1/ Truck delivered. 2/ Processor bids. 3/ Milling quality. 4/ Choice milling quality. 5/ 20 days to arrive. 6/ Barge delivered.

## WHEAT BIDS HIGHER

**PACIFIC NORTHWEST MARKET SUMMARY:** Cash wheat bids for March Portland delivery ended the reporting week on Thursday, May 17, higher compared to last Thursday's noon bids.

July wheat futures ended the reporting week on Thursday, May 17, higher as follows compared to last Thursday's closes: Chicago 56-1/2 cents higher at 6.57-3/4, Kansas City 54-1/2 cents higher at 6.72 and Minneapolis 40 cents higher at 7.67-1/4. Chicago July corn futures trended 37-1/2 cents higher at 6.25 and July soybean futures closed 17-1/4 cents lower at 14.38. Wheat futures were moderately higher for the week with support from hot, dry wheat in the US Southern Plains area, a good inspection-for-export figure of 28 million bushels (mb) for the week ending May 10, spillover support from higher row crops on Tuesday and Wednesday, and the lack of rain in the Black Sea Region. Corn futures were also higher for the reporting week. Trade thoughts that corn markets were oversold last week and due for a correction, good export demand, tight global supplies and technical buying were all factors supporting the corn futures. Soybeans were pressured early in the week by profit taking, lower outside markets and a higher US Dollar against foreign currencies. Later in the week soybeans had some support from commercial and noncommercial buying, good export demand and higher corn and wheat markets.

**Pacific Northwest Market Summary:** (Continued): Bids for US 1 Soft White Wheat delivered by unit trains and barges to Portland for May delivery trended 10 to 20 cents per bushel higher than last Thursday's range. Bids were higher in reaction to the moderately higher Chicago May wheat futures for the week.

Bids for 11.5 percent protein US 1 Hard Red Winter Wheat for May delivery trended 54 cents per bushel higher compared to last Thursday's noon bids in lining up with the moderately higher Kansas City July wheat futures for the week. On Thursday, bids were as follows: May 7.62-7.77, mostly 7.72; June 1-10 7.62-7.72, June 11-20 7.57-7.72, June 21- 30 7.52-7.67; first half July 7.34-7.62, last half July 7.22-7.52; New Crop August 7.27- 7.37 and September 7.32-7.42.

Bids for non-guaranteed 14.0 percent protein US 1 Dark Northern Spring Wheat for May Portland delivery were 45 cents per bushel higher than last Thursday's noon bids. Bids were supported by the higher Minneapolis July wheat futures for the week. On Thursday, bids for non-guaranteed 14 percent protein, were as follows: May 9.12-9.22, mostly 9.16; June 9.07-9.22; July 1-10 8.97-9.12, July 11-20 8.87-9.12, July 21-31 8.77-8.97; August New Crop 1-10 8.75-8.90, August 11-20 8.65-8.90, August 21-31 8.65-8.75 and September 8.65-8.68.

**Pacific Northwest Export News:** There were eight grain vessels in Columbia River ports on Thursday, May 17, with three docked compared to 17 last Thursday with six docked. New confirmed export sales for Pacific Northwest loadout were to Japan. Japan purchased the following wheat in metric tons: 37,391 of western white wheat, 35,605 of hard red winter wheat and 33,029 of dark northern spring wheat. Shipment is as follows: one cargo of western white wheat and one cargo of hard red winter wheat is for arrival by August 31 and one cargo each of western white wheat, hard red winter wheat and dark northern spring wheat is for June 21 to July 20.

**Cash Soft White Wheat:** Bids for US 1 Soft White Wheat, delivered by unit trains and barges to Portland during May ended the reporting week on Thursday, May 17, at 6.80-7.00, mostly 6.90, 10 to 20 cents per bushel higher than week ago bids for the same delivery period. Last Thursday's bids for soft white wheat for May delivery were 6.60-6.90, mostly 6.72. There were no white club wheat premiums for nearby delivery for this week or last week. One year ago bids for US 1 Soft White Wheat for May delivery were 7.55-7.75, mostly 7.64 and white club wheat bids were 7.55-7.75, mostly 7.64. Nearby bids for US 1 Soft White wheat began the reporting week on Friday at mostly 6.70, then dipped slightly lower to mostly 6.69 on Monday, before moving higher to mostly 6.71 on Tuesday and continuing higher to mostly 6.78 on Wednesday. Today (Thursday), the reporting week end bids moved higher to the weekly high of mostly 6.90. Higher Chicago July wheat futures most days of the week were supportive to soft white wheat bids. New confirmed export sales of white wheat this week were limited to Japan. Forward month bids for soft white wheat were as follows: June 6.80-7.00, first half July 6.80-6.95, last half July 6.75-6.85, August New Crop 6.70-6.90, and September 6.70-6.90. One year ago, forward month bids for soft white wheat were June 7.55-7.80, July 7.50-7.80, August New Crop 7.55-7.80 and September 7.60-7.82.

Outstanding U.S. white wheat export sales as of May 10, 2012 for the marketing year beginning June 1, 2011 and ending May 31, 2012, totaled 550.3 thousand MT compared to 596.1 thousand MT on May 3, 2012, and 786.3 thousand MT one year ago. Outstanding white wheat export sales for the 2011-2012 marketing year were to the following countries in 1,000 MT: South Korea 204.4, Japan 105.7, Ecuador 30.3, Nigeria 29.0, Taiwan 29.0, Thailand 25.5, Philippines 25.0, Indonesia 15.0, Mexico 10.3, Malaysia 7.0, Hong Kong 1.4, Canada 1.1, Vietnam 0.4, and total unknown 66.2. Accumulated white wheat export shipments as of May 10, 2012, in 1,000 MT for the 2011-2012 marketing year, totaled 5,328.9 compared to 4,529.3 one year ago.

Outstanding U.S. barley export sales as of May 10, 2012 for the marketing year beginning June 1, 2011 and ending May 31, 2012, in 1,000 MT, totaled 2.6 compared to 2.6 on May 3, 2012 and 3.6 one year ago. Outstanding barley export sales for the 2011-2012 marketing year in 1,000 MT were to the following countries in 1,000 MT: Japan 1.8 and Taiwan 0.8. Accumulated barley export shipments as of May 10, 2012 were 83.2 thousand MT compared to 97.6 one year ago.

**Coarse Feeding Grains:** Bids for **US 2 Yellow Corn** delivered to Portland in single rail cars were 279.00, 12.50 to 13.75 per ton higher than last Thursday's bids of 265.25-266.50. Bids for US 2 Yellow Corn truck delivered to the inland feeding areas of Yakima, Washington, and Hermiston, Oregon were 271.50-280.00, 14.00 to 20.50 per ton higher than last Thursday's bids of 251.00-266.00. Corn bids were supported by the moderately higher Chicago July corn futures for the week. Bids for **US 2 Heavy White Oats** for May delivery were 250.00, steady with last Thursday's noon bids.

**WHEAT: Cash closing bids for wheat delivered to the Pacific Northwest in dollars per bushel for nearby delivery.**

**NATIONAL AGRICULTURAL SUMMARY May 7-13, 2012 USDA, NASS Released 5/16/2012**

**Highlights:** Temperatures averaged more than 6°F above normal in California, promoting increased fieldwork and crop development, while readings averaged at least 6°F below normal in portions of New Mexico and Texas. Elsewhere, near-normal temperatures prevailed in much of the U.S. during the week. Precipitation was scarce across much of the West during the week, with total accumulations in many areas less than one-tenth of an inch. Conversely, late-week storms delivered beneficial rainfall to parts of the unusually dry South. Most notably, portions of southern Texas and the central Gulf Coast received more than 4 inches of rain during the week.

**Corn:** Producers had planted 87 percent of the nation's corn crop by week's end, 31 percentage points ahead of last year and 21 points ahead of the 5-year average. Planting was nearing completion well ahead of the normal pace across most of the major producing regions. Following last week's above-average precipitation, drier conditions in the Midwest allowed for a rapid planting pace in many states during the week. Nationwide, favorable growing conditions left emergence advancing at the quickest pace on record. By May 13, emergence had advanced to 56 percent complete, 40 percentage points ahead of last year and 28 points ahead of the 5-year average. By week's end, progress was at least 21 percentage points ahead of normal in 13 of the 18 major estimating states.

**Soybeans:** By May 13, forty-six percent of the soybeans were planted, 29 percentage points ahead of last year and 22 points ahead of the 5-year average. Nearly ideal weather conditions promoted double-digit progress in all estimating states except North Carolina, where a large portion of the soybean crop is grown following the winter wheat harvest. Nationally, emergence advanced 9 percentage points during the week to 16 percent complete by week's end. This was 13 percentage points ahead of last year and 11 percentage points ahead of the 5-year average.

**Winter Wheat:** Heading advanced to 72 percent complete by week's end, 22 percentage points ahead of last year and 26 points ahead of the 5-year average. Above-average temperatures, coupled with beneficial soil moisture levels throughout much of the growing season, promoted a rapid development pace of winter wheat in many regions. This left heading progress at least 40 percentage points ahead of normal in Colorado, Illinois, Indiana, Kansas, Missouri, Nebraska, and Ohio. Overall, 60 percent of the winter wheat crop was reported in good to excellent condition, down 3 percentage points from last week but 28 points better than the same time last year. In Kansas, precipitation remained scarce in the major wheat producing areas of the state.

**Cotton:** By week's end, 48 percent of this year's cotton crop was planted, 10 percentage points ahead of last year and 9 points ahead of the 5-year average. Squaring was evident in a few isolated locations in the South. Persistently dry conditions in Texas portions of the Plains limited cotton planting to irrigated fields

**NATIONAL AGRICULTURE SUMMARY** (continued): during the week; however, land preparation and chemical applications continued. Beneficial rainfall improved cotton condition in the remaining areas of the state.

**Sorghum:** Thirty-eight percent of the sorghum crop was planted by May 13, eight percentage points ahead of last year and 9 points ahead of the 5-year average. Planting in Kansas was steady during the week, with overall progress ahead of the normal pace, while above-average rainfall in southern Texas benefited the growing sorghum crop.

**Rice:** Nationally, 80 percent of the rice crop was seeded by week's end, 15 percentage points ahead of last year and 3 points ahead of the 5-year average. In California, many producers were just beginning to seed their crop. Adverse weather conditions earlier this spring had held planting progress 17 days behind normal. By May 13, seventy-three percent of the nation's crop had emerged, 24 percentage points ahead of last year and 15 points ahead of the 5-year average. With 90 percent or more of the Delta rice emerged, producers were busy applying fertilizer and herbicide to fields. Overall, 71 percent of the rice crop was reported in good to excellent condition, up 5 percentage points from last week and 17 percentage points better than the same time last year.

**Small Grains:** Oat producers had seeded 97 percent of this year's crop by week's end, 27 percentage points ahead of last year and 11 points ahead of the 5-year average. With beneficial weather conditions evident in many regions, emergence advanced 10 percentage points during the week to 88 percent complete by May 13. This was 35 percentage points ahead of last year and 20 points ahead of the 5-year average. With activity limited to Iowa, Ohio, and Texas, 36 percent of the oat crop was headed by week's end. This was 3 percentage points ahead of both last year and the 5-year average. In Texas, harvest for grain was just beginning in some areas with above-average yields reported, while many other producers were baling or green chopping their oat crop to help boost forage supplies depleted by ongoing dry conditions and limited pasture grass availability. Overall, 75 percent of the oat crop was reported in good to excellent condition, unchanged from last week but 23 percentage points better than the same time last year. Ninety-three percent of the barley crop was seeded by May 13, forty-seven percentage points ahead of last year and 25 points ahead of the 5-year average. With nearly a week of days suitable for fieldwork, producers in North Dakota seeded 20 percent of their crop during the week. This left North Dakota's overall progress 44 percentage points ahead of normal. Nationally, emergence advanced rapidly under mostly above-normal temperatures. By week's end, 56 percent of the barley crop was emerged, 36 percentage points ahead of last year and 21 points ahead of the 5-year average. Spring wheat producers had seeded 94 percent of this year's crop by week's end, 61 percentage points ahead of last year and 30 points ahead of the 5-year average. Seeding remained well ahead of normal in all major estimating states except Washington; however, improved weather and field conditions provided an increased number of days for producers in the state to complete fieldwork in recent weeks. Nationally, emergence advanced to 68 percent complete by May 13, fifty-eight percentage points ahead of last year and 36 points ahead of the 5-year average.

**Other Crops:** Aided by mostly sunny skies, peanut producers in the major estimating states planted 12 percent or more of their crop during the week. By week's end, 52 percent of the nation's crop was in the ground, 20 percentage points ahead of last year and 21 points ahead of the 5-year average. Above-average rainfall in portions of Georgia—the largest peanut producing state—helped to improve soil moisture, and producers planted 21 percent of their crop during the week. By May 13, sunflower producers had planted 8 percent of this year's crop, 7 percentage points ahead of last year and 5 points ahead of the 5-year average. Planting was most advanced in North Dakota, where recent weather conditions allowed for rapid fieldwork, but left some portions of the state in need of moisture.

### **INTERNATIONAL WEATHER AND CROP SUMMARY NOAA/USDA JOINT AGRICULTURAL WEATHER FACILITY**

**Washington, D.C.**

**May 6-12, 2012**

**Released 5/16/2012**

**EUROPE:** Wet weather across Europe continued to improve winter crop prospects.

**FSU-WESTERN:** Dry, warmer-than-normal weather accelerated winter crop development but increased evaporative losses in southern wheat areas.

**FSU-EASTERN:** Drier weather allowed producers to resume fieldwork following last week's rainfall.

**MIDDLE EAST:** Widespread showers and thunderstorms favored winter crops in Turkey.

**NORTHWEST AFRICA:** Sunny skies accelerated winter crop maturation and early harvesting.

**SOUTH ASIA:** Pre-monsoon showers continued in eastern and southern India, while hot, dry weather prevailed throughout the remainder of India and into Pakistan.

**EAST ASIA:** Heavy showers moved through southern China, maintaining abundant moisture supplies for crops.

**SOUTHEAST ASIA:** With the onset of the monsoon and northward transition of the ITCZ, increasing moisture supplies encouraged rice transplanting across Indochina and the western Philippines.

**AUSTRALIA:** Dry weather discouraged widespread winter crop planting in southeastern Australia, while showers in Western Australia benefited winter grains and oilseeds.

**ARGENTINA:** Warm weather hastened summer crop maturation, but locally heavy rain slowed harvesting in and around Buenos Aires.

**BRAZIL:** Beneficial rain continued in key southern production areas of secondary (safrinha) corn.

**MEXICO:** Seasonal rains returned to corn and sugarcane areas along the eastern Gulf Coast.

**CANADIAN PRAIRIES:** Conditions favored spring grain and oilseed planting, although freezing temperatures limited early development.

**EASTERN CANADA:** Seasonal warming led to rapid development of winter grains and pastures.

**BRAZIL:** After more than a week of warm, sunny weather, a cold front brought scattered, locally heavy showers to southern Brazil. Rainfall totaled more than 25 mm over the main farming areas of northern Parana and in neighboring locations of Mato Grosso do Sul and Sao Paulo; while timely for secondary (safrinha) corn and emerging to vegetative winter wheat, the moisture likely caused additional disruptions to the sugarcane harvest. Rio Grande do Sul, however, received only scant rain (less than 5 mm), and moisture remained limited for germination and establishment of winter wheat. Prior to the onset of the rain, weekly average temperatures were more than 2°C above normal, with highs reaching the middle and upper 20s (degrees C) on a daily basis, aiding crop development after last week's rain. Cooler conditions followed the frontal passage, but temperatures stayed well above freezing.
