## McNair 1813 Soft Red Winter Wheat

## Item 13a.

McNair 1813 wheat, C.I. 15289, was derived by the pedigree method from a head selection made in 1964 from a segregating F<sub>3</sub> population supplied by the Virginia Agricultural Experiment Station. McNair 1813 wheat has the following pedigree: Seneca/5/Redcoat sib/4/Redcoat sib/Kenya 338/H/Kenya 338/3/Norin 10/Brevor H=H168-1-2/2\*Purplestraw/Trumbull 555-1/Steintim/Thorne.

Reselections were grown as head-rows in 1969-70 and in 12 foot rows in 1970-71. Seed from selected 12 foot rows was bulked and the 1971-72 increase designated as breeders seed. Subsequent increase has been carried out according to the rules of the local AOSCA agency. Breeders seed is produced yearly from elite seed derived from 12 foot rows. Head rows furnish seed for the 12 foot rows.

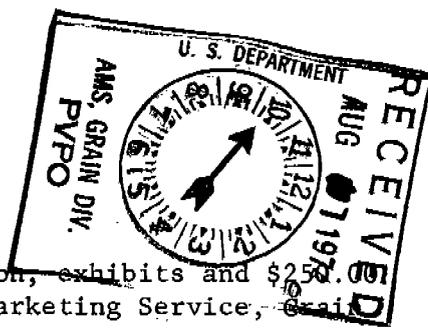

McNair 1813 is described as having 1.5% off-types. The off-types fall into general classes and result primarily from outcrossing with other material during 12 foot row increase. The off-type plants are all later maturing and approximately one-half are three or more inches taller than McNair 1813. In the green stage 1.0% of the population has pale-green versus yellow-green heads and 0.1% has blue-green heads. An off-type with wide flag leaves carried above the surrounding canopy makes up 0.1% of the population. At maturity only the taller off-types are recognizable and counts of 0.7% off-type heads are typical. Occasional ( $\leq 0.01\%$ ) fully awned heads may be observed.

The performance of McNair 1813 wheat in McNair Company tests, the Southern Uniform Soft Wheat Nursery and State Variety tests during the 1971, 1972, 1973 demonstrate the stability of both the morphological characters and the disease resistances of this wheat.

Attached: Summary of USSWN.

'McNair 1813' has been stable in above tests for characters stated.

## INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$2.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

## ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

## McNair 1813 Soft Red Winter Wheat

## Item 13b.

McNair 1813 wheat most closely resembles McNair 701 wheat. Both are early maturing semi-dwarf wheats with brown chaff and large, plump seed. McNair 1813 wheat can be distinguished from McNair 701 wheat prior to heading by the blue-green foliage, and after heading by the stiffer straw and erect vs. inclined head carriage. When compared to McNair 701 in the 1973 Southern Uniform Soft Wheat Nursery, McNair 1813 averaged one inch shorter, one-two days later in heading, and one pound heavier in bushel weight. In addition McNair 1813 had better powdery mildew, Hessian fly (race E), and stem rust resistance but less winterhardiness and slightly less resistance to leaf rust than McNair 701. These data are in substantial agreement with that contained in the 1971 and 1972 Uniform Southern Soft Wheat Nursery Reports and with state and McNair Company tests carried out during the same period.

McNair 1813 can be distinguished from McNair 2203, a powdery mildew susceptible sister line of McNair 701, by the same characteristics which distinguish McNair 701.

McNair 1813 Soft Red Winter Wheat

Item 13D.

McNair 1813 is distinguishable from other soft red winter wheats except McNair 701 and McNair 2203 by the brown-chaff color of the head and large plump seed. It is distinguishable from McNair 701 and McNair 2203 in the green stage by the blue-green versus yellow-green foliage, stiffer straw, and more erect head carriage. It is typically one-two inches shorter and one-two days later in maturing than McNair 701.

McNair 1813 also has better resistance to Hessian fly (race E), powdery mildew, and stem rust than does McNair 701 or McNair 2203 but is slightly less resistance to leaf rust and less winter-hardy.

McNair 1813 Soft Red Winter Wheat

Item 13e.

McNair 1813 wheat is the property of McNair Seed Company. This variety was developed by Dr. G. K. Middleton, Dr. H. C. Newton, Jr. and Mr. J. R. Bennett who were employed by McNair Seed Company during the time of its development. All cost of development were borne by McNair Seed Company.
