- 13A. Exhibit A, Origin and Breeding History of the Variety (See Section 52 of the Plant Variety Protection Act.)
- 13B. Exhibit B, Botanical Description of the Variety
- 13C. Exhibit C, Objective Description of the Variety
- 13D. Exhibit D, Data Indicative of Novelty
- 13E. Exhibit E, Statement of the Basis of Applicant's Ownership

14A. Does the applicant(s) specify that seed of this variety be sold by variety name only as a class of certified seed? (See Section 83(a). (If "Yes," answer 14B, and 14C below.) YES NO

14B. Does the applicant(s) specify that this variety be limited as to number of generations? YES NO

14C. If "Yes," to 14B, how many generations of production beyond breeder seed? FOUNDATION REGISTERED CERTIFIED

The applicant declares that a viable sample of basic seed of this variety will be deposited upon request before issuance of a certificate and will be replenished periodically in accordance with such regulations as may be applicable.

The undersigned applicant(s) of this sexually-reproduced novel plant variety believes that the variety is distinct, uniform, and stable as required in Section 41 and is entitled to protection under the provisions of Section 42 of the Plant Variety Protection Act.

Applicant is informed that false representation herein can jeopardize protection and result in penalties.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.

12A - During April 1973, single seeds were selected from the variety - Mack. Some 15,000 seeds were examined for hila color, seed size and any normal offtype plants. Eight seeds were found to be different. All eight were grown in pots in June 1973 and observed for environmental differences. Plant 1 listed as RA-526 showed a marked hila color difference ie brown hila as differentiated from Mack with black hila. This plant was harvested separately. Seed from the single plant RA - 526 were grown in the greenhouse during the winter of 1973-74. These plants were compared to Mack plants and appeared similar except for the hila color which remained brown.

In June of 1974 14 rows of RA-526 were planted alongside 2 rows of Mack check. These rows were 50' long with 40" centers. Careful observation indicated that RA-526 had slightly larger leaves and was 2 $\frac{1}{2}$ days earlier. These two varieties behaved similarly otherwise. Yields were taken on the two lines and appeared equal.

Actual yields are:

RA-526	=8.2 lbs/row	=46.6 bu/a
	x 14 = 115 lbs.	
Mack	=7.25 lbs./row	=40.7 bu/a
	x 2 = 14.5 lbs.	

RA-526 had no seed mottling (Mosaic) but Mack had approximately 4%

The 115 lbs. of breeders seed of RA-526 was sent to Puerto Rico for winter increase. This increase will be used as foundation seed for 1975 production. Excess seed will be sold in a Ring Around 5 series blend.

During 1975 and 1976 this line will be tested over five locations for yield, plant characteristics, etc.

RA-526 was a single seed selected from the variety Mack. It has a distinctly brown hilum (1). To date we have not noticed any seed or plant morphological variation.

(2) We would rate RA-526 to be a highly stable variety in regards to uniformity and genitic stability. Possible variation may arise from future mutations and outcrosses but to date these have not been observed.
