**Subject:** Comments for our petition of urea.

**Importance:** High

Dear Mrs Benham,

In our Petition For the Inclusion of Urea to the National Organic Program's (NOP) National List of Allowed and Prohibited Substances, we don't explain clearly inside which kind of traps we use the water solution of urea and how the fruit flies are killed. So we would like to inform you that the use of urea solutions may be used in any kind of traps with restricted evaporation and volatilization surface and that the trapped insects are killed simply by drowning in the traps solution. The date of the NOSB meeting at which urea will be evaluated is scheduled for April 28-30, 2004, in Chicago, IL.

Yours sincerely,  
Nick Stavrakis
