

FEDERAL MILK ORDER PRICE AND POOL SUMMARY, MAY

HIGHLIGHTS. Handler reports of receipts and utilization under the Federal milk order system for May have been filed and tabulated. Combined totals for the 10 consolidated orders are being released. During May, about 9.0 billion pounds of milk were received from producers. This volume of milk is 17.9 percent lower than the May 2006 volume. In May 2007, there was a significant volume of milk not pooled due to intraorder disadvantageous price relationships. About 3.8 billion pounds of producer milk were used in Class I products, 1.2 percent lower than the May 2006 volume. Calendar composition likely had a negative impact on milk used in Class I in 2007 as compared to 2006. The all-market average Class utilization percentages were; Class I = 42%, Class II = 16%, Class III = 34%, and Class IV = 8%. The weighted average statistical uniform price was \$18.12 per cwt., \$1.50 higher than last month and \$6.15 higher than last year.

1/ Names in parentheses are the major city in the principal pricing point of the market.

2/ Statistical uniform price for component pricing orders (Class III price plus producer price differential). For other orders, uniform skim milk price times 0.965 plus uniform butterfat price times 3.5.

3/ Due to a disadvantageous relationship between intraorder class prices and the location adjusted statistical uniform (blend) price in these markets, handlers elected not to pool an estimated 1.7 billion pounds of milk that normally would have been associated with these markets. In May 2006, the estimated not pooled volume of milk was 50 million pounds, occurring in Order Nos. 030 and 032. After adjusting for not-pooled milk, the year-to-year percent change is -2.7%.
