RE: USDA-National Organic Standards
Docket# TMD-94-00-2

Sirs:

I am appalled by the current proposed organic standards. Please do not attempt to redefine what is natural for me. It is my belief that evolution is natural; genetic engineering is not. Animals grazing and foraging are natural; factory farming - i.e. animals confined and fed by automation are not. Manure and compost are natural if the animals and plants are naturally raised; toxic sludge is not.

It is not natural for a herbivore to consume it's relatives flesh, do not allow my food to be irradiated by anything other than the sun; that is natural.

Please do not allow genetic engineering, factory farming, toxic sludge, animal cannibalism or food irradiation in organic farming procedures.

I will not purchase foods labeled organic under the current proposed national standards.

Thank you for your time,
Sincerely,
