Current National Drought Summary (April 8, 2025)

This U.S. Drought Monitor (USDM) week saw widespread improvement in drought-related conditions across areas of the South, Southeast, and Midwest, where a series of strong storms delivered heavy rainfall, damaging winds, and severe flooding. The multi-day storm event saturated soils leading to inundation of rivers, and severe flooding in low-lying areas from Arkansas to Ohio. Storm totals from the multi-day event ranged from 4 to 18+ inches, with the highest accumulations observed across central Arkansas, southeastern Missouri, and western portions of both Tennessee and Kentucky. In addition to heavy rainfall, the storm system sparked dozens of tornadoes as well as strong gusty winds in other areas, causing widespread power outages. In terms of reservoir storage in the West, California's reservoirs continue to be at or above historical averages for the date (April 8), with the state's two largest reservoirs, Lake Shasta and Lake Oroville, at 116% and 120% of average, respectively. In the Southwest, the U.S. Bureau of Reclamation is reporting (April 6) Lake Powell at 33% full, Lake Mead at 34% full, and the total Colorado system at 41% full (compared to 42% full at the same time last year).
