EXHIBIT "A"

Origin and Breeding History of the Variety

1. "Alamota" originated in Idaho in 1970 from a hand pollinated cross between Rogers 1261 as the male parent and Western Valley Seed Co. Freeze-Elite X G 168 X Backcross, Freeze-Elite X G 141 -A-1 as the female parent.
2. The second, third and fourth generations were multiplied in Idaho in greenhouse and outside plot production. Pure line selections were made in the F5 generation at Oregon State University in 1970, Enation and Sreak resistance being established at this time. A portion of this progeny was shipped to New Zealand in the fall of 1972 for a winter increase. Yield and performance tests were conducted by P.G.R.O of England, then U.S.D.A. Research Station in Prosser, Washington, at Findus of Sweden, Unilever Research Laboratory, England, and Cornell University, also six commercial processors. Through this testing it has also been established that this variety is also resistant to Top Yellows, Fusarium wilt and tolerant to Root Rot and Pythium.
3. This variety was stabilized in the fifth generation. No distinct variants have been observed in subsequent generations.

EXHIBIT " B "

Botanical Description of the Variety

1. "Almota" is a perfection type freezer pea. The plants are determinate, double podded, vigorous and maturity is mid-season.
2. This variety has a zigzag internode perfection type vine; determinate rather than indeterminate; semi-stiff straw with a 20 inch plant height. The plant color is deep green, medium heavy, will do some branching. Node color is green, internodes being about one and a half inches. First inflorescence being on the fourteenth node. Leaflets are paired two or more, medium wax, with marbling and dark green. Stipules are marbled, waxed, darker green than the leaflets and non-clasping. Flowers are white with greenish venation and usually born as doubles. This variety has a high ovule count with nine to ten berries per pod. The variety resembles Freez-Elite for deep blue foliage color. The difference being short internodes in the pod zone. Almota is an over-all shorter plant type than Freez-Elite, with a higher ovule count. The variety is resistant to Enation, Streak, Fusarium Wilt, Top Yellows and Powdery Mildew. Almota has Root Rot and Pythium tolerance.

00003

EXHIBIT " D "

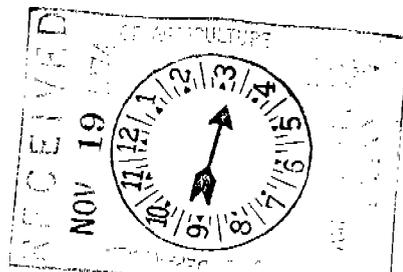

Data Indicative of Novelty

Novelty is based on the combination of the following characteristics.
"Almota" most closely resembles Freez-Elite; but Almota differs:

- (1) Shorter internodes in the pod zone
- (2) Higher ovule count 9.25
- (3) Resistance to Enation, Streak, Fusarium Wilt, Powdery Mildew, Top Yellows and tolerance to Root Rot and Pythium.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.
