Direct Hay Weighted Average Report for week ending 3/15/2024

Volume		
This Week	Last Reported ( )	Last Year

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Some spring storms this week provided some moisture to much of the state. A few cells carried some strong winds and small hail but only minor damage was reported anywhere. The drought monitor will take a bit to reflect the latest moisture at this point very little improvement was noted over last week. Grass should really take off now with the moisture and most cattle although still eating some hay are more interested in chasing any green that pops up. It will take a bit before grass can get ahead of grazing pressure so some feeding will continue for a while longer. The supply of hay is light to moderate, demand is moderate, prices are steady to weak. The Missouri Department of Agriculture has a hay directory at <https://apps.mda.mo.gov/haydirectory> or visit the University of Missouri Extension feed stuff finder at <https://feedstufffinder.org>
