**BE Pineapple Production**

Production of BE pineapple with pink flesh has been initiated in Costa Rica. ISAAA (ISAAA, 2017) reports that 25 ha of BE pineapple were planted in 2017. However, BE pineapple does not yet appear to be available for sale in the United States. Yellow flesh pineapple may be presumed to be non-BE pineapple.

**BE Pineapple Food Safety Reviews**

The FDA completed a biotechnology consultation on BE pineapple in 2016 (FDA, 2018).
