Volume XLII – Number 4

Issued Monthly

April 26, 2022

HONEY MARKET FOR THE MONTH OF MARCH 2022

IN VOLUMES OF 10,000 POUNDS OR GREATER UNLESS OTHERWISE STATED

Prices paid to beekeepers for extracted, unprocessed honey in major producing states by packers, handlers & other large users, cents per pound, f.o.b. or delivered nearby, containers exchanged or returned, prompt delivery & payment unless otherwise stated.

- REPORT INCLUDES BOTH NEW AND OLD CROP HONEY - (# Some in Small Lot --- +Some delayed payments or previous commitment)

DAKOTAS

| | | | | |
|---------|-------------------|--------|---|--------|
| Alfalfa | White | \$2.20 | | |
| Clover | White | \$2.20 | - | \$2.60 |
| Clover | Extra Light Amber | \$2.60 | | |

FLORDIA

| | | | | |
|------------------|-------------------|--------|--|--|

COLONY, HONEY PLANT AND MARKET CONDITIONS DURING MARCH 2022

APPALACHIAN DISTRICT (MD, PA, VA, WV): March came is a little warmer than expected and colonies were able to get out a fly. There was a little pollen gathering as red maples, witch hazels, and spring ephemerals were blooming. The warmer days occasionally interrupted by cold, windy days resulted in a push for orchards and by the end of the month apricots, plums and peaches were blooming. Cold weather interrupted this pre-mature warm weather dipping down into the upper twenties on the last weekend in March. For the most part colonies were healthy, but there were several reports of beekeepers reporting losses.

ALABAMA: No report issued.

ARIZONA: Arizona honeybees returned home in March after pollinating California almond orchards. Alfalfa conditions were rated mostly excellent to good, depending on location last month, with harvest taking place on more than three-quarters of the alfalfa acreage across the state. For the entire state,

pasture and range conditions were rated mostly poor. By March 22, 2022, moderate dryness was reported in 75 percent of the state based on the U.S. Drought Monitor's indications: No considerable precipitation was reported in the southeastern part of the state. Hay and alfalfa crop growth improved in the northeastern part of the state. In the southeastern part of the state, cotton planting has started, but producers are taking into consideration below normal precipitation.

Range conditions have been also affected due to low precipitation rates. Lower temperatures were reported in the north central and northeastern part of the state, with temperatures below 50 degrees Fahrenheit.

ARKANSAS: During the month of March temperatures were well above normal across most of the state. Precipitation during March was above normal across the northern part of the state. The southern part of the state was seeing unusual below normal conditions. According to the U.S. Drought Monitor website, Arkansas had normal soil moisture across the Northern part of the state and moderate drought conditions across the central and southern part of the state for March. No supply chain issues were reported. Too few prices exist to establish a current market price for wholesale white honey.

CALIFORNIA: Honey markets could rise ahead, but there could be less need for hives to pollinate almond orchards next season, California beekeepers say. "Last month our bees showed very little buildup and more colony losses," a beekeeper said. "Almond bloom seemed to have killed a lot of bees as we saw an unusual amount of colonies either robbed out or just dwindled to very weak colonies in the weeks that followed. We have seen about a 30 percent loss since almonds"

Plus, besides fewer bees, dry conditions have limited forage for the bees. "We have been getting some rain, but too little, too late to do us much good," he said. "We depend on the eucalyptus in our area, and those trees need rain much earlier to set blooms." Another beekeeper reported similar issues. Though bees collected plenty of pollen and some nectar from almond trees, frost damaged blooms and limited other plants that the bees could work. "Things are not looking great as far as good nectar and pollen sources for the bees at this point," he said. "Nearly three months of dry weather in most of California has put a damper on honey prospects for 2022. We are praying for some rain during the remainder of this spring's 'rainy season' so that there may possibly be some late summer or fall forage for the bees. Of course, additional snow would be helpful for surface water to irrigate crops this summer as well."

Prospects for the honey crop look bleak, which could keep the honey crop at higher prices, but overall volume will be limited. Though there seemed to be plenty of hives going into almond pollination, limited water and higher costs for fertilizer could limit almond acreage next season and the chances for hives to pollinate orchards.

In late March, beekeepers continued to make divides and requeen colonies. "Bees were removed from almond orchards and either transported out of state or to locations with some pollen and maybe nectar in California," a beekeeper said. "Many hives were split, and nucs were established in order to make up winter dead outs."

On a positive note, one beekeeper noted that Canada was considering reopening its markets to California package bees, which are caged shook bees with new queens. Those are sold by the hundreds of thousands to beekeepers to start or replace colonies each spring. "It was a huge business for California beekeepers to sell package bees to Canadians every spring for many years, until Canada closed the border when tracheal mite showed up," a beekeeper said. "That crashed the California package producers. Since then, beekeepers in Alberta have been begging for the import of packages to restart."

FLORIDA: Temperatures and precipitation amounts were about normal for the month. Several strong lines of thunderstorms with high winds and even a few tornadoes swept through the state late in the month. Temperatures, especially at night, were also much cooler than normal for a few nights. Orange blossom honey production appears to have been severely cut because of bloom loss due to the high winds and the cooler temperatures. Beekeepers were dealt a double blow with a shortened California almond pollination season and what may prove to be very low orange blossom honey production. The long term affects, if any, on such things as gallberry, palmetto and Tupelo remain unknown. They were all just beginning to bloom in late March. Watermelons and cantaloupes in Central Florida were being pollinated by Florida bees. Some of these bees were returning from California and some had finished pollination Florida blueberries, while others had remained in the state specifically for pollination work. Other bees returning from California were being sent to some of the northeastern states to pollinate such crops as blueberries, cucumbers, and squash. There was very little honey produced in the state during the month. Stored supplies were very light with good demand on any honey available for sale.

GEORGIA: Plenty of cold and wet freezing temps early in the month and wind toward the end of the month kept beekeepers busy trying to get into the hives and see the progress of the bees. Most are busy purchasing or preparing bees for sale and getting the numbers back up after winter. Finally, folks are meeting in person again and plans for gatherings are taking place now. Weather is now a huge concern to ensure a good spring flow and plenty of feed should be available with the warmer days just around the corner.

IDAHO, COLORADO, UTAH: During the month of March temperatures were normal across all Western and Eastern Idaho. Utah had temperatures that were normal across the entire state. Colorado had temperatures that were normal across the entire state. Precipitation during March was average for Utah. Precipitation was far below normal for the whole state of Idaho. Western Colorado saw precipitation that was below normal. Eastern Colorado saw precipitation that was more than normal for March.

According to the U.S. Drought Monitor website, in March Idaho had moderate dry to severe drought soil with small patches of no dry soil. Utah is currently under Severe to extreme drought conditions with most of the state under severe drought. The whole state of Colorado is between Moderate dry to extreme drought with most of the state under Moderate to severe drought.

Demand for Locally sourced honey has been good throughout all three states. Producers are keeping up with the demand for local honey in all three states so far. Prices for the month of March were between \$2.25 and \$3.50 per pound with a mostly price of \$2.25-\$2.75 for Idaho, Colorado prices are \$2.30-\$2.40 per pound for local honey. Prices for locally sourced honey in Utah are average \$2.20-\$2.55 per pound with mostly \$2.27-\$2.36.

ILLINOIS: The weather for March has been volatile. The temperature overall has been slightly above the norm but with many unseasonably cold days at the end of the month and with lots of rain. Most beekeepers report their bees in good condition. The bees are trying to rebuild their population. They are feeding on Maple, Willow and dandelions. Demand for honey is good at the retail level and demand was fairly good at the wholesale level. Prices are generally unchanged.

INDIANA: The weather has fluctuated from warm to cold for March with temperatures averaging slightly above average and with an above average amount of rain. Most beekeepers report that some of their bees have survived the winter in good condition, while others report that their bees have not

survived. Beekeepers also report that their bees are feeding on Maple and Willow trees as they bring nectar back to the hives. Demand for honey is good at the retail level and fairly good at wholesale level. Prices are generally unchanged.

IOWA, KANSAS, MISSOURI, NEBRASKA: No report issued.

KENTUCKY: The month of March came into Kentucky like a proverbial lamb, with mild temperatures and plenty of spring flowers in bloom. However, it did not stay that way, with snow, chillier-than-normal temperatures, and high winds punctuating the month's conclusion. Hives were toppled over, and the swarm season seems to be a bit subdued for this month. Supply chain issues are easing for some bee supply companies, too, while demand for all products remains strong. The Kentucky State Beekeepers Association was busy planning for an in-person Spring Meeting while many small local bee associations began resuming regular in-person meetings for the year. The Kentucky Queen Bee Breeders Association hosted a series of Zoom workshops all season and spent some of March planning an in-person field event in Ohio. Although some beekeepers had good overwintering success, many associations reported high losses of hives among their members, especially among people who have had not a lot of experience. The reasons were predictable: some hives simply did not have enough honey to sustain them after the first two months of snowy weekends, bear/raccoon damage, and wax moth impacting hives that were weak (perhaps went queenless or high varroa mites). However, excitement is building for field days, the 2022 KY State Fair, USDA sampling, and honey harvest.

LOUISIANA: During the month of March temperatures were well below normal across most of the state. Precipitation was normal to slightly below normal across the state. According to the U.S. Drought Monitor website, Louisiana had moderate drought conditions to areas of extreme drought conditions across the Southern part of the state for March.

By the end of the month things were starting to green up and a few blooms were poking out around the state. No supply chain issues were reported. Too few prices exist to establish a current market price for wholesale white honey.

MICHIGAN: No report issued.

MINNESOTA: During the month of March temperatures were a little below normal across the entire state. Precipitation in March was a little more than average for the North end of the state and precipitation was below normal for the south end of the state of Minnesota. According to the U.S. Drought Monitor website, in March northern Minnesota had no dry soil to abnormally dry soil and the southern part of Minnesota has no drought soil conditions. Supply for Minnesota honey is starting to look slightly short this year for locally sourced honey, but producers seem to be keeping up with the demand so far.

Prices per pound in Minnesota were \$2.25-\$5.00 with mostly price of \$2.27-\$3.00 for locally sourced honey for the month of March.

MISSISSIPPI: Beekeepers have been splitting up hives and purchasing Queens to increase hives and getting bees out to get a good Spring flow this year. The weather has been either a blessing or a curse this year with lots of wind, rain, and freezing temps in March. Beekeepers are optimistic that plenty of feed will be available, and quality is good as well as a nice color.

MONTANA: No report issued.

NEW ENGLAND: No report issued.

NEW YORK: No report issued.

NORTH CAROLINA: Temperatures in North Carolina were above normal in March with a statewide average temperature of 53.4°F; precipitation was below normal, especially in the Coastal Plains region. Overall statewide soil moisture levels were rated 5 percent very short, 17 percent short, 74.5 percent adequate, and 3.5 percent surplus the week ending April 02. The North Carolina Drought Management Advisory Council reported 12 counties as being abnormally dry, 22 counties as experiencing moderate drought conditions, and 4 counties as experiencing severe drought conditions.

The warmer, dryer weather allowed for increased brood rearing and, unfortunately, higher mite counts. Swarming in the southeastern region of the state was reported to apiary inspectors; some beekeepers began splitting hives to reduce the risk of swarming. The major honey flow is expected mid-April, but bees could be seen working Blackberry, Dandelion, and Dead Nettle in the Coastal Plains region. Red Maple and Sugar Maple were in bloom in the Piedmont and Mountain regions. Bees could also be seen working ornamental evergreen shrubs such as Camellias. Commercial pollinators began moving hives back to North Carolina, primarily to the eastern part of the state for blueberry pollination.

Demand for "local" honey was good. Retail honey prices at the Raleigh State Farmers' Market were generally unchanged: \$7.00-\$8.00 per 8-ounce jar, \$12.00-\$13.00 per 16-ounce jar, \$20.00-\$22.00 per 32-ounce jar, and \$18.00 per 44-ounce jar; processed honey, creamed, was \$10.00 per 16-ounce jar. Prices at the Piedmont Triad Farmers' Market in Greensboro were also unchanged at: \$8.00-\$12.00 per 8-ounce jar, \$12.00-\$18.00 per 22-ounce jar, and \$20.00 per 32-ounce jar.

NORTH & SOUTH DAKOTA: Winter precipitation continues to help with topsoil moisture. As bees in California finished with the almond crop they were relocated to other crops in other locations. NASS released statistics for 2021. The total number of colonies was 765,000 up 3.4% from 2020. Yield per colony was 52 lbs., down 18 lbs. from 2020. Total production for 2021 was set at 40,575,000, down 24% from the previous year. The total crop value for 2021 was set at \$90.1M, up slightly from \$87.8M in 2020.

OHIO: No report issued.

OKLAHOMA: During the month of March temperatures were slightly below normal across most of the state. Precipitation was slightly below normal across the state. According to the U.S. Drought Monitor website, moderate to areas of exceptional drought conditions covered the state. Too few prices exist to establish a current market price for wholesale white honey

OREGON: No report issued.

SOUTH CAROLINA: No report issued.

TENNESSEE: Tennessee Beekeepers are reporting high losses, mostly due to viruses and starvation. Recent cold snaps have resulted in heavy losses due to starvation in colonies that had brood areas too large for the smaller cluster to keep the brood warm while still accessing nearby food stores. Red maples are reblooming in some areas across the state after freezing out earlier in the year. Redbud and elm are in full bloom. Forsythia, dandelions, speedwell, henbit and deadnettle are all in bloom and producing nectar and pollen. Farmers markets are opening across the state and beekeepers should be out in force selling their honey.

TEXAS: During the month of March temperatures were below normal across most of the state. Precipitation during March was well below normal. According to the U.S. Drought Monitor website, soil moisture conditions for March showed soil moisture conditions from moderate drought to areas of exceptional drought across the Western part of the state. Overall March was very dry compared to an average March in Texas.

March did warm up enough to get the wildflowers started. The dry conditions making them sparse at best. A few showers scattered around the state had things starting to green up. As of the end of March, the mesquite trees in Central Texas had not started to bud which usually means that winter is not completely over.

Truck availability remains an issue that everyone is focused on. Too few prices exist to establish a current market price for wholesale white honey.

WASHINGTON: March saw mixed weather with warmer dry spells. Year to date precipitation was generally average for most areas in Central and Eastern Washington, the snow-water equivalents are still generally low for all areas East of the Cascades. Some additional snow later in the month helped slightly. NASS released statistics for 2021. The total number of colonies was 96,000, up slightly from 2020. Yield per colony was 32 lbs., down 5 lbs. from 2020. Total production for 2021 was set at 3,072,000, down 15.3% from the previous year. The total crop value for 2021 was set at \$7.7M, down from \$9.1M in 2020.

WISCONSIN: The temperatures for March have been near average with one very warm day and with twice the average precipitation. Beekeepers report most hives were lost over the winter. Beekeepers are trying to rebuild their populations with purchased packages. Beekeepers continue to supplement feeding with sugar cakes above the brood. Demand for honey is good at the retail level and demand was weak at the wholesale level. Prices are generally unchanged.
