

# Egg Markets Overview

A weekly publication of the USDA AMS Livestock and Poultry Program, Livestock, Poultry, and Grain Market News Division

June 06, 2025

Negotiated wholesale prices for graded loose caged eggs are firm to higher on moderate to good demand for mostly light offerings and mostly moderate supplies. Trading is moderate. Wholesale prices for national trading of trucklot quantities of graded, loose, White Large shell eggs increased \$0.11 to \$2.63 per dozen with a steady undertone. The wholesale price on the New York market for formula trading of Large cartonized shell eggs delivered to retailers held steady at \$3.00 per dozen with a steady undertone. In the major Midwest production region, wholesale prices for Large, white, shell eggs delivered to warehouses declined \$0.42 to \$2.89 per dozen with a steady undertone while the price to producers for Large cartonized shell eggs fell to \$2.71 per dozen. The California benchmark for Large shell eggs declined \$0.55 to \$3.49 per dozen with a steady undertone. Delivered prices on the California-compliant wholesale loose egg market gained \$0.31 to \$2.79 per dozen with a steady undertone. Interest is moderate for mostly light offerings and moderate supplies.

Shell egg demand over the past week was lackluster and well below where it has been measured in the past headed into June. Much of this can be attributed to the record-high retail price levels from earlier this year which, while now sharply lower, remain at historically high levels – at least when compared to consumer memory. While grocers have been cautiously bringing price levels to consumers down, supply remains the primary obstacle. As of this week, losses of table egg layers in U.S. flocks from highly pathogenic avian influenza (HPAI) number over 36 million or about 5% of the flock size on January 1 and this was following the loss of 40 million birds in 2024 – half in the final quarter of that year alone. At current lay rates, this translates to a 5% deficit in egg production for this week compared to a year ago – a testament to the industry's resilience given the sheer scope of losses from HPAI over the past two years. However, HPAI persists with major outbreaks occurring in Arizona over the past two weeks, enough to give dairycase managers sleepless nights. Things are looking up this week as demand for carton stock is on the rise along with shell egg promotions at retail outlets at some of the best average ad prices in months. Egg product manufacturers are seeing the rise in carton demand as spot market offerings for breaking use have declined considerably, leading some to slow production lines following several weeks of strong output. Most are now content to work from owned production and stocks and wait out the carton run.

Overall feature activity for shell eggs slows from last week with conventional caged and non-organic cage-free types accounting for the largest share. Features for conventional caged eggs rises and accounts for half of all ads this week and the average ad price decreases \$0.65 to \$3.34 per dozen. Features for UEP-certified cage-free shell eggs falls off with a \$0.42 rise in the average ad price to \$4.66 per dozen on limited offerings of white-shell stock. Activity for free-range, non-organic types increases this cycle with some limited features for pasture types. Featuring of organic shell eggs drops off this cycle.

The overall shell egg inventory increased just over one percent and the national inventory of Large class shell eggs rose 1.5%. Stocks of Large shell eggs in the key Midwest production region increased 12% as movement into retail channels slowed. The inventory

## This Week's Retail Large Shell Egg Feature Summary

Advertised Prices to Consumers at Major Retail Supermarkets

	White-Shell		Brown-Shell	
	Activity	Price	Activity	Price
<b>Caged</b>				
conventional	315	3.34	--	--
nutritionally-enhanced	38	3.99	--	--
<b>Cage-Free - Non-Organic</b>				
barn/aviary	65	4.66	--	--
free-range	--	--	134	4.37
pastured	--	--	31	7.99
<b>USDA Organic</b>				
organic	--	--	--	--
free-range	--	--	15	6.49
pastured	--	--	28	9.37

Includes 12 and 18 packs combined; prices weighted by store count.

share of Large class shell eggs was about unchanged at a 52% share of all shell egg stocks on inventory at the start of the week. Stocks of cage-free eggs increased 6% percent as features from the prior cycle expired. Stocks of nutritionally-enhanced eggs drew down just over 8.5% to support the most recent round of retail features. The inventory of organic shell eggs rose just over 8.5% as interest waned in the short-term while the breaking stock inventory gained 4% as breakers took advantage of a slowing carton trade to add to their stocks even as they maintained full line speeds. Total estimated table egg production was unchanged from last week but down 2% from last year to a year-to-year deficit the equivalent of 10.5 million cases in total.

The average national wholesale price for breaking stock declined \$0.01 to \$2.01 per dozen with a steady undertone. Demand is in a full range for light, to at times moderate, offerings. Supplies are moderate but declining on moderate to, at times, active trading Schedules are mixed. The volume of eggs processed last week was down a half percent and the share of weekly table egg production was down slightly to just over 33%. Cage-free stock accounted for 34% of eggs processed last week, a 2% percent increase in share. Production of whole egg decreased 5% as the focus shifted to egg components with whites up just over one percent and yolks nearly 1.5%. Dried egg production increased 17% and the production of inedible egg was down 8%. Breaking yields without inedible declined over a full pound to 40.83 pounds per case broken.

Wholesale prices for certified liquid whole eggs are lower with a steady to weak undertone Demand is moderate to good for mostly light offerings and light to moderate supplies. Trading is moderate to active. Wholesale prices for frozen whole eggs are down \$0.20 from the last test at \$2.80 per pound while prices for frozen whites are down \$0.05 to \$2.35 per pound. The undertone is weak with a full range of demand. Offerings are light , supplies are light to moderate and trading is moderate. Prices for dried eggs remain too few to report with the price of dried whole egg last quoted at \$25.00 per pound, dried yolk at \$21.00 per pound, and dried albumen at \$30.00 per pound. The undertone is generally weak with light to moderate demand. Offerings and supplies are light to very light and trading is slow to moderate.

According to NASS, the April monthly volume of frozen eggs in storage increased one percent from March but was 51% below the prior year. Stocks of whole frozen egg increased 13%, 52% below last year and the share of whole egg stocks gained 5% to a 41% share of total frozen stocks. Stocks of frozen yolk increased 47% but were 50% of the level from last year. Frozen egg whites declined 21% to a level 64% below last year. Stocks of unclassified eggs declined 5% from last month and were down 48% from last year. The share of unclassified frozen stocks declined 3% to a 50% share of total frozen stocks.

As of May 1, 2025, the estimated U.S. non-organic commercial cage-free table egg flock increased 4% to 109.3 million, 38% of the current U.S. table egg flock. This represents a 7% increase over the number of non-organic, cage-free table egg layers in May 2024 and a 4.5% increase in the share of the total commercial table egg flock. The USDA certified organic table egg layer flock in May was down 3% from April, about a half million birds less and on par with the flock size one year ago. The ratio of caged to cage-free layers currently stands at 55/45 as compared to 56/44 last month and 60/40 last year.

2025 Commercial Table Egg Flock HPAI Losses as of June 06, 2025

An additional outbreak of highly pathogenic avian influenza (HPAI) was reported over the past week in a commercial table egg flock of 1.4 million in Arizona. In 2025 to date, based on the latest data from APHIS, HPAI in commercial table egg layer flocks have resulted in the depopulation of 36.3 million birds. To date, USDA APHIS has confirmed 44 outbreaks in layer flocks in 10 states (AZ, CA, IA, IN, MO, NC, OH, PA, SD, and WA). The 36.3 million birds lost included 21.6 million (59.4%) in conventional caged systems and 14.8 million (40.6%) in cage-free systems. The 26,100 head previously reported as organic is no longer being reported by APHIS and has been removed. These losses represent 11.8% of the conventional caged layer flock and 14.6% of the non-organic cage-free flock on January 1, 2025.

Compared to January 1, the caged flock on May 1 was down 12.8% while the cage-free flock increased 8.3%. The organic table egg flock is down 2.5%. As of the end of May, nearly 60% of layer losses have occurred in caged systems. To date, Ohio has borne the brunt of 2025 outbreaks with 13.5 million (37%) of losses occurring in Ohio flocks.

Share by State of Total 2025 Commercial Table Egg Layer Losses

The overall export volume of shell egg and egg products in April decreased 31 percent; 29 percent below the year ago level as a larger share of highly pathogenic avian influenza (HPAI)-reduced production was channeled to the domestic market. The overall value for the month declined 45 percent but was 74 percent over last year, reflecting this year's record-high prices for many shell and egg products. The export volume of table shell eggs declined 14 percent from last month but was 45 percent over last year when domestic output was reduced due to HPAI outbreaks. The overall value of table egg exports decreased 51 percent for the month and the average price per dozen exported was down 43 percent (from \$6.56 to \$3.71 per dozen). Canada remains the primary U.S. export market for table shell eggs with 84 percent of 2025 shipments to date. The Bahamas was a distant second with 4.5 percent of exports with the Turks and Caicos closing in with 4 percent of volume. The U.S. exported table shell eggs to 16 trade partners in April - 23 for the year to date.

The volume of all egg products exported in April decreased 48 percent; 62 percent below year ago levels while the total value of all egg product exports was down 13 percent. Exports of liquid egg products declined 42 percent for the month but with a 22 percent increase in value. The volume of exported liquid whole egg increased 56 percent as a number of destinations increased shipments in April. The export volume of liquid yolk declined 38 percent for the month as Japan and Mexico, the two largest destinations, reduced shipments. Exports of liquid albumen dwindled by 88 percent as Ireland stepped out following their significant volume of shipments last month.

Exports of dried egg products in April decreased 51 percent for the month and 66 percent from last year. Total value of dried egg product exports decreased 55 percent. Exports of whole dried egg declined 38 percent for the month as Canada cut shipments in half. Exports of dried yolk decreased 76 percent big players Canada and Japan took no shipments. Dried albumen exports were virtually nonexistent with a very limited volume divided among three small destinations.

Overall imports of shell and egg products rose 27 percent in April with a 61 percent increase in value driven by continued efforts to supplement shell and egg products in the domestic market due to reduced production resulting from persistent outbreaks of HPAI in the first two months of the year. Imports of table shell eggs increased 12 percent as South Korea joined Turkey, Mexico, Brazil, and Honduras in shipping shell eggs to the U.S. Imports of liquid egg products decreased 15 percent for the month; 18 percent below year ago levels. Imports of liquid whole egg declined 15 percent as Canada and China both slowed shipments enough to offset increases by other partners. Imports of liquid yolk decreased 72 percent with Canada only sending a third of the volume in March. Imports of liquid albumen rose 16 percent – all to Canada.

Imports of dried egg products bounced back with a 347 percent increase over last month's volume led by dried yolk and albumen. Imports of whole dried egg gained 28 percent as Japan stepped up shipments just as Canada cut theirs. Imports of dried yolk rose 3,000 percent with the largest monthly volume since November 2015 and all from the Baltic State of Lithuania. Imports of dried albumen saw a near 800 percent increase with Lithuania, once again, the source.
