

We produce passive insect pheromone lures and traps. Consultants have asked us if they are organic. I cite NOP §205.601(f) that pheromone lures are allowed. A local certifying agency is wanting me to register the product (submit the application form with fee) to get their blessing, of course with an annual renewal fee. Can you advise?

Pheromones are allowed under § 205.601(f) as a synthetic substance for use in organic crop production as insect management. Any other active ingredients, however, must be approved and on the National List.
