November 7, 2018

Grain and Feedstuffs Market Trend

Compared to two weeks ago: Trade active on moderate demand for feed grade corn and soybeans with light activity on feed grade wheat. Trade inactive on all other organic grains. Bids for feed corn steady to 50 cents lower as buyers take in new crop. Bids for feed grade soybeans steady. No current forward contract activity reported this period but end users are taking in spring contracted grains. Areas that received excessive rainfall are reporting issues of aflatoxin in soybeans and some cases of vomitoxin in corn. Harvest yields are being reported as average to good.

Current National Drought Summary (October 30, 2018)

The U.S. Drought Monitor week ending on October 30, 2018 was marked by several weather events. The first, Hurricane Willa, made landfall as a category 3 storm on Mexico's Pacific Coast just after the cutoff for last week's map (8:00 AM ET, Tuesday). The remnants of this storm brought heavy rain and thunderstorms to Texas, which had already been saturated with excess rain over the last several weeks, and to other states in the southern tier of the country. These rains brought improvements to areas impacted by drought, including the long-term drought areas of Arizona and New Mexico. Moisture from Willa helped fuel the season's first nor'easter, which soaked the Northeast and brought snow to the higher elevations of New England over the weekend, helping to ameliorate drought and abnormal dryness across the regions. Storms also brought precipitation to the Pacific Northwest, the upper Midwest, and the Ohio Valley, bringing drought relief to these areas. Virtually no degradations occurred this week, except for an expansion of abnormal dryness across the Florida Panhandle.
