SUMMARY: WHAT HAPPENED?

Landed Costs to Mexico and U.S. Border Fell From Fourth Quarter 2023 to First Quarter 2024

Low transportation and landed costs are vital to the competitiveness of shipments of U.S. grain to Mexico and globally. A top importer of U.S. grain, Mexico receives U.S. grain either by cross-border land movements or by sea movements to Mexican ports for inland distribution. This article examines the costs of transporting U.S. grain to Mexico over land to various U.S.-Mexico border locations (land routes) and by sea to Veracruz (water routes), tracking changes over time (table 1).¹ For a table showing quarterly and yearly changes in transportation and landed costs, see [Grain Transportation Report, August 1, 2024](#).

Quarter-to-quarter transportation costs. From fourth quarter 2023 to first quarter 2024 (quarter to quarter), total transportation costs decreased for U.S. corn and soybeans, shipped both by water and land, and for wheat shipped by land.² For the water routes, falling transportation costs reflected falling costs of all modes of transportation. Truck rates dropped partly because of lower diesel prices ([Grain Transportation Report, August 1, 2024 fig. 13](#) and [Grain Truck and Ocean Rate Advisory, first quarter 2024](#)). Barge rates fell because of improved navigation conditions in the Mississippi River System and fewer inspections at the U.S. Gulf. Rail rates (public tariff, plus fuel surcharge) fell partly because of a decrease in fuel surcharges. Ocean freight rates also fell.

¹ Land routes to Mexico previously relied on rail rate data through the border to Guadalajara. However, in January 2022, because of a new Mexican tax, the U.S. railroads stopped publishing tariff rates for the complete “through” shipment from a U.S. origin to a Mexican destination. The railroads reported rates only to the U.S.–Mexico border ([first highlight, Grain Transportation Report, July 4, 2024](#)). Beginning this quarter (and adjusted for first quarter 2023 for comparability), the rail rates shown reflect only the route from the U.S. origin to the border. The total cost of the shipment would include a separate rate obtained from a Mexican railroad (not shown). It could also include additional costs (not shown) of purchasing empty rail cars in the secondary market. Also, please note Missouri has replaced Nebraska in the data, as a representative origin for soybeans exported to Mexico over land.

² Water routes typically involve truck transportation to barge to oceangoing vessel, or else, truck to rail to oceangoing vessel.

Mexico Transport Cost Indicator Report

Year-to-year transportation costs. From first quarter 2023 to first quarter 2024 (year to year), the total transportation costs of shipping U.S. corn and soybeans to Mexico by the water routes fell because of falling truck, barge, and ocean rates. However, the costs of shipping wheat to Mexico by the water and land routes rose, because of higher truck and rail tariff rates. The rising costs of shipping corn and soybeans by land were reflected in higher truck rates.

Quarter-to-quarter landed costs. Quarter to quarter, landed costs fell for all grains shipped by the water and land routes. For corn and soybeans shipped by the water routes, and for all grains shipped by the land routes, lower landed costs reflected a decline in both transportation costs and farm values. However, for waterborne wheat, lower landed costs reflected a drop in farm values that exceeded the rise in transportation costs (table 1 and figs. 1 and 2). The share of landed costs comprising transportation ranged from 11 percent to 27 percent for the water routes and from 12 percent to 27 percent for the land routes.

Year-to-year landed costs. Year to year, landed costs decreased for waterborne corn, soybeans, and wheat, because of both lower transportation costs and lower farm values. For land-route corn, soybeans, and wheat, the decrease in farm values outweighed the increase in transportation costs, causing landed costs to fall.

U.S. Inspections for Exports to Mexico: According to [USDA's Federal Grain Inspection Service](#), the United States inspected 5.1 million metric tons (mmt) of corn, 1.2 mmt of soybeans, and 0.9 mmt of wheat for export to Mexico in first quarter 2024. Quarter to quarter, U.S. inspections for export to Mexico were up 10 percent for corn, down 6 percent for soybeans, and up 41 percent for wheat. Year to year, U.S. inspections destined to Mexico rose 34 percent for corn, fell 6 percent for soybeans, and rose 14 percent for wheat. Lower landed costs for corn and wheat are consistent with quarter-to-quarter and year-to-year increases in corn and soybean shipments to Mexico.

Ocean Freight Rates: Ocean freight rates for shipping bulk grains to Mexico rose from the prior 4-year average. In the first quarter—via 25,000 ton-capacity vessels—the cost of shipping a metric ton (mt) of grain from the U.S. Gulf to Veracruz, Mexico, averaged \$22.22 per mt. This was down 1 percent quarter to quarter, down 1 percent year to year, and up 2 percent from the prior-4-year average. The cost of shipping by the same route in 35,000-40,000 ton-capacity vessels averaged \$19.43 per mt. This amounted to a 2-percent decrease quarter to quarter, 4-percent increase year to year, and 5-percent increase from the 4-year average. Ocean freight rates rose above the 4-year average in response to a strong global demand for bulk shipments and amid logistical challenges in the Panama Canal and Suez Canal.

Railroad: According to USDA's Foreign Agricultural Service, in first quarter 2024, 5.54 mmt of grain and oilseeds were exported to Mexico by land. Exports by land to Mexico are overwhelmingly rail shipments. Land-based exports to Mexico were up 7 percent quarter to quarter, up 6 percent year to year, and up 27 percent from the prior-3-year average.

Because of a Mexican value-added tax (VAT) charged on the Mexican portion of the rail shipment, U.S. railroads report only rates to the U.S. border. Tariff rail rates to the border per grain car averaged \$4,920 (table 2), down 1 percent quarter to quarter, but up 2 percent year to year and from the 3-year average. Fuel surcharges to the border per railcar averaged \$449, down 22 percent quarter to quarter, down 34 percent year to year, and down 9 percent from the 3-year average. Overall, rail transportation costs (tariff rates plus fuel surcharges) to the border were down 3 percent quarter to quarter and down 2 percent year to year, but up 1 percent from the 3-year average.

Mexico Transport Cost Indicator Report

Fruit and Vegetables

In first quarter 2024, total reported shipments of fruits and vegetables by refrigerated truck from Mexico were 3.50 million tons, down 5 percent from year to year. The sum of the top five commodities decreased by 45,000 tons, down 3 percent from year to year. At 373,000 tons—down 1 percent year to year—avocados were the largest refrigerated-truck import from Mexico by volume.

For shipments crossing the Arizona border from Mexico and traveling 501-1,500 miles, truck rates averaged \$2.81 per mile—up 14 percent quarter to quarter and down 2 percent year to year. For shipments crossing the Texas-Mexico border and traveling 501-1,500 miles, rates averaged \$2.85 per mile—up 2 percent quarter to quarter and down 8 percent year to year.

Diesel fuel prices for Texas-Mexico border crossings averaged \$3.69 per gallon. Diesel fuel prices for Arizona-Mexico border crossings averaged \$4.13 per gallon. The Texas-Mexico border crossing had a slight surplus of trucks in January, a surplus of trucks in February, and adequate truck availability in March. The Arizona-Mexico border crossing had adequate truck availability throughout the first quarter.

¹In 2022, due to tax changes in Mexico, all three Class I railroads that ship from the U.S. to Mexico (BNSF, Union Pacific, and Kansas City Southern) are only reporting rates to the border for interchange, called Rule 11 rates. The estimated total includes the estimated tariff through-rate for shuttle train service to U.S.-Mexico border locations and the reported fuel surcharge. The estimated rate does not include any additional costs for shuttle car service.

¹Rail tariff rates to Mexico are only estimated values. Due to tax changes in Mexico, all three Class I railroads that ship from the U.S. to Mexico (BNSF, Union Pacific, and Kansas City Southern) are only reporting rates to the border for interchange, called Rule 11 rates. Due to lack of data, Mexico tariff rate changes were estimated using the historical correlation between changes in US tariff rates (GTR Table 6) and Mexico tariff rates. The estimated total includes the estimated tariff through-rate for shuttle train service to Mexico and the reported fuel surcharge. The estimated rate does not include any additional costs for shuttle car service.

²Corrections were made to previously reported rail fuel surcharge calculations.

³Approximate load per car = 97.87 mt: corn & sorghum 56 lbs/bu, wheat & soybeans 60 lbs/bu.
