

**If we certify honey according to private standards that meet the NOP National List, is it possible to make reference to NOP in the label? Is it possible to add the NOP logo to the label?**

Honey may be certified to the NOP standards using the livestock and handling standards. Bees must be managed from the second day of life as organic, as with poultry. Feed organic feed; no prohibited substances. If certified in accordance with the NOP standards, they may be labeled according to the NOP regulations. Other standards may not be used in lieu of the NOP regulations for products labeled using the NOP logo or reference to the NOP regulations.
