Dry whey prices moved lower on the top of the price range and top of the mostly series this week. Some preferred-brand, single-spot-load trades, which have kept the top of the range intact over multiple recent weeks, were not reported this week. Additionally, the active trading pricing window has shifted from the low-\$.40s to the middle/upper-\$.30s. Some processors say they are not seeing inventory levels rise compared to previous months, but market pressures have pushed them to make necessary adjustments in order to move volumes. End users say offers are steadily incoming. Some are still finding values on high-protein blends, nonetheless dry whey trading activity was somewhat busy this week. Animal feed whey trading was quiet, comparatively, but steady when compared to feed whey activity in previous weeks.
