April 25, 2012

Understanding this Report P.2

National Overview Maps P. 3-5

Container Availability by Location:

Charleston, SC P.6

Chicago, IL P.7

Cincinnati, OH P.8

Columbus, OH P.9

Dallas, TX P.10

Denver, CO P.11

Houston, TX P.12

Kansas City, MO P.13

Los Angeles/Long Beach, CA P.14

Memphis, TN P.15

Minneapolis, MN P.16

New Orleans, LA P.17

New York, NY P.18

Norfolk, VA P.19

Oakland, CA P.20

Savannah, GA P.21

Seattle, WA P.22

Tacoma, WA P.23

Weekly Container Overview

- On average, the Ports of New York and Long Beach have the most containers available among the 18 locations reported. Availability at these locations is expected to increase over the next 2 weeks, until May 16.
- Availability of 20-ft containers at most locations is expected to rise the most over the next 2 weeks ending May 16. The exceptions include availability at Denver, Houston, New Orleans, Oakland, and Tacoma.
- Refrigerated containers are in greatest supply in New York, Norfolk, Seattle, and to a lesser extent Long Beach.
- Dry 40-ft containers are in greatest supply in New York, Long Beach, Norfolk, Dallas, Chicago, Memphis, and New Orleans this week. Carriers are reporting availability in Oakland and Savannah is particularly low for 40ft standard containers.
- At many of the reported locations, availability of 40-ft high-cube containers is greater than the availability of 40-ft standard containers this week.

Draft Document

USDA is an equal opportunity provider and employer.

Understanding this Report

The weekly Ocean Shipping Container Availability Report (OCSAR) provides a snapshot of container availability for westbound transpacific trade lanes at select intermodal locations around the country. The data presented in this report are gathered from the 10 member carriers of the Westbound Transpacific Stabilization Agreement (WTSA). The WTSA carriers include, APL, COSCO, Evergreen, Hanjin Shipping, Hapag Lloyd, Yang Ming Transport Corporation, OOCL, NYK Line, K Line, and Hyundai Merchant Marine. The following items provide guidance to better understand the information presented within:

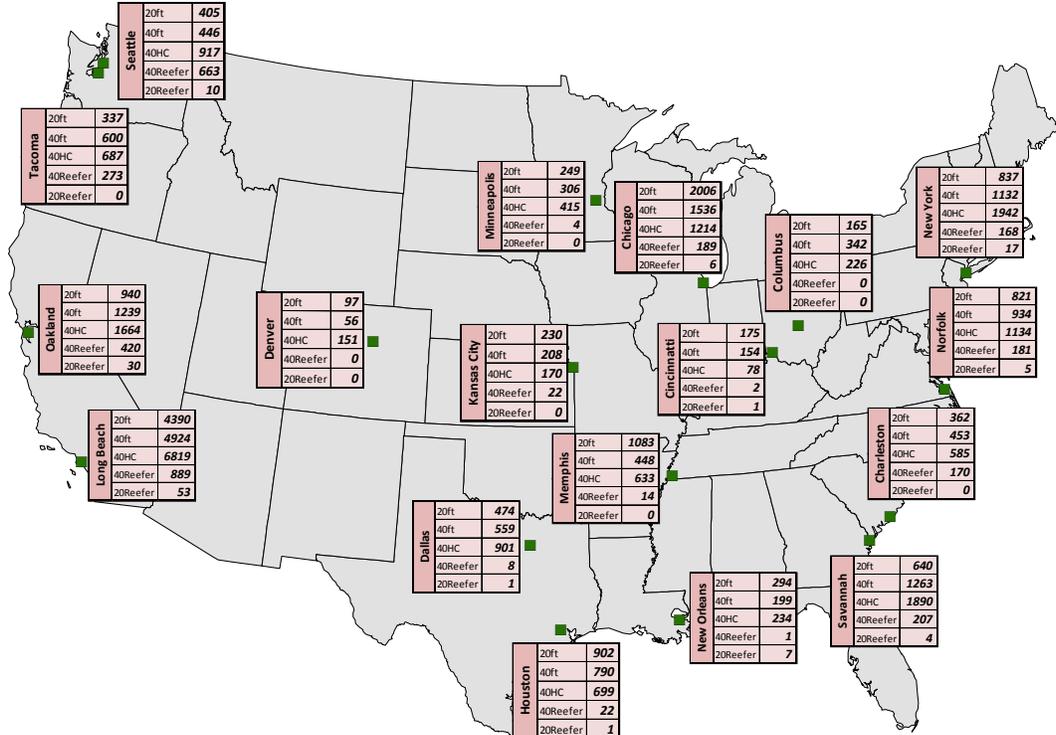

- The data are estimates of container availability per week by the participating carriers. The carriers determine container availability by comparing current supplies at each of the 18 intermodal locations with the demand for these containers based on up-to-date bookings or reservation information in the westbound transpacific trade lane.
- Each week, participating carriers report the estimated number of containers available for the current week (W1) as well as estimates for the subsequent two weeks (W2 and W3).
- Maps on pages 3-5 offer a national overview of weekly container availability, as well as an average of availability over the past 6 months. The weekly national data are derived from the sum of the individual carrier responses at each intermodal location.
- Individual carrier responses are presented by location on pages 6-23 and have been sorted from largest to smallest. Specific carrier identification with the availability data is not provided to maintain carrier confidentiality.
- Carrier responses showing negative numbers, such as -29, should be interpreted as meaning that 29 containers are needed by shippers but the carrier is not able to supply them. A positive number, such as 64, would mean 64 containers are available that are not demanded. An indication of 0 means the carriers have the exact amount of containers needed based on current supply and demand estimates.
- In addition to the weekly container availability data, the participating carriers provide average weekly throughput data for the past 6 months. These data help readers understand the aggregate flow of containers that have moved through the 18 select locations by the 10 participating carriers over the previous 6 months. These data will only be updated every 6 months.
- Availability levels are subject to change, and may be affected by any delays in return of equipment to carriers by shippers or consignees, and by free time restrictions imposed by railroads. Due to the dynamic nature of the container industry, carriers cannot be held responsible for the level of availability at the time of inquiry.
- Data presented in the report do not imply availability of chassis.
- Container availability estimates represent availability for all export cargo, not just agricultural products.
- USDA collects these data on a voluntary basis and cannot be held responsible for the status of container availability when a reader makes inquiry with an ocean carrier. USDA relies on the participating ocean carriers to ensure the data is accurate.
- Terminology:
 - 20ft Dry Container (20ft): A standard shipping container that is 20 feet long.
 - 40ft Dry Container (40ft): A standard shipping container that is 40 feet long.
 - 40ft High Cube (HC): A shipping container which is 40 feet long and 9 feet tall (1 foot taller than a standard 40ft dry container).
 - 40ft reefer: A refrigerated shipping container which is 40 feet long.
 - 20ft reefer: A refrigerated shipping container which is 20 feet long.
 - Chassis: A wheeled frame to which a shipping container can be locked for storage or movement. (Plural chassis)
