Weekly Container Overview

- On average, over the next 3 weeks the Ports of Long Beach, New York, and Oakland are expected to have the most containers available among the 18 locations reported. Availability at Long Beach and New York is expected to increase during the next 3 weeks.
- Among the inland locations reported, Dallas and Chicago are expected to have the most containers available over the next 3 weeks. Availability is estimated to increase each week, particularly for 20ft containers in Chicago and 40ft high-cube containers in Dallas.
- At more than half of the locations reported, the increase in availability for 40ft high -cube containers over the next 3 weeks was greater than each of the other 4 container types.
- Refrigerated containers are in greatest supply in Long Beach, New York, Oakland, and Seattle, and, to a lesser extent, in Savannah and Houston.
- Dry 40ft containers are in greatest supply in Long Beach, New York, Dallas, Chicago, Oakland, and Memphis this week. Availability of 40ft containers is reportedly the lowest in Savannah, Houston, and Columbus.
- The greatest increase in availability over the next 3 weeks is expected in Oakland for 20ft refrigerated containers and in Seattle for 20ft dry containers. The greatest decreases in availability were reported for 40ft high cube containers in Savannah and Oakland, as well as 40ft standard containers in Seattle.

USDA is an equal opportunity provider and employer.

Understanding this Report

The weekly Ocean Shipping Container Availability Report (OCSAR) provides a snapshot of container availability for westbound transpacific trade lanes at select intermodal locations around the country. The data presented in this report are gathered from the 10 member carriers in the Westbound Transpacific Stabilization Agreement (WTSA). The WTSA carriers include APL, COSCO, Evergreen, Hanjin Shipping, Hapag Lloyd, Yang Ming Transport Corporation, OOCL, NYK Line, K Line, and Hyundai Merchant Marine.

- The data are estimates of container availability per week by the participating carriers. The carriers determine container availability by comparing current supplies at each of the 18 intermodal locations with the demand for these containers based on up-to-date bookings or reservation information in the westbound transpacific trade lane.
- Each week, participating carriers report the estimated number of containers available for the current week (W1) as well as estimates for the subsequent 2 weeks (W2 and W3).
- Maps on pages 3–5 offer a national overview of weekly container availability, as well as an average of availability over the past 6 months. The weekly national data are derived from the sum of the individual carrier responses at each intermodal location.
- Individual carrier responses are presented by location on pages 6–23 and have been sorted from largest to smallest. To maintain carrier confidentiality, specific carrier identification is not provided.
- Carrier responses showing negative numbers, such as -29, should be interpreted as meaning that 29 containers are needed by shippers but the carrier is not able to supply them. A positive number, such as 64, would mean 64 containers are available that are not demanded. An indication of 0 means the carriers have the exact amount of containers needed based on current supply and demand estimates.
- In addition to the weekly container availability data, the participating carriers provide average weekly throughput data for the past 6 months. These data help readers understand the aggregate flow of containers that have moved through the 18 select locations by the 10 participating carriers over the previous 6 months. These data will only be updated every 6 months.
- Availability levels are subject to change, and may be affected by delays in return of equipment to carriers by shippers or consignees, and by free time restrictions imposed by railroads. Due to the dynamic nature of the container industry, carriers cannot be held responsible for the level of availability at the time of inquiry.
- Data presented in the report do not imply availability of chassis.
- Container availability estimates represent availability for all export cargo, not just agricultural products.
- USDA collects these data on a voluntary basis and cannot be held responsible for the status of container availability when a reader makes inquiry with an ocean carrier. USDA relies on the participating ocean carriers to ensure the data is accurate.
- Terminology:

  20ft Dry Container (20ft): A standard shipping container that is 20 feet long.
  40ft Dry Container (40ft): A standard shipping container that is 40 feet long.
  40ft High-Cube (HC): A shipping container which is 40 feet long and 9 feet tall (1 foot taller than a standard 40ft dry container).
  40ft reefer: A refrigerated shipping container which is 40 feet long.
  20ft reefer: A refrigerated shipping container which is 20 feet long.
  Chassis: A wheeled frame to which a shipping container can be locked for storage or movement. (Plural chassis)
