

REVISION HISTORY for PDP 1994 Public-Domain Database

8/10/2017 Revision: Revised the **1994-1996** and **2001-2002** public-domain databases and data ZIP files to eliminate the long-standing confusion with the Commodity Codes used for canned/frozen Sweet Corn and Sweet Peas. The CS and PS commodity codes had always been shared by canned and frozen samples. We replaced the commodity codes for Sweet Corn (CS) and Sweet Peas (PS) where the Commodity Type is "Canned" (commodity type code CA) with new "CD" and "SD" commodity codes. For historical counting and reporting purposes, it is better to have them separated since we count them as two separate commodities. This also resolved a glitch in the new online PDP Database Search app. With these changes, the "CS" commodity code refers to just Frozen Sweet Corn and "PS" refers to just Frozen Sweet Peas, while the new "CD" commodity code refers to just Canned Sweet Corn and the new "SD" commodity code refers to just Canned Sweet Peas.

Actions:

1) Updated value in COMMOD column of 94SampleData table to "CD" where COMMOD="CS" and COMMTYPE="CA". Changed 273 rows.

2) Updated value in COMMOD column of 94SampleData table to "SD" where COMMOD="PS" and COMMTYPE="CA". Changed 238 rows.

3) Updated value in COMMOD column of 94ResultsData table to "CD" where COMMOD="CS" and COMMTYPE="CA". Changed 16,315 rows.

3) Updated value in COMMOD column of 94ResultsData table to "SD" where COMMOD=" PS" and COMMTYPE="CA". Changed 14,318 rows.

7/20/2016 Revision: Revised the **1994** public-domain database and data ZIP file to change a reported Annotation code in the Results data table/file for a finding that was incorrectly showing as presumptive tolerance violation. In July 2016, while running a multi-year query for presumptive tolerance violations (PTVs), we noticed that the public-domain 1994 database showed one positive detection result for Methamidophos (code 170) in a Green Bean (GB) sample (Sample_PK 3414) where the Annotate code showed as "X" (PTV – Exceeds Established Tolerance), when it should have been null/empty, as reflected in the central 1994 PDP database and published Annual Summary.

Action:

1) Updated value in ANNOTATE column of 94ResultsData table to NULL where SAMPLE_PK = 3414 and PESTCODE = "170" and ANNOTATE="X". Changed 1 row.

5/26/2015 Revision: Revised the **1992-2013** data ZIP files to add tolerance tables for the 1992-2013 surveys to each downloadable ZIP file on the PDP Website. Populated a new ToleranceRef table in each PDPyyyy.mdb database file. Added Excel worksheets for the 1992-2013 tolerance tables into the Ref Tables Excel files included in the ZIP file. The new reference/look-up table holds established EPA Tolerance values for each reported pesticide/commodity pair.

12/10/2008 Revision: Revised the **1992-2006** public-domain databases and data ZIP files to incorporate a primary key value (SAMPLE_PK column) to link the Sample & Results data tables, designed to provide quicker searches and smaller databases. Published the ZIP files that contain the revised 1992-2006 databases along with supporting documentation (instructions, data dictionary, and reference table lists) to the PDP Website.
