- B. (1) All containers and packaging materials shall be constructed to meet the requirements of the FDA for safe contact with the packaged product.  
(2) In addition, all containers and packaging materials shall be constructed to comply with the sum concentration levels of lead, cadmium, mercury, and hexavalent chromium addressed by the Coalition of Northeast Governors (CONEG) model legislation. The sum of the concentration levels of lead, cadmium, mercury and/or hexavalent chromium present in any package or packaging component shall not exceed 100 parts per million. Concentration levels shall be determined using American Standard of Testing Materials test methods, as revised, or U.S. Environmental Protection Agency test methods for evaluating solid waste, S-W 846, as revised.
- C. The contractor shall obtain and maintain documentation from the container or packaging material manufacturer to verify that the containers and packaging materials used in this contract were in compliance with the Government's requirements.

### **1.3 50-KILOGRAM WOVEN POLYPROPYLENE BAGS**

Woven polypropylene fabric and circular-woven style bags.

- A. The color of the fabric shall be white, unless otherwise specified. At the contractor's discretion, it may use fabric containing marker yarns as a means of identifying the manufacturer of the fabric.
- B. The polymer in the fabric shall be 100 percent virgin polypropylene with no recycled material. Rework product will be limited to excess material produced during the initial extrusion process and will be limited to the amount produced during normal continuous operation. A system to identify and document this process shall be in place for review by the Government's audit personnel. The fabric in an unstressed state shall permit a minimum air flow of 3 cubic feet per minute per square foot and a maximum of 30 cubic feet per minute per square foot, when tested in accordance with ASTM Test Method D737, as amended.

- C. The fabric shall be finished by coating or other suitable method to prevent slippage. Individual test results shall be 28 degrees or greater, when tested in accordance with TAPPI Test Method T-503-OM-84. The fabric shall accept and retain printing ink that will not rub or flake off to a degree where legibility is impaired.
- D. The fabric shall be capable of resisting ultraviolet deterioration for a minimum of 200 hours of exposure in a weatherometer, when tested in accordance with Test Method 5804-Federal Standard 191, as amended. The fabric shall retain 70 percent of its original minimum tensile strength in each direction, after 200 hours exposure, when tested in accordance with Test Method ASTM D 5034 (Grab Test), as amended.
- E. Bags may be flat tube or gusseted.

#### 1.4 SEWING OF BAG SEAMS

- A. All bag seams shall be sewn in a manner which prevents the product from leaking through the seams during handling, storage, and distribution.
- B. The color of the sewing thread shall be natural or white. The tensile strength of the sewn seams shall not be less than the tensile strength of the fabric in the body of the bag.
- C. The top and bottom of the bag shall be heat cut or otherwise finished to prevent fraying or unraveling of the fabric during distribution. The bottom seam shall be constructed in accordance with Federal Standard 751a, SSn-1 Single Turnover, as amended. A minimum of 4 stitches per inch is required.

#### 1.5 BAG SIZE REQUIREMENTS

Circular woven polypropylene bags shall have the finished bag size of 23 inches by 39 inches, unless otherwise specified by the contracting officer.

#### 1.6 BALING REQUIREMENTS

- A. Bags shall be baled with 1,000 polypropylene bags to the base.
- B. Bags designed to be top loaded with bulk grain shall be baled for export with a minimum 14 gauge steel wire, or a minimum of 3/8 inch wide by 0.015 inch thick steel strapping, or minimum 1/2 inch polypropylene strap of sufficient strength to withstand export distribution. The wire or straps shall be positioned as follows:

Five (5) girth wires approximately equal distance apart. The bags shall be baled in a manner that would protect the finished product during storage and shipment.

- C. Required dimensions and counts shall be verified by in-plant quality control processes.

#### 1.7 PERFORMANCE TEST PROCEDURES

- A. All bags shall be capable of withstanding the following performance test for impact resistance.
  - (1) Ten filled and sealed bags shall each survive a single drop test on the butt and

side on a shock machine that produces for each test a velocity change of 195 inches per second using a shock duration of .002 seconds without loss of product.

- (2) Testing shall be conducted under standard temperature (73.4 o F plus or minus 1.8 o F) and relative humidity (50 % plus or minus 2%) conditions.
- (3) Filled bags shall be placed in the conditioned atmosphere for sufficient time before the tests are conducted for the bag materials to come to equilibrium.
- (4) Bags submitted under this performance specification shall conform to all other applicable material, construction, and performance specifications.

**B. Test Laboratories**

The contractor may use any independent or private laboratory that is capable of conducting the performance test for impact resistance described in Section 1.9. However, the Government is aware of only the following domestically located independent or private laboratories that have such capability:

<p>Lansmont Corporation 1287 Reamwood Sunnyvale, CA 94089 (408) 734-9724</p> <p>Lansmont Corporation 6539 Westland Way, Suite 24 Lansing, MI 48917 (888) 526-7666 <a href="http://www.lansmont.com">www.lansmont.com</a></p>	<p>Rutgers University Packaging Science and Engineering Dept. **1.8 TEST FREQUENCY**

- A. All testing specified shall be performed and documented.
- B. The air permeability and ultraviolet resistance tests shall, as a minimum, be performed annually and when a change in the formulation/design of the fabric is being made.
- C. The performance test for impact resistance shall be performed when a change in the formulation/design of the fabric is being made.
- D. The slide angle test shall, as a minimum, be performed in-house for every 10,000 lineal meters of fabric production. Testing performed in-house is not required to be performed under the specified temperature and humidity requirements. In addition, the slide angle test shall, as a minimum, be performed annually by an outside testing facility and when a change in the formulation/design of the fabric is being made. This testing shall be performed in accordance with all contract requirements, including the specified temperature and humidity.

- E. All supporting test and quality control documentation shall be retained and made available for review by the Government for a minimum of three years after final payment under the contract.
