Origin and Breeding History of the Variety

1. 'Goldfinch' originated as a mutant from the Aquarius variety of French Marigold. It was selected over a number of years and the first crop was grown in 1975. The first seed will be offered for sale after harvest 1976. This variety has won a Bronze Medal in the All Britain Trials for 1977 introduction in addition to being placed on the Novelty Register of the Fleuroselect trials. In both of these trials it was compared to the variety Honeymoon.
2. Goldfinch is stable for height, color uniformity and other characteristics. Like most open pollinated Marigolds an occasional off type does occur. These are rogued out in the production fields.

Exhibit D

Data Indicative of Novelty

1. 'Goldfinch' is larger flowered than the nearest comparison varieties 'Honeymoon' and 'Gypsy Sunshine'. Under most conditions the blooms will be 2-2½" in diameter compared to 1 3/4" for the comparisons. The enclosed color slide shows a comparison photo of 'Goldfinch' and 'Honeymoon' and shows clearly the size difference. This variety blooms at about the same time as the comparison varieties.
2. Comparison photograph taken in May 1976 at Geo. J. Ball, Inc., West Chicago enclosed.

Exhibit B

Botanical Description of the Variety

Goldfinch is a dwarf French Marigold (*Tagetes patula* CV). Plant height is 10-12 inches depending on climate. Habit is semi-erect and compact. The leaves are compound and the leaflets are filiform. Stems are zig-zag and the flower type is crested. Color is deep gold.

The nearest varieties are Honeymoon (Harris) and Gypsy Sunshine (Harris). Goldfinch is larger flower than both of these varieties.

INSTRUCTIONS

GENERAL: Send an original copy of the application, exhibits and \$250.00 fee to U.S. Dept. of Agriculture, Agricultural Marketing Service, Grain Division, 6525 Belcrest Road, Hyattsville, Maryland 20782. (See Section 180.175 of the regulations and rules of practice.) Retain one copy for your files. All items on the face of the form are self-explanatory unless noted below.

ITEM

- 5 Insert the date the applicant determined that he had a new variety based on the definition in Section 41 (a) of the Act and decision is made to increase the seed.
- 13a First, give the genealogy, including public and commercial varieties, lines, or clones used, and the breeding method. Second, give the details of subsequent stages of selection and multiplication. Third, indicate the type and frequency of variants during reproduction and multiplication and state how these variants may be identified. Fourth, provide evidence on stability.
- 13b First, give any special characteristics of the seed and of the plant as it passes through the seedling stage, flowering stage and the fruiting stage. Second, describe the mature plant and compare it with a similar commercial variety grown under the same conditions, and indicate the differences.
- 13c A supplemental form will be furnished by the PVPO to describe in detail a variety for each kind of seed.
- 13d Provide complete data indicative of novelty. Seed and plant specimens or photographs of seed and plant comparisons clearly indicating novelty may be submitted. Seeds submitted may be sterile.
- 13e Indicate whether applicant is the actual breeder, the employer of the breeder, the owner through purchase or inheritance, etc.
