COLONY, HONEY PLANT AND MARKET CONDITIONS DURING JANURARY 2024

- \$1.70

APPALACHIAN DISTRICT (MD, PA, VA, WV):. January's weather was mostly average temperatures and plenty of wind with the exception of two peak higher than normal temperature days. The first occurred on January 9 with high temperatures in the mid-fifties and the second occurred on January 26 with a high temperature of 70 degrees recorded in Inwood. A snowstorm blanketed the area with 6-9 inches on January 16. With the temperatures slightly above normal near the end of the month, a couple of beekeepers in Virginia were adding more food and pollen substitutes out and noticed their bees bringing in some yellow and white pollen. This was from skunk cabbage, winter jasmine, and crocus that decided to bloom earlier than normal. Otherwise, beekeepers were busy with meetings and maintaining equipment.

ALABAMA: The first two weeks of 2024 experienced normal temperatures throughout Alabama, yet drought-like conditions persisted from 2023 in every area of the state, except for the southeast region. These drought-like conditions persisted for the rest of January. The last half of the month experienced unusual weather, first with temperatures well below average, then temperatures well above average. This likely promoted colonies having low amounts of capped honeybee brood, especially in northern regions of Alabama, through the entire month of January. Varroa management was actively encouraged. Queens resumed egg-laying in northern regions at the end of the month, whereas brood rearing persisted throughout the entire month in coastal areas. As a result of brood-rearing in the south, and exceptionally cold temperatures in the north, colonies consumed many of their stored food reserves. In northern areas of the state, not much bloomed during January. Maples appeared to be blooming later than usual. Coastal areas experienced blooming bidens and camelias, and henbit could be seen blooming in most areas of state.

ARIZONA: The month of January showed some rainfall, but still very light in comparison to previous years. According to the Arizona State Climate Office, the rainfall was about .06 inches for the month. This is about 10% of the normal average Arizona rainfall for January. The drought has continued in many Arizona counties including Mohave, Maricopa, Pinal and Pima counties.

We have seen a reduction in bee hives present in the state. Many bee hives have been transported to bordering states (e.g. California) for nut tree and other yearly pollination projects. For those bees remaining, cactus bloom and alfalfa are current pollen sources. There are also some beekeepers still using pollen patties being to supplement feeding.

The demand for honey once again remains good throughout most of the state. Many bees are currently out of state but should be returned in a month or two to start the next season of honey production in Arizona. Honey reserves and production will remain low until their return.

ARKANSAS: During the month of January temperatures were below normal across most of the state. Precipitation was well above normal across most of the same area. According to the U.S. Drought Monitor website, most of the state had normal to abnormally dry soil conditions. Southeast border showed severe drought to extreme drought.

Too few prices exist to establish a current market price for wholesale white honey.

CALIFORNIA: No report issued.

FLORIDA: Temperatures and precipitation were about normal for the month except for a brief cold spell that plummeted temperatures below freezing to areas just north of Orlando. Northern parts near the Alabama border experienced temperatures below 20 degrees Fahrenheit. Bee health was considered to be above average during the month. Maple and wildflowers including Spanish Needle was widely available across Florida but the honey produced was used by the hive. Some beekeepers were supplemental feeding to strengthen the hives before shipping to California for the almond pollination season. Some hive splitting was done with the rest expected to finish their splits in February. Shipping to California began earlier in the month with most hives expected to be moved the last week of January. Fewer hives may go to California this year as pollination fees are expected to be about the same as last year. Some sources estimated the expected price to be about \$190-\$200 per hive. Orange blossom should be the next major source of honey production beginning in late February. Gallberry and palmetto honey production should begin sometime in March-April. There was practically no honey produced during January or stored at the end of the month in Florida.

GEORGIA: Beekeepers are waiting for the Spring weather to continue. Bees are reported to be in good shape and producing, however they just need more flowers, to keep going strong. Prices are about steady and may change as demand increases for Easter pull.

IDAHO, COLORADO, UTAH: During the month of January temperatures were normal in Idaho. Precipitation in Idaho was a little below normal. Utah had temperatures that were normal and precipitation that was normal. Colorado had normal temperatures across the whole state, Precipitation for Colorado was normal for January.

According to the U.S. Drought Monitor website, in January Southern Idaho had no drought and Northern Idaho had moderate to severe drought. Utah is currently under no drought to abnormally dry conditions in Southeast Utah. Colorado had normal soil moisture to severe drought in Southwestern Colorado, and a small spot of extreme drought in Southern Colorado.

Producers are taking their hives to California waiting for the almond pollination to start.

Prices for the month of January were between \$2.85 and \$3.20 per pound with a mostly price of \$3.00 for Idaho, Colorado prices are too few producers reporting to determine a market. Prices for locally sourced honey in Utah are \$2.80-\$3.30 per pound with mostly \$3.00 to \$3.30.

ILLINOIS: The weather for January has been mild overall with warmer temperatures and lots of precipitation. Beekeepers have been checking on the bees to see how they are doing. Beekeepers are also going to meetings, checking and repairing equipment, ordering packages, preparing for the spring and participating in beekeeping classes. Demand for honey is good at the retail level and fairly good at wholesale level. Prices are generally unchanged.

INDIANA: The temperatures for January were slightly higher than average with greater than average precipitation. Most beekeepers report their bees in good condition. Beekeepers are going to meetings and checking and repairing equipment. Demand for honey is good and demand exceeded supply at the retail level and demand was fairly good at the wholesale level. Prices are generally unchanged.

IOWA, KANSAS, MISSOURI, NEBRASKA: No report issued.

KENTUCKY: In January, many Kentucky beekeepers have experienced a pleasant winter, with the exception of a week of snow and bitterly-cold temperatures. Some have reported minor losses on social media, but do not seem to be having massive losses just yet. Since the month ended with relatively mild temperatures (50F), some beekeepers have even begun to do quick checks to see if hives are alive or need attention.

LOUISIANA: During the month of January temperatures were well below normal across most of the state. Precipitation was above normal across the state. According to the U.S. Drought Monitor website, most of the southern part of the state is abnormally dry. Northern part of the state experiencing severe to extreme drought with a line of exceptional drought running from the Northeast corner to the Southwest corner. There was another area of exceptional drought in the Southeast corner.

Too few prices exist to establish a current market price for wholesale white honey.

MICHIGAN: No report issued.

MINNESOTA: During the month of January temperatures were normal across the whole state. Precipitation for January was normal for the North end of the state, the South end of the state saw less than average precipitation.

According to the U.S. Drought Monitor website, in January the whole state had abnormally dry to moderate dry soil moisture with a small spot of severe drought up north.

Producers are taking their hives to California waiting for the almond pollination to start.

Prices per pound in Minnesota were \$2.80-\$3.00 with mostly price of \$2.80-\$3.00 for locally sourced honey for the month of January.

MISSISSIPPI: Bees are busy building up more honey in the hives and producers are busy getting them ready for splits to making more hives to sell. Honey is selling well, and interest is increasing. Prices are about steady.

MONTANA: No report issued.

NEW ENGLAND: No report issued.

NEW YORK: Temperatures continue above average. Much needed rain in the western NY region, while areas east of Lakes Erie and Ontario received heavy lake effect snow during a freezing spell. Some beekeepers expressed difficulties accessing muddy out-yards. Beekeepers have begun feeding their colonies, especially the strong hives requiring more feed. Honey sales continue strong.

NORTH CAROLINA: No report issued.

NORTH & SOUTH DAKOTA: At homes were at their overwinter locations. Water supplies were generally adequate despite warmer than average conditions, certainly, up from the droughts in recent years. Many of the bees are headed to or in California for almond and other crops. January has been wet with a number of rainy days. Still overall rainfall and snowpack moisture has been below average for much of the west. The cool weather required during winter has been lower than some recent years. Easier on the bees as they are more active but may alter the bloom.

According to the California Almond board, California has about 840,000 native colonies of honeybees, but needs 2.4 million colonies to pollinate crops. Some minor insect damage and bee rustling has been reported.

OHIO: Ohio weather during January, temperature was from a low of 2 degrees to a high of 46 degrees. Rain fall was above normal for all of Ohio, but it allowed the state to catch up from the deficient from 2023. We received approximately 4.5 inches for January. The trees and other Ohio crops such as wheat and pollinator plants will benefit from the moisture. Ohio honey bees are having high losses again this winter. There are several reasons, high populations of varroa is always a major contributor. Another major contributor is queens that have mated with drones that are not healthy. Another contributor is lack of proper training for beekeepers. With beekeeping projects at Wright-Patterson Air Force Base working with Purdue University we have found M Lineage honey bees. The honey bees which are feral are chewing mites 100%. More research will continue in 2024. Feral honey bees, due to their high mite chewing behaviors, are very healthy, are living in trees, out buildings are now moving into houses in many areas of Ohio, or in older large trees in the lawns of many home owners creating fear in many areas. We are putting swarm traps in areas of known bee trees catching swarms, preventing the swarms from becoming pests to home owners. Honey prices remain stable, wholesale \$5.50 - \$6.00 per pound. Retail \$9.00 - \$11.00 per pound.

OKLAHOMA: During the month of January temperatures were well below normal across most of the state. Precipitation was about normal across the state. According to the U.S. Drought Monitor website, Oklahoma had mostly normal soil moisture across the North and Central parts of the state. Abnormally dry to moderate with drought scattered across the southern part of the state. Too few prices exist to establish a current market price for wholesale white honey.

OREGON: No report issued.

SOUTH CAROLINA: Prices for South Carolina honey sold at the State Farmers Market in West Columbia, SC reported: 12/1 Pint \$70.00-75.00, 12/1 Quart \$110.00-130.00, 12 count. Honey Bears \$40.00-48.00, 4/1 Gallon \$180.00 and 1 Gallon \$50.00.

In the Midlands area of the state. Beekeepers reported demand for honey is high and production is low and many are looking forward to Spring buildup. Beekeepers are feeding with sugar water.

TENNESSEE: January was cold and wet with not many nectar or pollen sources. Beekeepers are calling in reports of large numbers of strong colonies with plenty of honey and pollen stores absconding during cold weather. These beekeepers are finding colonies with no bees except for dead brood. No bees on the bottom boards and very few bees on the ground in front of the colonies.

TEXAS: During the month of January temperatures were well below normal across most of the state. Precipitation during January was above normal across most of the state. According to the U.S. Drought Monitor website, much of the state has normal soil moisture with areas of moderate to severe drought in Far West Texas and there is still an area West of San Antonio of extreme drought that has shrunk in size.

Too few prices exist to establish a current market price for wholesale white honey.

WASHINGTON: The new year started with some colder, but drier weather. Much of Washington saw a cold snap in the middle of the month. There was less precipitation than normal. Earlier snow slowly dissipated saturating fields. After the cold mid-month, warmer days allowed growers a chance to do some pruning. As the month progressed the snow pack moisture content dropped below average initiating concerns for late summer irrigation.

WISCONSIN: The weather has been good for January with very warm temperatures and greater than average rain or snow. Beekeepers are checking on the bees for winter. Some beekeepers are deciding whether or not to feed their bees. Most beekeepers report that their bees are in good condition, while others report some dead hives. Beekeepers are going to meetings, checking and repairing their equipment and preparing for the spring. Demand for honey is good at the retail level and fairly good at the wholesale level. Prices are generally unchanged.
