Dear Sir or Madam,

I strongly oppose the use of irradiation on meat served to childeren in the National School Lunch Program. When meat is subjected to the equivalent of more than 100 million chest x-rays, new chemicals are formed that have hver been tested.

In addition, irradiation damages vitamins and creates free radicals that can damage the body's cells over time.

Without long-term human studies showing the safety of irradiated food, I am not confiddent in this technology right now. Childeren shouldn't be exposed to it -- certainly not without parents' consent. That means, at the very least, parents must be informed in advance and the food must be labeled as having been irradiated.

Sincerely,

John O'Toole
