Direct Hay Weighted Average Report for week ending 3/1/2024

Volume			
	This Week	Last Reported (2/19/2024)	Last Year
Tons:			
Hay	19159	16882	17372
Straw	100	140	280
Total	19259	17022	17652
Bales:			
Hay	376	399	194
Straw	91	91	50
Total	467	490	244

Please Note: The above volumes (tonnage, acres, and bales) listed on this USDA LPGMN report are for confirmed trades only, it does not include estimated volume (tonnage) for bids or offers to the trade.

Compared to the last report, demand picked up a bit for the southwest and south-central regions and remained slow for the rest of the state.

Grinding alfalfa prices remained mostly steady overall but did fall again in the southwest. Sellers are still looking to clean out their barns, while buyers are still in the driver's seat. Farmers are busy in the fields applying fertilizer and working the soil, getting ready for planting season. According to the U.S. Drought Monitor for February 27th, daily high temperatures reached into the 80s F some days in Kansas. Weekly temperatures averaged 10 to 20 degrees above normal across most of the region, increasing evapotranspiration (ET). The above-normal ET had little effect on vegetation, as vegetation is still dormant, but soil temperatures were well above freezing in southern parts of the region and the high ET helped to dry soils. Abnormally dry conditions expanded in eastern Kansas where recent precipitation has been low and soils were drying. The categorical percent area for abnormally dry conditions (D0) increased to 24%, moderate drought (D1) remained near 26%, severe drought (D2) remained just over 2%, and no extreme drought (D3) or exceptional drought (D4) was recorded.
