VARIETY: DOMINGOS 42

EXHIBIT A

Origin and Breeding History of the Variety

1. Domingos 42 originated from a hand pollinated cross between Climax and Vanguard. The cross was made in the Salinas Valley of California in 1969.
2. Initial trial plantings were conducted in 1970 to allow for individual plant selections. General trial plantings followed the initial selection work to allow for segregation and more comprehensive evaluations and selections. Selections made were based upon size, color, texture, and resistance to rusty rib. The procedure involving trial plantings, evaluations, and plant selections were repeated numerous times before finally attaining the desirable type. These plantings were conducted in Yuma, Arizona, and in the Imperial Valley of California.
3. Domingos 42 is resistant to rusty rib and genetically uniform and free of any distinct variations.

VARIETY: Domingos 42

EXHIBIT D: Data Indicative of Novelty

DOMINGOS 42 was developed to replace the variety Vanguard in the major lettuce producing districts of Arizona and California. It will replace Vanguard for winter harvest in the Imperial Valley, Blythe and Arizona districts. It will also replace Vanguard for spring harvest in the San Joaquin Valley of California.

Its distinguishing features include:

1. Unique in that it most closely resembles Red Coach 74, but differs in that it is best adapted for late winter harvest in the Imperial Valley of California. It is also adapted to late spring harvest in Blythe, California; Arizona and the San Joaquin Valley of California. Red Coach 74 is not adapted to these harvest periods.
2. Unique in that it is a Red Coach 74 type and is adapted to the Vanguard harvest period in the desert lettuce producing districts.
3. It is Rusty Rib and Internal Rib Necrosis resistant.
4. When compared to Red Coach 74 for mid winter harvest (the optimum Red Coach 74 period), its head size will be consistently smaller.
