But my question would be, in light of OMRI's list, is that something that we really need to continue to pursue? I guess I'll direct that to Rick.
And then, secondly, a lot of our work in the past historically has come from recommendations from NOP based on feedback that they have gotten from the farming community, such as the greenhouse questions, the planting stock, et cetera.

So I'm assuming that Bob Pooler will act in that regard now and feed us, and so some of our working plan is really an ongoing type of operation, based on the farmers' needs.

MR. CARTER: Okay. Rick?

MR. MATHEWS: Yes. I continue to see this as a partnership where we will identify issues that we think that the board should be addressing, based on the feedback that we're getting, just as we would expect this board to continue to surface issues amongst themselves as well as bringing to the Department, because of the feedback that they are also receiving. So that will continue.

MR. BANDELE: What about that list question? Do you see a need for that?

MR. MATHEWS: I don't know what that list question really involves. That didn't get surfaced to me before it went to you.

MR. CARTER: George?

MR. SIEMON: Well, I just wanted to make the
comment there is a little bit of a gap. When we've determined something is natural, it's not necessarily in the record that we've gone through that process, for people to know about this material. There's a bit of a hole there -- and that's the allowed list -- that people need to know, because once you decide it's only natural, it never shows up on the list.

MR. MATHEWS: I can tell you that we are working to develop a series of lists; that's something that Bob has been working on. And we haven't decided which kinds of list will necessarily go up, but we are looking at everything the board has previously ruled on and creating a document that shows all the positions that have been taken.

For example, what doesn't show up in the Federal Register document is all of the synthetics the board has already ruled on. We will definitely have a list of all of those things that you've already ruled on on our web, so that people can see, yes, this has already been petitioned, and the board has already said no, so now I don't have to worry about it.

As it stands right now, I guess about the only place they might find that is through the document that Emily developed, or maybe it was Zea.
MR. RIDDLE: Yes. We'll get to that.

MR. CARTER: Okay. All right. Other --

Yes, Willie?

MR. LOCKERETZ: Question for both of you: Is there any way of separating the question synthetic or nonsynthetic from the question should approve or should not approve, because if you simplify the process of just answering the first question, then a lot of substances are taken care of, but producers won't know that unless it's been made explicit: We considered the synthetic versus nonsynthetic, and we decided it was nonsynthetic.

MR. MATHEWS: Yes. We're going to be addressing all the materials that you have addressed. The disadvantage that the people out in the public have is that they can go to a document that says, These are what have been approved. What they don't really have is a separate document up on our web that says, These are the things that were not approved.

But I do know that work has already been done on that, and we're just going to formalize it and get it up on the web.

MR. CARTER: Okay.

MS. BURTON: I think what Willie was asking was a separate question. What he was asking was --
especially, I mean, just like related to 205.606, there's materials that we are going to deem nonorganic agricultural items that are nonsynthetic, and will there be a list available to the public so that they know something has already been reviewed.

And we are hoping to -- there will be list; we're just not sure right now who's going to be working on that list. We're hoping OMRI will take advantage of that.

They're also -- as the board will review a material, there will be something on the website. So there will be lists; we're just really not quite sure where it's going to be right now.

MR. CARTER: Okay. Anything else for Owusu?

(No response.)

MR. CARTER: Thank you, Owusu.

Willie, International.

MR. LOCKERETZ: Well, the first thing we know we're doing is to continue to develop and elaborate that document, which we distributed a very preliminary form the other day, and we'll do that elaboration mainly, I hope, with comments that all of you, as well as the public, give to us by way of how they see various questions we raise in that document, so -- because that's as far as we could go up to this point, but we're hoping for good response to
that document, and then we'll put out a more elaborated
version.

Another thing we're talking about doing is also
kind of informal, nonbinding. By way of background, the
Accreditation Committee has from time to time surveyed
certifying organizations about how the accreditation
process was going and what difficulties they were having
and so forth.

And first me and then later on Jim, who became
chair of the Accreditation, after I moved over to
International, has reported to the board about what the
issues are, what the problems are, and so forth.

So we're going to start doing a similar thing
in the international domain, informally surveying the
players in international organic trades, such as IFO, such
as OTA, such as foreign certifiers that have been
accredited by USDA already, and so forth, and get a kind
of picture of how they see the situation regarding
international trade in organics and, again, informally
report back, not as an action item, but to enlighten the
board and the NOP about the sorts of things we've been
hearing.

Beyond that, we have no specific plans,
although we -- I talked to Keith the other day, and we
agreed that another one of our conference calls with the International Committee and Keith would be valuable to help us figure out what we should be doing, because with International the needs are not so clear as they are with Crops and Livestock and Processes, where they're already in business, knowing that they have to do more of what they've been doing all along; we're a new operation, and so our task is not so clearly defined, but I hope that will change in the very short future.

So we'll talk to you, Keith, about scheduling another conference call the way we had a couple of weeks ago.

MR. CARTER: Okay. Discussion, questions for International?

(No response.)

MR. CARTER: Okay. Before I call on Jim, when we move into the public comment period, you do need to sign up to be on the list to give any public comment, so those of you that do want to give some public comments, please go over and sign in on the list here.

Okay. Let's move on, then, to Accreditation.

MR. RIDDLE: Yes. Thanks. The first item on our work plan will probably make the NOP very happy, and that is to take a little break --
MR. MATHEWS: Thank you, Mr. Riddle.

MR. RIDDLE: -- in recognition just of the incredible amount of work that's gone into the Accreditation and this meeting and then the follow-through from this meeting, too.

But then when we really get down to being engaged, the big item for the Accreditation Committee in the short term is to act as the interim peer review panel and review the NOP's accreditation program and begin by screening all the documents that have been used in that.

So we certainly will have something to report on that in September.

We also have the grower group certification criteria that we've submitted. At this meeting it will be posted for public comment, so we'll be receiving and reviewing those comments and then making redrafts to that as needed.

Also as needed we stand available to assist the NOP in the development, refinement of the enforcement plans and procedures, and especially as that relates to the states and state organic programs.

And item that we brought up and was mentioned by several certifiers is the need to merge the ISO-65 and
NOP accreditation requirements, and the Accreditation Committee will be addressing that. I don't know; we may have some first draft to present in September, but that's certainly on our work plan to look into that.

We will be assisting the NOP in the complaint procedures as they relate to accredited certifiers to follow through with the notice being posted on the website as needed.

And we'll continue to monitor certifier issues, just like was mentioned for crop issues, as various issues come up, especially from accredited but also applicant certifiers, and in particular a couple of those that we heard quite a bit about, 120 days of sufficient time to make organizational changes, and also the examples of workable organizational structures.

And the last item is to continue to monitor the NOP and now also the NOSB page of the website and provide feedback to the program.

MR. CARTER: Rick.

MR. MATHEWS: Define break.

(General laughter.)

MR. MATHEWS: I just want everybody to know that I've already cut the travel papers for Jim to come to Washington to work in the NOP for a 30-day period as
acting program manager while I go to Maine.

MR. CARTER: All right. Other comments or questions.

All right. Willie?

MR. LOCKERETZ: Could you give us some sense as to your guess as to the time scale under which these various things will be happening?

MR. RIDDLE: Well, I tried to as I want along, but if you want me to go back, the interim peer review, that will be happening -- that's going to kick in in the next couple of weeks after this break. That's item number 1, and that will be -- we will have something to report in September.

A number of these are just ongoing. We'll also have something to report on the grower group criteria in September.

MR. CARTER: Just one thing: A lot of the committee reports we've talked about September. Let's keep in mind that we're also planning on an October meeting in which a lot of this will be done, because September, other than the item that was specifically, by board action yesterday, directed to be addressed in September, we're going to have our hands full of materials issues, although I would encourage all of the committees
coming into September to at least have some written reports for distribution, and then we will have some time for discussion on that in October.

   MR. RIDDLE: I just had a question. It wasn't clear to me -- I want to make sure that each of the committee chairs submit their work plans in writing and that those will be posted, similar to coming out of last October's meeting, so that the public who didn't take notes real quick will know what each of the committees is working on.

   MR. CARTER: Okay. Any other discussion for Accreditation?

   Okay. We got another issue?

   MR. RIDDLE: Yes. The board policy task force also has a work plan, and that is to send the adopted board policy manual, as we amended it, into the program, and then to make corrections, circulate to the task force, and we'll make a report in September, but also that would be more appropriate as then an action item to vote on any proposed changes at the October meeting.

   MR. CARTER: Okay. Then if there's no other discussion on committee actions, number one, I just want to compliment the committee chairs. I think that you got a lot of stuff on the plate here, so we appreciate and
reiterate what Jim said: If you can get him your written work plans, so we can get that on the --

MR. RIDDLE: Not me.

MR. CARTER: Get the work plans -- sorry about that; I'm just giving you more work. Get the work plans in so that they can get on the web.

Let's now take a short break. We will try and be back here by 9:30.

MR. RIDDLE: Could I make a couple of announcements before the break quickly, or you want to make them after?

MR. CARTER: Go ahead and make them now, and then we will take a 15-minute break.

MR. RIDDLE: Yes. Just while everybody's still here, I wanted to let people know -- it's not been clear -- that Zea Sonnabend has been working on updating the green book, so essentially the NOSB recommendations, and she'll be making a progress report at our next meeting and have something to present.

I don't think it's quite done yet, but some people haven't known, I think, that those are all being consolidated. The green book wasn't available electronically; this is all going to be electronic file, and so we can clearly reference what all the past NOSB
recommendations have been, so I just wanted to announce that.

And then I also wanted to announce -- there's a couple of times I've mentioned just in passing about the NRCS having a transitional support payment in Minnesota, and this is follow-through from the memorandum of understanding at the national level between NRCS and the Organic Trade Association.

And in the very brief sign-up period that wasn't well publicized, it still netted 145 applicants that each could be bringing 250 acres and receiving a payment of $50 per acre for cropland and $25 per acre for pasture land to convert it, so they'd receive that payment for three years, and they'd have to complete an organic plan and be inspected by an accredited certifier in order to qualify for that payment.

And there will be a presentation I'll be making about the conservation benefits of organic practices on Friday morning at 10:15, as part of the OTA show, but also the state conservationist, the head of NRCS for the state of Texas, will be on there as well.

So if you're interested in kind of this interplay between organics and the NRCS, I just wanted people to know that there's some positive things happening
there.

Thanks.

MR. CARTER: Okay. Then let's take a 15-minute break. According to my watch it's 25 after, so we will come back at 20 till.

(Whereupon, a recess was taken.)

MR. CARTER: Okay. Jim again will serve as the official timekeeper. Please prepare your comments for five minutes. When we gavel, you'll be able to continue whatever sentence you're on, but if you continue on ad infinitum without putting a period into a long sentence, I will call you on it.

MR. LOCKERETZ: David, how many commenters do we have?

MR. CARTER: We have got about 20 signed up. And the chairman's prerogative is the first person I would like to call on is our former chair, Carolyn Brickey.

MS. BRICKEY: I love compliments, as you know. I want to tell you, first of all, that we've been enormously entertained in the audience by all our chicken analogies, and if you want to hear some of them, you can talk to people in the audience after the meeting.

I want to raise a serious topic first, Mr. Chairman, which is one of our former members is very ill,
Betsy Lyden [phonetic], who some of you know, and I would suggest it would be very nice for the board to pass a resolution wishing her well and commending her for all her public service and sending that off to her.

I can get information for you about her address, but I think NOP has it also.

MR. CARTER: Okay.

MS. BRICKEY: Well, just a few words of advice this morning, which I'm sure you're dying to get: First of all, I think -- the one thing I would really stress with you folks is to find the issues that unite you and work on those issues.

Why? Because that's where you're going to find your strength; that's where you're going to have the greatest impact; that's where you're going to do your best work.

So if you work and work and work on a document that is voted, you know, nine to six, even though the board vote carries and the document becomes the board position, that's not going to be as strong for you as a document you all work on and have ownership and feel strongly about together.

So look across the room for those ideas that bring you together and try to work on those ideas the
most.

And I'll go back to some comments that some of you have made recently about whether you're relevant. You know, Bill Clinton went through a phase about wondering whether he was relevant or not. And Bill Clinton is still relevant, I think we would all argue, at some level.

So pick those issues that matter the most to you and also to the National Organic Program. Be true to those things that you can deliver.

Your number-one priority is to give your best advice, and your way of doing that is work together as strongly as you can on issues that matter the most and try to deliver on those issues.

You got to be practical; you know, you can work and work and work on something, but if it doesn't work or it's never going to be implemented, where are you?

I think in a number of these issues -- and I would say that the pasture issue falls into this same category -- the most important thing is what happens on the ground and whether it's enforceable and verifiable, and that's where I would put my focus and my emphasis.

You know, can you verify it? How are you going to do it, and can you get it enforced? Those are the issues that matter the most. And I hope that the board
will be able to move more into that issue as you move along.

I want to disagree with some of the unhappiness that the board has felt about our seafood task force that we completed I guess about six months ago. Although it seems like now the position that the Department takes may be somewhat different than we would have wished or that we voted for in our document, I still think there's very good content in that document about the criteria that make a system organic, and I think that all the cards in that deck have not been played yet, and I think that's going to become important.

And I think that was good work; it was deliberative work, and that's the kind of work that I urge you to undertake on this board.

Don't be precipitous; be patient. I think Barbara gave a very excellent description of how things work at USDA; you know, it's a very slow-moving, thoughtful, considerate -- some people feel too cautious -- place. But they're not going to act precipitously for the most part, and it's not going to benefit you to act precipitously.

You know, when I was on the board, I always used to say, Let's not sit here and wordsmith this,
because we're probably not going to get it right. So I
would urge you to avoid that as often and as much as
possible.

And I want to comment for a minute about
materials, Kim. This project that you're going to start
with looking at previously approved materials -- I'm going
to throw a new acronym out for you: PAM.

EPA has an enormous amount of parallels that
you can draw from in their experience in approving
pesticide products. Of course, there are differences, but
a major difference is our lack of experiences and
resources with this whole idea of re-reviewing materials,
and I think you can learn a lot and benefit from the
experience they've had in doing that.

And I think the most important thing is not to
duplicate work that was done but to really look toward
figuring out what you could do that hasn't been looked at,
where you don't have data, et cetera, et cetera.

And I think they could give you some good
advice about that, and I'd be happy to put you in touch
with people that can be helpful.

I think that the most important thing in the
materials process, besides efficiency, is going to be
consistency. If you can't feel that you're using the same
criteria to evaluate a material you looked at yesterday and you're going to use that same criteria in September, then you've got a problem.

And it sort of rebounds, in that you get in kind of a circle of saying, okay, they're alternatives, but they're alternatives because we reviewed that material first, and it becomes an alternative, and now we're reviewing another material.

You've got to try to use the same criteria, and that's going to be more and more important as the involvement of the petitioners increases. And, believe it or not, it will increase, especially after October. So I just throw that out as an important thing to remember.

And I just want to thank all of you for all your hard work. I know sometimes you feel like you're operating in a vacuum. Sometimes you wish you were operating in a vacuum, but you're not.

So I want to thank all of you and welcome the new members and offer to be helpful in any way that I can.

MR. CARTER: Thank you, Carolyn.

The suggestion was made that this board pass a resolution of best wishes to Betsy Lyden, and the chair would certainly entertain that at this time.

MR. SIEMON: I make that motion.
MR. LOCKERETZ: Second.

MR. CARTER: Okay. It's been moved and seconded.

Discussion?

All in favor say aye.

(A chorus of ayes.)

MR. CARTER: Opposed, same sign.

(No response.)

MR. CARTER: And I will work with Katherine to develop an appropriate letter from the board.

Thank you, Carolyn.

Now, our next commenter is Randy Duranceau.

MR. DURANCEAU: I want to thank the board for the last two days. This has been very enlightening for me. This is the third meeting I've been to, and I'm starting to figure this out now, and it's been very, very good. And I appreciate all your hard work and all the information you all have to digest.

And for us here it's pretty -- we're pretty specific in what our wants and desires are, and you all have to understand everything.

A couple of things I want to talk about, and I hate to beat the dead horse into the ground, but on this poultry access issue, as well as some of the other
comments we've heard about using conventional grains to raise organic broilers -- and I'm going to focus mainly on the broiler issue. That's what we do, and that's what I want you to understand I'm talking about.

As far as we're concerned --

MR. LOCKERETZ: Would you state your affiliation.

MR. DURANCEAU: I'm sorry. I'm Randy Duranceau with Petaluma Poultry out of Petaluma, California. We've been raising free-range chickens for over 15 years, and organic since 1999.

To me, both issues, whether it's outside access or asking you to make an exception to feed conventional grains for organic birds, are both economic issues.

Organic grains are expensive. Basically they're three to four times the cost of conventional grains. Outside access is a real issue of control of the conditions for the birds inside their housing.

Feeding conversions are extremely important in the broiler business. Once those conditions in the houses are broken and heat changes, sunlight changes, so forth and so on, conversions can get out of whack, and that costs that grower lots of money.

And so as you progress down and other people
get into the business that have not been used to raising
free-range birds or organic, conversions are extremely
important to them.

And when those conditions change, the cost of
that raising that bird changes. As I stated the other
day, over 50 percent and close to 70 percent of cost of
raising that bird is feed cost. And so, again, it's
extremely important to watch those.

And so to me, that is why, as we go down this
road, as more people get involved in the business, outside
access becomes a real issue.

And I agree with Carolyn, enforceability and
verification is extremely important. That's the concern I
have in the rule that you all approved here, the
recommendation, was that a lot of this is not enforceable
or verifiable.

Words like "when feasible," "temporary
confinement" -- those are all issues that we as a
legitimate organic grower of broilers have. And just a
concern.

And so I just urge you again -- you know, I
urge you to think about what we're doing here and think
about verification and enforceability here and what we're
doing for these birds.
I encourage any of you to come out and visit our operations, if that's appropriate. One of the concerns I have also is that the recommendation was a little bit quick yesterday, and I had this gut feeling that there were some things -- some statements made and some issues brought up that were incorrect.

And, again, I encourage the board, if you need information from any of the growers out here, whether it's conventional growers, organic growers, free-range growers of broiler or layers, you know, access us; we're more than willing to help talk and educate you on really what's going on out there.

So I don't know if there's any questions that you have for me at this point?

MR. CARTER: Okay. Willie?

MR. LOCKERETZ: A question: As you know, the motion we just passed requires that there exist an outdoor space for the birds to go out in if they choose. So you can't have temporary -- "temporary" can't be forever; there has to be -- at least in theory they have to go out. Now, my question to you is, if a suitable outside area exists and it's up to the birds or the grower to choose where the bird is to be, will they preferentially take -- will the producer encourage them to
go out, and will they preferentially go out?

So, in other words, I'm asking, how much of a difference does it make that we're specifying there must be a place?

MR. DURANCEAU: There must be a place outside?

MR. LOCKERETZ: Outside. Yes.

MR. DURANCEAU: In our operation, on average we have anywhere from 50 to 80 feet in between our houses, and they're anywhere from 200 to 300 feet long, so that means up to 16,000 to 24,000 square feet outside for those birds to go.

Those doors are open. I have my little example here with a picture that shows exactly what those houses typically look like. And so those birds will go outside.

I mean, if it's raining and cold and windy, they'll stay inside, but on beautiful sunny days, in the morning, they'll go outside; they'll go outside all afternoon, and they'll come in and out at will. And that's really how we, as raisers of organic and free-range poultry, view this. These birds must be able to have the choice to go in and out at will.

And our outside access is basically dirt, natural grasses, and gravel around the houses.

MR. CARTER: Okay. Kim?
MS. BURTON: Just so that -- just the statement, I suppose, is that all of the documents that we did approve here at the board will be posted on the website for public comment. So I would encourage everybody -- you know, if you did hear something or see something that you don't agree with, then please comment.

MR. DURANCEAU: Okay. Thank you.

MR. CARTER: Thank you very much for your time.

Oh, I'm sorry. Goldie?

MS. CAUGHLAN: Could I just ask, as a point of information, when you decided to go from your regular operation, where I know you had a free-range program in existence for quite a while -- and I assume that the free-range birds had -- those who were properly feathered, at that age, at least, had the outdoor access. Was that any different than the type of outdoor access that you're giving Rosey [phonetic]?

MR. DURANCEAU: No. Exact same outside access.

MS. CAUGHLAN: And for further reference, did you try other systems of outdoor access before you came to this method? Did you try platforms or other --

MR. DURANCEAU: No. As far as I know -- and I was not with the company 15 years ago, but as far as I understand, this is how we've always raised our free-range
birds, and then obviously our certifier required outdoor access, and so we used the same outside access as we had been using for 15 years, but obviously we had to have those ranges and those homes -- houses certified organic.

    MS. CAUGHLAN: Thank you.

    MR. CARTER: Okay. Thank you very much.

Next up we Tina Ellor -- or Tina Ellor Phillips.

    As you come forward, everybody, if you would, please, identify yourself for the record, who you represent. And if you have written statements that you want to present, please give a copy to the court reporter as well as Katherine.

Next in the queue is Harriett Behar.

    MS. ELLOR: Hi. My name is Tina Ellor; I'm from Phillips Mushroom Farms, also with the Organic Working Committee of the American Mushroom Institute, and I just have a very short comment today.

    First of all, I want to thank you for the opportunity to comment, and thanks for all the hard work that the board and the USDA have put into these standards, and in particular the mushroom standards.

    And I'd like to particularly thank Richard and Mark Keating for all the work they put into learning about
how to grow mushrooms; more than they ever wanted to know.

But I really feel like they did consider that mushrooms are a really unique crop compared to a lot of other crops, and they put a lot of effort into learning how it was done.

A little background here: We're certified by Pennsylvania Certified Organic, and agriculture is still the number-one crop in Pennsylvania, and mushrooms are the number-one agricultural crop, followed by hay to supply the mushroom industry.

Ten percent of the mushroom growers in the US are certified organic, and in an industry that had sales of $863 million for the year 2000-2001, sales of organic mushrooms totaled 8.5 million in the same time period.

So we're very interested in the mushroom standard and the process that we're going through to get a mushroom standard.

What I wanted to comment about today is that when you consider issues of composting, we would really like you to take into consideration that mushroom growers are composters.

We put 40 to 50 tons of raw materials -- composted raw materials into a mushroom house, and those mushroom houses are turned over four to six times a year.
My concern is that the goal of mushroom composting is to make selective media to grow mushrooms, not necessarily as a soil amendment, so we're not really falling under specifically the definition of composting.

It also concerned us a little bit -- and I was relieved when I heard on Monday or that I learned on Monday that the compost task force recommendation is not a rule change, so we can certainly still grow mushrooms under the original composting standard, with the exceptions that are in the mushroom standard.

We were concerned that that was a moving target, so I want to ask that when you consider composting issues, you consider also mushroom growers, because we specifically refer to the composting standard.

The only other small consideration I have is in that recommendation it says that you shouldn't sort of be able to recognize what went into the compost by the time you apply it on the soil, and mushroom compost, even at the time it's applied to the soil, you can still recognize that it has hay and straw, and I think that's a small point and probably not all that important.

So just to finish up with two things: Don't forget about mushroom growers when you're thinking about compost, and also, if I can ask this question, where does
the mushroom standard stand? When will we have a final standard? And what can we do to help? We're here -- you know, Richard has all the contact information you'll ever need to learn all you ever want to know or don't want to know about growing mushrooms. So don't be afraid to ask us if you have questions.

Thank you very much.

MR. CARTER: Okay. Thank you, Tina.

Rick?

MR. MATHEWS: Yes. The -- go ahead and stay there, Tina.

The mushrooms are covered. We have a policy statement out that talks about the scope of the rule, and mushroom production is included there. Most all of what the board was stating would go into a mushroom practice standard is already included in the regulations.

I would note that one particular point of issue to you is the composting and the fact that you want to use a higher number.

We would consider that covered by the provisions under pest management. As I've learned, the reason for the higher number is to control the other kinds of fungi that are growing in the compost.

So you could comply by having a higher number
that is used for the purpose of controlling what, for your
industry, is a pest. But otherwise, the things such as
treated lumber are already in there.

MS. ELLOR: Right.

MR. MATHEWS: The provisions about not
providing for separate areas, so that you don't get the
commingling, those kinds of things are already provided.
So I think if you read the regulations closely, under the
Crop Production Standards, you will find that all of those
issues have already been addressed.

The only issue that is not addressed in the
case of mushrooms is the issue that the trees have to come
forested area that has not had a pesticide in three years,
and so that would not be a requirement for mushroom
growers under the existing standards.

MS. ELLOR: Okay. Thank you very much.

MR. CARTER: Okay. Oh, I'm sorry.

Willie?

MR. LOCKERETZ: You were concerned about the
compost standard, but it wasn't clear to me whether the
compost standards apply to mushrooms at all. It's under a
section about soil fertility and crop nutrient management,
but you're saying that's not what it's used for in
mushroom growing. Am I correct?
MS. ELLOR: Right. We make compost specifically to grow mushrooms, not as a soil amendment.

MR. LOCKERETZ: So what is your interpretation as to whether either the current or the newly to be developed compost standards apply to mushroom growers at all?

MR. MATHEWS: I'll have to take some more time to think about that one, but I would look at it in reference to what is already in the regulations with regard to compost and to what's been proposed through the task force with regard to compost or soil amendments.

But my reading of the regulations, as they are today, would not prohibit mushroom growers from growing mushrooms in that material.

MR. LOCKERETZ: The question was whether they have to comply with the compost standards as now written, which are under the heading of soil fertility or something like that.

MR. CARTER: We got to things moving along, but, Zea, a quick comment on this compost task force, and then Dennis.

MS. SONNABEND: I think I might be the only person for the compost task force still here. While we didn't specifically address mushroom growing in the
compost document, the only really absolute requirement in the compost document right now is that you justify your composting program in your organic plan.

And so if it's being used for a specialized purpose such as mushrooms, I see that it can be covered by your whole rationale for your composting program being addressed in your organic plan.

And that would include why you use the carbon-nitrogen ratio you use; why you use the time frame you use; what you do to monitor it, all the things that any compost requires, but how it applies to your mushroom system.

MR. CARTER: Okay.

Dennis?

MR. HOLBROOK: My question is basically what you're utilizing is really not traditionally classified as compost for your mushrooms. Is it not a growing medium that you're using the grow your mushrooms in?

MS. ELLOR: Our growing media happens to be compost, definitely compost.

MR. HOLBROOK: Okay. But it's not a completely cured compost. Right?

MS. ELLOR: It depends on what you mean by completely cured. It certainly goes through adequate
temperature and turning profiles from the original standard, but it goes higher -- the temperature goes higher, which is one problem we had originally.

But there's an exception for that in the rule as it's written now -- or it's not a rule yet. The mushroom standard is not a rule yet, but it would fall under the crops. Right?

MR. MATHEWS: It falls under the existing standards as they are now. And what I'm saying is that with regard to the higher temperature, the purpose of the higher temperature is pest control. And so it would fall as a pest control for fungi.

MS. ELLOR: Right. I certainly see your point. It just happens that our growing substrate is compost.

MR. CARTER: Okay. Owusu, and then we're going to move on.

MR. BANDELE: I would agree with Dennis. If you're not using that material -- regardless of what the material is, if you're not using the material for soil-building, then to me it's really not a compost. And that would be the same like copper sulfate being applied as a soil amendment versus disease -- I think they're two distinct issues.

MR. CARTER: Okay. Tina, if you want to
respond, and then we're going to move on.

MS. ELLOR: You know, I would have to think
that over, because honestly I've never considered that
we're not using compost, because we've been using compost
for over a hundred years, so I'd really have to think that
over.

(General laughter.)

MS. ELLOR: Okay. Thanks.

MR. CARTER: Thank you, Tina.

Okay. We have Harriett Behar and then after
that will be Diane Joy Goodman.

MS. BEHAR: Good morning. I just want to say
I've sat here with you for the past two and a half days,
and it's been very interesting. I really appreciate all
the work and pre-preparation that you do before you get
here, and there's a lot of different stakeholders in this
industry, and you have a lot of different people coming at
you with different opinions, and I really appreciate the
deliberations that you do in listening to everyone.

I am Harriett Behar; I'm from the Independent
Organic Inspectors Association. For those of you that are
new members to the board, I just want to tell you a little
bit about IOIA. We're an internationally recognized
organization of independent organic inspectors.
We're recognized for our quality organic inspector trainings. We train inspectors around the world. We use experienced and active inspectors to lead these trainings, as well as experts in the various fields that the trainings are based upon.

We are continually upgrading our trainings, and we have started a training module based on the NOP rule, so both the new inspectors and the experienced inspectors will be brought up to speed, and of course as things keep evolving with NOSB recommendations and interim rules, we will keep bringing those into the inspector training.

So I just wanted to let the NOSB know that the inspectors are paying attention to what you're doing, and we're going to try to get that out to our membership.

In addition to our trainings, we also have an inspector forum on the internet, and a lot of things go back and forth there, so our inspectors are constantly talking about, How do you deal with this issue?, and back and forth.

And Jim is on that forum, and he, as well as Emily Brown Rosen, help us with understanding. So just to let you know that the IOIA members are paying attention. So when you do talk about inspectors, we're doing the best we can to get your information out there and on the
ground, being able to verify the NOP rule.

And with NOP implementation we need qualified inspectors more and more. And I know that that's a statement within the rule that the inspectors need to be qualified and directed to the NOP. I would just encourage you to review the inspectors that are being used by the accredited certifiers.

Okay. I would like some clarification from the NOP: if the interim final rule that's going to come out in September will include the technical corrections as well as materials, or is it only going to be a materials item? I know there were some technical corrections approved in the past two meetings.

MR. MATHEWS: We're still working on the technical corrections document. It is a separate document. The rule -- the interim final rule that comes out is just for materials.

MS. BEHAR: Okay. But there was a concern, especially amongst the -- yes?

MR. CARTER: Go to a microphone so we can get this on the record.

MR. NEAL: In addition to what Richard stated, there were some changes that -- some recommendations that were made by the board with respect to the National List
that some people did consider as technical corrections, but they're not. They're actual direct changes to the National List, such as a the change in the section headings in Section 205.605 and .606. Those would be included in the interim final rule.

MS. BEHAR: Okay. Well, one of our major issues was the calculations of -- in order to determine whether the label will carry the word "organic" or "made with organic," and it states in the rule that it's based on the total weight of the finished product instead of the total ingredients; that was one of the technical corrections.

We really feel that one especially needs to come through, because as an inspector it's very difficult to inspect to a problematic rule.

I want to talk about the guidance documents that the certifiers give to their clients and also for the inspectors. My understanding is the NOP has been reviewing those, and I want to encourage the NOP to allow the certifiers to keep giving out these guidance documents.

The regulatory language is very difficult for operators to understand in many ways, as you know, and these clarification guidance documents are very, very
important.

We understand they are not to deny certification based on those guidance documents, but I would encourage the NOP in their accreditation review to look those over for compliance to the rule but to let them continue using those.

MR. CARTER: Willie has a question for you.

MR. LOCKERETZ: We've heard a lot today and in earlier days about verifiability and so forth. In your opinion, just dealing with the inspection part of the certification, are there any problems in the final rule about the things that would be difficult to verify, and if so, do you have any suggestions about what areas we might concentrate on, because we all want verifiable standards. So you have a lot of experience in this line. What can you suggest?

MS. BEHAR: Well, the IOIA, as well as certifiers, have given numerous questions to the NOP to that effect. I can't right now go through all of them. The one specifically on the calculation of ingredients is one we really would like to see changed as soon as possible and clarified.

But it goes back to these guidance documents; the regulatory language is vague in many areas, and the
certifiers are providing clarification, in many cases, to their operators, and I just don't want the NOP to narrow the focus of those guidance documents; they're very important for both the inspectors and the operators to use.

MR. CARTER: Okay. Rick?

MR. MATHEWS: We fully intend that the certifying agents would use guidance documents to help their operations or clients come into compliance with the national standards.

Where we will scrutinize them is in the case of someone who is using a guidance document to actually create rulemaking. I guess the only thing I could think of right off the top of my head right now is in the case of pasture.

Let's say that their guidance for what is suitable pasture was to say, You can never have more than six cows per acre. I would argue with that, because if we've got a little bare patch of ground with a few sprigs of grass, that's not going to carry as many cows as something that has gone through an NRCS program for the development of adequate pasture, and so that kind of thing we would have a problem with.

The idea is that the cows would be on pasture,
that the quality of that pasture would be continuously improved, and that that pasture would provide a significant portion of that animal's nutrient needs.

MS. BEHAR: Yes. And NOSB recommendation on pasture for ruminants is something that we can inspect and verify.

MR. MATHEWS: Yes. And that's what we would be looking for from the guidance. And then, just to reiterate, we don't want a blanket statement that it absolutely has to be this, because then that takes away the opportunity for improvement.

MR. CARTER: Okay. Thank you.

Okay. Diane Joy Goodman and then Arthur Harvey.

MS. GOODMAN: Hi. I don't have anything written. This is just something that I wanted to bring up because it's very important to me, and I think that it's just a reality check for all of you.

First, I want to thank you for an excellent meeting, for Dave doing a fabulous job as chair, for all the committee chairs, for all the good work that you did, and especially to Rick and the NOP staff for accrediting everybody on time when you said you would and for all the work that went into it.
I want to about annotations, and the reason that I want to bring this up is the more detailed the annotations become and the more lengthy or wordy they become, the more difficult they're going to become to be adhered to on the ground.

And in the five years that I spent on the farms and the experience I had in reading labels on pesticides and on soil amendments, working with my partner, who had been farming all his life as a third-generation farmer, the attitude on the ground when it comes to regulation on a label about how you use something is taken with a grain of salt, at best.

The oversight for the use of the farmer picking up a bag of material or soil amendment and actually following the directions is going to be mixed with their own good judgment.

The ability of an inspector to actually verify that our annotations is going to be followed is going to be iffy, at best, if not overburdensome.

So my encouragement to you is to keep annotations to -- as close to nonexistent as possible; either decide to make a recommendation to approve a material or to not approve a material, one or the other, and come down on one side of it or not, so that it's
really clear to the operators what they can use, what they
cannot use.

The more complicated it becomes, the less
attention is going to be paid to the instructions that
you're trying to give.

I think that's really critical, especially
since what we're going to be dealing with, come October, I
think is going to be quite a surprise to most of our
organic community. I know from Ray Green in California
and from conversations with NOP staff here the number of
phone calls that are being received from conventional
farmers and food processors about what's it going to take
for them to get involved in organic production once we
have an implemented rule, are astounding numbers of calls.

OTA and the organic community and certifiers
are not getting these calls, because a lot of these people
don't know who to call, so they go to who is familiar to
call, and that's the Department and the agencies they're
used to dealing with.

So we're going to be in for a real surprise
with the numbers of people coming in. I'm real pleased
about that myself, and I hope everybody else is, because
it really reaches our goals of what we started to do here
20 years ago.
But those folks are not going to be in tune with our little annotations. They're going to want to know what can they use, what can they not use. Just tell them what to do.

So on that note I just hope you'll take it with a grain of salt as well, and thank you very much again for your time.

Oh, one other thing: At the All Things Organic conference you know that there's an NOP session, where Barbara and Rick are going to be presenting what went on at this meeting. Any of you as members of the NOSB that can attend that session and contribute from the audience in the Q&A session, it will be very valuable to have you there.

We also have another session -- and this is for the folks in the public as well -- on farm bill and what the implications are. Elizabeth Nardi is coming from Senator Leahy's office to discuss the provisions that the organic community received, which is more than we've ever received in legislation before.

We have a lot of really great and interesting sessions coming up, so please do try to attend.

Thanks.

MR. BANDELE: Diane.
MS. GOODMAN: Yes?

MR. BANDELE: I appreciate your comments in terms of the annotations, and I understand that sometimes they are difficult to enforce, as are other parts of the rule itself, such as how many times you turn the compost, C-to-N ratios, et cetera.

But the fact of the matter is that sometimes these decisions are very, very difficult, and without the annotations -- it's hard enough getting things through, but without those annotations, some of the material would not even stand that chance.

So that's the thing, is trying to balance what you're saying with the needs of the farming community. It can be difficult, but I appreciate it.

MS. GOODMAN: Thank you. I'm aware -- thank you.

Other questions?

MR. CARTER: Other comments, questions, for Diane?

(No response.)

MR. CARTER: Thank you, Diane.

Okay. Arthur Harvey is up next, and then after that will be Susan Ulery.

MR. HARVEY: My name is Arthur Harvey, of
Canton, Maine. I am a chair of the inspectors subcommittee of OTA's quality assurance committee, which deals with standards.

Also I am the chair of the bylaws committee of the Independent Organic Inspectors Association. I'm a certified blueberry grower/processor, and beekeeper, and obviously these organizations and the bees are not responsible for my views.

(General laughter.)

MR. HARVEY: In the past I have directed many comments to the NOP, my congressman, and senators, Secretaries Glickman and Veneman, et cetera. A copy of my final blast is in front of you.

Since my efforts have not brought satisfactory results, I venture to place them before you. It may be asked why I do not submit formal petitions to amend the National List.

Well, the change I request is much deeper than that. In a nutshell, I want you to repropose the final rule within the framework of the Organic Foods Production Act of 1990.

Let me briefly describe six urgent matters which present significant legal issues as well as transgressions against consumers' and farmers' interests.
Number one: .606 contains language in the second paragraph which in effect repeals OFPA 6517(c)(1)(C). The law requires a listing of specific materials that have been through a TAP process and been reviewed by this board.

But the board has shied away from this responsibility. The result is a blanket approval, in advance, for every agricultural product, including those with unknown effects on health.

It is an outrage that a certified organic product may contain 5 percent of conventional ingredients, none of which have been reviewed. It may also be that precise names of these ingredients may not be disclosed to the NOSB, the NOP, or the consumer if food groups are labeled.

For certified "made with organic" the situation is even worse.

Number two: .501(b)(2) reverses a long traditional of federal minimum standards which have the beneficial effect of promoting competition among manufacturers. Examples include the Consumer Product Safety Commission, Interstate Milk Shipment, Coast Guard equipment standards, to name a few.

Now the USDA, without a statutory basis, is
attempting to eliminate competition among certifiers.

This is contrary to the pattern in Europe. It has already lowered the organic standard in my sector by allowing blueberry growers to manage their fields with long-lasting herbicide applied once every seven or eight years and marketing two thirds of their crops as organic.

Number three: .605(b) is category of synthetics which should be forbidden in processed food, according to OFPA 6510(a)(1) and 6517(c)(1)(B)(iii). The NOSB has struggled with this and made some ambiguous decisions.

The result is .600(b) and .605(b), which are likely to be invalidated by a court if this board and the NOP do not come to their senses.

Number four: The exclusion of wholesales, distributors, and most retailers flies in the face of OFPA 6502(10). The NOP explains this exclusion in the preamble, page 80555: "Certifying these handlers would be an unnecessary burden on the industry."

I believe that it's well known that two-thirds of all violations of organic integrity occur in these excluded operations, so the question I pose is, why should farmers assume the burden when the primary violators do not?
Number five: .304(b) and .100(a) require that 70 percent organic products be certified, but OFPA 6510(a)(4) says all certified products must contain at least 95 percent organic ingredients. Also, 6505(c) exempts these products, so any enforcement action under .304(b) will probably be thrown out by a judge.

Number six: .504(b)(4) and (5) do not protect the consumer interest. Transparency requires public access to certification documents more meaningful than the name and address of the producer's business office plus the category of products.

For starters, why not disclose the farm plan, leaving out financial and marketing data. That would be a long step toward implementing OFPA 6506(a)(9) and 6515(g).

MR. CARTER: Time.

MR. HARVEY: Thank you.

MR. CARTER: Thank you, Arthur.

Questions for Arthur?

(No response.)

MR. CARTER: Thank you, Arthur.

MR. SIEMON: You want us to start all over again. Right?

MR. HARVEY: I'm afraid you'll have to do quite a bit of that. Yes.
MR. CARTER: Okay. Susan Ulery and then Emily Brown Rosen.

MS. ULERY: Susan Ulery. I'm here for the Synergy Company, which is kind of minority interest in the organic goods, because we produce dietary supplements.

And we're a minority because dietary supplements traditionally haven't been interested in the organics business. Our company was founded with that as the base, and we're running into a problem with spirulina, which is -- we produce a 70 percent "made with" product, and spirulina's a big deal in that product.

And we understand that the Chilean nitrate issue has been postponed several times and, unbeknownst to me, got postponed again, because I came here yesterday, expecting to get in on the agenda.

So I'm a little bit at a disadvantage, because I haven't heard your questions or viewpoints, and I would really like to know what they are so that I can be prepared for September.

At any rate, you've thrown us a curve ball, because the NOP increased its scope, and now we apparently are not going to proceeding as a dietary supplement under the AOS; we're going to be under the NOP, and we have to make labels and brochures, and our website's getting
posted and updated.

And as a small business, this curve ball is going to be really expensive and really painful if we lose the Chilean nitrate issue and we can't claim organic spirulina in this product.

And so I just wanted to bring that perspective to you, that -- I mean, I'm in some ways glad that the NOP is stepping up to increase its scope, because it will make it maybe easier for people like us to know where we're at, because when you have different standards applying to different aspects of the organic industry, it's really hard to know, as a user -- and I plague our certifier with questions all the time.

But we don't have very much time. You know, these labels that I've got going to the printer when I get back to work next week -- well, I don't know if they're going to be any good in October or after October. So that's an expensive thing for us.

MR. CARTER: Susan, just to -- and the reason that that is being postponed was at the request of some of the folks within the industry that they didn't think that there was enough notification --

MS. ULERY: Because of the soil-based petition that paralleled this but was going in the opposite
direction. Right?

MR. CARTER: Well, I'll just -- Kim, if you want to add --

MS. BURTON: Yes. I was surprised when Susan came up to me yesterday and said what her purpose was for to be here.

The petitioners -- as we discussed yesterday, the petitioners for the spirulina were in agreement that we could postpone this vote, and to my knowledge, they said, Oh, yes, everything's fine and dandy with it.

So I apologize for that. I also encourage you to do written comments about that TAP review, because in reality --

MS. ULERY: And I have submitted to Katherine.

MS. BURTON: In reality, we didn't have any other comments on that from the industry, other than the two petitioners, so we really weren't even aware of your needs.

So I do apologize for that. And see you in September.

MS. ULERY: Hopefully.

MR. CARTER: Sounds like a song.

Go ahead, Jim.

MR. RIDDLE: Well, I'd like to respond to your
issue about the scope being extended now to include dietary supplements and several other large product categories, because the preamble clearly stated that they were outside of the scope when the final rule was published, and now there's been a change in that interpretation fairly late in the game for a company to have to change formulations, have to change labels, and get certified.

MS. ULERY: Yes. It feels like somebody's, in an old Western, shooting at your feet, and you're hopping from foot to foot, and you just don't know which foot you're going to land on.

MR. RIDDLE: Well, yes. This wasn't --

MS. ULERY: I gather this is not my own experience only.

MR. RIDDLE: You aren't alone. But I think you bring up a very valid point that does need to be considered thoughtfully both by the board and the NOP, is the full implications of this change in scope.

MS. ULERY: And we're all dying to hear what those are, but -- and that brings me to my next point, which is the October deadline. I don't know how that's going to play out for us and our certifier, and I don't know what your intentions are since you've thrown this
curve at us at this point.

It might be prudent to -- you know, if the whole point of going through this exercise of having the NOP is to encourage standardized organic products, maybe this is one of those cases where you want to give dietary supplements and the other categories more time to come into compliance and more time for the board and the NOP to understand the issues as you bring these products in, because there are portions of the NOP that don't really apply very well to, for instance, dietary supplements. I'm going to restrict my remarks to those, because that's what I know.

The three food groups designation on a "made with" label -- Pure Synergy, which is our main product, has 62 ingredients, and we've got like six categories of ingredients. Only two of those categories are 100 percent organic, so we could choose two of those to list.

If you're talking about marketing and telling the consumer what's in the product, it kind of undercuts us for all those other ingredients that are organic that we've managed to pull together and put in the product.

Do you understand what I'm saying? So to limit us on the "made with" panel declaration to, one, require us to list three food groups, which the OAS didn't, and
then to limit them to three -- we don't like that.

So just so you know, it doesn't fit very well
with what we do. And I understand that it fits pretty
well with most food categories, but supplements are a
little different.

On the spirulina issue, just in case I can't
make it in September and just to highlight the main import
of what I was trying to say in my letter, which hopefully
you will have, is I believe there's a strong need to
distinguish between soil-based agricultural needs and
restrictions and then here you've got a category of
growing that's in a pond or a tank and it's closed and
contained.

And it may be that it deserves a totally
different rule or consideration. And I understand when
you're crafting rules, to make exceptions is horrible for
the enforcers, for the regulators; you don't want them.
But it's a sorry fact that you get to have them, and I
would really urge you to make room for a product like
this, because these two companies, Cyanotech and
Earthrise, have had a really strong commitment to
organics, and certainly our company has, and we're going
to have the rug pulled out from under us, and all those
years of promoting organics and trying to get people to
understand why they're important -- we lose.

One last point --

MR. CARTER: Okay. You need to wrap up, because we lost track of your time; we thought you were done with your comments, and so we quit the time here, so just very quickly, if you could summarize.

MS. ULERY: Yes. Public perception that Marty was talking about, the use of the term "certified organic" versus "organic" -- I think those of us who work in this world very closely tend to forget about the consumers and what they know and don't know; they don't know anything.

I can't tell you how many times I have people say, Why organic? Why should I pay that much for that? Certified organic -- I think it's really important that you let people make that claim.

MR. CARTER: Okay.

MS. ULERY: Thank you. Oh, and communicate more on your website, please.

MR. CARTER: Okay. Rick.

MR. MATHEWS: With regard to your labels, when were you planning to start using the labels that you were ordering this week?

MS. ULERY: August.

MR. MATHEWS: August?
MS. ULERY: Yes. See, the lead times are often very long, and then of course you've got issues of expense. If you run a really small print job, they kill you with price. The labels can go from being eight to nine cents a piece for the ones I'm thinking of to being more like closer to 20 cents.

MR. MATHEWS: Okay. Are you aware that the labeling requirements actually kick in October 21, and that any label that is applied to any product prior to October 21 can still be found on the shelves after October 21?

MS. ULERY: Yes.

MR. MATHEWS: Okay.

MR. CARTER: Okay. Thank you.

MS. ULERY: Thank you.

MR. CARTER: Emily, and then after that we have Mary Mulray. Is she here?

VOICE: Yes, she's here.

I just have a few problems I wanted to address on the whole proposal about rearranging 205.606 and also a couple of comments on incidental additives in livestock feed. And I believe Mary's going to talk more about 606,
I really appreciate the effort that the board has made to try and fix this wording. It is very confusing and needs clarification. People don't know what that list is supposed to represent: Is it the total universe of commercially nonavailable ingredients? Is anything allowed and these ones must be organic? So it needs to be cleared up.

However, I think that the solution isn't well thought out yet at this point; I think it's premature to make a change based -- I know you voted this -- I believe you voted this as a final recommendation on a change.

However, it conflicts elsewhere with the definition of nonagricultural ingredient in the rule, so there's obviously a few glitches here that the definition says that, for instance, of a nonagricultural ingredient, that such things as -- for the purpose of this part, a nonagricultural ingredient also includes any substance such as gum, citric acid, or pectin extracted from, isolated from, or a fraction of agricultural products so that the identity is unrecognizable.

Now, this has always been a problematic definition, but you can't take pectin off the list when the definition says pectin is nonagricultural.
So I think that you need to look at the impact also on the rest of the nonsynthetics on the list, because some of them are clearly agricultural, too.

So my suggestion for the time being is that we get a general policy clarification from NOP to say that nonorganic ingredients are allowed -- anyone is allowed under the commercial availability; just clarify the general intent of that and then open up for more comment and fixing up of how to restructure those items on the list.

There has been really no public notification of this big change. Right?

MS. BURTON: Yes. It will go [inaudible].

MS. ROSEN: Oh, okay. Good. All right.

So I have more ideas; I can talk to you more about that later. And it's a tricky thing, but we're not quite there yet.

MS. BURTON: Just a comment: Why it came up so quickly was we are receiving petitions now to add materials, and, quite frankly, we're out of money, so we just wanted to at least get that out there, and I encourage comment. So anything would help.

MS. ROSEN: Right. And along that line further, we need -- if you're going to rank something as
agricultural and outside the scope of the list, we need a clear line drawn and criteria. Also, we want to make sure you're not just passing the buck on the decision here, because some of these materials that we're suddenly calling agricultural have a lot of sort of caveats about how they're produced, if they're a synthetic or natural form; the gelatin, like two out of those four forms were produced not using -- you could not make them organically.

So does that mean they're, by de facto, not commercially allowed and therefore anyone can use them? In that case, you should just put it on the list so it's clear that it's allowed, rather than have certifiers running around trying to investigate bone factories in Iowa and find out how they're making this stuff. You know, it's not clear that way.

But we can talk more about that later. I just think there are some problems and it needs to be further addressed.

Incidental additives in livestock feed: You know, I was very comfortable with that, going in, as a guidance document; I'm really uncomfortable with that going into the National List as a whole big, huge category that could be totally misinterpreted.

I dug out from my files, which I didn't have
yesterday -- I think you should go back and look at FDA's comments on the feed additive issues; they had some language suggestions, and they discuss their authority with AAFCO, and I think it's well within the bounds of clarifying FDA's rule to put that information out as a guidance document, and I think that would be -- I just think it would be more advisable.

If you wanted to put positively in that carriers are required from organic sources, you know, as are required by FDA to be on the label, that would be a positive thing you could add in, but I wouldn't want to put in this large category of incidental additives without -- you know, I just think it could be misused.

It also sets the precedent that FDA is an acceptable TAP reviewer, as far as organic is concerned, and I don't know if you want to make that step.

All right. Thanks.

MR. CARTER: Comments, questions for Emily? Willie?

MR. LOCKERETZ: A question for Emily and I guess Rick as well. I understand your concern about blanket approval of a large category of ingredients, but am I correct in thinking that since this would be only interim final rule, that if an objectionable one was
discovered, it would be easier to remove that than it
would be if it were the full rulemaking process?

And is that good enough for you, to assuage
your concerns about blanket acceptance?

MS. ROSEN: Well, this is not just blanket
incidental; it could be anything in 21 CAR, practically.
The question is of where they're allowed, and it has to be
really clear to producers that they're allowed only as
secondary ingredients, say, so it's down the list and it
is minor and exempt.

But I don't think that will be clear on just a
straight listing on the National List, and I think it
would be better to explain it in a position paper that's
really clarifying how FDA regulates these things.

So it's already in law; it's not like
reinventing the wheel.

MR. CARTER: Okay. Rick?

MR. MATHEWS: The regular rulemaking process
will take at least 18 months. What we have tried to do is
come up with a solution to provide these materials -- the
availability of these materials to people before October
21.

So we have, as I've stated previously,
consulted with the attorneys and then granted permission
to go with an interim final rule.

The interim final rule will have a comment period provided for within it. People can weigh in as much as they want. If problems come up, this thing could go back to proposed rule and then go from there to a final rule.

So something that we would be saying is, Okay; it will automatically be okay until we had to then go back and do the full rulemaking process on it.

So I don't know if that helps Willie any more or not.

MR. LOCKERETZ: Well, how does it compare between going to full rule after there's been an interim final versus going to full rule just from the beginning as far as how long it would take? In other words, to answer Emily's objection --

MR. MATHEWS: What I just said, Willie, is that the provision is effective upon the date specified in the interim rule, which would, in all likelihood, be -- it's either going to be -- I'm hoping it will be upon publication. That's our goal, that it would be effective upon publication.

If you went out with a proposed rule, there would be a minimum of probably nine months before it
became effective.

Well, now, it would be more than that; I mean, it would take us nine months to just publish the interim final rule, and then there'd be another nine months after that.

So you're talking a minimum of 18 months before it would become effective under the normal rulemaking process. This other way it's going to take whatever time it takes us to get the interim final rule out.

Does that help?

MS. ROSEN: Can I ask one question about that timing?

MR. CARTER: Yes.

MS. ROSEN: So if you have to go -- if you have an interim rule and then there's too much comment and you have to go back to a full proposed rule, what happens in between? Like does the stuff that was proposed in interim stay until the rewriting, or do you revert to the original?

MR. MATHEWS: It depends on the scope of the problem, and it's also something I'll have to refer to the attorneys.

MS. ROSEN: Thanks.

MR. CARTER: Thank you, Emily.
MS. ROSEN: Okay. Sure.

MR. CARTER: Okay. Mary Mulray and then Marian Casazza.

MS. MULRAY: Hello. My name's Mary Mulray. I'm speaking today as an OMRI board executive committee member, TAP reviewer, MPPL committee member of the OTA, and interested industry member.

I too want to commend the board on their hard work preparing for this meeting and their diligent deliberations of the issues during this meeting, and the NOP for their hard work regarding accreditation, preparation for this meeting, and responding to the endless questions that come up about organics.

My comments are directed to processing materials and the removal of the list from 205.606 for those materials that are nonorganic agricultural materials, which I agree to in principle, and some of these comments will be duplicates of some of Emily's comments.

205.606 states that any nonorganically produced agricultural commodity may be used in accordance with the restrictions specified in this section and when the product is not commercially available in organic form.

I'm specifically not addressing the issue of
commercial availability in this section, except peripherally in one of my examples.

I want to support Kim's recommendation that third-party review of this materials is critical; I also believe there needs to be a clarification and/or guidance document on these issues, and I understand that the Organic Trade Association has requested this in the past via the MPPL committee.

There's still a fair amount of confusion as to what's an agricultural material, a nonagricultural material, and what is synthetic or nonsynthetic, or what's really defined as natural.

An agricultural product is defined as any agricultural commodity or product, whether raw or process, including any commodity or product derived from livestock that's marketed in the United States for human or livestock production.

The key issue here is "raw or processed." In the nonagricultural definition, it says a substance that's not a product of agricultural, such as a mineral or bacterial culture that is used as an ingredient in an agricultural product.

For the purposes of this part it also includes any substance such as gum, citric acid, or pectin that is
extracted from, isolated from, or a fraction of an agricultural product so that the identity of the product is unrecognizable in the extract, isolate, or fraction.

And as Emily stated, we have created some confusion, because those things are listed. Pectin, gums, for example, are listed as agricultural materials in 205.606, yet they're in the definition of nonagricultural materials.

And I know the Materials Committee is working on this; I just want to support that work.

In addition, is corn starch or rice flour, for example, recognizable or unrecognizable as corn or rice, the agricultural commodity? The question is how much processing is allowed for a product to be considered agricultural.

And then in the definitions of synthetic and nonsynthetic, which I won't go into, essentially there needs to be lines drawn and further guidance there as well.

Examples of processing materials considered at this meeting give good examples: gelatin was considered an agricultural material, but depending on the process, it may be synthetic or nonsynthetic.

Two of the nonsynthetic forms could not be made
organically because of the processing input. So does that mean they are de facto allowed, since they could never be commercially available as organic?

Shellac bleach was not added to 205.606 in the past, since it was synthetic, but unbleached shellac was considered to be consistent with .606. How will certifiers and inspectors know the difference when reviewing formulations?

The larger nonorganic food processing industry does not understand these concepts at all, and there's much confusion within the organic industry, so I believe more clarification is needed.

A clear positive list of allowed materials listed somewhere would be helpful.

I want to recommend that certifiers look to third-party review systems such as OMRI to evaluate these materials and make a determination. OMRI and the reviewers would need guidance from the NOSB before carrying out this process, however.

Once there's clarity on these issues, processors and handlers should encourage their suppliers of these materials to become listed as brand-name listings to ensure that they would meet the requirements of 205.606.
Thank you.

MR. CARTER: Thank you, Mary.

Any questions for Mary?

MS. CAUGHLAN: You're giving us your written input, Mary?

MS. MULRAY: Yes. I haven't printed it, but I can.

MR. CARTER: Okay. And also be sure to give a copy to the reporter over there if you have time.

Thank you, Mary.

Okay. Marian Casazza, and then we have Leslie Zuck.

MS. CASAZZA: I'm Marian Casazza. I'm the vice president of quality systems for Quality Assurance International, QAI.

First of all, QAI would like to welcome the new NOSB members, and we appreciate all the hard work and dedication that all the NOSB members have put into all of the work that you've been doing. We empathize with the difficulty of dealing with all of the issues that are involved.

We would like to remind the NOSB that the annotations will add to the time and cost of certification and that they may increase the difficulty in forming
equivalency agreements with foreign governments.

We'd like to request some clarification on the materials list as it relates to postharvest. Some materials on the crop list like floating agents represent processing on the farm, while waxes are found on the processing list.

At what point does postharvest transfer from crops to processing? Certifiers need to be clear on which list is applicable.

Based on this meeting and the public comment, QAI is preparing for a complete public testimony for the next NOSB meeting, dealing with these issues and others as they pertain to the impact on certification agents.

Finally, on Monday, Mr. Bass from Country Hen presented some testimony in which he represented his organization as QAI-certified. Although they were certified with QAI in the past, they do not currently hold a QAI valid certificate, and I've asked Mr. Bass to contact QAI office to clear up this situation.

MR. CARTER: Okay. Thank you, Marian.

Comments or questions for Marian?

Okay. Thank you.

MS. CAUGHLAN: Just one comment: You indicated that you were planning on doing public testimony. We
always welcome your written comments timely as they go along; those are what help us in our job mostly. Certainly we welcome public comment, but you indicated waiting. I would just say put your thoughts to us ASAP.

MS. CASAZZA: [inaudible].

MR. CARTER: Okay. Why don't you speak into the microphone, please.

MS. CASAZZA: I'd just like to put more thought into the comments that we have from this meeting --

MS. CAUGHLAN: Certainly.

MS. CASAZZA: -- and put it into written form --

MS. CAUGHLAN: But again --

MS. CASAZZA: -- or public comment for the next time.

MS. CAUGHLAN: Thank you.

MR. CARTER: Okay. Leslie Zuck and then, looking at this next name here, the way it's signed in, it says Mary Mesh; I wonder if that's Marty's sister.

VOICE: I think it's his chicken scratch.

MR. CARTER: Yes, it's his chicken scratch. Okay. Leslie, go ahead.

MS. ZUCK: Hello. I'm Leslie Zuck, executive director of Pennsylvania Certified Organic. On Monday I
came here to support the board's draft recommendations for poultry outdoor access and dairy replacement animals.

I still support your poultry outdoor access recommendation as amended, and I still support your amended draft recommendation on dairy replacement animals.

Surprise, surprise.

So, having said all that -- that's just the however -- I just really want to emphasize that the clarification the board is working on on the dairy replacement animals that they -- once -- if they're brought onto the farm after the herd is converted, must be organic from the last third of gestation, unless commercially unavailable, is very, very important and very, very necessary.

On Monday Mr. Mathews asked the Livestock Committee to justify, one, why their clarification was necessary; two, who it was a problem for and, three, what the economic justification or impact was for that clarification or guidance that they were submitting.

I'd like to suggest some of those answers. One, why is it needed? Nearly all the certification agencies I have spoken to that certified dairy operations interpret the rule as requiring organic replacement heifers; however, one certification agency that does not
require organic replacement heifers certifies a lot if not most of the dairy cows in the US.

So who is it a problem for? Well, it's a problem for the 7000 cows and their farmers in Pennsylvania, because the rules are different, depending on who certifies them. And clearly this is not where we want to be.

The language, I will admit, of the rule is contradictory; it is confusing, and it unintentionally allows for different interpretations, so we need a solution.

And I guess here's where I kind of have to fess up, admit that I am also an attorney, because one of the first things they will teach you in law school is, you know, in a situation where you have a contradiction or a question of interpretation or an ambiguity is to look to the reason behind the rule. Why is it there? What is it meant to do?

And that's not always easy. Sometimes you have to go and research legislative intent, check out the congressional records, all that. But we're pretty lucky in this case, because we have the preamble to this very rule, which spells out that the intent of the rule is to require organic replacement animals, whether raised on the
farm or purchased from off farm.

So I'll read from page 80570: "The conversion provision rewards producers for raising their own replacement animals, while still allowing for introduction of animals from off the farm that were organically raised from the last third of gestation."

This should protect existing markets for organically raised heifers while not discriminating against closed-herd operations.

Finally, the conversion provision cannot be used routinely to bring nonorganically raised animals onto an organic operation. It is a one-time opportunity for producers working with a certifying agent to implement a conversion strategy for an established, discrete dairy herd in conjunction with the land resources that sustain it.

I think that's pretty clear. A blanket allowance for transitioning commercially produced heifers would discriminate against farmers who raise their own, which is something we certainly should want to encourage, and the preamble states that this is not the intent.

It's also a problem, however, for those operations who specialize in raising certified organic heifers for other organic dairy farmers. Allowing
nonorganic replacements would be a huge -- make a huge
economic impact on those heifer operations, many of which
are young farmers just starting out; they hope to have
their own organic dairy herd someday, but right now they
can't afford the equipment or the land to get into it, and
it is in the best interest of the entire organic dairy
community to encourage these new farmers, and it would be
a great detriment to lose them.

It would have an impact as well on the organic
dairy farmers who rely on purchase replacement heifers,
because they want to buy organic heifers, so they don't
want to buy conventional or commercially produced heifers
when they need to get a few of their own if they can't
raise enough for themselves.

So we need to have the requirement to be in
there in order to ensure the integrity of the organic
dairy products, and still if you do have that commercial
availability clause in there, it still makes it fair to
regions of the US where there aren't an available supply
of the organic heifers.

Thank you. Questions?

MR. CARTER: Questions?

(No response.)

MR. CARTER: Okay. Thank you, Leslie.
Okay. Marty Mesh and then Liana Hoodes.

MR. MESH: Marty Mesh, with Quality Certification Services, Florida Organic Growers.

If there's any hesitation about getting ready for enforcement, I think we all recognize that it should be a highest priority for USDA, and certifiers need to know exactly how it will work and when.

I said years ago that USDA should not release the first proposed rule, then the next one, without including an enforcement section. The response was always, Don't worry; we're the USDA. We'll take care of enforcement.

I urge you to get prepared and use egregious examples to achieve widespread compliance quickly. The industry came to USDA partially for that reason. It's been a very long time, and the lure of easy money may tempt some folks to misbehave.

It should be made clear the mislabeling and outright fraud of consumers will not be accepted by the United States government and that enforcement time lines will be swift.

I applaud the members of the board who recognize and take appropriate actions when a conflict of interest exists and encourage careful consideration in
this area as you deliberate on materials.

We will await the NOP's response concerning the use of "certified organic" on the label; appreciate the dialog, and hope the decision will be made, then communicated to the industry and certifiers quickly.

I was thankful that the past members of the NOSB were here to aid the current board. I appreciate the vast amount of work and preparation on the part of a very overtaxed USDA staff to prepare for the meeting and appreciate the transition that the older members helped the new members make.

I'd like the tables to be arranged in the future so that us in the peanut gallery can pass notes, if we're not going to be called on by the chair, because there's a lot of expertise in the room that I think you guys could take advantage of, and I appreciate the chair's ability to facilitate a difficult meeting.

I want to Eric Sideman and the rest of the members of the compost task force for the excellent work of the problem that organic farmers have expressed the utmost concern about: the conflict of interest -- I mean the compost issue that needed attention.

Thank you. However, the language is a bit cloudy when you have compost and high-quality compost with
the same time, temperature requirement but only a pathogen
reduction to differentiate them.

This may cause mandated pathogen testing of
compost for use in a compost tea or at least a question of
whether or not high-quality compost is safe, in the mind
of a consumer.

Overall I feel there's a lack of sensitivity to
the challenge of verification of the standard and
especially annotations, as you put more and more on
certifiers and inspectors to verify.

We need guidance on what is sufficient
documentation to verify exceptions to the standards: too
hot, too wet, too dry, in whose opinion? Is letters from
two vets, three vets, one vet sufficient to be the
exception to the rule.

If certifiers are to verify that folks are
compliant, some clear direction on what we are to verify
is helpful. As Carol and many other people have said
articulately: What is verifiable and what is enforceable?

We want to thank USDA for agreeing to look at
fixing the government-mandated spray issues that I've been
trying to bring up. Hopefully you could fix it in the
interim final rule that's being published before October
21. For USDA to say they couldn't fix it because of
existing rule language, your policy interpretation ability was evident with the nonallowance of organic meat labeling and then through magical nonUSDA rulemaking but with policy interpretation, organic meat appeared.

And then finally I encourage the peer review panel to get implemented, set up, and start work as soon as possible.

Thank you.

MR. CARTER: Okay. Thank you, Marty.

Rick has a comment.

MR. MATHEWS: I want to comment on the enforcement program. And as you well know, Marty, and as all of the other certifying agents in this room know, you have already started that process through your application.

The certifying agents are the first line of enforcement of this program. You will be the ones who are the eyes and ears of the organic industry. You will be telling us when someone who is not certified by you is alleged to be in violation or when you think that one of your competitors as a certifying agent is not doing something that is allowed for under the standards.

So I remind the certifying agents they have a huge role in enforcement of this program.
MR. CARTER: Okay. Oh, I'm sorry, Willie.

MR. LOCKERETZ: More a question for Rick, I guess, but Marty referred to what he hoped would be put into the interim final rule by September and had to do with mandated spray programs, I believe.

MR. MATHEWS: And conflict of interest.

MR. LOCKERETZ: Conflict of interest, yes, of course. The word processor is set to put that phrase in every second page.

But, Rick, am I -- I believe there will be two interim final rules -- is that correct? -- one dealing just with materials for the National List, which that's the one you're trying for by September? Am I correct in this?

The interim final rule that deals with other issues such as the ones he raised, is that a second interim final rule? And if so, will it be by September 21 as well?

MR. MATHEWS: The only interim final rules that we are doing are for materials. All other rules have to go through the proposed rule -- final rule process.

The technical corrections docket is just that, a technical corrections docket and will not be seeking public comment, and therefore will not go through that
type of rulemaking process.

Marty's issue is that Marty doesn't like the fact that the rule provides that if there is a mandatory spray program and your crop is sprayed, the rules provide that, because you were subject to a mandatory spray program that applied a prohibited substance to your farm, the rules provide you do not use the organic status for that parcel that was treated with that prohibited substance; you do, however, lose the organic status of that crop.

What Marty is trying to do is to get us to tie it to the 5-percent rule. I'm not making any obligations on that.

MR. MESH: Thank you for your consideration.

MR. MATHEWS: Yes. I am considering it, but I'm not committing anything.

MR. MESH: Or compensating farmers would be --

MR. MATHEWS: We won't be compensating.

MR. RIDDLE: Well, this seems like a very important issue, and should it be something that the Crops Committee should consider and possibly add to the work plan drafting some language, working with Rick on this consideration of the issue?

MR. MATHEWS: This is not a new issue. This is
an issue that's been going on for as long as they've been
trying to put this rule out and get it fully implemented.

    This is an issue that's been vetted many times
in many ways, and the sad truth may be that if you want to
grow a certain crop in an area where they're going to
treat, maybe you shouldn't be growing there.
    I mean, it's just like with all the other
prohibited substances out there.

    MR. MESH: Or maybe the government shouldn't be
spraying.

    (Laughter and applause.)

    MR. CARTER: Okay. Thank you, Marty.
    Liana Hoodes and then Brian McElroy.

    MS. HOODES: Liana Hoodes, National Campaign
for Sustainable Agriculture. I just have a few quick
comments. I'm not going to read at high speed today.
    Unfortunately, I want to reiterate something
that I spoke about earlier about the role of NOSB
clarifications, and I want to commend the work of this
board. It's always -- I know how much work you do, and
then I'm always amazed at what comes out of these meetings
and the huge amount of work that it takes to draft
recommendations and clarifications.
    Our concern is that, other than the area of
materials, what does really happen to these recommendations once you've had the vote and they leave NOSB? The waters were muddied even more during this meeting about whether a recommendation is an enforceable clarification to the rule or an unenforceable guidance document.

What are the criteria for making these characterizations, and who makes these decisions? What is the status of all those recommendations that you have made over the years? And where do we find this? I urge you as a board to follow through on what this process is.

Secondly, we heard about -- we heard a lot of comments this week, and we now all understand that there clearly is certified organic product on the market that is certified by a USDA -- recently USDA-accredited certifier that violates both the letter and the spirit of the law regarding accreditation, certification, and production.

And absolutely the certifier in many cases is the place where enforcement starts, but in other cases it involves the certifier. We hope the Department moves very swiftly to protect the market and the farmers who must compete against fraudulent product. It's very important; it can't wait for a year.

It's got to happen soon, or the market's in big
And finally, this whole example highlights the fact that conflict of interest is a many-splendored thing, and it can take many forms, and I propose that you seriously -- the program and NOSB consider that farmer-based certifiers may actually safeguard against many forms of conflict of interest. Keep on looking at this.

I know it's clearly a hard piece to work on, but there are many times when it is those farmer-based certifiers who do protect us.

That's it.

MR. CARTER: Thank you, Liana. And I would just say, as a follow-up to your first comment, that is a big issue and one that the board and the NOP have had a number of discussions on, particularly the last couple of months, about the implementation of recommendations from the NOSB.

Barbara Robinson has particularly agreed to go through and help us compile a list of NOSB recommendations and what has happened, and we want to use that as the basis, then, to start analyzing, you know, what's getting implemented, what's not, and how can we make the process more effective.

MS. HOODES: Excellent. Thank you.
MR. CARTER: Okay. After Brian we've got Amelia Adams.

And as others have said, again, congratulations to the NOP staff. All of you and the USDA quality systems staff have all been under a lot of pressure. Don't go into the bunker. There's going to be a lot of complaints and a lot of discussion, but don't go into the bunker. Stay out here; we're all on the same side.

Quickly, I have submitted written comments on a specific topic, but a couple of things that have come up that I want to comment on quickly and then get to my written comments is there was this handling operation ingredient affidavit which I'm sorry I haven't participated in, and I apologize for that, but I want a change to maybe perhaps off-line discuss the relationship of this affidavit to Section 205.500 and the obligations of the certified operation. And maybe I can do that off-line with the two of you.

MR. RIDDLE: It's just being posted for comment.

MR. McELROY: Okay. I misunderstood that it
was adopted as a guidance document. Okay.

MR. RIDDLE: It was posted from committee for comment.

MR. McELROY: Good. Thank you. Okay.

Next topic: I want to support Marty Mesh's comments about the use of the terminology "certified" and emphasize that, though terminology "certified" is in most of the certification programs, name is part of our trademark name, so whatever decision comes down on that, could we be very cautious to retain the opportunity for us to keep our names.

Then now to the comments that I've written, and I won't read them; I'll try to maybe discuss it in plain language so that there's another opportunity to explain it.

This is back to accreditation according to the NOP program versus accreditation to the ISO-65 program. And the CCOF has now become accredited to two different programs and have two different accreditations, and we fully expect that we will end up with two accreditation site visits.

I have been assured by USDA staff that we will have one site visit and that those two will be combined; however, we've been assured in the past that the gap
between ISO-65 and the NOP program was to be resolved in
the past, and it wasn't.

And now here we are faced with these two
different accreditation programs, and I believe that when
the auditors walk out that they will do their job by the
book, because that's what they're paid to do, and the book
will be that they've got two different sets of standards
to verify, which is going to mean two different
accreditation visits.

Now, this whole NOP program has been very
focused on making sure that certification happens to one
standard, and in the process we have suddenly created two
different accreditation programs.

You know, we've had two giant steps forward,
and this is one step back. So I really encourage this to
be resolved at the highest level possible in the USDA,
because it cannot be resolved at Mr. Mathews' level,
because the quality assurance program is separate from the
NOP program.

We're dealing with two different program
managers, from my understanding, and I may be wrong on
that, but we need to go up to the level where finally the
two program managers are supervised by the same person so
that there can be some sort of resolution to this issue.
Let me tell you why I think the issue's extremely important. One, as I said, organic certification programs are subject to two accreditations in order to qualify product for export to the European Union, and 90 percent of us have to do that.

This is an added expense and administration on organic certification programs that will surely be passed on to organic producers.

The second part of this: European Union regulators now have evidence of the ways that the NOP program do not comply with ISO-65. This will surely be a point of discussion on any trade agreement.

An NOP-accredited program that applied to the ISO-65 program was denied ISO-65 accreditation and has been awarded NOP accreditation. When you go to the website and you look at the ISO-65 accredited programs, you see a list. That list is not the same as the list of the NOP-accredited programs.

There are ISO-65 accredited programs that have "under review" marked next to their name. You go to the NOP list, the lists don't match.

The gap is not that wide. I think it can be resolved, and the Accreditation Committee chairman has brought this issue up in the past, and I think you have
some documentation to help look at the differences.

However, the more these lists go on and the more we have differences in these lists, I'm afraid the wider the gap is going to go.

So that pretty much sums it up; it's a bit of an arcane issue, and I'm really hoping -- I'm sorry you're taking a little break. It's well deserved, but this issue really is key. We're headed for nine months here, until October -- well, probably down to six months now; I'm not counting, but we're going to have some problems with the European Union over this issue, I have no doubt.

Thank you.

MR. CARTER: Thank you, Brian.

Questions or comments for Brian?

Willie?

MR. LOCKERETZ: Can you tell us a little bit about this particular case of, I think it was, ISO-65 denial and USDA accreditation awarded, if I got it correctly? Give us a sense of what and how the differences were.

MR. McELROY: I don't know, because the differences were not revealed to me. It wasn't our program; it was another program that those issues are confidential. But I'm sure the NOP staff and the USDA
quality assurance staff could go through those items with you.

MR. CARTER: Okay.

MR. McELROY: Thank you.

MR. CARTER: Thank you, Brian.

Amelia Adams and then it looks like Doug Cathert [phonetic]?

MS. ADAMS: Hi, everyone. I am Amelia Adams, and I'm represent Quality Certification Services and Florida Organic Growers. I am certification coordinator for Quality Certification Services.

I, like everyone else, would just simply like to thank you for all of your hard work. I think that that pretty much covers that. And I would like to speak for a moment from the standpoint of organic certification.

There's been a lot of terms thrown around regarding guidance documents and the intent of the final rule and so forth and so on. And I can tell you that I spent countless hours reviewing the final rule, and I believe I have a pretty good idea of the intent of it.

However, what I think doesn't matter. I can't certify to intent. I have to certify to what's in black and white. I can't even certify to a guidance document, and this becomes more and more important as the industry
is moving away from the core of farmers and processors who fully believe and live their lives according to organic integrity and division of their organics and are emotionally and physically involved in the organic movement.

This industry is bigger than that now. There's people in it simply just for the money, whether we like it or not; it's a mushrooming industry.

And these people don't really care about guidance documents. They're going to do the minimum that is required to achieve organic certification. And you got to take the devil's advocate on a couple of things, unfortunately, and realize that when you create an ambiguous standard, the minimum is what is going to be accepted many times.

And I'd like to just go through the -- since it's -- not to beat a dead horse, but since it's fresh on everyone's mind, I'd like to go through the access to outdoors for poultry for a moment and tell you a little of what I can guarantee you I am going to hear from producers wishing to get around this recommendation, this standard.

"Organically managed poultry must have access to outdoors. Organic livestock facilities shall give poultry the ability to choose to be in the housing or
outside in the open air and direct sunshine."

I can guarantee you I'll have a producer come
to me and say, Well, my house has a door on it; the
chickens can choose to open it if they want to.

Next line: "The producer's organic system plan
shall illustrate how the producer will maximize and
courage access to the outdoors."

Well, I showed them how to use the door. They
see me go in and out three or four times a day; I showed
them the movie Chicken Run. And, you know, while I'm not
going to sign my name to that as certified organic,
there's someone out there who will.

Same thing with organic certification agencies.
They're not all in it for the organic integrity and the
mission. A lot of them are in it for the money; a lot of
them are created by the interest of these people who are
in it for the money.

Same with organic inspectors. You can't count
on guidance documents being the method to encourage the
farm plan to be a better and better organic system.
That's simply unfortunately not the way it is, and I would
just like to express that view as an organic certifier,
that those are some concerns that we have with guidance
documents and intents of the standards.
Any questions?

MR. CARTER: Thank you, Amelia.

Any questions for --

Yes, Willie?

MR. LOCKERETZ: A generic version of a point that you raised concerning how much discretion the certifier has: There are arguments for giving the certifiers considerable discretion because of ecological and environmental differences around this big country of ours, but also -- well, in your -- would you like to see more or less specified in explicit instructions concerning the standards: the trade-off between the problem you described versus the fact that there really are differences from around the country that need individual interpretation?

Do you want us to be more or less explicit concerning how much you put into the black-and-white standards?

MS. ADAMS: I believe that there are ways -- like you said, the environmental differences, area-appropriate, temperature-appropriate and so forth issues are very important.

As from Florida, that becomes very important. You can't do a lot of things in Florida that you can do
other places. But I believe that there are ways to still be specific while allowing for geographically appropriate methods.

I believe that there are ways to get around that. The same example would be the access to outdoors for poultry and the amendment that -- number two, bare surfaces other than soil do not meet the intent of the rule.

I believe that that, for example, can be fleshed out. I can guarantee you someone's going to come to me and say, Well, it doesn't meet the intent of the rule. I don't care about meeting the intent of the rule; I just want to make money. Is it allowed or not?

And that's -- you know, I believe that that can be fleshed out, regardless of geographical location and appropriateness.

MR. CARTER: Thank you.

Other questions or comments?

(No response.)

MR. CARTER: Okay. Thank you, Amelia.

Doug and then George Bass.

MR. CRABTREE: First I'll apologize for my penmanship. It's Doug Crabtree from the Montana Department of Agriculture. We're proud to be a newly
minted certifying agent under NOP.

Just a few quick comments, possibly questions, from Big Sky Country. One of the primary concerns of our soon-to-be certified clients deals with the seed rule, and more specifically the definition of "commercially available" and how we will require that to be documented.

And I would certainly like to have more clarification on that issue from NOP, and my hope is that it can be consistent among certifiers, because I don't think it is, from what I hear. I'm hearing that there are vastly different interpretations of commercial availability and the documentation thereof at this time.

One thing else, a related issue: I would like to see NOP come up with a list of seed suppliers that certifiers could use in verifying lack of commercial availability. I think that would go a long way to clarifying this confusing issue.

Another matter that is bringing a lot of concern from growers in our state: the definition of compost. We are hearing -- and I would second this, that it's an overly prescriptive definition, and it's going to be very difficult, if not impossible, for many growers to meet the definition of compost using the methods and products they have been using, especially in northern
climates with regard to the temperature requirement and
also especially for smaller growers that may not have the
equipment or the resources to follow this intensive method
of preparation.

A third issue are treated fence posts. I'm
getting a lot of questions up there: Can I use treated
fence posts? If I already have them, will I be allowed to
have livestock within fences using treated fence posts?
Are there any allowed treatments currently for fence
posts? How is this use regarded under the material lists
and standards?

And can we grandfather in existing fences if
they are treated with materials that may be judged as
prohibited?

I guess those are my primary questions, so if
anyone wants to respond, I'd welcome that. If not, I'll
just enter them as official comments.

MR. CARTER: Okay. Anybody have specific
comments?

Owusu?

MR. BANDELE: On the commercial availability
issue, we -- the board has submitted a document to NOSB in
terms of that issue. That is on the website, is it?

MR. RIDDLE: Our recommendation?
MR. BANDELE: Yes.

MR. RIDDLE: Yes. The board's recommendation would only be on the website in the minutes from that meeting where we passed it, but that gets back to the need to really consolidate those recommendations and have those available.

But we're still waiting on the NOP to respond to their request for public comments in the Federal Register notice, because commercial availability was clearly sought, and they're -- my understanding from what Rick's previous comments, that it's still being put together, so that hasn't been issued yet.

But I did want to respond to the fence post question, because it's clear to me in that language of the rule that existing installations are allowed. So this is for new installations and replacement purposes that treated wood is prohibited.

But on your question of are there any allowed treatments and what are the real practical alternatives for farmers, that's -- I don't have any clear answer. I mean, there's nothing on the list as a wood treatment right now that works.

MR. CARTER: Other comments or questions?

(No response.)
MR. CARTER: Okay. Doug, thank you very much.

MR. CRABTREE: Thank you.

MR. CARTER: Just to let you know, we in Colorado have been following what's been happening in Montana very closely as they try and move toward certification establishment.

MR. RIDDLE: Just one more point, Doug: The Crops Committee did submit and we endorsed a compost task force report -- you weren't here yet -- so you should take a look at that.

There's going to be further work done by kind of a subcommittee of that task force to develop some proposed rule change language.

MR. CRABTREE: Thank you.

MR. CARTER: Okay. Next we have George Bass; then we'll have Brian Leahy, and there are two others after that.

MR. BASS: I only have three comments, really. one is to --

MR. CARTER: Please identify yourself.

MR. BASS: George Bass, from the Country Hen. I started the organic egg business in this country, and I was pleased to do so before the legislation came out on organic stuff.
I want to thank the board. I've just been very, very impressed with what I've seen and heard, and I've enjoyed meeting everybody here. And I was not very happy about this access to the outdoors. I think the public doesn't really know much about poultry, and I think I do know something about poultry after 30 years in it, but I'll live with what you -- I think it's fair. I think you came with something that's nice, and it's good.

I don't think it really meets my standard. My standards would be a hundred birds per acre, but that's all right.

I'm an outlaw. I guess I'm not a member of -- I'm not certified, and I learned that 15 minutes ago. And the only reason I can think that I didn't hear it before is one of our guy gals is getting married, in the office, and she's very, very excited about her future with this man, and evidently this letter never got to me.

And it's nothing that -- I feel very sorry about it, and I apologize for it, but we are going to try to make amends.

One of the reasons that I am an outlaw is that I've been waiting for a decision as to what to do with the access to the outdoors. I didn't know what to do, whether to move the farm or close the farm.
So -- but I'd like to talk on size of the -- of operations. I think if -- people kind of throw rocks at me because I am 67,000 hens and about 20,000 pullets, but I think the law of the supermarkets is dictating, and if you don't go along with the supermarket -- as they increase in size, you have to increase in size or you lose your business.

And I'm not going to increase any more; I'm going to increase about 10 percent, one barn, and that's it. I'm calling and end and I'm going to diversify. But I just thought I'd make that statement, because a lot of people do throw rocks at people that are bigger, and I think the opportunity is to get bigger. I think this thing is growing marvelously, and it's really up to all the things that you are doing, and I think you're cutting a lot of ground, and you're leading, I guess, the world in this kind of a movement, and I support it.

Third point is I think that Rick's group ought to be expanded by double or triple. I think the complexity, the amount of work that you're doing, the excitement of the movement, et cetera, et cetera -- and I will write a letter, and I think perhaps other people in the audience could write letters to their representatives, suggesting that the size should be increased.
That's all I've got to say.

MR. CARTER: Okay. Thank you, George.

Comments or questions?

(No response.)

MR. CARTER: Okay. Thank you very much.

Okay. Brian Leahy and then Phil LaRocca.

MR. LEAHY: I'm here to talk about

accreditation and conflict of interest.

MR. CARTER: Please identify yourself.

MR. LEAHY: I'm sorry. I'm Brian Leahy. I'm

the president of California Certified Organic Farmers.

When I started growing organic I was a rice

farmer in 1980, which is a program crop, which means you

deal with the government, USDA, every day. I think I was

the first modern organic farmer to get elected to a county

board.

So I'm used to what USDA wants, and I'm used to

their method, which is they tell you what they want, and

they tell you how to get there. And I recognize that this

is a very unique program that we're running here, because

USDA -- the government is actually giving a private entity

the power to issue a federal license, so we're on new

territory, which probably means we need to concentrate

more on where we really stand, but we've been running just
trying to get accreditation going.

And so what we found was our conflict-of-interest issues are board members still involved in certification or at least still in the same legal entity as certification taking place.

So I had our attorney, who works for the largest nonprofit ag firm in the world -- and her specialty is bylaws -- write out the questions we had and sent them to USDA.

Those questions, we never did receive a written answer. We received a bench audit that said that we were not -- that they had questions on our structure. So we sent them some written materials, and then we never heard until the other day that we had problems with our structure.

And when I got here, I found that there were other organizations similar to ourselves who did set up a fairly similar proposal to ours that still have some certified members in the board, a mixed board, did get accredited and did not have the conflict-of-interest problem.

And what I'm talking about is communications and our need to be able to sit down and work things out, because we now have less 120 days to change legal
structures or to do something, and we're not exactly sure what we can do.

I know I have two models out there, but, you know, really what we have created is a partnership between the government and private industry, and we really need clear communications and mechanisms, and especially in circumstances we have here, where the same organization that writes the rules does the interpretation and then is also accrediting us and where there's conflicts, and then there's built-in conflicts where there should be give and take, and then we turn around, and the same organization is going to come and say, Okay; now we're going to look and see if you did a good job or not.

So we have, I think, a real major flaw in the whole system, but we also need -- we have about 110 days now, Richard, to really figure this out. I have a board meeting in a week and a half so that we can go through our legal requirements to get changes made.

So I don't how we can -- I'd love to sit down this week, in the next few days, and talk and see if there's things we can agree on.

MR. CARTER: Okay. Are you done?

MR. LEAHY: I am done.

MR. CARTER: Okay.
Rick?

MR. MATHEWS: I believe the question has been posed to Barbara Robinson and that she has suggested that, because CCOF has many chapters, that you could be working amongst your chapters to certify the board members of each of those chapters.

MR. LEAHY: Part of the problem is we've had oral communications, which are always helpful, but it has to -- we need writing; we really need writing.

MR. MATHEWS: We'll provide that in writing to you.

MR. LEAHY: Okay. But -- all right. I guess what we were asking and what you said you'd provide -- I don't mean -- Richard, I'm not talking to you; I'm talking to USDA, federal government, on and on -- was we also need working models or, if we propose working models, that they are accepted, so that we can go ahead and make the structure changes, because we made structure changes based on what we thought was a good-faith effort.

MR. CARTER: Willie?

MR. LOCKERETZ: I can guess that after the initial list of accredited certifiers was put out, there must have been a lot of buzz, buzz, buzz among certifiers.

Do you have postmortem, as it were -- do you
have any indication of how widespread among certifiers the problems you encountered were?

MR. LEAHY: I believe there's eight organizations similar to ourselves, which are the -- have certified parties on the board that did not -- that had the same problem, which was they -- and what we received a little box that says we have 120 days to get this problem solved.

There's eight of us. I know -- I don't know -- well, it's all on the web, so, yes, I know Florida's in that circumstance; I believe OCIA is, so it is fairly widespread.

MR. CARTER: Okay. Jim?

MR. RIDDLE: Yes, just to respond to Willie's question: We put together -- I just remembered this -- a table of all of the 42 accredited certifiers with the type of operations they're accredited for and then the five different categories of conditions that they are having to address in the next 120 days.

And there are nine certifiers with the organizational structure conflict-of-interest issue, including one state program. There's 21, so exactly half of the accredited certifiers are being told that they have to change their standards to be solely the NOP standard.
So, anyway, I can make copies of this for the board members here before we leave.

MR. LOCKERETZ: I have to leave. I want to apologize to any members of the public who are waiting to comment, but I just have to go because of catching a plane, so --

MR. RIDDLE: Okay. Could you get those copies; you grab yours and then have somebody bring them back, if you'd like that, on your way out?

MR. LOCKERETZ: [inaudible]

MR. RIDDLE: Well, I was just thinking you could have it now if you just stopped at the desk, put it on the USDA tab, if that's okay.

MR. LOCKERETZ: Okay.

MR. CARTER: All right.

Phil, and then our last commenter is Pete Gonzalues.

MR. LAROCCA: Seems like I'm always last. I want to thank you for your patience. I'm sure you want to get on to something else, as do I.

My original comment was to pick up where I left off on Monday, and I do want to appreciate this time, and that is to basically deal with --

MS. CAUGHLAN: Could you identify your --
MR. LAROCCA: I'm sorry. I'm Phil LaRocca. I am a certified organic grape grower, organic processor, and livestock producer as well, and also chairman of the board of the California Certified Organic Farmers.

Again, my original intention and my main point of the comments today is to address the NOP regarding federal programs. However, you all, since I'm in Texas, I do want to make a quick comment.

I just want to reiterate that at CCOF with its conflict of interest, we did not sit on our hands in this thing. We have hundreds of hours of staff and volunteer time, thousands of dollars' worth of attorney fees -- if you dealt with a law firm that big, you know they are not cheap -- to really try to resolve this, so, again, I just would -- I thank the NOP for giving us our accreditation, and I think if we keep up this dialog, we will resolve this problem.

The second comment I want to make -- and, again, this is not from my certifier hat but from my producer hat, regarding certified organic. I know our company -- and I can tell from a lot of people that I know in the industry -- we have spent a lot of time in promoting, through our business, certified organic: This bottle of wine is certified organic. This wool is
certified organic.

so I think you really need to take that into account, because I think by taking that off the label, you can lose some economic impact, because we have spent a lot of marketing dollars to educate the public that "certified organic" means that, that this product has been inspected to the best and the highest quality level of organic standards.

And we're a small company compared to larger companies, which also have used the same marketing tack. So I really think that needs to be considered when you look at the certified organic.

Okay. Throughout the course of two days, Jim -- or three days, Jim has mentioned NRCS programs. And I know several years Keith, through the NOP, has tried to make some impact in natural resource conversation documents.

This is extremely important that the NOP get involved with another government agency and let them know that we have organic producers out there.

Jim has stated very positive results from the State of Nebraska -- excuse me -- Minnesota. In California we are getting mixed opinions, and I say it is important -- I know the OTA is beginning to work on this,
but the government agencies in California are telling me they would like to hear something from the federal level. I say this because right now there is an EQIP program through NRCS which is willing to cost-share anywhere from 20 to 70 percent to the producer to eliminate or knock down the use of pesticides or herbicides. I have been told that, as an organic producer, we won't qualify for this program. And most of the people on this board realize that as an organic producer, we are constantly in the battle of eliminating pesticides and herbicides in our program. It is not like a, snap, wake up in the morning and you got this thing figured out every day; you always are facing something new out there. So we should not be penalized for the fact that we are already achieving what this program is out to set its goal at. This is what I keep trying to tell these people: If you are putting in a program to eliminate the uses of pesticides and herbicides, then your goal is to take this off the market. Well, if you have farms that are doing this already, they should be somewhat also involved in this compensation goal rather than just be said, You can't do it because you're already doing it.
So I think the NOP really needs to get involved in this, because as a government agency, NRCS looks at the book, and that's what I think Keith was trying to do: actually get it in their manual so that they had references to organic agriculture and they can see that there is a place for us.

Thank you.

MR. CARTER: Okay. Thank you.

Rick?

MR. MATHEWS: I'd like to restate something that I said earlier in the meeting, and I encourage everyone here that if you're going to the organic trades association show at the convention center, that you stop by our booth.

USDA will have a double booth there. It will be manned by people from not only the organic program but from risk assessment, who takes care of the crop insurance; from the foreign agriculture service; the NRCS people will be there. And we'll also have people from Agricultural Marketing Services direct marketing, which also deals with our farmers' markets.

So at least at this we are pulling together people for the purposes of, you know, having you learn what is available in those different programs. And, of
course, I'm sure that the people manning those booths would be more than happy to take any suggestions you might have back to the people that they work for to talk about what more could they be doing for organic than what they might already be providing.

MR. LAROCCEA: I appreciate that, Rick; that's exactly what we need. That's what I was asking for.

MR. CARTER: Okay. Thank you, Phil.

And our grand finale, Pete Gonzalues.

MR. GONZALUES: Thank you. As executive director of Oregon Tilth, I'm representing our nearly 700 gardeners, consumers, and also agricultural producers that form the membership of Oregon Tilth. My comment is very focused, related to the compost tea, which I believe was passed in the last couple of days.

I'm sorry I was unable to provide written comment with a fully authorized signature in the short window between the release of this proposal and your decision; however, I would hope that you revisit one particular aspect.

There's an assumption stated in the task force recommendation stating that the critical determinant regarding pathogen growth in compost teas and extracts is the addition of carbon sources during the brewing process.
If that word "the" could be replaced with the word "a," I would agree that that is a critical element, but as biology teaches us, there are numerous -- there are other environmental factors which affect the growth of any population; in this case, oxygen is a critical factor, and so I hope that you would consider that oxygenation has a major bearing on this issue.

And in conclusion, I hope you will retract your prohibition of this progressive area of biological pest control. Simply because it can be done wrong does not mean this whole area of research should be prohibited.

Thank you.

MR. CARTER: Okay. Thanks, Pete.

Comments, questions?

(No response.)

MR. CARTER: Okay. Let me just close the public comment period here and then Rick has got an issue here on some clarification.

MR. MATHEWS: Yes. I was asked earlier -- I think it was by Arthur; they were trying for the notes to determine whether or not the access to the outdoors for poultry was regulation or for guidance.

In reality, its clarification. It's neither the -- it's not guidance document, but it's a
clarification of what the regulation means.

MS. CAUGHLAN: Point. Rick --

MR. CARTER: Okay. Goldie.

MS. CAUGHLAN: Could you expand a little more as to the impact of the -- of what you just said?

MR. MATHEWS: Well, the clarification helps people understand what it is they have to do to comply. I mean, there was so much debate about whether or not the bird physically had to go out the door. And now you have spoken with the voice of this board, saying, Yes, it has to go out the door.

So I see that as clarifying the regulation; we'll put that on the web to make sure that everybody fully understands the bird has to take a hike.

MS. CAUGHLAN: And this, as a clarification that you're saying, then, is it true, Rick, that we could further clarify as we get the input from more areas of the public and scientific impact -- that we could clarify it even further? Is that correct? It is a living document.

MR. MATHEWS: I would have to see what you're talking about. I mean, if you're going to start putting specifics as to what has to be out --

MS. CAUGHLAN: As long as we hold true --

MR. MATHEWS: -- in that --
MS. CAUGHLAN: -- to the rule --

MR. MATHEWS: As long as you hold true to the rule, that's okay. But if you start defining how much space, how many birds to the acre, et cetera, like George said that he would prefer to see a hundred birds to the acre -- if you come out and tell me that you want me to put into the rule that you have to have one acre for every hundred birds you're putting outside, I'm going to tell you you can't do that, because that is changing the rule, and so therefore we would have to go through the full rulemaking process to do that.

MS. CAUGHLAN: Thank you.

MR. CARTER: Okay. Kim?

MS. BURTON: If I could suggest, before the next meeting, or hopefully in the next couple of months, that we actually have a definition of the following: clarification document, a guidance document, and a policy document, so that when we present stuff to the NOP office, that we can actually head them as such, so that we know exactly what their intent is and where they should be going.

Thank you.

MR. CARTER: Very good suggestion.

Okay. Let me -- there's a couple of things; we
got a couple of things very quickly here.

Number one, our next meeting in September: I would ask that we schedule that -- we're already scheduled the 17th and 18th; I would say that we will probably need to meet the 17th, 18th, and 19th, using the 16th as a travel day. Okay? So please put that on your calendar.

MR. SIEMON: Just so I'm clear -- and work all the way till five o'clock on the 19th or half day for travel?

MR. CARTER: Well, I tell you what; when you're in DC, you're in the East, so you can leave at 6:00 and still get home by --

MR. SIEMON: Three full days?

MR. CARTER: Let's count on three full days. I think we're going to need it.

Okay. October: I would like to suggest that our meeting be around the 21st and 22nd; I hear that there's something going on then. But I think that it would be very helpful -- very good for us to be there during that, so if you would put that on your calendar.

Barbara said we're busy then.

MR. MATHEWS: And part of that busy-ness is just trying to get your charter renewed.

MR. CARTER: Yes, that's true. We'll work on
that.

Then a number of comments have come up on annotations. It just --

MR. SIEMON: [inaudible]. That's the first I've heard about that meeting.

MR. CARTER: Well, the 21st and 22nd has worked for us on the board. I just want the -- if we're going to have a board meeting and talk about these other issues, I think we need to have the board in town when the implementation date is, because I think we want to give as much publicity to the fact of this as we can.

Committee chairs: You know, a number of comments came up about the issue of let's not overannotate, and I think that that is a valid concern, but as the chair, I would just say -- would really direct that the committees -- it's very important that you go through and talk about what annotations need to be on there or not on there, and do that heavy lifting at the committee level, because if it comes to the board with a list of annotations, I intend to go through there as annotation by annotation and do the selection process there.

So really that detail work needs to be done at the committee level.
I really have nothing else. Is there anything else for the good of the order?

Again, I want to thank the new members that have come on; you've gotten up to speed very quickly.

Yes, George?

MR. SIEMON: I just wanted to make sure that Kim's request is a request from the whole board.

MR. CARTER: Yes.

MS. BURTON: Yes.

MR. CARTER: Just final comments here is, number one, I also want to express my appreciation to the board and the staff, as my first meeting as chair, of being patient with me as I go through a few things here.

I appreciate the work of the board that you've done here in the last few days, and particularly the staff. I know Katherine has been glued behind the laptop there, but, you know, this -- for all of the burps and the bumps that we hit as we go forward, I think that we're all headed in the right direction, and we need to recognize that from time to time.

So thank you all very much. Is there anything else to come before the board?

Jim?

MS. CAUGHLAN: I'd really like to thank the
chair very, very much.

(Applause.)

MR. SIEMON: [inaudible] motion to double the NOP staff.

MR. CARTER: Yes. That's right. One of the days the USDA will have as big an NOP staff as they have FSA.

MR. RIDDLE: Move to adjourn.

MR. CARTER: Okay. Motion to adjourn. Second?

MR. LACY: Second.

MR. CARTER: Any discussion?

(No response.)

MR. CARTER: Hearing none, all in favor say aye.

(Chorus of ayes.)

MR. CARTER: Opposed, same sign.

(No response.)

MR. CARTER: The meeting's adjourned.

(Whereupon, at 12:00 noon, the meeting was adjourned.)
CERTIFICATE

IN RE: National Organic Standards Board

LOCATION: Austin, Texas

DATE: May 8, 2002

I do hereby certify that the foregoing pages, numbers xxx through 851, inclusive, are the true, accurate, and complete transcript prepared from the verbal recording made by electronic recording by Penny Bynum before the U.S. Department of Agriculture National Organic Standards Board.

6/09/2002

(Transcriber) (Date)
The National Organic Standards Board meeting of September 17–19, 2002, was attended by 13 members:

Members Present:

- Owusu Bandele
- Kim Burton
- Dave Carter
- Goldie Caughlan
- Ann Cooper
- Dennis Holbrook
- Mark King
- Rosalie Koenig
- Michael Lacy
- Kevin R. O’Rell
- Nancy Ostiguy
- Jim Riddle
- George Siemon

Absent: Rebecca Goldburg

National Organic Program (NOP) Staff:

- Barbara C. Robinson, Agricultural Marketing Service Deputy Administrator for Transportation and Marketing
- Richard Mathews, NOP Program Manager
- Katherine Benham
- Arthur Neal
- Demaris Wilson
- Keith Jones

CALL TO ORDER: September 17, 2002 – David C. Carter, Chair - 8:15 a.m. (p.4)

Dave Carter welcomed everyone to the meeting, and had each member to introduce him/herself. He announced the October 21 implementation deadline, and the upcoming October 19–20 NOSB meeting. He talked about the materials review and voting process, and stated that there was difficulty doing the minutes from the Austin meeting. Therefore, to assist Katherine with recording the committee votes, he will bring forth from the committee the materials votes and motions and will do a roll call voice vote from each person.

APPROVAL OF AGENDA (See Discussion Document)

The agenda was approved. Kim Burton added that some of the crops materials listed will be deferred until the next meeting.

APPROVAL OF MINUTES

May 6–8, 2002 – Meeting Minutes (See Discussion Document)

The minutes were approved unanimously with no discussion.

Mr. Carter stated that the Executive Committee minutes, June 5, July 9, and August 13, 2002 (See Discussion Documents), are in the book, and Mr. Riddle added that they are also posted on the NOSB website.
The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record. Some individuals also presented written comments. Transcribed comments, and where applicable written comments, can be found at the DESIGNATED ATTACHMENTS.

SIGN–IN SHEETS, (Attach. A)
Gerald Davis, CalOrganic, (Attach. 1, Page 9)
Jeff Huckaby, General Manager, Grimway Farms, (Page 17)
Jim Pierce, Organic Valley Crop Cooperative, (Attachs. 4 & 4a, Page 27)
Andrea Caroe, Quality Assurance International, (Attach. 5, Page, 31)
Eric Kindberg, Organic Grower, (Page 35)
Kelly Shea, Horizon Organic, (Attach. 6, Page 57)

Tom Harding, Kansas City Ingredient Technology, Inc., (Attachs. 8 & 9, Page 87)
Leslie Zuck, Pennsylvania Certified Organic, PCCO), (Page 97)
Hubert Karreman, Penn Dutch Cow Care, (Attach. 10, Page 104)
Lynn Coody, Organic Ag Systems Consulting, (Page 120)
Joe Smiley, Organic Trade Association, (Page 124)
Liana Hoodes – National Campaign for Sustainable Agriculture, (Page 129)
Dan Leiterman, Crystal Creek, Inc., (Attach. 11, Page 133)
David Engel, Midwest Organic Services Association, (Page 138)
Emily B. Rosen, OMRI, (Page 143)
Zia Sonneband, California Certified Organic Farmers, (Page 144)
Mohammad Belay, Earthrise Nutritionists, (Page 148)
Kelly Morehead, Cyanotech Corporation, (Page 150)
Marty Mesh, Florida Growers and Quality Certification Services, (Page 157)

RECESSED at 12:45 p.m.

AFTERNOON SESSION – September 17, 2002 at 1:00 p.m.

NOP UPDATE AND DISCUSSION: Barbara C. Robinson & Richard H. Mathews (p.165)

ISO 65 Guide and Accreditation – Keith Jones (Discussion Document)

Keith Jones from NOP was asked to address 3 issues regarding ISO Guide 65 and NOP. (1) Mr. Jones said that the NOP meets every objective laid out in ISO Guide 65. (2) A country has every right to require that a product be certified by an ISO 65-accredited certifying agent in order to be imported into that country. (3) An NOP-accredited certifying agent can also be an ISO-accredited certifying agent. He also discussed the structure of EU-U.S. equivalency negotiations.

Barbara Robinson added that all accreditation costs have been minimal so far, since only per diem and travel may be charged by USDA until October 21, 2002.
October 21 NOP Implementation

Ms. Robinson stated that the program will be going into implementation and Secretary Veneman informed us that she will attend the roll–out event that will take place at Whole Foods Store.

Cost Share Program

Ms. Robinson stated that yesterday she signed the press release which will advertise the latest certification cost-share program. It is available in all 50 states and covers producers and handlers. The first certification cost-share program was available in 15 states and covered producers only.

Other Issues

Communications. Ms. Robinson stated that when NOP answers producers’ questions, they are not trying to get in the way of certifying agent/client business. She pointed out that as federal agency, we can’t refuse to talk to people. She agreed that NOP would work to get both sides of a story so that we don’t give out mixed signals.

Website Message Board. Ms. Robinson said that message board we had talked about setting up was proving to be more complicated than expected.

Labels Outside NOP Jurisdiction. Mr. Jones stated that NOP cannot “bless” labels for organic beer and wine. ATF has the regulatory and the statutory authority and the mandate to approve labels that go on alcoholic beverages. Because we allow organic alcoholic beverages to be produced, ATF has come to us and said, we don’t really want to become organic experts, we need your expertise. That’s why we’re involved in this process. The same is true for meat. FSIS has jurisdiction over meat and poultry products.

Compost Tea/Compost. (pp. 167-173, 178-180, and 182-185)

Certificates. (pp. 174-178)

TAP Reviews. Discussion on funding and quality (pp. 187-195)

Recommended Materials and Technical Corrections. (pp. 195-200)
DAIRY HERD CONVERSION – George Sieman, Livestock Committee Chair

Presentation and discussion, (pp. 201-232) (Discussion Document)

COMMITTEE MATERIALS REVIEW/RECOMMENDATIONS

CROP MATERIALS (Discussion Document) – OWUSU BANDELE, Chairperson

CHILEAN NITRATE (pp. 241-256)

Spirulina Aquaculture Production: According to Mr. Bandele, the committee voted 5 to 0 for nonsynthetic classification (at another point, he stated it was unanimous) not to change the current annotation which allows for Chilean nitrate use not to exceed 20 percent of the total nitrogen supplied to crop.

Prohibition in Crop Production (removing the current annotation): The committee also voted 4 to 1 not to remove the annotation. One committee member voted to establish a three year sunset provision after which the use of Chilean nitrate would be prohibited in crop production. Includes discussion on how to fill data gaps in TAP reviews with USDA research.

OZONE (pp. 256-269)

According to Mr. Bandele, the committee vote was 3-2 in favor of use for cleaning irrigation lines, and 5-0 for synthetic against using it to control weeds and soil borne pathogens. Discussion ensued regarding variances for research on certified organic operations vs. dedicated research facilities.

LIVESTOCK MATERIALS – GEORGE SIEMON, Chairperson

BUTORPHANOL (pp. 269-274) – (Discussion Document)

The committee recommends that it be considered a synthetic for use only in a medical emergency (surgery) by a licensed practitioner in accordance with FDA guidelines. They also added the stipulation of “twice withdrawal,” which Mr. Siemon explained as “… if it’s a milk cow, for example, you can’t sell milk [from a cow given the substance in question] for 3 days. We’re just saying it has to be 6 days.”

FLUNIXIN (pp. 274-284) – (Discussion Document)

The committee considers it a synthetic pain reliever and recommends it be used in only in a medical emergency, when prescribed by a licensed practitioner in accordance with FDA guidelines with double withdrawal.

XYLAZINE/TALAZOLINE (pp. 284-286) – (Discussion Document)

XYLAZINE: The committee recommended to be added to 205.603, as synthetic; TALAZOLINE: The committee recommended to be added to 205.603 synthetic.
EPINEPHRINE – a.k.a. Adrenaline (pp. 286-29)- (Discussion Document)

The committee recommended it prohibited natural (to combat allergic reactions), with a specific allowance for emergency use, once in a lifetime.

Change to Processing Materials. A decision was made to stop discussing livestock materials and move on to discuss processing materials.

PROCESSING MATERIALS – MARK KING, Chairperson

TETRASODIUM PYROPHOSPHATE (TSPP) (pp. 291-294) – (Discussion Document)

The committee recommends (by a vote of 6-1) that it (PH buffer and dough conditioner) be considered an allowed synthetic for use only in dairy foods labeled as organic or for use in agricultural products labeled as made with organic, specified ingredients or food groups.

CALCIUM STEARATE (pp. 294-297) – (Discussion Document)

The committee recommends (by a vote of 6-1) that it (anti-dusting agent) be considered prohibited synthetic, “and first to prohibit in the organic category, and then, second, to prohibit in made-with category as well.”

GLUCONODELTALACTONE (GDL) (pp. 297-301) – (Discussion Document)

The committee recommends (by a vote of 7-0) that it (tofu coagulant) be considered an allowed nonsynthetic which would be produced by microbial fermentation of carbohydrate substances.

HYDROXYPROPYLEMETHYLCELLULOSE (HPMC) (pp. 302-305) – (Discussion Document)

The committee recommends (by a vote of 6-1) that it (gelatin capsule hardener) be considered an allowed synthetic, “made with organic only” only for hard capsule application.

COMMITTEE WORK PLANS – (Discussion Document)

ACCREDITATION COMMITTEE, Jim Riddle, Chairperson, (pp. 305-316)

MATERIALS COMMITTEE, Kim Burton, Chairperson, Discussion, (pp. 316-320)

PROCESSING COMMITTEE, Mark King, Chairperson, Discussion, (pp. 320-323)

CROPS COMMITTEE, Owusu Bandele, Chairperson, Discussion, (pp. 323-334)

LIVESTOCK COMMITTEE. George Siemon, Chairperson, Discussion, (pp. 335-336)
BOARD POLICY MANUAL, Jim Riddle, (pp. 337-339) – (Discussion Document)

Mr. Riddle reported on changes already made to draft and 3 items that should be added.

MEETING ADJOURNED 6:10 P.M.

CALL TO ORDER : Wednesday, September 18, 8:13 a.m., Dave Carter, Chair

Mr. Carter announced that Mr. Lacy would be leaving in the afternoon due to a family emergency.

MATERIALS REVIEW

LIVESTOCK MATERIALS – GEORGE SIEMON, Chairperson

HEPARIN (p. 370) – (Discussion Document)

The committee voted against adding it (a synthetic anticoagulant) to the National List by a vote of 3-0.

ATROPINE (pp. 370-373) – (Discussion Document)

The committee voted against adding it (a synthetic antidote to treat poisoning) to the National List by a vote of 4-1.

FUROSEMIDE (pp. 373-374) – (Discussion Document)

The committee voted to return the TAP for more information by a vote of 5-0.

ACTIVATED CHARCOAL (pp. 374-376) – (Discussion Document)

The committee voted to consider it a synthetic and add it to the National List as a medical treatment, by a vote of 6-0. It must also be from a vegetative source.

MINERAL OIL (pp. 376-379) – (Discussion Document)

The committee considers it a synthetic and recommends that it be allowed for bloat control by a vote of 4-0 (with 1 abstention). It is already allowed for topical use. A second petition was put forward for dust control, but the committee is deferring their decision because the TAP did not adequately address this usage.

KAOLIN PECTIN (pp. 379-385) – (Discussion Document)

The committee voted to allow the synthetic version.
BISMUTH SUBSALICYLATE  (p.385) – (Discussion Document)

The committee declared it a synthetic, said it should be allowed and described it as pepto bismol for calves.

MAGNESIUM HYDROXIDE  (p. 385) – (Discussion Document)

Mr. Siemon said it is a laxative antacid. The committee voted 5-0, but outcome not explicitly stated.  (Addendum Attached – “FDA Publishes Final Rule on Extralabel Drug Use in Animals – from pages 6–7 of the Magnesium Hydroxide TAP)

PROPYLENE GLYCOL  (pp. 385-389) – (Discussion Document)

Mr. Siemon described it as a synthetic used to treat acute ketosis in ruminants. The vote was 3-0 with 3 absent. Outcome was not explicitly stated, but since they talked about an annotation, it is assumed that the vote was to allow the material.

CALCIUM PROPIONATE  (pp. 389-390) – (Discussion Document)

Committee recommended adding it to the National List as a synthetic for use in treating milk fever. The vote was 5-0 with 1 absent. It was also considered for use as a mold inhibitor feed additive and rejected.

CELL WALL CARBOHYDRATES  (pp. 391-415) – (Discussion Document)

Mr. Siemon says, “We call this a natural, and therefore we want this to be allowed. 3, none against, and 3 absent.”

POTASSIUM SORBATE  (pp. 415-419) – (Discussion Document)

The committee considers it a synthetic and recommends it be allowed in livestock production as a preservative in aloe vera.

YEAST DERIVATIVES – (Discussion Document)

The committee recommended that Yeast Derivatives should be considered NATURAL.

PROTEINATED CHELATES – (Discussion Document)

The committee recommended that Chelated Trace minerals should be added to 205.603 synthetic substances allowed for use in organic livestock production with the following restriction: Proteinated and Polysaccharide Chelates only. Amino Acid Chelates are prohibited.
PROCESSING MATERIALS – Mark King

ACTIVATED CARBON (pp. 420-430) – (Discussion Document)

The committee considers it a synthetic, and voted unanimously to add it to the National List. It must be from vegetative sources only.

NOSB ACTIONS ON MATERIALS

CROP MATERIALS – Owusu Bandele

CHILEAN NITRATE (pp. 432-503)

According to the discussion document, Mr. Bandele read the motion.

MOTION: Owusu Bandele
SECOND: Nancy Ostiguy

MOTION TO AMEND:

To amend the annotation for sodium nitrate to read: unless use is restricted to no more than 20 percent of the crop’s total nitrogen management or for unrestricted use in spirulina production until the year 2006.

MOTION: Kim Burton
SECOND: George Siemon

MOTION: Kim Burton
SECOND: George Siemon

To correct the annotation: Unless restricted to 20 percent of the crops in nitrogen management, or until October 21, 2005, for unrestricted use in spirulina production. Motion Fails: Vote: 5 Favored, 8 Opposed, 1 Absent

Mr. Carter stated it was back to the original recommendation from the Committee which is not to change the annotation.

Mr. Bandele repeated the motion: Not to change the current annotation which allows for Chilean nitrate use, not to exceed 20 percent of the total nitrogen supplied to the crop. Vote: Passes 12 Favored, 1 Opposed, 1 Absent

Mr. Bandele asked if this was the same motion for the second petition, and do we need to do it that way?

Mr. Riddle asked to reconsider that one because we were discussing it in that context.
Mr. Bandele stated that in the context of the petition to prohibit the use of Chilean nitrate in crop production, again the committee voted 4 to 1 not to change the current annotation which allows for Chilean nitrate use not to exceed 20 percent of the total nitrogen supplied to the crop.

**MOTION:** Owusu Bandele  
**SECOND:** Rose Koenig

Mr. Riddle stated that he was opposed to the motion because in his understanding of organic agriculture, nitrogen doesn’t come in a bag; it should come from the natural system and the nitrogen cycle, and there are some problems revealed in the TAP with the material. He further stated his concerns with the material, and favored removing the material from the list for international harmonization purposes and clearly alternatives do exist. It’s used to short circuit the natural farming systems, natural nitrogen cycles.

There was additional discussion regarding chilean nitrate, and Mr. Riddle stated that what was passed in ’95 was with the condition that it be reviewed in two years and that has finally happened now, seven years later. And in light of that, he offered an amendment to the current listing which is under 205.602(h), sodium nitrate, unless use is restricted to no more than 20 percent of the crop’s total nitrogen requirement, until October 21, 2005, which gives three years for anticipated directive which will give time for research. Also, it’s consistent with the original Board’s recommendation that this is going to be an expedited review.

**MOTION:** Jim Riddle  
**SECOND:** Michael Lacy

**VOTE ON THE AMENDMENT:** Sunset clause to add to the current annotation until October 21, 2005; **Vote: 2 Favored, 11 Opposed, 1 Absent.** The amendment fails with a discussion on the original motion.

Mr. King asked how can we ensure in some efficient fashion that this could be followed through within the next five years and is this something that we should consider? Mr. Carter responded that it’s not germane to this motion, but it’s certainly a definite issue and will need to be addressed.

Mr. Bandele repeated his original motion, “not to change the current annotation which allows for Chilean Nitrate use not to exceed 20 percent of the total nitrogen supplied to the crop.” Mr. Mathews stated that that motion has already been voted on, and the issue now is whether or not to remove the material from the list.

**MOTION:** Not to remove Chilean Nitrate from the National List. **Vote: 12 Favored, 1 Opposed, 1 Absent.**

Ms. Koenig introduced a report that will assist in dealing with material issues that we consider to have problems. She also stated that it’s a way to identify if there are issues that were not clear that we voted in favor of something, to somehow record those so the public can have access to the information. Perhaps could be posted to the website for researchers to access.
The Crops Committee asks for the adoption of the following policy directive to USDA listed below: (Discussion Document)

**MOTION**: Rose Koenig  
**SECOND**: Nancy Ostiguy

The NOSB requests the following information and data in regards to sodium nitrate. This information should be addressed for the upcoming mandated review of the product in approximately 2007.

Economic impacts and assessment: (a) Approximate number of farms utilizing the materials, (b) the geographical distribution of the farms utilizing the material, (c) the size of the farm operations utilizing the material, (d) list of crops to which the material's applied, and (e) methods and timing of material application.

Environmental impacts and assessment: (a) Sodium and nitrogen accumulation in soils, (b) the impact of sodium nitrate on water quality, (c) the impact of sodium nitrate on soil microorganisms, (d) the impact of sodium nitrate on soil quality, (e) comparison of approved alternatives, naturals and listed synthetics, in various cropping systems, and (f) development of best management practices for materials.

**MOTION**: Nancy Ostiguy  
**SECOND**: George Siemon

Specific to Sodium Nitrate: Amendment to the original motion to take the language in Section E of Roman Numeral II and duplicate that as Section F in Roman Numeral I.

Mr. Holbrook stated that one of the reasons why this whole process came about out of the Crops Committee is because we didn't feel that the TAP reviews were giving us this type of information, and when we revisit this in five years, the TAP reviews are going to be the same. The additional information needs to be put there so that we can determine whether these things need to be changed or not.

Mr. Bandele stated that it says comparison of approved alternatives, and it should be stated because it could be interpreted as just a comparison of the alternatives, not necessarily including the sodium nitrate. Mr. Carter asked Mr. Bandele if he was offering a friendly amendment and Mr. Bandele concurred. Ms. Ostiguy took it as a friendly amendment, and Mr. Siemon agreed.

**FRIENDLY AMENDMENT**: Mr. Carter read the friendly amendment, To duplicate the language under 2–E as new 1–F with the addition of the words comparison to, “Comparison of approved alternatives, natural and listed synthetics, in various cropping systems using Chilean nitrates. In both cases. Vote: 13 Favored, 1 Absent.

Mr. Carter stated back to the original motion as amended.
MOTION: Jim Riddle  
SECOND: Rose Koenig

Mr. Riddle stated that one concern of the committee is the lack of information about the impact of the mining and manufacturing process, and would like to request that it be studied in this interim period. He offered a friendly amendment to the second section, Environmental Impact and Assessment, to add a new Item G, impact of Chilean nitrate mining and manufacturing process. **Vote: 13 Favored, 1 Absent.**

FRIENDLY AMENDMENT: The main paragraph would say the NOSB requests the following information and data in regard to sodium nitrate — Chilean nitrate – this information should be addressed for the upcoming mandated review of the material. Mr. Riddle asked that the words, “in approximately 2007” be deleted.

Mr. Mathews stated that because of time do we need to do a voice vote, and Mr. Carter stated, “yes” for the record.

MOTION: Jim Riddle  
SECOND: Goldie Caughlan

Mr. Riddle also added to the amendment that would be on the list, that is the impact of this material on international trade. It’s not ever going to be addressed by a TAP review, and it’s not logical to add in here and would like to move to add to Number 1 a new Item G, “impact on international trade.” **Vote: 10 Favored, 3 Opposed, 1 Absent**

Mr. Carter – back to the motion as repeatedly amended, which is on the full thing as was largely rewritten. **Vote: 13 Favored, 1 Absent**

**OZONE GAS – Synthetic** (pp.503-509)

Use 1: the committee voted 3 to 2 to add ozone to the list with the following annotation, “to be used for cleaning irrigation lines only.”

Use 2: the committee voted 5 to 0 prohibit ozone for use in weed control.

Use 3: the committee voted 5 to 0 to prohibit ozone for use in soil borne pathogen control.

MOTION: Dennis Holbrook  
SECOND: Rose Koenig

To add to the list to be for “used as cleaning agent for irrigation lines only.” **Vote: 9 Favored, 4 Opposed, 1 Absent**

RECESSED: 9/18/02 – 11:30 a.m.
AFTERNOON SESSION: 1:00 P.M.

LIVESTOCK MATERIALS – George Siemon

PROPYLENE GLYCOL (pp. 514-525)

MOTION: George Siemon  SECOND: Michael Lacy

To be added to 205.603(a), list of synthetic substances, allowed for use in organic livestock production with the following restriction: “only for treatment of acute Ketosis in ruminants.”

Vote: 13 Favored, 1 absent

MAGNESIUM HYDROXIDE (pp. 525-529)

MOTION: George Siemon  SECOND: Michael Lacy

Added to 205.603(a) as a synthetic substance, allowed for use in organic livestock production with the following statement: “allowed when formulated from either natural or synthetic materials.”

Vote: 13 Favored, 1 absent

EPINEPHRINE (pp. 529-540)

Epinephrine is made from the adrenal gland of hogs, and the committee declared it a natural, as a prohibited natural. Because this is a hormone, the committee was concerned about allowing this, so they tried to make it narrow, but there are other uses to be concerned about. It can be used to stimulate heartbeat, to treat bronchitis, allergic reactions, emphysema, as well as the treatment of eye disease, glaucoma, hair transplants, entropic bleeding, which is a reason to narrow the field.

MOTION: George Siemon  SECOND: Michael Lacy

Epinephrine should be added to 205.604, non–synthetic substances, prohibited for use in organic livestock production, except for emergency treatment of anaphylactic shock, to be used only once in an animal’s lifetime.

DISCUSSION: Ms. Caughlan questioned the rationale for the “once in an animal’s lifetime” tag. Mr. Carter stated that the rationale for “for once in a lifetime,” was to have tools available for emergency treatment, without allowing repeated treatment. Mr. Siemon stated that it was an extra annotation. Ms. Burton stated that she also had a problem with the annotation. Mr. Carter stated that the motion will have to be amended.

MOTION: Kim Burton  SECOND: Goldie Caughlan

Motion to remove the once in a lifetime prohibition. Mr. Siemon accepted

Vote: 11 Favored, 1 Abstention, 1 Absent

MOTION: The motion stands is epinephrine should be added to 205.604, non–synthetic
substances, prohibited for use in organic livestock production with the following recommendation: prohibited, except for emergency treatment of anaphylactic shock. **Vote: 13 Favored, 1 Absent**

KAOLIN PECTIN (pp. 540-544)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Kaolin Pectin should be added to 205.603(a) as a synthetic substances allowed for use in organic livestock production with the following statement: Allowed when formulated from either natural or synthetic pectin. **Vote: 12 Favored, 1 Abstained, 1 Absent**

BISMUTH SUBSALICYLATE (pp. 544-546)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Bismuth Subsalicylate should be added to 205.603(a), allowed for use in organic livestock as a disinfectant, sanitizer and medical treatment as applicable. **Vote: 13 Favored, 1 Abstained, 1 Absent**

FLUNIXIN (pp. 546-559)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Flunixin should be added to 205.603(a), as a synthetic allowed for use in organic livestock production with the following restrictions: For emergency medical use only, when prescribed by a licensed practitioner. Withhold time shall be double the FDA requirement.

**DISCUSSION:** Ms. Koenig stated that the TAP was not adequate in the case of this product in terms of how it’s made and some of the logical impacts of the process. It appears that we’re actually trying to approve a brand name which is the active plus the incipient, and that the TAP should be sent back for review before approving. She also felt that banimine trademark should be stricken. Mr. Siemon agreed and Mr. Carter confirmed that it was stricken.

Mr. O’Rell stated that we’re not considering Banimine in the TAP. Banimine is the only patented form of flunixin, and so we are dealing with Banimine. There was further discussion on the motion to defer.

**MOTION:** Rose Koenig  
**SECOND:** Owusu Bandele

**Motion to defer** petition until October pending more information from the TAP review. Historical use by organic farmers as well as the seventh criteria for reexamination. **Vote: 9 Favored, 3 Opposed, 1 Abstention, 1 Absent**
Ms. Burton stated that the minutes will not be the guide in submitting more information regarding the TAP. The Board will be responsible for submitting comments to her prior to the October meeting.

The board will review the complete TAP and Kim Burton will put together and forward to the contractor by next Wednesday, 9/27/02. Patricia Smith, Center for Food and Nutrition Policy (the TAP contractor for Flunixin) will be able to review TAP by next meeting.

**XYLAZINE/TALAZOLINE** (pp. 559-578)

*MOTION*: George Siemon  
*SECOND*: Mark King

Xylazine should be added to 205.603 (a) synthetic substances allowed for use in organic livestock production with the following restrictions: For emergency medical use. To be administered by a licensed practitioner. Once in an animal’s lifetime. Withhold time shall be double the FDA requirement.

Talazoline should be added to 205.603(a) synthetic substances allowed for use in organic livestock production with the following restrictions: To counteract the effects of Xylazine. To be administered by a licensed practitioner. Once in an animal’s lifetime. Withhold time shall be double the FDA requirement.

*MOTION*: Goldie Caughlan  
*SECOND*: Nancy Ostiguy

To strike, “Once in an animal’s lifetime.” Motion to strike for both with the same vote. **Vote: 10 Favored, 3 Opposed, 1 Absent**

Kim Burton asked if you have in this annotation to be administered by a licensed practitioner, is that part of the requirements of this drug, and is it required that we put it in the annotation that it’s only to be administered?

George Siemon stated that it’s not required because it’s covered somewhere else in the rule. Audience: It’s a veterinarian–only drug. Therefore, Ms. Burton moved to strike the words, “to be administered by a licensed practitioner.”

*MOTION*: Kim Burton  
*SECOND*: Goldie Caughlan

Amend to strike, “To be administered by a licensed practitioner” for Xylazine and Talzoline. **Vote: 13 Favored, 1 Absent**

Original Motion as double amended.
MOTION: George Siemon  SECOND: N/A

MOTION: Synthetic substances: Xylazine shall be added to 205.603 (a), allowed for use in organic livestock production with the following restrictions: “for emergency use and withhold time shall be double the FDA requirement,” and Talazoline to be added to 205.603 (a), allowed for use in organic livestock production with the following restrictions, “to counteract the effects of xylazine and withhold time shall be double the FDA requirements.” Vote: 10 Favored, 1 Opposed, 2 Abstained, 1 Absent

BUTORPHANOL (pp. 578-597)

MOTION: George Siemon  SECOND: Nancy Ostiguy

Butorphanol should be added to 205.603(a) synthetic substances, allowed for use in organic livestock production with the following restrictions: For emergency medical use by a licensed practitioner, and withhold time shall be double the FDA requirement.

MOTION: Kim Burton  SECOND: Nancy Ostiguy

To strike “used by a licensed practitioner.” Vote: 12 Favored, 1 Absent, 1 Abstained

Phone Statement from Hugh Karreman, via Ms. Zuck: Substance is synthetic morphine commonly used for abdominal surgeries, twisted stomach. Caesarean section – emergency surgery. There are no other alternatives to this material unless you would use inhalation-type things that you would use in the hospital, anesthesia. The advantages of this product over regular morphine is that it is commercially more available, there’s only been one study in 30 years with morphine in cows, and if people knew you kept morphine in your veterinary clinic, it would be subject to theft.

Mr. Mathews stated that in the annotation, it said, “for emergency medical use,” and should that really say, “for use in conjunction with surgery rather than an emergency medical use?”

Nancy Ostiguy stated that she agreed and move to delete “emergency medical use” and substitute “for use during major surgery.”

MOTION: Nancy Ostiguy  SECOND: Dennis Holbrook

Mr. Carter clarified the motion, “to delete for emergency medical used and substitute the words, “for surgery.”

Ms. Burton commented that if we’re going to allow it and we’re going to allow a licensed veterinarian to administer it, why are we dictating how and when if it’s not just for emergency treatment? Therefore, it should not have any annotation if we’re going to say it’s only for surgery because we’re not veterinarians, and we don’t know if that’s the only time this would be administered. Kevin O’Reell seconds, and stated that setting a broken leg that wouldn’t technically be surgery, that you’d want to knock the animal out, and felt that we do need to leave it general. Therefore, Ms. Ostiguy withdrew the motion, and Mr. Holbrook agreed.

Delete for “emergency medical use” and substitute “for use in major medical surgery.” Motion to
Ms. Ostiguy stated that she would like to amend the motion to just delete, “for emergency medical use” since it only can be used by a veterinarian.

**MOTION**: Nancy Ostiguy  
**SECOND**: Michael Lacy

Mr. Carter stated that Livestock production with the following restrictions, “withhold time shall be double the FDA requirement.” There was discussion on that motion to strike the language and have substitute or just strike the language.

To strike the language “for emergency medical use” and changing “restrictions” to “restriction.”  
**Vote**: 11 Favored, 1 Absent, 2 Abstained

Vote on George Siemon’s Original Motion:

To add to 205.603(a) synthetic substances allowed “for use in organic livestock production with the following restriction: withhold time shall be double the FDA requirements.”  
**Vote**: 11 Favored, 1 Absent, 2 Abstained

**POTASSIUM SORBATE** (pp. 597-634)

**MOTION**: George Siemon  
**SECOND**: Nancy Ostiguy

Potassium Sorbate should be added to 205.603(a), synthetic substances, allowed for use in organic livestock production with the following restriction: Allowed only in livestock therapeutic products formulated using organic Aloe Vera (which is labeled “made with organic (specified ingredients or food group(s)).”

**MOTION**: Nancy Ostiguy  
**SECOND**: Kim Burton

To removed the restrictions, “allowed only in livestock therapeutic products formulated using organic aloe vera which is labeled made with organic, which is labeled made with organic (specific ingredients or food group(s))

**AMEND MOTION**: Ms. Ostiguy restated her motion to read as to eliminate the, “which is labeled made with organic (specified ingredients or food groups).”
Mr. Riddle offered a friendly amendment to remove the word “organic” in front of aloe vera,” so that it’s allowed only in livestock therapeutic products formulated using aloe vera. Ms. Ostiguy and Ms. Burton agreed.

**FRIENDLY MOTION**: Jim Riddle  
Second: Kim Burton

To remove the word “organic” in front of the words “aloe vera,” and strike all text following “aloe vera.”  
**Vote: 13 Favored, 1 Absent**

**MOTION**: Kim Burton  
Second: Rose Koenig

To strike the word “therapeutic.”

**MOTION TO AMEND THE LANGUAGE**: Potassium sorbate should be added to 205.603 (a), (b), and (d), synthetic substances, allowed “only for use in Aloe Vera products.”  
**Vote: 13 Favored, 1 Absent**

Jim Riddle moved that this be placed in a new Section (g), and Ms. Ostiguy suggested it be called preservatives. Mr. Riddle concurred, to read potassium sorbate, and then we could change the annotation as a preservative only for use in aloe vera products.

Ms. Ostiguy motioned to do a general category, and Mr. Holbrook second, “to strike and create a new category, Section (g), that would be entitled, Preservative and then list Potassium Sorbate.

**MOTION**: Jim Riddle  
Second: Kim Burton

To strike 205.603 (a), (b), and (d), and add a new section 205.603(g) Preservatives, under which potassium sorbate would be listed.  
**Vote: 7 Favored, 1 Absent, 5 Opposed, 1 Abstained. Motion fails.**

**MOTION ON THE TABLE**: To add to 205.603(a), (b), and (d), “only for use in aloe vera products.”

**MOTION**: Rose Koenig  
Second: Goldie Caughlan

Substitute motion to defer until October meeting – livestock to come forth with a policy on preservative and excipients as a total policy.  
**Motion has been rescinded**

Mr. Riddle opposed the motion to defer, and stated that the Livestock Committee has worked long and hard on this and there’s no reason. We’re not sending it back for further TAP information or anything, because we’ve done our work, and should be ready to vote on it.

After discussion, Ms. Koenig agreed to rescind the motion.  
Ms. Caughlan agreed.

**ORGINIAL MOTION**: Potassium Sorbate to be added to 205.603 (a), (b), and (d), synthetic
substances, allowed for use in organic livestock production, only for use in Aloe Vera products.  

*Vote: 13 Favored, 1 Absent*

**CELL WALL CARBOHYDRATES** (pp. 634-641)

Mr. Bandele stated that one of the TAP reviewers pointed out that it was not clear in terms of the extraction method, thereby causing problems in calling it a natural.

Ms. Burton stated that her justification for considering it a natural, even though we don’t have the manufacturing process, is that it’s derived from baker’s yeast and that is an allowed natural. Mr. Riddle stated that there was follow-up research and the information gathered from the producer indicated extraction is aqueous. There was further discussion on the extraction methods.

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Cell wall carbohydrates are considered naturals.  

*Vote: 13 Favored, 1 Absent*

**YEAST DERIVATIVES** (pp. 641-643)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Yeast derivatives are considered naturals.  

*Vote: 13 Favored, 1 Absent*

**PROTEINATED CHELATES** (pp. 643-646)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Chelated trace minerals should be added to 205.603 synthetic substances, allowed for use in organic livestock production with the following restriction: Proteinated and Polysaccharide Chelates only. Amino Acid Chelates are prohibited.

**MOTION:** Nancy Ostiguy  
**SECOND:** Mark King

*DEFERRED* and send back to TAP reviewers, Center for Food and Nutrition for further clarification.  

*Vote: 12 Favored, 1 Absent, 1 Opposed*
**TASK FORCE EPA/NOP ISSUES** (pp. 646–650)

Ms. Koenig discussed the development of a very small task force to deal with EPA/NOP issues which include the List 3 inerts discrepancies, and moving the labeling program forward. They would like to get the NOP sanction to do that.

She also stated that the EPA and NOP will have to talk to make sure that between those agencies, that that will be a formal mechanism, but what she wanted to do is see if they could seek Board approval pending the agency's approval, but this way, it would allow them to get that small task force started with perhaps a minor report in October and maybe some policy stuff at the meeting in October. Rose and Nancy will volunteered to represent the NOSB and will probably ask Eric as a past NOSB member, probably an individual from OMRI, and then maybe one or two other individuals that have some expertise in these types of issues.

**MOTION**: Rose Koenig  
**SECOND**: Nancy Ostiguy

The Chair will appoint a task force to work with EPA on issues identified by Rose Koenig, and will include up to five individuals from the Board.  
**Vote**: 13 Favored, 1 Absent

**RECESS**ED AT 4:00 P.M.

**RECONVENED ON SEPTEMBER 19, 2002 AT 8:15 a.m.** (pp. 642-699)

Barbara Robinson asked that all certifying agents be aware that according to section 205.501(a)(13), any entity that we (USDA) accredit as a certifying agent must accept the certification decisions made by another certifying agent accredited or accepted by USDA.

Further, certifying agents do not have the authority and cannot require other certifying agents to prove that their certificates are good.

Discussion ensued between Ms. Robinson, Ms. Koenig, Mr. Mathews, and Mr. Riddle on rule interpretation vs. rule changes regarding accreditation and compost.

**ATROPINE** (pp. 653-660)

**MOTION**: George Siemon  
**SECOND**: Owusu Bandele

Atropine, a synthetic, should not be added to 205.603.

**MOTION**: Jim Riddle  
**SECOND**: Rose Koenig

Deferred to October meeting; Kim Burton needs requests for more information from the TAP reviewers by 9/25.  
**Vote**: 12 Favored, 2 Absent
HEPARIN (pp. 660-663)

**MOTION:** George Siemon  
**SECOND:** Jim Riddle

Heparin, a synthetic that’s used to prevent blood from clotting, should not be added to 205.603, based on the fact that sodium citrate is available as an alternative.

**MOTION:** Rose Koenig  
**SECOND:** George Siemon

On the table until later in the day, to give the Board time to find the information needed on sodium citrate. **Vote: 12 Favored, 2 Absent**

FUROSEMIDE (pp.663-664)

Does not require Board action. Livestock Committee decided to return the TAP for more information. Will be taken up at October meeting.

CALCIUM PROPIONATE (pp.664-699)

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Calcium Propionate, a synthetic, should be added to 205.603(a) to be used in organic livestock production.

Discussion ensued regarding use of calcium propionate for use only as a treatment for milk fever vs. its use as a preservative for aloe pellets. Information on practical application was given by Dr. Leiterman.

**MOTION:** Jim Riddle  
**SECOND:** Nancy Ostiguy

After discussion, Mr. Riddle stated that the intent of the motion to amend was to make it clear that use should be restricted to treatment of milk fever. After more discussion, Mr. Riddle WITHDREW the motion to amend.

Mr. Carter stated that back to the original motion which is calcium propionate should be added to 205.603(a), allowed for use in organic livestock production.

**AMENDMENT FOR MILK FEVER ONLY:** Two motions: To be allowed for use in 205.603(a) with an annotation for treatment of milk fever. And the second motion would be to send the TAP back to get further information on the use as a preservative in animal supplements and medical treatments.

**MOTION:** Rose Koenig  
**SECOND:** Owusu Bandele

Calcium propionate should be added to 205.603(a), with the restriction for milk fever only. **Vote: 10 Favored, 2 Absent**

**SECOND MOTION:** Rose Koenig  
**SECOND:** Goldie Caughlan
Motion to send the TAP back for review further information on other uses of the substance in the organic industry.  **Vote: 12 Favored, 2 Absent**

**ACTIVATED CHARCOAL (pp. 699-705)**

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Activated charcoal, a synthetic, should be added to 205.603(a), for use in organic livestock production with the annotation that it must be from vegetative sources.  **Vote: 12 Favored, 2 Absent**

Ms. Burton is recusing herself from a Processing Committee vote on this material asked if she the Board thinks she should recuse herself from the Livestock vote, too.

**MOTION:** Kim Burton asks for Board to vote on whether or not she should recuse herself on the Livestock vote.  **Vote: 11 Opposed, 2 Absent, 1 Abstention**

**MINERAL OIL (pp. 705-716)**

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy

Listed under 205. 603 synthetic substances, allowed for use in organic livestock production for topical and as a lubricant.  Should have the annotation changed to add the following: “allowed for internal emergency medical use for only one instance in an animal's lifetime.”

**MOTION:** Nancy Ostiguy  
**SECOND:** Mark King

Amend to strike “allowed for internal emergency for medical use for only one instance in an animals' lifetime.”

Mr. Siemon stated that we need to make sure that it gets into the (a), and if you eliminate that whole sentence, you’re not going to get it into (a).  Ms. Ostiguy stated that it just to clean it up, not to delete, but only to delete the annotation.  Therefore, she modified her motion, to include that it goes under (a), deletes the annotation.

Modified motion to include under Section (a) and delete the annotation and add mineral oil to 205.603(a).  Mineral oil would be listed under 205.603(a), allowed in synthetic substance, allowed for use in organic livestock production.  Mr. King stated that this does not in any way remove it from (b), it simply adds it to (a).
AMEND THE MOTION: To change and insert (a) after .603, and eliminate internal emergency use only in one instance in the animal’s lifetime. **Vote: 11 Favored, 1 Opposed, 2 Absent**

Mr. Carter stated that to go back to the motion as amended, and pass with the new language.

**MOTION:** Mineral oil is a synthetic substances approved for use under 205. 603 (a), synthetic substances, allowed for use in organic livestock production. **Vote: 12 Favored, 2 Absent**

Ms. Burton concluded that we now have six materials that we deferred to the October meeting, and we will still have to get the priority from the Livestock committee and if it’s acceptable by this Board, we’ll have them reviewed in that order: Mineral oil to be deferred, calcium propionate, furosemide, atropine, flunixin, and the proteinated chelate mineral complex with the question still on the heparin.

**PROCESSING MATERIALS – Mark King**

**CALCIUM STEARATE (pp.716-721)**

Mr. King stated the mineral was petitioned for use as an anti–dusting agent for baking products that are enriched with vitamins, enzymes. It was found to be synthetic by both the reviewers and the committee. The petitioner’s stated use to reduce the dust in the work environment, related to enriched or fortified baked goods.

Reviewers noted that this would be presumptuous in some ways in thinking that organic consumers want fortified products, but also found that there wasn’t any real empirical evidence that it actually was effective as an anti–dusting agent. Therefore the committee looked at the application of criteria and found the environmental information was also inconclusive, and offered the following recommendation.

**MOTION:** Mark King **SECOND:** Goldie Caughlan

Calcium Stearate 205.605(b), synthetics allowed, to be prohibited for products labeled as “organic” and “made with organic.” **Vote: 11 Favored, 3 Absent**

**TETRASODIUM PYROPHOSPHATE – TSPP (pp. 721-767)**

Mr. King stated that the petitioned use in this case was as a pH buffer and dough conditioner for use in organic meat alternative products. This is actually used in an ingredient in texturized wheat protein for organic meat alternative products, such as veggie burgers. The reviewers found it to be synthetic, and also found that TSPP is a pyrophosphate that belongs in the generic classification of sodium phosphates
Sodium Phosphates, 205.605(b), synthetics allowed, for use in diary foods labeled as “organic” or for use only in agricultural products labeled as “made with organic-specified ingredients or food groups.”

**MOTION:** Kevin O’Rell  
**SECOND:** Goldie Caughlan

Mr. O’Rell motioned to change the present annotation of sodium phosphates, “for use only in dairy foods labeled as organic or for use only in textured meat analog products.”

A discussion involving Mr. O’Rell, Ms. Brown-Rosen and Mr. Mathews ensued relating to the broad category of sodium phosphates, and does it include more materials than was intended.

Mr. O’Rell stated that there is a need for clarification with the current listing because sodium phosphates is a generic term and does cover a variety of orthophosphates, pyro and poly. There was more discussion on the motion and Mr. O’Rell withdrew his motion.

**MOTION:** Kevin O’Rell  
**SECOND:** Kim Burton

To amend the motion that tetrasodium pyrophosphate (TSPP) be added to 205.605 (b) (allowed as a synthetic) with the annotation, “for use in textured meat analog products.”

Mr. Riddle referred to the original recommendation of the committee that it be used in products labeled “made with organic …” and that’s how he agreed to support the material.

**MOTION:** Jim Riddle  
**SECOND:** Ann Cooper

To amend the motion to state, “for use only in agricultural products labeled made with organic-specified ingredients or food groups.”  
**MOTION WITHDRAWN**

Mr. Carter clarified the voting level process on the motions, and indicated that there are series of layers, and stated that he wanted to make sure that he had the right one. Ms. Burton stated that there was an amendment, a new motion, to add TSPP as a separate material under 205.605(b), “for use only in textured meat analog product.” He also stated that if you vote for this amendment, and if it is defeated, it goes back to Mr. O’Rell’s amendment. If Mr. O’Rell’s passes, then we go through and do the motion as amended. If Mr. O’Rell’s is defeated, it goes back to the original motion. If Mr. Riddle’s amendment passes, his language is added to Kevin’s amendment. If it is defeated, we simply go back to Kevin’s language and then we will vote again on whether that language should be used to change the original motion.

**MOTION 1:** Jim Riddle  
**SECOND:** George Siemon

TSPP to allow only for use in texture meat analog products labeled “made with organic ….”  
**Vote:** 4 Favored, 7 Opposed, 2 Absent, 1 Abstained.  
**JIM RIDDLE’S MOTION FAILED.**

**BACK TO KEVIN O’RELL’S MOTION 2**
MOTION 2: Kevin O'Rell
SECOND: George Siemon

To amend the original language; TSSP be approved under 205.605(b), allowed as a synthetic with the annotation “for use in textured meat analog products.” If failed, then moved back
*Mark King's original first motion. Vote: 8 Favored, 3 Opposed, 1 Abstained, 2 Absent

Mr. Siemon asked if this is to allowed this substance for dairy foods, should the motion be “for use only in dairy foods labeled as organic?” Mr. O'Rell stated that we agreed we would take up at the next meeting in October the issue for clarification on sodium phosphate for use in dairy foods, and they were to be specific for orthophosphates. This is separate only as a listing of TSPP, under the motion, it would not be allowed in dairy products.

Mr. King clarified that we voted on the amendment which was approved, and voting on it to take action. Mr. Carter stated because the previous vote was only whether you prefer Mr. O'Rell’s language over the original. This is why it’s as two votes.

MOTION: TSPP is a synthetic allowed under 205.605(b) for use only in textured meat analog products. Vote: 8 Favored, 3 Opposed, 2 Absent, 1 Abstained

HYDROXYPropyl METHYLCelLULOSE (HPMC) pp. 767-778

It's petitioned as an ingredient of hard capsules used for encapsulating powdered herbs. It's considered to be part of the group of compounds known as cellulose ethers or ethers. It's included on EPA’s List 4-B inert, on which EPA says have sufficient data to substantiate they can be safely used in pesticides.

Methylchloride used in the manufacturing process is considered hazardous and flammable. It is approved as a food additive and it is currently used to make hard capsules used in the herb and supplement industry as an alternative to gelatin.

So the following recommendation, Mark King moved that we consider 205.605(b), synthetics allowed, which would be HPMC made with organic only, only for hard capsule application.

MOTION: Mark King
SECOND: Goldie Caughlan

To add HPMC to section 205.605(b), synthetics allowed, with the annotation that it be used in the category “Made with organic … “ only, and only for hard capsule application. Vote: 6 Favored, 2 Absent, 5 Opposed, 1 Abstained – FAILED

GLUCONO DELTA LACTONE – GDL pp.779-782

It's petitioned to be added to the national list as a tofu coagulant. It's produced both naturally through fermentation and synthetically. We found out in this case the petitioner has stated that the material they use is produced through fermentation. The committee considered really in this case only GDL produced from fermentation as petitioned. It's used at a level of approximately .4 percent, and it's considered to be really the coagulant of choice for silken tofu, because it produces kind of this gradual acidification and it initiates the curdling of the protein and then
provides that silken texture. For those of you who use it, you know it can be used in sauces and different things like that.

**MOTION:** Mark King  
**SECOND:** Anne Cooper

GDL to be added to 205.605(a), non-synthetics allowed. GDL produced by microbial fermentation of carbohydrate substances.  
**Vote:** 12 Favored, 2 Absent

**ACTIVATED CARBON** pp. 783-793

It was petitioned to remove brown color from white grape juice concentrate. It's used for mechanical filtration, physically separating the suspended solids as the liquid passes through the carbon.

It has been used in the U.S. since 1929 for municipal water supplies. It's used to remove the brown color caused by oxidation, improving flavors and colors.

The committee, and TAP reviewers, unanimously found this to be synthetic, and also unanimously voted to add it to the national list as did the reviewers.

**MOTION:** Mark King  
**SECOND:** Kevin O'Rell

Activated Carbon to be added to 205.605(b) Synthetics allowed: from only vegetative sources, for use as a filtering aid while recognizing the vast array of agricultural by-products (natural sources) commercially available.  
**Vote:** 11 Favored, 1 Recused, 2 Absent

**GLYCEROL MONOOLEATE** pp. 794-796 (Discussion Document)

**MOTION:** Kim Burton  
**SECOND:** Jim Riddle

**MOTION TO WITHDRAW:** Petitioner withdrew the petition. Board will withdraw the petition, as requested by the petitioner.  
**Vote:** 10 Favored, 2 Recused, 2 Absent

RECESS AT 11:30 A.M.

RECONVENED ON SEPTEMBER 19, 2002, AT 1:30 P.M.  p.801
**LIVESTOCK MATERIALS** – George Siemon

Broaden 205.603 pp. 801-813

**MOTION**: George Siemon  
**SECOND**: Nancy Ostiguy

Revising the Feed Additive Motion 3 decision at the May meeting. *See May Meeting Minutes, pg. 15 of 24 for discussion document.*

**MOTION**: NOSB recommends an addition of a new 205.603(g), all materials as annotated in 205.605 can be used in organic livestock production subject to FDA or AAFCO regulations.

*Vote: 11 Favored, 1 Abstained, 2 Absent*

**HEPARIN** pp. 813-817

**MOTION**: George Siemon  
**SECOND**: Kevin O’Reell

Heparin should not to be added to 205.603, based on the fact that it is a synthetic and that there’s already an alternative (sodium citrate) on the list. *Vote: 11 Favored, 1 Opposed, 2 Absent*

**CROPS MATERIAL – VOTE RECONSIDERATION**

**CHILEAN NITRATE – SPIRULINA PRODUCTION** pp. 817-858

**MOTION**: Nancy Ostiguy  
**SECOND**: Dennis Holbrook

To reconsider the TAP decision on chilean nitrate in the use of Spirulina production. *Vote: 12 Favored, 2 Absent*

Ms. Ostiguy stated that part of the confusion was to figure out exactly what was the motion that was passed because of a bunch of amendments. The motion that was passed was to maintain the current restriction on sodium nitrate use to no more than 20 percent of the nitrogen input for the spirulina. Therefore, she moved to add, “unless restricted to 20 percent of the crop’s total nitrogen use, chilean nitrate can be used in an unrestricted manner in spirulina production until October 21, 2005.

**MOTION**: Nancy Ostiguy  
**SECOND**: Ann Cooper

A discussion initiated by Ms. Ostiguy ensued highlighting why spirulina production was 1) different for other crop production in its need for nitrogen and 2) why it isn’t hydroponic production. A member of the audience, Mr. Belay, explained a naturally occurring spirulina production system in Chad involving flamingos and his own split spirulina operation.
Not to change the current annotation which allows for “Chilean nitrate use not to exceed 20 percent of the total nitrogen supplied to the crop, or until 10/21/05, for unrestricted use in Spirulina production.  **Vote: 9 Favored, 2 Absent, 3 Opposed**

Rick Mathews pointed out that there is some confusion among producers regarding the annotation as it now stands. Mr. Mesh gave an explanation of that. Dave Carter asked the Crops Committee to look at the language and come back with a recommendation at the October meeting.

**DISCUSSION LED BY FMI’S DEBRA WHITE ON RETAILING AND PROCESSING** pp. 859-875

**LIVESTOCK PRESENTATION** – (Discussion Document)

**DAIRY ANIMAL REPLACEMENT RECOMMENDATION** – George Siemon pp. 877-888

George Siemon presented the committee’s revised recommendation, and asked that it be posted on the NOSB website for a 30-day comment period.

**OTHER BUSINESS** pp. 889-904

Mr. Carter motioned and informed everyone that Secretary Veneman disclosed that she has been diagnosed with breast cancer and requested that the Board draft a letter expressing our concern for her health and best wishes. Goldie Caughlan seconded. Vote: Unanimous

**NEXT MEETINGS:**

Mr. Mathews stated that the next NOSB meeting scheduled for October 19 and 20 and the rollout on Monday, October 21, in Washington, DC.

NOSB – Austin, Texas – May 13–15, 2003, with a travel day on the 12th

Executive Committee Conference Call – September 24th – 4:00 p.m.

**RECOMMENDATION:**

Materials Review Task Force to review the whole process for materials adoption, what we like to recommend for Livestock and Processing to work through those two committee structures and come forward with some things to talk about at the October meeting.
PUBLIC COMMENTS – September 19, 2002 at 5:00 p.m. pp. 904-

The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record. Some individuals also presented written comments. Transcribed comments can be found at the designated page numbers.

Tom Harding, Agrisystems International (p. 905)
Dr. Dan Leiterman, Crystal Creek, (p. 918)
Marty Mesh, by proxy for Jim Pierce (p.920)
Leslie Zuck, Pennsylvania Certified Organic (p. 937)
Cissy Bowman, Indiana Certified Organic (p.943)

MEETING ADJOURNED, September 19, 2002, at 5:55 p.m.
The National Organic Standards Board meeting of October 19–20, 2002, was attended by 14 members:

Members Present:

- Owusu Bandele
- Rosalie Koenig
- Kim Burton
- Michael Lacy
- Dave Carter
- Goldie Caughlan
- Kevin R. O’Rell
- Nancy Ostiguy
- Ann Cooper
- Jim Riddle
- Rebecca Goldburg
- George Siemon
- Dennis Holbrook
- Mark King

National Organic Program (NOP) Staff:

Barbara C. Robinson, AMS/Deputy Administrator, Richard Mathews, Program Manager, Katherine Benham, and Robert Pooler.

CALL TO ORDER: October 19, 2002, 8:05 a.m., Presiding: David C. Carter, Chair, (pp. 5-13)

Mr. Carter opened with the introduction of the NOSB members and asked that public commenters sign up in advance.

AGENDA APPROVAL – (Discussion Document)

The chair asked for any comments, corrections or additions to the agenda, and the following changes were noted:

Materials Committee: Ms. Burton stated the following materials will not be reviewed: Crops: Potassium silicate; Livestock: Calcium propionate, Furosemide, and Proteinated chelates.

Processing Committee: Mr. King said there will be no ion exchange speaker.

International Committee: Ms. Goldburg said the committee will defer its recommendation regarding US/EU Equivalency.

PUBLIC COMMENTS – October 19, 2002, (pp. 12-114)

The following individuals presented public comment. Each person’s comments were recorded and transcribed for the record. Some individuals also presented written comments. Transcribed comments and, where applicable, written comments can be found at the designated ATTACHMENTS.

SIGN–IN SHEETS (Attach. A)
- Tom Harding, AgriSystems – (p. 13)
- Ken Chambers, Colorado Sweet Gold (p. 17) – (Attach. 1 & Attach. 2)
- Richard Siegel, Attorney representing Colorado Sweet Gold, (p. 24) – (Attach. 3)
- Grace Marroquin, Marroquin International, (p. 35)
NOP UPDATE – Barbara Robinson and Richard Mathews (pp. 110-116)

Ms. Robinson discussed the following:

Website Overhaul (p. 114)

Everyone was invited to visit the revamped NOP website.

Petition to File Legal Action (p. 115)

The Center for Food Safety filed a petition for legal action with the Secretary, alleging that NOP consistently refused to establish a peer review panel. It is now with the USDA lawyers.

Implementation Event (p. 115)

NOP Implementation event will take place at the Whole Foods Market on P Street. It is on the Secretary’s calendar.

Budget (p. 115)

NOP budget for FY03 is no bigger than for FY02.

Mr. Mathews discussed the following:

Accreditation (p. 116)

Six new certifying agents are in the process of being accredited. That will put us in the neighborhood of 66 accredited certifying agents at the start of the next phase.

Stream of Commerce (pp. 116-120)

The issue for a lot of people is what do you do about product that was not produced to the NOP? The answer is that all product produced to NOP standards must be labeled according to NOP standards. All product not produced to the NOP may continue to use the designation of organic until that product is used up, but cannot indicate it was produced to NOP standards. Mr. Siemon and Ms. Burton expressed confusion and dismay at this seeming recent change of policy.
The following arose from questions or comments by Board members:

**Minor vs. Major Noncompliances** (pp.120-124)

A discussion on the need for guidance on the definition of minor noncompliances was prompted by a comment from George Siemon.

**Status of Materials Approved by the NOSB Since March 2000** (pp. 124-143)

In response to a question from Mr. Riddle, Mr. Mathews said that a list of materials recommended for inclusion on the NL would be posted to the website. However, he added that they are not sanctioned until they go through the rulemaking process. Certifying agents could treat use of these materials as a minor noncompliance until rulemaking is completed. Ms. Koenig said that producers distrust NOP and want something in writing. The NOP’s struggle to handle the volume of work, questions, meetings, etc., was discussed by Mr. Mathews. Ms. Caughlan initiated another discussion on materials which brought up the point that USDA attorneys have not yet approved the idea of allowing prohibited substances, even if their use has been recommended by the Board. More discussion ensued on how to shorten the period from recommendation to entry on the National List.

**Clarification of Status of Board Recommendations** (pp. 144-154)

Mr. Mathews said that Board recommendations, for example, access to the outdoors, are not enforceable. They can be used as guidance—only the rule is enforceable. Ms. Koenig suggested that the NOSB policy manual contain administrative information on recommendations to help the Board and future Boards to understand the role recommendations play in the running of the NOP.

**Legal Petition from Center for Food Safety (revisited)** (pp. 154-158)

In response to Mr. Carter’s question, Mr. Mathews and Ms. Robinson talked briefly about the legal petition filed to establish a peer review panel (on accreditation) and the efforts taken to that end already and the obstacles that are making that difficult.

**Mutual Respect** (p. 158-160)

Ms. Robinson stressed the need for mutual respect and courtesy between the Board and NOP staff.

MEETING RECESSED FOR LUNCH AT 11:56 a.m.

MEETING RECONVENED AT 1:30 P.M.

**ADOPTION OF BOARD POLICY MANUAL** (pp. 162-180) – (Discussion Document)

Mr. Riddle proposed adoption of board policy manual and Ms. Caughlan seconded. Mr. Riddle pointed out changes and these were discussed by the Board. An amendment to add the following language, “Individuals providing public comment to the NOSB may respond to questions from the Board beyond the allocated time limit.” was carried.
The Board then voted to adopt the policy manual.

Ms. Koenig proposed that a glossary of terms and an explanation of procedures be developed for use by the Board, and Ms. Caughlan seconded. The Board voted to adopt this proposal.

**MATERIALS COMMITTEE DISCUSSION ITEMS** (pp. 180-187)

**Materials Task Forces** (pp.180-181)

Ms. Burton reported that the Committee formed two task forces to look at materials review.

**Task Force on EPA Lists 3 and 4 Inerts** (pp. 181-184)

Ms Koenig reported that the task force had asked selected people from government and private industry to submit names of formulated products to EPA so that EPA could determine if they contained List 3 inerts. This information would ultimately be used to determine if these products should be used in organic production.

**Presentation on Materials Review Process** (pp. 185-187) – *(Discussion Documents 1 & 2)*

Ms. Burton gave a presentation on the materials review process.

**PROCESSING COMMITTEE DISCUSSION ITEMS** (pp.191-196)

**Scope of the Review Process as It Relates to Materials Used in Processed Products**

Mr. King said the Committee will recommend that all direct and secondary direct food additives are subject to NOSB review; indirect food additives are not subject to NOSB review.

**When Does Handling Become Processing?**

Rough drafts are finished on “post-harvest handling vs. processing” and on “on-farm processing.”

**Guest Speaker** (pp. 198-230)

Mark Itzkoff, attorney with Olsen, Frank and Weaver, Washington, DC, gave background information regarding FDA regulation of food packaging, food ingredients, food additives, and food contact substances and answered questions from Board members. A discussion followed on the nature of ion exchange.
CROPS COMMITTEE DISCUSSION ITEMS (pp. 231-265)

Materials Reviewed (pp. 231-247)

BHT

Mr. Bandele said the Committee reviewed three materials. For the first, BHT, the Committee agreed, 4-0, that it is a synthetic. The 3 TAP reviews recommended approval of BHT to be used as a pheromone for mating disruption. It appears that Committee agrees, with an annotation. Exact wording not clear from transcript.

POTASSIUM SULFATE
For the second, potassium sulfate, the Committee agreed 4-0 that it is a synthetic, and voted, 4-0, not to add it to the National List.

DIMETHYLNAPHTHALENE 1,4 (DMN)
For the third, dimethylnaphthalene 1,4 (DMN), 2 TAP reviewers cited potential environmental concerns, while 1 TAP reviewer recommended adding it to the National List. The Committee agreed 4-0 that it is a synthetic, and voted not to add it to the National List.

Compost Tea (pp. 248-254)

Mr. Bandele will propose to reactivate the Compost Task Force, with the specific charge to look at the compost tea issue. Discussion ensued between NOP and Board.

Clarification of Regulations as Applied to Planting Stock (pp. 254-259)

Ms. Koenig will present guidance in the form of a Q&A.

20 Percent Rule re: Sodium Nitrate (pp. 259-265)

Document being drafted on what “20 percent” actually means.

ACCREDITATION COMMITTEE DISCUSSION ITEMS (pp.265-293)

Criteria for Certification of Grower Groups (pp.265-289) – (Discussion Document)

Mr. Riddle said a recommendation will be brought forward for a vote tomorrow which incorporates public comment. He proceeded to read from the recommendation. The Board discussed and took questions from the audience.
Accreditation Committee as NOP Peer Review Panel (pp. 289-293) – (Discussion Document)

Mr. Riddle highlighted various points of the still-internal working document.

LIVESTOCK COMMITTEE DISCUSSION ITEMS (pp. 293-302)

Materials Reviewed (pp. 294-295)

Mr. Siemon said the Committee will be reviewing and making recommendations on flunixin, atropine, and mineral oil.

Dairy Replacement Animals (pp. 295-296)

Mr. Siemon said the Committee will take recent feedback into consideration when developing a recommendation for presentation tomorrow.

Excipients (pp. 296-302)

Mr. Siemon said the Committee will make a recommendation to allow “excipients in medications which are non-active.” Ms. Ostiguy went into more detail and took questions from the Board. Ms. Koenig solicited input from Ms. Brown-Rosen (Discussion Document).

INTERNATIONAL COMMITTEE DISCUSSION ITEMS (pp. 302-303)

Ms. Goldburg said the Committee is working on a recommendation on EU/US equivalency.

MEETING ADJOURNED AT 5 P.M.

CALL TO ORDER: October 20, 8:10 a.m., Presiding: Dave Carter, Chair

PUBLIC COMMENTS (pp. 300-415)

The following individuals presented public comment. Each person’s comments were recorded and transcribed for the record. Some individuals also presented written comments. Transcribed comments and, where applicable, written comments can be found at the designated ATTACHMENTS.

- Grace Marroquin - (p. 300)
- Mark Itzkoff - (p. 308)
- Diane Joy Goodman - (p. 311) – (Attach. 9)
- Janning Kennedy, California Certified Organic Farmers - (p. 316)
- Jack Jenkins, Pacific Biocontrol - (p. 329) – (Attach. 10)
- Dan Leiterman, Crystal Creek Company - (p. 331)
- Urvashi Rangan, Consumers Union - (p. 334) – (Attach. 11 – Attach. 11a)

(From this point forward in the transcript, the speaker identified as Mr. Williams should have been identified as Mr. [Rick] Mathews.)
Tina Ellor, proxy for Leslie Zook, Pennsylvania Certified Organic - (p.348) – (Attach. 12)
Tom Harding, AgriSystems International - (p. 354)

CROPS COMMITTEE ACTION ITEMS (pp. 415-491)

MATERIALS

PHEROMONES (pp. 415-437) – (Discussion Document)

Motion: Mr. Bandele proposed that the following changes and annotations be made regarding 205.601(f), “Pheromones—includes only EPA-exempt pheromone products, EPA registered pheromone products with no additional synthetic toxicants unless listed in this section and any inert ingredients used in such pheromone formulations that are not on EPA List 1, that is inerts of toxicological concern or EPA List 2, that is potentially toxic inerts, provided the pheromone products are limited to passive polymer dispensers, pheromone products containing only pheromone active ingredients listed in this section and List 4 inerts may be applied without restriction.”

Second: Ms. Koenig seconded.

Amendment 1: Ms. Goldburg motions to strike the word "polymer." Ms. Ostiguy seconds. The Board votes unanimously to pass the amendment.

Amendment 2: Mr. Siemon motions that original motion also be included in the National List for Livestock as well as Crops. Ms. Ostiguy seconds. The Board votes 10-0 with 4 abstentions to pass the amendment.

Motion as amended: “Pheromones—includes only EPA-exempt pheromone products, EPA registered pheromone products with no additional synthetic toxicants unless listed in this section and any inert ingredients used in such pheromone formulations that are not on EPA List 1, that is inerts of toxicological concern or EPA List 2, that is potentially toxic inerts, provided the pheromone products are limited to passive dispensers, pheromone products containing only pheromone active ingredients listed in this section and List 4 inerts may be applied without restriction.”

Vote: The motion passes unanimously.
POTASSIUM SULFATE (pp. 437-439) – (Discussion Document)

Motion: Mr. Bandele motions that potassium sulfate be considered a prohibited synthetic.

Second: Mr. Holbrook seconds.

Vote: The motion passes 13-0, with one absent.

1,4 DIMETHYLNAPHTHALENE (pp. 439-444) – (Discussion Document)

Motion: Mr. Bandele motions that 1,4 dimethylnaphthalene be considered a prohibited synthetic.

Second: Ms. Koenig seconds.

Vote: The motion passes 12-0, with one abstention and one absent.

LIST 3 INERTS (pp. 444-476)

Motion 1: Mr. Siemon motions “to allow Class 3 inerts that have tolerance in food products to be used in crop pesticides if pesticides are not commercially available using materials on the National List.”

Second: Mr. Bandele seconds.

A long discussion involving Board members, NOP staff, an EPA staff member and audience members ensued. Mr. Carter said he was going to ask for a reading of the motion unless there was a motion made to continue the discussion.

Motion 2: Mr. King motioned to continue the discussion.

Second: Mr. Riddle seconds.

Vote: Motion passes unanimously with a simultaneous voice vote.

Motion 3: Ms. Koenig motions to table discussion until after lunch.

Second: Mr. King seconds.

Vote: Motion passes 13-0 with one absent.

BREAK FOR LUNCH – 12:15 p.m.

RECONVENED, 1:30 P.M. on October 20, 2002

LIST 3 INERTS (cont’d) (pp. 477-491)

Substitute Motion (for Motion 1): Ms. Burton proposes a substitute motion, “The NOSB recommends that any list 3 inert material forwarded for a technical review be allowed for use until that material is approved or prohibited by the Secretary of Agriculture.”
Second: Mr. King seconds.

Chair to assign task force to work with EPA.

Vote: Motion passes 12-1, with one absent.

**LIVESTOCK COMMITTEE ACTION ITEMS** (pp. 491-511)

**MATERIALS**

**MINERAL OIL** – (Discussion Document)

Due to dissatisfaction with supplementary information, Mr. Siemon says the Committee defers the vote on mineral oil.

**CALCIUM PROPIONATE**

Due to lack of supplementary information, Mr. Siemon says the Committee defers the vote on calcium propionate.

**FUROSEMIDE**

Mr. Siemon stated “we don’t have ready the next one, which is furosemide.”

**ATROPINE** – (Discussion Document)

The Committee will send back [to TAP reviewer].

**FLUNIXIN** (pp. 495-508) – (Discussion Document)

**Motion 1:** Mr. Siemon motions that Flunixin be added to 205.603, synthetic substances allowed for use in organic livestock production, with the following restrictions: withhold time shall be double the FDA requirement.

Second: Ms. Ostiguy seconds.

**Motion 2:** Ms. Koenig motions to defer flunixin until a telephone meeting can take place.

Second: Mr. Bandele seconds.

Vote, **Motion 2:** The motion fails 3-10, with one absent.

Vote, **Motion 1:** The motion passes, 11-2, with one absent.
ACCREDITATION COMMITTEE ACTION ITEMS (pp. 512-517)

GROWER GROUP CERTIFICATION CRITERIA (pp. 512-517) – (Discussion Document)

**Motion:** Mr. Riddle motions that the Grower Group Certification Criteria Recommendation as reviewed and changed be adopted. (Final document is posted on NOSB web site under Accreditation Committee recommendations.)

**Second:** Mr. Siemon seconds.

**Vote:** The motion passes, 13-0, with 1 abstention.

LIVESTOCK COMMITTEE ACTION ITEMS (pp. 517-551)

DAIRY ANIMAL REPLACEMENT (pp. 517-535) – (Discussion Document)

**Motion:** Mr. Siemon motions: On existing organic dairy farms all replacement or expansion dairy animals shall be under continuous organic management from the last third of gestation. It is recommend that until 10/21/05, animals shall be under continuous organic management beginning no later than 1 year prior to production of the milk or milk products that are to be sold, labeled, or represented as organic.

**Second:** Ms. Ostiguy seconds.

**Discussion:** Board members questioned whether this recommendation would be considered guidance or clarification (policy statement) of the rule. Mr. Mathews said that implementation of this recommendation may require rulemaking. After considering the NOSB recommendation together with OTA input, NOP will analyze them in the context of the existing regulations and present the analysis to the Office of General Counsel. NOP will then report the findings to the NOSB.

**Substitute motion:** Mr. Siemon makes a substitute motion that reads: On existing organic dairy farms, all replacement or expansion dairy animals shall be under continuous organic management from the last third of gestation.

**Second:** Mr. King seconds.

**Vote:** The motions passes, 10-2, with 2 abstentions.

EXCIPIENTS (pp. 535-550) – (Discussion Document)

**Motion:** Ms Ostiguy motions that the following recommendation be adopted: The NOSB recommends the addition of a new 205.603(h) to read as follows: Excipients used in the manufacturing or found in the finished product of drugs used in livestock treatments are allowed unless specifically prohibited.

**Second:** Mr. Siemon seconds.
Substitute motion: Mr. Riddle makes a substitute motion, but Ms. Ostiguy speaks the actual motion. In the interest of clarity, the transcript of this part of the meeting has been excerpted as follows:

“205.603(e) would begin with—this would be in addition, ‘as non-active substances for use with disinfectants, medications, and pesticides,’ so this is the non-active material.

Now we move to a portion that’s already in the law, so 205.603(e) actually starts with ‘As synthetic inert ingredient is classified by the Environmental Protection Agency for use with non-synthetic substances or a synthetic substance listed in this section and used as an active pesticide ingredient in accordance with any limitations on the use of such substances. EPA List 4 inerts are of minimal concern.’

All that is already in there. Going back then to the addition. This again applies to non-active substances for use with disinfectants, medications and pesticides. The first item, ‘synthetic excipients, as classified by the Food and Drug Administration for use with non-synthetic substances or synthetic substances listed in this section and used as an active animal drug in accordance with the limitations on the use of any such substance that one, has been determined by FDA that the substance is generally recognized as safe, grass, pursuant to Title 21 US Code of Federal Regulations, Part 182, 184, or 186.’

Second part, ‘is approved as a food additive by a petition set forth in 21 CFR 171 or is reviewed and included with the list of active ingredients in this part.’

Second: Ms. Caughlan seconds.

Substitute motion withdrawn: Mr. Riddle and Ms. Caughlan withdraw substitute motion.

Vote: Original motion passes, 12-2, with 2 abstentions.

CROPS COMMITTEE ACTION ITEMS (pp. 551-567)

HYDROPONICS (not action item) (pp. 551-557) – (Discussion Document)

Mr. Bandele handed out background information on hydroponics.

PLANTING STOCK (pp. 557-565) – (Discussion Document)

Motion: Mr. Riddle motions that 3 Q’s and A’s (Discussion Document) developed by Crops Committee be forwarded to NOP for approval and subsequent posting on NOP website as planting stock clarification for producers.

Second: Ms. Koenig seconds.

Vote: Motion passes 11-0, with 3 abstentions.
COMPOST TASK FORCE (pp. 565-567)

**Motion**: Mr. Bandele motions to re-establish the Compost Task Force, to be co-chaired by Dennis Holbrook and Eric Sideman.

**Second**: Ms. Koenig seconds.

**Vote**: Motion passes 14-0.

PROCESSING COMMITTEE ACTION ITEMS (pp. 567-597)

PROCESSING TASK FORCE (pp. 567-592) – (Discussion Document)

**Motion**: Mr. King motioned that the Processing Task Force Recommendation be accepted by the Board with the addendum as proposed. The recommendation will then be posted on the NOP website for comment. The recommendation reads: Direct and secondary direct food additives are subject to NOSB review. Indirect food additives are not subject to NOSB review.

**Second**: Mr. O'Rell seconds.

**Vote**: Motion passes 14-0.

WHEN HANDLING BECOMES PROCESSING FOR PRODUCERS & RETAILERS (Discussion Document) (pp. 593-597)

Mr. King discussed sources and very rough draft he is working on to clarify handling vs. processing for producers and retailers. (Not an action item)

COMMITTEE WORK PLANS (pp. 598-602)

PROCESSING COMMITTEE (p. 598)

Mr. King reported that the Processing Committee will: develop final Processing Task Force recommendation; continue work on handling vs. processing for retailers and producers; work on cultures; and work on materials review.

ACCREDITATION COMMITTEE (pp. 598-599)

Mr. Riddle reported that the Accreditation Committee will: continue review of NOP Accreditation Program; monitor certifying agent issues; monitor website; and solicit glossary items and complete Board Policy Manual Glossary.

MATERIALS COMMITTEE (pp. 599-600)

Ms. Burton reported that the Material Committee will: develop prioritization criteria for re-review of materials; manage EPA List 3 inerts task force; look at new petitions and forward for review; and monitor contractors.
NOSB OCTOBER MEETING MINUTES
Page 13

CROPS COMMITTEE (p. 600)

Mr. Bandele reported that the Crops Committee will: re-establish compost task force; develop sodium nitrate clarification; develop hydroponics guidance; work on List 3 inerts issue; review TAP reviews; and develop a Q and A on potassium sulfate.

LIVESTOCK COMMITTEE (pp. 600-601)

Mr. Siemon reported that the Livestock Committee will: discuss breeder stock issue; investigate need for differentiation between livestock and crops when it comes to materials review; identify calf-hood drugs to see if any need to go through TAP reviews; and revisit standards on production stock (e.g., wool).

INTERNATIONAL COMMITTEE (pp. 601-602)

Ms. Goldburg reported that the International Committee will: look at recommendations on equivalency; and discuss relevancy and work plan of International Committee.

ELECTION OF BOARD OFFICERS (pp. 603-609)

CHAIR

Dave Carter was nominated by Ms. Burton; seconded by Ms. Koenig. Mr. Carter elected unanimously by voice vote.

VICE CHAIR

Jim Riddle was nominated by Ms. Ostiguy; seconded by Ms. Goldburg. Mark King was nominated by Ms. Burton; seconded by Ms. Koenig. Mr. King elected by paper ballot. 9-5.

SECRETARY

Jim Riddle was nominated by Ms. Caughlan; seconded by Mr. Siemon. Mr. Riddle elected unanimously by voice vote

STATUS OF FILLING BOARD VACANCY (pp. 610-611)

Mr. Mathews reported that there were 6 inquiries, 3 of whom were qualified. NOP is making initial screening.

ADJOURNED – Sunday, October 20, 2002 – 5:00 p.m.
The National Organic Standards Board meeting of May 13-14, 2003, was attended by 15 members:

**NOSB Members Present:**

- Owusu Bandele
- Kim Burton
- Dave Carter
- Kevin O'Rell
- Ann Cooper
- Rebecca Goldburg
- Andrea Caroe
- Mark King
- Rosalie Koenig
- Michael Lacy
- Goldie Caughlan
- Nancy Ostiguy
- Jim Riddle
- George Siemon
- Dennis Holbrook

**National Organic Program (NOP) Staff:**

Barbara C. Robinson, AMS/Deputy Administrator, Richard Mathews, Program Manager, Katherine Benham, Arthur Neal, Keith Jones, Toni Strother, Bill Ashley and Bob Pooler

**CALL TO ORDER:** May 13, 2003, 8:15 a.m. *Presiding: David C. Carter, Chair*

Mr. Carter opened with the introduction of the NOSB members and asked that public commenters sign up in advance.

**ANNOUNCEMENT:** Dave Carter announced Jim Riddle’s appointment as University of Minnesota Endowed Chair of Agricultural Systems. Jim requested input on organic livestock research items.

Dave Carter reported on NOSB planning sessions in February 2003, and in May 2003. *(See Discussion Document)*

Mr. Carter also reported that the NOSB had issued two letters to Secretary Veneman following congressional passage of the organic feed waiver provision. The first letter expressed concern about the issue, and the second thanked the Secretary for taking a stand on the issue.

Mr. Carter met with the Secretary following the second letter.

**AGENDA APPROVAL** *(See Discussion Document), (Pg. 10)*

By motion made, seconded and carried the agenda was approved, with the addition of determining the next meeting date and location.

**MINUTES APPROVAL** *(Pgs. 10–11)*

**SEPTEMBER AND OCTOBER MEETING MINUTES APPROVAL** *(See Discussion Document)*

**EXECUTIVE COMMITTEE CONFERENCE CALL MINUTES** *(See Discussion Document)*
VOTE: The minutes were approved unanimously with no discussion
REVIEW OF BOARD POLICY MANUAL – (See Discussion Document), (Pg. 12)

Jim Riddle moved to add to the NOSB Board Policy manual provisions developed during the planning session concerning a vision statement and mission statement. The motion passed, along with an amendment by Kim Burton to note that the board’s responsibility is to maintain a National List of “allowed and prohibited” materials.

PRESENTATION – (Pg. 16)

Jim Riva, Branch Chief, USDA AMS Audit Review and Compliance Branch, gave a presentation on the AMS ARC services on NOP Accreditation. The text of this presentation can be found within the meeting transcripts.

PUBLIC COMMENTS – May 13, 2003 at 10:30 a.m.

The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record. Some individuals also presented written comments. Transcribed comments can be found on the NOSB portion of the web. Written comments where applicable, can be found at the DESIGNATED ATTACHMENTS.

- Public Comment Registration Sign–In Sheet
- Audience Sign–In Sheet
- Spangler Klopp, Townsends, Inc., (Attach. 1, comment read by Chair), (Pg. 47)
- Ronnie Cummins, National Director Organic Consumers Association, (Attach. 2) (Pg. 49)
- George Kuepper, NCAT Program Specialist, (Attach. 3), (Pg. 54)
- Dr. Laura Morrison, Acting Executive Director, OMRI, (Pg. 57)
- Brian Baker, OMRI, (Attach. 4), (Pg. 61)
- Robert Hadad, Director, The Humane Society of U.S., (Attach. 5, comment ready by Chair), (Pg. 69)
- Emily Brown Rosen – Proxy for Doug Crabtree, (Attach. 6), (Pg. 71)
- Tom Harding, AgriSystems International, (Attach. 7), (Pg. 82)
- John Immaraja, Project Manager, Chemical Corporation, AMVAC, (Pg. 84)
- Zea Sonnabend, CCOF, (Pg. 91)
- Candace Boheme, Organic Consumer, (Attach. 8), (Pg. 99)
- Urvashi Rangan, Director, Consumer Union, (Pg. 104)
- Liana Hoodes, National Campaign for Sustainable Agriculture (NCSA), (Attach. 8), (Pg. 109)
- Beth Sears, Product Manager Cerexagri, Inc., (Attach. 10), (Pg. 113)
- Tom Hutchinson, OTA, (Pg. 118)
- T.M. “Mac” Devin, Technical Services Veterinarian, Ft. Dodge Animal Health, (Attachs. 11 & 12), (Pg. 121)
- David Hiltz, Scientist, Acadian Seaplants, Ltd., (Pg. 125)
- Leslie Zuck, Executive Director, PCO, (Attach.13), (Pg. 132)
- Penny Sandoval, Northeast Organic Dairy Producers Alliance, (Pg. 136)
- David Engel, MOSA, (Pg. 140)
- Marty Mesh – (Pg. 143) – Urvashi Rangan, (Pg. 144)
- Lisa Englebert and Carol King, NOFA New York – read by Chair, (Pg. 150)

BREAK FOR LUNCH RECESS - 12:15 p.m.

RECONVENE MEETING on May 13, 2003, at 1:15 P.M.
**NOP PROGRAM UPDATE, (Pg. 152)**

*Barbara Robinson reported the following:*

- Feed grain survey mandated under the 2002 Farm Bill has been completed, and has been submitted for review before public release. The survey does contain price data.
- An amendment was added to the supplemental appropriations bill to direct USDA to develop standards on wild-caught seafood. Because of resource constraints and workload, this issue has not been taken up. Any development will go on the web for public consideration. Her intent is to start with the history of previous actions on this matter.

*Richard Mathews reported the following: (Pg. 158)*

- NOP has developed a Peer Review concept that includes assessment by the American National Standards Institute (ANSI). Assessment will be to NOP requirements, ISO Guide 61, ISO 19011, and IAF guidelines. The Review Panel will consist of a team of three people; Lead assessor schooled in ISO 61, a second assessor schooled in ISO 61, and a technical resource person with organic expertise appointed by USDA from nominations submitted by the public.
- The docket recently published in the Federal Register does not cover all materials recommended by the NOSB. It is primarily a crops document, with some technical corrections on processing materials. A docket is being prepared for release next week for section 205.605. Another docket is on his desk for review that relates to livestock materials. NOP is having FDA review processing and livestock dockets before going out to the public.
- The NOP has developed a Decision Tree; and that document has been given to the Board and will be made available to the public.
- NOP is developing an Interim Final Rule for Good Guidance Practices. Intent is to make the role of guidance documents clear to the public. The rule will create a new section 205.603, entitled, “Good Guidance Practices.” There will be a 30-day comment period. Food Contact Substances will be the first issue put through the new process.

**National Organic Program report concluded**

**PRESENTATION OF COMMITTEE DISCUSSION ITEMS:**

**MATERIALS –KIM BURTON**

- **MATERIALS PROCESS REVIEW (See Discussion Document), (Pg. 165)**

  The Committee is working with NOP in ongoing process of clarifying current material review process *(See Discussion Document)*:

  - NOP review process of a petition prior to the forwarding to materials committee *(See Discussion Document)*
  - Cut-off date (30/60 day) for TAP reviews prior to an NOSB meeting
  - Confidential Business Information; and clarification on process
When recommending material review using existing TAP reviews then the committee MUST review the supplied information and expedite a supplemental TAP if necessary.

Guidance Document/OFPA criteria for contactors on reviewing materials (i.e., Livestock)

PLEASE NOTE: Transcript Error: Page 174 – Mr. Bob Moore should be Mr. Bob Pooler

ACCREDITATION - JIM RIDDLE

- MINOR NON-COMPLIANCES (See Discussion Document), (Pg. 176)

Mr. Riddle reviewed with the board a Draft 4 of the document regarding Minor Non-Compliance which received a committee vote of 4 to 0 1 absent to remain as a committee draft with no action taken. Draft 3 received substantive comments, which are incorporated in the new draft. Draft 4 will be posted for public comment (See Discussion Document).

Mr. Riddle reported on his attendance at National Institute of Standards and Technology (NIST) meeting on assessment of organic accreditation bodies.

PROCESSING – MARK KING

- FOOD CONTACT SUBSTANCE POLICY (See Discussion Document), (Pg. 183)

The committee is deferring official action on the proposed policy document for further research.

- CHLORINE IN DIRECT CONTACT WITH ORGANIC FOOD (See Discussion Document), (Pg. 187)

Recommendation divided into 5 motions. Jim moves each, Kevin seconds. The board voted unanimously to recommend a rule change to correct annotations for chlorine in the National List as follows:

A. Change the annotation of §205.601(a)(2) to read: Chlorine materials - Except, That, residual chlorine levels in the water in direct crop or food contact and in flush water from cleaning irrigation systems that is applied to crops or fields shall not exceed the maximum residual disinfectant limit under the Safe Drinking Water Act.

B. Change the annotation of § 205.603(a)(3) to read: Chlorine materials - disinfecting and sanitizing facilities and equipment. Residual chlorine levels in the water in direct crop or food contact shall not exceed the maximum residual disinfectant limit under the Safe Drinking Water Act.

C. Change the annotation of § 205.605(b)(9) to read: Chlorine materials - disinfecting and sanitizing food contact surfaces. Except, That, residual chlorine levels in the water in direct crop or food contact shall not exceed the maximum residual disinfectant limit under the Safe Drinking Water Act.

The board also unanimously recommended specific changes to the NOP Questions and Answers to clarify that chlorine monitoring should not be done at point of discharge, stating “Certified operators must monitor the chlorine level up stream of the wash operation or rinse operation, where the water last contacts the organic product.”
The board also recommended a prioritized re-review of chlorine (14-1-0) “in light of new information about the relationship of chlorine and trihalomethanes, available alternatives, food safety, health effects, and application procedures.”
• POST HARVEST HANDLING vs. ACTUAL HANDLING OR PROCESSING (See Discussion Document), (Pg. 195)

Mr. King has resubmitted a clarification document for handling vs. processing primarily for crop production. He also talked about a guidance document that NOP had released on how retail food establishments can comply with the NOP. The document does differentiate between exempt and excluded retail operations. The document is posted on the website.

CROPS – OWUSU BANDELE

• HYDROPONICS (See Discussion Document), (Pg. 196)

Draft guidance document regarding certification of hydroponics and other soil-less production systems. The draft will be forwarded to the strategic planning committee and NOP for feedback and to determine if further work on the document is a priority.

LIVESTOCK – GEORGE SIEMON, (Pg. 201)

• BREEDER STOCK REPLACEMENT – (See Discussion Document)

The Board unanimously passed to adopt the proposed recommendation regarding Breeder Stock Replacement and to be posted on the NOP website.

• FIBER BEARING ANIMAL STANDARDS

Discussed under the committee work plan and no action was taken.

• DAIRY ANIMALS REPLACEMENT STANDARD – (See Discussion Document)

Approved the Livestock Committee’s recommendation for a rule change. VOTE: 13 approved, 2 abstained, 0 No.

• CLARIFICATION OF REQUIREMENTS FOR REVIEWING LIVESTOCK MATERIALS (See Discussion Document)

Nancy Ostiguy presented recommendation for clarification of information for TAP contractors; the document will now go to the Materials Committee for consideration, and then be posted for public comment.

• REVIEW IVERMECTIN FOR REMOVAL

Mr. Siemon reported on the Parasiticide Task Force. No action taken.

• ALTERNATIVE FEED SUPPLEMENTS TO DL-METHIONINE

Becky Goldburg reported on research now being conducted in the industry on fish meal and other alternative methionine sources. No action taken.
INTERNATIONAL – BECKY GOLDBURG, (Pg. 219)

- NO REPORT. To be part of the strategic planning committee.

PRESENTATION OF COMMITTEE DISCUSSION ITEMS – (Page 220)

Presentation and discussion of material recommendations from Crops, Livestock, and Handling Committees. Materials recommendations from the committees were discussed during the balance of the afternoon. Per the agenda, no action was taken on those materials.

MEETING RECESSED AT MAY 13, 2003, AT 5:45 P.M.

WEDNESDAY – MAY 14, 2003, at 8:15 a.m.

MEETING OPENED WITH PUBLIC COMMENT SESSION:

Jim Pierce, Organic Valley, (Pg. 4)
Liana Hoodles, National Campaign for Sustainable Agriculture (NCSA), (Pg. 8)
Toni Feder, Northwest Coalition for Alternatives to Pesticides, (Attach. 14), (Pg. 10) (Transcript Error: Ms. Better should be Ms. Feder)
Karen Balthrop, Northwest Coalition for Alternatives to Pesticides, (Pg. 12)
John Wallingford, Wyeth Nutrition, (Pg. 15)
John Immaraju, (Attach. 15), (Pg. 20)
Tina Ellor, Phillips Mushroom Farms, (Pg. 23)
Lucina Lampila, IFAC/Prayon, (Pg. 27)
Urvashi Rangan, Consumer Union, (Pg. 36)
Marva Holt, Holts Organic Land and Livestock, (Pg. 43)
Harriet Behar, (Pg. 46)
Margaret Scoles, Organic Inspector, Independent Organic Inspectors Association, (Pg. 49)
Cissy Bowman, Chairman, Indiana Certified Organic, (Pg. 50)
Leslie Zuck, PCO proxy for Ned MacArthur (Pg. 57)
Marty Mesh, Executive Director, Florida Certified Organic Growers and Consumers (Pg. 67)
Joe Hall, California Natural Products, (Pg. 75)
Bob Buresh, Director of Nutrition and Research for Tyson Foods, (Pg. 80)
Dex Conaway, Communications Director for Indiana Certified Organic, (Pg. 88)
Marty Mesh, proxy for Laura Kennedy, Quality Cert. Services, (Pg. 93)
Juli Brussell, Member, Organic Farming Research Foundation Board, (Pg. 97)
Tom Hutcheson, Organic Trade Association, (Pg. 100)
Grace Marroquin, Marroquin International, (Pg. 103)
Jim Pierce, Organic Valley proxy for Tom Harding, AgriSystems International, (Pg. 111)
T.M. “Mac” Devin, Ft. Dodge Animal Health, (Pg. 117)
Cindy Salter, Executive Director, Compost Tea Industry Association (Read by Dave Carter), (Pg. 119)
Barbara C. Robinson, Deputy Administrator, TM/AMS, (Pg. 121)

PUBLIC COMMENT CLOSED AT 11:00 a.m.

INERTS TASK FORCE REPORT – Nancy Ostiguy and Rose Koenig – (See Discussion Document), (Pg. 123)
Nancy Ostiguy reports that the task force has been reviewing List 3 Inerts. The task force was created to address the conflict regarding List 3 Inerts.

The task force is recommending a temporary guidance policy that would allow that products made with disclosed Inerts that were allowed in 2001 by a now-accredited certification agency to be continued for use until December 2004, with some restrictions. The task force approved the report on a vote of 6-3. Kim Burton and Mark King provided reasons for not supporting the recommendation.

Ms. Ostiguy recommended that the task force document be posted for public comment.

Nancy/Rose will take board comments under advisement, and then will send a revised proposal to NOP for public comments.

COMPOST TEA TASK FORCE REPORT – OWUSU BANDELE (See Discussion Document), (Pg. 158)

Dennis Holbrook reported on the status of the Compost Teas Task Force. Compost Tea Task Force met by conference call in early May. A list of task force members was distributed.

The Task Force has created a series of subcommittees to examine the various factors in making, storing and applying compost tea. Those subcommittees will meet between now and the October 2003 Board meeting.

PRESENTATION OF WRITTEN MATERIAL RECOMMENDATIONS

CROPS MATERIALS – Owusu Bandele

TETRAHYDROFUFURYL ALCOHOL (See Discussion Document), (Pg. 162)

THFA was petitioned to be added to section 205.601, “synthetic substances allowed for use in organic crop production.” More specifically, the committee examined the substance in relation to 205.601(m)(2), “as a synthetic inert ingredients as classified by the EPA for used with nonsynthetic substances listed in this section and used as an active pesticide ingredient in accordance with any limitations on the use of such substances.

The Committee concurs with the TAP review in that evaluation against OFPA Criteria 1 and 6 in particular require specific information to determine the substance’s potential for agroecosystem interactions. The Committee found the material to be synthetic. **Committee Vote: 5 Approved**

**MOTION:** Owusu Bandele  **SECOND:** Nancy Ostiguy
**MATERIAL STATUS:** Synthetic – Allowed
**FINAL VOTE:** None
**Why Synthetic:** Deemed so by TAP Review determined that manufacturing process products were not natural.

**ANNOTATION:** Add to 205.601(m) with the annotation “only until December 31, 2006.” The annotation was designed to be consistent with the EPA deadline for review of all inerts exempt from food tolerance requirements.

**Why Annotation:** EPA review process to move to either List 4 or List 2; If goes to List 2 then off National List.
POTASSIUM SILICATE  (See Discussion Document), (Pg. 171)

The Committee received a petition to consider as a synthetic substance allowed for use in organic crop production as plant disease control” and as a “synthetic allowed for use in organic crop production as plant for soil amendments.”

The Committee voted to allow the material but for disease control only under 205.601(i). However, after discovering that the material had not received the EPA label required for pesticide use, the committee reconsidered that recommendation. **Committee Vote: 4 Approved; 1 Absent**

- **MOTION:** Owusu Bandele  
- **SECOND:** Dennis Holbrook  
- **DEFERRED:** Until Next meeting

**Why Deferred:** Potassium silicate was deferred pending additional information regarding its manufacturing process and pending the acquisition of an EPA registration for use as a pesticide. Currently, the material does not have an EPA registration.

PHOSPHORIC ACID – (See Discussion Document), (Pg. 173)

The Committee received a petition to consider as a synthetic substance allowed in crops to be used to adjust the pH for aquatic plant extracts. **Committee Vote: 4 Approved; 1 Absent**

- **MOTION:** Owusu Bandele  
- **SECOND:** Dennis Holbrook  
- **DEFERRED:** Until Next Meeting

**Why Deferred:** The decision involving phosphoric acid deferred pending a Full TAP review for crop usage. That review should also reassess its use in liquid fish products.

GLYCERIN OLEATE/GLYCERINE MONOOLEATE – (See Discussion Document), (Pg. 176)

The Committee received a petition to consider as a synthetic substance allowed in crops. **Committee Vote: 4 Approved; 1 Absent**

- **MOTION:** Owusu Bandele  
- **SECOND:** Dennis Holbrook

**MATERIAL STATUS:** Synthetic – Allowed

**FINAL VOTE:** 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED

**Why Synthetic:** The manufacturing process involves synthetic materials.

**RECOMMENDATION:** To be added to 205.601(m)

- **MOTION:** Owusu Bandele  
- **SECOND:** Nancy Ostiguy

**ANNOTATION:** Only until December 31, 2006. The annotation was designed to be consistent with the EPA deadline for review of all inerts exempt from food tolerance requirements.

**Why Annotation:** EPA will clarify status as List 3 inert by end of 2006.

**FINAL VOTE:** 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED – The material was approved for addition to the National list until December 31, 2006.
LIVESTOCK MATERIALS – George Siemon

PROTEINATED CHELATES – (See Discussion Document), (Pg. 187)

Deferred: Until Next Meeting October 2003
Why Deferred: Committee has not received TAP Supplemental Report by contractor.
CALCIUM PROPIONATE – (See Discussion Document), (Pg. 187)

The material was petitioned for use as a livestock treatment for Milk Fever and mold inhibitor. Use for Milk Fever was recommended by Board in September, 2002. The committee recommended to be added to 603(a) as a mold inhibitor in dry formulated herbal remedies. **Committee Vote: 4 Approved, 1 No, 1 Abstained**

**MOTION:** George Siemon  
**SECOND:** Owusu Bandele  
**MATERIAL STATUS:** Synthetic – Allowed  
**FINAL VOTE:** NONE – The material was previously established as a synthetic.

**RECOMMENDATION:** To be added to 205.603(a)  
**MOTION:** George Siemon  
**SECOND:** Mike Lacy  
**ANNOTATION:** As a mold inhibitor in dry formulated herbal remedies  
**Why Annotation:** The committee was concern that if they didn’t annotate it, it would be used for feed purposes – it’s a general feed preservative. The committee wanted to make sure that it’s only used as a therapeutic tool.

**FINAL VOTE:** 11 APPROVED, 2 NOS, 2 ABSTAINED, 0 RECUSED

FUROSEMIDE – (See Discussion Document), (Pg. 193)

The Committee received a petition to consider for medicinal livestock treatment as a diuretic used for the treatment of udder edema and pulmonary edema which is associated with conjunctive heart failure. **Committee Vote: 5 Approved; 1 Abstained**

**MOTION:** George Siemon  
**SECOND:** Nancy Ostiguy  
**MATERIAL STATUS:** Synthetic  
**FINAL VOTE:** 15 APPROVED, 0 NO, 0 ABSTAINED, 0 RECUSED  
**Why Synthetic:** Manufacturing process – molecular change of parent material. Petitioned by manufacturer as synthetic.  
**APPROVED:** Effective treatment udder edema and pulmonary edema. Suitable alternative treatments not on list.

**RECOMMENDATION:** To be added to 205.603(a)  
**ANNOTATION:** Double FDA withhold time – (96 hours totaled)  
**Why Annotation:** TAP indicated that 10% residual of material remains active after 48 hours. Committee recommended longer withhold for organic use.  
**MOTION:** George Siemon  
**SECOND:** Mike Lacy

**FINAL VOTE:** 15 YES, 0 No, 0 Abstained, and 0 Recused. The Board supported the double FDA withhold due to data showing that after 48 hours there is still 10% residual in tissue. NOP staff clarified that NOSB can recommend extended withdrawal, but they must have a compelling claim related to the OFPA criteria to establish that requirement.

MINERAL OIL – (See Discussion Document), (Pg. 197)
The Committee received a petition to consider as an internal treatment for compaction and for use as a dust suppressant ingredient in organic livestock feed production. **Committee Vote: 1 Approved; 4 Disapproved; 1 Absent**

**MOTION**: George Siemon  
**SECOND**: Becky Goldburg  
**MATERIAL STATUS**: Synthetic – **NO VOTE** – Established at previous meeting.  
The Committee recommended, not be allowed to be used as a dust suppressant in the formulation of livestock vitamin/mineral supplements.

**MOTION**: Jim Riddle  
**SECOND**: Mike Lacy  
To be added to 205.603(d); and allowed for dust control and disbursed until 10/21/2006, with three year phase out, and development of other alternative.  
**MOTION VOTE**: 8 YES; 7 NOS: MOTION FAILED

**FINAL VOTE ON ORIGINAL MOTION TO PROHIBIT**: 8 YES TO PROHIBIT, 8 NO NOT ADDED, 0 ABSTAIN, AND 0 RECUSED – By prior action, this material is classified as a synthetic. A motion to include the material on the National List as an approved substance for use as a dust suppressant failed.

**ATROPINE** – *(See Discussion Document), (Pg. 209)*

The Committee received a petition to consider as an antidote for poisoning in organic livestock production. **Committee Vote: 5 Approved, 1 Absent**

**MOTION**: George Siemon  
**SECOND**: Nancy Ostiguy  
**MATERIAL STATUS**: Synthetic  
**FINAL VOTE**: 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED  
**WHY SYNTHETIC**: Manufacturing process – synthesized chemical heat and pressure used to break molecular bounds.  
**WHY APPROVED**: Effective antidote for poisoning of livestock. No other alternatives on National List. Also, effective for treatment of pink eye.

**RECOMMENDATION**: Add to 205.603(a) as a livestock medication without an annotation

**FINAL VOTE**: 13 YES, 0 NO, 2 ABSTAINED, 0 RECUSED – The material was approved for addition to Section 205.603(a) of the National List.

**MOXIDECTIN** – *(See Discussion Document), (Pg. 223)*

The Committee received a petition to consider for medicinal livestock treatment, as a topically applied broad spectrum parasiticide effective against both internal and external parasites.

**DEFERRED**: Until Next Meeting  
**WHY DEFERRED**: Upon the recommendation of the committee, the material was deferred pending the gathering of additional information from Petitioner; need additional information from TAP contractor. The Board had concerns about its possible antibiotic properties, its 6 month half life effect on the environment, and residues in milk, fats and lipids.
PROCESSING MATERIALS – Mark King

EGG WHITE LYSOZYME – (See Discussion Document), (Pg. 228)

The Committee received a petition to consider for additional to the National List of Substances Allowed and Prohibited in Organic Production and Handling as a nonagricultural substance allowed in processed products labeled as “organic” and “made with organic” ingredients. **Committee Vote: Unanimous**

**MOTION**: Mark King

**SECOND**: Jim Riddle

**MATERIAL STATUS**: Non–Synthetic

**FINAL VOTE**: 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED

**Why Natural**: Derived from a natural (chicken egg whites) source and the MFG process. No solvents used in the MFG process of the enzyme. Consistent with other enzymes.

**Why Approved**: Additional information received by the petitioner on the GRAS status.

**MOTION**: Mark King

**SECOND**: Kim Burton

**RECOMMENDATION**: Add to 205.605(a)

**FINAL VOTE**: 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED – Egg White Lysozyme was approved for addition to 205.605(a) of the National List

NITROUS OXIDE – (See Discussion Document), (Pg. 234)

The Committee received a petition for use as a whipping propellant in products labeled as “organic” and “made with organic.” **Committee Vote: Unanimous**

**DEFERRED**: Until Next Meeting

**Why Deferred**: Due to late arrival of the TAP Report – Not adequate time to review TAP report.

L-MALIC ACID (See Discussion Document), (Pg. 235)

The Committee received a petition for use as a PH adjuster in processing operations. **Committee Vote: Unanimous**

**MOTION**: Mark King

**SECOND**: Kevin O’Reell

**MATERIAL STATUS**: Non–Synthetic

**FINAL VOTE**: 14 YES, 1 NO, 0 ABSTAINED, 0 RECUSED

**Why Non–Synthetic**: Fermentation of carbohydrate substance.

**APPROVED**: The natural alternative detailed in the TAP report is commercially available. Verified with petitioner.

**MOTION**: Mark King

**SECOND**: Kevin O’Reell

**RECOMMENDATION**: Add L–Malic Acid to 205.605(a) of the National List

**AMENDMENT TO MOTION**: To add an annotation that from the microbial fermentation of carbohydrate substances.” **Vote**: 14 Yes, 1 No, 0 Abstentions, 0 Recusals
FINAL VOTE: 15 Yes, 0 No, 0 Abstained, 0 Recused – L Malic Acid was approved for addition to 205.605(a) of the National List with the annotation. Action on DL-Malic acid was deferred.

SODIUM ACID PYROPHOSPHATE – (See Discussion Document), (Pg. 245)

The Committee received a petition for use as a leavening agent in baked goods. Committee Vote: 5 Approved, 1 No, 1 Abstained

MOTION: Mark King SECOND: Kim Burton
MATERIAL STATUS: Synthetic
FINAL VOTE: 15 YES, 0 NO, 0 ABSTAINED, 0 RECUSED
Why Synthetic: Using synthetic ingredients in the MFG process.
APPROVED: No alternatives available; unique function and similar to other phosphates on the National List.

MOTION: Mark King SECOND: Kim Burton
RECOMMENDATION: Add to 205.605(b)
ANNOTATION: “For use only as a leavening agent”
Why Annotation: Specific use in application; not enough information on other uses.

FINAL VOTE: 10 YES, 2 NO, 3 ABSTAINED, 0 RECUSED; The material was approved for addition to 205.605(b) of the National List for use as a leavening agent

MICRO-ORGANISMS – (See Discussion Document), (Pg. 251)

The Committee received a petition including spore powder for inclusion on the National List. Committee Vote: Unanimous

MOTION: Mark King SECOND: Kevin O’Reell
MATERIAL STATUS: Non–Synthetic
FINAL VOTE: 12 YES, 3 NO, 0 ABSTAINED, 0 RECUSED
Why Natural: Mfg. Process is natural; Previous TAP reviews deemed natural such as enzymes and dairy cultures.

MOTION: Mark King SECOND: Kim Burton
RECOMMENDATION: Add to 205.605(a), “Any food grade bacteria – fungi, and other micro–organisms

FINAL VOTE: 11 YES, 1 NO, 3 ABSTAINED AND 0 RECUSED; The material was approved for addition to 205.605(a) of the National list as “any food grade bacteria, fungi, and other micro-organisms.”

COMMITTEE WORK PLANS – (Pg. 265)
Accreditation – Jim Riddle
- The committee will continue to work on the minor non-compliance document. The document will be posted for discussion. Action is planned for the October meeting;
- The committee will begin to look at information on certificates, and ideas for creating uniform information on those certificates; and
- The committee will be analyzing the future role of the committee.

Board Policy Manual Task Force – Jim Riddle
- Task force will include the timeline for submitting committee recommendations and TAP reports;
- The task force will include any new committees’ names and descriptions – and any changes in board structure – as a part of the policy manual;
- Update our voting forms will be prepared for inclusion in the manual;
- Language on the Peer Review Panel will be removed; and
- Other amendments will be handled as needed.

Processing/Handling – Mark King
- Will continue to work on Food Contact Substance and Guidance;
- Will work on materials: (1) Nitrous oxide, and (2) Sunset review of materials on the national List; and
- Post-harvest handling vs. processing.

Livestock – George Siemon
- Will work on clarifying non-edible livestock standards;
- Will work on clarifying new dairy herd entry clause and post list of scenarios for public comment;
- Stimulate task force within industry: (1) Alternatives to methionine, and (2) Identify calf-hood drugs to petition; and
- Livestock materials to be addressed include:
  - Moxidectin
  - Chelated minerals
  - Flunixin
  - Fish meal

Crops Committee – Owusu Bandele
- Compost Tea Task Force will continue its work;
- Materials: (1) Work will continue on deferred materials, and Sodium nitrate use;
- Rose and Nancy will continue to work on List 3 inerts;
- Committee will coordinate with NOP on status of greenhouse and mushrooms recommendations;
- The committee will seek clarification on sodium nitrate use; and
- The committee will consider possible continuation of hydroponics work based on NOP/Strategic Committee Feedback.

Materials Committee – Kim Burton
Update Material Review Process
  - NOP review process of a petition prior to forwarding to materials committee.
  - Cut-off date for TAP reviews prior to an NOSB meeting.
• CBI information. Clarification on process?
  ▪ Draft Policy on the National List Sunset Revision Process – post for public comment;
  ▪ When recommending material review using existing TAP reviews then the committee MUST review the supplied information and expedite a supplemental TAP if necessary;
  ▪ Status on list 3 inerts and EPA – Rose Koenig & Nancy Ostiguy;
  ▪ National List Update – status on NOSB materials recommendations and Federal Register Dockets; and
Discussion with NOP on restructuring the National List: *(See Discussion Document)*
- Specifically Handling 205.605 and 205.606
- Ongoing issues with TAP reports; contractors, deferred TAPs for inadequate information.
- Guidance Document/ OFPA criteria (?) for contractors on reviewing materials (i.e., Livestock)
- National List Sunset Provision – Ms. Burton distributed a document concerning the recommended process to begin the re-review of materials included on the National List. After Board review the document, it will be posted for public comment.

*International Committee – Becky Goldberg*
- No Work plan pending restructuring of board committees.

**OTHER BUSINESS**

**NEXT BOARD MEETING:**
- October 22-24, 2003 in Washington, DC; 10/22/03 – ½ day of committee work (afternoon)
- 10/23-24/03 NOSB Meeting
- OTA 5/2-4/04 in Chicago, Illinois
- **2004 MEETING:** October 12-14, 2004 – To Be Determined

**MISCELLEANEOUS INFORMATION:**
- Kim Burton suggested that co-chairs be assigned as soon as possible regarding recommendation for the materials.
- Federal Register for Processing and livestock and good guidance practices and new section. The board should have a plan to respond; w/a 30 day public comment.
- Dave Carter to work with Kim, Mark, Andrea, and Rose on the policy task force committee. To work with committee chairs – to bring the recommendation on how to proceed with policy strategic plan for policy control.

**MEETING ADJOURNED AT 4:45 P.M.**
The National Organic Standards Board meeting of October 22–24, 2003, was attended by 15 members:

Members Present:

- Owusu Bandele
- Kim Burton
- Dave Carter
- Goldie Caughlan
- Ann Cooper
- Dennis Holbrook
- Mark King
- Rebecca Goldburg
- Rosalie Koenig
- Michael Lacy
- Kevin O’Rell
- Nancy Ostiguy
- Andrea Caroe
- Jim Riddle
- George Siemon

National Organic Program (NOP) Staff:

Barbara C. Robinson, AMS/Deputy Administrator; Richard Mathews, Program Manager; Katherine Benham, Arthur Neal, Keith Jones, Francine Torres, Darcie Priester and Bob Pooler

NOSB WORKING SESSION (Closed to the public): October 22, 2003 – 8:00 a.m.

See Discussion Document

Call to Order: October 22, 2003 – David C. Carter – 1:30 p.m.

Dave Carter welcomed everyone to the meeting and had each member introduce him/herself. Mr. Carter talked about the meeting format, and using the agenda, what the Board will focus on during this meeting. Specifically, the Board will develop a statement of what constitutes compatibility/consistency with a system of sustainable agriculture/organic production and handling relative to substance review and evaluation. The Board will also clarify and document its recommendations from the May 2003 meeting.

Mr. Carter announced that FDA representatives will give a presentation on FDA approval for livestock materials. He also stated that public comment will focus on the issue of compatibility, and finally on Friday the board will go through the May 2003 material recommendations that were made and will use the standardized template to rework the process.

Announcement: (See Discussion Document) (Pg. 7)

Jim Riddle announced that during a meeting a few weeks ago the National Association of State Departments of Agriculture (NASDA) adopted a policy statement in support of organic agriculture.

Approval of Agenda: (See Discussion Document)

Mr. Carter stated that the materials chair will provide a review of the materials process and that the board will bring forth the formal process for the adoption of the form for materials consideration. He also stated that this is an ongoing process that will be incorporated into the board’s policy book. The agenda was unanimously approved.
Mr. Richard Mathews, NOP Program Manager reported on the following:

**Rule Making Docket:**

The rule making process was in final clearance, and he was very optimistic that they will be cleared for publication in the Federal Register by the first week in November. Once the documents are published and effective the day after publication, people will be able to start using those materials that occur in those two documents. The two documents address all of the crop materials, a few issues relating to livestock, some processing issues, and a number of technical corrections that were made. There is one material (TSSP) that will come back to the Board for reconsideration based upon public comment. TSSP cannot be used. Those materials included in the two final rules will be added to the list and can be used starting on the effective date of the respective final rule.

**Livestock Materials Docket:**

NOP is still working on issues on the livestock materials; the docket is not final yet, and will have to go through proposed rule. There will be a 30 day comment period on the proposed rule and those materials will go through the same process of our analyzing the comments. NOP will report to the Office of Management and Budget (OMB) what the commenters are saying about the materials and what can be done about it. NOP will provide OMB with justification for adding or not adding a material to the National List.

**Materials Review Process:**

The NOP is looking at the materials process as a system. Internally working on how NOP can do a better job. Also looking at the petition procedures to determine what can be done to improve the quality of petitions. Working with the vendor to clarify expectations. For the next few days the Board will be looking at ways to make their decision process more transparent. All of these steps will help us to do a more effective job communicating to the public what we do as the Board, the reviewers and the NOP.

**Peer Review Panel Selection:**

The Peer Review Panel is underway, and ANSI is responsible for the peer review. The expert has been selected (Ken Cummings) and the review process has begun. However, it will probably take another two to three months before anything is completed.

**Paperwork Reduction Act:**

Every two years NOP has to get OMB approval for the recordkeeping burdens that are placed on the public. The record keeping approval that is in place expires in January 2004. NOP published its intent to continue this process of gathering information and the public is welcome to comment on the record keeping burden.
Approval of the Minutes – *(Pg. 14)* – *(See Discussion Document)*

Jim Riddle moved that the Board approve the May meeting minutes; Dennis Holbrook seconded with no discussion. Minutes approved unanimously.

Approval of the Executive Committee Conference Call Minutes *(See Discussion Document)*

Jim Riddle pointed out that in the meeting book at Tab 3, the July minutes is not the final version; and that there was an amendment to reflect that Kim Dietz had left the call at a certain time after the materials committee report. Mr. Riddle wanted to make sure that the official record reflects the corrected version. Mr. Mathews stated that the updated version of the minutes was adopted and accepted by the Board and posted on the website. No action – just for informational purposes only.

PRESENTATIONS:

The text of these presentations can be found within the meeting transcripts. *(Pgs. 100–150)*

*Drs. Steven Vaughn, FDA, Director of the Office of New Animal Drug Evaluation, Center for Veterinary Medicine; and Vito E. Vengriss, FDA, Office of Surveillance and Compliance* provided an overview on Animal Drug Approval Process. The text of this presentation can be found within the meeting transcripts. *(See Discussion Document)*

*Dr. Richard Forshee, Associate Director of Research for the Center for Food and Nutrition Policy, Virginia Tech* provided a presentation on TAP Reviews and how to improve the process. He also talked about providing factual and scientific answers in an objective manner so that NOSB and NOP can make informed judgments on the petitions that are receive for inclusion on the National List. *The text of this presentation can be found within the meeting transcripts. (See Discussion Document)*

The NOSB received presentations from OMRI, *Ms. Emily Brown–Rosen, Policy Director, Mr. Richard Theuer, Former Board member and serves on the OMRI Board of Directors, Mr. David Decou, Organic Farmer and Managing Director of OMRI:* *(See Discussion Document)*

*Mr. Decou* talked about coming up with ways to have a thorough and transparent process, having objective standards that can be understood, how they should apply to both prohibit as well as added materials, and finally the TAP review process. *The text of this presentation can be found within the meeting transcripts.*

*Ms. Brown–Rosen* provided an overview of enhancing the petition process overall, including the petition; the screening process; the statement of work and the guidance for contractors, and the TAP decision process. *The text of this presentation can be found within the meeting transcripts. (See Discussion Document)*

*Mr. Theuer* talked about obtaining quality TAP reviews and limited competence in the selection of TAP contractors stating that it may be worthwhile considering having them specialize in the different areas, because everybody is not equally good in crops, livestock and processing. *The text of this presentation can be found within the meeting transcripts.*

*Recessed at 5:30 p.m.*
Reconvene: October 23, 2003 – 8:00 a.m.

PUBLIC COMMENTS

The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record; and some individuals also presented written comments. Transcribed comments, and where applicable written comments, can be found at DESIGNATED ATTACHMENTS.

Policy Development Committee – Mark King (See Discussion Document)

Mark King stated that the committee developed a 22-page draft statement that defined compatibility with the system of sustainable agriculture and consistency with organic handling. Jim Riddle who is the primary author of the draft statement provided an overview. Initially he put together a draft option one document with supporting language. Jim stated that the committee has since identified two distinct types of substances, those used in production, (and there’s criteria for production materials) and handling materials. As option two, the committee recommended two separate statements; one to be used for evaluation of compatibility of production materials and the other, handling materials. The committee had a second call, and Keith Jones stated that what would be helpful to the program are measurable criteria or factors in order to understand what is compatible and consistent. This lead to the drafting of a third option.

Mr. Riddle talked about how the Policy Development Committee made some more revisions to the option three document and adopted that as the recommendation with a vote of 3 to 0 with 2 absent. He also stated that the working draft will be posted for public comment and would be adopted at the next meeting and will be used by NOP as any material is moved forward in the regulatory process.

For further discussion on the Board’s deliberations in developing the compatibility guidance document, please see the meeting transcripts. (Pgs. 126 – 284)
Chair’s Discussion (Pgs. 284 – 291)

Mr. Carter talked about the procedures that are in the Board’s policy manual for election of officers who served a one year term, and explained that candidates may be self nominated or nominated by another member of the Board, and provided additional details regarding the election procedures. He also made a request to the Board to remove his name from nomination for reelection as Chair.

Mr. Carter talked about a meeting with Ken Clayton and A.J. Yates, and shared three things that he wanted to accomplish as Chair: (1) the importance of making the transition from the steering committee or organizing board to a board that is an operational board for a federal regulation; (2) he wanted to make sure that he provided an opportunity for all of the voices of the organic community to be heard at the table so that there was open and transparent discussion; and finally (3) to accomplish building a really collaborative, cooperative relationship with the Program.

Mr. Carter closed by stating that it’s best for him to step aside and for someone to come and fill the Chair’s position; to continue to work in developing the communication, and the relationship with the Program and make sure that the integrity of this Board is never compromised. He also thanked everyone for the opportunity to serve as Chair when the Rule was implemented one year ago, and praised the organic community for standing up to protect the integrity of the organic rule.

Nomination/Election Proceedings:

Ms. Dietz nominated Mark King as Chair; and Ms. Caughlan seconded. Mr. Lacy moved that the nomination be closed and Mr. Siemon seconded. *Mark King nominated as Chair*

Ms. Caughlan nominated Jim Riddle as Vice Chair, and Mr. Lacy seconded. Ms. Caughlan moved that the nomination be closed and Ms. Caroe seconded. *Jim Riddle nominated as vice Chair*

Mr. Siemon nominated Kim Dietz as Secretary, and Mr. Lacy seconded. Ms. Caughlan moved that the nominated be closed and seconded. *Kim Dietz nominated as Secretary*

Other Business:

There was further discussion from the Board regarding the schedule for the following day and how each committee will work and handle the review of the May materials that the Board made recommendations on to NOP. Mr. Mathews also reiterated that the Board will break up into three groups dealing with crops, livestock and processing, and then come back as a full board, and work through the documents to create one master document.

Recessed at 5:30 p.m.

**Next Meeting:**

April 28–30, 2004 – Chicago, Illinois
UNITED STATES DEPARTMENT OF AGRICULTURE

IN RE:

National Organic Standards Board Meeting

Hearing held on the 22nd day of October, 2003
at 1:30 p.m.
The Radisson Barcelo Hotel Washington
Washington, D.C.

TRANSCRIPT OF PROCEEDINGS

BEFORE: DAVE CARTER, CHAIRPERSON

MEMBERS OF THE BOARD:

ROSALIE KOENING, COMMITTEE MEMBER
REBECCA J. GOLDBERG, COMMITTEE MEMBER
MICHAEL P. LACE, COMMITTEE MEMBER
ANN L. COOPER, COMMITTEE MEMBER
KIM DIETZ, COMMITTEE MEMBER
KEVIN O’RELL, COMMITTEE MEMBER
JAMES RIDDLE, COMMITTEE MEMBER
MARK KING, COMMITTEE MEMBER
GEORGE SIEMON, COMMITTEE MEMBER
GOLDIE COUGHLAN, COMMITTEE MEMBER
OWUSU A. BANDELE, COMMITTEE MEMBER
ANDREA CAROE, COMMITTEE MEMBER

MR. CARTER: Okay. In total -- you know, probably violation of federal law, but out of respect for the folks that are here today, we will go ahead and convene the meeting of the National Organic Standards Board, because we do have a lot of work to do. But just to let the record reflect that the time certain called for the meeting was at 1:00 p.m. We’re waiting for the folks from USDA to get back from lunch. Legally, we’re not supposed to have an advisory committee meeting unless there’s USDA folks present, but I think that they will be here shortly, so we will just go ahead and begin. So the first thing I’d like to do is to just go around the table here and have the Board members introduce themselves. And let the minutes reflect that Nancy Ostiguy will not be here until tomorrow. She’s a professor and she’s finishing up some finals today, and will be not here. Other than that, we have everybody on board. And so we’ll start off with Rose.

MS. KOENING: Just say who we are?

MR. CARTER: Who you are and what do you do.

MS. KOENING: My name is Rose Koening. I’m a producer in Gainesville, Florida.

MS. GOLDBERG: I’m Becky Goldberg. I work for York Stenographic Services, Inc.

34 North George St., York, PA 17401 - (717) 854-0077
an environmental organization in environmental defense.
And my office is in New York.

    MR. LACY: I’m Mike Lacy. I’m a faculty
member from the University of Georgia.

    MS. COOPER: Ann Cooper. I run a shop New
York.

    MS. DIETZ: Kim Burton, a handler
representative from Chico, California. For the official
records, my name was changing. I got married last week
and it’s not Kim Dietz, so I’ll have to start using that
name.

    MR. O’RELL: Kevin O’Reell, a handler
representative from Longmont, Colorado.

    MR. RIDDLE: Jim Riddle, a homesteader
representative from Minnesota. A certifier rep and I’m
endowed chair at the University of Minnesota.

    MR. CARTER: Dave Carter, a consumer rep. But
I actually spend half of my time working with buffalo
ranchers and half of my time doing ag consulting.

    MR. KING: Mark King. I’m the retail
representative on the Board and I reside in
Indianapolis, Indiana, and independent consultant.

    MR. SIEMON: George Siemon, the farmer rep
from Wisconsin.

    MS. CAUGHLAN: Goldie Caughlan, consumer rep.
I work with food cooperatives in Settle, Washington.

MR. BANDELE: Owusu Bandele, professor at Southern University in Louisiana.

MS. CAROE: Andrea Caroe, environmental rep.

MR. CARTER: In terms of the meeting process, this is kind of a unique -- a different type of meeting format that we’ve got the next few days, in that because of some of the issues surrounding the materials review process, the department has asked us to focus this meeting specifically on two areas. Number one is a standardized process for the materials review and particularly going through some of our decisions that we’ve made in the past and putting them into a standardized process that they can use then for the implementation. The second area is the trying to surround and get some consistency around the process that we use as a board on the criteria for the compatibility with organic systems and how do we define that. And so that’s going to primarily be the focus of the next couple of days. Today we have a presentation from FDA. Because of some of the issues that have surrounded, let the record reflect we are now legal. Katherine is here, so we have a USDA representative. And let’s see. I saw Dennis. Where’d he go?

MR. SIEMON: Can we do the minutes now?
MR. CARTER: Well, let me -- no. I just...

MR. SIEMON: Okay.

MR. CARTER: I want to make some announcements here. Anyway, we do have a representative or some representatives from the FDA to speak to us because of some of the issues that have come about with the livestock materials. Tomorrow we’re going to really be looking for public comment and input from the public on this issue of compatibility. Obviously, during the public comment, people are free to use that time for whatever they desire, but we’ll particularly be looking for input on the compatibility. If you do want to get public comment file, you need to sign out. There’s a sheet at the back, as well as just a general attendance sign-out. And then Friday will be day when the Board is simply going to be going through, and particularly the recommendations that we made -- that were made, going through this sort of standardized template and trying to rework them through that process. The public is welcome to sit in on that meeting. We won’t be having any public input at that time, but it is an open meeting. So that is sort of the drill for the next couple of days. Now, as far as other announcements, Jim Riddle has got an announcement that he’d like to share with the Board.
MR. RIDDLE: Thanks Dave. I’ll pass these around. There’s some copies for the Board and there’s some extra copies, as well. And what this is -- I’m very excited to announce is the National Association of State Departments of Agriculture -- these are all of the commissioners and secretaries from all 50 states. NASDA has adopted a policy statement in support of organic agriculture at their meeting a few weeks ago. This is a very significant development, and I just want to highlight a few of the items in the policy statement. NASDA’s calling for a full and consistent implementation and enforcement of the final rule. Aren’t we all. We all support that cooperation between NOP and experienced private and public certifying agents in addressing the practical aspects of organic production and certification issues, increase federal funding to support adequate NOP staffing levels and activities to accomplish legislative intent, cooperative relationships between NOP and the state departments of agriculture. Federal funding to states to allow them to implement their responsibilities under the Act, inclusion of organic as a defined commodity, and USDA market promotion programs. Increased funding for the organic transition program and other grant programs from the federal government, creation of a national program.
leader for organic agriculture, collection and
dissemination of organic price data for sale of
commodity crops, specialty crops and retail organic
sales. There are other points here. That’s just a
summary of this. The incoming president of NASDA is the
Minnesota commissioner of agriculture, Jean Huguson [ph].

MR. CARTER: Other announcements from the
Board? Okay. With that, then, we’ll call on Barbara
Robinson. She just stepped out? Okay. The -- then, we
have the agenda that is in the meeting book. I would
note that Friday morning when we get into the
discussion, we will have the materials to chair as is
accustomed to give the review of the process and a
presentation on that. And at that time we will also be
bringing forward the formal process for the adoption of
the form that we’re using now for our materials
consideration. This is an ongoing process that we want
to incorporate into our board policy book and so we will
take that step at that time. Any other changes or
additions to the agenda? I see none. Do I have a
motion to adopt this agenda as our working agenda?

MR. KING: So moved.

MR. CARTER: Second?

MS. DIETZ: I’ll second.
MR. CARTER: Any discussion? Seeing none, all in favor, say I. Opposed, same sign. Motion carries. Can someone locate Barbara for us? Okay. Richard, would you like to make the remarks on behalf of the program?

MR. MATTHEWS: Seems like we’re always talking about the exact same things. I’m Richard Matthews, program manager. The issues that are probably of greatest concern to people right now is where are we on the rule making process. And as you’ll recall, those rules were issued in both April and May. Both of those have cleared almost every single hurdle for publication in the federal register. I’m optimistic that if not by the end of the first week in November, very soon thereafter, both of those proposals will be published in the Federal Register. Where we are right now is that they’re in the final clearance. By that I mean they have already gone through the attorneys, they’ve gone through the Office of Management and Budget. Everything is right down to the last stages. The reason why I’m still allowing another two weeks before we get it done is because it takes approximately five days once the document gets to the Federal Register. What will happen is that the documents will be published in the Federal Register, and effective the day after publication.
People will be able to start using those materials that occur in those two documents. Those two documents address, essentially, all of the crop materials, a few issues related to livestock, some issues related to processing and a number of technical corrections that we had made. There is one material that will be coming back to the Board for reconsideration based on public comment and that material cannot be used. Those that are published as final will be added to the list and will be able to be used starting that date. We’re still working the issues on livestock materials. The docket is not yet final. That docket will have to go through proposed rule. At this time, there will be a 30 day comment period for all of those who are concerned about how long the comments periods will be. From now on, they will all be 30 days to comment on the proposed rules. And then those materials would then go through the same process of our analyzing the comments. Part of that analysis is that what we do is we report to the Office of Management and Budget, and what is that commenters are saying about the materials and what it is that we could about it. We have to give our justification as to why we’re either adding or not adding it to the Federal Register. So it’ll still have to go through that process. We’re still quite a ways
down the road from the livestock issues. And that’s really the big thing that we’ve got going now that we’ve got the Board meeting and working on. As the Board knows, we’re taking and looking at the materials process as a system. We internally are working on how we, the NOP, can do our job better. But we’re also looking at what it is that we’re requiring of those who file a petition. So we’re looking to see what can be done better in that area to enhance the quality of the petitions that are submitted. So we’re looking at petitions, we’re looking at what it is we do. We’re going to be working closely with the reviewers to address what it is that is expected of them and then what it is that they end up generating for this board. And the Board, as you know, but the public may not, the Board is looking at how do they make their decision process more transparent and that’s what we’re going to be working on today, tomorrow and the next day. And then once all of that is done, then those different steps all figure into helping us do a more affective job communicating to the public what it is that we do as the Board, the reviewers and the NOP. I kind of look at this as if it’s a three-legged stool. Reviewers, the NOP and the NOSB are all equal partners in this. If one leg is shorter than the other, then the stool doesn’t
work very well. Or if one of those legs is cracked or broken, you know, the stool doesn’t work very well. So what we’ve got to do is all get onto the same page and be all working to help each other do each of our own respective responsible areas, to do it more affectively. And that’s what we’re working on right now. The issue of peer review, that program is underway. Nancy is doing the peer review. The expert has been selected, the review process has begun. Nancy has been in looking at our program, initially. It’ll take probably another two to three months before everything is all finished, but I can assure you, it’s well on its way and it’s working. Any questions?

MR. CARTER: Yeah.

MR. MATTHEWS: Jim.

MR. CARTER: Jim.

MR. KING: Yeah, if you could just comment on the Federal Register notice that’s open right now through December 8, on the Paperwork Reduction Act compliance.

MR. MATTHEWS: That’s a requirement that every two years we have to go back through the Office of Management and Budget and get approval for the recordkeeping burdens that are placed on the public. The recordkeeping approval that we have in place right now...
now expires in January of 2004, so what we’re doing is
we’ve gone out and published our intent to continue this
process of gathering the information. The public is
welcome to comment on the recordkeeping burden. But
this is really a formality of putting the public on
notice, giving them an opportunity to comment, but it’s
also necessary for us to continue to gather the
information that is required under the national
standards.

MR. CARTER: Okay. Other questions?

MR. BANDELE: Yeah.

MR. CARTER: Owusu.

MR. BANDELE: Any more information on that one
material that is coming back to the Board?

MR. MATTHEWS: It’s the one that’s the meat
analog, tetrasodium...

MR. BANDELE: Tetrasodiumpyrophosphate [ph].

MR. MATTHEWS: ...pyrophosphate or something
like that.

MR. BANDELE: TSPP.

MR. MATTHEWS: TSPP.

MR. CARTER: Okay. Other questions or
comments? Okay. Oh, I’m sorry, Andrea.

MS. CAROE: Did you -- have you publicly named
the expert that's going to be on the panel, yet?
MR. MATTHEWS: The expert has been selected, yes. Ken Cummings [ph].

MR. CARTER: Okay. Other questions? Okay. Thanks, Richard. A couple of other announcements that I failed to make at the beginning is anyone that speaks either from the Board or the audience that’s invited to speak, whatever, you do need to go to the microphone, you do need to identify yourself. This is being transcribed and we need to have an accurate record. Also, would admonish folks to turn the cell phones either to off or vibrate and to keep any conversation out in the hallway, so that we can focus on the discussion here. With that, let me, then, direct the Board’s attention to the minutes of the May, 2003, meeting, which minutes have been posted. What is your pleasure? Jim?

MR. RIDDLE: I move that we approve the minutes of the May meeting as presented to the Board.

MR. CARTER: Okay. There’s a motion. Is there a second?

MR. HOLBROOK: I’ll second it.

MR. CARTER: Dennis Holbrook seconds. Discussion? Seeing none, all in favor say I. Opposed, same sign. Motion carries. We also have in the book the review of executive committee minutes from the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
meetings that have been held since May. And Jim?

MR. RIDDLE: Yeah. Just in looking through those, there at tab three of the meeting book, and just wanted to point out for the record that the July minutes are actually not the final version. What’s in your meeting book, that’s still the draft minutes, and there was an amendment during our last call to reflect that Kim had left to call at a certain time after her materials committee report. And I did get those final minutes path read, so I just want to make sure that the official record reflects the correct version of the July minutes.

MR. CARTER: Okay.

MR. MATTHEWS: The website does have the correct minutes.

MR. CARTER: The correct minutes are on the website. So, okay. The minutes are always adopted by -- accepted by the Board and generated.

MR. RIDDLE: Right. So, again, on the executive...

MR. CARTER: You don’t...

MR. RIDDLE: Yeah.

MR. CARTER: I was going to say, you were giving me that look like we...

MR. RIDDLE: No.
MR. CARTER: So we don’t have to act. That’s just for informational purposes only. All right. Then, this afternoon we have a couple of individuals who are sitting in, a couple of individuals from the Food and Drug Administration to visit with the Board, and the folks that are here are both from the surveillance and compliance division of the FDA. We have with us Dr. Steven Vahn. And I’m going to butcher this one, I know if for sure. Dr. Vengris? Yeah? What’s that?

MR. VAHN: No butchering.

MR. CARTER: No butchering. Okay. This came about because of the discussion that we had on -- we referring to livestock medication and the actions that were taken. The FDA had responded to the program that there were some of these materials that were not in compliance with FDA provisions. We think -- and particularly in August, during the meeting of the American Association of Feed Control Officers in Denver, I had an opportunity to be there. Jim was there, as well, as was Emily Brown-Rozen from OMRI. We had a chance to have a very informal discussion with some of the FDA folks who were there about some ways that we can bring these materials into compliance with the FDA. So we thought it would be helpful to have the folks from FDA come and visit with the Board and see how we can
start to address this issue. So at this point, I just like to turn it over to our guests from FDA.

UNKNOWN: You’re asking for an awful lot.

MR. CARTER: I’ll tell you what, we’ll trade you one laptop for approval of ten materials. Okay. Let me -- while they’re -- while they’re setting up, Owusu has brought to the chair’s attention an issue about -- go ahead.

MR. BANDELE: Yeah. In the -- in the minutes, and also the section dealing with the materials, the tetrahydraperfluidalcohol [ph], this thing is incorrect, because we considered that. It should read tetrahydraperfluidalcohol will be added to 205601M2, with the annotations of until December 31, 2006.

MR. CARTER: Okay.

MR. MATTHEWS: Which minutes are those?

MR. BANDELE: Yeah. It’s in the May summary, as well as the summary that was provided...

MR. CARTER: Yeah. Owusu, if you go to page eight of section...

UNKNOWN: It’s in a different section.

MR. CARTER: There at the bottom of the page. That reflects that it was brought. That was the Board entry.

MR. BANDELE: Oh, okay. I got it.
MR. CARTER: Okay? So we’re okay. I did go to a meeting once that they handed out squirt guns to people as they came in and then anybody whose cell phone went off during the meeting was fair game.

UNKNOWN: Well, since yours has been going off...

UNKNOWN: That’s why you’re all wet.

MR. CARTER: That’s why I’m all wet. Okay. Welcome.

MR. VAHN: We’re all set. Thank you for letting me travel light.

MR. CARTER: Yeah.

MR. VAHN: My name is Steve Vahn, I’m the director of the Office of New Animal Drug Evaluation at the FDA Center for Veterinary Medicine. The reason that Dr. Vengris and I are here today, we were invited to come down because there has been some confusion about how FDA regulates new animal drug products and food additives. And our intent here today is to be informational, not necessarily to influence the Board in anyway. So what we thought we do is I would first talk about my area, which is the pre-approval area, and talk about the drug evaluation we go through to give you a sense of what an approved drug means. And Dr. Vengris is going to talk about medicines from the Division of
Surveillance and the Office of Surveillance Compliance, and Dr. Vengris will be talking about how we regulate products once they are approved or otherwise on the market. And there’s a number of areas there and some fine distinctions that I think would be very useful and probably clear up a lot of confusion that has occurred.

MR. CARTER: You might pull the mike just a little bit closer so everybody can hear you.

MR. VAHN: Sure. Okay. Do you want to go to the next slide? First of all, where our statutory authority comes from, a number of different acts. Primarily, it’s the Federal Food, Drug and Cosmetic Act. We’re also subject to the National Environmental Policy Act and Water Act and Air Act and National Aquaculture Act and so on. From that law, we further interpret the statutes through the Federal Code of Regulations. Most of our regulations are in 21CFR, part 500, and I’ll show you that in a minute. And we further interpret the regulations, then, through our policies in the guidelines. The statute and the regulations have the force of law. The policies and guidance are more advisory in nature and they’re not considered enforceable. In the Federal Food, Drug and Cosmetic Act there’s a few things that I think are important to point out. First is, what is the definition of a new animal
drug. A lot of folks think a drug is defined by the chemical that it is. Actually, the statute defines an animal drug by its intended use, so literally, anything can become a new animal drug if it’s intended for the diagnosis, treatment, cure, mitigation or prevention of disease, or it’s affected -- or it’s intended to affect the structure of function of the animal, other than as a food. So we have a very broad umbrella type of definition. Dr. Vengris is going to go into some of the distinctions and limitations of where our act stops and other acts pick up and other agencies regulate similar products. Specifically, within the food, drug and cosmetic act, section 512 deals with the new animal drug applications that I’m going to speak to today. We have three types of applications, for the most part, that we deal with, the original applications, the first time a new entity comes to us for approval. The subsequent changes after approval are dealt with through the supplemental new animal drug applications. And then there are generic new animal drug applications. We call them abbreviated new animal drug applications, and they are close to identical copies of pioneers that have already been appraised and approved. We do allow -- under the Federal Food, Drug and Cosmetic Act it’s illegal to market a product if it’s not the subject of
an approved application. There’s one exemption for that
and that is for the investigations that are necessary to
prove that a product is safe and affective to get to
market. And as I said, as mandated by the Act, a new
animal drug cannot be sold in interstate commerce,
unless it’s the subject of a new animal drug
application. And Dr. Vengris is going to speak to the
levels of enforcement within that division. So what is
a new animal drug, an approved new animal drug
application? It means the product is subject to -- is
safe and effective for it’s intended use. The methods,
the facilities and controls that are used for
manufacturing and processing and packaging the drug are
adequate to preserve it’s identity, strength, quality
and purity. Anyone can sponsor a new animal drug
application. It can be a US resident or if it is a
foreign firm, they have to have a US agent in the United
States that we would deal with, primarily. Usually, it
is pharmaceutical firms, because it does cost quite a
bit to get a drug approved and on the market. Generally
what’ll happen is a pharmaceutical sponsor will do a lot
of pre-investigation on a new animal drug discovery
research. For example, the discovery of new molecules,
the purchase of other patented entities. They’ll do a
new number of pilot studies to identify the
pharmacologic value of the product. They’ll do work in both laboratory species and the target species. That is a species that they intend to develop the product for. They will work on dose and toxicity, doing pharmacokinetic studies, and really trying to triangulate the safety -- the level of safety with the level of effectiveness for a particular biological affect, and the concentration in which they can manufacture the product, subsequent to be put into a reasonable dose. Okay. We don’t take the initiative in our center to propose products or label indications. The sponsors do that. And the sponsors conduct the necessary research that supports the drug’s safety and effectiveness. We do not do that research at the center. We’re responsible for evaluating the results of those studies, and we help companies in designing the studies so that we get the data that we need to make a safety and effectiveness decision. The research is conducted under a 980 [ph] investigation. The legal parts of the requirements for that are in the code of federal regulations. The cite is there. Allows for the shipment of an investigational drug to investigators and it also allows for the authorization for the use of edible tissue -- meat, milk and eggs -- from animals that have been treated with an investigational drug. It
allows for the conduct of studies to collect the data and document it’s safety and effectiveness. And there are certain requirements that go along with that, including labeling requirements of the investigational drug, the collection of data, the maintenance of records, accountability of the drug for shipment, receipt and use, accountability of the treated animals and their disposition and the qualifications of the investigators that are allowed to do the studies. Generally, we start off the process with a pre-submission conference. That’s a formal process that -- it was informal until the 1996 Animal Drug Availability Act was passed, and now it results in an agreement between the sponsor -- the pharmaceutical sponsor and CBM, which is contractually binding on both for what will be done to prove safety and effectiveness. Generally, we discuss -- voluntarily agree on a product development plan and protocol for each studier, or use of a standard protocol for those products in which the claims have proven. We have statutory definitions of safety and effectiveness. For effectiveness it’s based on substantial evidence consisting of one or more adequate and well controlled investigations. And it can be done in a number of different types of combinations of studies, studies in lab animals or the target.
species, field investigations, biocolon [ph] studies, invetro studies, quite a bit of latitude there to be able to mix and match the right kind of data that we need to be able to conclude that the product is effective. And it also has to be conducted by experts that are qualified by scientific training and experience to evaluate the effectiveness of the drug, and it has to be -- and based on that, then the data that’s generated, other experts similarly qualified would be able to conclude the drug has the effective -- purports to have or is represented to have under the conditions of use at a prescribed, recommended or suggested way. The sponsor conducts the studies to generate the data following that particular protocol that we work with them to develop. The data is then evaluated both by the sponsor and CBM for data integrity, make sure it’s truthful, it’s accurate, there’s not errors and mistakes. Then we scientifically review the data to determine if it does allow us to conclude that the product is safe and effective. The definition of safety is a very broad definition, and it’s adequate tests by all methods reasonably applicable to show the drug is safe under the conditions prescribed, recommended or suggested. Safety means really four areas. We deal with human food safety, target animal safety, environmental safety and
user safety. The way we try to -- the process by which we develop the products, we work under a system called phase review. So during the investigational phase, there’s a high level of interaction with the sponsor, who break down the areas that they have to complete in the technical sections. And those are listed there, human food safety, the target animal safety, environmental safety factors -- chemistry, FOI, summaries and labeling. And I’m going to go into each one of those in a minute. The idea is that they can get decisions at each step in the process from us as to whether they’re moving in the right direction or if they need to complete another part of that application before they move forward. And when they’re all completely finished, then they’ll file their new animal drug application. For human food safety, obviously, we’re concerned with meat, milk, eggs. Honey is another product. We look at drug residues from a couple of standpoints. First of all, we’re concerned about the direct toxic response, and essentially an overdose kind of response. We’re also concerned about chronic exposure. It’s in our food every day, three meals a day for some many years. We’re also concerned about indirect exposures, such as antimicrobial resistance. We do a battery of studies, toxicological studies. And
a few examples are listed there. We’ll do genesity [ph] studies, the two 90-day feeding studies in two different non-target species, reproductive studies, teratology [ph]. We do some -- we’ll do other gene-tox studies and special studies as we -- depending on the nature of the compound. We ask for user safety information. And we would do a -- for antimicrobials, we’ll do a microbial safety risk assessment for determination of the risk associated with the development of antimicrobial resistance in the animals that are being treated. And then we also look at the impact of the drug residues themselves on microbes or flora in the human gut from people consuming residues from those drugs that are used in treating animals. Based on all of that, we will develop an OL [ph], do some calculations and some safety factors. We develop a safe concentration, look at the average dietary intake for each of those and then establish -- excuse me -- establish a safe concentration. That then is the concentration of the total residue that would be allowed for a person to consume in a day. We do -- then we do comparative metabolism studies to make sure we have similar metabolic profiles in the target species to the lab animals that the tox studies were done in. We do a total map, metabolism study, terradialable [ph] study in York Stenographic Services, Inc.

34 North George St., York, PA 17401 - (717) 854-0077
the target species, whether it’s cows, pigs or turkeys
or so on. We develop an analytical method to be able to
detect the residues. We generally assign a marker
residue, which is either the parent or the most
prevalent metabolite that persists for the longest
duration of time, and we develop the method to that
marker. Then based on that marker and using that
method, we will determine through tissue residue
depletion studies how long it takes for the total
residue to deplete to the safe concentration by using a
marker that will in parallel deplete down to a level
that we assign as a tolerance. And when that -- the
residue depletes and reaches the tolerance, that tells
-- then when we know that the total residue has depleted
from the animal to a safe concentration. We publish
that tolerance in the code of federal regulations and in
21CFR, part 556. We also run our methods through
validation. There has to be an analytical method that
is developed that we can also use for residue monitoring
by our agency and by the inspection service in the
United States. Target animal safety has a little bit
different standard. It’s a the cumulative affect of the
drug on the animal, such that it does not adversely
affect the treated animal. This has a little bit more
judgment associated with it. For example, if it was a
drug intended to treat a skin rash, you certainly would want no adverse affects whatsoever. On the other hand, if it was a drug that was an anticancer drug, you would be able to live with a few side affects, because the nature of the drug -- the intended effect of the drug. So we have veterinarians on staff, about 50 of them, that make the target animal safety evaluations and to make sure that the animal is not adversely affected by the treatment. We do a number of studies to get at the target animal safety. We do a tolerance study at 10x, the proposed dose for three times the duration, to characterize the toxic syndrome associated with the drug. And then we’ll do a chronic toxicity study, which is at 0, 1, 3 and 5x of the proposed dose. The 3x duration to determine the marginal safety associated with the drug. If it’s to be used in reproductive actively animals, we do reproductive safety studies, and in some cases we will go down to breeds, specific age groups or other animals that we feel there’s a particular sensitivity associated with the drug. The environmental safety, we want to make sure that use and manufacture and disposal does not pose a significant environmental impact. We’re required to do that assessment as part of our approving the new animal drug application under the National Environmental Policy Act.
We also have to make sure that they would be in compliance with the clean water and the clean air act, otherwise if we approve the drug, then the producers will not be able to use the drug, because if they did, they’d be in violation of those acts. What we have to do is include either a categorical exclusion, which essentially says that there’s no circumstances under which the use of this drug would cause an environmental affect, or if we think there may be some, we have to do an environmental impact -- an environmental assessment. Excuse me. And then based on that assessment, we will publish either a finding of no significant impact or an environmental impact study. The number of studies that we do, if we have to do an environmental assessment or a number of affect studies, a number of both aquatic and terrestrial species that allow us to determine the impact on the environment. User safety, we’re concerned with the hazards associated with manufacturing the product, occupational exposure at the site of manufacturing, manufacturing emissions. We’re concerned about hazards associated with administration to the animals. We’re also concerned with hazards associated with the use of air, water, solid waste, contaminated via the use of disposal of the drug after the fact. And we deal with everything from what would be the impact of...
someone accidentally injecting themselves on up to in
feed mills where a lot of the drugs are in powder form
and there’s dust and inhalation and potential response
to that. So I’ve hit the highlights of that. I didn’t
go into manufacturing to any great extent, but basically
there’s a slot earlier. We document the manufacturing
process. They have to validate it, develop stability
data. All of that ensures that there’s adequate
protection to make sure that the product is maintained
to it’s purity in the strength and the quality. And we
establish an expiration date. And basically what he
expiration date is, is the date of which the product has
in test fallen outside of it’s specifications and has
lost either the quality or the strength. So basically,
the NADA is a systematic approach to document the
evidence that drug products are safe and effective. The
approved drug products consist of not only the drug in
the container, but all of it’s packaging and it’s
labeling. And then we describe the documented evidence
in a freedom of information summary, an environmental
assessment and then the drug labeling. Basically, three
different audiences. The FOI summary tells the public
the basis upon which we made our decisions. The
environmental assessment speaks to any environmental
impacts that we anticipate. And the drug labeling is
the information to the user of how to safely and
effectively use the product and its conditions of use.
And we have to file all of our approvals in the code of
federal regulations, and all of these documents are
freely accessible. That’s it. I think what I’d like to
do, if you don’t mind, is let Dr. Vengris go ahead and
give his presentation. But I think we’re going to have
to shut, because he has a CD. And what we will do,
then, is both of will answer questions for you after
you’ve heard his presentation.

MR. CARTER: Okay. While you’re changing that
and seeing as how some of us sitting here drank a couple
of glasses of water while were waiting for me to show
up, we’ll take a five minute break here.

[Off the Record]

[On the Record]

MR. CARTER: Dr. Vengris?

MR. VENGRIS: Good afternoon. My presentation
will be different than Dr. Vahn’s.

MR. CARTER: Please introduce yourself for the
record.

MR. VENGRIS: Yes. My name is Vitolis
Vengris. I’m with the Center of Veterinary Medicine in
the division of surveillance.

MR. CARTER: Thank you.
MR. VENGRIS: I’m pleased to attend this meeting. And will attempt to introduce you to major functions of the Office of Surveillance of Compliance, especially those functions which could be related to the areas of your interest. It was not easy for me to prepare for this presentation, because I have limited knowledge about the National Organic Standards Board and your mandate, and also on federal standards on the line of the marketing of claim of organic food. And my intent today will be to describe how the FDA determines the regulatory status of animal drugs. And I will not imply whether those products should or should not be used in animals which -- from which organic products of food are derived. It is our position that food and drug -- the administration of approved drugs is used according to label directions are safe. The FDA has a broad mandate to assure safety and effectiveness of drugs, including animal drugs. Also, devices and safety of the food supply. This is responsibility is derived from the Federal Food, Drug and Cosmetic Act that Dr. Vahn mentioned. The Act was amended in 1968 to include sections, which specifically addresses animal drugs. And the Center for Veterinary Medicine within the FDA helps to ensure the safety of the food supply, and assist in providing for the healthcare needs of
animals through the approval and post-approval monitoring of animal drugs. And also, we have jurisdiction over medical devices -- animal medical devices, and also oversight of animal feed and food additives. The animal counterpart of cosmetic, which is within Drug and Cosmetic Act jurisdiction, is commonly referred as a grooming aid. And I refer to class of products for cleansing and promoting attractiveness of animals. They’re not subject of FDA control, grooming aids are not, unless such product has specific drug ingredients or therapeutical structure or function claim, then they become drugs and they are labeled as such. The next slide, please. Our functions at the office -- I apologize for very rich -- yeah, very poor. Right. A lot of information, but I won’t go through the slide. I’ll try to use, in the text, the major functions. Our functions at the Office of Surveillance and Compliance are multiple, such as monitor marketing animal products. This includes drugs, devices, food additives, animal feed. We evaluate a drug's direct -- withdraw approvals when conditions warrant. Office of Surveillance and Compliance is also responsible for development and implementation of policies that affect marketed products. We render opinions under regulatory jurisdiction, evaluate and grant or deny permission to
market an approved product under regulatory discretion. Also, pursuit and enforcement actions, and assure safety of animal derived foods through a couple of programs, the tissue residue program, which is in cooperation with USDA Food Safety and Inspection Service and the National Drug Residue Monitoring program, which is FDA and state program of the Office of Surveillance and Compliance. Also, in the office we have drug listing program. Also, very important, the national antimicrobial resistance monitoring system called NARMS, and this program is a corroborated effort with FDA, USDA/APHIS and CBC. Also, a significant part of our resources is outreach -- various educational outreach, mostly to the field people programs. The structure of the CBM and functions of its office are listed on our CBM page. And I won’t go through this, but in short summary, Office of Surveillance and Compliance is comprised of four divisions. There’s a Division of Surveillance, Division of Animal Feeds, Division of Compliance and Division of Epidemiology. And functions among the Office of Surveillance and Compliance divisions are varied, yet closely related with a mandate to assure safe and efficacious animal health products, protect public health, including animal-derived human food supply. Next slide, please. Let me stress that while the FDA is...
responsible of regulating animal drugs, feeds, foods, devices and most other animal health products, there are some classes of animal products that fall under the jurisdiction of other federal agencies, specifically, USDA/APHIS, which controls veterinary biologics under the authority provided by the Virus and Toxin Act [ph], and Environmental Protection Agency, which regulates pesticides under the Federal Environmental Pesticide Act and Federal Insecticide, Fungicide and Rodenticide Act. However, in all those situations where residues of pesticides are detected in animal derived human food products, FDA has the responsibility for regulatory enforcement. FDA is responsible for programs and the regulatory actions aimed at preventing illegal drug residues in human food derived from treated animals. This is a corroborative effort with USDA Food Safety Inspection Service, and which they are responsible for the inspection part. Also, I should point out that jurisdiction of authority of some of the products is not always clear. And the memorandums of understanding or the memorandums of agreement between the agencies, delineate procedures and responsibility, including criteria in the specific classes of products for regulatory control. For example, some products used to control external pests that intended to act
systematically, are regulated as drugs, such as oral
control of anti-flea products. Where it’s topically
applied, flea control products generally fall under EPA
jurisdiction. Currently, center for vet medicine and
APHIS, which is USDA, have established working groups
mandated to update the memorandum on the health
understanding between CBM and APHIS. And also at the
present time, representatives from the CBM and EPA are
discussing the update of their memorandum of agreement
on jurisdiction of the issues between CBM and EPA. Next
slide, please. And now let me introduce you to basic
statute definitions of animal drug, animal biologic
product and pest control, which will better illustrate
why we sometimes hate these jurisdiction of issues. You
saw that definition in previous presentation. Next
slide, please. And definition of animal biologic
product -- some people maybe cannot see well, because of
the -- this animal biologic -- anyway, drugs -- articles
intended -- I repeat what was said before -- articles
intended for use in the diagnosis, cure, mitigation,
treatment or prevention of disease in men or other
animals and articles other than food intended to affect
the structure and the function of the body of men or
other animals. That would be the next slide. Animal
biological products, all viruses, serums, toxins or
analogous products which act primarily through the
direct stimulation, supplementation and enhancement or
modulation of the human system or the human response to
diagnose, cure, mitigate, treat or prevent disease in
animals. The term, "biological products," includes, but
is not limited to vaccines -- allergens, antibodies,
toxoids, immunostimulants, certain -- like cytograms
[ph], like -- humanizing components of -- microorganisms
and diagnostic components of natural or synthetic
origin. And the next slide, pesticide definition. The
term pesticide means any substance or mixture of
substance intended for preventing, destroying, the
deterring or mitigating any pest, and second part, which
is any substance or mixture of substances intended for
use as a plant defoliants or -- it does not apply to the
CBM. And continuation of the definition, provided that
the term "pesticides" shall not include any article that
is a new animal drug, and B, that has been determined by
the Secretary of Health and Human Services known to be a
new animal drug by a situation establishing conditions
of use for that article. And the second part, works as
an animal -- or containing this article of -- as you may
see, there is an adverse overlap, and it is not all this
easy to resolve this problem. Because mechanism of

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
mechanism of action, and that’s the reason memorandums of understanding and agreement between agencies are very, very important. And with changing science and changing our legislature, processes, it has to be modified. There are two other reasons that expanded the veterinarian’s authority in the area of drug use. Specifically, the Animal Medicinal Drug Use Qualification Act of 1994, also known as AMDUQA, and the Animal Drug Availability Act of 1996, ADAA. AMDUQA allows the use of approved animal drugs in an extra -- manner, including human drugs for use in animals under certain specified conditions. And ADAA helps streamline the animal drug approval process and also authorizes a new category [ph] of veterinary feed directive drugs, which may be used in animal feeds. Next slide, please. This is also repetition. Dr. Vahn gave that definition of new animal drug. But once a product is determined to be a drug, as I mentioned, it’s not always easy, because some products could fall under EPA jurisdiction, ours or the USDA determines it to be a drug. The next step is to establish whether or not it is a new animal drug. And the directive defines a new animal drug -- this is in part -- as any drug intended for use for animals other than men, the composition of which is not generally recognized among experts qualified by
scientific training and experience as safe and effective for use under the conditions prescribed, commanded or suggested in its labeling. Labeling -- label claims are the key factor in the product's status. By virtue of "interpretations," there are, for all practical purposes, no animal drugs which are not out of new animal drugs. Of course, there are exceptions. The approval process, grandfathered, but I won't discuss these issues. Most of us are well aware of the fact that today there are many unapproved new animal drugs on the market. According to our CBM drug listing database, there are about 1,260 unapproved versus 3,160 -- 1,260 approved and 3,160 unapproved active products. Drug listing meaning new drug list or active products, which are in the market. The listed requirement, if the company doesn’t register manufacture site or drug list -- the number of unlisted unapproved active animal drugs is unknown. We recognize the need for some of unapproved products to be available for veterinary profession, animal growers and animal owners. Center for Veterinary Medicine permits some unapproved new animal drugs to be marketed under so called regulatory discretion. Sometimes CBM does not take regulatory action protocol at this time, because of rather low regulatory priority of a valid product. This is mainly
due to our agency’s limited resources. And some misbranded and/or adulterated, unapproved products are subject -- and we take enforcement action. Our priority scale for enforcement of actions is based on following conditions that we have. The highest priority with full products which have potential for a drug’s effect on humans, either through unsafe residues occurring in food or from direct exposure of the product. Then a hazard to the target animals, and lastly, the products, which are relatively safe, but of questionable effectiveness in non-life threatening disease conditions. Of course, exceptions always exist. And even in very lean budgetary times, the agency’s trying to protect public from any fraud. As I have already mentioned, Office of Surveillance and Compliance is responsible for rendering regulatory discretion and allows some unapproved products to be marketed. It is usually done on a case by case basis for classes of products. And the main criteria for this determination is, of course, safety and ethical -- of a product. I should emphasis that there are a number of factors, such as the nature of -- ingredients claims. I always like to use little example that drinking water obtained from some nice spring and labeled to treat brain tumor is a drug -- a new animal drug and action. It means claims, again, meet -- active
ingredients claims meet of the product and availability of approved similar products, published scientific information available, conditions of use also allow regulatory discretion if a product has prescription legend versus OBC [ph]. It’s case by case on specific warnings. And that definition of process. At this point, it is important to emphasize the difference between FDA approved and allowed or permitted animal products. I think we have miscommunication with some of the people. As Dr. Vahn illustrated in his presentation, the first approved product goes through very thorough, rigid approval process. And in the latter case, products which were allowed under regulatory discretion, agency grants regulatory discretion, which we always may withdraw. And it could be based on new needs or new information or if a similar product is being approved and appears on the market. That’s what -- and also, the organizers of this meeting asked me -- us to come on serious position on the use of homeopathic treatments. And that, I guess -- I have a few sentences on this. We consider them to be unapproved new animal drugs and evaluate them also on case by case basis. The compliance policy regs on human homeopathic drugs do not apply to animal homeopathics. They’re also not subject to the provisions of any FDA
policy involving the regulation of human homeopathic
drugs. It is -- excuse me. It is our opinion that
veterinary homeopathic drugs should be regulated and
held to the same scientific status of safety and
efficacy as any veterinary drugs. One of the risks in
the reliance on homeopathic veterinary products is that
there may be a delay in obtaining proper veterinary
treatment in some life threatening disease conditions.
Moreover, in the ADMA guidelines for a product
alternative and complimentary veterinary medicine,
recommendation is for product research to be conducted
in veterinary homeopathy to evaluate efficacy
indications and limitations, because research in
veterinary homeopathy is limited. The -- also recommend
that veterinary homeopathy be practiced only by licensed
veterinarian who have been educated in veterinary
homeopathy. For example, over-the-counter veterinary
homeopathic products labeled as for -- conditions would
be the sufficient priority for our regulatory action.
Thank you. That’s all I have, as far as presentation is
concerned.

MR. CARTER: Thank you, Dr. Vengris. Let’s
open it up for questions. Apparently, we’re getting
some feedback, because all of us have got laptops
running at the same time here and it’s causing some
feedback with the microphones, so we’ll try to move them
away from the microphones or shut them down here. So
anyway, let’s open it up to questions. Yeah. Rebecca?

MS. GOLDBERG: I was wondering if the FDA has
a list of unapproved products that the agency is
allowing on a basis of regulatory discretion?

MR. VENGRIS: No.

MS. GOLDBERG: Was it 1,260 unapproved?

MR. VENGRIS: No, no. That’s 1,200 -- our --
we have drug listing database that companies have to
list products. 1,260 -- we have about 1,260 approved
products in our drug listing, and we have more than
3,000 unapproved. But the number of unlisted and
unapproved, I don’t know. No one...

MR. VAHN: What I might add, when we say that
a product is marketed without being approved, it’s under
a certain set of conditions. The FDA and Dr. Vitolis --
Dr. Vengris is -- the division that evaluates the
labeling to make sure that the reasonable claims and
appropriate cautions are on the labels, products have to
be drug listed and the establishments where they’re
manufactured have to be in our official inventory so
they can be -- they are still subject to the
manufacturing practice regulations for how the products
are manufactured. They have to be done in a way that --
similar to approved drugs, where there -- you maintain
the quality, purity and strength of the products. The
-- when they market them, then they have to drug list,
but they’re not required to then state the safety and
effectiveness prior to approval. But the things on the
label may include that they may be limited only to be
marketed for certain claims or they may be limited to
prescription status.

MR. SIEMON: So one more thing.

MR. VENGRIS: Um-hum.

MR. SIEMON: Then numbers that you just
quoted, and you said 1,260 approved...

MR. VENGRIS: Yes.

MR. SIEMON: ...and what was the other?

MR. VENGRIS: I think 3,000...

MS. GOLDBERG: 160.

MR. VENGRIS: No, no, no.

MR. VAHN: Somewhere over 3,000.

MR. VENGRIS: We have more than 3,000
unapproved, but drug listed products in our database.

MS. GOLDBERG: Can you state which -- I’m

sorry.

MR. VAHN: Go ahead.

MR. VENGRIS: Approved product goes to Office
of New Animal Drug Evaluation and goes through the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
approval process as established new animal drug
application. All conditions which you -- which Dr. Vahn
named, safety and efficacy studies, they -- these
approved product go through that rigid process.
Unapproved products which are allowed to be marketed
under regulatory discretion, you know, just meaning what
you said, will base that regulatory discretion on label
claims on nature of the product, warnings, conditions
for use and also manufacture and other requirements, is
to ensure that good manufacturing.

MR. CARTER: All right. Are there -- oh,
let's see. Rose?

MS. KOENING: Well, I have a clarification on
that and then I have something -- so you’re saying that
those unapproved...

UNKNOWN: Microphone.

MS. KOENING: Oh, sorry. So you’re saying --

oh, I forget. You’re saying the unapproved is lawful?

MR. VENGRIS: No. We’ll allow -- some of them

we’ll allow under regulatory discretion we have

authority to allow.

MS. KOENING: Right. As long...

MR. VENGRIS: But we can change our mind.

MS. KOENING: Right, right.

MR. VENGRIS: It’s much easier for us to start
marketing of unapproved drug than approved. Approved, you have to go through the process and so on and so forth. It is sort of -- rather a complicated process.

MS. KOENING: But it’s -- but what...

MR. VAHN: Or it’s semantics, a little bit. If you say is it lawful, we have to say, no, it’s not lawful, because it’s in violation of the statute. But the executive branch -- all agency’s executive branch can set their own limits on regulatory discretion, below which, we’re not concerned, above which, we are. So for example, we’ll take a product that was on the list of concerns, calcium fluoroglucamate [ph]. It’s used for the treatment of milk fever [ph]. It’s prescription, it’s manufactured under the good manufacturing practices, it’s a sterile product -- injection, that is not approved, but we allow it to be marketed under those conditions by regulatory discretion. We have better things to do than to go out and enforce the manufacturer of the calcium fluoroglucamate to go through the approval process.

MS. KOENING: Okay. So -- but...

MR. CARTER: Okay.

MS. KOENING: Yeah. I think...

MR. CARTER: Let Rose...

MS. KOENING: Well, that’s what I’m trying to
understand, you know, digest what you’ve presented to us and then the work that we do and how it relates to your agency. So what I’m understanding is that number one, we can’t -- we certainly can’t approve anything that’s not -- that’s a new claim, because then it would be considered a new drug and it would have to go through this process.

MR. VENGRIS: No, you can approve -- you can get approval going through approval process.

MS. KOENING: Yeah. But I’m saying if somebody comes to us with a petition that’s not in our jurisdiction to make a new label claim, that is considered a new drug, it’s got to go through you, and then we can see if that -- once you’ve said it’s -- but what we -- if something is labeled for a specific use, you determined it to be -- you know, you’ve approved it and it could be on either of these types of products, then we do have the ability then to determine if it is or is not appropriate under organic systems?

MR. VENGRIS: I don’t know your mandate, but, yes, the products approved -- allowed under regulatory discretion, and the third group which would take them forward to action.

MS. KOENING: Okay. And then the last question I have, on those agencies -- APHIS and...
MR. VENGRIS: EPA?

MS. KOENING: ...EPA. Many of the things that I think fall within what we’re looking at are those that are not systemic. A lot of them are -- and I understand that -- so that sounds like it would EPA.

MR. VAHN: Right.

MS. KOENING: Now, how is that memorandum of understanding set up in terms of what we do? Then do we go then -- if we’re going to allow something that is under the jurisdiction of EPA, then who do we -- where do we get our information or who do we have to check with, the EPA or FDA?

MR. VENGRIS: I think that if it is a EPA regulated product, you would -- we’re talking about pesticides, right? We’re not talking about animal biologics.

MS. KOENING: Or biologics.

MR. VENGRIS: Well, then permission and -- what you have to get from them. But if you have a product which you don’t know whether it’s EPA or FDA regulated, then I would suggest you contact FDA, because we have working groups, we have standing committees, and we try to determine -- and even we have to spend time and discuss the sheet where the specific product belongs to.
MR. CARTER: Becky and Jim and Barbara.

MS. GOLDBERG: I’d like to get my arms around it a little better about unapproved products. If I as a member of the livestock committee of the NOSB want to find out an approved product, I can go to CFR, I can go to your website and get a fair amount of information. But if I look at a product and to me it makes sense that it’s an animal drug, that it’s not approved, how do I find out whether it’s an unapproved product that you’re allowing to be marketed under regulatory discretion? Is there anyway the public can get that information?

MR. VENGRIS: You could -- and Dr. Vahn made -- approved products are qualified in 21CFR and green book on our website. It’s not difficult to find out. There is now list of products which are allowed under regulatory discretion. And also, I would just like...

MS. GOLDBERG: Do you know this? No, no, no. Wait.

MR. VENGRIS: No specific list, because also it depends on a claim, because maybe ingredient is same ingredient, but indications -- we would never allow a product to be marketed under regulatory discretion.

MR. CARTER: Jim? Or do you need to follow up...

MS. GOLDBERG: Can I just follow up a little.
bit on that? So what you’re telling me is there is no
way to find out, basically, about these unapproved...

    MR. VAHN: You can ask.

    MS. GOLDBERG: We can ask. Right.

    MR. VAHN: You can ask us.

    MS. GOLDBERG: Right.

    MR. VAHN: We’ll be glad to help you out...

    MS. GOLDBERG: Yeah.

    MR. VAHN: ...because chances are you’ll
probably trip across a few we weren’t aware of...

    MS. GOLDBERG: Okay.

    MR. VAHN: ...and probably shouldn’t be out
there as well.

    MS. GOLDBERG: Okay. One of the challenges
always as a member of the public who’s interested in
animal drug issues...

    MR. VAHN: Um-hum.

    MS. GOLDBERG: ...is to get information
because of the -- part of the Food, Drug and Cosmetic
act, which basically makes drug approval confidential,
does that same secrecy apply to the unapproved products
which you’re allowing on the market?

    MR. VAHN: No. There really isn’t any
confidential proprietary information. The
confidentiality is provided only when they are working
under an investigational new animal drug exemption or
they have a new animal drug application.

MS. GOLDBERG: And once it’s approved I still
can’t get all the information.

MR. VAHN: That information is still in those
files and it is protected, but it’s summarized in the
documents that...

MS. GOLDBERG: Right, summarized.

MR. VAHN: Now, that data doesn’t exist if we
don’t ask for it in those products that are unapproved
and we allow to be marketed.

MS. GOLDBERG: Right. If you’re in a process
of decision making about an unapproved product, can I as
a member of the public call you and get that information
or is that still...

MR. VAHN: Generally, not...

MS. GOLDBERG: Right.

MR. VAHN: ...because it’s under development.

MS. GOLDBERG: I’m going to yield to Barbara
in the follow up, because she...

MR. CARTER: Okay. Barbara? And you have to
come up to the microphone.

MS. BROWN-ROZEN: I just -- do I have to
identify me?

MR. CARTER: Yeah.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. BROWN-ROZEN: Yes.

MR. CARTER: We have a short attention span.

MS. BROWN-ROZEN: Barbara Robinson, NOP, USDA.

So what I think you might be able to do -- and I’m going
let Steven tell me if I’m wrong -- is that you would in
a case of Pepto-Bismol for example, or something like
that -- an unapproved, but allowed substance or drug, if
you wrote your annotation as in accordance with FDA’s
permitted use, that would probably cover whether FDA
approves it or doesn’t approve it, but allows it? Is
that -- or have I gotten too specific for FDA? In
accordance with FDA’s permitted use.

MR. VAHN: Yeah, you would need to do that.

We could probably help you with a little bit of language
-- we may have a little trouble with drug permitted...

MS. ROBINSON: Right.

MR. VAHN: ...but we can work on that.

MS. ROBINSON: Yeah. See, we’re not the only
agency that has those semantic things.

MR. VENGRIS: And also, I would like that --
who would -- you offer claim and who could say -- it is
very difficult question. We may allow those claims to a
product.

MR. VAHN: Yeah. I think you’re looking for
more of an umbrella...
MS. ROBINSON: Yeah.

MR. VAHN: ...the caveat of what the...

MS. ROBINSON: And you're saying the --

through FDA is the label claim. Because the minute you
make that label claim, you've set in motion some -- you
know, you've said, okay, this Pepto-Bismol is for
control of or treatment of, and then you've made a label
claim and now you've set in motion FDA as saying, well,
we don't know if that label claim holds up or whether
it's been approved for that. And that sets in motion
your whole process.

MR. VAHN: It triggers the definition of the
drug and not -- that has to be proven, so...

MS. ROBINSON: So that's the thing you don't
want to do, is you don't want to trip FDA's process
they'll go in, because we're likely to be way out in
left field forever.

MR. VAHN: But...

MR. CARTER: Okay. Okay. Because the next
couple of questions I think will...

MS. ROBINSON: Yeah. We actually were
thinking very well alike. Because what I was hearing
was that for the materials that are on -- these
unapproved materials that obviously are being used by
the industry...
MR. VAHN: Um-hum.

MS. ROBINSON: ...that it’s -- the best thing for us to do is to have an annotation to those materials versus being too specific for their use and let that fall under the FDA and the veterinarians use. You know, withholding -- were specific and that’s what I’m hearing. So I just want to clarify that.

MR. VAHN: And we can -- we’d be happy to help you with some of those examples.

MS. ROBINSON: Okay.

MR. VAHN: For example...

MS. ROBINSON: It doesn’t mean that we can’t review the material for what it’s being petitioned for.

MR. VAHN: Right. Let me give you a couple examples. For example, on the list that you sent to us, you were concerned about acculated charcoal, calciumfloraglucamate...

MS. ROBINSON: Yeah.

MR. VAHN: ...and those are products that -- and the business -- and those -- well, let me deal with -- those products are products that under those certain label conditions and whatnot, we’ve allowed to be marketed by regulatory discretion. There were a couple of other products on there like chloral phenol [ph] and xylazine [ph]. Those products we would require an
animal drug application to be approved before those products could be marketed for use. Now, having said that, unless they’re on this prohibited list, which is...

MS. ROBINSON: And it’s not yours.

MR. VAHN: ...our prohibited list, from extra label [ph] use. That’s 21CFR-530. We do allow those products to be used in an extra label manner by veterinarians with a whole lot of caveats, that there’s a valid veterinarian/client/patient relationship, there’s not another drug available that is effective for that particular clinical need and there -- the veterinarian has taken adequate steps to ensure the human food safety -- public health safety from the use of those products and that extra labeling.

MS. ROBINSON: So from a materials review standpoint, we need to do a little more work up front, which we all know...

MR. VAHN: Right.

MS. ROBINSON: ...we need to do that, and before it gets to this process, we have exactly what -- whether it’s an approved and it’s use or unapproved or this other -- it allows...

MR. MATTHEWS: We’re bringing it to you under regulatory discretion.
MS. ROBINSON: Right. But the third one, unlisted, unapproved, you’re saying there’s some that are -- that’s a real bad group.

MR. VENGRIS: No, not necessarily. Some of them -- there maybe some manufactures don’t know that they have to. It’s not an excused ignorance, but that they have to drug list. But there is another group which are really violative [ph] products which we take enforcement action. I’m not implying that any unapproved, unlisted is granted because it’s not listed.

MS. ROBINSON: It hasn’t gone through the process.

MR. CARTER: Okay. I’ve got George.

MR. SIEMON: Yeah. Barbara, the thing I’m concerned about is the letter that we have from Sharon Bentz [ph], trigger list. It says purely, we cannot have any FDA approved materials.

MS. ROBINSON: It may have been...

MR. SIEMON: Maybe the FDA...

MS. ROBINSON: The word approved there may have a different meaning.

MR. CARTER: This is goes back to what like Rosalie was saying. Well, okay. And then that’s what we’re trying to clear up. It goes back to a point Rose was making. Are they lawful?
MR. MATTHEWS: Well, by a strict reading of the Federal Food, Drug and Cosmetic Act, the unapproved drugs we allow to be marketed by regulatory discretion are not lawful. May they be marketed, yes. But just because that’s within our purview to say whether they can be or can’t be...

MR. SIEMON: I know, but -- okay. First of all, so you’re disagreeing with the letter from the FDA, is that what I’m hearing?

MR. MATTHEWS: Yes, I am.

MR. SIEMON: But our list is also a CFR list. And so I thought the conflict is we’re going to have one CFR list that has the material that isn’t in your CFR list.

MS. ROBINSON: No, you won’t. You won’t.

MR. SIEMON: Okay. All right.

MS. ROBINSON: In the first place...

MR. SIEMON: So...

MS. ROBINSON: ...they come first. They say -- they define the universe and we will live with that universe, because you don’t supercede their authority. What you need to know is where they are boundaries and where they are permitted uses and stay within that language. And truthfully, except for the drugs that are out there that haven’t -- somebody hasn’t petitioned for
their use and they haven’t gone through your process, whether good, bad or indifferent, you’re probably not going to confront -- you’re not going to be asked to approve something that FDA wouldn’t have already...

MR. MATTHEWS: Yeah.

MS. ROBINSON: ...I doubt it.

MR. MATTHEWS: Well, we do. There’s a lot of things that fall under their feed world or grass -- feed that are being used for preventative measures, and that’s where you got into that unlisted, unapproved world. If you understand unlisted and unapproved drugs...

MR. VAHN: Well, that’s the drugs. When we go into the feed world, there’s a couple of other provisions that you need to be aware of. Later in the 500 parts of the CFR, we do have all of the generally recognized as safe products listed and they are listed not only as a chemical entity, but as the use under which they are considered grass. So they’re all -- they are also unlisted.

MR. MATTHEWS: As a feed additive.

MS. ROBINSON: Right.

MR. SIEMON: But now I’m talking about the feed additives that are used rightfully or wrongfully as a preventative measure in livestock health...
MR. MATTHEWS: Okay.

MR. SIEMON: ...which is very close to what your statement on what you use the ketosis treatment for. That’s your discretion where you call it an aid and prevention treatment of ketosis [ph].

MR. MATTHEWS: Right. I wouldn’t say discretion.

MR. SIEMON: Now, these are the same uses that we have...

MR. MATTHEWS: Okay.

MR. SIEMON: ...for feed or...

MR. MATTHEWS: And that’s -- some of those products are at least misbranded foods -- have not -- unapproved, adulterated new animal drugs by virtue of the claims they make. If you have, let’s say, a mineral mix. A mineral mix is for in the supplemental nutrition of the animal. That’s fine. If it’s intended to allow the animal to live up to it’s genetic potential, that’s wonderful. But as soon as they cross the line and they say it’s intended to -- for the mitigation of disease or cure or treatment, prevention, all those things we put in the definition, then it becomes a drug, and at that point it becomes either a misbranded food or adulterated, unapproved new animal drug.

MR. SIEMON: I see.
MR. MATTHEWS: And that’s where it crosses the line. So you can change the product merely by changing what’s on its label.

MR. CARTER: Okay. Are you...

MR. SIEMON: This is the...

MR. CARTER: Go ahead.

MR. SIEMON: ...product that have to do with them...

MR. MATTHEWS: Um-hum.

MR. SIEMON: ...because that’s been our authority. Well, now that we’ve said that the previous letter didn’t -- the approved only, now we can go to this allow according to FDA permission. That now gives us permission AMDUQA drugs.

MR. MATTHEWS: Okay. Depending under this...

MR. SIEMON: They’re still approved drugs, I know that. But...

MR. MATTHEWS: Okay.

MR. SIEMON: But with the approved drug -- and where you state according to permitted use, but we’re never going to say for the non-label use in our docket, no. Because we have -- I don’t think we use -- there we are -- not approved for dairy. And we know they’re used in dairy. We wrote our standard for dairy, you came back and said, no, you can’t do that. So now we’re just
going to take the for dairy out and it will then still
be okay under the veterinarian -- I understand all the
conditions there. What was used under AMDUQA will now
be okay as long we take the word dairy out of our
recommendations.

MR. MATTHEWS: Let me make a final
distinction. You guys can set the standards wherever
you want. We’re not trying to tell you where to set
your standards.

MR. SIEMON: Well...

MR. MATTHEWS: If you have an approved -- we
have the two classes of drugs, essentially. The
approved drugs and the unapproved drugs. And you’re
allowed -- and you’re likely to encounter both. The
unapproved drugs that we allow to marketed by regulatory
discretion. In other words, we got better things to do
than to go after them. Under AMDUQA, the off-label,
only approved drugs can be used in an alterable manner.
Unapproved drugs marketed by regulatory discretion may
not be used. They are not part of AMDUQA. So we’ll
make that distinction.

MR. SIEMON: I understand. That was my
question. If we approve an approved drug...

MR. MATTHEWS: Um-hum.

MR. SIEMON: ...and but our approvals were
AMDUQA used, we just can’t list that use in the – our
standard?

MR. MATTHEWS: That’s not our purview.

MR. SIEMON: Okay.

MR. MATTHEWS: That’s your decision as to what
you list as...

MR. SIEMON: That’s not what I’ve heard. I’m
trying to deal with the letter I have from you all here.
I’m...

MR. MATTHEWS: We would consider that use
illegal because of our statute that says it’s
unapproved. But if the use by a veterinarian under the
conditions of AMDUQA is legal. And I was just confusing
you.

MR. SIEMON: Okay. One more thing. What
about unapproved materials? Can we put an unapproved
material under our health section?

MR. MATTHEWS: That’s not our jurisdiction.

MS. ROBINSON: There is -- unapproved or
allowed with FD -- under FDA discretion.

MR. CARTER: Okay. Now, let’s go down the
order here, because I have Jim and I have Andrea and I
have Rose and Mark.

MR. RIDDLE: Yeah. Well, we were getting
exactly to where I wanted to ask a question. And that
is, it’s not just an issue of annotation, but where we place it on our list. It’s under the federal -- the organic regulation. There’s just five categories for these livestock materials, and that’s as a disinfectant and sanitizer, medical treatment as applicable. That’s one category. Then that’s where we’ve been placing these kind of products. But otherwise, our only other choices are as a topical treatment, external parasiticide and local anesthetic, as a feed supplement, a feed additive or a synthetic inert ingredient in a pesticide. Should we -- yeah. So you can see that if we place a product -- an unlisted, unapproved, but regulatory discretion under that first list, then we are saying it -- you know, can make a medical claim. And I’m just wondering if we need to be looking at another category there in our list that matches up better with yours?

MR. MATTHEWS: Well, I think your list is -- totally overlaps...

MR. RIDDLE: Okay.

MR. MATTHEWS: ...with a lot of different agencies' jurisdiction. And I would say your topical -- you know, let’s take a product that was invented to treat lice in cattle. That can be -- depending on how it works, if it’s topically applied and it works
locally, that’s regulated by EPA.

MR. RIDDLE: Yeah.

MR. MATTHEWS: If it is like viromecta [ph]...

MR. RIDDLE: Right.

MR. MATTHEWS: ...or, you know, amoxidectrin [ph], some of the other products that are systemically absorbed, that’s a drug, the way we divvy that up. And that’s regulated by us. And they would -- we would require approval for those products. On the other hand, there are dusts and powders and stuff that are out there that are probably marketed by regulatory discretion as well. So your categories in no way line up with our categories.

MS. ROBINSON: I don’t think you need to worry about the words in your -- the categories in your list. It’s the -- you could put it in box X. The important thing is that you’re not prescribing a use or a set of conditions, you’re not superceding FDA’s authority and you’re not saying, well, we know that, you know, sugar is really a sweetener, but we’re going to say sugar is used for -- we’re going to allow sugar for the treatment of...

UNKNOWN: Lice.

MS. ROBINSON: ...lice. I mean, because...

MR. MATTHEWS: There’s people.
MS. ROBINSON: These aren’t real examples.

MR. MATTHEWS: No.

MS. ROBINSON: Well, I can’t think of any.

UNKNOWN: Aloe vera.

MS. ROBINSON: Okay. But if you’re going to put aloe vera in the category. But then if you say aloe vera is allowed for the treatment of or the prevention of some disease, you’ve overstepped your bounds. Why don’t you just simply say aloe vera -- put in the category you want.

MR. RIDDLE: Okay. But if we put in A...

MS. ROBINSON: No.

MR. CARTER: Let Jim finish and then...

MR. RIDDLE: Yeah. That’s my question. If we put something like aloe or magnesium, you know, in a digestive -- under A, isn’t that making a medical use claim by placement on that -- under that category?

MS. ROBINSON: I don’t think so. I don’t think that...

MR. MATTHEWS: So long as we, you know, link it to allowed under regulatory discretion.

MS. ROBINSON: Yeah. I think that’s the -- now, I do think we might have to ask our lawyers that, but I don’t think the fact that you put it under that category is making a claim that contradicts FDA. I
think it’s you annotations that are causing the
problems.

MR. CARTER: All right.

MS. ROBINSON: I don’t think...

MR. CARTER: Andrea? Andrea’s up next. Okay.

Oh, okay.

MR. RIDDLE: To respond to this one.

MR. CARTER: Okay. Sorry. I didn’t realize
there was...

MR. VAHN: It probably does. It’s going to
take your general counsel’s opinion on this, but -- and
I’m not sure of the context in which you’re listing
these products. If you’re listing them merely whether
they are allowable for use to meet an organic standard
or not an organic standard, I’m not so clear that you
would be making an assertion that these are, therefore,
by definition a drug or a biologic or a pesticide. And
I think merely listing them as whether they’re allowable
for use as an organic would necessarily be saying that
-- you’re saying they’re a new animal drug, or they’re
approved for use.

MR. RIDDLE: Or even if they’re approved.

MR. VAHN: Yeah.

MR. RIDDLE: But they’re under the...

MR. VAHN: I think what Barbara was trying to
get is maybe what you want to do is put some broad
statements and that they are approved in accordance with
FDA’s regulations or something like that.

MR. RIDDLE: Okay. Can I just follow up your
one example that’s on that list A, aspirin.

MR. VAHN: Okay.

MR. RIDDLE: That’s not an approved drug,
correct? That’s a low priority...

MR. VAHN: Yes.

MR. RIDDLE: ...and allowed under regulatory
discretion.

MR. VAHN: Yes.

MR. RIDDLE: And it’s in our list A as a
disinfectant, sanitizer and medical treatment, as
applicable, with the annotation, approved for healthcare
use to reduce inflammation.

MR. VAHN: Well, when you say approved...

MR. VENGRIS: Approved by whom?

MR. VAHN: ...you’re saying approved for...

MR. RIDDLE: Approved for...

MR. VAHN: ...organic use.

MR. RIDDLE: For organic use.

MR. RIDDLE: Yeah.

MR. VAHN: You’re not making an assertion that
it’s an approved drug.
MR. RIDDLE: So that example, you don’t have a problem with...

MR. VAHN: I’m not...

MR. RIDDLE: Yeah. I think if we were to do it over again, we might shorten or eliminate that annotation.

MS. ROBINSON: Right.

MR. VAHN: You’re not approving the marketing of the product...

MS. ROBINSON: Exactly.

MR. VAHN: ...you’re only approving...

MS. ROBINSON: The use.

MR. VAHN: ...the use under and still meet the qualifications of an organic product.

MR. RIDDLE: Uh-huh.

MR. VAHN: Correct?

MR. RIDDLE: Yeah.

MR. VAHN: Then I think there’s a distinction here that we can make.

MR. RIDDLE: Okay. And that’s not a problem.

MR. VAHN: I don’t see one.

MR. RIDDLE: Yeah. You don’t see one.

That’s...

MR. VAHN: But I think Barbara has a good idea of what -- if we need to get a legal interpretation.
MS. ROBINSON: Well, you know, also, Rick is suggesting that perhaps that part of the problem lies with the fact that you do have all these sub-categorical uses. It’s either suitable for organic livestock production or it’s not. And then it has to be -- because you always have to be in accordance with existing regulatory schemes of the EPA, FDA and APHIS and FSIS. You could -- no matter what you wrote, you can’t -- you can’t supercede those existing regulatory forms.

MR. CARTER: Okay. Yeah. I’ve forgotten. Andrea?

MS. CAROE: Okay. So based on the facts that you’re material would be listed under the A category that specifically states uses at the top of the category, we’re not making a structural function claim on the material that has not been approved by FDA for those functions -- for that function. So it says for medical treatment, on the top of the category -- when we put a material in there, we’re not saying that you can use that medical -- for medical treatment, if the FDA has not said that that material can be used for medical treatment. Do you see what I’m saying? The category itself seems to make the distinction on the claim that we can’t -- I mean, I understand that the -- but -- are
very specific, but also the categories in themselves.

MR. VAHN: This is more of a legal issue and you’re not allowed to make decisions beyond your statutory authority. And I think that’s what Barbara is trying to say, is you’re ruling on whether or not it’s accepted for use as an organic or in product -- or in animals that will become an organic product. We’re not -- and that’s a different statutory authority that we have. We can’t tell you what’s organic or not organic and you can’t tell us what can be legally marketed as a drug or what can’t be marketed as a drug. So I think we have a nice bright line that language could be, you know, clarified.

MS. ROBINSON: Whenever you try and take a non -- you take a non-drug, something that’s -- if you decide that you can use it as a drug, that’s where you’re going to get into trouble, because you’ve just stepped over the line, and it’s these folks that say what’s a drug.

MR. MATTHEWS: Okay. We’ve been here.

MS. COLE: Well, I just wanted to clarify, because, you know, we understand that what FDA established, such as we can’t do opposite of. We understand that. But what I’m saying is that the way we’re kind of formatted here, is that we may have --
yeah, we may be in trouble just based on the way we’re -- the format of this document and the category, because it’s almost impossible for us not to make a strong type of claim on the use of materials. And as soon as we do that, if it’s unapproved...

MR. MATTHEWS: Let me take a stab at this.

MR. CARTER: Go ahead for the record, Richard Matthews.

MR. MATTHEWS: It seems to me that there are several issues that are coming to the forefront. One is the categories within the list, and the other major point is the annotation that is used for the material. What we really need, generally, is early on in the process, taking the petitioned use, consult with FDA. But when the Board acts -- maybe what the list needs to do is just be one list. You got a section for synthetics allowed in livestock. No subcategories, none whatsoever. Substances allowed in livestock, synthetics. And then you just list them without putting on annotations, without having subcategories. If you did that, it helps to ensure that you don’t run afoul with FDA. But with our implementing these enhanced procedures, we could also address the petition using any time to make sure that we’re also not running afoul with FDA.
MR. CARTER: Go ahead. Continue, Andrea.

MS. CAROE: My concern with it, Richard, is that the materials that are used now in organic production -- and it’s taken us a -- it’ll take us a like, I would imagine, a very long time to make that amendment to this rule. What do producers do in the meantime?

MR. MATTHEWS: Well, what I would look at is why not change the structure of the section at the same time that we’re addressing materials. In other words, we come out with a proposed rule that adds certain materials, but at the same time, propose the elimination of the subcategories. If you’ll note in the rules that we’ve already done, we have started to change the structure a little bit because of feedback from the Federal Register about how we list the materials. If you -- when these final rules come out, you’ll notice that we did away with some of the numbering system. It’s just a whole list now without numbers in front of them, that way it facilitates the alphabetical listing of the items without saying, okay, we’re going to change A-5, A-7 and then add a new A-5 and A-6 and, of course, everything else gets changed. So we are already making some enhancements to the sections as we go along. So in my mind, we could take and put out a proposed rule to
add materials and also to change the way they’re laid out at the same time.

MS. CAROE: And what would your estimate be on to when that list will be available? If we move quickly, how quickly could it be, six months, a year, two years...

MR. MATTHEWS: I...

MS. CAROE: ...two weeks?

MR. MATTHEWS: Well, let me run through the regulatory process a little bit. In a case of where you want to change a section of the regulations that does not deal with the national list, you’re looking at a minimum of 18 months, okay, because of the various regulatory hurdles we have to go over. In the case of materials, we have been told that they won’t be considered the materials to be non-major. Therefore, we don’t have to go through as long a review with OMB. Okay? We do have to go back to them with what is called a -- plan, where we describe for them what it is we’re going to do and then they make a ruling as to whether or not they agree with us as to whether the action is, indeed, major or non-major. But we’re in the fortunate position that materials changes are considered non-major. So that actually shortens the process, because you don’t have that 90 day OMB review, plus the
additional 60 if they decide they want it, not once, but
twice -- so it would really go through the same kind of
process that we’ve been going through since about last
April, where the rule -- it’s out as a proposed rule, it
would have a 30 day comment, we would have to analyze
the comments, we would send our report to OMB on that.
Then we could start our work to write the docket,
because then it would get published as a final rule and
it would become usable one day after it’s published as a
final rule. Now, I can’t say that we can get it done in
three months or five months or nine months, because it’s
going to vary with every single rule and it’s also going
to vary with, you know, what else going on. But it’s
going to be a much shorter process than if we were doing
a change, say, to section 105. It’s like we were adding
a new thou shalt not sin. Then that process would take
a good year and a half.

MR. CARTER: Okay. Okay. I have -- here’s
what I want to do is -- yeah, I want to go, because
there’s Rose, first, then Mark and Kevin and Owusu, and
then I know we’ve got some veterinarians in the
audience, too, and I’d like to get some feedback from
the veterinarians as well. So first of all, let’s --
Rose?

MS. KOENING: I just want to make a comment
about this and then I’ll change the direction of the
questioning. Okay. I just want to say is if we look
under the crop section, the crops are set up very
differently. And if we use the crops model, like --
because it’s very general categories. It just says
pesticides. It doesn’t say how those pesticides are
applied, it doesn’t make recommendations for use. So I
think the crop section was -- you know, again, it’s how
things were written. But I think -- anyway, livestock
is just more defined than crops, and if we use crops as
kind of a model for that...

UNKNOWN: ...FDA.

MS. KOENING: Well, but they’re generally
pesticides. And we list the types of pesticides, but we
don’t -- and if we do have an annotation, we usually --
it’s a specific use that’s easily checked by the
labelings of those products. Anyway, the question I had
-- and it was just more of a -- maybe it doesn’t belong
here, but it’s of interest. Did I understand what you
were saying, right, on the homeopathic -- so you’re
saying that animal laws are more strict than human laws?

MR. VENGRIS: I’m not saying that, I’m saying
human laws do not apply.

MS. KOENING: But you’re saying that there’s
no such thing like -- because I know there’s
controversy, like, you know, Ginko or whatever. You know, you can go to a health food store and buy a medicinal...

MR. VENGRIS: Oh, you are talking about food supplements?

MS. KOENING: ...like a homeopathic thing, but it’s not the same in animals that...

MR. VAHN: That’s correct.

MS. KOENING: ...also the homeopathic thing, but it would have to be specific -- those are not allowed, like is that...

MR. VENGRIS: No. It’s also case by case we might allow under regulatory discretion. We might not take enforcement action. But human homeopathic policies and guides do not apply who consider them drugs and new animal drugs.

MR. CARTER: All right. Mark?

MR. KING: Yeah. This is a big difference. I have two questions that are general. One is a feed question or a feed additive question. And in general terms, can you describe the difference between something being used to optimize health and/or to prevent something?

MR. MATTHEWS: Sir, you’re getting into an area where we spend a lot of time. In determining...
whether a product is a food versus a drug is the degree to which it affects the structure of the function. For example on the one hand, treating ketosis or one of the terms of art these days that you’re hearing about is the subclaviliti [ph] ketosis, where we have an altered physiological condition changing that function would put it more on the drug side. Whereas if we’re merely helping animals reach they’re already established genetic potential by having a complete full diet, you know, it’s intended for high performance, that falls into the food side. So there is a gray area, but we do spend a lot of time determining, you know, what are the limits of discussion.

MR. KING: And then secondly, the drug category, can you describe the difference between an approved indication and a label claim?

MR. MATTHEWS: Okay. A label claim -- actually, none of those -- those are all terms of art that we throw around probably recklessly. The statute describes the intended use that’s prescribed, suggested or recommended in the labeling, so it’s very broad. In fact, when we get into some of the products that we end up regulating, there may not be anything adverse in the indication or the claim for a section of the label. But you may go down farther in the label and there’s

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
something buried in there where they’re making an
intended use -- establishing an intended use. It is
egregious. So anywhere on the label, if there’s
something that suggests an intended use for the product,
that would determine its regulatory status. And I will
go beyond that, too. Thank you, Dr. Vengris. There’s
also -- there’s different categories of promotion
materials. We have advertising. And where we regulate
the advertising, prescription products, over-the-counter
products are regulated by the Federal Trade Commission.
The -- there is also promotional labeling, and there’s a
number of criteria that’s been set up court decisions as
to when, essentially, advertising becomes promotional
labeling and is subject is to the same provisions as the
label would be. So it’s fairly complex and a convoluted
way of -- the process that we have to go through to
establish the intended use of products.

MR. KING: And just if I could add to that one
thing. When you were discussing in general terms
unapproved or natural or homeopathic and those kinds of
various -- where do you see that when you, for example,
referenced earlier, we believe that at some point in the
future these should be regulated?

MR. MATTHEWS: At this point in time and
probably for your purposes, we don’t even go home saying
that we don’t recognize natural or homeopathic or any of
the other classifications of products. If they have an
intended use that meets a definition on the drug, we
regulate them as a drug.

MR. CARTER: Okay. I got Kevin and then
Owusu.

MR. O’RELL: Well, just to be clear on this,
because I think I heard this flip flop on Jim’s
explanation -- example, the terms of aspirin and the
category that we have it is for medical treatment. And
then we an annotation, which -- I can’t read it --
approved for healthcare, used to reduce inflammation.
And I saw you gentlemen shaking your heads at one point
after at least conferring. The way we have that
structured with our categories, is that allowed by the
FDA or would you think we’re implying that that’s a
medical usage? But not for marketing, I guess. You’re
saying we’re okay, because it’s under organic?

MR. MATTHEWS: I don’t think we’re in a
situation where we can tell you what you consider to be
organic or not organic.

MR. O’RELL: Right.

MR. MATTHEWS: I think -- you know, I think
you kind of do a little -- cut a square where you’re
going to have things that are acceptable by you as
organic, but would be unacceptable by us to be marketed, and things that are organic that you can market, things that are not organic by your standards and we would allow or not allow. I think there are two different -- and they could fall into any one of those four quadrants. And whether or not -- I doubt that we would be concerned about what you would consider organic or not organic, because they are still in those two quadrants that were unacceptable to us, we would still take whatever enforcement action we needed to to correct those products or to remove them from the market.

MR. O’RELL: So we don’t necessarily need to change our categories?

MR. MATTHEWS: That would depend on what you and, I guess, USDA decides.

MR. O’RELL: If I can just follow up on that, what would really trigger it is the intended use on the label claim of the product itself...

MR. MATTHEWS: Yes.

MR. O’RELL: ...is that correct?

MR. MATTHEWS: Yes. Yes. Let me just add one piece to this, because I think we’re going down a path here that you might fall into a potential trap that we’ve run into. Products have to be truthfully labeled as well. They can’t be false and misleading on any
particular, so if the product’s truly being marketed for a particular intended use and the label doesn’t declare that, it’s then misbranded and it’s still in violation of our laws. So there is an assumption that it’s truthfully labeled and we do -- we have a number of core precedences, particular with bulk drugs, where we have established that the product will be marketed, there was established intended use. If the product’s not properly labeled, they were misbranded. And had they been properly labeled, they would’ve been unapproved adulterated drugs. So they have to be truthfully labeled and then the intended uses established.

MR. CARTER: Okay. Owusu?

MR. BANDELE: Yeah. I just have a concern in terms of understanding the problems that the annotations create. But to me they are still a mystery. Where I think we run to problems, if we just had the one list without the annotations, because that would -- for people to use these synthetics in a lot broader way than we intended.

MR. CARTER: Okay. All right. Now, wait. Before I call -- you don’t have -- we’ve got a couple -- at least two vets in the office -- in the audience. We may have more. But I’d like to get some -- you know, any comments that you have as far as -- you know, we can
put on those, and then Goldie and then I see Kim’s got her hand up, so -- you?

MR. CARRIMAN: Okay. Thank you. Hubert Carriman, veterinarian from Pennsylvania. I want to...

MR. CARTER: Stay close.

MR. CARRIMAN: ...thank these two gentlemen for coming in, because I think they’ve really elucidated the situation perfectly. I can follow them since I’m a dairy vet. And I think Jim’s question regarding the categorization under the medicine is -- still I think could cause problems down the road, unless -- and the annotations that you’re worried about, that we could just have, perhaps, under veterinary direction and leave it at that, instead of like 90 days withholding or whatever. I know it’s really sensitive to you all to have extra withholding time. I think you need to uncouple that from whatever the FDA is saying. If you want to say 60 day withholding, just say that, don’t say FDA, because then we got to get them in. And that’s fine. I mean, that’s their job. So I say possibly if you want to do some of these healthcare drugs -- I’m not saying feed additives or anything, I’m speaking as a veterinarian -- you put under veterinarian directions. And as far as the homeopathic drugs go or human drugs that are not approved drugs for animals, if there is a

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
valid client/patient relationship of ECPR [ph], can a veterinarian label a homeopathic drug or a colostrum whey [ph] derivative or an aloe product that are not even on your radar screen, because they're human or they're nutritionals, if I label that, is that okay, by the inspectors from the public health service and whoever comes to the farm, which I don’t know if they’re under FDA, but am I allowed to do that, the extra label drug use? Yes, please.

MR. MATTHEWS: Okay. It doesn’t matter who would label the product. Once the product is labeled and establishes intended use, then it’s subject to our jurisdiction. What I think you’re speaking to are the labeling provisions under the Grade A Pasteurized Milk Ordinance.

MR. CARRIMAN: Yeah.

MR. MATTHEWS: Correct?

MR. CARRIMAN: Yes.

MR. MATTHEWS: Okay. And those are also regulated by FDA and then through our Center for Food Safety and Applied Nutrition [ph], there is a federal safe operative program to which the model for Grade A Pasteurized Milk Ordinance is developed and it’s through the national conference of interstate milk shipments, and then subsequently each state then adopts that.
pasteurized milk ordinance. And so it’s actually as state code, but it has federal oversight, because ultimately, FDA has oversight over the safety of milk. In those kind of situations -- let’s say the cost of the product, if it establishes it’s intended use and it meets the definition of a drug, it would be considered a drug. Those products would be subject to our regulation, and particularly if they were commercialized or marketed. And we would set our onus of discretion of where and to what extent we would enforce that. They wouldn’t be exempt just because they had a veterinarians label. The pasteurized milk ordinance labeling provisions were intended to address products that were allowed to be marketed by FDA, both the approved and those allowed and regulated by regulatory discretion. There’s further labeling directions that needed to be put on those labels.

MR. SIEMON: I got a little confused there.

MR. MATTHEWS: Okay.

MR. SIEMON: I thought we were just referring to the veterinary authority to use AMDUQA, to use human drugs.

MR. MATTHEWS: Only approved.

MR. SIEMON: I know. Only...

MR. MATTHEWS: Only approved.
MR. CARRIMAN: But human homeopathics are.

MR. SIEMON: Human approved. The human approved as well.

MR. MATTHEWS: They would have -- right.

MR. SIEMON: It’s a human approved drug and he has the -- the veterinarian has the privilege to use those on livestock animals under the conditions of AMDUQA.

MR. MATTHEWS: Under the conditions of AMDUQA, correct.

MR. SIEMON: Even if it’s a human approved, but not FDA livestock?

MR. MATTHEWS: Yes.

MR. SIEMON: And so for example, I don’t know if homeopathic...

MR. MATTHEWS: And there is -- and there are label requirements under the DMO that they have to meet.

MS. COUGHLAN: Homeopathics are a drug. There is such a category.

MR. MATTHEWS: There is such a category.

MS. COUGHLAN: And that’s the problem.

MR. MATTHEWS: Yeah. They’re not approved, but there is such a category, though.

MR. SIEMON: Okay. Then you...

MR. CARRIMAN: Well, actually, I thought I...
heard -- I thought I heard you say earlier that homeopathic are allowed under human drugs -- but not a human drug, but they are allowed for human use subject to conditions. But then if I label it, is that okay or not? Because it’s not a human drug.

MR. MATTHEWS: It would have to be an approved human drug subject to an NDA [ph].

MR. CARTER: Stand up close to the mike when you’re talking.

MR. MATTHEWS: Sorry. It would have to be a human drug subject to an NDA, an approved human drug.

MS. CAUGHLAN: Even if it is a -- will allow an animal to reach it’s full potential?

MR. MATTHEWS: If it’s -- the intended use as a drug. For example, let’s make it simple. It’s for the treatment of ketosis, that way we know -- okay? And that product would be -- there would have to be no other approved drug available -- animal drug, or the veterinarian has determined that those approved animal drugs did not work in this particular situation. And then I could go to an animal drug or a human approved drug. Only approved drugs.

MR. SIEMON: But the other option is, of course, to flip over to the micro-nutrient world, which had been used for homeopathic remedies inside FDA, to my
understanding.

MR. MATTHEWS: But AMDUQA does not apply. There’s no provision for use under those conditions.

MR. SIEMON: But then they can use it as a micro-nutrient if they had a new group for that under FDA? I understand that’s the term being used, micro-nutrients, too, for...

MR. MATTHEWS: We don’t recognize micro-nutrients. They’re -- the intended use establishes for -- as a drug, they’re drug. Otherwise, they would have to be -- you know, as a nutrient, they may fall under the food or feed additive...

MR. SIEMON: That’s what I’m saying.

MR. MATTHEWS: ...provisions. Yes.

MR. SIEMON: That’s what...

MR. MATTHEWS: In which case, they wouldn’t be a drug and need to have labeling under PMO.

MR. CARTER: All right. You -- okay. And what I’d like to do now, because we’re running to the time considerations here, but I want to gets some inputs from veterinarians. I know Goldie had her hand up. And I would like Kim, who is materials chair, and George is the livestock chair, they’re kind of trying to bring us to what the action -- how we proceed from here, so...

MR. CARRIMAN: Just one last thing on the
labeling, because hopefully all organic farmers have veterinarians and hopefully they have valid client/patient relationships for the safety and all for the animals. In Pennsylvania, I don’t know if you know, but back in 1997, when the PMO came out regarding aloe vera, homeopathics and tetracycline powder for topical use, and there was one other thing, some veterinarians in Pennsylvania got together with the head sanitary inspector there. And in Pennsylvania, we’re allowed to label those specific things. And when the federal public health inspectors have come around, it’s been totally fine. Is that -- that concurs with what you’re saying? Through the PMO, we’re allowed to label it and the public health inspectors have been saying that’s okay for six years. They say if you got this label on here, it’s going to be okay.

MR. MATTHEWS: And what has happened is that they check back with FDA...

MR. CARRIMAN: I would hope so.

MR. MATTHEWS: They check back with our FDA Center for Food Safety and Applied Nutrition and the states work very closely with our safety group. And we have a working group between CBM and them to go over those kinds of products and those conditions. And we actually publish a memorandum of information, MIs, that
establish those limits under the pasteurized milk ordinance. So those are available on the SYSTAN [ph] website at FDA.

MR. CARRIMAN: Okay. Thanks.

MR. MATTHEWS: Yeah.

MR. CARTER: And Alice Waters [ph] and -- I’m sorry. Okay. Then let me -- Goldie, do you...

MS. COUGHLAN: No, I pass.

MR. CARTER: Okay.

MS. COUGHLAN: I just had one extra and it’s been followed up.

MS. DIETZ: I had my hand up.

MR. CARTER: You did have your hand up? Okay.

MS. DIETZ: And it was a question. So if a category was as broad as animal health, okay, so that didn’t get into drugs or -- I mean, where drugs could clearly -- but it was broad thing, animal health, that wouldn’t -- FDA? If we had a category that was animal health and we didn’t -- and then we put just the annotation on some of them that we -- that appears to be FDA jurisdiction and we just put under -- what the veterinarian said, under veterinary discretion or something, would that alleviate any of these problems that we’re having in terms of categorization? I don’t think it’s -- maybe that’ll come...
MR. CARTER: Yeah, I think that can have that in our discussion. I’m sorry.

MR. MATTHEWS: I thought that was you. I’m sorry.

MS. DIETZ: The question was, is it -- instead of -- we definitely have very specific use categories and haven’t been able to resolve -- it’s definitely going into a legal ground, which again could chew up a lot of time in terms of us trying to get with the process. But do you see anything wrong with just an animal health category? Because we’re not being addressed by all of -- both EPA, APHIS and FDA jurisdictions would fall under our general animal health category. And then just put under veterinary discretion on those things, which would then allow the -- you know, it would allow things to be put within a general category and then it would be up to the practitioners who know the law to then go through and make sure they’re abiding by all the other agencies that regulate those?

MR. MATTHEWS: I wouldn’t have a problem with the animal health provision.

MS. DIETZ: Category.

MR. MATTHEWS: That’s up to you as to where you want to set any limits under that. I think that’s general enough. It’s going to catch the whole umbrella.
and probably save you a lot of heartburn from what I’m hearing.

MR. CARTER: Okay. We’ve got one -- another vet, then I want to -- let the minutes reflect that Nancy Ostiguy -- I’m sorry -- Nancy Ostiguy joined the meeting at 3:40. Welcome.

MR. LAVER: Thank you for having me. I’m Dan Lave [ph]. I’m not a veterinarian. I’m with Crystal Creek, Incorporated for Scotts [ph] and I’m a nutritionist. I’ve been a nutritionist for 30 years. I have two vets on staff. One issue that I want to ask -- and I want to thank you very much for the enlightenment that I’ve had here today. I think I’ve got a grip on some these topics. In the example that he told us, if I understand right and tell me if I’m wrong, I’ve heard stated that dietary application for the prevention of a disease, condition or ill health of an animal would classify an item as drug. To me, as a nutritionist, that would securely put all nutrients in to the category of a drug. So I need the clarification since my whole realm of activity and purview with our activities for prevention to benign use of nutrition, how do you approach that with not a -- just using plant nutrients?

MR. MATTHEWS: That’s our definition when we get into structure of -- is it affects the structure or

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
function of the animal other than as a food. So if it’s doing what that nutrient does, you could argue it. If you were providing a vitamin, for example, you are preventing a deficiency of that vitamin. But we would say that’s what that nutrient does. And so that would be still considered a food. But if you went on beyond that and were making, for example, production claims that it was for increased rate of gain, it was for improving feed efficiency beyond the genetic potential of the animal much as you’d expert from the birth point, then that would be considered a drug and that’s where we draw the line in the structure and function world. When you go over into the disease area, we don’t think of -- we’re assuming the animal’s already being fed a proper diet. And then any abnormalities that occur are considered, then, diseases. But otherwise healthy animals receiving nutrients, those nutrients would be considered food.

MR. LAVER: Okay.

MR. CARTER: Okay.

MR. LAVER: I have just one rebuttal or refinement to that. Respectfully, metabolic diseases are not pathogenic diseases. And when you get involved with metabolism or diet such as ketosis, that can be rectified at a preventative level and/or a treatment
level with nutrition. I have a hard time understanding how a nutritional application would be required to be handled as a drug.

MR. MATTHEWS: Okay. We don’t define diseases as just those things caused by pathogenic agents, diseases -- any abnormal condition in the animal. So things like ketosis and milk fever, even though there are preventative steps that you can take to maintain the animal from getting into an altered disease state, that’s not the same as what we would consider for preventing a disease where we’re -- when we know the animals are likely to develop a diseased condition and we’re putting in place ingredients other than nutrients to keep them from acquiring that diseased condition.

MR. CARTER: Okay, Dan, I’ve got to cut it off, because I wanted -- we need to kind of see where we head from here. So, Kim?

MS. DIETZ: I’m first?

MR. CARTER: Yeah.

MS. DIETZ: Okay. What I’ve been hearing and just jotting notes down, first of all, we all understand that other regulatory agencies supercede the NOP rule, so that’s a given. And similar to food, where FDA regulations take charge, whether it’s a food or vitamin or anything, we still have to comply with FDA
regulations. So I think that’s kind of an area that we haven’t really grasped prior to this point for the livestock. I can see this going two ways, but we have definitely have to restructure the livestock category. We can go the crossway where we generalize specific uses and whether that’d be livestock health, or similar to processing, where we just say synthetics allowed and it’s a given that FDA supercedes our materials. And that’s probably the area that I would recommend. There’s -- if you look at the list -- the national list, it just says synthetics allowed and there’s no category to what food group or products that you allow this to go into, so -- or annotations. And I’ll just sum that up better. It looks like it’s very doable and we can fix it very easily with the materials that make it back and make those recommendations.

MR. CARTER: Okay. George?

MR. SIEMON: Well, my concern is just the timing about all that. So my question is our we going -- what is NOSB’s role in this process? And I think you left out any potential cleanup of annotations.

MS. DIETZ: Yeah.

MR. SIEMON: And so I think, you know, my question is this is really time critical issue. What is it we can do in the next few days -- what is necessary
for us to do in the next few days? And this issue is getting quite old, so if we can resolve this -- is an action needed by NOSB in the next few days to go through the annotations and to revisit these titles and make recommendations? And so I would really like to look at our agenda and see what we can do to address these.

MR. CARTER: Well, again, the question, what can we legally do if it’s not on the agenda. So, Richard, let...

MR. SIEMON: I mean, this is an issue -- this letter is June 23. And the issue is solvable and it’s a top priority.

MR. CARTER: We’re current. And Richard Matthews.

MR. MATTHEWS: We’re currently working on a livestock -- if it’s the will of this board, we will take out the categories and what we’ll do is we’ll go back to the draft document, take the categories out and write in what we’re doing and why we’re doing it and then move on. So, I mean, that docket we’re working on. Whatever the Board wants to do, if you want to change the categories, you want to remove the categories, tell us what you want to do and we’ll put it into the docket we’re currently working on.

MR. SIEMON: But the annotations are also part

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
of this, correct?

MR. MATTHEWS: The annotations are a part of it, but it may be something that has to wait. But at least on a category issue, we can fix that right away.

MR. SIEMON: But the point is...

MR. MATTHEWS: And that’s something we could do right now with the docket we’re working on.

MR. CARTER: The question I have from a procedural point is what are we allowed to do at this meeting when this isn’t part of the agenda?

MR. MATTHEWS: That’s a good question. We may have an answer for you tomorrow.

MR. SIEMON: And what about if we need a general disclaimer stating that’s what I’m hearing? I don’t think you need to put it up for each material, we just need a general disclaimer within FDA permitted rules. I think that -- well, covered the department rules, on it’s law, on it’s...

MR. MATTHEWS: When it comes down to that, we’ve already -- we’ve already fought that battle with the attorneys when we were doing the rule making process the first time. There is a concern that if you put in in compliance with FDA or in compliance with the EPA, maybe we missed APHIS or we missed FDA in a spot where we should’ve included FDA. So in reality, I would say...
you got to do it in compliance with all the laws. Now, we’ll get -- and go back talk to the attorneys about is whether or not we want to -- not in the national list part, but maybe in the very beginning of the regulations, a new section or a section -- or a subsection within the sections -- talk to the attorneys to see if they would go along with the idea of breaking up the sizing of what’s in the Act within the regs. What is already understood -- I mean, the Act -- with the regulations what you do is implement the Act, and the Act already says you have to do it in compliance with everything else. The problem we run into is some people don’t quite fully understand that and we’ll just have to keep reemphasizing that.

MR. SIEMON: But I’m agreeing with you, but I’m going to react to Barbara’s saying what we got to do is say as the law applied by FDA. I think it is coming already. and the foundations of the rules and the law -- that is already a given. So, Barbara, earlier you were saying this is what we needed is to go over our itinerary -- specific statements.

MS. DIETZ: We’re getting into old habits and we’re taking the cart before the horse again. We have -- you have a docket of approved materials that you’re going to publish anyway. We have materials that are not
on that docket and we need to fix this. And we need to, as a board, come up with the recommendation that we all agree on to make those changes on those next written materials, so...

MR. MATTHEWS: I don’t understand what you’re saying. I’m sorry.

MS. DIETZ: You have materials on the docket that’s going to come out that I would assume are -- do not include some of the materials that we’ve had problems with the annotations on...

MS. ROBINSON: Correct.

MS. DIETZ:...correct?

MR. MATTHEWS: Okay.

MS. DIETZ: So as board and a committee, the materials committee, especially, we can come up with a recommendation of what we recommend to do to the national list and the we have re-review those materials and come up with corrected annotations based on our recommendation. Does that make sense to you? I don’t think we can fix the materials that we have problems with today.

MR. CARTER: No.

MR. MATTHEWS: No.

MR. CARTER: We’re at this meeting because of the public comment and everything else. I mean, again,
we got to follow...

MS. ROBINSON: The USDA can fix the docket in respect to the categories. We do not -- this is a proposed rule, it’s going to go out, you know, comment can be received on it. It does not require the Board to tell us please take the categories out of the program -- the rules. We can go ahead and do that. We have the authority to do that, and then take comment on it. If it makes you nervous, the Board is free to pass a resolution -- here’s the sense of the Board. You can do that even at this meeting -- sometime at this meeting. But you also -- one point I’d like to say is we don’t want to really get into public comment and debate. We had an agenda to hear from the TAP reviewers and kind of keep this thing going along.

MR. CARTER: We’re trying to get there.

MS. ROBINSON: So I’ll sit down...

MR. CARTER: Okay.

MS. ROBINSON: ...and shut up.

MR. SIEMON: We were supposed to have to give you the summary of our passport visa [ph].

MS. ROBINSON: Of your what?

MR. SIEMON: Of the passport -- where we -- then I’m not clear yet. I’m sorry.

MR. CARTER: Well, I think we need to have
probably a livestock committee meeting here during the
day, then come back with something before adjourn, and
then the recommendations on how we move this forward,
so...

MR. SIEMON: To deal with specifically with
the subtitles, but not the annotations?

MR. CARTER: Well -- yeah. This is committee
work. Okay? We need to take this to the committee and
figure out -- given the process that we have to follow
and the train wreck that we’re in now, how do we get of
that. Okay? So -- okay. All right. I am going to
declare a seven minute recess and we will get back to
our...

MR. CARTER: Okay. Rose, Jim, it’s coming up.
Kevin, Dennis, Mike. Okay. Go ahead.

MR. FORSHEE: Thank you. This mike? Yeah.

MR. CARTER: Yeah.

MR. FORSHEE: First of all, thank you very
much for the invitation to speak here today. My name is
Richard Forshee. I am the associate director and the
director of research for the Center for Food and
Nutrition Policy at Virginia Tech. We’ve been doing TAP
reviews for I believe it’s about a year and a half now.
And we’ve been asked to come here today and talk a
little bit about our experience and our thoughts on what
can be done to improve the process. I’d like to begin
by just briefly telling you a little more about the
broader mission of the center and what we do, because I
think it will help put some context on how we view this
particular process and how we come to some of our views
on how to the process can be improved. CFNP is an
independent, non-partisan academic research center in
the College of Agriculture and Life Sciences at Virginia
Tech. The mission of the center is to advance rational
science based food and nutrition policy. We are
recognized as a center of excellence in food and
nutrition policy by the Food and Agriculture
Organization of the United Nations. And our areas of
focus are in food safety and nutrition. We conduct
research, outreach, communication and education on a
variety of issues within our areas of expertise. This
includes doing statistical analyses of national surveys,
look at consumption patterns, it includes international
education programs for dignitaries from foreign
countries, risk analysis programs that we’re doing with
the FDA, a variety of things in these areas. All of the
Activities that we do at the center eventually come back
to policy. We believe that better analysis is going to
lead to better policy, eventually. It’s not always a
straight line, but if you get better work out there,
better data, you’re going to lead to a better policy outcome. We conduct original research to address questions that are relevant to current food and nutrition policy. We communicate our research through peer review publications, scientific conferences and comments to national and international policy makers. This includes the Food and Drug Administration, the US Department of Agriculture and the World Health Organization, as well as state governments. We also host conferences, roundtables and lectures to bring together scientists, policy makers and stakeholders to foster better communication on this issues. We provide policy analysis through comments, essays and presentations. However, it’s important to point out that we are not policy makers. What our role is is to help stakeholders understand what the issues are and what the consequences are for the various policy alternatives that they face. Providing TAP reports for the National Organic Program and the National Organic Standards Board, fits very well with the overall mission of the Center for Food and Nutrition Policy, because we see that this project is that implementing an important food law in a manner that is faithful to the legislation in order to produce useful information to consumers and an objective and transparent process for stakeholders.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
In our view, the role of CFNP as a TAP reviewer is to provide factual and scientific answers in an objective manner so that NOSB and NOP can make informed judgments on the petitions they receive for the national list. We do not believe that it is appropriate for CFNP or any TAP reviewer to make value judgments on either specific substances or the philosophy of organic farming. That is a role that congress took on when they established the guidelines for it and that is the role that the National Organic Standards Board has in representing stakeholders to try and see that the law is properly implemented. The role of TAP reviewers, in our opinion, is to facilitate the implementation of OFPA based on the legislation and the regulatory guidance provided by the USDA. I also want to talk briefly about some of our activities in other areas of regulatory policy. In addition to working as TAP reviewers, where it’s our job to take petitions and provide the necessary background information for a regulatory decision to be made, we have also worked in situations where our work is used as part of a petition to another agency. In particular, some of you may be aware FDA has recently released interim guidance on qualified health claims for foods. We are currently preparing an evidence a summary of scientific literature that’s going to be used for a
qualified health claim that will be submitted by a
collection to the FDA. As part of the qualified health
claim project, we developed a rigorous method for
conducting an evidence based summary of the scientific
literature that conformed to the interim guidance of the
FDA, and we also presented this approach to a panel of
external experts for validation, and we include
extensive internal and external quality control in the
process. One of the reasons that this is important to
mention today is it shows how the process of regulatory
guidance can be used to develop a systematic approach
that can then be applied by a wide range of groups. The
process that we’ve developed for implementing a
qualified health claims reviews is going to be submitted
as a manuscript to be published so that other people can
see the systematic approach that we put in place that we
believe allows other people to easily replicate this
work and come to the same answer based on the available
scientific evidence. It’s also important that doing
this project has helped provide us with firsthand
experience in how petitions are put together in other
regulatory contexts. It also provided an example of how
regulatory guidance, even interim guidance, can put
flesh on the bones of legislation in order to improve
the consistency, objectivity and transparency of the
regulatory review process. What we have learned in our experience with qualified health claims is that the petitions for qualified health claims are expected to be much more detailed than those that have been used to date in the TAP review process. The petitions for a qualified health claim essentially represent the petitioner’s best attempt to address all of the standards that have been set forth in the interim guidance. This includes among other things a summary of the scientific evidence, evidence summary tables to say what the body of evidence suggests about the claim that they wish to make, it also includes copies of all of the scientific articles that are referenced in the petition. So the petition says these are all of the articles that we have found. Here are the copies for FDA to then go and do further review. The petitions also address some of the legal questions that were discussed at the meeting earlier today. The people who are submitting the petitions to FDA do go through a section where they identify, for example, that the food that they want to use the label on meets grass standards. And there are a number of other legal questions that the petitioner addresses when they are submitting the document to the FDA. And finally, the FDA has an initial screening process that they use to ensure that the petitions are
complete, and that they also define explicit criteria that will be used to prioritize the review of the petitions. For example, qualified health claims that would affect a broader segment of the US population receive greater priority in terms of where in the queue they will go for review. Petitions that include consumer research to demonstrate that the claim that is proposed will be understood by consumers and will not be misleading as it’s presented also are going to get higher priority when the FDA is considering how to use its scarce resources in evaluating petitions that come to it. The FDA’s interim guidance for qualified health claims is also quite extensive. And this is most of it. This is to implement -- this is the extra guidance that FDA has given to people who want to submit petitions, to give clear guidance as to what all the standards are that need to be met and what objective criteria are going to be used in order to evaluate them. We’re not here to suggest that you adopt something like the FDA’s qualified health claim criteria. However, based on our experience with the TAP review process with the qualified health claim’s regulatory guidelines that we’ve had experience with as well, and with other regulatory policies used that we as a policy center have been involved with, we will respectfully offer some
suggestions for petitions, the statement of work and regulatory guidance as you asked me to today. Let me begin with some general comments on the regulatory process as we’ve experienced it. First of all, CFNP would appreciate additional regulatory guidance to make the process more consistent and transparent. I’ll go through some of the specific criteria later to talk about some of the issues that we view as particularly troublesome. But in general, we would like more guidance in terms of definitions and objective standards that we can use in order to determine and help you to determine whether the criteria in OFPA have been successfully met. We believe that the TAP reports that we submit should provide concrete objective information and avoid value judgments. We believe that on each of the criteria that we need regulatory guidance that establishes clear objective standards. As TAP reviewers, we would appreciate additional guidance on the expectations for reports and a way to clearly establish what constitutes a complete and satisfactory report. We need a better understanding of what are the minimum requirements that we need to meet. We will always try to exceed that, but we need to know what the minimum standard is in order to reach it and we also need to know when we’ve reached the finish line, when we
have done enough on the report to provide NOSB and NOP with the information that they need to make an informed regulatory decision on the substance that has been petitioned. Guidance to simply focus on the criteria of OFPA has, in our opinion, not been sufficient to -- sufficient guidance for us to successfully address all of these criteria. Because some of the questions in the criteria have not been clearly defined, we need better definitions, and as mentioned, we need more objective standards against which we can measure a substance. CFNP would also find it useful to have lines of communication between NOSB, NOP and the Center for Food and Nutrition Policy more clearly defined and consistently maintained. Communication is always difficult when you have large organizations with diverse memberships, but there has been some confusion in the past over whether communication to CFNP should come from the National Organic Program or the National Organic Standards Board, whether there should be a single point of contact on each, and there have been occasions where the communication has not been as timely as would be helpful for us to complete the project on the timelines that we’ve dealt with. Furthermore, the communications have sometimes consisted of forwarded e-mail that contains a complicated mix of messages. It can be

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
difficult for us to sort through the whole set of messages and find out just which point it is. So to the extent that we can get a single point of communication and clear messages as to what needs to be done on the particular substances, that would be very helpful for us at the Center for Food and Nutrition Policy and we believe it would be helpful for other TAP reviewers as well. Another issue that begins to touch on trying to manage the process of doing TAP reports is that it would be useful if we could have more consistency in the timing and quantity of reports in order to maintain proper staffing levels and appropriate quality control at the center. As an organization, we could plan to do about 10 TAP reports a year or we could plan to do about 20 TAP reports a year. We could plan to do just about whatever number you choose, but what becomes difficult for us as an organization is if we plan for, let’s say, 20 TAP reports and we only get five in a given year. Because of the way the payment for the TAP report are structured, we need to have a rough idea how many we’re going to be receiving so that we can keep the appropriate specialist on staff to help with doing the reports. Let me be very clear that we recognize that some of the issues regarding the timing and quantity of TAP reports are outside of the control of either NOP or...
NOSB. And we are happy to work to manage the situation as efficiently as possible and we have already taken steps in order to try and do that. All the faculty staff that work on TAPs reports at the Center for Food and Nutrition Policy have multiple projects that they’re engaged in, so we’re able to shift people to other projects when there isn’t a crunch of TAP reports and bring them back on to focusing on TAP reports during times when we do need more focus. And we do utilize some temporary staffing when we receive high volumes of TAP reports. However, we think it’s essential to maintain some expertise and continuity on the faculty and staff so we have people who have had experience on this and that we have people who have the necessary set of professional qualifications in order to do this. So again, we are very happy to work with NOSB and NOP to see if we can find ways to better understand what the volume of work is going to be so that we can keep the right people in place. I also want to mention that TAP reviewers need to be given as much lead time is as possible to prepare the reports. In the statement of work for this particular project, 262 days is specified from the time that a TAP report is given to the TAP reviewer until the report has to be presented. I can say that the CFNP has never had anything close to 262
days in order to complete an assigned TAP report. We also recognize that that’s probably not a feasible number for any TAP reviewer to expect. We understand with the nature of your work that you’re going to need quicker turnaround than 262 days. And we’re very willing to work to meet the needs of you, our partners. But again, we need as much time as possible in order to produce a high-quality report, so if there are ways that we can work together in order to make sure that we’re given as much lead time as possible to prepare the kind of report that you need to make a decision, that would help with our project. I have used specific comments on the petitions themselves. We believe that it would be useful if the petitions could be more detailed and consistent. We have had petitions range from a half a page to several pages in length that provided lots of detailed guidance. The more detailed and consistent the reports can be, the better we’re going to be able to respond to the questions with regard to that substance. We also think that it would be useful if the petitions began by addressing the criteria themselves and providing some guidance to us as to what the evidence might be supporting whether that criteria is met or not. Instead of having the TAP reviewers begin and do the search trying to get into the mind of the petitioner as

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
to why they think this is consistent with the OFPA, if we could actually have guidance from the petitioner saying we believe this substance is consistent with OFPA, because it meets each of the criteria in these ways and here is some of the evidence that we believe supports that, that then allow us as an independent third-party reviewer of the information to verify that information, compare it to the objective standards that hopefully we’re able to work together to set and determine whether or not this petition is meeting the criteria and objectives of OFPA and the entire organic project. We also think it’s important that there be different petition formats for crops, livestock and processing. Some of the issues in each of those areas do differ. We understand that some work is already ongoing on that and we look forward to seeing the result, but we do want to emphasize that from our perspective it would be quite useful to have different petition formats for the different areas. One consistent and serious problem that we’ve run into at the Center for Food and Nutrition -- pardon me -- one problem that we’ve consistently run into at the Center for Food and Nutrition Policy is that acquiring confidential information can be quite difficult. In particular, some of the information on how the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
substances are manufactured, those can be confidential procedures and oftentimes it is difficult for us to get manufactures to share with us or to develop some sort of blinded process through NOP, NOSB or some other agency that would allow us to get the information that we need to answer some of the criteria. If we could work with NOSB, NOP and petitioners to develop some sort of systematic way of handling confidential manufacturing information, it would make it easier to provide the kind of information on environmental impact and other issues with the criteria. Alternatively, if we’re unable to develop a good system for getting that sort of confidential information available to the TAP reviewers, it should be recognized that TAP reviewers should attempt to get this information on manufacturing processes, but there should come a time when the TAP reviewer can document that they have made all valid attempts that they could to achieve the information, where they’ve contacted, when they made contacts, who they tried to contact in order to get the information. And then it should -- we believe it would be useful for the TAP reviewers to then be able to flag that report as incomplete and say we simply were unable to get the confidential information that we needed to completely address the issues on this substance. And then once
it’s flagged as incomplete, to have help from NOSB, NOP
or the petitioners to try and address that lack of
information. It would also be useful to have more
information on the uses of the substance, including
information on the specific uses that are envisioned by
the petition, other uses of the substance and as well as
specific examples of how this substance has been used,
specifically in organic agriculture or how it’s intended
to be used in organic agriculture. I was very
interested in the discussion that we saw earlier today
with the FDA and the issues of making sure that the
substances that are petitioned for use under OPFA are
consistent with all existing laws and regulations. As I
mentioned, in some of the other activities we’ve been
involved with, qualified health claims, a screening
process has been set up, in that case at FDA, in order
to evaluate petitions before they go on for further,
more detailed review. We do believe that it would be
useful to have a screening process established by NOSB
and the National Organic Program to determine that
petitions are complete and that the proposed substance
and use do not violate federal law. We do understand
that some of this is already being implemented. And as
I said, I found the discussion earlier today to be very
interesting and useful. We encourage you to continue to

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
work to help make sure that a screening process is put in place that will help to guarantee that the petitions that go out are ready for review by the TAP reviewers and that we don’t have a waste of resources with doing TAP reviews on substances that would not be allowed to be used because of other federal laws. We also have a few specific comments on the statement of work as you requested us to address. The terms used in the criteria need to be clearly defined and objective standards need to be established on which to judge whether each criteria is met. Again, we believe that these standards need to be established through regulatory guidance, so that value judgments and personal opinions are irrelevant to the evaluation of a substance. In our opinion, the evaluation of a substance should be the same regardless of which TAP reviewer it would be assigned to. In our view, we believe that it’s important that when a substance is evaluated any reviewer can point to it and say this meets the standards, because it meets these specific objective criteria and here’s the evidence, or it does not. We believe it’s also important that the standards be clear to all stakeholders, whether someone is an organic consumer, whether someone is an organic producer, whether is a policy maker in this area. The standards
should be clear enough that people can have a reasonable expectation of what is likely when they submit their petition, and furthermore, they should have some assurance that because there are objective and transparent standards, that the decisions that are reached on these substances would be more defensible in the event of legal challenges. We believe that separate and distinct regulatory guidance needs to be issued for crops, livestock and processing. The issues in the three areas are very different and the TAP reviewers need guidance on each one. So as regulatory -- as you can develop regulatory guidance, if you can think about how the regulatory guidance needs to be different for each one of the areas, that would be very useful to TAP reviewers. We also recommend that a system should be established to provide more consistent and constructive feedback to improve future reports. We understand that NOP and NOSB are developing some forms at this moment that may help with some of the feedback process, but we are very interested in finding out what parts of our reports are successful and useful for the regulatory decisions that need to be made, as well as the parts of the reports where there have been problems, and a consistent means of providing feedback on the reports would be useful for us, both as -- I mean, quality
control, as well as a means of improving our work going forward. As I mentioned at the start of the discussion, the lines of communication need to be clearly established and maintained, in particular, we believe the TAP reviewers need to know whether the assignment or petitions will come through NOP or NOSB and who’s direction to follow about whether to proceed, put on hold, additional information that’s required, again, some way of making sure that TAP reviewers know whom to turn to with questions and who to listen to as they get additional direction about how to conduct a particular report, it would be useful. As I mentioned, additional regulatory guidance helps to establish more objective criteria are really the heart of what we think could help to improve the consistency and transparency of this process. I’m not going to go through at this point all of the criteria and talk about exactly what we think the regulatory guidance should be. Frankly, I don’t think it’s the place of the TAP reviewers to say exactly what that guidance should be. I think that’s a project that needs to be addressed by all the stakeholders that are involved. However, I will suggest a few examples to show you where we have had difficulty implementing some of the criteria and coming to a recommendation about whether a particular substance does meet particular...
criteria. For example, in criteria one, from crop and livestock. The potential substance for detrimental chemical interactions with other materials used in organic farming systems. There are a couple of issues in there where guidance could be useful. To start with, it can be very -- it can be impossible to address every possible interaction between a substance and all of the materials that could possibly be used that have been identified as used in organic farming systems. So some regulatory guidance on how to focus or limit the search for which interactions are important, which are the ones that are of the most concern to either the petitioner or the Board or the National Organic Program, would be useful. Also, the statement as it’s written, in our view, doesn’t provide an objective standard by which we can determine when the line has been crossed in terms of detrimental chemical interactions. We can define what the chemical interactions are going to be between a proposed substance and substances and materials that are used in organic farming systems. But determining whether something is so detrimental that it fails the criteria is not as clear to us from that statement, whether this means none is allowed, that no detrimental chemical interaction could be allowed, a little and what a little would mean or it depends on other pieces of the
criteria. So regulatory guidance that helps us better understand what the threshold is for a particular criteria would be useful in helping to make sure that we provide objective TAP reports that others could look at and come to the same conclusions. Again, briefly on point two, the toxicity and mode of action of the substance and of it’s breakdown products or any contaminants and their persistence in the environment. We can provide objective reports on the chemical and environmental properties of a substance and how it breaks down while it’s in the environment. That’s something that can be provided objectively that everyone could come to the same conclusion about. But as we read the criteria currently, it does not provide guidance about what level, if any, is allowable. And again, it goes back to the question, is this criteria going to fail to be met if we demonstrate that there is any amount of toxicity as this substance breaks down in the environment, is a that the criteria? Or where should the line to be drawn on in guidance on that, we believe would be useful. On point three, one of the -- point three is the probability of environmental contamination during manufacture, use, misuse or disposal of a substance. One of the issues that we’ve had with that criteria is the term misuse. It is difficult to
determine all of the possible ways that someone would misuse a product. Guidance on whether we’re to look at what would be a likely misuse or how we can limit that, how that term of misuse should be applied in this particular case, we believe that more guidance would be useful. And finally, the most difficult -- the most difficult criteria that we have faced in terms of trying to come up objective standards that we think could be defensible based on the evidence that we could provide, has been the question of compatibility of the substance with a system of sustainable agriculture. There are a number of terms in there that could stand additional definition from our perspective, and guidance on how to determine what that capability is without having to rely on a value judgment of the particular TAP reviewer, we think would be useful and would improve the transparency of the process, as well as the defensibility of regulatory decisions that are made should any legal challenges come along. I also want to give an example of a criteria that we think is quite well laid out in the current system. Under the criteria for processing, point five establishes the criteria that a substance should be graphed, considered generally recognized as safe by the FDA when used in accordance with good manufacturing processes and contains no residues of
heavy metals or other contaminants in excess of FDA tolerances. So this clearly defines what standards are being used to evaluate this question and it gives reference to an objective standard that can be used in order to determine how much is too much. And that objective standard in this case is in excess of FDA tolerances. So now on this question, any TAP reviewer can go through, determine whether the substance is on the FDA grass list, when it’s used according to the good manufacturing processes. And good manufacturing processes have been clearly defined in other areas. And then it says what the threshold is that would move a substance in violation of this criteria. So we believe that is an example of a criteria that can be implemented consistently by a TAP reviewer based on evidence about the substance. In conclusion, I want to say that CFNP is committed to making the TAP review process successful. We’ve gained valuable experience from our previous reports and we have also just brought on an additional project manager to assist with TAP reports. Ms. Gail Heim, who is in the audience today, has several years of experience with environmental chemistry and EPA regulations, as well as an undergraduate degree in human nutrition. Combined with the rest of the experience that we have at CFNP, we believe that our experience and

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
knowledge base in food safety, nutrition and animal health can provide an excellent breadth of knowledge for continuing to work with you on the TAP reports. Thank you once again for this opportunity to share our thoughts with you. And I would be happy to take any brief questions, or if we need to move on to the next person, Dave, we might as well.

MR. CARTER: Okay. Dr. Forshee, how -- what's your timeframe here? Because I understand you may be under kind of a time crunch to...

MR. FORSHEE: Yeah. We've actually been able to squeeze out a little additional time, so I have some time that I can stay. How late are you...

MR. CARTER: Okay. Well, what I want -- you know, in an ideal world, I think it'd be good to go through the other -- to have OMRI come up and give their presentation, and then we could ask some general questions, so if...

MR. FORSHEE: We can stay until after that presentation.

MR. CARTER: Okay. We'll be...

MR. FORSHEE: Okay. Thank you very much.

MR. CARTER: Then I would like to have OMRI. Emily Brown-Rozen or Dave Decou or...

MR. DECOU: Hello, this is Dave Decou.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. CARTER: Okay.

MR. DECOU: I’m introducing the OMRI presentation.

UNKNOWN: Hold the mike up, Dave.

MR. DECOU: I thought you wanted me to lean over.

UNKNOWN: No, we got a PowerPoint and we just go to get...

MR. CARTER: Okay.

MR. DECOU: Yes, there will be a PowerPoint in a minute. While that’s beginning, I’d just like to introduce OMRI, who many of you probably think you know what it is and I’m not sure you all do know what it is. First of all, the three of us who are presenting today, many of you met Emily Brown-Rozen. She’s the policy director of OMRI. She’s previously worked for -- New Jersey. She’s worked for the OTA, involved with the American Organic Standards creation. She’s been a materials advisor to the Quality Assurance Counsel of the OTA, and many, many other projects involved in the organic industry. Richard Theuer is a previous member of the NOSB. He’s been involved -- heavily involved in your processing industry -- food processing industry and he currently has a consulting firm of his own and he’s recently joined the Board of directors of the Organic

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Materials Review Institute. He’s also a long time member of the advisory council at OMRI, as to give a deeper scientific background on various issues. I happen to be an organic farmer. I have also spent the first six months of this year as the managing director of OMRI in the process of mentoring a new executive director who came -- started working in January and has now taken over as executive director as of July 1. And I’m no longer employed there, but I am on the Board of directors. And point of fact, I’m on the Board of directors of the organic -- the Grohn [ph] Company in Eugene, Oregon. I’m on the Board of directors of the Organic Trade Association and the Board of directors of OMRI. And as you probably figured out, I’m thoroughly bored. What -- as a farmer, I’ve watched this industry for 20 years and I really do want this industry to continue in the vein that it started with, which -- well, not all the veins. There’s been too much discussion about too many things and it’s all been redundant, but let’s find a way to move ahead and be consistent with our history.

MR. CARTER: Could you repeat that, please?

MR. DECOU: I can’t remember what I said.

MR. CARTER: That’s all right.

MR. DECOU: Thank you, Dave. I do want us to
come up with a thorough and a transparent process, and
to get truly objective standards that we can all
understand and agree with is difficult, if not beyond
that. But I do want to be able to have those standards
also to apply to when we prohibit a material, as well as
add a material. Obviously, the TAP review process is
crucial. We need to do it well to maintain the
integrity for our customers. How do we get there?
That’s slide three. I’d like to be at slide two. OMRI
as an institution is a non-profit 501C-3 -- okay. Maybe
my order’s different than theirs, but we’ll go on.
501C-3, research and education organization. We have a
board of directors that is intentionally made up of a
diverse portion -- wow, that was pretty -- of the
industry. We have a certain number -- we have a minimum
number of certifiers, a minimum number of farmers, we
have a minimum number of processors, a minimum number of
input suppliers and a minimum number of public interest
people on the Board. So as we move through we try to
make contact with as many aspects of the industry as we
can so we don’t over-shift ourselves. We also guarantee
that we have more certifiers than anybody else, so
they’re considered to be more objective than the rest of
us, and I won’t take discussion on that point. The
primary focus of OMRI at this point is objective

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
material review. Our mission, as put up there,
professional independent transparent review of materials
compatible processes allow to produce, process and
handle organic food and fiber. That’s really our focus.
It shows up in our main activity, which is brand-name
review of products appropriate to be used in organic
processes, whether it’s farming processing or livestock
production. We are a former TAP review contractor. We
no longer do TAP reviews. We finished our last one in
October a year ago and we have no intention of doing TAP
reviews in the future. Point of fact, it makes our life
much too complicated because of the brand-name review
work that we do. We have to be extremely knowledgeable
in the materials world, but we cannot be on both sides
of the fence in advising ourselves. It becomes much too
much of a conflict of interest, which, you know, most of
us know how hard that gets to be. So we have
consciously as an organization decided to no longer do
TAP reviews. OMRI historically is very appropriate --
from our history is very appropriate to advise on this
because of all the TAP reviews we’ve done. Many of them
we did very well. I think there are probably a few
arguments about a few, but in general, we’ve done a
fairly good job. We still are heavily involved in the
materials issues of the brand-name -- brand-name review

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
projects that we do and is the main source of funding for our organization. Our brand-name review work requires us to maintain -- the next slide, please -- a generic materials list, which is considered to be consistent with the National Organic Program’s national list, but isn’t always identical in the fact that we will probably have some naturals in there, whereas the national list only contains those things that are synthetic and/or prohibited naturals. But we have a larger list that we consider to be more user-friendly, and that’s the intent of them. And if you have advise on how to make it more user-friendly, we’re always willing to listen. We review inputs and ingredients to see if they’re consistent with the rule as the NOP has presented it. That means it’s not that we are certifying anything. It’s quite hard to not use that word. People still throw it at us, but we’ve tried -- it’s consistent with the national rule. When we have a brand-name product and say this is OMRI listed, we’re saying that it is consistent with the national rule. We also make no claims to say that we have all the brand-name products listed. We’re only doing it for those that passed to do it. We maintain a third-party distance from everything and we are able to work beyond some of those confidential business material issues.
because of the standards that we maintain in the
organization. Everybody’s got a very strict contract
that they sign around that issue. We also do a lot of
work consulting with certification bodies, government
agencies and international organizations. Our people
travel all over the world to help set up -- and we work
with IFON [ph] and so on. At this point, I want to turn
the mike over to Emily, who’s going to talk about
enhancements to the program -- to the TAP review
program, guides, petitioner, and then Richard Theuer
will take over and talk about how there’s quality
improvements that might be done.

MS. BROWN-ROZEN: Hi, I’m Emily Brown-Rozen,
the policy director for OMRI, which you all know, I’m
sure, by now. Thank you for inviting us to speak. This
is a great opportunity for us and we really appreciate
it. I just want you to realize that I brought my two
big-guys with me, so if you have any problems with
anything I say, you can talk to them, okay? Okay.
Well, let me give a little brief overview of what I’m
going to cover here and that is -- there’s just these
little points here that -- enhancing the petition
process overall, including the petition itself. The
next big step we see that needs some work is the
screening process that Dr. Forshee talked about quite a
bit. I think we actually have a lot in common with some
of the points that he made, so I will be reinforcing
that. The statement of work and the guidance for the
contractors and then a little bit about the decision
process itself as -- once it goes out of the TAP
contractor’s hands into NOSB’s hands. Okay. Next,
Dave. Okay. First of all, with the petition
guidelines, the notice that’s in the federal register
from July of 2000, is the official notice to the public
as to what constitutes a good petition. And this is --
you know, I think it was actually a pretty good document
at the time. It’s now -- the rule has been finalized
since that was published. So this came out before the
rule was final. So we need some updating in terms of
reference to the existing regulation. It doesn’t
mention, you know, the section numbers or, you know,
that they’re actually in the rules, so it would be
helpful to update it and mention that. It also -- it
would also really help to include the Actual
prohibitions as are spelled out OFPA, because it’s not
fair to petitions what’s just definitely off the table.
You would hope they would take initiative to go look up
OFPA, but that doesn’t seem to have prevented a lot of
petitions from coming in the door. They’re just, you
know, categorically, you know, not allowed. So that
would be helpful to have that in there. Also, it should reference the permitted categories, because there’s a specific pretty narrow list of permitted categories for production, crops and livestock, particularly. And so if it doesn’t fit at all into any of those categories, it’s a tough call -- you know, it’s another, you know, sort of pointless petition. Okay. The other things that need updating there is the processing criteria are not included in that petition notice. There’s just a reference that says call the NOP office if you want to find out what they are, so it would be easier if they were right there. The livestock criteria, it just -- it mentions the general of the criteria, but now that the Board has done work on elaborating what -- how to apply the livestock criteria to livestock materials, so it would be good to fill that information into the document, too. Then, again, on your point 12, which is the justification statements in the petition, Dr. Forshee made his point. The petition should address the specific criteria that applies to them. Right now, there’s just some general language that says -- talk about, you know, it’s affect on the environment, you know, there’s sort of a summary of the criteria, but if they really -- the petition statement, the justification, should really be trying to justify
according to the exact criteria, it would make the case
stronger in the petitions and it would make it easier
for the reviewers to evaluate the data that they
submitted. There also needs to be a notice in there
that petitioning is not just for adding or prohibiting
materials, it’s also for amending materials. It’s not
clear right now when you read that. There needs to be
an amendment on the language in I think it’s point 12,
again, on handling substances. It talks about -- you
have to provide a justification statement for synthetics
used in handling. But -- so I actually saw a petition
come in with no justification statement and it said,
well, it’s -- you know, it’s not synthetic, you know, so
we don’t have to do that. But the point at issue, that
terminology should really be nonagricultural, because
synthetic and non-synthetic materials used in handling
all have to be on the list and they all should be
justified in the petition. So I think that was a case
where that was before the final rule on that and, you
know, the terminology wasn’t quite with it on the rules
terminology. Okay. Did I hit everything on that list?
I guess so. You moved me on. Okay. So that’s the
petition notice. Now, I think in addition, guidance for
the petitioners would be good and -- so that we get the
best quality petition we can up front and they
understand more than maybe what’s in the dry language of the notice or -- you know, you need a little more explanation. It always helps. So here are these terms. And these, of course, are tough questions and they’re going to take a little policy work. I mean, the Board always is struggling between what is synthetic and what is non-synthetic and -- but, you know, clear examples -- you know, summarize the policy making that has come to point, get it on paper, provide that to the petition and also give examples of things that have been determined to be synthetic and non-synthetic, so they would know how to -- you know, or even if they don’t even need to petition. We see a lot of unneeded petitions coming in that are for natural materials that -- I mean, it actually -- it doesn’t hurt to have them come in and have an official confirmation that it is natural. That’s nice to know. I mean, that can be part of this preliminary screening process. But it’s a really important step. The other really tough one is agricultural versus nonagricultural. I think everybody in the industry is wrestling over where to draw that line and what does it actually mean. So it’s just time to sit down and figure it out and put down some guidelines and draw the line and then, you know, modify it if you have to, but put it on paper. Listing, again,
the categories of permitted substances, you know, go into more detail about prohibited materials and also referencing all the previous NOSB decisions and -- you know, so that people can easily look up what was already petition, was it prohibited. I know there’s some great improvements coming on in the website, which is really good. Hopefully eventually we’ll have it all tied in there or maybe update the spreadsheet database so that you can see what came in when, when it was prohibited, for what reason and it’ll be real transparent to all the petitioners. Okay. Okay. Another thing I think needs clarification is the CBI situation on the petitions. The way the notice is now, it just says, you know, you can do it. You know, if you feel you need to keep this material proprietary, that’s your -- you know, and you’re entitled to do that. And so petitioners assume that -- fine, I’ll do that. But they need to know what happens when they do that. I mean, just clearly spell out who gets access to it. Does it go to the TAP reviewers, does it go to the NOSB, are they supposed to hold it confidential or do they not get to see it at all, just so that everyone knows that, you know, it might cause a delay in their petition, it might cause some difficulties for NOSB to review it, so that they’re aware up front when they make that decision, if they
want to hold a CBI or not, so that we don’t have to argue about it later and they can just be advised, you know, how they’re making their choice to reveal information. Also, that guidance would be helpful to the petitioners on the requirements to document the regulatory status, either on their EPA, FDA -- I should add APHIS to this -- so that they can do the best job of identifying that and save time later when they -- you know, have to consult on that. Okay. The next big topic is what we think is to be a more formalized screening period. Between the time the petition comes in and goes to the contractor, it needs to -- I think just elaborate a little bit more carefully what this screening procedure is. I understand you’re all working on it and that’s always been a little tricky to monitor, because it’s going between committees and NOP and it’s just hard to try track all that. But if we have a more formalized process, I think -- and really dedicate a certain amount of time to that, that’ll, you know, eliminate a lot of unnecessary work later and just make it real clear and transparent to the public, too, what is the status of this material. So in this period an assessment should be made that whether the petitions meet all the of the criteria -- not all of the criteria, but the basic criteria for the prohibited categories and
that sort of thing. And then it does provide for a
better TAP review. Okay, Dave. Okay. Step one of
screening. NOP receives the petition, evaluates it for
completes. Are all 12 points answered, is it -- you
know, seem reasonably complete, and if not, send it back
to the petitioner, you know, set a timeframe for that.
You know, within 30 days we’re going to send it back or
we’re going to say it passes step one. And then give
the petitioner a finite amount to get it back or else
it’s -- you know, it’s got to start over in the queue.
So if you put -- and we do this at OMRI all the time.
We just give them deadlines, you know, and keep things
moving. And if they choose not to do it, then they’re
going to have to wait. So it just help manage the time
there. Step two would be -- I would suggest a joint NOP
and NOSB review of the screening of the criteria and the
prohibited categories. Maybe NOP does it first and then
the materials committee or whoever signs off on it, just
to make sure -- or NOP might not be sure and they might
ask you for your advice, but you should both sign off on
it, I think, because that’s kind of a big step. Is it a
prohibited substance, is it in a permitted category.
And then this goes on the next one, Dave. Is it natural
or synthetic, is it, you know, being applied in the
right slot, is it agricultural or not. And sometimes
these you can’t answer right of the bat, and you might
need to say, okay, we’re going to go to the TAP
contractor, we’re going to get an initial assessment of
this screening and then we’re going to make, you know, a
stage-two decision before we go for a full TAP review,
so we have an informed decision before we spend a whole
lot of money and maybe waste time. So I just think that
would be really -- later on. Okay. Next. Okay. I was
just going briefly run through the so-called prohibited
categories. But this would be the kind of guidance that
could also go out to the petitioner. So if they’ve --
you know, if they’ve got that kind of information, then
this would -- you know, this makes this job easier, too,
for the screening process. But there’s some specific
prohibitions in OFPA in the different categories under
crops -- you know, synthetic fertilizers are basically
all prohibited. Synthetic nitrogen, phosphorus, lime
and potash. Under livestock healthcare practices
there’s a couple of tricky areas in that -- well, no
antibiotics, except therapeutic. And then there’s this
general statement about medication in the absence of
illness, which is always hard when we’re talking about
preventive healthcare practices.

MR. CARTER: You have us a little looking
dazed and confused...

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. BROWN-ROZEN: Oh.

MR. CARTER: ...because that slide is missing from...

MS. BROWN-ROZEN: This slide -- you know, it got slipped out of that, too.

MR. CARTER: Okay.

MS. BROWN-ROZEN: Yeah.

MR. CARTER: I thought maybe...

MS. BROWN-ROZEN: So we can...

MR. CARTER: ...you were just making sure we’re awake here.

MS. BROWN-ROZEN: Okay. I saw you all were shuffling. Okay. Good, you’re reading along.

MR. CARTER: That’s right.

MS. BROWN-ROZEN: That’s fine. Okay. Next one, Dave. And so -- and then this is a similar issue with specific prohibition on handling materials, the sulfates and nitrates -- nitrates. Except for sulfates allowance in wine, we know we have that new amendment to the OFPA. The one about packaging materials that might have synthetic preservatives or fumigants or ingredients known to have levels of nitrates, heavy metals or toxic residues. Now, this -- you know, some of these you may not be able to grasp out of the petition, but we should look at those basic ones for the obvious ones that would
fall out at that point. And then the permitted
categories that I’ve been talking about are the -- that
long specific list that they wrote in to the OPFA. You
know, everything that’s going in the crops and livestock
list is supposed to fit in one of those categories. So
if it doesn’t, there’s kind of question whether it can
be added to the national list. So that’s where we have
a pretty narrow group of categories there. Although,
you might want to spend some time talking about what is
a production aid, because I think that’s been sort of
expanded from time to time to cover things like
potassium bicarbonate for disease control. There’s no
other good category for it that I can think, so -- okay,
next. Okay. And then this is really important to do
this screening on the regulatory status. We thought --
you know, obviously, we run into problems with that. So
developing either a process to get, you know, a point-
person at the other agencies to respond to questions at
this point or, you know, hopefully get good information
from the petition on it, and then if you have to verify
that before you go on to a full-fledged review. That
seems like it would be worthwhile. Oh. And then this
is the last most important thing I think about screening
is that it needs to go in the public record. You know,
you have to point -- make a spot to announce what you’ve
found. You know, if it didn’t go to full TAP review, but you decided it was rejected, then either, you know, NOP notifies them and it gets published somewhere or maybe at your next meeting you say, okay. This is the list of petitions that have been rejected for this reason, so that it’s just real clear, you know, and it got -- and people know why and what happened to it and -- you know, because we’ve had suppliers come to OMRI and say, well, we send in petitions and we never heard about them back and, you know, they could’ve been terrible petitions. I don’t know. But, I mean, it’s nice to have that very public so everyone does know. Okay. Moving on to the statement of work and the contractors. Rich is going to talk in more detail about this, but I have a few points I wanted to hit here. The way the contract’s written now, it requires bimonthly reporting, which I think is actually a good idea, but it takes some supervision. So you need a back and forth -- somebody looking at those monthly reports, and good communication. I think there was a good point made earlier that where are we with the problems, you know, is there a hang-up or does this one need, you know, one question answered and some feedback from the Board before we go further, that kind of thing. So regular reporting and communication I think is good. There’s
nothing in the report that require -- in that statement
of work that really requires qualifications of your
staff people and your -- or your updated -- you know, if
you’re changing personnel, you know, that should be
regularly updated and supplied to the department. The
timeline has always been an issue. As was mentioned in
the contract, it says 262 days. We feel like you need
at least 120 days to prepare a good initial report and
then send it on to reviewers, really. So we tried to do
work in 120 days totally, but it was really tough to get
a really good quality report and have some time for re-
review -- you know, have the reviewers really work on it
further. And maybe sometimes they need a second -- you
know, more questions answered after the reviewers. So I
think, you know, a longer time period is definitely
warranted. How that’s handled, it is difficult. If you
don’t know how many TAP reviews you’re going to be doing
in a certain time period, to hire the number of staff
and be geared up to do the work is difficult.

MS. DIETZ: How long is your normal process
for TAP reviewers to have a document, 30 days?

MS. BROWN-ROZEN: Oh, we gave them three
weeks, actually.

MS. DIETZ: Three weeks. Thank you.

MS. BROWN-ROZEN: And it was tough. Okay,
next. Scope of the review. I think -- oops -- the -- one other thing that needs to be clarified a little bit is, you know, we would always get into to new issues about alternatives. One of the criteria is what are the alternatives for use. I think that and compatibility are the two hardest criteria to answer and they’re not totally objective. I mean, you do have to evaluate sort of the scene, but -- and try and do the best you can with the information you have. But alternatives, you know, we feel they should be done based on -- and this is what we tried to do, is base them on the literature -- solid reports, so we could find how they’re being -- what alternatives were -- not could be used now and what historically have been allowed from, say, older references possibly before this, you know, new product or ingredient was invented. So it’s always good to go back into the historical record of how did people used to make the stuff or how did you used to grow this crop without this. And that would give an indication -- so alternatives also need -- I think there needs to be guidance about it’s not just alternative substances, it’s alternative practices, methods, cultural practice, biological methods, other -- you know, the whole scope there. Availability of the alternatives is difficult to assess. And that -- sometimes you can’t tell. You
know, you an search the literature and there’s, you
know, new stuff out there or it’s being used differently
and it’s very hard to get a very current industry
status. So I think that’s where, you know, there needs
to be additional public comment or maybe other -- if you
want to look at economics of an available alternative,
you might need to commission a specific means for
collecting that information that’s different than the
TAP review, because that’s just really a whole different
area. And also that -- I think -- yeah. So economic
impact should come from the public, it should be a
different source. Economic considerations are really
not mentioned in the criteria in the OFPA, so I think
that’s an additional one. If you’re going to consider
it, that’s a difficult one to tackle. Next. Okay. On
to the decision process. Again, I think we’ve said
these things in general before, but, you know, the whole
-- you know a good process goes a long way, you know,
with having a defensible process and having people
accept the decision. So as much as possible, we can
move towards complete transparency. I think a great
step -- now the petitions are starting to be posted and
I think that’s very helpful and that’s a good step. And
then getting all the TAP reviews posted in a timely way
before the reading so that people can make comments, is
really important. If possible, the committee recommendations -- and then there’s this period after the TAP review is done where the petitioner might be giving more information to the Board, you know, to address some of the issues that were raised in the TAP. It’d be good for that information to be public, too, so it’s all aboveboard and, you know, a good balance of all the information that can be made. Standardizing procedures at the meetings. I think we’ve been working at this on every meeting since I’ve been attending them and it’s come a long way. But I think, you know, it’s time to really narrow it down and kind of follow the same way every time. I know -- and you have proposed some forms to record your decisions in terms of the criteria that are required and that’s fine. It seems very complete, and then it covers every possible criteria you could think of. I think that you might need a different model for arriving at the answers to those questions. I mean, you might want to -- we’ve proposed a decision tree in the past and it’s attached in the back here. To sort of step by step go through the questions and answer them all, and then I think that would be -- you know, you could fill in the blanks on your checklist, hopefully. And you do have to go through it a little differently. Crops and livestock
and processing are all different, so, you know, you have
-- you might want to address that. I think those could
be modified for the livestock criteria now. But if you
go through them all in an orderly way, then I think
whatever forms you need to fill out for NOP will be
easier and you’re flow will be easier, too. I guess
that was what I was talking about, the forms there. If
-- yeah. If you get to a point where there’s not
sufficient information to make a decision, I think there
should be no hesitancy in calling for more information
and tabling a decision and reconsidering it when you
have, you know, good data on hand, and again, adequate
time for comment. Okay, Dave. Okay. Always more work
needed to be done, so I gave you a little to do list
here. But as we mentioned, these guidance’s documents
could really be helpful, so those -- these are the big
ticket issues, agricultural, nonag, synthetic, non-
synthetic. What is an antibiotic? We seem to be
wrestling with that on some of the drug reviews, because
an antibiotic is not like a clearly defined at FDA. You
know, they talk about antimicrobials, the talk about
antimicrobial properties, and I think it might be
helpful to have a little better understanding of when do
we say no on those. Commercial availability is a big
issue of non-organic ag commodities, because, you know,
then you need to know if you’re going to categorize it as agricultural and put it under 60 -- recommend it to go under section 606. How does that -- you know, how does that apply, of if you think it’s totally not suitable. So I think that whole policy development is a big area that would be relative to the list of germinations. Next one. We’re there. Okay. Well, now I’m going to it over to Rich and then I’ll be here to answer questions. Yeah.

MR. RIDDLE: You mentioned the decision tree being attached to the back.

MS. BROWN-ROZEN: Uh-huh. It should be...

MR. DECOU: It’ll be...

MR. RIDDLE: Okay.

MS. BROWN-ROZEN: We have a big hand in that.

MR. RIDDLE: Okay.

MS. BROWN-ROZEN: He’s just giving it to you. He did. Okay.

MR. RIDDLE: Keep us attentive.

MS. BROWN-ROZEN: All right.

MR. THEUER: Well, I’d like to just pass along some remarks that I’m -- how we see a better chance of getting quality TAP reviews. Could I have the first one, please? One thing that we all know is that there’s a limit to our competence in the -- in selecting TAP
review contractors. It may be worthwhile considering having them specialize in the different areas, because not everybody is equally good in crops, livestock and processing. Sometimes I’m approached to be TAP reviewer for crops and I, you know, decline very quickly, because I don’t know very much about soil. Since that is rare to have organizational competence in all three areas, it might be useful to have specialization. The other element that has, you know, in review and actually creating TAP reviews and doing the boiler chemical review of the -- two years ago, now. Some operational and real life experience with the category is very useful in improving the quality of a review. For example, ammonia. It was thought in a statement that ammonia got into food and ammonia’s a boiler chemical. And it turned out it was related to a refrigeration leak in a plant. It was not related to the use as a boiler chemical. But, you know, one has to know about plants and what happens to get that. Could I have the next?

TAP reviews are created by investigators. Investigators who are new to the business, in a sense, need to be trained, they need -- and either take time to develop competence -- and time when something’s not a good commodity and you need them too quickly. The other option is to have a training program. And so it might
be useful to consider having a requirement for a training program. And the problem is, the current contracts do not fund training. But if you have competent investigators -- and this is a point that’s been made before -- they need sufficient time to do quality work. I’ve tried my hand at doing a TAP review or two and I figure it’s 15 to 20 hours of grinding it out, digging into the literature, going and doing it. Well, that means two, maybe three a week if you really push it. And if something comes out of the sky with 5 or 10 or 15, it’s difficult. You can’t keep a timetable when you don’t have a steady rate of work. Could I have the next? Providing a complete petition. This has been dwelt on before. The one area you assume is that the processor -- the petitioner knows his system better than anybody else does, so he should know what alternatives might work, he should know what alternatives have been tried. And we all know of TAP reviews where the petition was so complete, it was a joy, and others where, as someone said, it’s a two-page document and there’s almost nothing in it. Another aspect of completeness is one you might get a chuckle out of. I’ve seen a document come in as a TAP reviewer where at some point in the system someone tried to save money by printing it on both sides of the page. Well, they faxed
it. And it’s very difficult when you only have the odd-number pages to find out what was going on. Could I have the next one? Now, we’ve talked about TAP reviews, knowing what is expected. The TAP review template is an absolute requirement if you want a good TAP review. They need to be specific, and OMRI will be handing out some of the templates they used historically to give instruction and hopefully solicit good comments to give good TAP reviews. Could I have the next one? Here’s where you have to do some work. Many TAP reviews will come back or have comments that doesn’t address the question, what about this. It would be lovely to have a blueprint success in the examples of great TAP reviews. It would also be useful to know why you think they’re great, so that, you know, beating -- they say teach a man to fish and he can -- you know, you feed him for life. Beating him with the fishing pole doesn’t help. And so, you know, it’s useful to give a detailed comment on why it’s good, instead of always saying this terrible. Because then you’ll get more of the good stuff and maybe less of the ones that require massive redoing. Now, the next one. This is another thing that you can do something about. When I was on the Board back in the ’92 to ’95 area, we actually put out a notice asking people if they would be TAP reviewers, and
quite a few people came back with the answers. As the situation progressed, it’s almost like the TAP reviewer people became a proprietary property and you couldn’t find out. They were anonymous in the reports. If you were doing a new and you’re saying who do I got to, especially if you’re trying to find ones who have done it before so you can get -- you know, that’s your point of experience. I think it would be useful when we find competent TAP reviewers with operational experience that everybody says are good TAP reviewers, the NOP and NOSB should consider maintaining a roster and maybe petitioning to have people volunteer. What’s your specialty, what can you do. Well, if we find them, how do we retain them? The best way of retaining a TAP reviewer is to give him a good TAP review. I’ve had ones where, you know, the petition was terrible, so the TAP review was incomplete. So you go to the library and you start digging through tons and tons of stuff trying to fit the pieces that aren’t there and trying to find out what the alternatives are, are there any other ways of making this material. And so I thing the going rate is about $150. Well, after about six or eight hours, you know, you could go to McDonald’s and do hamburgers for a better rate of pay when, you know, that’s what your business is. So what also is needed, if you allow
incomplete petitions to go through the process so the work is cascading down on the TAP reviewer -- the TAP creator and then the TAP reviewer, you need to find a way of paying people for the work they do when it expands beyond what they really committed to do.

MR. CARTER: Thanks. Let’s -- and I’m wondering if Dr. Forshee, if you can come up and the other folks from Virginia Tech, because I think what we’d like to do is just open it up to some general questions and follow-up. Kim?

MS. DIETZ: First of all, I want to finally celebrate the fact that I’ve met Richard Theuer. I had no idea what he looked like, and Richard’s obviously been a big contributor to the TAP review process, a past NOSB member, and getting us to the point where we’re at today. So thank you for your...

MR. THEUER: Thank you.

MS. DIETZ: ...commitment to this process, because you have been around since the beginning when there was one-page TAP reviews...

MR. THEUER: Right.

MS. DIETZ: ...pretty much, where you guys made decisions. We have come a long way, I think, and I gave this spiel this morning, that we approve the process every day, every meeting, every board, every
year, and it’s going to continue to get better. So what we’re doing here at this meeting, I’m very thankful that we have the commitment by the NOP and by the Board and by the contractors and every to maybe finally get this right. I don’t know. We’ll see. Again, Richard -- excuse me, I’m fighting a cold -- Forshee, you know, you guys have come into this process with, you know, a lot of handicaps and we’ve acknowledged those and it’s been a tough process, but I think that you will see a huge improvement from this point forward, and we’ll certainly try to address all of your issues, some of which we won’t, because they, quite frankly, have never been within the purview of the NOSB to do. I hear guidance documents, guidance documents, guidance documents. And although I think that’s needed, I just don’t know who’s going to do that. So we need to talk about it as a board and as the NOP.

MR. FORSHEE: If I might just say...

MS. DIETZ: Sure.

MR. CARTER: Go to the mike.

MR. FORSHEE: I did just want to emphasize that we stand ready to work with...

MS. DIETZ: Yeah.

MR. FORSHEE: ...NOSB on these issues. We are committed to making this process work well and to
improve the overall process and our piece in it.

MS. DIETZ: And our commitment has to been to improve that process thus far. So I really -- I didn’t really have a lot of comments for you other than we’ve documented and we’re certainly going -- we have a commitment, we have a lot of money invested in you to get these -- the best as possible. Emily...

MS. BROWN-ROZEN: Yeah.

MS. DIETZ: ...could you sit down?

MS. BROWN-ROZEN: Yeah.

MS. DIETZ: And I agree with everything you said, too. And the process always gets better. You had one comment in here on the decision process and transparent petitions posted, TAP reviews posted, all of those things we’ve been trying to work on. You had the committee recommendations posted before meetings. That is something we’ve never done before and I don’t know whether -- legally whether we can post the committee’s recommendation before a meeting. So I don’t know if we can do a little discussion on that.

MS. BROWN-ROZEN: I thought -- haven’t you posted this on before? I thought some have been, but I don’t know.

MS. DIETZ: I don’t think they’ve been publicly posted.
MR. CARTER: Okay.

MR. MATTHEWS: Richard Matthews. Again, that is part of what the grand scheme of this systems approach to the entire rule making process with regard to material. And what it encompasses is that the idea is that the review would be done 60 days before the meeting. The Board’s committees would work on the materials during the first 30 days of that 60 days leading up to the meeting. We would then publish for everyone to see what the committee is going to be recommending to the Board, so that the public would have approximately 30 days to react to what the committee is saying they’re going to recommend to the Board. And the full board would have approximately 30 days to react to the committee’s recommendation, so that when you get here to the meeting, the Board, itself, has already taken into consideration what the committee is recommending, the public has had a chance to see what the committee is recommending. They then come and make better informed comments to the full board. Then the full board takes what they’ve already analyzed from the committee, plus what they’ve just heard from the public and then they try to come up with what is a good, sound recommendation on the material. Now, when we get comments in from the public during the period leading up
to the meeting, we’ll also be publishing those so that
the Board can even in advance start to see what the
public is saying on the materials even before the public
comes in and makes a public testimony.

MS. DIETZ: Thanks.

MR. CARTER: Right. Other -- we’re you done, Kim?

MS. DIETZ: Yes. Thank you.

MR. CARTER: Okay. Other comments or
questions? Okay. Rose and then Jim.

MS. KOENING: I’d just thank both of you guys
for coming in and giving presentations. You know, and I
understand -- I mean, a lot of your theme was the value
judgment, you know, position. I guess the question is,
is that, you know, the criteria -- a lot of the, I
guess, documentation from your organization -- now that
you say that, now I understand kind of the methodology
that you go about it. You do a lot of literature and
you even kind of present just that data with not much
analysis for us. And I guess the -- I think we have to
be somewhere in between not putting in, necessarily,
value judgment, but just by getting data, a lot of the
people on the Board may not have technical expertise in
those areas, even though you’re assigning somebody who
may have technical expertise to do that literature.
search. Somewhere in between there doesn’t necessarily have to be a value judgment statement, but there does have to be an analytical kind of pros, cons lane of the decision so that we can at least be presented more than just raw data or files downloaded from the Internet. So where do you draw that line is the question I have for both reviewers. Because there’s been a lot of criticism, I guess, with too much value judgment versus presenting something in a format that allows us to critique data, especially those who don’t have that expertise to then be able to make a decision based on data and some critique by somebody who has expertise. So if you could comment on that.

MR. FORSHEE: I have a comment on that. For the record, Richard Forshee. We have heard that concern and that’s one that we’re definitely going to work to address so that there is more synthesis of the material, as well as one of the things that we’re planning for future reports is essentially an executive summary for the points before going into the Actual data. And so, yes, in terms of summarizing, weighing the quality of the evidence, those are all things that -- things that we are comfortable as an organization doing. And we have heard that concern and in the next round of reports, we’re going to work to address that.
MR. CARTER: Okay. Jim?

MR. RIDDLE: Yeah.

MR. DECOU: Can I...

MR. CARTER: Well, I’m sorry. Yeah.

MR. RIDDLE: Well, I could...

MR. CARTER: I’m sorry.

MR. DECOU: I think that’s a very good point.

And having been a member of the NOSB at an early stage, each NOSB board probably has it’s own slightly different sort of Zeitgeist of, you know, why is it -- we each get a philosophical orientation working with each other.

And so you do have the dilemma of a great deal of value input as to what’s “compatible” and what, you know, interferes with organic integrity and what does not.

And I think that’s where...

UNKNOWN: He’s buying drinks tonight.

UNKNOWN: Yeah.

MR. DECOU: I think that is where if you could take some clarity TAP reviews that provide the information without a ton of bias and without no value judgment and say, you know, I’d like the facts, but I’d like them explained in this particular way, that might be very helpful to tone down the ones who tell you what to do, so to speak, and help those who really don’t know what your -- your drug result.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. KOENING: So in other words, I mean, we need more of a literature -- like if somebody does a literature review for a dissertation, I mean, you’re bringing up all points and you’re giving those -- you know, those references and you’re really showing different points of view with that documentation. So there is value judgment in the points of view, although you may not state your values until the discussion, but in the literature review, you’re bringing out all points and backing them up. But -- you know, and that’s where the summarization comes in, it’s not necessarily...

MR. DECOU: Yes. As an organization, we are comfortable moving more in that direction and that’s something that we will be working on. Just to quickly refer to the value judgment issues. I want to be clear that one of the reasons that I made that so important is that as the TAP reviewer, we don’t think that it’s appropriate for us to be making the decisions about is this particular substance consistent with organic agriculture of not. We are quite happy to try and provide with all of the information that you need, including by doing some of the organization of that information, which we have not done enough of. We’re happy to do that piece of it. But again, we feel that as a third-party reviewer, we have to take the
legislation as it has been given to us and the
regulatory guidance as it has been given to us and apply
to the substances that we’re asked to review.

MS. KOENING: I have one more question and
then...

MR. CARTER: Okay. Go ahead, Rose.

MS. KOENING: As far as in the current way
that things have been done, once you’ve done that TAP
review, then you get your outside reviewers to kind of
review that, and then historically, they’ve actually
voted -- you know, there’s a value judgment, if there is
any value judgment. So then, are you recommending --
and this is a question to both OMRI and yourself -- is
it better that they just really review the technical
merit of what you’re saying, rather than giving their
opinion? I mean, is that right format?

MS. BROWN-ROZEN: All right. I’ll go first.

No. That was a good point, Rose. And that is
historically -- what we would do is say, you know,
you’ve selected these experts to be reviewers. They
have good expertise in this area and you’ve given them
guidance. We do give a little guidance about what about
capability means. If we can work on -- you guys work on
this more, then that could be given to them. In your
opinion, given all this other database information here,
do you think it’s compatible for system organic agriculture? Now, you don’t -- you know, it’s three different opinions and you can, you know, judge them for what they’re worth. But I think that’s useful to have that value, you know, from someone very knowledgeable in the field and knows the area. So I think that these are not totally objective, but that’s how they are written in the OFPA, for that reason.

MR. DECOU: As a TAP reviewer, the first two questions that you get are in the case of is it synthetic or non-synthetic, and then should it be permitted or not. And the synthetic, non-synthetic is a big factor weighing on the rest. So the critical thing that I would come back to you and say -- let me digress. In 1995, after I got off the Board, they invited me back to facilitate meeting on materials and I gave an exposition on synthetic. And then people went about and said -- 8 out of 13 said citric acid was synthetic. But if you give guidance as to what’s synthetic and what’s non-synthetic and what’s agricultural or nonagricultural so that you give it to the TAP reviewer, it won’t come back this crazy way, now, where you got three people and one says it’s synthetic and two say it’s not. It’s the same material. And so it’s almost like you need the examples and it has to -- it’s almost like the TAP
review for the contractor, it’s -- the definitions the
clarification and the guidance on this is what synthetic
means and this is what agricultural means, and if it’s
not that, it’s not. And so you -- I think that’s
something that you can create, and that would be
permanent and the Zeitgeist of the Board, you know. The
1994 board was like this and, you know, it was like
boring. It can’t be that way.

MR. FORSHEE: I would just say that our TAP
reviewers ask for that same sort of guidance. That’s --
the feedback that we get from our TAP reviewers is tell
me how to make this decision.

MR. CARTER: Okay. Jim?

MR. RIDDLE: Yeah. I hadn’t wanted to also
thank you, both groups, for your presentation. And I
think there were incredibly valuable insights here. And
that’s exactly what we were looking for. I agree -- you
know, in the short-term here, I think we’re going to
have guidance on the capability issue, and I think we
need to get down on paper the synthetic, non-synthetic
and the ag, nonag guidance. Those are doable. And we
have some guidance we’ve already worked on on the
livestock materials, because -- or the livestock
criteria, because those really weren’t written for
livestock materials. And so we need to keep those
alive. Those may have fallen off the table a bit, so I’m glad you brought those back up. I was quite intrigued by Emily’s reference to this decision tree. We were -- have a materials review form that the NOP needs at the end of the day, but how we fill that out is a challenge. We heard about Barbara spending over 12 hours, I think, doing an example of one that’s already been done. And I -- you know, I guess it doesn’t matter when I clock in, because my rate doesn’t go up or down when I’m working for free, anyway. But, you know, anything that we can use as a tool to help us complete that form I think is valuable. But I turn to that at that back of your handout and see it’s date November 13, 2000, which is before the final rule was posted. And so it looks like, well, here’s another task, you know, that we can do for free to update this. I mean, how far off is this from...

MS. BROWN-ROZEN: I don’t think it would be that late.

MR. RIDDLE: No?

MS. BROWN-ROZEN: I just -- you know, I got an example...

MR. RIDDLE: Could you speak to the mike?

MS. BROWN-ROZEN: ...and, you know, offered it -- I’ll get up. Yeah. No. You know, we had thought --

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
I had thought about this in the past and I dug it out of
the archives here. And it seems to me now as if --
yeah, we have to revisit it. I think the criteria --
but I don’t know if it’s that far off. You might --
based on the new criteria for livestock, I’m not sure
what else. There might be a couple of other things.

MR. RIDDLE: Well, the handling criteria now
is in the rule...

MS. BROWN-ROZEN: Okay. Right.

MR. RIDDLE: ...and before it was just an NOSB
kind of guidance.

MS. BROWN-ROZEN: No. Well, it was voted and
it was...

MS. DIETZ: This has gone to the Board before.

MS. BROWN-ROZEN: Yeah

MS. DIETZ: : It’s come to us.

MS. BROWN-ROZEN: Yeah. I was -- yeah.

MR. RIDDLE: Yeah.

MS. DIETZ: Several times.

MR. RIDDLE: But I’m just saying, it’s a
historical document...

MS. BROWN-ROZEN: Right.

MR. RIDDLE: ...according to where we are.

MS. BROWN-ROZEN: No. It just was a model. I
mean, there may not be enough steps in there now.
Actually, the screening steps are kind of built in there, so maybe, you know, you could divide it out into phase one screening and then you have this is what the committees do. You know, you could break it out further, because -- you know, the synthetic, non-synthetic, all those things. I was going to tell you I was going to handle it. But, yeah, I’d be happy to work on it some more if you want.

MR. CARTER: Okay. Kim?

MS. DIETZ: I keep making notes. Richard and Richard, we have talked about a pool of qualified reviewers and this has come up many, many, many times. And then OMRI brought it up in their presentation. And I think that we -- even as a board we’ve talked about how can we get this done and, you know, have the confidentiality that’s needed, yet seek as a board -- seek those people to help us. So I just want -- for the record, I think this is something that we do need to enact for the success of TAP reviews and for the success of this program, because we need qualified people to do it and we need to pay them to do it. So I do agree with and I just wanted to bring that out for both of you.

MR. CARTER: Richard?

MR. FORSHEE: I had not mentioned that in my presentation, but I just want to say I wholeheartedly
agree with your comments and those of Richard.

Developing a pool of qualified responsive TAP reviewers
is a huge task and anything that can be done to make
that more public and more permanent would be...

MS. DIETZ: And then I had a comment and a
question for you. It was mentioned about specialized
contractors and obviously opening up, which we’ve all
agreed for years to do. But do you feel that the Center
for Food and Nutrition Policy has the capability to
review all three areas for us? Right now you have the
sole contract. And do you have the capability to do
crops, livestock and processing, the chief fields?

MR. DECOU: Or where are you strongest?

MS. DIETZ: Or, yeah. Well...

MR. FORSHEE: Well, we -- I will say that that
is a very wide range of petitions to try to deal with.
And frankly, I agree that from a regulatory perspective,
it probably is better to have more than one set of TAP
reviewers. In terms of our -- one advantage that we do
have being part of a major land-grant university is that
we do have colleagues within our College of Agriculture
and Life Sciences that can provide a tremendous amount
of support to us as we are trying to analyze a variety
of petitions. And so within the department of food
science and technology within the College of Agriculture
and Life Sciences and within the Center for Veterinary Medicine at Virginia Tech, we do have many resources that we can draw on. Within our own organization, we have -- we just recently had a veterinarian who began to work with us, actually within our organization as opposed to on any sort of consulting basis. We have expertise in environmental chemistry and regulations with EPA. We have a human nutrition and we have a lot of background in food safety issues. So we do have a good breadth of knowledge. But again, I would have to agree that from a regulatory perspective, it’s almost certainly better to have multiple groups doing TAP reviewers. We’re happy to do them, but I think that that probably would be a good move in the long run.

MR. CARTER: All right. Rose?

MR. k: I guess a final question I had for both TAP reviewers is that on some of this information when we get materials in, it’s easy to do a literature review on a compound. The hard thing -- and we talked a little bit about this earlier -- is then taking that information and then applying it to an organic system, because there’s not much research on organic systems and the use of those within an organic system and all the alternatives. So any suggestion on how you, I guess, wrestle with those things within an institution such as
your institution, or how has OMRI tried to get those
real-world examples without having an extensive bank of
literature in organic farming systems? I mean, do you
use anecdotal kind of evidence? Ss farmers, have you
been able to get that information?

MS. BROWN-ROZEN: Are you talking mostly about
the alternatives question or...

MS. KOENING: Yeah, alternatives and
compatibilities, you know, some of those adverse --
where you were saying misuse or adverse reactions, that
you don’t know -- if you do just a literature review on
a compound and it’s not within an organic context, and
then the people at your institution may not have
expertise in organic farming systems, they may not know
that this thing is used in conjunction with, you know,
hydrogen peroxide, because that’s not commonly a
function of a normal, conventional farming system. So
I’m saying how do you come up with that information and
how did you come up with that information? How do you
guys grasp that kind of information?

MS. BROWN-ROZEN: I think -- well, you know,
going by what, you know, you can find in the literature
and then relying on your reviewers and trying to get
people with expertise in an -- actually, an organic
application, is familiar with what we -- or if you don’t
have the specific reviewers, then making sure you ask
some experts that might’ve, you know, done organic food
processing, not just conventional, you know, in a
similar kind of product and find out how they’re doing
it, so that you can sort of fit it into the landscape.
There may be nothing. I mean, that’s difficult and it’s
time consuming. But you can try to make an effort to do
that.

MS. KOENING: So in other words, when you do
those TAP reviews, you require them to go through all
the criteria and then add in the wholes...

MS. BROWN-ROZEN: Well...

MS. KOENING: ...of the...

MS. BROWN-ROZEN: Well, if you look in that
packet we’ll be giving this template that, you know,
goes through the whole -- all the little categories, and
we have a little bit of narrative under each one. This
section is supposed to cover, you know, fade and
toxicity. And generally, we look at human studies, not
-- you know, not just animal studies. You know, we give
them a little stealth out of them -- how we look at it.
And then -- but then we have a little questionnaire at
the end, you know, and do you know of any other way --
you know, do you know of any other alternatives? Do you
have any other literature? What do you run across,
basically.

MS. KOENING: And that...

MS. BROWN-ROZEN: So we get feedback from them, from each reviewer.

MS. KOENING: So are you saying that that’s been more of an OMRI internal document? Do you think that that...

MS. BROWN-ROZEN: Oh, yeah, that’s -- yes.

MS. KOENING: Do you think that that there is a -- do you think we need to be thinking about that as a board, how -- because that’s critical a lot of times. That’s where a lot of times we, I guess, public comment, or when somebody’s looking at a TAP, that’s one area that seems like there’s always a deficiency or many people say there’s a deficiency, so...

MS. BROWN-ROZEN: Well, I think that would help if you -- you know, if you have the timeline a little better and more public, you know, availability of the information and maybe a little better outreach on -- you know, this is coming up. Everybody’s that’s interested can write in, because typically -- well, another big problem was there would be one very specific use petition for the substance, but there’s -- you know, when you look up in the literature, there’s like hundreds and hundreds of uses for this material and how
many of these do we investigate and what are the most likely ones. And that’s what to -- usually we had a little period -- or we narrowed down the scope of the investigation to -- you know, look, it’s used for, you know, toppings and floor polish and this and that. Which ones do you want us to concentrate on? You know, and so we would, you know, try and make it a little bit more doable. But -- so -- yeah. No. But I think that kind of guidance that we did was -- you know, that was useful for us. We needed to work -- have a standardized way to work and give the information, because we would have, you know, occasionally, new TAP reviewers, so we wanted to give them all the same information. And that kind of a document could be really modified to go to the contractor as whole. You know, this what we would like you to cover under each of these. And you might want to change the template to maybe -- based on, you know, the new outcomes that you’re looking for. The template of the TAP review has to be structured a little bit differently to make it easier to answer those questions. You know, we just did it based on, you know, the OFPA criteria, the -- you know, what was in our contract and getting clear information. But it might be time to re-
look at that, too.

MR. CARTER: Okay. Richard, do you want to
comment?

MR. FORSHEE: Yes. I’ll just comment briefly on that. That is one of the challenges -- is viewing it in the context of organic production, because as you mentioned, the literature is just beginning to develop on what that means and having the literature on how things get used in that system. So that is a challenge. We did do some of the same things that OMRI has described in terms of directing questions to our TAP reviewers to try and address some of these issues. I’ll also mention just very briefly that there is some academic work that’s -- I’m sure you all are more aware than I am -- that’s beginning to be developed on organics, and some of that is going on at Virginia Tech, as well as, I believe, they’ll be getting an office and, of course, working some of the professors who just published a new book on the subject. So within our family at Virginia Tech, some expertise is developing, but it has been scant.

MR. CARTER: Okay. If there aren’t any other burning questions, what I’d like to do is ask Mark, as the chair of the policy development committee and Kim as the chair of the materials committee, to kind of give us a sense of how we proceed from here, so...

MR. KING: Okay. Well, first I’ll start by...
thanking -- yeah, I know. You’re diverting everyone to someone else. Thanks, Dave. But, no. Thank you for participating. I did want to pay particular attention to Emily’s slide and it’s the policy issues and need of guidance. So we certainly, as a committee, will look at that very strongly and see where we’re at and how we can move forward. In a more general sense, I liked the references from everyone concerning the relationship between NOP, the contractors and the NOSB. So I think that that’s certainly is more of an elevated view, if you will, that we need to look at and find out specifically what needs to be in the Board policy manual, what role is NOP going to play in this process and how can we help better define those lines of communication, as Richard said earlier. So those are just some things in the general sense off the top of my head that we’ll be considering at our next meeting, so from a committee perspective.

MS. DIETZ: Well, this morning we spent about four hours just going over the material review process, so you will see a lot of what you have brought up that’s already being addressed by the NOP and by the Board. We’ve got templates that we are going to start using and that -- well, I could say what we could do is take all of the concerns and take these slides and actually go
through in the areas that we have not discussed, kind of
go through and address them and say whether -- what we
can do and what can’t do about it, and kind of a little
action plan, so to speak, so that we can at least give
you feedback on what some of your concerns are.

MR. CARTER:  All right.

MS. DIETZ:  Hopefully that’s sufficient.

MR. CARTER:  Yeah.

MS. DIETZ:  Sir, Chair.

MR. CARTER:  Very good. Okay. And I again
want to reiterate -- it’s been said a couple of times --
but thank both Virginia Tech and OMRI for coming in,
because I think this is very helpful this afternoon. So
is there anything else we need to address this
afternoon? Everybody looks pretty road weary here,
so...

MR. SIEMON:  Just whether we’re going to have
any livestock meeting or not. Maybe we can just get
together afterwards...

MR. CARTER:  Okay.

MR. SIEMON:  ...over here in this corner...

MR. CARTER:  Yeah.

MR. SIEMON:  ...and see if we can decide that?

MR. CARTER:  Okay. So livestock committee
will get corralled in the corner here. Yeah, Kim?
MS. DIETZ: Prior to our last break, we were going through the national for livestock and whether or not we’re going to restructure and everybody got all excited. I think we need to step back and not do anything hasty, so to speak, and that the materials committee should really look at -- and it’s always been our charge to make recommendations as to how the national list is structured. And so that materials take that and come forth with the recommendation.

MR. CARTER: I would concur, because...

MS. DIETZ: Okay.

MR. CARTER: ...what I heard before the last break was most people weighing in very heavily...

MS. DIETZ: Yeah.

MR. CARTER: ...that if we could do that by...

MS. DIETZ: We had some politicians.

MR. CARTER: ...reducing it and/or by extending the list.

MS. DIETZ: Yes.

MR. CARTER: And so I think that’s...

MS. DIETZ: Okay.

MR. CARTER: ...an indication that we need to take a breath here and then look...

MS. DIETZ: Yes.

MR. CARTER: ...and see how it’s done, so...
MS. DIETZ: And the materials committee is meeting at 6:15 in the lobby.

MR. CARTER: Okay?

MS. DIETZ: Okay. Yeah.

MR. CARTER: All right. With that, I will declare a recess. We will reconvene at 8:00 a.m. tomorrow morning.

***

CERTIFICATE OF REPORTER, TRANSCRIBER AND PROOFREADER

IN RE: National Organic Standards Board Meeting

HELD AT: Washington, D.C.

DATE: October 22, 2003

We, the undersigned, do hereby certify that the foregoing pages, numbered 1 through 175, inclusive, are the true, accurate and complete transcript prepared from the reporting by the reporter in attendance at the above identified hearing, in accordance with applicable provisions of the current USDA contract, and have verified the accuracy of the transcript by (1) comparing the typewritten transcript against the reporting or recording accomplished at the hearings, and (2) comparing the final proofed typewritten transcript against the reporting or recording accomplished at the hearing.

CONTRACTOR (NOT PRESENT): R & S TYPING SERVICE
                           (903) 725-3343
CHAIRMAN KING: Good morning. I'd like to officially call to order the meeting of the National Organic Standards Board.

Welcome to Chicago. Thanks for being here. Thanks for your interest. I look around the room and I see a lot of familiar faces, I see a lot of years of dedication and experience to the industry.

As usual, we have some interesting topics to discuss and deliberate over the next few days, and we'll appreciate your input and your positive focus on that.

Would like to essentially start the meeting with board introductions, so Ann, if you'd like to start.

MS. COOPER: Ann Cooper, I'm a chef from New York, and I'm a consumer.

MS. KOENIG: I'm Rose Koenig, producer, from Gainesville, Florida.

MS. CAROE: Andrea Caroe. I'm the certification director for Protected Harvest and an environmental representative.

MR. SIEMON: George Siemon, from Wisconsin, and I'm the producer rep.

MR. CARTER: Dave Carter, from Colorado, a
consumer rep, but in real life an itinerate farm organizer.

       MR. RIDDLE: Jim Riddle, certifier rep,
       University of Minnesota.

       CHAIRMAN KING: Mark King, a retail rep,
       Indianapolis, Indiana.

       MS. DIETZ: Kim (Burton) Dietz, and I'm from
       California, and I'm a handler representative.

       MS. OSTIGUY: Nancy Ostiguy, environmental
       representative.

       MR. O'RELL: Kevin O'Rell, Boulder, Colorado, and
       I'm a handler representative.

       MS. CAUGHLAN: Goldie Caughlan, Seattle,
       Washington, consumer rep.

       MR. LACY: Mike Lacy, Atkins, Georgia, science
       rep.

       MS. GOLDBURG: I'm Becky Goldburg, from New York.
       I'm an environmental representative.

       CHAIRMAN KING: Okay, thank you. At this time
       has everyone had a chance to approve the agenda? -- I hope.
       I'd like to officially approve the agenda.

       MR. CARTER: You need a motion for the -- second.

       CHAIRMAN KING: It's been moved and seconded.

       All those in favor say aye.

       BOARD MEMBERS: Aye.
CHAIRMAN KING: Opposed, same sign.

(No response.)

CHAIRMAN KING: Motion carries.

At this time, in the first tab of your book, you'll see the minutes from the October meeting, 2003. Are there any proposed changes or amendments or edits at this time?

(No response.)

CHAIRMAN KING: I would entertain a motion.

MR. RIDDLE: Yeah, I'd move that we approve the --

MR. SIEMON: I'd second that.

MR. RIDDLE: -- October minutes.

CHAIRMAN KING: Moved by Jim Riddle that we approve the October 2003 minutes, seconded by George Siemon. All those in favor say aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No response.)

CHAIRMAN KING: Motion carries.

Quick note here, the executive committee meetings are actually listed here, those are on the website for your review, so those who are interested in what the executive committee has talked about over the past few months,
they're there for information purposes.

And one quick announcement I forgot to make:

Please, if you would, those of you who have cell phones, turn them off, turn them to vibrate. If you do get a call or something of that nature, we'd greatly appreciate your stepping in the hall to take the call, that sort of thing.

So thank you for that.

Are there -- and I do have one quick announcement. Owusu Bandele was not able to make the meeting for medical reasons, so our thoughts are with him and hope that he gets well soon, so we regret that he can't be here.

Are there other announcements? Jim?

MR. RIDDLE: Yeah, Mark, I have a couple of announcements. One went out to the Board -- I believe it was last week, a letter informing the Board of the formation of an accredited certifiers association, and I have a copy of that, if you haven't seen it or didn't make note of it, and I just wanted to mention that for the record.

I see this as a very positive development. There is a need for a network, a professional association, of the accredited certifiers. So I just wanted to call that to everyone's attention.
This is not an inspectors association, we've had that for years, but now there's a similar organization for the certifiers themselves, that are USDA-accredited. And it's currently at an interim address, it's housed at the Vermont Organic Farmers, Nova [phonetic], Vermont, office.

And then also I wanted to bring to people's attention a scientific study that has just been published in Renewable Agriculture & Food Systems, entitled "Profitability of Organic Cropping Systems in Southwestern Minnesota," and that was a 10-year comparative study of organic four-year crop rotation versus 2-year conventional systems, and just to quote one thing from the abstract: with premiums, the 4-year organic strategy had net returns significantly higher than conventional systems. Without premiums, the net returns were statistically equal. So they were looking at yields and profitability in this study and finding that even without organic price premiums it was equivalent profitability.

So that's in Renewable Agriculture & Food Systems, Volume 119, 135 through -46, page numbers. That's it.

CHAIRMAN KING: Are there other announcements?

(No response.)

CHAIRMAN KING: Okay, I have one other
announcement concerning a board member. Many of you are aware that Dennis Holbrook has resigned from the Board. Dennis called me several months ago, and he's had some challenging situations in the family; consequently, he's not only managing his own farm but some of his father's businesses, and so he regretfully resigned, but it appeared to be a wise choice based on the work demands, professional demands before him. So he will be sorely missed, and fortunately we have people, like Nancy, who have stepped up and taken over some of where Dennis left off with crops and that sort of thing, so we're very grateful for that. I did want that to be reflected in the record.

If there are no additional announcements at this time, we're actually a bit ahead of schedule, we're ready for public comment.

And just a quick reminder, and I think Katherine had indicated there are two sheets for the sign-up of public comment, one for today, and of course one for the second session, which is on Friday. So it's important, I think, to sign up in advance, especially for Friday, it appears there may be some additional people coming in for the conferences and the like, so it would be, I think, a good idea to reserve a spot early, if you will.

And I think we're ready for the first -- I don't
know if we have a sheet up here. Oh, an official announcement. Jim Riddle, who has so graciously served as our timekeeper for the last many years --

MR. RIDDLE: I've lost track of time.

(Laughter.)

CHAIRMAN KING: -- has officially handed over his -- well, his sign --

MR. RIDDLE: Yeah, the one-minute sign.

CHAIRMAN KING: -- the one-minute sign, as well as the official timekeeping duties, to Kim Burton today. So you have five minutes to make comment, and you'll get a one-minute warning.

We have two names on the first -- we have John and Merrill Clark.

MS. CLARK: Well, we're not joined at the hip, so we would -- we're two different people.

CHAIRMAN KING: Yes, I'm aware --

MS. DIETZ: So you each want five minutes?

CHAIRMAN KING: So do you each want five minutes, or you're doing this together --

DR. CLARK: Yes.

CHAIRMAN KING: All right. Thank you.

MS. DIETZ: I have my baking timer here, so when you're baked, then it's going to go off.
(Laughter.)

DR. CLARK: Okay, good morning. My name is Dr. John Clark. I am a biochemist who turned organic farmer in 1968, after a long career as a biologist, research chemist, and professor.

My wife, Merrill, was a charter member of the NOSB from '92 to '96. I became a student of the OFPA statute during this period and wrote a number of published analyses of the OFPA, including a complete analysis of the Act in the University of Toledo Law Review in 1995.

This document was based on this statute and was heavily reviewed by student editors, faculty editorial staff, as well as editors at the University of Law Review -- University of Toledo Law Review and University of Toledo Law School itself.

Unfortunately, this review has been roundly ignored by USDA's National Organic Program personnel, the NOSB and the USDA Office of General Counsel, who were all provided with multiple reprints of that review in 1995.

I have furnished copies of that review for everyone, including a copy of my statement.

I'm here to tell you that the Final Rule is rife with multiple violations of the statute. Furthermore, elicitations of those violations can be found in 26 pages
of single-spaced line-by-line, word-by-word comments
submitted by me in April 1998 in response to the first
proposed Organic Rule.

I spent the entire month of March 1998 grinding
out these comments, with recommended deletions, additions,
and extensive references to the OFPA. If these comments
had been taken seriously, they might have enabled the NOP
to quickly publish a final rule and regulation consistent
with the OFPA statute. Instead we got a Final Rule 5 years
later, ignoring comments by me and others, which persisted
in previous inconsistencies and further violations of the
OFPA statute.

I ask now that NOSB request a reproduction of
these comments for each present NOSB member, as well as
obtaining copies of the Law Review. I have done the second
thing for you.

I find it shocking that 14 years after OFPA's
passage NOSB and NOP persist in the pretense that Congress
did not make clear the legislative letter and intent of
this law and that members are still trying to substitute
their own agenda, their own agendas, on many aspects of the
statute, particularly when it comes to the List of
synthetic ingredients in processed foods labeled "organic."

The National List procedures for technical
advisory panel reviews have been mishandled, misdirected, and illegitimately done, in many instances, for many substances. They have now ended up with an unbelievable array of questionable materials allowed for organic use, with more being jockeyed up for approval today.

On the second page, Line 3, it's 6518(m), not 6519(m), if you could correct that. TAP reviewers are generally misinformed about three criteria -- about the three criteria, 6517(c)(1)(a) for review qualifications, and the category qualifications, 6517(c)(1)(b), and the applications of the seven criteria under 6518(m).

If, and only if, the criteria in 6517(a) and (b), (c)(1), (a) and (b), are met, NOSB should reject any review not demonstrating this procedure to qualify a material for review under 6518(m). That's what Congress intended, very clearly and concisely, in the law.

Furthermore, all materials must include specific use and application annotations. They rarely do. The Organic Materials Review Institute and Virginia Tech are not necessarily legitimate TAP reviewers because of incompetence, conflicts of interest, or lack of transparency.

USDA must find qualified reviewers, compensate them fairly, and keep permanent files on each petitioned

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
material, in addition to using a proper tolling period for renewed reviews under the required 5-year Sunset Provision referred to in the statute. This Sunset period does not run from October '02, it runs from the date of the NOSB review to each substance.

Then I call on the National Organic Program director and staff to conduct NOSB information assessments on the content of -- I'll start skipping these things, conduct NOSB information sessions on what is commonly called a precautionary principle as it applies to organic standards. The staff as well as NOSB should avoid the pursuit of risk assessment and take up the more important task of risk avoidance.

MS. DIETZ: Time.

DR. CLARK: The rest of it is fairly clear, I won't insult you by going over my time and reading the rest of it, but the last paragraph, "Violations of the OFPA in USDA's rule are unconstitutional because the administrative branch of the federal government has only the authority to enforce the law and not to make it. Even if there is a precedent for this, nothing can justify making rules which mislead organic food consumers. OFPA is a law which is about making claims to consumers, a generally foreign concept at USDA, where producer and processor groups have
been the focus for decades.

CHAIRMAN KING: Thank you.

DR. CLARK: Thank you.

CHAIRMAN KING: Merrill Clark. Hold on, we have a question. Dr. Clark, Rose has a question for you, if we can get you back up here, that'd be great.

MS. KOENIG: Is this working now?

THE WITNESS: Since you last heard from me, I'm deaf in one year --

CHAIRMAN KING: It's just that the speaker's pointed toward the audience, you can't hear it.

MS. KOENIG: Oh.

Did you have a chance -- we have a Sunset Provision that the materials committee has proposed as far as the process that we're trying to come up with to go through this 5-year Sunset. Did you have the opportunity to take a look at that?

DR. CLARK: I looked at something briefly yesterday and I was kind of surprised that everything dates from '02, and there are materials on the List that have been reviewed 11 years ago.

MS. KOENIG: Yeah, part of that's because the (inaudible) start with when the rules -- it starts on the day of implementation, that's why that '02 date is there.
DR. CLARK: That's not the way I read the statute.

MS. KOENIG: Well, my -- I guess my -- my question was -- I guess my comment now, if you looked at it, would be: it would be helpful -- you seem to be concerned and interested about materials process, if you could perhaps submit, after you take a look at that Sunset Provision, comments on that, that would be very helpful for the materials committee.

DR. CLARK: Okay. I've offered to do -- not only review -- I did some in '94 and '95, and I've never been asked since to do anymore, but I've been, I thought, visibly available to do more and comment on the process as well.

CHAIRMAN KING: Are there other questions?

MR. RIDDLE: I just have a comment.

CHAIRMAN KING: Jim has a quick comment.

MR. RIDDLE: John, I appreciate your concerns. I just want also you and other people in the audience to be aware that, you know, one of the criteria in OFPA, as I'm sure you know, is consistent with a system of sustainable agricultural, and then in the Rule it mentions compatibility with organic farming and handling, and at the Board meeting last October we spent a lot of time working...
on a draft to further define and explain what that means, and that has been posted for several -- for two rounds of public comment, and we'll be considering the final draft on that, and I just want to point out that it does embed the spirit of precaution. So I appreciate you bringing that up in your comments, and the Board is trying to address that with the compatibility draft.

DR. CLARK: And I would appreciate having the latest draft of that. I'm not sure I have that.

MR. RIDDLE: Yeah. It's posted on the website leading up to this meeting. There's slight amendment of deleting one line from it, that we'll be considering as we vote, but it's not substantially different than what's been posted for 60 days.

CHAIRMAN KING: Thank you, Dr. Clark. Merrill, now we're really ready for you this time, so --

MS. CLARK: Well, thank you. Merrill Clark, growth on organic farms, and one of the charter members for NOSB back in '92 to '96 and chaired the livestock committee.

I'm here today to embellish about a portion of a letter that I wrote to Jim Riddle back in March, 18, of this year, which I am told he copied you all. One of the issues of that paper -- which I'll talk about the most, but
I have a couple of things to add to that -- is the organic inspection and certification of already USDA FSIS-inspected livestock processing facilities. We feel the addition of another inspector, another work beyond the work of competent FSIS inspectors already at the site at smaller processing plants normally used by most of the small- or medium-size organic livestock producers is redundant, unnecessarily expensive, and actually a major stumbling block to getting any significant quantity of certified organic meat products into the marketplace.

An example of the problem: within the Dallas, Texas, State Burger website, which I looked at recently, is the question: "Is State Burger beef organic?" This is the name of a product. His answer was: "Well, from our research, it appears the federal government now regulates it, so it can be called certified organic, so we have to be careful how we use the term." Then he says, "First of all, I don't believe there is any such thing as a certified organic processing plant, livestock processing plant."

We at Roseland Farms are beginning to agree with them. After having gone through the hassle of searching out now three USDA-inspected processing plants over the course of 20 years, the new rule is forcing additional certification of the same plants, not because the ones we
have been working with through the USDA FSIS inspection are inadequate, with inspectors incapable of ensuring all organic processing standards are met, but because animal slaughter and meat cutting and wrapping seem to be falling into the same handling/processing category as complicated multi-ingredient processed-food products and other categories.

These products do probably require extra oversight because of their additive uses, cooking, mixing, and all the other things that go on with making a processed product, but cutting up a side of beef into T-bone and other cuts and wrapping them is not -- it's not that complicated.

I'm here to say that the continual inspection that is presently at work in these smaller processing plants across the country can easily be expanded to cover the extras required by organic meat slaughter and handling.

Denny Proctor of Great Lakes Processing, the only finally certified organic meat processor in all of Michigan and maybe in a three-, four-, five-state area, in the Great Lakes, told us last February that he was required to make no changes at all in his processing protocol in order to comply with the protocol organic standards that were already in place. In other words, he was doing everything
required already that was being asked by USDA inspection protocols.

I believe that is undoubtedly the case in the plant we are using, that is, USDA FSIS-compliant, in Shipshewana, Indiana, and 400 miles closer to us than the Great Lakes plant that's certified in Sheboygan, Michigan, and our concern is about continuing to ship animals, which we haven't had to do in the past, 400 miles one way.

USDA inspectors are at both of these plants regularly when animals are slaughtered. FSIS inspectors can and do become quickly versed in the other things to look for with respect to organic processing requirements. We have set up a protocol with this processing plant that reflects what we require, animals first in line before any slaughter takes place, preceded by complete segregation of our animals from any others, no conventional feed fed while they're there, Roseland beef sides tagged and hung in separate quarters, all equipment first used for the cutting of our halves, 180-degree water for sterilizing and washing down facilities, et cetera.

FSIS inspectors can and have been carrying out these checks. FSIS and AMS are a part of the same agency. Certainly they can work together on bringing this about.

What are the other options? Well, we could build
our own 500,000 -- or I mean a million-dollar inspected processing plant and then pay the cost for certification we are already using or try to find another processor who wants to be -- who might want to do our work but not terribly concerned about being certified and having another inspector on top of the first inspector come in again.

Organic Valley is probably, I suspect, the biggest operation that can afford to have their own processing plants. I was told, actually, by Pam Saunders that Organic Valley had a phone call not too long ago that this point is well-taken, that I'm bringing up, and should be brought up for a possible rule change.

When I contacted OTA, for instance, for information about certified organic processing facilities, they were able to lead me to no one, period.

Certainly the Rule with respect to requiring additional organic certification and inspection at USDA FSIS-complaint processing plants needs to be reviewed, looked at, or something.

I wanted to add a couple other related issues.

MS. DIETZ: Time.

MS. CLARK: Do we have large animal, otherwise called kayfall [phonetic] processing facilities or livestock facilities in the organic tradition, there seems
to be a concern that there are large dairy operations and
the continued need for other antibiotics and parasiticides
maybe to accommodate larger dairy, factory, farm, whatever
you want to call them, and as far as we can get away from
anything relating to a K-fall, the sooner we better do
that, because it is not anyplace at all in the Rule on
organic animal production.

CHAIRMAN KING: Are there questions for Merrill?
Yeah, Dave.

MR. CARTER: Merrill, so you're recommending that
we would allow slaughter to be handled in a non-certified
facility, organic certified --

MS. CLARK: Well, in an FSIS-inspected and
therefore certified -- if there were some way where the
certification could take place through FSIS -- I don't
understand the reason for having this inspection and then
another inspection, because there isn't that much more --

MR. CARTER: Okay. How would you handle it,
because even some of the smaller plants now, as a part of
their slaughter process, are doing things like rinse and
chill, when they run a super-chilled saline solution
through the carcass after they stiff the animal or -- or
those type of things. I mean, there are some processes, in
actually slaughtering the animal and cutting the carcass,
in which some chemicals and some things are utilized. How
would we -- how would we --

MS. CLARK: Well, we're -- we're just talking
about sterilization of hot-water rinse, first of all, or
our particular animals or some other's organic animals
would just have a different process, which they would put
into their protocol and set it up. It wouldn't have to be:
well, here's what we do with all the conventional animals,
we have to do it with yours as well. If there's something
that's allowed through organic, that FSIS can certify to --
it's -- it's terribly -- I mean, how many people know where
these certified livestock processing plants are, and --
otherwise, you know, if we keep it that way, we're -- we're
stuck with no certified organic livestock.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, just a quick comment. I
promise not to comment on everything that everyone says.
(Laughter.)

CHAIRMAN KING: We're going to hold you to do
that.

MS. CLARK: Too (inaudible) so far.

CHAIRMAN KING: Yeah.

MR. RIDDLE: On the record (inaudible). Yeah, in
the past few months I did a survey of organic livestock
research needs, and one theme that kept coming up was
exactly what you're saying: the lack of local, regional
processing capabilities for organic livestock.

So it certainly is a need, I think it's a need
just in general, not for organic livestock, but we've lost
a lot of the --

MS. CLARK: Yeah.

MR. RIDDLE: -- infrastructure out there for
slaughtering. But also, I worked for years as an inspector
and inspected a number of USDA facilities, slaughter
facilities, and found, you know, numerous things happening
which didn't meet organic standards, you know, use of
pesticides in the kill room, lack of audit control, lack of
cleanup procedures that would be necessary. So there's --
you know, I -- I wouldn't support anything to weaken the
organic certification of those facilities, but, you know,
possibly training FSIS inspectors to understand the organic
regulations I think would be a major step forward.

But I did just want to point out that there is at
the present time the organic certification cost share, that
will reimburse handling facilities as well as farmers up to
75 percent of the certification inspection costs, up to
$500 a year. So that would be an incentive for some
smaller regional processors, you know, to go that route,
but I think it -- you know, the studies I've done certainly show that this is a valid concern that you bring up.

MS. CLARK: Well, yeah, because the processor we're using now has an inspector coming, FSIS inspector there, and they're there all the time. A certifier inspector, what does he come, once a year? He, she, whoever. I mean, they're always there, and if they know the protocol for organic, why -- that's far better than saying, "Here comes my once-a-year certifier inspector."

It's sort of crazy.

And talking about diminishing, I'm very worried that I see antibiotics and parasiticides coming up on all this for animal production. I don't get it.

CHAIRMAN KING: Are there other questions?

(No response.)

CHAIRMAN KING: Thank you, Jim. Thank you, Merrill.

Next we have Mark Kastel.

UNIDENTIFIED MALE VOICE: (Inaudible) Friday.

CHAIRMAN KING: Okay. I think I'm probably going to butcher this next name. Kathy Seus.

MR. RIDDLE: Mr. Chairman, could you say who's on deck, please.

CHAIRMAN KING: Yes. Thank you, Jim. Dr. Bossy
[phonetic] is on deck.

MS. SEUS: Last name is spelled S as in Sam, -e-u-s, as in Sam, like Dr. Seuss, less one S.

UNIDENTIFIED FEMALE VOICE: I'm having real difficulty hearing, whether it's a combination of this -- and the microphone does not seem to be fully functional.

CHAIRMAN KING: Yeah. I don't see our technical soundperson. When he gets in -- okay, sorry for the interruption.

MS. SEUS: That's okay. You all know my name now, right?

CHAIRMAN KING: Yes.

MS. SEUS: Good morning. My name is Kathleen Seus, as you all know. I'm from -- I'm the farm program manager from Food Animal Concerns Trust, which is a non-profit organization founded in 1982 that advocates humane and sustainable farming practices, and I'm pleased to have this opportunity to provide comments on behalf of FACT to the NOSB.

FACT welcomes the animal husbandry standards included in the National Organic Program, specifically Sections 205.236 through 205.239. These standards provide a basis for which elevation by which eligibility for organic certification can be established.
However, while we acknowledge NOSB's effort to create minimum standards for humane animal husbandry, we are concerned that the current standards are very vague and lack clear definition. This lack of clearly-defined standards has left the issue of organic animal husbandry open to interpretation by NOP and producers that undermines the integrity of the organic program and erodes consumer confidence in the USDA Organic label.

FACT is concerned about this lack of clarity for several reasons. First seems to be the inclination of NOP to overstep its authority to override or reinterpret established animal husbandry standards. To illustrate this concern I reference two examples.

The first is the court case Massachusetts Independent Certification v. Ann Veneman, Secretary, U.S. Department of Agriculture, and A.J. Yates, Administrator, Agricultural Marketing Service, regarding country hen.

The second example is the April 13th, 2004, guidance document regarding the origin of livestock and dairy animals.

The relevance of the examples are more completely detailed in my written comments, I don't have time to go through everything. However, the fact is that NOP does not have the authority to override or reinterpret or rewrite
standards as established by the NOSB.

Secondly, FACT is concerned about the impact NOP interpretations may have on animal health and well-being. Here I refer specifically to the guidance document beforementioned. FACT is concerned that the need for any organic dairy operation who's already been 100-percent certified to go outside the organic system for replacement heifers may be indicative of possible animal health problem on the farm, resulting in higher-than-normal mortality.

I quote: "The primary goal of organic agricultural is to optimize the health and productivity of interdependent communities of soil life, plants, animals, and people. Compromised animal health has no place within an organic production system."

FACT is also concerned about the survival of smaller family farms. Organic food production is one of the few remaining niche markets available to smaller farmers. Smaller farmers need these niche markets in order to survive the mass consolidation of the agricultural industry as a whole.

Every time NOP overrides or reinterprets the established standards, particularly in favor of larger factory-style organic farming operations, they un-level the playing field. This places the smaller independent family
farms at a competitive disadvantage and threatens their economic sustainability, which violates the very principle on which organic agriculture is founded.

Finally, FACT believes that clearly-defined standards are crucial to consumer confidence in the Organic label. FACT managed Nest Eggs, a brand of Kaytree [phonetic] eggs, for 18 years. I personally managed that for 2 years. FACT established clearly-defined standards for the production of nest eggs, such as stocking density and the prohibition of force molting. Consumers who purchased nest eggs knew exactly what the production standards were and can count on the enforcement of those standards.

However, because concise animal production standards had not been established by the NOSB, consumers cannot be certain which production practices were used to produce the organic food they see in the stores.

All organic eggs, beef, poultry, pork, or dairy, for that matter, are not the same when it comes to animal production practices. FACT believes this lack of consistent production practice erodes consumer confidence.

Without clearly-defined animal husbandry standards, the current standards will continue to be abused. FACT believes that NOP will continue to interpret
standards as they see fit. This undermines the integrity of the organic program, erodes consumer confidence in the Organic label, and contributes to the disappearance of family farms in rural communities.

FACT would like to call on the NOSB to clarify animal husbandry standards. We'd like to see this done for every animal species covered under the National Organic Program. For example, we'd like to see minimum stocking densities, we'd like to see concise definition of "outdoor access." We welcome the opportunity to work with NOSB to help establish --

MS. DIETZ: Time.

MS. SEUS: -- these standards. Thank you for your time.

MR. SIEMON: So just to your last part there, you would actually like to see us get very specific about stocking densities, the whole nine yards, and do you see issues of doing that nationally? That's one of the authority things we've had.

MS. SEUS: You know, I understand it's -- it is thorny, because, for example, we just completed an investigation of about 70 different egg brands that advocate -- or that indicate they're humane, including
organic brands, and what we found is, stocking densities and whether or not they allow force molting and whether or not they beak trim, et cetera, they really vary from production -- from producer to producer.

The issue is, is that the USDA Organic label is like an eco-label and there needs to be some substantial definition behind it, and I don't think we see that. I mentioned the case of the country hen, you know, outdoor access is not defined.

Some -- we -- I know there are some producers, I've met them at organic trade shows, that let their hens out on pasture, and then there are other ones I talked to on the phone, when I was doing my investigation, that admit the hens rarely, if ever, go outside.

I think that's a problem, and when consumers are looking at different organic eggs, they have no idea what the standards are, they don't know whether those hens got outside or not. To some consumers, that's an issue.

And so it would be nice if there were some -- you know, even if the stocking densities were low, lower than you would normally consider, it would be nice to have some standardized production practices out there so consumers know at a minimum what they're getting when they see the Organic label.
MR. SIEMON: Does your organization have quantitative standards?

MS. SEUS: We don't have quantitative standards. We are working on basically what I would consider guidance documents for standards for different animals. We obviously do for laying hens because we have the nest egg program. Our standards were probably a little higher as far as stocking density, we had two square feet per bird, it was a cage-free operation, it was not organic, so they did not go outside, although they did have access to natural sunlight, they're Amish farms, so there was no -- it was impossible to do lighting systems, so they have to use sunlight.

But I know there are also other organizations out there, Free-Farmed is one example, Humane Farm Animal Care, where they do have, you know, quantitative standards in place, and I know other organizations are doing that as well.

So I think it's something that's very possible. I'm not saying it's not time-consuming, and I'm not saying it's not going to take a lot of effort, but I certainly think it's something that's possible and might -- might -- you know. And I also think that as the organic industry gets bigger and bigger and more big business, and I'm
talking M & M, Mars, and Con-Agra, and they're already in
the organic industry, I think -- I think as the industry
gets bigger and it's more dominated by these large
industries, I think we're going to see animal husbandry
standards decrease and decrease unless we do something to
establish standards now. It may not happen for 10 years,
but the organic industry is not going to grow at 20 percent
forever and at some point people are going to start looking
to do some cost-cutting to -- you know, to keep their
margins, and it's certainly not going to be to give the
animals more pasture.

So it'd be nice to have standards in place so
those kind of things don't happen in the future.

CHAIRMAN KING: Other comments or questions?
(No response.)

CHAIRMAN KING: Thank you very much for your
input.

MS. SEUS: Thank you.

CHAIRMAN KING: Dr. Bossy is next. Thomas
Harding is on deck.

MR. HAM: Dr. Bossy was not able to attend, so I
am Steve Ham, and Dr. Girish [phonetic] Ganjyal from MGP
Ingredients.

We wanted to thank you for -- I think the
CHAIRMAN KING: Steve, just for the record, how do you spell your name?

MR. HAM: Oh, I'm sorry. Steve Ham, H-a-m.

CHAIRMAN KING: Okay. Thank you.

DR. GANJYAL: And I'm Dr. Girish Ganjyal, G-i-r-

CHAIRMAN KING: We may need a spelling on that.

MR. HAM: It's on the sheet.

DR. GANJYAL: It's on the sheet.

CHAIRMAN KING: Oh, you are on here?

DR. GANJYAL: Yes.

CHAIRMAN KING: Okay, great. Thank you.

MR. HAM: It's much faster.

UNIDENTIFIED MALE VOICE: And please speak into the microphone.

MR. HAM: Okay. We want to thank the National Organic Standards Board for allowing us to present this testimony on behalf of MGP Ingredients, hereinafter MGPI, to support the petition for inclusion of tetra sodium pyrophosphate, hereinafter TSPP, to the National List.

TSPP is an analog of sodium phosphate and is used for buffering and conditioning during the extrusion of wheat gluten. This textured wheat protein is then used as
an ingredient for making organic meat-alternative products. TSPP is listed on the FDA's Generally Regarded as Safe List and is an ideal processing material for organic products. It is presently being used in dairy-substitute products, cheeses, spreads, meats, poultry, and cereals. TSPP is used in small quantities at levels of .5 percent to 3.5 percent in MGPI's proprietary process to produce this textured wheat protein, which in turn is typically used at about 10 to 12 percent in finished consumable products. Thus the level of TSPP in finished consumer products is even smaller.

Currently no alternatives exist for the functional properties displayed by TSPP when used in small amounts in this proprietary process. Extrusion processing is used in this process and involves high temperature and high-pressure cooking for a short duration. TSPP is unique because it has a high melting temperature and thus withstands the extrusion processing conditions while maintaining its functionality.

Saytan [phonetic] is a product made by mixing gluten with water and spices. It does not generate any fibers, like a textured wheat protein, and has poor sensory characteristics. Other materials have been used at three to four times the amounts of TSPP, which gives distortions
to color and taste.

Furthermore, commonly-used and accepted alternative materials have been tried and offer no serious processing advantages, and none are approved for organic processing.

The following ingredients were tested and their processing effects were as follows. I'm just going to list these, since you have copies. Sodium hydroxide, sodium bicarbonate, sulfur bisulfate, sulfite, metabisulfite, sodium phosphate, disodium phosphate, tetra sodium polyphosphate, sodium polyphosphate, and the last one listing the TSPP.

As mentioned earlier, excluding the TSPP, these materials reduce product quality, functionality, affordability, and cause unwanted product discoloration and undesirable odor and taste to these organic products so cannot be produced from a natural source and has no organic ingredients as substitutes.

TSPP not only aids in the processing of this product, it also retains the digestibility characteristics. Textured wheat protein has an excellent digestibility of 96 percent.

To obtain good textured wheat protein product, the wheat gluten needs to be conditioned to the correct pH
and should flow uniformly and easily in the extruder. TSPP helps to condition and helps the full ability of the wheat gluten in the extruder and thus does not directly texturize the wheat gluten but, rather, creates ideal conditions for the wheat gluten to be textured in the extruder.

Textured wheat proteins provide organic food processors diversity to their product line in the vegetarian, meat analog, and health foods categories.

Finally, in light of the above unique functional properties of tetra sodium pyrophosphate, MGPI is requesting in this petition to expand the sodium phosphate category, which is already approved on the NOSB list for dairy use only, to include milled and processed grains, especially wheat gluten, and TSPP to be added to the sodium phosphate (inaudible) that is already approved. Thank you.

CHAIRMAN KING: Now, does he have an additional--
MR. HAM: No.
CHAIRMAN KING: You're just along, okay.
MR. HAM: To help with questions.
MS. KOENIG: The sentence you wrote -- I guess I need some -- I need some clarity. You say it doesn't directly texturize the wheat gluten but, rather, creates ideal conditions for wheat gluten to be textured in the
extruder, and what does that mean?

DR. GANJYAL: What that means is -- like -- like extrusion is basically a high-temperature, high-pressure cooking system in which basically you know, (indiscernible) which will, you know, knead the dough and everything, like cook it nicely, and by the time it comes to us, then the texture -- it forms texture, like when the fibers are formed.

But actually what happens is the cooking system -- the cooking time is very, very short, and that's why we need some agent to actually make it flow easily, otherwise it will -- you know, the wheat gluten is a dough, it sticks to the system, and so that's why we want something which will make it flow easily in the extruder, and that's the main reason why we want to use TSPP. I mean, that basically helps it, to texture it.

CHAIRMAN KING: Sir, just for the record, could you please read your name into the microphone again for the court recorder.

DR. GANJYAL: Yes. My name is Girish Ganjyal.

CHAIRMAN KING: Thank you.

MS. KOENIG: How do you discern between -- I guess that wording -- again, I'm reading your words, I'm just trying to understand what the difference between --

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
you're saying functionally it's textured so that it can be
processed, but does that -- but that texturizing does
result in a texturized wheat gluten, doesn't it? I mean,
you say it doesn't, but -- so you're saying -- I mean, it
doesn't get removed once it's gone through that process, I
mean it's still there and it still functions, correct, or
no?

DR. GANJYAL: Basically, that's the reason -- it
actually processes, and also like -- probably like some of
it is gone because -- I mean, at the high temperature, and
there's a lot of water in there, okay, so it solidifies
[phonetic], and when it comes out of the extruder, as the
pressure is released, the steam evaporates. So probably
some of the TSPP is operated, along with the moisture in
there. That maybe -- does that answer your --

MS. KOENIG: Not really, sorry.

CHAIRMAN KING: Okay, Kim and then Kevin.

MS. DIETZ: Are you generally going to be here
when we actually review this material, are you here for the
few days, if we have questions about the process?

MR. HAM: We were going to leave this evening.

CHAIRMAN KING: Kevin.

MR. O'RELL: I would like to try to bring some --

MR. HAM: I'm sorry, can I add a comment.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
Dr. Tom -- or Thomas Harding -- Thomas Harding is our consultants. I believe he will be attending the full --

CHAIRMAN KING: Okay. Go ahead.

MR. O'RELL: It might help to have the technical people here at that time as well, though.

Rosie, just to try to bring some clarification to this and maybe simplify some of the conversation that was going back to satisfy Rosie's question: it's my understanding, and maybe it's incorrect, that TSPP is functioning more as a flow agent through the system but the texture's being created by the pressure in the extrusion process, and the heat.

DR. GANJYAL: Exactly.

MR. O'RELL: Is that --

DR. GANJYAL: Yeah. The --

MR. O'RELL: Can you elaborate, just -- I mean, I wanted -- that's my understanding of how the texture is formed.

MR. HAM: The TSPP is added to help the wheat gluten flow through the -- through the extruder. It's helping with pH and flow. The texturization is actually occurring because of the pressures and temperatures of the extruder, it's a cooking --

MR. O'RELL: The texturization is a mechanical
process.

MR. HAM: Right, through -- through pressure and temperature.

CHAIRMAN KING: Andrea and then Jim.

MS. CAROE: On the first page of the document you provided, you go through the alternatives, and for the sodium phosphate, disodium phosphate, tetra sodium phosphate, and sodium polyphosphate, you have a comment in the process effect that the higher levels of use, 9 to 10 percent or more. Could you explain what that means.

MR. HAM: Sure. We were going through an evaluation of different potential alternatives, and in the evaluation of these -- the ones you mentioned, we were finding that we were needing to use significantly higher amounts to achieve similar effects.

MS. CAROE: Higher amounts of the tetra sodium phosphate?

UNIDENTIFIED MALE VOICE: No.

MR. HAM: No, higher amounts of the sodium phosphate, disodium phosphate, tetra sodium polyphosphate, and sodium polyphosphate.

MS. CAROE: Right.

UNIDENTIFIED MALE VOICE: So 10 percent --

MS. CAROE: (Inaudible) 10 percent higher than
what you would have used for the (inaudible) --

MR. HAM: My understanding -- I'm sorry. My understanding -- go ahead, Girish.

DR. GANJYAL: Yes. If you -- what does that mean is, like when we tried using these different materials, actually we had to use a lot more than -- I mean like 10 percent more than what you would use -- the tetra sodium pyrophosphate.

MS. CAROE: Okay. That's what I just wanted to clarify.

MR. HAM: Thank you.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, I had a question about that too. With these other materials, some of which are allowed, were you getting the same texture response, that you find desirable for your product?

DR. GANJYAL: No [phonetic]. The reason -- I mean, especially tetra sodium pyrophosphate, it helps -- I mean, with that you get the desired product more easily, and also the texture is more better when we use that.

MR. RIDDLE: Okay. So it's not -- it's a combination of using this material with the pressure and temperature that creates the texture or improves the texture; correct?
MR. HAM: Correct. The textured wheat protein that we are producing is different than like a saytan-type product, where it's a solid mass, it's more of extruding to have meat-like appearance, although this is not a meat alternative on its own, it's used as an ingredient in those types of products. So to achieve that type of texture, using the higher levels, we -- we're not getting identical texture, but more importantly, we're getting off color, odor, sensory properties by using these higher levels.

MR. RIDDLE: Okay. And those higher levels, 9 to 10 percent, that's in the wheat gluten itself, not in the finished consumer product; correct?

MR. HAM: Correct. We are using -- this finished product would then be hydrated in water and used as a percentage in a finished product formula, probably 10 to 12 percent, in a finished product.

MR. RIDDLE: Okay. Thanks.

CHAIRMAN KING: I have Nancy, then Kevin.

MS. OSTIGUY: Am I correct that any changes in the flow properties will change the texture?

DR. GANJYAL: Do -- say that very briefly -- what again, say -- like when we texturize (inaudible), like you work the dough, you knead the dough very nicely, and you've put a lot of mechanical energy into the dough, and this
extruder -- I mean, say, for example, in a broad sense, what I can say is (indiscernible) then we may have to extend the extruder far, far bigger, okay, because the time which is available to cook in the system is very, very less, so you want to make sure that it flows very nicely and mixes very nicely when the dough is going into the screws [phonetic]. So that's -- I mean, we found that TSPP is basically helping us in that flow, so that it gets a good amount of time to cook properly and uniformly.

CHAIRMAN KING: Kevin.

MR. O'ReLLI: Yes. The use of orthophosphates was discussed before, and I'm just a little confused, I'd like to get some clarity from you. The use of orthophosphates, we were told before, didn't provide the same functionality in terms of a finished product, but now you're saying here that the orthophosphates require just a higher usage level of 10 percent more. If -- if something that's already approved works at a 10-percent higher level, does it give you the same texture --

DR. GANJYAL: Well, in that case what happens is we don't get like enough of the wheat actually in the final product, like say for example you have like 100%, you add like 12 percent or -- the other products, then the actual level of the wheat in the final product is very, very less
when you compare it with using TSPP. And also it gives
like off flavors and, you know, odor and all that sort of
stuff.

MR. O'RELL: Well, I guess what I'm asking is:
if you can use an already-approved product at 10-percent
higher level, do you get the same results or are you saying
you get different results that are unacceptable?

DR. GANJYAL: Well, I mean, it gets -- I mean, it
gets like other off flavors and, you know, like different
other stuff along with that.

MR. HAM: I think, on the sensory properties, it
doesn't make as acceptable a finished product, or an
acceptable ingredient in our -- to our customers to use in
organic products.

CHAIRMAN KING: Rose had a quick question.

MS. KOENIG: I understand it's your -- so you're
looking for the substance for your proprietary process,
which involves a certain mechanical setup, with pressure
and temperature. Is there other wheat proteins available
on the market that is commercially being used in products
that are currently being labeled as organic or that are
doing just different processes and not using the TSPP?

MR. HAM: I think, as far as functionality, I am
aware -- well, I've got -- no, I'm not aware that there are
any organic products out there. We do offer a diverse product range. What we are seeking with this is for a few specific products within -- within our diverse product line. To achieve the fibrous texture, it is important to do this. To just simply run product through the extruder and grind it to a powder, for example, may be not necessary.

MS. KOENIG: But -- I mean, I'm a producer too, I mean I pretty much know what my competitors are doing, you know, I'm -- I'm relying on you guys, I guess, you know, as far as -- because my -- I guess my concern, when -- you were talking about specific parameters of a proprietary process, so is it -- what I'm -- my question: is it just unique to your process and because of the parameters, temperature and pressure and mechanical --

MR. SIEMON: You're really asking about the extrusion, aren't you?

MS. KOENIG: Yeah. Well, that's what --

MR. SIEMON: Extrusion --

MS. KOENIG: So I'm just saying: is it specific to your particular proprietary process or is this an industry-wide --

DR. GANJYAL: Well, yeah, I mean, the extrusion process is used industry-wide, sure, but they produce like
different -- like probably some of -- I don't know whether they use that in the organic products, but they use like soy texture and soy products, but the -- the -- you know, they use like rancidity and like different other -- off -- I mean side effects when you actually process soy. So that's -- I mean, this -- I mean, our customers like this product more, better than.

CHAIRMAN KING: Okay. Are there additional questions, comments?

(No response.)

CHAIRMAN KING: If not, I think we'll move on now. Thank you very much for your input.

DR. GANJYAL: Thank you.

CHAIRMAN KING: Next up Thomas Harding; on deck, Jim Pierce.

MR. HARDING: Good morning. It's a pleasure to be here. To be quite honest, I didn't think I was going to be back here talking about tetra sodium pyrophosphate.

As you know, the reason we're here is because of the reconsideration which was handed down through the rulemaking process, where there was a 3-to-3 split and there was some question about the annotations, so I'm told, and that it needed some more review.

But in any case, I'm not going to repeat most of
what's already been said and just jump into some of the
critical areas that are important. So with that history,
we had to first of all find out what reconsideration was,
and we eventually found out, and what I've done is I just
prepared a couple notes, and I also have a letter
circulating that is from one of the end users who is in
support of the use of this material in their made-with-
organic product.

So I'm going to pay attention only to the
additional page comments [phonetic] so that we can shut
this pretty short.

TSPP needs to be permitted in organic ingredients
and products, not only in made-with-organic, because
there's been a lot of discussion about that at the previous
meeting. There is no advantage to the consumer and it
causes the manufacturer and end user unnecessary
formulation difficulties and unnecessary added cost, and we
get to the additional materials that are used, and the
other types of materials, it raises the cost and of course
it reduces the organic ability. In other words, instead of
95/5, we're now 75/25. And so that's a very important
factor.

Plus, allowing TSPP in organic product
ingredients raises the bar for manufacturers to use more
organic raw materials and ingredients. The "made with
safe" has the opposite effect. In other words, we lower
the amount of organic product, as was said before, and we
increase the amount of chemical going into it.

The prepared value-added organic food products,
including meat analogs, are experiencing significant
growth, representing major consumer interest in
consumption. TSPP adds to the quantitative values -- the
qualitative values of these new products. We must provide
the consumer with safe product choice, not decide for them
what organic products they can eat. End users support the
use of TSPP -- please reference the letter that I'm
circulating -- and recognize they have been -- and they
have been at other NOSB meetings, supporting this process,
and I want to be very clear that our intent was not to have
TSPP singled out as a new ingredient but to make it part of
the sodium phosphate analog, which is now restricted under
annotation to dairy.

So we're not trying to restrict it for, quote,
our proprietary, because there's nothing proprietary about
this very important question you raise. Our formulation is
very simple, it's .5 percent for one product, and 3.5
percent for another, and the rest is wheat gluten and
organic flour. In both cases those organic ingredients are
the principal products.

In the end use of this product, we're talking about, in one case, seven percent, in another case somewhere between 10 and 12 percent, in -- as an ingredient in the actual finished organic product. So we're talking about rather low levels of use.

The other thing was that in this process, in all the research I did -- and I'm certainly not the technical person that these gentlemen are, but: This a thermal mechanical process. That's actually what ends up forming the texture, the flow legency [phonetic], which is so important, where TSPP, because of its high melting point, it's very essential to be able to do that. Otherwise you'd have an extruder about a quarter of a mile long. So it's really important to get that through the system, to cook it only for a period of time, without destroying the overall qualitative values of it, and then at the same time get it through the system and into the finished product.

So those are very important points there. MGP ingredients, the organic ingredient manufacturers here, and you've heard from them and gave compelling testimony about TSPP and its functionality, quality values, safeness-in-low-use rate, and clearly stated their research has found no alterative to TSPP.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
There was some concern that TSPP does not show up in the final product ingredient panel. That is true. However, it is not required by FDA. I must point out that TSPP is listed on the ingredients we manufacture at MGP, it simply says, "organic wheat flour, organic gluten, and TSPP." It's not our fault that the labeling system does not require it on the labeling of the finished product, somewhere between seven and ten percent.

Thank you very much. Any questions?

MR. RIDDLE: Yeah, Tom. The statement you handed out to the Board from Kevin Scott, President, (inaudible) Foods Company, has a line that I find curious. It says, "Our current line of certified made-with-organic meatless burgers and breakfast products currently contain certified-organic ingredients with TSPP."

MR. HARDING: That's correct.

MR. RIDDLE: Well, TSPP is not on the National List.

MR. HARDING: TSPP was being used prior to the implementation of the National List, we petitioned that, and, as was said at this board two previous times, it was approved for our use pending the final rulemaking and being placed in the National List, and that's the way it was
handled.

MR. RIDDLE: Well, I understand what you're saying, but everything that didn't make it on the National List is prohibited, and recommendation of the Board doesn't allow the use of a substance until it's gone through the rulemaking process. So I guess I'd like a little more background on this, who's certifying this, how many companies, certifiers, are allowing this.

MR. HARDING: Well, I think you'll have to go back into your own history a little bit. The way the material was handled, as I understand, anyway, that, first of all, it was being certified as a product before the final implementation. When the petition was place forward, that's one of the issues we raised. That same document was submitted before, and we addressed that, that the certifier had given us a continuance pending the final review of the petition and at such time would then make a decision whether we would continue to use it or not if in fact it was approved by the NOSB and was then placed on the List eventually. That's the history.

MS. DIETZ: I have a comment.

CHAIRMAN KING: Kim has a quick concern.

MS. DIETZ: That was brought up, and I don't think that's a place for this board -- that's a compliance
issue with USDA, and we -- that -- we can go back to our
minutes, and we discussed this in detail --

UNIDENTIFIED MALE VOICE: Exactly. I agree with
you.

MS. DIETZ: -- so I don't think we need to bring
it up.

MR. RIDDLE: It's very clear that a substance is
not allowed for use --

MS. DIETZ: Right.

MR. RIDDLE: -- until it's on the National List,
and that was made clear previously when this was discussed,
and it hasn't changed.

MS. DIETZ: Well, we don't need to know who
certified it.

MR. RIDDLE: Well, I think it is public knowledge
and public information who certified it.

MR. HARDING: What we've done, this -- being very
open and honest about what's happened, over the period of
the implementation of the Rule, what transacted and what
you think or what somebody else thinks, so I'm not going to
get into an argument here about that, Jim.

MR. SIEMON: And that's an industry-wide issue
about a whole --

MR. HARDING: Exactly.
MR. SIEMON: -- host of materials and not just this one alone.

MR. HARDING: And I would bet there are a whole host of them. But anyway, thank you all very much, I appreciate it.

CHAIRMAN KING: Other comments or questions for Tom?

MS. DIETZ: And I just have one -- in fact this board did recommend that materials could be used until on the National List, and that was a formal recommendation, even though it's not being -- taken place, so --

MR. HARDING: Right. And the vote was clear that it was an approved material to go on the List, and I have to be honest with you, I was totally shocked that we had it sent back to reconsideration, because we advised them that the annotation could be problematic.

MS. DIETZ: That's the process, and that's okay.

MR. HARDING: Exactly. Thank you very much.

CHAIRMAN KING: Thank you, Tom. Next up is Jim Pierce, on deck is Haim Gunner, with Eco Organics.

MR. PIERCE: Good morning, Mr. Chairman, NOSB, NOP staff, ladies and gentlemen of the gallery. I'm Jim Pierce, self-appointed certification czar at Organic Valley.
In the interests of total transparency, I would like to point out and state for the record that I work with and for NOSB member George Siemon at Organic Valley. George, like the rest of you, struggles to put aside professional affiliations in this forum in order to stay true to your appointed constituency, in George's case farmer producer.

I will do no such thing. I stand before you, devoted on behalf of my constituency, the 650 family farmers who together, with over 250 employees and 65 processing plants, make up the largest and most successful organic dairy farming co-op on the planet, and we're upset. (Laughter.)

MR. PIERCE: Since we're in the Windy City in the midst of baseball and Billy Goat fever, let me summarize our concern in baseball paraphrase by saying: there is no joy in organic mudville.

I would respectfully direct your attention now to the diagram on the back of this testament. Some of you might be familiar with the heighth curve. The heighth curve is a visual tool to track -- used to track progress of many things, including business start-ups, technology, and personal relationships.

Today I would like to use it to describe the
National Organic Program and your role in its future. The classic height curve is comprised of five distinct parts: the trigger event, the peak of inflated expectations, the trough of despair, the slope of enlightenment, and the plateau of success.

The trigger event in this height curve starts on October 21, 2001, at a whole foods store in Washington, D.C. When Deputy Secretary of Agriculture A.J. Yates announced the implementation of the National Organic Program, we all had a big collective hug. The ensuing peak of inflated expectations contained enough momentum to establish the USDA Organic seal as the single most successful eco-label in the food industry.

Now cue the piano into minor key as we slip into the evitable but always disturbing trough of despair. Bake [phonetic], the bottom of the trough, April 14, 2004, the date that three so-called guidance documents were issued by NOP, representing what the organic dairy farmers in my co-op feel is the most serious threat to organic integrity to date, a greater threat even than any previous assault by far, in fact, because in contrast to previous assaults by unscrupulous operators and corrupt politicians, these maladies are from the inside, from the National Organic Program staff, from the very guardians and managers
responsible for the ultimate oversight of our livelihood.

The scope document which guides fraudulent
salesmen of organic sewage sludge and organic kitty litter
to go ahead and use the word "organic" and leave the USDA
out of it and let the buyer beware is short-sighted and
shallow.

The livestock feed document, which guides immoral
feed manufacturers to use fishmeal regardless of
sustainability, contamination, and prohibited materials, in
direct contract to the hardworking good advice that you,
the NOSB, provided them, is an insult.

But the document titled Dairy Replacement, that
erroneously guides organic dairy producers to use
antibiotics anytime, on any organic farm, on any calf or
cow, is a travesty, setting the organic standards back by a
decade and threatening to destroy the reputation of organic
much faster than wild-caught salmon or imprisoned poultry.

So we're pissed, but we're far from giving up,
and despite rumblings that we hear from you all of burnout
and brick wall head-banging, we're not going to let you
give up either. We're counting on every member of the
National Organic Standards board, present and future, to
lead our national organic program out of the trough of
despair and up the slope of enlightenment. That's your

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
job, clean, pure, and simple.

In the coming hours and days you'll hear a myriad of suggested solutions, many of which you're already familiar with. Weigh the proposals, make the wise decisions we know you're capable of, and get organic back in the limelight.

Thank you, as usual, but no less sincerely, for your attention, for this opportunity to address the Board directly. I look forward to watching you work through the material decisions that are before you. By posting committee recommendations on your website, your transparency has improved tremendously. After reading all the petitions, TAPs, and committee recommendations, I would so much like to assure you that you are faultless in your decisions, but alas, you are not.

Particularly, the crop committee has, in my opinion, arrived at the wrong decision in two cases. Hopefully there's people here today from the cotton industry to address the hydrogen chloride issues and from the apple growers to address the 6-benzyladenine -- I knew I'd do that wrong.

If my comments have moved anybody beyond motivation to enragement, I apologize. God bless you, and thank you.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
CHAIRMAN KING: Jim, as always, thank you for your animated comments, it's very encouraging to get your input, and I think that we're all aware there's some ongoing challenges and you, you know, have the support, certainly, of the Board to work together with the program. I know later today that the program has a few minutes and perhaps they can address some of the issues at that time in their presentation.

Do people have questions or comments for Jim?

(No response.)

CHAIRMAN KING: Thank you, Jim.

MR. PIERCE: Thank you.

CHAIRMAN KING: Mr. Gunner is up next, and Lori Johnson is on deck.

DR. GUNNER: As the Board knows, the reason I'm here is because the TAP committee recommendations were directed to the use of soy protein isolate as a food, and in fact our submission is for soy protein isolate as a soil amendment, and in the hope of avoiding a deferral of a decision for soy protein isolate, I asked to come here to supplement the recommendations and the questions which the NOSB asked, in the hope that this would fulfill what you want to know and so that we could get a decision early, rather than late, particularly in view of the fact that
we've been hunting for a decision for some 4 years.

    I should start by saying that I'm a microbial
ecologist by training, and my interest in soy protein
isolate was sparked by the fact that -- applied an
experiment having to do with microbial treatments, the soy
protein isolate stimulated an extraordinary explosion of
microbial growth. Then considering the isolate, because of
its very high nitrogen content, anywhere up to 15.5
percent, and a very, very low C/N ratio, at the level of
about 2, it turns out that this could be an extraordinarily
effective fertilizer as well as overall stimulus to the
soil ecosystem.

    Very briefly, since I've already submitted the
responses to the questions that you felt the TAP group had
not provided you with, let me simply review the questions
that you asked and our responses to them.

    One, use of the material as a soy -- soil
amendment. Well, I've already indicated that we get an
explosion, sometimes a 6- to 800-percent increase in
microbial populations. This has both the effect of
stimulating further organic matter decomposition so that in
addition to the nutritional value provided directly by the
soy protein isolate, you get a second (indiscernible) of
fertilizer.
The explosion of microbial communities is -- also turns out to be effective in suppressing microbial pathogenic attack on crops simply by competitive exclusion. We've submitted data to show the effects on turf grass growth, on clippings, on root expansion, and I won't take up the committee's time by reviewing this.

In short, what we have is not only an extraordinarily effective fertilizer effect but a very large ecosystem series of beneficial effects.

The question for the committee, of course: is the material synthetic or non-synthetic? Well, it's very difficult to synthesize protein. This, of course, is synthesized in the -- in the soybean and the issue is really the manner in which the protein is released from the bean.

Our contention is that this is compatible with Regulation 205.605(j)(1), in which the plant extracts which use sodium hydroxide as a neutralizing agent, as well as humates, are available for registration and we feel that under this regulation, that soy protein isolate also qualifies.

Other questions which the committee asked is in terms of genetic modification. The high rate of microbial decomposition and the virtual disappearance of the soy
fertilizer makes this a moot point. In addition, whatever nucleic acids carry the genetic information is simply not part of the protein isolates.

The basic manufacturing process leaves a very, very trivial amount of sodium hydroxide. Essentially the sodium is what we're concerned with, and at the rate of application, it is truly a meaningless residue.

Are there adverse effects in the environment from manufacture, use, and disposal? None that we have been able to determine, and none has ever been described.

No toxic or adverse effects. Undesirable persistence, no, I've already indicated that the material is very, very rapidly decomposed by microbial communities.

And finally the question "Are there other natural organic fertilizers?", and indeed there are. Natural manures with a nitrogen content of about 4 percent, municipal waste, 6.5 percent, crop residues, about 7.5, fishmeal, higher, 12 percent, fish emulsions, 5 percent, kelp or seaweed.

The problem with these, of course, is that fishmeal, fish emulsions, and others are highly undesirable because of their odor, and most undesirable, of course, is their extraordinarily carbon-to-nitrogen ratio, which means that they are very long-term residues in the soil.
In short, I feel we have an exceptional soil amendment, certainly natural in its derivation and certainly equivalent to other treatments which are registered, such as the humates and the kelp extracts. Thank you.

CHAIRMAN KING: Thank you, sir. We have questions. I have Nancy first, Kim second.

MS. OSTIGUY: Did I understand you correctly when you said that the question of GMOs was irrelevant because the protein doesn't contain the product in GMOs and it's your source --

DR. GUNNER: No. I said it's irrelevant because the amount of residue is negligible, and we get such a high rate of decomposition, the cell [phonetic] is -- virtual total disappearance because of microbial activity.

MS. OSTIGUY: But the source of the soy could be soy that --

DR. GUNNER: Oh, yes, it could be, yes.

MS. OSTIGUY: -- has been genetically modified.

DR. GUNNER: Yes.

MS. OSTIGUY: Okay. That's what I wanted to know.

CHAIRMAN KING: Okay, I have Kim, and then Becky.

MS. DIETZ: Hello, Haim.
DR. GUNNER: Kim.

MS. DIETZ: I have to just go on record that this gentleman has probably the long-lasting record of the materials review process, he started with this in 2001, so I just need to officially say that. Whether it's a positive thing or a negative thing, I think you've certainly (inaudible) --

DR. GUNNER: It's a tribute to my endurance and commitment to this product.
(Laughter.)

MS. DIETZ: Yeah. I think that, you know, it is a very difficult product, and I'm going to have a long lengthy discussion when we actually review this material, so, one, are you going to be staying through the meeting, that's my question for you, when we actually review the material?

DR. GUNNER: To my great regret, I have a plane to catch --

MS. DIETZ: Okay.

DR. GUNNER: -- but I -- I would like -- perhaps during the break we could meet. I have to leave at 12:10.

MS. DIETZ: Okay. That's really all my comment. But he has been in this process for 5 years, between OMRI and the petition process and having confusion, so I hope we
can at least get something done --

DR. GUNNER: Did you all get copies of the material I submitted?

MS. DIETZ: Yes. There are public comments in the book, I believe.

UNIDENTIFIED MALE VOICE: Yeah, and a flow chart.

CHAIRMAN KING: Becky, then Rose.

MS. GOLDBURG: I want to thank you for supplying us with so much information. I wanted to follow up on the question that Nancy asked about the residues, and you argue that they're trivial. Are you speaking of the nucleic acid residues or of the --

DR. GUNNER: Well, there's total decomposition

MS. GOLDBURG: Total --

DR. GUNNER: Yeah. We've done this -- you know, my basic training is in microbiology, and we find that you have virtually -- not virtually, you have total decomposition and you get microbial cessation of growth until you add another dose of material, then you get a typical dose response.

So that -- because it is so available, you have, you know, short-chain amino acids, peptides there, there's virtually no residue in the soil, that we've been able to detect.
MS. GOLDBURG: So -- I'm still not sure. Are you arguing there's no residue of the GM protein itself or the --

DR. GUNNER: There's just no residue on the material, it is --

MS. GOLDBURG: On the material itself.

DR. GUNNER: Yeah.

MS. GOLDBURG: Okay.

DR. GUNNER: It is either -- because the carbon-to-nitrogen ratio is so narrow, it's so immediately available, and, as I said, the turnover in native organic matter, just a -- really an extraordinary array of beneficial effects, and to include this material I think is -- from organic registration, and we've had a lot of people who are very interested in using it in organic growth, I feel is doing an injustice to potential growers. It's simply extraordinary, very high -- the highest nitrogen level of -- unless you're going to bridge [phonetic] products, with urea and the like, of an organic material eminently available, and certainly comparable, in its manufacture, to kelps or humates.

CHAIRMAN KING: Okay, Rose, and then George.

MS. KOENIG: A couple questions. What was the nitrogen level of the protein, what are you saying the
percentage was?

   DR. GUNNER: It goes anywhere -- the ultimate product has anywhere from 13.5 to 15.5 percent.

   MS. KOENIG: Okay. If there is feather meal, which is a protein, which is pretty readily available, that's about 12 percent nitrogen --

   DR. GUNNER: Right.

   MS. KOENIG: -- other than the ones you listed which would be comparable. Additionally, did you see the committee's recommendation? I mean, there is -- on the website the committee has proposed a recommendation --

   DR. GUNNER: Yes. But the recommendations were based on a misapprehension, they treated it as a food ingredient.

   MS. KOENIG: No, what I was going to say was that the process that went through is -- you know, it did go and -- was technically reviewed as a crop and a soil amendment. What the -- and you can access the web to see that report. And if you have web access and you haven't viewed that --

   DR. GUNNER: Of course I haven't, but the reports we --

   MS. KOENIG: -- it might make sense --

   DR. GUNNER: -- got demonstrated that the ultimate response was to turn it down, they simply were not
was not adequate presentation by the TAP recommendations. Is there anything beyond that?

MS. KOENIG: I think that the TAP kind of went through some of those --

DR. GUNNER: I saw that it did [phonetic] --

MS. KOENIG: -- the issues that you had, and maybe -- through -- because it was a long process, that in 2001 it may have been, I wasn't aware of that, but I can assure you that the TAP that we looked at did look at it based on the OFPA criteria and as a crop soil amendment, so just to clarify that.

DR. GUNNER: Certainly the latest staff recommendations which were turned down by NOSB --

UNIDENTIFIED FEMALE VOICE: It was deferred.

DR. GUNNER: -- seemed to be inadequate.

UNIDENTIFIED FEMALE VOICE: The recommendation was deferred, and he has read that, and his response is in the public comments, I think he's (inaudible) asking.

MS. KOENIG: Okay. And then I guess, finally, back to Becky's question on the GMO issue, because it was something that was discussed by the crops committee, do you have any sign [phonetic] -- the question is not whether the protein -- the soy protein gets degraded, it's the fact that I guess the source of soy -- there's so much GMO soy
now, the -- it's really the BT toxin, what the effects
would be not on the microbial population within the soil
but other, you know, insect populations that might exist in
the soil that would be affected by that toxin, and do you
know of any -- because we did not have that information
provided in the TAP, and I think that's what --

DR. GUNNER: I have not seen any data on use --
since this is a novel application of soy protein, as a
fertilizer, virtually no data exists. But again, the rapid
uptake and decomposition suggests that the danger to any
insect population is minimal. We're talking about the
disappearance of this material applied to soil and
fertilizer amounts within -- you get activity within the
first 24 hours. So the notion that this would be a danger
to any incidental population is -- is very remote, in our
-- and by the way, as an ecologist, I'm not unconcerned
with this.

And also, as one of the (indiscernible)
environmentalists here, of the -- one of the first
departments of environmental science, I can claim some
credibility in my concern for the environment.

CHAIRMAN KING: I have George, then Jim.

MR. SIEMON: I just needed to understand the
commercial use here. You said it's 13 to 15 and a half
percent nitrogen, and what is the recommended use per acre, like pounds --

DR. GUNNER: We use it -- you have to appreciate that this is not inexpensive, it about .5 pounds per thousand square feet, we speak in terms of applications of turf and the like, on golf courses, so it's not designed for broad agronomic use, it's --

MR. SIEMON: So you said 25 pounds per thousand --

DR. GUNNER: .5 pounds.

MR. SIEMON: Point --

DR. GUNNER: .5. It's a very minimal amount.

MR. SIEMON: And what's the cost, does any --

what would a farmer --

DR. GUNNER: Oh --

MR. SIEMON: Just so I understand.

DR. GUNNER: It costs about -- you have to say -- it would be at the level of about --

(Pause.)

MR. SIEMON: That's okay, if you can't answer it.

DR. GUNNER: It would be -- it depends on volumes, of course, but it's roughly about a buck and a half a pound, not inexpensive.

MR. RIDDLE: Yeah. Well, I agree with your comment that the TAP review addressed who would use this soy protein isolate and I found it wholly inadequate and I think that was part of the basis of the crops committee recommending deferral, but you provided much more detailed information, and I thank you for that, and one of the questions I had, that the TAP didn't address, it discussed various manufacturing processes but said that the petitioner had not supplied the information. Well, now I see that you have, and it's clear in your flow chart that this is a hexane-extracted --

DR. GUNNER: No hexane residue.

MR. RIDDLE: Yeah. We're not talking residues, we're talking processing methods and inputs. But it's hexane-extracted, made from non-segregated soybeans; correct?

DR. GUNNER: Right.

MR. RIDDLE: Okay. And then in -- your information you provided and the TAP provided looked at the, you know, nitrogen on an input substitution type of basis rather than looking at the whole-systems approach, which --

DR. GUNNER: Right.

MR. RIDDLE: -- under the regulation, soil-
building crop rotations are mandatory. So your nitrogen needs to be coming from the natural nitrogen cycle to begin with, and that aspect is not addressed in either your information or in the TAP.

The question I have is, can your company or another company produce this material from segregated non-GMO soybeans? -- because we're not talking about or debating the effects of the residues, it's a fact that the regulation prohibits the use of excluded methods, so can you produce this substance from --

DR. GUNNER: Yes. I mean, the question is not the nature of the soy, the question is the process itself, and whether or not it's genetically modified does not determine ultimately the protein concentration in which we are interested.

MR. RIDDLE: Yeah.

DR. GUNNER: Now, the --

MR. RIDDLE: So that's a possibility.

DR. GUNNER: Yes. But non-GMO, of course --

MR. RIDDLE: Because --

DR. GUNNER: -- would add to the expense enormously and (inaudible) --

MR. RIDDLE: Yeah, but that's not our worry.

And then the other is just whether -- you know,
the committee's recommended to defer, and would you rather that we take action one way or another?

DR. GUNNER: Yes, we would, because I'm assuming there is an appeals process and after all of these years, the committee has been as steeped in this problem as we are, so that I would -- yes, we would prefer a decision, hopefully on the basis of adequate information available to you.

MR. RIDDLE: Thank you.

CHAIRMAN KING: Okay. Other questions? Kim?

DIETZ: Just -- I was going to save this comment, but I'm going to -- while you're here I'm just going to state this. In 2001 Mr. Gunner petitioned to OMRI for the material because it truly is a brand-name material, so I'm going to go on the record and say that it's a brand-name material.

The reason that it was in the system so long was because it's a brand-name material, and now it's before the Board as a material to be placed on the National List. So we have a lot of confusion on this board because we shouldn't be reviewing the soy protein isolate, in my opinion, we should be reviewing the two materials, the -- I think it's the hydroxide, the sodium hydroxide, the two materials, and I have my notes, when we actually review...
this material I'll go through it.

So I'm not sure what we're going to do with this, in my opinion, as a board. I would like to sit down and talk to the crops chair and the NOP because I'm confused over it, and I've been just as involved in it as you have for the last 4 years, intimately.

So I'd like to get it settled, and yes, I would like to come to some resolution for this meeting [phonetic] Mr. Gunner and figure out what exactly it is and where's the problem. But again, I believe it's a brand name and it should be handled differently.

DR. GUNNER: Well, thanks to the Board and its patience.

UNIDENTIFIED MALE VOICE: And your patience.

CHAIRMAN KING: And yours as well. Thank you.

DR. GUNNER: Thank you.

CHAIRMAN KING: Let's see who we have next.

Maury Johnson, and Ray Boughton is on deck.

MR. JOHNSON: Good morning. My name is Maury Johnson. I'm with NC Plus Organic Seed, in Lincoln, Nebraska. I'm also a member of the American Seed Trade Association committee on organic seed, and I just wanted to share with you this morning a little bit of our view of organic seed.
I think one of the things that has been a little bit frustrating to us and perhaps to some other people is that the concept of organic seed and why it is a good concept has in many cases been lost to the organic grower. In many cases he sees this as just another rule or just another burden for him to carry, and what we're trying to do at NC Plus and what I've encouraged the American Seed Trade Association to do is to focus, instead of on the negative side, what are the positive aspects of organic seed and how can organic seed contribute to the organic effort.

And in the little brochure that I passed out to you, I would like to talk a little bit about some of the benefits as we see them and we think should be emphasized, as well as some of the specific issues relating to not just organic seed but seed in general.

At NC Plus and, I believe, other seed companies attempting to do organic seed we're trying to provide seed products that meet the unique demands agronomically of organic farmers, as well as the markets that they're trying to serve.

One of our main crops, of course, is corn, and raising corn organically, in the organic environment, is quite different than on conventional. The products, the
hybrids, need to be different. But the organic farmer's
also looking to market his products to a different set of
consumers, and in the case of soybeans, for instance,
there is much greater interest among organic farmers for
food-type soybeans as opposed in the conventional, where
the emphasis is on a commodity.

So organic seed producers and organic seed
companies and public entities can concentrate on the kinds
of products that the organic consumers are asking for.

A second advantage of organic seed that is
sometimes lost is that purchase of organic seed by organic
farmers helps to support other organic farmers rather than
a multi-national corporation that doesn't really care one
way or the other about the organic farmer.

At NC Plus, we have organic seed production on
about 3500 acres involving corn, soybeans, red clover,
alalfa, two or three grass species, and organic -- and
sorghum, Sudan grass, we have production from Michigan to
Texas to Wyoming to Minnesota, and we are working with
farmers in all of those states, who now have another
opportunity, if they want to pursue it, for a crop to
raise.

The third advantage, I think, is that organic
seed has the potential to be less in GMO content than
conventional seed, non-GMO content will be a very high priority, and I'm not here to debate, you know, whether --
the GMO levels and all that, but if the organic seed grower tests his seed stock, if he's very thorough and
dedicated to cleaning the equipment, if you have a facility where the seed is being conditioned and bagged,
that is non-GMO, and if you have the final testing of the organic seed product before it goes out to a customer,
those are all things which we have found in our experience have greatly limited GMO content.

But those are all things that the conventional seed producer is not likely to pay as much attention to as an organic seed producer.

CHAIRMAN KING: One minute.

MR. JOHNSON: Just briefly on some other issues:
Will organic seed be as good as conventional seed? It certainly can be, but seed quality is often determined by the environment and by experience, and those are things that organic seed producers are going to have to gain very quickly.

How about cost, and I know cost is not supposed to be part of the equation, but cost is merely a --

CHAIRMAN KING: Time.

MR. JOHNSON: Okay.

MR. SIEMON: Are you satisfied with the present rule on organic seed?

MR. JOHNSON: We would like to see greater consistency of the implementation of the Rule. As a for instance, we estimate on field corn that probably no more than 40 percent of the organic corn acres in the United States are being planted to -- with organic seed. The problem is not the shortage, the problem is implementation.

MR. SIEMON: Do you think there's adequate organic seed corn available and that it's not -- you said it's not shortage. You feel it's available?

MR. JOHNSON: It's kind of hard to say for sure how many acres are out there, but using USDA statistics, NC Plus by itself, just knowing what we can supply, we could -- by ourselves we could probably supply 80 percent of the market, and there's five or six other organic seed providers for corn. So in the case of corn, I think the supply is there. I think in the case of soybeans the supply is there.

In the case of alfalfa and some other crops, it's going to take a little time to build those supplies, but a lot of seed producers are kind of sitting on the
sidelines, wondering what kind of a market is there going to be. We have taken kind of an aggressive approach, but many other folks are kind of waiting to see.

The supply will come pretty quickly, because it's -- again, it's a relatively small market, but in the field crops that I'm familiar with, I'm convinced the supply can be filled pretty quickly.

MR. SIEMON: Of course, some of the problem is the availability, you've got to order months ahead of time and often you run out of corn right that moment, so it's that infrastructure development too, is another other part of it.

MR. JOHNSON: Well -- and again, I'll just speak for our company, but we have maturities that can go from Texas to North Dakota, you can call us now and get -- maybe not every one of our hybrids in any particular seed size, but you can get any hybrid maturity we have available.

And one of the discouraging things to us is that last year, and even this year, we will be obsolescing a fair amount of seed, organic seed, because we couldn't get it sold, and that's kind of discouraging.

CHAIRMAN KING: Jim, and then Andrea and Dave.

MR. RIDDLE: Yeah. Maury, thanks for your
comments. Besides the need for better consistency in how it's being implemented and enforced, a question -- if you see any deficiencies or problems with the Rule itself as it applies to organic seed, that's one question; and then also, the Board has a recommendation, that we'll be discussing tomorrow morning, on the whole commercial availability issue, to help clarify and bring consistency to that. But that recommendation was written in the context of minor ingredients for processed foods, but it would also impact the organic seed, and so I will appreciate -- will you still be here tomorrow?

MR. JOHNSON: No. I have seed stock to deliver (chuckles).

MR. RIDDLE: Okay. Well, if you have any comments on that, it would be very helpful, but also just -- as the Rule is written, are there some things that you would like to see changed, that maybe the Board should, you know, form a task force or cost committee, do some work on?

MR. JOHNSON: Well, in the Rule there is reference to equivalent varieties, is a variety from company A equivalent to a variety of company B, and that's a pretty tricky question, because, you know, we're dealing with a living entity here, a seed, and the crop that it

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
produces, and what is equivalent, so that the whole notion of equivalency is a little bit hard to get a grasp on.

We have always felt, at NC Plus, and I think other companies as well, that our goal is to make our seed good enough that you, as an organic grower, would buy it even if the Rule wasn't in place. We don't want the coercion there.

But by the same token, farmers and growers are creatures of habit, and if they're used to going to a particular seed provider and now all of a sudden you're asking them to change, there's some resistance, but all we're saying is: give organic seed a chance, recognizing that there are some long-term benefits out there, and so give it a chance, and I guess again concentrating on the long-term payoff and potential for use of organic seed.

I guess the other thing -- the other comment that I would make is -- and I have suggested this to our ASTA group as well, I think this has to go on a crop-by-crop basis. I mentioned corn. There's adequate supplies of field corn out there. Grain sorghum acres are very small and rain sorghum production requirements are such that you have to have fairly large fields to grow the crop. It is unlikely that in the near future there would be sufficient demand to produce organically grain sorghum
seed. I mention ed alfalfa. Alfalfa takes some time to get going. So I think you have to kind of look at it on a crop-by-crop basis.

But I guess what I would like to see is that the use of organic seed be kind of like using treated seed on certain crops. In other words, people who use treated seed can lose certification, but if there is supplies of organic seed of a given crop, then maybe we need to get to the point where they lose certification on that. I hate to be suggesting something that strong, but maybe that's what it's going to take.

CHAIRMAN KING: So if I'm hearing you correctly, and then I have several people that want to speak, you're saying if we could get more specific and look at it literally on a crop-by-crop basis, that may help define --

MR. JOHNSON: Right.

CHAIRMAN KING: -- commercial availability.

MR. JOHNSON: Because there's some crops where the number of acres are so small and the production requirements are so -- are such a nature, it's going to be difficult, from a business point of view, to justify producing that seed organically.

CHAIRMAN KING: Andrea, then Dave.

MS. CAROE: Well, as Jim mentioned, we will be
discussing a recommendation on commercial availability for minor ingredients. One of the controllers [phonetic] that we looked at and had included in that is a requirement that both the user of that ingredient and the certifier that is certifying use of a non-organic ingredient maintain a certain effort to look for the particular ingredient in organic, and by doing that, they need to use tools which are clearinghouses of availability.

To your knowledge, and you mentioned that you're involved in a C group, is there a list of availability of organic seed, is there a list of different vendors that are selling different types of seeds?

MR. JOHNSON: On, I believe it was, March 25th, our American Seed Trade committee group -- and we've met three or four times over the last year, and we have been working on a proposal for a database of organic seed suppliers, that first of all you'd have to be certified organic to be on the List, and it would be on kind of a crop-by-crop-type basis, and that was brought up and it was discussed in a meeting between our American Seed Trade committee group and some folks from the USDA, Kevin and Rick Matthews, for their -- it was just something that was discussed, it's something that our American Seed Trade group has to look more carefully at. We're meeting in
Philadelphia at the end of June and I think we're going to try to finalize a recommendation as far as a national database that would list organic seed suppliers.

MS. KOENIG: I have a question.

CHAIRMAN KING: Rose.

MS. KOENIG: Two things. There are databases out there, because I did a presentation on organic seed. I mean, it doesn't give you the quantities and varieties, but there's certainly sources, if you type in -- so there's -- there's some efforts out there by various organizations that at least list the manufacturers.

I wanted to go in a different direction, because we're -- the cost committee was looking at a material that was used for de-linting cotton, hydrochloric acid, and I just wanted to know, as I started looking -- you know, part of the issue was treatment versus a process, and I didn't -- I still haven't, I guess, got the answer, as far as how much chemical processing goes on, in terms of, you know, taking the raw seed and making it a marketable product for either -- precision planting, is there other crops, other than cotton, where the physical structure -- you know, the properties of the seed have to be removed for planting, and do you view that kind of removal as a process or a treatment, or association?
MR. JOHNSON: First of all I have to tell you that the crops that we work with, there is no treatment or processing going on of those -- of those particular crops.

MS. KOENIG: But you still have to clean it, correctly [sic.] -- or --

MR. JOHNSON: Right. We clean it with mechanical means. Our group, though, has discussed other seed crops, primarily in the area of vegetables, and certain coating materials that are -- have been used there on the seed itself, and at NC Plus we are looking at some of these materials to use on the seed, because one of the things about untreated seed is that it -- in some ways it does kind of add to the cost to the farmer at some point because, you know, he may have stem loss [phonetic] or -- or whatever. As a seed producer, the fact that we never use seed treatment or coatings of any kind puts us at greater risk as well.

But this issue that you talked about is primarily with the smaller seeds, especially the vegetable seeds, where they're made -- need to be some sort of coating just to be able to plant those, and I'll have to tell you, I'm not very knowledgeable on those kinds of crops.

I guess one other comment, if I could make it
here: at NC Plus, we have done a lot of testing for GMOs in the seed stock and in the seed that we sell, and we think that that has been an important service to the customers that we sell to and the customers -- and the people they're trying to sell to, and we've invested a lot of money in that over the years, and I guess one of the things that we would like to see is maybe some identification by the seed seller of what he has done, in terms of GMO content, not that there maybe necessarily needs to be a standard, but just identify if the seed has been tested or not tested or whatever.

CHAIRMAN KING: Thank you very much.

MR. JOHNSON: Thank you.

CHAIRMAN KING: At this time I think we'll take a quick break, 15-minute break, and have -- who do we have next here. Ray. Ray, you're up when we come back, and what's the official time, 9:58, so we'll reconvene at about 10:12, 10:15.

(Off the record at 9:58 a.m. and reconvened at 10:20 a.m.)

(Tape change.)

CHAIRMAN KING: All right, let's officially get started here. The next member for public comment is Ray Boughton.

MR. BOUGHTON: Thank you, board. I'm Ray

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
Boughton, I'm from Colfax, Wisconsin, up about 60 miles straight east of St. Paul, Minneapolis, and up northwest of Eau Claire.

I'm here today because I'm concerned, like Maury is, on production of organic hybrids. Lake Organics is located in Colfax, Wisconsin, which is 25 miles northwest of Eau Claire or 60 miles east of St. Paul, Minnesota. Lakeland Farm was established in 1929 by my grandfather, and it's a third-generation farming operation. We are farmers.

We currently farm 900 acres of organic certified corn, soybeans, food-grade soybeans, and hybrid seed corn. Our organic hybrid seed corn is marketed in five states by another family-owned business, Bruner [phonetic] Seed Farm in Durand, Wisconsin. I believe in Wisconsin there's only about three or four family-owned seed companies left; everything else has been bought up.

I am president of the Wisconsin Organic Crop Improvement Association Number 1 and a member of the International Standards Committee for OCIA International in Lincoln, Nebraska.

A problem has developed where untreated foundation seed cannot be purchased. Nearly all the seed purchased for seed production has been treated with
Capitan [phonetic] or Apron, which is a prohibited material by the NOP. This material is used to protect the seed from seed diseases, including seed rot, which Maury just mentioned just a few minutes ago.

The hybrid being produced from these foundation seeds are not only specific to the Wisconsin area but are the product of decades of seed breeding. In the past Bruner's has bought the foundation seed variety, only licensed seed company that can purchase this seed, that we cross-breed to produce various hybrids, which are harvested and processed for resale the following year. We've got a full one year in between. This process is one full generation from the actual sale to the organic farmer who plants a seed which is untreated.

Monsanto is buying up many of the foundation seed stock companies. Last year the seed company where we purchased the majority of our seed stock from, Holden Seed (indiscernible) was purchased by Monsanto, which will most likely limit the availability of untreated seed. It was -- just as a little after-thing: it was purchased at an enormous price, I don't know how many millions more than the actual company was worth, if that kind of relates what they're looking at.

Our concern is that as long as organic seed

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
producers can only use untreated seed and foundation seed continues to be treated, organic seed developers and seed producers will be very limited in their hybrid selections. Large corporate seed stock companies, like Pioneer International, Northrup King, and Garst will continue to sell untreated seed to the organic farmers, that had been grown from treated seed stock, using chemicals, commercial fertilizer, and all conventional farming methods, while the organic producer, on the other hand, using all organic farming practices, is prohibited from producing the seed stock from the treated foundation stock. Because of this disadvantage, organic seed producers will probably meet their demise in the future. Thank you very much. I'll take questions. CHAIRMAN KING: Questions. George. MR. SIEMON: I'm a little confused. You say that the problems that developed were untreated -- I guess I -- I just answered my own question; no wonder I was confused. (No response.) MR. BOUGHTON: (Chuckles.) As I put, two -- there's two other letters, and one shows our attempt last year to buy untreated seed foundation stock, you'll see
Holden Seed, at the bottom you'll see a little clip there called a -- Monsanto Company.

MR. SIEMON: So basically your certifier is telling you -- you're saying there's no commercially-available alternative and they're still telling you no because it's treated.

MR. BOUGHTON: It's treated, yes. And where we have to compete, as he mentioned before, you can call up your local Pioneer dealer, he will have untreated seed if you order it far enough ahead for him, but that same seed that you're allowing Pioneer's person to sell, we can't sell, and they have treated theirs with chemicals and everything else, but us, using all organic -- and the only thing different that we use is the foundation stock, which is one whole generation away from the actual end user, probably two, actually, two generations.

MR. SIEMON: And this is -- your certifiers determine that.

MR. BOUGHTON: Yes. It's NOP's standard.

CHAIRMAN KING: Just a point of clarity.

MR. BOUGHTON: Yes.

CHAIRMAN KING: It sounds like, in the foundation seed production, you're talking about two different --
MR. BOUGHTON: Right.

CHAIRMAN KING: -- production systems, one clearly conventional, but in your example, it's your intent to use this foundation seed on land that's managed organically?

MR. BOUGHTON: All organic, completely organic.

MR. SIEMON: And then the land will qualify.

CHAIRMAN KING: Yeah.

MR. BOUGHTON: It's all qualified, certified.

CHAIRMAN KING: So it would be a prohibited -- use of a prohibited (inaudible) --

MR. BOUGHTON: Jim, you could probably clarify that a little bit, what happened when the standards were written.

MR. RIDDLE: Well -- right.

(Laughter.)

UNIDENTIFIED MALE VOICE: Thanks, Jim.

(Laughter.)

MR. RIDDLE: You know, historically, the requirement was for organic farmers to use untreated seed, and if you couldn't get untreated, then you could use treated; and then it went up a notch, you know, to the organic; and then total prohibition on the treatment; and then, simultaneous, having the organic seed requirement
has implications for the production of organic seed, so you can't use a treated foundation stock to produce an organic hybrid that would then be planted by an organic farmer, and, you know, I just want to be clear on what you're requesting, and that is, as I understand it, and you correct me if I'm wrong --

MR. BOUGHTON: Yes.

MR. RIDDLE: -- that there would be a change in the Rule or a clarification of the Rule as it applies to organic seed production, that there be an allowance for treated seeds or certain treatments to be used for production of organic seed, not the production of an organic crop.

MR. BOUGHTON: Right. Strictly for foundation seed stock only.

MR. RIDDLE: Right now, the way, instead of a rule change, that that could be accomplished would be: to petition the use of the treatments for that specific use, for the preservation of foundation seed, or however the use would be annotated.

MR. BOUGHTON: Yes.

MR. RIDDLE: So that the door is open for that approach without a rule change right now.

MR. BOUGHTON: Right. That's what we are
requesting, to go -- go that route.

CHAIRMAN KING: Okay, Rose.

MS. KOENIG: I guess the -- so the foundation stock is controlled by you? The foundation seed.

MR. BOUGHTON: Very few companies. One of them here is, as you have in front of you, Holden Seed out of Iowa. What is happening now is Monsanto is buying up the seed stock companies. You can see where that's going to be heading down the road.

MS. KOENIG: But -- so -- I mean, have you requested just non-treated --

MR. BOUGHTON: Yes. Yes, we have.

MS. KOENIG: -- and they --

MR. BOUGHTON: We have requested seed stock. There are certain numbers, when you're plant breeding --

MS. KOENIG: Right, I know.

MR. BOUGHTON: -- when you start breeding different numbers, we have to have like a certain male or a certain --

MS. KOENIG: Right, I know.

MR. BOUGHTON: -- female to create a hybrid, and that's where -- we're running into our major, major problem on that.

MS. KOENIG: But there's no -- I mean, the
treatment for your parental lines -- just like an organic
grower has to purchase a hybrid, I mean we have to go
through, say, the same commercial -- you know, like Opito
[phonetic] Seed or some of the -- the larger companies.
Again, like George said, it may take six months in advance
to request non-treatment, but that's something that, when
asked, they have been able to accommodate, but it does
take a lot of planning. There's -- why won't they do that
with the parental stock?

MR. BOUGHTON: We raise 168 acres of seed corn.
When I go to Holden's, which is a multi-million-dollar
company, and walk in the door and ask for five bags of
seed, you can see where I'm coming from.

MS. KOENIG: But it's a post -- the thing is, is
same thing, I mean, I'm buying a pound of onion seed,
so it's even less than 150 pounds, from Opito. The thing
is, is that is a post -- I mean they have the untreated
seed, and then at a certain point it's treated --

MR. BOUGHTON: Much of it --
MS. KOENIG: -- because it doesn't come off of.
So -- so I guess --

MR. BOUGHTON: No, all of it -- no.
MS. KOENIG: I guess what I would say is that we
need to make sure there's due diligence that that in fact

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
is the case, because I know as a producer requesting a pound of seed, it is obtainable. It does take extra effort. And what the seed companies have told me is that "that's no problem, we just need to know because we don't" -- you know, again, it comes -- it doesn't come off the plant treated, there's a process where they do take those lots and do it at a certain time, but you can perhaps request those before that time.

MR. BOUGHTON: We do not have the ability, as a small company, to go a year in advance and ask for five bags of seed. It would be -- you'd -- when you're talking about Monsanto, you're not talking like -- I don't know where you buy -- where you purchase your seed, what type of seed you're planting, but corn seed is a completely different -- we're -- we're talking corn, that's all I'm talking is corn, and that's a completely different product. As you mentioned, it's specific to this one --

CHAIRMAN KING: First of all, thank you for attaching these letters, and I think Rose is on the right track here. We understand, I think, your challenge, as you've communicated it. As with everything we do these days, documentation is key --

MR. BOUGHTON: Right.
CHAIRMAN KING: -- and being able to forward that to perhaps further define the issues so we can somehow resolve it.

Are there other questions or comments?

(No response.)

CHAIRMAN KING: Just a quick housekeeping note.

Please --

MR. BOUGHTON: Thank you.

CHAIRMAN KING: -- try to refrain from talking while we're doing public input, we'd like to concentrate on the conversation at hand.

I simply have a company name for the next, it's Valent BioSciences, so if there's a representative from Valent BioSciences, please give your name for the record, for the court reporter, please.

MR. FILAJDIC: Hello, my name is Nenad Filajdic. I'm a product development manager of Valent BioSciences. First of all I'd like to thank you for an opportunity to be here and say a few words about 6-benzyladenine, which is used in apple thinning.

What was available before were commercial products such as Promalin and Accel, and they also, in addition to 6-benzyladenine, contain giberellic acid. This new product that we have, Accel, is only based on
6BA, so basically what it's used for is thinning and sizing, also fruit quality, mostly used in apples.

What is important about this product is that it's basically naturally-occurring in plants, it's cytokinin, and we synthesize it basically just because it's a big savings. It would be fairly impossible to produce it straight from the plants because of the quantities, but we do synthesize it, and it's naturally-occurring cytokinin. It's non-toxic, it doesn't harm any beneficials, it's very low toxicity and very low persistence in the environment.

In addition to that, there's no other chemical thinners or any -- I should say effective thinners available in organic production, even though some are tried, with limited success. What non-apple growers have as an alternative is NAA, basically, and 7-carbaryl, which are not very environmentally-friendly compounds, so this is basically the only -- the only other alternative that organic growers could use, in case that this is approved.

Right now we don't have a formulation that is organic because our commercial products have other ingredients that are -- two ingredients that are actually category 3, but if this -- if 6BA is included in the List, we would be ready to produce organic formulation, because
the research has been performed on it. This would enable organic growers to save -- to save on its production, because the (inaudible) thinning would be pretty much avoided, and as most of you know, that is the single most -- single biggest cost for apple producer, is thinning.

So I need to apologize because I don't know if my document got to you in time, I e-mailed it, but if not, we also submitted this document before, it was just not updated for 6BA alone product, it was mostly based on 6BA plus gibberellic, so I updated that and I sent it. It has a lot of information in addition to what I just said, but if you have any other questions, I would be glad to answer those. Thank you very much, again, for your time.

CHAIRMAN KING: People have questions? Rose, did I see your hand go up?

MS. KOENIG: I did. If anybody has one, I just want to check before I answer the question -- ask the question, but I guess one of the questions I had, and I'm not sure if we have it, was public comment from apple growers as far as the need for the product.

I mean, one of the things that the committee discussed was the -- you know, the optional -- the labor-intensive -- I mean not -- again, I'm a producer, and, you
know, weeding and hoeing is -- is labor-intensive, but that's what we do.

So can you just speak to -- to those -- to the hand-thinning option.

MR. FILAJDIC: Sure. There are some numbers also in the report that came out and it basically states on average the cost for hand-thinning to be $1680 for a 20-acre farm, and that's four or five times higher than what non-organic producers can spend, because basically these other compounds, like NAA and 7, are fairly cheap.

So that is basically, in a nutshell, what -- where it would come out economically. As I mentioned, I'm fairly certain that's the biggest single cost in apple production.

If we talk about sustainability, I see this product as being sustainable because one of the -- one of the important objectives in production is to stay in business, and this will allow a lot more flexibility. So that's how we see this, we see this as a help to organic growers.

There is a lot of interest for this product in Europe also, we're working -- that's basically why we started working on this formulation that is going to be organic.
CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah. You mentioned Europe. Is this substance allowed in Europe at the present time?

MR. FILAJDIC: We submitted for registration in key countries a couple of months ago, so what we're looking at is sales in a few major countries in 2005, most of the countries 2006. This is not organic. So --

MR. RIDDLE: Oh, that's just for conventional use.

MR. FILAJDIC: Yes.

MR. RIDDLE: Okay. So it's not approved for organic use --

MR. FILAJDIC: Not yet --

MR. RIDDLE: -- in Europe yet.

MR. FILAJDIC: -- no. No.

CHAIRMAN KING: Dave.

MR. CARTER: Yeah. Just a question on the handling of it during application, because the TAP noted that, you know, it's not harmful as long as you have the proper protection, which you can say about just about anything, so, you know, as far as in your intent or something like that, but --

MR. FILAJDIC: Nothing unusual. I'm not sure of the numbers, but there's (indiscernible) four hours, which
I believe is pretty much the minimum. I'm not aware of any additional requirements that we have other than

MR. CARTER: What are the main problems with exposure to it, I mean what would you run into?

MR. FILAJDIC: I'm not really aware of anything. Our toxicity is fairly low. There is a little bit of an eye irritation, but other than that, toxicity -- I have numbers in a document that I submitted. It's very low. And persistency in the environment is also very short.

MR. SIEMON: Did we get the document he's referring to?

CHAIRMAN KING: I don't know, I can't seem to find it, unless someone else --

UNIDENTIFIED MALE VOICE: No, I didn't either (inaudible) --

CHAIRMAN KING: -- so I don't know if that's something that Katherine had received --

UNIDENTIFIED MALE VOICE: Can we make copies?

CHAIRMAN KING: Do you have copies with you?

UNIDENTIFIED FEMALE VOICE: I have some copies. I downloaded one, it was on the website, so I'll get copies.

CHAIRMAN KING: All right. Rose had another
quick comment.

MS. KOENIG: I have just one more question. Are you familiar -- I know the Organic Materials Review Institute has a brand name of a natural source of cytokinin on there. Are you familiar with that product, and do you --

MR. FILAJDIC: No, I'm not. As far as I know, this is -- as far as I know, Valent BioSciences is the only company actually doing extensive research on this. There are other companies that use generic products. There is actually a 6BA that is already registered in the United States for non-organic production by Fine Agrichemicals [phonetic] but only at a -- at a low rate, so --

MS. KOENIG: This would be a naturally-derived form. I think it's from --

MR. FILAJDIC: No, I'm not.

MS. KOENIG: -- fish or --

MR. FILAJDIC: Oh. No, I'm not.

CHAIRMAN KING: Additional questions?

(No response.)

CHAIRMAN KING: Thank you.

MR. FILAJDIC: Thank you very much.

CHAIRMAN KING: Next is Zea Sonnabend, CCOF; on
deck, David Engel.

MS. SONNABEND: Hello. I'm Zea Sonnabend, from California Certified Organic Farmers. Most of you have seen me up here many times. Of course I would like to comment on pretty much every subject brought up today, but I'm going to confine myself to a few subjects that have been brought up yet, that I think are important.

First of all, the petition that you'll be dealing with concerning urea in pheromone traps for olive fruit fly. I understand that the urea was petitioned as an active ingredient, which in use in the field, at least in California for olives, it is not, it is the -- and the TAP review is really inadequate to explain the situation in which it is used, and so I feel like I need to fill this in, because we have a lot of olive growers that would probably like to use the material as an inert in a pheromone trap.

These traps are for a fly, not a moth, and the traps need to have urea in liquid form to be able to work effectively, and therefore it's like a little bottle that is hung in the trees, and the sticky part with the pheromone is at the top of the bottle and then a solution of ammonium carbonate and perhaps urea is used in the bottom of the bottle to provide the smell like rotting
meat that attracts the flies to the traps.

So far my personal interpretation of the exemption that you gave to list three inerts for pheromones would apply to urea for this use because it is on List 3, it's registered for -- as an active pesticide not for this use, but it is also on EPA List 3 as an inert, and it is serving the function of the -- the equivalent function of the other List 3 inerts in the other types of twist-tie traps.

Anyway, I understand that you don't want to allow it as an active, perhaps, but I do urge you to word your -- whatever vote you take on it so it does not prevent its use, perhaps, as -- under the pheromone exemption for List 3 inerts in traps.

So far as actually haven't let our growers use it because it was under petition and I didn't understand exactly the finer points of the petition, but the ammonium carbonate by itself is not working that well, we have a really bad olive fruit fly problem that's evolved in the last couple of years. And I will be here when you discuss it, if you need more background information.

Secondly, as sort of the historical voice of the past materials reviews for the NOSB, I was quite concerned that the letter that the department issued concerning
phosphoric acid in aquatic plant products.

The original NOSB, when they put things on the National List, had no intention for other synthetic things that were not mentioned in the annotation to be allowed in those products. Not -- and I don't want to say that I'm opposed to the phosphoric acid, possibly, in aquatic plant products, I think it might be a very appropriate thing, because they do need something to preserve and stabilize it, but it should be reviewed by a TAP review, because there are other alternatives calcium propionate and -- or sodium propionate and sorbates and things like that, that could also serve the same functions, and not just blanketly allowed without a TAP review for that purpose.

It, you know, leaves the door open potentially to elemental sulfur with emulsifiers, fish products with urea in them, all kinds of additives that could be used with things on the National List.

I urge you to put a statement at the beginning of 205.601 which says that things on the National List may only be used in the -- with the restrictions in the section to say that they should only be used with the annotations as presented, not with additional products in them.

Okay, I also wanted to comment on the Sunset
document for the National List. I read this very quickly. I think it is really important to set up a procedure for -- you know, to review the -- re-review the materials.

I do really hope that you don't base it entirely just on technical information, because the technical information from the original reviews is not equivalent to the technical information you get today and you'll be creating a lot of work.

I do think it's a good -- the part about going for public comment to suggest priorities for review is a good idea. Review the controversial ones and -- but make a streamlined procedure for the ones that aren't going to have a lot of controversy or else you're going to really be in for an amount of work you're not going to be able to complete.

And last of all, I was on the Compost Tea Task Force, we made a very thoughtful document and recommendation, and I will be here to help with background information on that and to provide anything you might need from that task force. Thank you.

MS. DIETZ: Zea, on the phosphoric acid, I'm a -- as a historian, I'm going to ask your opinion, and also Steve Harper here is a past NOSB member so I might ask
Steve --

MS. SONNABEND: And Merrill. Actually, Merrill was on the NOSB at that time.

MS. DIETZ: Since we've been reviewing materials at this board, we asked to see the whole manufacturing process, and it's been part of our discussions that if we approve a material, then we're approving everything that it takes to make that material function on the National List, so that would be anything that's used in that manufacturing process of that material, unless we specifically annotate against or restrict.

So what you said is contradictory to what I believe we've (inaudible) --

MS. SONNABEND: No, they did--well, they did look at the things that were used in aquatic plant products--

MS. DIETZ: Okay--

MS. SONNABEND: --and decided to only allow--

MS. DIETZ: Okay. Right.

MS. SONNABEND: --hydroxide stabilization, potassium hydroxide stabilization. Or extraction, excuse me.

MS. DIETZ: Okay.

MS. SONNABEND: However, not as much information
was available at the time they did that review about other additives, about the need for preservatives in the products.

MS. DIETZ: Right. But from a board standpoint, we can't go back until the re-review of the material and look at an entire process, but our function of this board and the material on the National List is it's allowed unless it has a specific annotation that --

MS. SONNABEND: This does have a specific annotation and --

MS. DIETZ: Right. I'm talking in general, I'm not --

MS. SONNABEND: Right.

MS. DIETZ: -- specifically talking about the phosphoric acid issue --

MS. SONNABEND: Okay. But --

MS. DIETZ: -- but just as a blanket so that --

MS. SONNABEND: Yeah. It's just that that annotation was expanded upon by the NOP, and I don't believe that was the intention when it was voted into the --

MS. DIETZ: Okay, and I'm not commenting on that, other than as a historian and as how we have to look at a material on a National List --

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MS. SONNABEND: Uh-huh.

MS. DIETZ: -- and there's many, many, many that are on there. I mean, natural flavors is a typical example that --

MS. SONNABEND: Uh-huh.

MS. DIETZ: -- and there's many, that if it's on there, then we have to assume that the process to make it is allowed unless it's restricted by the annotation.

MS. SONNABEND: Right.

MS. DIETZ: Okay. Okay.

CHAIRMAN KING: Jim, then Rose.

MR. RIDDLE: No, Rose was first.

CHAIRMAN KING: Okay, Rose, then Jim.

MS. KOENIG: Which gets me back, I guess, to sort of Kim's point and what you brought up in terms of the Sunset Provision. The Sunset Provision that was proposed by the committee allows for that -- the calling of more technical information on issues that have kind of surfaced, such as perhaps the fish in aquatic plants, and also allows, I guess, the NOSB to re-look at some of those earlier materials that were put on in the early years, that as I understand it -- and again, I wasn't on the board -- were in page formats and very abridged versions, not really a technical review at all but sort of just a
compilation of information that people could gather.

Could you comment --

MS. SONNABEND: Okay --

MS. KOENIG: -- to those reviews, because --

MS. SONNABEND: Uh-huh.

MS. KOENIG: -- you know, there is a suggestion that those -- that technical information was adequate, and that's what --

MS. SONNABEND: Right.

MS. KOENIG: -- I'm trying to understand, is the adequacy of that technical --

MS. SONNABEND: They varied a lot. There were 160 -- or -54 products reviewed in three NOSB meetings, or four. I mean, we had days where 40 were done in a day. But the background information varied from some that I have huge volumes in my files on just one material, to the one-page format.

They did receive technical review in the sense that each material got sent to three experts in the field, who did offer their opinions, just like today, but the source documentation that those three experts had to deal with was skimpier than it is today, and what they -- some of those three experts did actually write papers about it, and others just checked the box, "okay, synthetic," or
"not okay, synthetic." So it varies.

That source document does exist still. You can go back over it. But, you know, my concern with your -- the version that you showed me, that -- the way it's written, is that -- and I apologize for saying this, but some of the clarity of it is mired in proposing future guidance documents (chuckles), and it doesn't make clear that there could be things that won't need supplemental review to just be able to go through. So it would be good if it could just elaborate a little bit more on that, maybe.

CHAIRMAN KING: Okay. I have Jim, then Nancy, then Ann.

MR. RIDDLE: One comment, not a question. I appreciate your historical perspective on the aquatic plant extracts and that the only substances which can't be used are those which are allowed under the annotation, and I'd just like to read something from the preamble, that Rose had brought to my attention, Page 80612, where the NOP said that synthetic ingredients in any formulated products used as organic production inputs, including pesticides, fertilizers, animal drugs and feeds, must be included on the National List. As sanctioned by OFPA, synthetic substances can be used in organic production and...
handling as long as they appear on the National List.

So, you know, that really is the precedent that we're working under.

MS. SONNABEND: And that's why aquatic plant products is on there in the first place, because most people think: oh, that's a natural, but the extraction process renders it to be a synthetic, and that was decided by the original NOSB.

MR. RIDDLE: And my question is about the urea in the traps, and I -- I heard this interpretation, that it could fall under the EPA List 3 allowance that's already become part of the amended rule, and the question I have is about the removal of those traps as standard practice.

Are these something which actually can be recovered and removed or are we looking at --

MS. SONNABEND: Yes.

MR. RIDDLE: -- soil application here?

MS. SONNABEND: No, no. It's a little bottle.

MR. RIDDLE: Yeah.

MS. SONNABEND: It does not leave the bottle. The bottles are pulled down at the end of the year. The material gradually evaporates over time.

MR. RIDDLE: But the bottles themselves and any
residues or remaining materials are removed.

MS. SONNABEND: (Nods head.)

MR. RIDDLE: Okay.

MS. SONNABEND: I do want to make it clear that, you know, so far, that is my interpretation, but I have not advised these UF growers that they could use this yet --

MR. RIDDLE: Yeah.

MS. SONNABEND: -- until the petition got clarified.

MR. RIDDLE: Right.

CHAIRMAN KING: Okay, Nancy, and then Rose has an additional comment.

MS. OSTIGUY: Zea, my question is on urea still. Explain to me your reasoning for looking at urea as a pheromone rather than an attractant. It is not a standard pheromone for an insect.

MS. SONNABEND: Okay. A pheromone twist-tie, for instance, or a pheromone wing trap contains the pheromone, and then it contains additional substances that help the pheromone disperse, that keep it from breaking down too fast, that maybe -- you know, additional attractant-type things. We don't know what all the List 3s are. We looked at a couple of them, but we don't know
what they all are, in all the different pheromone traps, and the problem with reviewing them all is what led to there being an overall exemption. This -- it all comes in one package that you buy from the company.

In the olive fruit fly traps, mostly the growers put them together themselves. There is -- University of California has been providing pre-made traps to some -- in some counties, but mostly the grower has to get the pheromone, get the bottle, get the ammonium carbonate, and put it together themselves.

I see it as being an equivalent thing, although the grower made it themselves, but they do have to get the urea and the ammonium carbonate component from -- you know, it's a different thing, when they buy it, and they put it together themselves.

MS. OSTIGUY: Well, the logic --

MS. SONNABEND: So maybe you do -- I mean, it is your prerogative, but I'm just saying if you're going to reject the petition as it stands, word it carefully with whether you want to allow that, its use as an inert, or not, because otherwise it's still in limbo, the way it's actually used.

MS. OSTIGUY: But what I would -- what I'm trying to understand from what you're describing is the
difference between inert and active when the material is
an attraction. That is an active ingredient, in my
understanding of the definition, of active versus inert.

MS. SONNABEND: I think the pheromone companies
don't see it that way necessarily. You know, I -- it's
your determination to make.

MS. KOENIG: I think the problems you get with
this, what you're describing -- and again, I have to think
a little bit more about it, but my gut is, is that if
there's a commercial product, okay, that contains urea, it
would be under the inerts, it wouldn't be listed on that
product, then based on what we voted on as far as the
List 3s for those types of traps, it would be okay.

But what you're saying to me: with these
homemade jobs it's a totally different story because it's
not a commercial product, so in fact we can't -- you know,
our hands are tied on this one, we can't approve it as an
-- you know, an item, we can't approve it if it's not
registered with the EPA. I mean, for the first step is --
if it is -- so I'm saying if you can find a commercially
available product that has it as an inert --

MS. SONNABEND: How -- I mean, I just have
trouble understanding how farm advisors are recommending
it if it's not approved by the EPA.
MS. KOENIG: But farm advisors are not recommending it to the NOP --

MS. SONNABEND: Right, I understand that.

MS. KOENIG: -- you know, that's not our -- you know. So anyway, that's -- that's I think --

MS. SONNABEND: You know, it's another example of: the commercial companies get to sell the product but the farmer doesn't get to make it themselves.

CHAIRMAN KING: Other questions for Zea?

(No response.)

CHAIRMAN KING: Zea, thank you. David Engel is next, and Leslie Zuck is on deck.

MR. ENGEL: Good morning. My name is David Engel. I'm a dairy farmer from Wisconsin, still.

(Laughter.)

MR. ENGEL: I'm also the executive director of the Midwest Organic Services Association, and recently I am what would be called an interim board member, interim steering committee member, of the recently-formed Accredited Certifiers Association.

So my comments today, as they have been in the past, I tend to like to kind of step back and look at the larger picture and get a sense of what we're doing with the pieces that we have.
You know, like when we were growing up, our mother said, "Well, you pick them up and put them away." Well, as mature adults now, we have a lot of pieces out there that we're working with, and sometimes they get kind of messy, they're not really where they should be, they're not working properly, and, as several people have expressed today, when we come to a meeting like this, it's a mess, it seems like, to some of us, but I -- I don't take that view.

I think the pieces are very positive. Obviously they are what we have to work with. They are pieces like the NOSB, the national rule, the federal rule, the National Organic Program and their staff, the different certifiers, companies that are petitioning products, the petition process itself, all of these pieces go together, and we are working with them now.

So to repeat, then: process is everything to me, and we need to make sure that these pieces are working together. For example, one thing that has been mentioned before that we think would be very, very positive would be an executive director for the National Organic Standards Board, because that would help you people coordinate within yourselves and provide a go-between between the NOSB and the NOP. We think that would be very positive.
Another issue that has come up in the past, that I'm not sure where it's at, at a certain point -- I believe it was last year, I can't remember, the peer review panel was brought to the table by the National Organic Program and a certain kind of process was put in place. It didn't appear to me that it was what the Organic Food Production Act required in terms of a peer-review panel, but neverthe-less, there was something started, and I'd be interested to see where that comes from -- or how it ends up.

Another issue that has come up in terms of process has been timely publication of the ingredients that the Board recommends in the federal docket so that they can be brought into production, into use, by producers. Generally speaking, the community has felt -- and this was brought up today earlier -- that a recommendation and an approval by the National Organic Standards Board then would result in a timely publication in a federal docket and it could be used in a reasonable manner. That has not happened, and it's caused a lot of problems.

Another issue that has been brought up today and that I feel that some of these, you know, issues could be addressed by looking at the process we have, is: whose

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
authority is it to provide guidelines, and what kind of
relationship are there in answering these questions, that
we all have, to what they mean on the ground, and an
example of that has to do with the treated seed, for
example.

The dairy interpretations that have been made by
the National Organic Program, that seem to fly in the face
of what everybody's been doing, and yet now there's an
interpretation, so -- it's a guideline, it's an
interpretation.

What does this mean to a certifier and how they
apply it? One good example of process that has occurred,
I think -- and I've talked with several of you about this,
and that's the feedback that I've gotten -- is last -- the
last NOSB meeting, you all went through a -- you stepped
back, you went within and you addressed the compatibility
issue, and this was based on a need, perceived by
everybody, to put together better --

CHAIRMAN KING: Finish that sentence and then
we'll have some questions.

MR. ENGEL: To provide better review of
materials. Thank you.

CHAIRMAN KING: Questions for David about any of

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
the items he brought up?

(No response.)

MR. ENGEL: Thank you.

CHAIRMAN KING: Thank you. Leslie Zuck, and Urvashi is on deck.

MS. ZUCK: My name is Leslie Zuck. I'm the Director of Pennsylvania Certified Organic. We certify about 300 operations in Pennsylvania, a lot of chickens and cows. I'm also on the interim steering committee with Dave Engel for the Accredited -- the newly-formed Accredited Certifiers Association, and I would like to make a couple quick comments, at the beginning of my comment, about two of your draft recommendations, since you're going to be talking about those in the next couple days.

On the accredited certifying agents' procedure for determining minor non-compliances, I would really -- I know that you originally were asked to take out the term "major" as it applied to non-compliances, but I really would like to have you reconsider using the designations "major" and "minor" non-compliances because -- we've even just tried to discuss this document, and the issue -- it just becomes a semantic nightmare, and it could become a legal nightmare as well when we're dealing with clients,
because having the word "non-compliance" refer only to major non-compliances makes things unnecessarily difficult, because when you say "non-compliance," the word usually would refer to both of those types of compliance - non-compliances.

So it should -- the plain "non-compliance" should refer to either and we need to bring back the "major" and "minor" so that we can be clear what we're talking about. I mean, it's hard enough for certifiers to really understand, we're having a discussion in the staff -- you know, with the staff, and we have to convey that information to our -- our clients and our farmers.

On the commercial availability draft recommendation, Number 2-B, 3 and 6, these -- actually, these two first comments were also on behalf of the Northeast Certifiers Association, or group. B-3 is asking -- or requiring certifiers to verify the non-availability of a material by checking current lists of some sort, and we believe this burden should be placed on the producer to produce to us the Lists that were checked and, you know, bring that as part of their Organic System Plan. The burden is on the producer to verify that.

And Number 6, submitting a list to the NOP of all materials that we approve, and we would just like to
know why -- what would that information be used for and why would that additional burden be placed on certifiers.

Okay, my main comment is about the guidance statements -- the guidance statement on the use of fishmeal as a protein supplement in the feeding of organic livestock.

After reading the document, it occurred to me that it would be extremely important to have a definition, a better definition, of what a protein supplement is. Since it doesn't have to be organic and it can be fed in any amount, I fear that without more specific information defining it, that it would open the door to a lot of things. What one producer or certifying agent would call a supplement another producer or certifying agent could just as easily call a feed ingredient, which would then have to be organic.

So we need a little help here. In fact, the current definition does -- it says -- it defines a feed supplement as a combination of feed nutrients, some even saying fishmeal as a stretch, to get under that definition, if it's not a combination of feed nutrients. So I think we just need some help with that there.

I would also like to ask for clarification from either the NOSB or NOP regarding Section 205.237 and as to
whether the non-synthetics referred to there cover both agricultural and non-agricultural materials. The fishmeal guidance statement doesn't clarify whether the fishmeal is allowed because it's non-synthetic or because it's non-agricultural, or doesn't it matter.

As an accredited certifying agent, it's important for us to have this clarification. It affects things like the use of maybe molasses, kelp, alfalfa meal, or, depending on the definition, even soybean meal as a protein supplement. So we need a little help with that too.

It's important for us to know whether we must prohibit these non-synthetic materials and supplements that are allowed under .237 if they also contain a synthetic ingredient that is not on the National List. PCO has allowed the use of fishmeal as a non-synthetic under .237 as long as it did not contain a synthetic ingredient not on the National List, such as a synthetic preservative, ethoxyquin, but fishmeal preserved with the natural preservative Nature would be allowed. Did I say we did allow -- we did not allow the use of fishmeal with ethoxyquin but we do allow the use of fishmeal with the natural preservative Naturox.

So since the statement -- as long as it does not
contain synthetic ingredients is missing from that
guidance statement, I'm just wondering why that issue
wasn't mentioned and whether, as a certifying agent, I
should be allowing or prohibiting these materials.

CHAIRMAN KING: Thank you. Questions? Andrea,
Ann.

MS. CAROE: Do you have your comments written,
Leslie?

MS. ZUCK: I do not. I could write them.

MS. CAROE: I mean, you've got a lot of good
comments in there about a lot of recommendations.

MS. ZUCK: Yeah.

MS. CAROE: We're going to be discussing that,
and I tried to take as good notes as possible, but --

MS. ZUCK: Well, I'll tell you what, my next
sentence was going to be a recap of those three things,
the three basic -- the three basic questions I have, which
are: a need for a better definition of supplement,
especially protein supplement, which there is no
definition for; and can the non-synthetics allowed under
205.237 be agricultural or non-agricultural; and three, is
fishmeal allowed even if it contains a prohibited
material, and if so, are other non-synthetic supplements
also allowed if they contain prohibited materials.
So that's kind of a summary of my questions.

CHAIRMAN KING: Well, and I think it would be important if we could get copies of those questions somehow, even if --

MS. ZUCK: I'll do that. I have it on my computer, but I couldn't print out.

CHAIRMAN KING: Oh, yeah. But they're very well thought out, so I think it's important to go ahead --

MS. CAROE: And also your comments on the minor non-compliance and commercial availability.

MS. ZUCK: Okay.

MS. CAROE: Well, I guess this was under the commercial --

MS. ZUCK: Yeah, that was --

MS. CAROE: Yeah, the commercial availability as well.

MS. ZUCK: The commercial --

MS. CAROE: Those comments that you made as well, I'd like to see those written down, if I could.

MS. ZUCK: Sure, I'd be happy to.

CHAIRMAN KING: You're passing --

MS. ZUCK: I wrote these on the train, so you don't want a copy of this.

CHAIRMAN: We're going to get to you eventually,
okay?

         MS. ZUCK: I can hardly read it.

         CHAIRMAN KING: Third time's a charm, right?

         Jim, you --

         MR. RIDDLE: Yeah. On the commercial availability, we did receive some other comments that were posted on the website, similar to yours, and I don't have the draft open in front of me right now, but I do believe that we've made some changes --

         MS. ZUCK: Good.

         MR. RIDDLE: -- but we will -- I'll be presenting that tomorrow morning. So you'll be here?

         MS. ZUCK: I will be.

         MR. RIDDLE: Great. Yeah. So if they're not being addressed, then speak up, you know, at that time, if they haven't, but it would sure be helpful to get them in writing.

         MS. ZUCK: Will do.

         MR. RIDDLE: As far as answering those other questions about the implication of the feed -- fishmeal, I think we have the same, similar questions.

         CHAIRMAN KING: Other questions for Leslie?

         (No response.)

         CHAIRMAN KING: Okay. Thank you.

R & S TYPING SERVICE - (903) 725-3343

         5485 S. LIVE OAK, GILMER, TX 75644
MS. ZUCK: Thank you.

CHAIRMAN KING: Urvashi, you're up, and James Wettle is on deck.

MS. RANGAN: Good morning. My name is Urvashi Rangan. I'm an environmental health scientist for Consumers Union. We're the publisher of Consumer Reports magazine. I also direct the eco-labels project at Consumers Union, where we rate environmental labels on lots of products, and organic is definitely one of them. So one of the main missions of that is to educate consumers as to what organic means, which is why I come here to every National Organic Standards Board meeting.

We want to thank you again for your tireless efforts to guard the standard and guard this label for consumers. Without you, without these open public forums, it would be very difficult for us to express our concerns on a regular basis about these things. It also gives us an opportunity to regroup, to learn what new things have been issued.

We also want to commend the NOP for prohibiting the use of the USDA label or any NOP approval implications on personal-care products, on dietary supplements, and on aquaculture. We think that consumers are better served by that, and for those -- for all of those for a variety of...
different reasons, but we commend them for their actions on that.

However, these guidance statements that have been issued in the last week, of which I think there were four new ones, I'm not sure what this is. Some of these come with significant changes to the regulations and to the law. This is a public program. That process that needs to be in place is that these things need to be proposed in regulations for public comment. It's really difficult when we have clarification statements that are also subject to change at any time without public comment. This is not what guidance needs to be, this isn't how this program needs to be run.

There's one of these directives that's of particular concern to Consumers Union, and I think I'm going to probably spend most of my time today talking about that, but there are other issues that I'm going to be bringing up on Friday concerning labeling inconsistencies, concerning the fishmeal, concerning the antibiotics in livestock.

But this one I'm going to talk about today is of most concern to Consumers Union. I don't think there's been an issue as important to maintaining consumer confidence in the label, and that has to do with this
compliance and enforcement directive for pesticide use in
organic production.

We don't see this as a compliance and
enforcement strengthening; we see it as a loosening of
compliance and enforcement. Consumers expect -- and this
is what the regs and the law say -- that there are no
synthetic pesticides reviewed unless otherwise reviewed by
the National Organic Standards Board and approved for use
on the National List.

We get this question all the time from
consumers: what is on organic produce, are there
pesticides being used, are there synthetic pesticides
being used. To be honest with you, I get it internally at
Consumers Union. People don't quite understand. And it's
already convoluted enough to explain that well, it's not
that there aren't any synthetic pesticides, but those that
are used are approved by this board. That is the very
essence of the law and the regulations, and it is before
they are used they are reviewed and approved.

This entire document disregards that fact, that
these compounds and these agents need to be reviewed
before they are used. Many of you may recall the
Consumers Union has tested organic produce for pesticide
residue, we did that before the National Organic Program.
Because there have been assurances now that there is a process in place for reviewing these materials, the question has not been opened again, as to whether or not these things need to be tested. This document opens that question. These prohibited pesticide residues could be found now on organic products that include ingredients on EPA's List 2 and 3 that are prohibited for use in organic production.

Consumers rely on this board to make sure that that doesn't happen. It cannot happen. It is serious erosion of what the organic label means to consumers. And this guidance document makes significant changes to that and makes a serious shift of the standards.

It's based in secrecy, these ingredients are not required to be listed, it is under confidential business information. Based on a conversation I had with EPA yesterday: only the manufacturer really has access to what ingredients are in those formulations. EPA is the only one that can crack that code. That's why EPA proposed a pesticide registration guidance for manufacturers of pesticides who want to get extra labeling that their pesticide is okay for the National Organic Program. We would like to see this board mandate that pesticide manufacturers have to go get that NOP label from
NOP -- from EPA. EPA has offered to do it. We need to
  take them up on that opportunity.

  CHAIRMAN KING: Questions or comments for
  Urvashi?

  (No response.)

  CHAIRMAN KING: Thank you very much.
  MS. RANGAN: Okay. You're welcome.
  CHAIRMAN KING: I have James Wettle up next, and
  then Marty Mesh is on deck.

  (Pause.)

  CHAIRMAN KING: This is your official proxy, I see. So we'll have the opportunity to see Marty for ten
  minutes.

  UNIDENTIFIED MALE VOICE: I think he needs a
  handicap for doing this to me.

  (Laughter.)

  MR. MESH: They asked me to. As the primary --
  my name's Marty Mesh, reading comments on behalf of the
  Texas Organic Cotton Marketing Cooperative.

  As the primary marketer of organic cotton grown
  in Texas, the Texas Organic Cotton Marketing Cooperative
  is against the NOSB's crops committee's proposal that
  hydrogen chloride not be added to the List of allowed or
  regulated substances. Our reasons and comments on
recommendations and the TAP reviews are detailed below.

As stated in the co-op petition, we are requesting that the NOSB allow the restricted use of hydrogen chloride in the process of de-linting organic cotton seed because we have no alternatives.

First of all, there is no commercially-available organic cotton seed; second, there is not any commercially-available non-organic cotton seed that is not acid-delimited; third, planting un-de-linted or fuzzy seed is not an option with mechanized planting; and fourth, there are no commercially-available alternative processes for de-linting the seed or otherwise making the fuzzy seed suitable for planting.

The crops committee and TAP reviewers suggest the use of lactic or acetic acid as alternatives but acknowledge that these may not be effective. All of the de-linters and others with expertise in dealing -- in the de-linting process, that we have talked to, agree that these acids would not work satisfactorily.

One of the persons we discussed this with was Dr. Gay Jevedin [phonetic], retired senior director of research for Cotton, Inc., who is the co-developer of the dilute acid-de-linting process using sulfuric acid. Dr. Jevedin stated in a phone conversation April 14th,
'04, quote, "Acetic acid and lactic acid would not be suitable alternatives for commercial de-linting of cotton seed. These acids are too weak to remove the lint in a short enough time to prevent damage to the seed," unquote.

As far as alternative processes of de-linting, we have pursued and are continuing to pursue any possibilities that we find. We're working with Tom Wiedengardner [phonetic], director of cotton seed research and marketing for Cotton, Inc., on starch coating the fuzzy cotton seed to make it usable in mechanical planters. Wiedengardner, who has been involved with Cotton, Inc., in the development of easy-flow cotton seed for the feed industry is now trying to improve the process for planting seed. We have sent him 250 pounds of fuzzy cotton seed for trial in his pilot plant, if he is able to get it going.

However, Wiedengardner indicates that at best commercial availability of planting seed using this process is several years away.

Also another company, LT Kinzer Company, is working on an enzyme de-linting process, but here again, it is in developmental stage and is a few years away from commercial availability.

We've also looked into the mechanical de-linting
options but because of the various problems have not found anything that's a viable solution. One of the best hindrances to finding an alternative to de-linting with hydrogen chloride, whether it would be trying organic acids or special mechanical de-linting, is that no commercial de-linting company is willing to do anything out of the ordinary for the small quantity of planting seed needed by organic producers. We have difficulty even obtaining acid-de-linted seed that is not treated with various chemical seed treatments.

The large seed companies will not provide untreated seed at all. We are fortunate that one small seed company has been very good to provide us with untreated planting seed, and a few local de-linters will de-lint producer cotton seed and leave it black, with no chemical seed treatments. However, even these who have provided us black seed are not at all interested when approached about alternatives to hydrogen chloride because our volume is so small.

The TAP review mentions that, quote, "organic cotton production is more than a hundred-million-dollar-a-year business," unquote. However, the current annual farm value of cotton sold in the organic market is approximately 2 million -- that's a 98-percent error --
for production in the United States and 15 million worldwide.

The TAP review also touches on the issue of whether the use of hydrogen chloride as a de-linter means HCI is being used as a processing aid or a seed treatment. It is our position that it is a processing aid, not a seed treatment, because of, among other reasons, the fact that EPA does not require that it be registered as a seed treatment.

The criticalness of the issue of organic cotton producers' ability to plant seed that has been de-linted using hydrogen chloride cannot be overemphasized. The members of our cooperative produce a large majority of the organic cotton grown in the U.S. --

MS. DIETZ: Time.

CHAIRMAN KING: Finish your summary, please.

MS. DIETZ: Your time on your first five minutes up, so you can finish it up --

MR. MESH: Well, let me finish the sentence.

MS. DIETZ: That's fine.

MR. MESH: All of our numbers you see that has been de-linted with HCI, as far as we know, all other producers in the country do also, and I'll give part of my five minutes to the Texas Organic Cotton Cooperative, to

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
finish their letter.

MR. RIDDLE: Okay. Go ahead and then finish and then we'll see if there are any questions on this.

MR. MESH: As has been previously stated, we have no alternatives at this time. If organic producers were to be decertified for the use of this seed, it would eliminate organic cotton production in the U.S. If that happens, 4,000 or more acres would return to conventional cotton production because there are no other economically viable crops in this arid region, west Texas.

It would be especially regrettable for this to happen at this time because the demand for organic cotton appears to be finally taking off, our cooperative and others have worked very hard for many years to develop the organic cotton industry. It would be a tragedy if just at the point that there's potential for converting significant acres of cotton to organic with the accompanying reduction in pesticide use. I don't know if you're aware of how much pesticides are used in conventional cotton. It's substantial. In fact, there's none -- no other crop more.

The seed issue is allowed to eliminate domestic organic cotton production. We urge you to recommend that hydrogen chloride used for de-linting cotton seed be
considered a processing aid and to allow hydrogen chloride for use in organic production for de-linting cotton seed.

The Texas Organic Cotton Marketing Cooperative will continue to pursue both mechanical and organic solutions for the process and will inform you as soon as we have found one.

MR. RIDDLE: And Marty, my clock shows you used just a little over a minute of your own time, so why don't you start --

MR. MESH: I think Kim was the timekeeper, I thought we were going to make improvements in the ability for timekeeping.

(Laughter.)

MR. RIDDLE: It's hard to let go of that (inaudible). But you'll have about four minutes on your own is what --

MR. MESH: "About" is the critical --

UNIDENTIFIED MALE VOICE: Your reputation precedes you.

MR. MESH: You know, if there's questions on the de-linting -- I mean, I would also add that your TAP review is suspect, you have a Ph.D. of -- associate professor of chemistry in the middle of the U.S., you have

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
a masters with biochemistry in forensic drug testing in
the eastern U.S., and you have the U.S. --

CHAIRMAN KING: Marty, let me just interrupt.
Are there questions for Marty concerning the de-linting
process?

MR. MESH: Or the TAP reviews, I would take
either one.

MS. KOENIG: No, and -- you know, Marty and I
had talked as I know he had -- we had concerns with the
TAP report, I mean, and that's what I wanted to make clear
to individuals sitting in the room, is that when we vote
and when we submit a recommendation for either crops or --
you know, any of the committees, I mean, it's based on the
information at hand, and that's why it's really important,
now that we're following that process and having it on the
website in advance, that hopefully we'll get more of this
public input and -- which means, you know, back to Jim's
comment, that: yeah, there's some decisions in there that
the committees made, but again, those decisions were made
based on the information at hand, and we worked to try to
let people know about that so that if there was other
information that we didn't have within the TAP, that we
could consider that. So I thank you and I thank the Texas
cotton growers for coming forth with that information,
because one of the big things was the -- that gray area of alternatives, and the fact that they have brought forth an expert really helps the process, as far as being able to reconsider and think about this thing before the final vote.

The question I had was -- and what wasn't clear was whether the co-op -- and I think you made it clear. When you say organic seed production, were they -- are they in fact producing organic seed that they're trying to use themselves or is this an issue in both the non-commercial-ly-available -- you know, that organic seed is noncommer-cially-available and therefore it's just a process similar to the foundation seed that's occurring and therefore cotton is not even being able to be grown?

I mean, I assume that they're using seed that is already being processed, or de-linted. I don't know. What's the current situation?

MR. MESH: Right. The petition is so that organic cotton producers can use organic cotton seed in planting. It has to be processed as a processing aid with hydrogen chloride, so that they can continue to do that. If you deny the petition, then the only thing they have left to do is find -- there is no alternative. You know, I was going to say find treated -- I mean find
conventional seed, but that's going to be treated with HCI as well. There is no alternative.

MS. KOENIG: Thank you, because that wasn't clear.

MR. MESH: So their goal is to use organic cotton seed.

CHAIRMAN KING: Nancy has a question, then Dave.

MS. OSTIGUY: One of the points that you read in the letter, that I have a question about: since cost is not an issue that we can consider, one of the items is that planting of the linted version of the seed is impossible with the mechanical planting process.

MR. MESH: It's not possible. I mean, you plant cotton on thousands of acres --

MS. OSTIGUY: Right. Well, that's what I said, is it's not possible, right. But is mechanical processing -- is that a cost issue? What's the reason for mechanical planting?

MR. SIEMON: Compared to doing it by hand?

UNIDENTIFIED FEMALE VOICE: You mean mechanical -- any mechanical de-linting?

MS. OSTIGUY: Well, yeah, I'm supposing.

MR. SIEMON: Mechanical de-linting?

MS. OSTIGUY: No, I'm talking about planting,
because it says that you can't plant linted cotton. One of the ideas is -- linted cotton seed because it messes up the planter. I'm not a farmer, okay, I --

MR. SIEMON: So you mean as compared to planting by hand?

MS. OSTIGUY: I know honey bees really well, you ask anything about honey bees, I can do that, but farming I don't know. And so the question is: is there any other way to plant?

MR. MESH: No, there's not any other way to plant --

UNIDENTIFIED FEMALE VOICE: Not commercially.

MR. MESH: -- cotton on -- I mean, you know, you can't grow cotton planting by hand. And, you know, Keith was a cotton farmer, or your dad was a cotton farmer, and maybe he could add some expertise, you know. I mean, I can tell you all about watermelons but not --

UNIDENTIFIED MALE VOICE: We don't hold that against the cotton industry.

(Laughter.)

MR. MESH: But as far as I know, there is no other way to plant cotton except mechanically planted.

MS. OSTIGUY: Which is what the question was: is there another alternative to planting.
UNIDENTIFIED FEMALE VOICE: To the best of his knowledge.

CHAIRMAN KING: Okay. All right, Dave, you had a question.

MR. CARTER: Well, mine was almost along the same line of Nancy in that I need, you know, cotton 101. Coming from Colorado, it's not a big crop up there.

MS. OSTIGUY: Yeah.

MR. CARTER: But in planting it, I mean, is the de-linting -- the planting is the only issue that the de-linting is relevant? I mean, are there other -- other reasons that you need to de-lint the cotton seed before planting it or is it just because of the -- the mechanically planting?

MR. MESH: Mechanically planting.

MR. CARTER: Okay. There -- I mean, is there any other ways of -- is it drilled, like you drill wheat, is it --

CHAIRMAN KING: Keith, please, come forward. You'll have to come to the mic, otherwise I'll be in trouble with the court recorder.

MR. MESH: Just for the record state your name.

(Laughter.)

MR. JONES: I'm Keith Jones, with the National R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
Organic Program, and unfortunately, I have been a cotton farmer, so --

The last fuzzy cotton that was planted in the cotton belt was probably in the 1950s. My dad switched over from fuzzy planting to acid-de-linting planting in the mid to early '50s. You can't even find planters today that will plant fuzzy seed. If you look at planting systems today, it's primarily vacuum planters, and even when you were using plate-type planters, that technology was really not available even up until the mid '50s, was really the last fuzzy plate-type planters that were -- that were available.

So you're -- so because you're using vacuum planters today, de-linting is even a -- more of an issue than it was, say, even, you know, 30 years ago, because what you're trying to do is move that seed through essentially a tube, a plastic tube, about three-quarters of an inch, and you're trying to move that seed through vacuum from the seed hopper into the ground. So it's a planting issue, pure and simple. And when these folks say the technology is not available to plant fuzzy seed, that's a hundred percent correct, it's not available.

CHAIRMAN KING: Quick question, someone who spends a fair amount of time among collectors of antique...
and old equipment and that sort of thing. What you begin to see over time is sort of the "what comes around goes around" adage and that, you know, technology does sort of reappear, and in your opinion, with this experience, Keith, would there ever be a point in the future where a planter would be remanufactured to plant fuzzy seed; if so, why; if not, why?

MR. JONES: Now, in my opinion, Mark, that's not going to happen, for two reasons. One, all the fuzzy planters of that era essentially went to Mexico and got junk, that's where all our planters went, okay. You might find a 4-O planter somewhere, stuck in a tree row, that could still plant fuzzy seed, but farmers out on the high plains of Texas use 12-, 16-, 24-row equipment, okay, it's very sophisticated. And so to go back -- to go back to that 4-O operation is just out of the question.

There's actually no demand even to do so, for an equipment manufacturer to do that, because nobody plants fuzzy seed anymore. The chosen path beginning in the 1950s for seed production was acid de-linting, and the reason for that is it's primarily a fungal issue. You take -- I mean, you get a better distribution in the stand [phonetic] because it's easier to plant, but it's also a fungus issue, because what you've got in fuzzy seed is
you've got the ability to create disease and fungus problems. If you eliminate that seed, particularly in areas that's got high ambient temperatures, if you eliminate that fuzz around the seed, you eliminate any place for that fungus to grow, okay.

And so we were able to move from -- and this is off the top of my head, but we were able to move from planting about 20 to 24 pounds per acre fuzzy to, at the time of our latest technology, which was in the early '80s, anywhere from 6 to 10 pounds per acre de-linted, okay.

CHAIRMAN KING: Nancy.

MS. OSTIGUY: Keith, the -- so -- but did the de-linting decrease application of fungicides or any of that sort of -- or did it just increase your ability to -- increase the density?

MR. JONES: Yeah, the issue, Nancy, is that -- one of the things that these guys are wrestling with is that when you -- when you de-lint seed, you routinely apply some sort of fungicide too. Okay, that's just -- that's just the process. If you go to the de-linter, they're applying -- they're not only de-linting but they're applying a fungicide.

MS. OSTIGUY: With conventional seed.
MR. JONES: With conventional seed. So the challenge for the folks in Texas is to -- is to essentially get the seed de-linted, pull that seed out of the line so that the fungicide doesn't get attached to it, and it's my understanding that the -- the cotton industry, because these guys are not using GMO materials, it's still a save-your-seed kind of industry.

I mean, we saved all our seed when I was growing up, you would catch your planting seed from the gin, you would take it to the de-linter, have it de-linted, and that was -- that was what you would use. We used foundation seed that we saved for about 4 years and then we bought foundation seed about every 4th year.

And it's my understanding that JIMI [phonetic] is adopting a similar practice, and that is, they are harvesting organic cotton grown in -- according with the regulations, they are catching the seed at the gin, they're then taking that seed to the de-linter, and because they have to have it de-linted in order to plant the next crop, they have to have the HCI applied to it, and then the HCI essentially kicks it out from being organic again.

So they're caught in this kind of catch-22 that they're never going to be able to get out of the cycle,
so --

MS. OSTIGUY: Okay.

CHAIRMAN KING: Are there additional questions or comments for Keith?

(No response.)

CHAIRMAN KING: Thank you very much, Keith.

MR. MESH: So moving into my four and a half minutes or so, the --

(Laughter.)

UNIDENTIFIED FEMALE VOICE: We'll see

(Laughable) --

CHAIRMAN KING: Yeah. It may be less at this point.

(Laughter.)

MR. MESH: You know, again, my question is about the TAP reviewers having no -- no history with cotton production and relying on them for expertise. I view this petition similar to methionine, I mean here's an industry trying and looking at doing -- you know, creating alternatives, trying to be in search of alternatives, thinking that there is an alternative in the future, doing some research, but clearly it's a few years away, and this board approved methionine, you know, for a limited amount of time, saying, "Let's do the research and try to find
something that's more compatible with organic."

I will also bring up the issue that organic cotton seed is a huge feed source not treated with HCI, that seed is captured before the de-linting process and then it goes into being a component of livestock feed, and if you -- you're going to do away with a huge potential source of livestock feed, and Jim Pierce could probably give you some figures on how many producers are using organic cotton seed as a livestock feed source.

So, now moving on to Quality Certification Services, that's who I'm here to represent, a USDA-accredited certifier. We sent a letter to the USDA and the past secretary of the NOSB by mistake, but I hope that he forwarded to the rest of the members of the Board our letter, requesting a revision -- you know, re-looking at the scope document.

We're specifically concerned about aquaculture, which has been certified to the national rule prior. It was an excellently-written letter, and I'll make sure you get a copy eventually from Jim.

(Laughter.)

MR. MESH: And fabric, we think -- we're a little confused on that. It's not the worst thing to make a mistake or issue a guidance document or a direction that
should be reexamined; it is much worse to not be willing to admit a mistake and remain adamant that driving down the wrong way -- driving down the wrong way of a one-way road is okay because it's only going one way.

We request the NOSB to pass a resolution requesting the USDA to take the steps we outlined in our letter, which your past secretary has, to protect the organic farmer and confidence of the organic consumer, and I could go into it, but because the clock is ticking, I wouldn't get very far, I reckon, but, you know --

MS. DIETZ: Now you've got a minute.

MR. MESH: But basically, you know, there was a May '02 policy statement, and there's been public statements made by the program, saying if you can certify something to the Rule, it can be by an accredited certifier, you can label it as organic and put a USDA seal on it. People have invested hundreds of thousands of dollars in organic production practices, meeting that, based upon information -- in legal terms they call it detrimental reliance, when you clarify something with an authority and then act upon that, and those people are being put out of business immediately based upon that scope document, or scope change, without any public process.
So just know that I've finished early, I think
this is a first.

(Laughter.)

CHAIRMAN KING: Okay. Kim has a question.

MS. DIETZ: While you were commenting on people
-- reviewers of the TAPs, I just had one comment I was
going to make, but since it's kind of brought out --.

One of the reviewers for a number of TAPs on the
crops committees was an accredited certifier, and I --

MR. MESH: Can they certify cotton?

MS. DIETZ: -- I had a problem with that. There
was a number of materials. So I just questioned having
accredited certifiers actually conduct TAP reviews, I see
somewhat of a conflict of interest there, and so we just
probably need to address that.

MR. MESH: And did that certifier have
experience in cotton?

MS. DIETZ: It was on three or four materials
that we're going to be reviewing (inaudible) --

MR. MESH: Right, but my guess is they've never
certified a cotton farm.

MS. DIETZ: Probably not, but it was -- it was
an accredited certifier that -- I think it's a potential
conflict.
MR. MESH: I think that's a comment to a process, you know, but --.

CHAIRMAN KING: Additional questions for Marty? Jim?

MR. RIDDLE: Yeah. Not a question, but I did receive your letter, and it was excellent and very well-written.

MR. MESH: I couldn't hear you, what? It was what?

(Laughter.)

MR. RIDDLE: And I will forward it to the rest of the Board. I thought you'd sent it to all the Board members, so I'm sorry for that. But, you know, the concern you raise is major and a change in the rules of the game after companies have made investments when the previous scope document said: if you can certify, if you can produce to the Rule as written, you're eligible for certification, and companies in a number of sectors have done that, and I -- you know, I think it's something that we probably need to hear a response from the NOP on how they came to that conclusion and also what their response is to the companies that are suffering economic harm because of this reversal in scope.

CHAIRMAN KING: Other questions?
(No response.)

CHAIRMAN KING: Thank you, Marty.

MR. MESH: Finished early.

CHAIRMAN KING: Indeed, nice. I don't know if Steve Harper's in the room, I have him down for public comment.

UNIDENTIFIED MALE VOICE: He is.

CHAIRMAN KING: He is?

UNIDENTIFIED FEMALE VOICE: We at least can acknowledge that he's here.

CHAIRMAN KING: He's saying no -- okay.

MR. HARPER: I'm Steven Harper, from Small Planet Foods. I guess I just want to acknowledge all the hard work that the NOSB continues to put forth. I'm sorry. I just wanted to acknowledge the incredible work that the NOSB continues to put forth. And I have a lot of concerns, but I did not have time to put some comments together, but I do want to make some positive comments on the 606 Task Force and the direction of the commercial availability and the clarification of the national -- the National List as it regards processing, and I think that is a very good direction for the Board as far as a recommendation, and I guess I'm going to leave my comments there. So I think that's a really good direction to help
clarify that whole situation.

CHAIRMAN KING: Well, it's very good to see you and very nice to have you here, and we appreciate any comments you have.

I think now -- it's 11:45. What we'll do is break for lunch and come back, unless there are additional -- anyone who has not signed up, that wishes to give public comment, okay, and after lunch we'll begin with the NOP comments. We're scheduled to start at 1:15. I would literally like to start at 1:15, so please be back before that. Thank you.

(Off the record at 11:45 a.m. and reconvened at 1:17 p.m.)

CHAIRMAN KING: I'll reconvene the meeting of the National Organic Standards Board. First up is our comments form the National Organic Program, Rick Matthews.

Rick has indicated that he has a number of slides, and I would entertain questions from the Board as he goes through his presentation; however, he may at some point say, for example, "the next slide may answer this question." So we'd like to get this through this efficiently, knowing that we have limited time. So if you do have a question, please feel free to make note and we'll recognize it. It's all yours, Rick.

MR. MATTHEWS: Okay. I would stand up, but we
do need to be able to work the microphones. Katherine, take it to full screen.

Okay, I'm Richard Matthews, I'm program manager of the National Organics Program, and I've got about 40 slides here that we're going to try and answer a lot of the questions that have been coming up, and the first one is we're going to talk about the cost-share program.

There currently are two different cost-share programs, there's what we refer to as the AMA, which stands for Agricultural Marketing Assistance program, and then there's the National Organics Program.

The purpose of these two cost-share programs is to assist with costs of the NOP certification. Under this program, the -- under both programs, actually, the AMA and the National,

Certified operations are entitled up to 75 percent reimbursement of their cost of being certified. The maximum amount that they can receive is $500. This is actually per year, so somebody who is renewing their certification is also entitled to receive cost-share funding.

Both programs are administered cooperatively between the USDA and the participating states. USDA allocates the funds to the states and the states process
the applications and distribute the funds to the people
who apply for cost-share.

The AMA cost-share program is a $1 million
program. It's currently funded yearly. It's for
producers only. There are 15 states that are eligible to
participate in this program. 13 of them are found in the
Northeast. The two exceptions to that are Utah and
Wyoming.

We currently have 14 states participating. The
state that is not participating is Rhode Island. Rhode
Island has historically not participated because Rhode
Island has historically not charged for certification.
They are going to, however, begin participating in this
program with the next fiscal year.

For our purposes, a fiscal year runs from
October 1st through September 30th, so beginning fiscal
year 2005, which begins October 1 of this year, Rhode
Island will join the group.

The national cost-share program is a $5 million
program. It's a one-time funding. To date we have
allocated -- or obligated 3.6 million of that $5 million,
which means that there is 1.4 million that remains, that
can be obligated to the states that are participating in
the program.
The national program is for both producers and handlers, but because of the AMA program, those 15 states that are under the AMA program, it's only handlers that apply under the national program in those 15 states.

We currently have --

CHAIRMAN KING: Rick, you've got a quick question, I think, about cost-share.

MR. RIDDLE: Yeah. You say there's 1.4 million left that hasn't been allocated, so at the current rate of allocation, by the end of this year or next year, would you anticipate --

MR. MATTHEWS: We have no idea when it'll run out. As states need additional funding, we provide that additional funding based on the history of the use of the funds within the state.

MR. RIDDLE: Would it be safe to say by the end of 2005 it could be short of funds?

(Laughter.)

MR. MATTHEWS: I --

MR. RIDDLE: Well, I'll say that. You don't need to. Okay, thanks.

MR. MATTHEWS: All right. We have 45 states participating in the national program. The two that would be eligible for both producers and handlers that are not
participating are Arizona and Louisiana. Delaware, Nevada, and Rhode Island are those states that are in the AMA program, their handlers are not being served under the national program.

The next one is a category that we seem to have had a lot of interest in lately, and that's the NOP budget. The total budget of the National Organics Program is $1,443,000. The Department, meaning USDA, and the Agricultural Marketing Service take overhead from that. The overhead that is expended is $180,756. That leaves, for salaries and benefits, $741,846, which is actually an increase over previous years. The NOSB is budgeted this year at $90,000. Now, what comes out of that budget is the cost of travel for board members, the printing of all of the documents for the board members' meetings, renting this room, paying for the airline tickets, things like that.

Then also included in there, for example, this year is the nominations process for new board members. Other non-paid category is $430,400. This includes travel, staff travel, parcel post, rent, communications, utilities, contracts, printing, supplies, equipment. Under contracts you will find TAP reviews, you will find our contract for doing compliance work, contract on copier
maintenance. So that's where the contracts come in, mainly copier, compliance, TAP reviews, and some other miscellaneous things that we've done in the past, you know, 40,000 here for -- for example, I believe it was with ATRA we did a $40,000 contract. So that's the kind of thing that goes into that.

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. MATTHEWS: Yeah. And in the non-pay area, contracts takes up the lion's share of that, there's very little that goes into these other areas.

Okay, now moving on to compliance cases, for fiscal year 2003 we had 114 cases that were opened by the compliance staff. 16 of those 2003 compliance cases remain open, seven of them are still in NOP compliance, nine of them have been referred to the NOP staff for follow-up work, and out of the nine that have been referred back to us, we have gone to the attorneys and requested the filing of a complaint for revocation of certification, so we have one now that has gone to the hearing clerks, to be assigned to a judicial officer. Three cases have been combined into one of the seven open cases in the NOP compliance.

That means that 96 of the cases that were open - three cases have been combined into one of the seven

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
open cases in the NOP compliance. That means that 96 of
the cases that were opened in 2003 have been closed. 32
of those were closed because there was no NOP violation.
Six of them were also closed because there was a lack of
evidence in order to pursue the case. 58 of the cases
resulted in corrective action.

You'll note that from the Listing below, most of
these deal with labeling issues. The second most common
violation is: not being certified. So out of the 58
corrective actions taken, 26 have corrected the labeling,
12 have removed organic labeling from their products,
seven chose to become certified, and that was basically
the violation, they weren't certified, and 13 other
corrective actions.

Now, I can't sit right here and tell you what
each one was, but they're single occurrences of a
violation that were not of a labeling or a certification
nature.

In fiscal year 2004, so far we've opened 18 new
cases. Seven have --

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. MATTHEWS: I'm reading from the wrong slide.

43 cases were opened. 25 remain open. Of the 25 that
remain open, 21 are still with NOP compliance, they're all
under investigation. Four of them have been referred back to the NOP, and we'll be taking additional action.

Now we go to the closed cases. 18 of those cases that were open so far this year have been closed. Seven of them, again, no NOP violation. In fact, one of those seven involved an exempt operation. Eleven others have taken corrective action: three corrected labeling, three removed organic labeling, and then five other corrective actions.

Again, you can see that the primary reason for the cases that we're receiving have to do with either the person is not certified, which is the second most common, and then the most common is the labeling issue.

Okay, new members for the --

CHAIRMAN KING: We've got a quick question from Andrea.

MR. MATTHEWS: Andrea.

MS. CAROE: These cases where there is a representation of organic that is not certified, what surveillance is picking these folks up, is it complaints that you're receiving from the public or is this some other type of surveillance that's --

MR. MATTHEWS: Well, the compliance staff also does surveillance by going into supermarkets and buying...
product.

MS. CAROE: Is that primarily where you're seeing -- because I mean there was always a question, we knew that --

MR. MATTHEWS: Some of them are a result of an NOC compliance staff buying products and then following up with the sellers of those products. The other way is through people who are filing complaints, and I don't have a breakout of how many of them were the result of complaints versus how many of them were the result of the compliance staff going into supermarkets and buying product.

For the Board, as I'm sure that many of you are aware, there is going to be five openings effective January 24th of 2005. Two of those are producers, one is a handler position, one is an environmentalist position, and one is the retailer position. These are 5-year terms of office. We have gone out with an announcement, and the resumes -- for those people who are interested in being board members, the resumes are due June 14th of 2004.

To date, we have published the news release that was published on March 8th of 2004. We've also issued a Federal Register notice, which was published on March 16th of 2004. That is what we have done in the past, a news
release and a Federal Register notice. This year, for the first time, we are able to do something entirely different, and what that is, is that using the client lists that are supplied by certifying agents, we have been able to compile a list of 8,646 producers and handlers operating within the United States. Every one of them has been mailed a postcard with the information that was found in the news release and the Federal Register notice. So every certified operation has been mailed a postcard, inviting them to submit their own names for nomination to this board.

We've also e-mailed postcards to 41 land-grant universities and three USDA outreach programs. We have not finished. We are still trying to do more. We are trying to contact environmental organizations as well as retailers. So we're doing quite a bit of outreach, trying to get a good slate of nominees for this board.

So far, as of April 23rd, we've received ten resumes; two producers, one handler, two retailers, and five environmentalists have submitted the resume needed for us to process their nomination. We've also got four nominations where we think these are really people who are serious and we're just waiting for the resumes; three of those are producers, one of those producers also qualifies
as a handler, and the other one is a retailer. We've also received 25 inquiries, these are people that we really don't know, in some cases, who they are, but we do know that we have 11 producers who have inquired, we have one retailer who has inquired, and then 13, we don't have enough information, but they have contacted us about board membership. Jim?

MR. RIDDLE: Yeah. Does a person need to state which seat they're seeking or you make that determination?

MR. MATTHEWS: We would prefer they tell us what they're seeking.

MR. RIDDLE: Okay.

MR. MATTHEWS: It helps in screening them. And you can apply for more than one position. A producer who is also a handler could say that "I want to run for a producer or a handler position."

Okay, we're going to move on now to accreditation. To date we've received 137 applications for accreditation. For those of you who looked at the preamble to the Final Rule, we were estimating that we might get about 50 of these, so we kind of underestimated the interest in the program from certifying agents.

53 of those 137 are private domestic certifying bodies. Now, four of them have withdrawn since they
submitted their application. 20 of these applicants are states. One of those states has withdrawn its application; the state that withdrew is Connecticut. 64 foreign certifying agents have applied, and two of them have subsequently withdrawn their application.

Out of the 137, we have to date accredited 92. 38 of them are private organizations operating in the United States, 15 of them are states, and 39 of them are certifying agents operating in foreign countries. George?

MR. SIEMON: Are there physical visits for the foreign people yet, or what's the status of that?

MR. MATTHEWS: The auditors are performing site visits for the foreign, yeah. We've got one team in South America right now, don't we?

UNIDENTIFIED MALE VOICE: They'll start in June.

MR. MATTHEWS: In June.

UNIDENTIFIED MALE VOICE: Starting in June.

MR. SIEMON: Okay.

MR. MATTHEWS: Okay. For those that have not been yet accredited, and we don't -- we don't turn anybody down, we just don't approve them, okay, we just -- so for those that have not been neither -- they have neither been turned down nor approved, 12 of those are with the auditors, five of those are private domestic, three are
states, and four are foreign. 26 are still waiting for information. Now, what that means is they haven't made it to an auditor, they have sent in information, the information is woefully deficient, and the auditors can't do anything with it, so what they do is they go back to the applicant and request additional information. So right now you have six privates, domestic, that are in that boat, you have one state in that boat, and you have 19 foreign.

Okay, now we'll move on to the arrangements for export. We still only have one export agreement, and that is with Japan. We have five recognitions; those are with British Columbia, Denmark, New Zealand, Quebec, and the United Kingdom.

The difference between arrangement and recognition: An arrangement, in the case of Japan, is where Japan has agreed that our standards are equivalent to theirs and they recognize product produced to the National Organics Program for export to Japan.

A recognition is where we have recognized that foreign government's accrediting process as equivalent to ours, and it allows the governments in those five countries to accredit certified operations to certify to the National Organic Program. Okay.
The final of the three categories for how people get in is that of equivalency. As of today, we still do not have an equivalency agreement with any foreign country. The closest we are is with the negotiations with the EU, and we're not there yet, but we're still working on it.

MR. O'RELL: A question.

MR. MATTHEWS: Yes.

MR. O'RELL: Is there any foreseeable time frame for the EU equivalency agreement?

MR. MATTHEWS: You want to answer that one, Keith? Keith's our chief negotiator. You know I couldn't let that one go by, Keith, after all the discussions we've had.

MR. JONES: No, I understand. I'm --

CHAIRMAN KING: The question was: is there a time line for the EU negotiations?

MR. JONES: The question is, is there a time line for the EU negotiations. There is a joint E.U.-U.S. summit that will be held in Dublin, Ireland, in June, late June, that is providing some impetus on both sides for the conclusion of an agreement. There is significant kind of process questions that we still have to address, both externally through the EU process and internally within
the U.S. government, as to how best to conclude the
recognition agreement.

We have made significant steady progress towards
the -- essentially the dilution, if you would, of any
technical issues that are outstanding. There are some,
obviously, but we have, over the last 18 months, really
whittled those down just to the absolute essence.

You know, Kevin, you're asking me to gaze into a
crystal ball, and I think my best guess is: There is
certainly a strong desire on both sides to conclude an
agreement. There's strong trade interests on both sides
that would like to see the agreement concluded. If it's
going to happen, it will happen this summer, I'm convinced
of that, okay, because I think the timing and the momentum
and everything is coming together, that if this is really
going to happen, it will happen this summer.

MR. O'RELL: Keith, would this be a blanket
equivalency for the full regulations, or will there be
sections carved out where differences do occur --?

MR. JONES: Well, when we speak in terms of
equivalence, at least from the perspective of AMS, we
never assume that there will be 100-percent equivalency.
When we talk and use the phrase "equivalence," we are
assuming a combination of equivalence and compliance on
both sides, okay. So that's the way we -- that's the way we view it.

At the current time we have carved off no sector, we have carved off -- there's not been any products carved off, with the exception of honey. It appears that the Europeans are not going to accept any U.S. honey at this point. Okay. And keep in mind those -- those -- the issues that I'm talking about are still in negotiation, so that might, again, work itself out, but at this time, that'd be the only product area that's not under consideration.

MS. CAROE: Keith, one more question. Just educate me a little bit on government process. When this gets signed by both countries of origin if an agreement is reached, is that effective immediately or is there some other government process that happens? I mean, if this were to happen this summer, would it be effective this summer or --

MR. JONES: No, that's -- that's a good question. Usually, Andrea, the way the process works is that when it's -- when it's signed off by the representatives of the respective government, U.S. government, the European Commission, it would be effective at a date certain.
There might be a lag time between the signing of the documents and the effective date just because there may need to be some things, you know, put in place to make certain things happen, but it would be a very short time frame that we've been looking at, after -- after signature.

So I think you can take some comfort in the fact that if we're going to do this, it can happen relatively quickly.

MS. CAROE: Thank you.

MR. MATTHEWS: Any other questions?

(No response.)

MR. MATTHEWS: Okay, the next area is the area of the directives, and let me explain something about directives first. We probably use some words that are a little bit foreign to the organic community as a whole, we use terms like "guidance" and "directive," and when we issued the program scope, the antibiotics, and the fishmeal guidance statement, when we sent that to the Board and to OTA the day before it was published, what we should have done was to say that that was a directive and not a guidance, and the reason for that is that directives basically tell you what you have to do to comply with the Act and the regulations; guidance, on the other hand,
would tell you: here is our best thinking of one way for you to be within compliance of the Act and the regulations; you might find a better way yourself and still be within compliance. So the guidance is -- you don't necessarily have to follow the guidance as long as you still maintain compliance; a directive, however, tells you: this is the only way to do it.

So we will be changing the title on the first three from "guidance" to "directive." If there's a better term that is less inflammatory, please let us know, but we are rather limited by government-speak as to what we can call these, so we hope that we're not inflaming situations simply because of a word that we have to use to describe what it is that we have to do.

MR. MESH: What about "proposed" (inaudible)?

UNIDENTIFIED FEMALE VOICE: Yeah.

MR. MATTHEWS: But they're not proposed, they're not proposed, Marty. Okay, let's move on to the next --

CHAIRMAN KING: Hold on, Rick, Dave just had a quick question.

MR. CARTER: I do want to extend on that, I mean as far as directives, and I think one of the things that at least some of the Board is a little bit concerned about is, on these things -- and we recognize that it's NOP's
job to issue the directives, but in our role, statutory
role, to advise the Secretary on implementation of the
Rule, you know, I continually ask about works in progress,
and when directives are developed, what is the opportunity
for the Board to have some participation in some
discussion as a work in progress, rather than -- and
particularly when directives come down on very short
notice before the Board meeting, and so then the public,
you know, feels like they've been shortchanged, as well as
being prepared to even come in and give public comment
after the fact.

MR. MATTHEWS: Well, those really aren't out for
public comment. Those are actually documents that are
vetted with the USDA attorneys, that are vetted with
management, and they're based on the regulations and the
statute. You'll notice that what we've done with these
documents is we excerpt portions of the Act and the
regulations, and that's where we're basing the directive.

CHAIRMAN KING: Barbara had a quick comment.

MS. ROBINSON: Barbara Robinson, Deputy
Administrator, Transportation Marketing Programs.

The reason we don't ask you for public comment -
- a better way to think of these directives is: they are
the law and the regulations. All we did was try to figure
out a way to make it easier to understand, they're written, and that's why you see in every directive, before you get to what NOP is saying, first you see all the citations from the preamble, from the regulations, and the statements from the law, and so -- and we do that because we strongly believe that if we are about to issue anything, if it can't be anchored directly to the law or the regulations, we shouldn't be saying it.

But you should think of it, certifying agents should think of it, as just: this is the law and these are the regs; we're simply saying it in a different way.

CHAIRMAN KING: Rose.

MS. KOENIG: I had a question. I guess I saw the three -- well, I guess they came last week. The pesticide use lists three inerts. Somebody just notified me, I guess on Monday, at a meeting, that there was some directive there. But, you know, in terms of the reg, I don't understand how that would fit. And, again, I -- you know, I apologize for not having time to process that, but according to my knowledge -- and again, I'm not a lawyer, but it's pretty specific in terms of the National List, that only List 4s are allowed, and we've been systematically putting on List 3 as they've been petitioned, and I -- as I read it: it allows for a use if
somebody is not knowledgeable. But I don't see where that can be justified except in the sense of a regulatory -- I guess that's your regulatory discretion.

MR. MATTHEWS: We -- and the next few slides are going to tell you what these documents do and that they do not do. We have always taken the position: if we tell you that you can do something at a certain point, the flip of that is that you can't do something at a different point; or if we say it's okay to use this, then it's the opposite, you know?

For example, speaking ahead of what we've got here, somebody said, "Well, what if we give the antibiotic to the breeder stock in the last third of gestation?"

Well, if we said you can apply it to -- administer it to the animal before the last third of gestation and the calf is still organic, if we say that, then it really means that if you do it in the last third of gestation, it's not organic.

And I guess -- it seems to me that it's almost like we're going to have to say both sides of the coin every time we go out with something, but I'm going to try and explain these things as we go along.

MS. KOENIG: Okay. I'll wait till then.

MR. SIEMON: I just want to clarify, because
there's a lot of -- a lot of questions about these documents. Are we going to go through a discussion now about these documents?

MR. MATTHEWS: I'm going to give you the dos and the --

MR. SIEMON: We are going to?

UNIDENTIFIED FEMALE VOICE: We are.

MR. MATTHEWS: -- what they do and what they don't do. Okay?

MR. SIEMON: I'm glad for that.

CHAIRMAN KING: Okay, and Jim, just one quick comment --

MR. RIDDLE: Yeah, before you get to the specifics of the documents. Barbara addressed the public comment limitations or non-existence but didn't -- you didn't really respond to Dave's question about the role of the Board, where we're charged under OFPA to provide advice to the Secretary on implementation, and I look back --

UNIDENTIFIED FEMALE VOICE: And this is already being implemented [phonetic] --

MR. MATTHEWS: This is already implemented.

MR. RIDDLE: Well, it's implemented continuously. That's why you have to --

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MR. MATTHEWS: Well, it's --

MR. RIDDLE: -- give guidances on an ongoing implementation.

MR. MATTHEWS: These sections of the regs have already been implemented. What we are finding is inconsistent application across certifying agents.

MR. RIDDLE: Right.

MR. MATTHEWS: And so what we have done is taken what we know to be inconsistent practices by certifying agents and tried to bring uniformity to these issues.

MR. RIDDLE: But, if I could continue, I look back at a policy, what probably would be considered now a directive, that was developed a while back in collaboration with the Board, and that was how to calculate percent organic ingredients and the role of added water, and I see that as a model example where the Board was consulted, drawn into the process, and came up with a directive which has not been open to criticism, it's really stood. People understand it, and it's the best example that I can think of where the Board was drawn in, we were able to exercise our responsibility, and the end product then has the support of the Board and the public.

So, you know, I just hope we can use that as an
example and move in that direction more than, you know, 
this blindsiding or catching us by surprise, where -- it's 
just not a healthy situation.

CHAIRMAN KING: And simply put, just to follow 
up on Dave and Jim's comments, I think it's safe to say 
that the Board really would like to be involved in the 
process, we feel we're here to assist and advise, and if 
there's something that we can do to help that process 
 improve, then we're certainly open to that. So --

MR. MATTHEWS: Okay, we hear that. The next 
slide, please. Okay, we're going to start with program 
scope. What does the program scope do? It identifies 
product categories not covered by OFPA. Those include 
personal-care products, body-care products, cosmetics, 
dietary supplements, over-the-counter medications, health 
aids, fertilizers, soil amendments, manure.

It also identifies product categories covered by 
OFPA for which we have not engaged in rulemaking. Those 
two areas are: aquatic animals and pet food. We just 
have not done rulemaking, and we can't require, we can't 
enforce, our standards on industries that have not been 
afforded the opportunities of the Administrative 
Procedures Act, which requires formal rulemaking in order 
to bring them into the fold.
Again, what the directive does, it states that the products not covered by OFPA cannot be certified to the National Organics Program. It states that aquatic animals and pet foods, in the absence of standards, cannot be certified to the NOP. It does not mean that they will never be covered by the NOP; it's just that there are no standards, and in the absence of standards, you cannot be certified to the NOP.

It states that products that cannot be certified to the NOP cannot carry the USDA seal. That's both for those that are not covered by OFPA as well as those that are covered by OFPA, that have not yet had rulemaking performed.

Now, what the directive does not do, it does not prohibit certification of such products to other standards. You'll recall in the preamble to the Final Rule we say that certifying agents who want to certify products that are not -- that are not covered by the NOP standards may do so, so this means that Dave Engel's group can go ahead and create standards for cosmetics, if that's what they want to do.

MR. RIDDLE: For organic cosmetics.

MR. MATTHEWS: For organic cosmetics. They can do that if they want. We have not said that certifying
agents cannot create their own standards for the products not covered by OFPA.

This directive does not allow the identification of non-organic agricultural ingredients as organic. As the directive clearly states, all agricultural products produced and handled in the United States must be certified to the National Organics Program to carry the word "organic." Okay, so we're not saying that you can use conventional products in these products as an ingredient and call it organic unless it is an organic ingredient.

MS. CAROE: Excuse me.

MR. MATTHEWS: Yes.

MS. CAROE: So that's the enforcement of the ingredient deck of these products that are outside of OFPA?

MR. MATTHEWS: The entire labeling of those products is outside of OFPA, but if they're going to say that an agricultural ingredient within that product is organic, then it has to be organic, it has to be a truthful label claim.

MS. CAROE: So does that --

UNIDENTIFIED MALE VOICE: That --

MS. CAROE: Let me finish that. So does that
mean that NOP compliance could actually enforce that if --

MR. MATTHEWS: No. We would probably turn that
over to Commerce.

MS. CAROE: Okay.

UNIDENTIFIED FEMALE VOICE: Justice.

CHAIRMAN KING: Okay, I think George had --

okay, Kim.

MS. DIETZ: One of the questions we're hearing
out there is the use of the word "certified." We'll have
USDA-certified agricultural products and we will have
QAI-certified or, you know, Joe Smith-certified. Will
they be able to use the word "Certified Organic"?

MR. MATTHEWS: Yeah. Yes.

MS. DIETZ: Thank you.

MR. MATTHEWS: They can --

MS. DIETZ: As long as it's truthful labeling.

MR. MATTHEWS: -- make any truthful claim. What
they cannot do is represent it to be USDA/NOP-certified.

MS. DIETZ: That's a question out there, that
people are asking.

MR. MATTHEWS: That's right. It does not
prohibit identifying organic agricultural ingredients as
organic, as I said, it does not prohibit labeling such
products as organic.
UNIDENTIFIED MALE VOICE: And it doesn't matter what standard.

MR. MATTHEWS: It doesn't matter what standard. Because cosmetics are not covered, for example, by the Organic Foods Production Act. We cover agricultural products, and a cosmetic's not an agricultural product.

CHAIRMAN KING: Barbara.

MS. ROBINSON: Just to add to what Rick is explaining there, just to make it perfectly clear to people, in case you don't realize:

USDA is given its authority by the Congress. USDA cannot unilaterally wake up one day and decide that it now has jurisdiction over another agency’s regulated entities. Those products that are not covered by OFPA because of Congress are covered by the FDA, and we have no authority to change that, we cannot enforce against products over which we have no jurisdiction.

If you have issues with that, you must take it up with the Congress. You cannot ask USDA to do it differently; they have no authority to. It's just a simple fact of government.

CHAIRMAN KING: Dave, then Becky.

MR. CARTER: What, if any, discussions have been held with other agencies, such as FDA, that if entities
under their jurisdiction are going to use the term "organic," that there is some sort of consistency with the USDA Organic Rules, has there been formal discussions or informal discussions with those agencies on that issue?

MS. ROBINSON: I think we've probably had a few informal discussions, but nothing of any seriousness, and frankly, given that we do not have the enforcement authority for those areas, we expect those industries to do just as this industry did. USDA is not going to propose standards and we're not going to propose regulatory behavior to the FDA. We expect the industry to come forward and -- Keith -- Keith can add to this.

MR. JONES: Dave, that's actually an excellent question, because we're required to consult, we actually have consulted with FDA, we've consulted with FDA extensively on this. I just had a conversation with FDA last week.

FDA is not certain -- and I can't speak for FDA and wouldn't speak for FDA. They're not certainly exactly what they're -- what they're going to do. FDA has been quite clear in all of the discussions that it has had with USDA and with industry that our rendering is correct. You know, laws have limits, the Organic Foods Production Act has limits, and these areas that we're talking about are

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
squarely within FDA's purview for their labeling, okay? So we've been very diligent in making sure that FDA has been involved in the process and that FDA concurs with where we're at in this.

MS. GOLDBURG: Barbara or Keith. I'd like to better understand the limits of this directive when you're dealing with agricultural products. I understand what you're saying about cosmetics and so on not being covered by the law, but let's take fish or pet foods. I'm not --

MR. MATTHEWS: That's the next slide, I'm going to address fish and pet food on the next slide.

MS. GOLDBURG: Okay.

MR. SIEMON: Same question here.

MS. GOLDBURG: Well, can I ask my question --

MR. MATTHEWS: Sure.

MS. GOLDBURG: -- and then you can tell me it's on the next slide. I want to understand what the limits of the certification of those types of products outside the USDA program are. For example, how does part of the statute and the regs that deal with prohibited methods apply to, say, salmon? Could we have organic transgenic salmon? I guess I'm trying to jive in my mind how --
UNIDENTIFIED FEMALE VOICE: That's a (inaudible), that's a totally different issue, Becky.

MS. GOLDBURG: Well, I --

UNIDENTIFIED FEMALE VOICE: We don't have standards, so they can't be certified.

MS. GOLDBURG: I know. So basically --

UNIDENTIFIED FEMALE VOICE: There is no certified organic salmon to the USDA standard.

MS. GOLDBURG: I know. I know. But that's my question. I understand that. So in other words, outside -- certifiers can certify to their own standards --

UNIDENTIFIED FEMALE VOICE: Right.

MS. GOLDBURG: -- that they create.

UNIDENTIFIED FEMALE VOICE: Right.

MS. GOLDBURG: And I'm not -- I don't (inaudible) any certifiers about to do this, but I want to understand how open the scope of potential organic certification for agricultural products is.

UNIDENTIFIED MALE VOICE: It's open.

MS. GOLDBURG: Is it entirely open, is it partially constrained by --

UNIDENTIFIED FEMALE VOICE: What do you mean by open, what do you mean is it open?

MS. DIETZ: I think what the question is, and
this is where the industry was 20 years ago, whether it's
OTA developing standards or whether a private entity
develops standards, they're going to be allowed to do
that, as long as they certify to a standard. There's no --
- USDA is not going to step in and say "those are
approved" or "not approved." It's going to be --

MS. ROBINSON: Industry can bring us standards
for those -- what you're going to see from Rick on the
next slide, pet food can come forward, fish can come
forward, they -- as you saw in the previous slide, they
are covered by OFPA, but we have no standards. Ergo, if
the industry brings us standards, we go into our
rulemaking mode, we publish them, we ask for comment, we
take the comment, we work with it, we publish a Final
Rule, boom, they're covered. From that point on, any
private standards go away.

MS. DIETZ: But until that point --

MS. GOLDBURG: But until that point, when there
are only private standards, they can be highly variable --

MS. ROBINSON: That is true.

MS. GOLDBURG: -- and my question is: are there
constraints on what those private standards can say?

MS. ROBINSON: No.

UNIDENTIFIED FEMALE VOICE: No.
UNIDENTIFIED MALE VOICE: No.

MS. ROBINSON: No.

MS. GOLDBURG: So, for example, prohibited methods are not prohibited from the private standards --

MS. ROBINSON: It is pre-October 21, 2002, for those commodities. That's what you have to go back to.

MS. GOLDBURG: Okay. Thank you.

MR. SIEMON: I'd rather see the slide, but -- it just fits in so well. So we couldn't have just said:
since we don't have standards, we're going to use livestock feed for pet food, or something like that, you couldn't have had that discretion is what you're saying, until we developed standards?

MR. MATTHEWS: We -- in order to fully comply with the Administrative Procedures Act, we have to go through rulemaking that involves the pet food industry. Okay? Let's move on to the next slide, Katherine.

CHAIRMAN KING: Andrea, did you have -- Keith, then Andrea, then Rick.

MR. JONES: Let me walk you guys through this, because I think there's -- I think there's a disconnect, there's a serious disconnect between what certain parties believe that USDA can do under its authority and what we've actually done.
Through the Organic Foods Production Act, essentially what you had, through the promulgation of the Final Rule, was a federalization of standards for certain products, okay, so this -- the point that I'm trying to make here, folks, is that this is not anything new. What we are finally setting out in writing is in fact 100-percent consistent with what USDA has done since day one under the authority that is vested in it by the Organic Foods Production Act. We have in no way, okay, changed the process.

As we go through notice and comment rulemaking, which is the only way we can promulgate standards, we cannot assent to voluntary standards and then somehow say that they're under the Rule and you can carry the seal. The only way that we can have standards which carry the USDA seal is to go through notice and comment rulemaking.

There are areas, which we spell out in this directive, where that has not happened.

There's also, in the case of pet food, a cross-jurisdictional issue, pet food is regulated by the Food & Drug Administration, so not only have we not only gone through no notice and comment rulemaking for the sake of pet food, there will be additional consultation that will have to occur with FDA to ensure that they want us to
essentially reach into their labeling protocols and regulate the labeling of pet food when the modifier "organic" is attached to it. Okay.

Now, in certain cases -- and again, this is quite consistent with what we have set out from day one, is that we regulate up to farm gate, okay? We do this with cotton. Cotton has always been regulated under the regulations as they're written, up to and including the farm gate. We have no textile standards; we have said that. We have no processing standards for textiles; we've said that.

Therefore, the ability for cotton, once it is spun and woven into fabric, that is essentially unregulated by OFPA, okay? And so what we've said, in an analogous way, is that there are certain products that -- if you want to use this to get your head around -- that are like cotton, that we simply either, one, do not have the authority to regulate, nor have we gone through the process that we are required to go through to promulgate standards.

So what I want to leave you with is this single notion, and if there's a lack of clarity, I want to stay up here until we get this, okay, because this is no different, we have done nothing different in this
directive that is inconsistent with anything that we have said in terms of the concept and how we regulate things, this kind of march of federalization, if you want to call it that, and the notion that our limit -- that our authority sometimes is limited to farm gate certification.

So those are the two things that you really need to take away from this presentation, is that there's an authority question and there's a process question. Okay.

CHAIRMAN KING: Okay, I have Andrea, Jim, then Rose.

MS. CAROE: Okay, I just want to clarify something in my own mind. The relationship and the arrangement that the program has with BATF and alcoholic beverages, is that possible only because alcoholic beverages fall within OFPA but outside the labeling authority of the program?

MR. JONES: Well, that relationship is actually codified through a memorandum of understanding, okay, so there has been consultation, BATF's -- which is now -- what is it -- TTB, their attorneys sat down with our attorneys and said, "Okay, we think we can play in the same sandbox with you, okay?" That's how that piece of the puzzle got put together, is because there was a meting of the legal minds in terms of the respective authorities.
that are contained in various statutes, and then there was an MOU that was put together that linked those various authorities. Okay.

MR. NEAL: Also, there are legal responsibilities -- Arthur Neal. There are legal responsibilities that USDA/NOP has that TTB cannot perform on behalf of USDA regarding their products, so TTB does not have the legal authority to say whether or not -- if an organic claim on a wine product is legal, because USDA has not granted them that authority, and it would be the same instance if USDA tried to say that an organic claim on an FDA-regulated product was compliant, because FDA has not granted us that authority.

MS. CAROE: My question is really geared at why this relationship couldn't be duplicated with other products.

MR. MATTHEWS: Let me answer that. Let me answer that. The issue of alcohol beverage was always contemplated to be covered, for example the sulfites issue, and as -- you'll recall that originally all the sulfites were prohibited from any wine product, and the industry went to Congress and was able to get Congress to agree to saying that sulfites can be used as long as that wine product is only labeled as a "made with." So in that
case, the alcohol beverages were always included in the original rulemaking. The pet food has not. That's the difference. Okay?

CHAIRMAN KING: Okay, I have Jim, then Rose, then George.

MR. RIDDLE: Yeah. You know, Keith, when you were talking about the march of federalization and this is a part of a continuum, I guess some of the confusion that's happening out there is, you know, people read the May 2002 Scope policy, which said these sectors are eligible, and they proceeded to set up systems which followed the regulations, certifiers certified to that, they made major investments, and now that's been turned on its head for certain sectors. And I understand what you're saying in that -- you know, like pet food, I've talked about this, you can make pet food to the human food standards, label it to the human food standards, but it's just packaged for pets. Why can't you continue to do that, and what I'm hearing, and correct me if I'm wrong, is that there is a need for an MOU with FDA, something like that, because they have code jurisdiction or they have jurisdiction over --

UNIDENTIFIED FEMALE VOICE: They have jurisdiction --

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MR. RIDDLE: -- pet food labeling, that NOP doesn't have.

MR. JONES: Right.

MR. RIDDLE: So that's standing in the way, even though it can be produced and --

UNIDENTIFIED FEMALE VOICE: Yes.

MR. JONES: Yes.

MR. RIDDLE: -- and certified --

MR. JONES: Yes.

UNIDENTIFIED FEMALE VOICE: That is a labeling issue (inaudible).

MR. JONES: Yeah. And Jim, let me respond to the last point first, and then I'll get into the March policy statement.

This is a labeling authority issue, okay, and FDA has the labeling authority, full stop, for the products that we have delineated in that scope direction. Full stop, okay, they have the authority.

Now, this in -- the knitting together of NOP and FDA authority I think is much more -- personally, this is a personal opinion, don't take it as gospel from USDA, but it is my personal opinion, in looking at the authorities, that the knitting together of those authorities is much more complex than sitting putting an MOU, okay?
Now, it may not be so, we are in continuing consultation with FDA and will be in consultation with FDA on these issues for the foreseeable future, okay? Because one of the things that you've got to understand is that we desire the same thing that you desire, okay, and that is, we want clarity in labeling, we want consumers protected, okay, we want consumers to understand what they're buying, but we also want people to understand that our authority is limited.

I know this is hard to believe, but we are not the all-knowing, all-seeing individuals that you think we are, okay? We're limited, okay? We're limited as to where we can go, and that's something you're just going to have to get your arms around, okay?

Now, in terms of the March policy statement, okay: in hindsight, it is unfortunate that that document was written the way that it was, okay, but let me say this, Jim: It wouldn't matter if we had published that statement 40 times or one time, we cannot give authority we don't have, okay?

So that's what you need to keep in mind, is that we cannot give authority where we have not been delegated that authority by Congress. So it is unfortunate, again, that that statement was written the way it was, you know,
we recognize that people made some decisions on that,
that's why we think we've been kind of recognizing that,
you know, in this -- in this -- but we can't give
authority -- no matter how much you would force us to do
something, short of notice and comment rulemaking and
short of FDA saying, "Yes, we're going to allow you to
regulate the labeling of this product when 'organic' is
attached to it," we just don't have the authority to give,
okay, and that's straight up.

CHAIRMAN KING: Okay. We'll have Rose, George,
then Dave.

MS. KOENIG: So -- and that's, I think, the
sense of confusion, because I know I've (chuckles) -- I've
been to so many presentations where they say, "The only
difference now is that the USDA owns the word 'organic."

So what you are saying is, is that if you -- if
it's an agricultural product within your authority, yes,
you do own that word in the sense, but you don't own the
word in things that are not -- beyond the -- your
authority.

MR. JONES: Right, and --

MS. KOENIG: So -- and that's where this -- and
that's why on these body-care products, if it's an
agricul-tural product, you still -- you may not -- you
know, you may send it to a different office, but you -- it
is still under -- within our regs if it's agricultural
organic --

MR. JONES: Well, but --

MS. KOENIG: -- but anything else, body-care
products, things outside of that, you don't own the word,
anybody can own the word.

MR. JONES: Yeah, and let me -- let me pick up
on that. I think that's -- if I understand you right,
Rose --

MS. KOENIG: I know what you're saying.

MR. JONES: -- that's a correct rendering of
where we're at. Now, when -- and I was guilty early on of
saying we own the word "organic" --

MS. KOENIG: Yes, you did, and that's why -- and
that's why I'm saying that the communication has been
always "we own the word" and that's what --

MR. JONES: We own the word organic, for the
products we own the word --

MS. KOENIG: Organic on.

MR. JONES: -- organic on --

MS. KOENIG: Exactly.

MR. JONES: -- okay, and --

MS. KOENIG: But we've taken that all the way,
as: you own the word and that, you know, the word is --
you know, and there's going to be regs, so --

UNIDENTIFIED MALE VOICE: First there was the
word --.
(Laughter.)

MR. JONES: Yeah. And I guess in response,
there should -- there should have been some sort of
understanding that the term "organic" when it's applied to
chemistry is not regulated by the Organic Foods Production
Act.

Okay, so there are certain -- there are certain
uses of the modifier "organic" that we don't regulate. So
despite my inarticulate nature, you should have picked up
on the fact that: well, okay, well, I think I kind of
know what he's talking about here, even though -- if he's
not exactly using the right words. Fair enough?

MS. KOENIG: That's fair. But I think that
sense of confusion -- I mean, I take things literally, and
I think most people that are not accustomed to this
regulatory arena and the way the federal government works
in terms of departments -- I mean, half of the confusion
among the Board is -- you know, and I was telling
somebody, you know, the learning curve in this, you know,
as far as people being on the Board, is incredible. I
mean, we don't -- we don't function on a day-to-day level, so it just seems, you know, in some ways incredibly inefficient, but I understand what you're saying. I think it's just going to be a process of us trying to --

MR. JONES: Well, and one of the things that we're --

MS. KOENIG: So give us time.

MR. JONES: One of the things that we're trying to do, we're trying to do exactly what you're asking us to do, and that is: speak with clarity, you know, don't use shorthand, and we're guilty of that, we're guilty in assuming that you just know what we're talking about, okay, and I -- I own that, okay.

So what we're doing, I think, now for -- for -- perhaps better than we've ever done before is we're saying in our writing and in our speech: okay, this is really where it's at, this is where you draw the lines, okay?

MS. KOENIG: Just one thing, and I'm just going to make this assumption, it's a statement. I think -- and maybe -- this is my observation, and I don't know if it's true, but it seems like there's a learning curve even within your agency, as far as how you're extending to these other agencies, and I think the alcohol was a good example, that there are some groups that are easier to
kind of mesh your programs with but there are others that
are also bogged down in bureaucratic and regulatory
language that is not such an easy fit, and those are the
ones where you're not -- where we're seeing this kind of --
-- there may never be an agreement. So I'm reading into
that that --

MS. ROBINSON: You're right, Rose, but let me
just say, this is not in defense of the Department at all,
but there probably has not been a new program created in
USDA for probably 35 years, so -- and this is -- this is
brand-new, it's

MS. KOENIG: And what --

MS. ROBINSON: -- it's from the ground up --

MS. KOENIG: So I think that the way that the
industry sees these directives is: aha, they knew this
all the time, and now they're finally -- you know, it's --
I am understanding that it's a learning process for you,
it's not something that you've decided to just change the
playing field midstream or anything like that, and so --
okay, I understand.

MS. ROBINSON: Okay.

CHAIRMAN KING: Okay, all right.

MS. ROBINSON: I think we should try and get
back on track here.
CHAIRMAN KING: So how's that next slide coming, Rick?

MR. MATTHEWS: Yeah, it's -- yeah, we really do need to get back on track because --

CHAIRMAN KING: Hold on, hold on, I do have a couple other people with comments, but Rose, you're done on this one.

MR. MATTHEWS: Okay, but let me just say this one thing. There's still 43 percent of the presentation yet to go.

CHAIRMAN KING: And it is near 2:30, so -- we appreciate the math on that. I have George, then Dave, then Jim.

MR. SIEMON: Just a point of clarification, then, because I'm concerned for the pet food industry. They can now go to a certifier, get them to adopt standards that are -- they can't say they're equal or -- to NOP standards, but they could do them equal to NOP standards and use the word "organic" on the front of -- the labels, so they can go forward without the USDA seal and we can avoid most of the disruption, but they can't imply that it equals NOP standards, even though they do.

MS. ROBINSON: The products that we don't cover, George, are still bound, as all products in the
United States are, by truth-in-labeling clauses.

MR. SIEMON: I know, but it's truthful if they meet the human standards for NOP, it's truthful.

MS. ROBINSON: If it's truthful, they can say it.

MR. SIEMON: But it says right in your document they may not imply --

MR. MATTHEWS: Okay, hold on a second, hold on a second. What we have said is that pet food, like fish, can be certified to any standard that is out there, with the exception of the NOP.

MS. ROBINSON: Right. Right.

MR. SIEMON: I don't understand that [phonetic], but okay --

MR. MATTHEWS: Okay. Now, the ingredients in that pet food, the corn, the beef, the rice, whatever, if it's produced here in the United States, it has to be produced to the NOP. We're regulating the labeling. The only reason why we're not covering labeling at this time is that we have not gone through the rulemaking for that process, when it comes to pet food, that --

MR. SIEMON: But there's no reason why all those agricultural ingredients, they can't have an asterisk down below that it's USDA certified ingredients --

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MR. MATTHEWS: That's -- they --

MR. SIEMON: -- and complies with all USDA things.

MR. MATTHEWS: -- they can make all truthful --

MR. SIEMON: I mean, we've got to help these people here.

MR. MATTHEWS: They can make all truthful label claims, they can say the rice was produced to the National Organic Standards. They can say the beef was produced to the National Organic Standards. They cannot say that this dog food --

MR. SIEMON: I understand.

MR. MATTHEWS: -- was produced to the National Organic Standards.

MS. ROBINSON: And just for sake -- you know, the pet food folks, they -- one of the reasons we haven't brought them under is they have their own labeling guidelines, they have -- you know, AFCO has its own labeling. They did come to USDA before implementation and they asked us to change our labeling regs to accommodate them, and we said no, we were not going to change the labeling regulations in this program to accommodate the pet food industry, we thought that there had to be another way to work this out and that we wanted to see some
activity on their part, so --

MR. MATTHEWS: Okay, let's kind of slide on to
the next slide.

CHAIRMAN KING: Well, hold on, I've got Dave,
Jim, and then we're moving on, and it is approaching 2:30,
I'll remind the Board of that.

MS. DIETZ: Five minutes each?

CHAIRMAN KING: Yeah.

MR. CARTER: I recognize there's 43 percent, but
that's not 43 percent by weight. This is really one of
the heaviest issues in this presentation.
(Laughter and applause.)

MR. MATTHEWS: I don't know that that is true.
You haven't seen the rest yet.
(Laughter.)

UNIDENTIFIED MALE VOICE: I think we're just
warming up.

MR. CARTER: And also, just let me put into the
record, I'm going to try and avoid entering into
discussions pertaining specifically with pet food, because
I am involved in a pet food project that is not organic
but is at least familiar enough to know that there's a lot
of folks out there playing fast and loose with definitions
on pet food.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
The question, though -- I guess the comment that I would make is to encourage -- and I recognize, Keith, that it's more difficult than just doing a memorandum of understanding with FDA on some things, but that would sure be a great place to start, is to enter into a memorandum of understanding as a first step.

MR. RIDDLE: And my question --

CHAIRMAN KING: Yes, go ahead, Jim. Next and last.

MR. RIDDLE: I just want to make clear that an accredited certifier can have this other certification to any standard and still have their name, you know, similar, same basic claim, "certified by," you know, who they are, X-Y-Z certifier, that would appear on an NOP product, they don't have to set up a separate entity or something. You know, as far as what the consumer would read would be the same name of the same certifier that's certifying an NOP/USDA organic product. Correct?

MR. MATTHEWS: That's what we've said.

MR. RIDDLE: Okay, yeah. All right. Then I just -- I also have a suggestion that I think might bring some comfort, and that is: if there was information posted about how to file a complaint with the Justice Department, if you have concerns about truth in labeling
or untruthful labeling, you file a complaint to us when
it's something we regulate, you've already got that, but
here's where you go and how you do it --

UNIDENTIFIED FEMALE VOICE: We can put the link
over to FTC's Truth in Labeling, and they have that right
on their website, how to file a complaint.

MR. RIDDLE: Uh-huh, yeah.

UNIDENTIFIED FEMALE VOICE: And they will also
tell you how to go to your state attorney generals.

MR. RIDDLE: Right.

UNIDENTIFIED FEMALE VOICE: We can put the link
on, that's not a problem.

CHAIRMAN KING: Rick, next slide.

MR. MATTHEWS: All right. What do we need for
aquatic animals and pet food to be certified to the
National Organic Program? We need industry submission of
proposed standards. In reality, we need three things: we
need a proposed standard; we need them to tell us why this
particular standard; and they need to provide us with
information about the industry to be regulated. Okay.

You know, we recognize that pet food is
something that probably doesn't take an awful lot of
changes to the regulations to make pet food possible under
the NOP. The problem is, we haven't done the rulemaking.
Okay.

I can tell you that there's three areas of concern. Labeling is number one. Number two, are they using any kind of synthetics that the rest of the food industry doesn't do. I don't know the answer to that. The other thing is that in .237, livestock feed, we talk about by-products. How many of these by-products are being fed to mammals. Dogs and cats are mammals. So you'll have to take a look at that section as well.

But other than that, it looks like it's pretty -- pretty easy for this Board or the pet food industry, or this Board and the pet food industry, or even a consultant for the pet food industry, and I know there's a couple of you on this Board, that if you want to throw together some standards and submit them, we'll start the rulemaking process.

MR. SIEMON: Is that a livestock committee process?

MR. MATTHEWS: The livestock committee can work on it.

MR. SIEMON: I don't know, I'm just asking.

UNIDENTIFIED MALE VOICE: Or a pet food task force.

(Laughter.)
MR. MATTHEWS: The bottom line is, you guys can work on that, and will we take that from you? Of course we will.

CHAIRMAN KING: Okay, and we can talk about that later.

MR. MATTHEWS: Now let's move on to the next slide, Katherine.

CHAIRMAN KING: All right, next slide.

MR. MATTHEWS: There's also been some questions about whether or not we'll extend the October 21st, 2005, deadline for using up existing supplies. When it comes to those products that are not covered by OFPA -- again, those being cosmetics, body-care products, fertilizers, things like that -- the answer is: no, because we're -- we're not regulating those areas, so no, we won't extend that deadline.

But when it comes to fish -- aquatic animals actually, because there's more to it than just fish, but -- aquatic animals or pet food, the answer is: possibly. It really depends on what's happening within the industry as far as creating standards that we can then put through the rulemaking process.

MS. CAROE: Rick?

MR. MATTHEWS: Yes.
MS. CAROE: So the only thing that's non-compliant about those labels is if they actually have the USDA seal or represented as USDA organic certified?

MR. MATTHEWS: That's correct.

MS. CAROE: So if they say organic and they have a certifier's name, that label's still complying as long as the certifier has something they're certifying to --

MR. MATTHEWS: That's correct.

MS. CAROE: -- and it does meet it.

MR. MATTHEWS: The ones that have to be changed are those that are using the USDA seal or say "certified to the NOP" or something to that effect.

Does that affect a lot of people? It'll affect some. Some people will run out of the labels before the deadline, and what they'll have to do is get new plates printed up, or made up, so that they can get new packaging printed without those claims. Otherwise they'll still in business for making organic cat and dog food.

MS. CAROE: Now, some of these things have really long shelf lives, that are on the shelves. They're not going to -- they're not going to have to do recall or anything, those --

MR. MATTHEWS: It's going to be --

MS. CAROE: It's in commerce --
MR. MATTHEWS: It's going to be another one of these old product deals.

MS. CAROE: Okay.

MR. RIDDLE: And the thing about animal by-product use, that would really be applicable if you were going to certify the pets.

(Laughter.)

MR. RIDDLE: I mean, that's prohibited, if you wanted to certify the pets -- I'm not trying to be cute, I --

MR. MATTHEWS: What I'm saying is that some people have raised that issue and I'm saying take a look at it to see if it's a problem.

MR. RIDDLE: Right.

MR. MATTHEWS: I've heard people from both sides of it saying, "Well, that's not a problem," other people say it is a problem, so I'm saying that's one area to look at for determining whether or not it's a problem. Okay? Other than that, the only things I've heard about is: well, is that particular paragraph a problem, yes or no; what about materials; and what about the proper labeling scheme for pet food. So that's -- that seems to be the challenge for the pet food industry. Okay.

Let's move on to the List 3 inerts. See, Dave,
this one's going to be probably more than 43 percent.

(Laughter.)

MR. MATTHEWS: It reminds producers and ACAs that pesticides can only be used when pest-management practices fail, and that's something that everyone has to keep in mind. You have pest-management practices within the standards. Those come first. Just because something

is on the National List doesn't give you carte blanche to just use it, it has to be a part of the organic systems plan.

Use of List 3 inerts is prohibited. You cannot knowingly use a List 3 inert. The producers and the accredited certifying agents must try to determine what List 3s are in the pesticide product that the producer is proposing to use. Okay. They have to try.

The pesticide use must be listed in the organic systems plan, and the organic systems plan must be negotiated, enacted, and amended through dialogue between the certifying agent and the producer. None of those requirements have changed. Okay.

This directive acknowledges that List 3 inerts are not listed on the pesticide label. The farmer has no way -- when he goes into the farm supply store and picks up a container of a pesticide that has an approved
ingredient listed, the approved active is listed on the product, he has no way of knowing what's in there, with the exception of the List 3, which EPA requires to be listed. Okay. So he's got to be able to -- he has to then try to find out what is the inert in that product, unless it's listed someplace else, for example an OMRI listing, or maybe the certifying agents have been able to find out what it is and maybe this new certifying agents organization can help us pull together a listing of all products that may not be on OMRI'S list but certifying agents know whether or not they contain List 3s. So that's work to be done.

Now, the producers and the ACAs may not be able to find out what is in that product. We're looking for them to contact the manufacturer, we're looking to them to contact the EPA, we're looking to them to contact other ACAs in order to try to find that out, but it's very likely they're not going to be able to get that information.

What this directive does is it says that after due diligence the ACA will approve the use of pesticides with unidentified inerts. Okay. Due diligence means contacting the manufacturer, contacting EPA, and contacting other ACAs.
This directive also requires that the producer be informed of the requirement to immediately stop the use of this product should it come to the attention of the certifying agent that that product does indeed contain a List 3 inert. They have -- the certifying agent should be telling the producer that up front. Once that is identified as a problem, then they have to tell them again, okay, "We have since found out that it has a List 3, you have to stop." Okay.

They also need to document this notification, both times, document it when they first tell them, "Okay, we're going to approve the plan with this material," and also when they tell them to stop using it. They would take no adverse action on the producer that used one of those products that was later found to have a List 3 inert.

Now, if the producer used something that was later found out to have been prohibited, they would have to stop immediately. If they chose to use it again after having received written notification to stop, then the certifying agent must initiate procedures to revoke certification. There's only one way of correcting a non-compliance for use of a prohibited substance on your acreage, and that is to go through a whole new period,
which is a minimum of three years.

So in the case of somebody who willingly used it, knowingly, willfully used it, they're going to get revoked for 3 -- for 5 years. Now, that's -- that's just the way it's going to be. Yes, Rose.

MS. KOENIG: Now, this, to me, is an example of sort of what -- I guess Jim's example of the -- what was the process -- the water, going back to the percent water. I under-- you know, I'm not -- so the question is not to the -- to what you're saying there, it's more of an alternative that I think is a more responsible approach.

MR. MATTHEWS: What is?

MS. KOENIG: My approach.

(Laughter.)

MR. MATTHEWS: All right. What's your approach?

MS. KOENIG: I mean, EPA -- I mean, everything that is a pesticide has to be registered with EPA, okay.

MR. MATTHEWS: Right.

MS. KOENIG: You can take the active and you could probably -- I'm assuming it has a database, you could get a list of every active that we've approved, natural and things on the List, and EPA could pretty easily -- maybe not tell us what the List is, but they could probably go through all of those and tell us which
are List -- which have List 4 inerts and which have List 3 or List 1 or List 2 --

MR. MATTHEWS: If that was --

MS. KOENIG: -- and we could provide that information so that you could avoid even having that loop-- I don't want to call it necessarily a loophole, because it isn't a loophole if in fact the procedures are followed that way, but I think that the information is there, there's two federal agencies involved. We had Bob Tourlet [phonetic] come, they made that proposal as far as the alternative voluntary labeling scheme, that I know that that's not required, but it seems like there should be some interagency communication that you guys could facilitate and provide that information to your certifiers, that would provide that information, and we wouldn't need this directive.

MR. MATTHEWS: There's no requirement for the manufacturer to give up that information, and in many cases EPA doesn't have that information. So it's not an easy matter for the certifying agent just to call them up and say, "Does it have a List 3?" Now, that is the key way to do it, is you don't say, "Tell me what's in the product," but you can ask them, "Your inerts, are they on a List 3 or a List 4 or a List 2 or a List 1?"
MS. KOENIG: That's what I'm saying, I'm not saying -- no, I'm not saying to disclose a particular inert, but doesn't the -- can the EPA just inform the ones that are compliant and the ones that aren't compliant by brand name? You know --

MR. MATTHEWS: I don't know that they can.

MS. KOENIG: Well, that, to me, is the question. I mean, that seems like --

MR. MATTHEWS: Well, right now we can't get that information.

MS. KOENIG: Well, then I -- you know -- okay.

MR. MATTHEWS: That's what this problem with the List 3 is all about.

MS. KOENIG: But we --

MR. MATTHEWS: What you have done is you have prohibited the use of a product that farmers in many cases have no way of knowing whether or not they're in compliance.

MS. KOENIG: But I'll go back -- again -- you know, because -- I was on the List, the inerts task force, and I will argue that this example, whether it's inerts or formulated -- formulations of natural fertilizers, it's the same issue. Things that are not -- there's things that don't require -- again, it's a labeling issue, that
growers may, you know, purchase, that they then find, even though it says, you know, organic manure or organic stuff, that -- and they don't really realize that there's other --

UNIDENTIFIED MALE VOICE: Correct.

MS. KOENIG: -- other examples. Like for example, a good example of it is soil mixes, okay, a lot of -- metromix. It says metromix, you're buying metromix, it doesn't tell you necessarily that there's 10-10-10 pitters [phonetic] in those things. Growers have to find that information out through using Organic Materials Review Institute or working through their certifiers.

So this issue is not unique, necessarily, to List 3 inerts. I think the solution is easier with List 3 inerts because we actually have a federal agency that regulates it and that does somehow have that information, that perhaps could be, you know, conveyed to us in a format that would be acceptable to them as an agency. So I'm just putting that out.

CHAIRMAN KING: I think what Rose is asking is: could we explore that, in your opinion, and you don't have to answer that now; please take it into consideration.

MR. MATTHEWS: Okay.
CHAIRMAN KING: Goldie, then Jim.

MS. CAUGHLAN: Help me understand, Richard, how we can come to this position of saying we -- we can't find out whether it's in there or not. I mean, I was reading that thing and I thought, you know, it was leading to say therefore not being able to find a disclosure, therefore not being able to find out would lead us to assume: okay, you can't use it, which is precautionary principle. How in the hell can we come to this opposite -- how do I go and talk to consumers? I don't -- it's -- I'm sorry: it's nuts. That is so backasswards.

(Laughter.)

MR. RIDDLE: Yeah. Well, I'll say that in a different way.

(Laughter.)

MR. RIDDLE: It's my understanding that, you know, the burden of proof is on an applicant to demonstrate compliance and the use of approved materials when they enter the process, but now it -- as I understand this, it's rewarding producers and manufacturers for withholding information, and this applies not just to List 3 but also List 2 inerts.

UNIDENTIFIED FEMALE VOICE: And List 1.

MR. RIDDLE: Well, List 1s are required to be
labeled by EPA, is my understanding. So that information is revealed. But List 2s and 3s are not, and 4s. So it could fall anywhere there, so it's not just List 3s.

I guess, you know, I'm assuming that you develop this in consultation with EPA, and I'm just wondering what their opinion has been, because I know they do have a lot of this information and have that pesticide, you know, labeling program that this impacts, cross-jurisdictional, like we were talking about before. I'm just wondering what they've said about this to you, to help move this forward.

MR. MATTHEWS: When it comes to this program, they defer to us.

MR. RIDDLE: But have you talked -- I mean did they review this, did they review this --

MR. MATTHEWS: No, they did not review this.

MR. RIDDLE: Okay.

CHAIRMAN KING: Other comments? We have just one, Zea, quick comment.

MS. SONNABEND: Can I just make a really quick comment?

CHAIRMAN KING: Yes; very quick, please.

MS. SONNABEND: You said at the beginning that these directives were things about the way the Rule always
was, and this is not what you've been saying to us up until this point. In fact, you know, I know on several phone calls you said, "You can't use it if you don't know what's in it." So now we've been going along and -- you know, California, the materials capital of the world, practically, right? So we've got our growers all trained now, we're issuing these -- I forget what you call them, we call them cease-and-desist orders: you stop using it if you can't find out what's in it, we get them 30 days. Now we have them all trained. This is a step backwards now, we have to retrain them.

The directive gives no phase-in, it says it's effective instantaneously. We don't have internal process developed for this new thing. You know, it's not guidance, it's -- it throws us into a tizzy about it.

CHAIRMAN KING: Thank you. Go ahead.

MR. MATTHEWS: Okay, let's move on. What the directive does not do, we do not see it as allowing List 3 inerts. It's recognized -- what we are doing is -- and why we have taken this position is that we recognize that the farmer doesn't know, and in many cases the certifying agent doesn't know. Okay? They can't identify this stuff. Without this ruling, it's: when in doubt, go without. In other words, anyone who uses that substance
is going to be out of organic for 5 years.

UNIDENTIFIED MALE VOICE: When in doubt?

MR. MATTHEWS: When -- well, if you don't know what it is and you're -- part of the problem is that certifying agents are all over the map on this one. What you have to remember is that when a prohibited substance is applied to your land, you're out of organic production for 5 years. You're revoked.

CHAIRMAN KING: Knowingly.

MR. MATTHEWS: That's your revocation.

CHAIRMAN KING: Knowingly.

MR. MATTHEWS: That's when you knowingly do it.

Okay. So the only option is, the only other option that we see, is to go out there and tell people: yes, the active is allowed, but no, you can't use the product, and not through any fault of your own, but because manufacturers won't give you the information.

CHAIRMAN KING: Kevin.

MR. O'RELL: Rick, the directives, as I understand it, are based off of legal substance, so what -- in this case of this interpretation, this is based off of legal advice, legal counsel, with the USDA, or is this --

MR. MATTHEWS: It becomes an enforcement issue,
how do we enforce this thing.

    MS. CAUGHLAN: You have to know.

    UNIDENTIFIED FEMALE VOICE: You have to know

where you don't use it.

    UNIDENTIFIED FEMALE VOICE: "When in doubt, do

without."

    CHAIRMAN KING: Rose?

    MR. MATTHEWS: How about some certifying agents,

any certifying agents want to weigh in on this?

    MS. DIETZ: I think we need to --a

    (Rapping.)

    MS. DIETZ: It's 3 o'clock, and we haven't

started even our agenda yet.

    MR. MATTHEWS: That's right.

    CHAIRMAN KING: Yes, that's right. Very quick

question, not a statement, I have Rose, then you, Kim.

    MS. KOENIG: I just want to reiterate, I guess,

what Jim said, that your policy directive talks about

List 3, but List 2 falls into the same category --

    UNIDENTIFIED FEMALE VOICE: Same thing.

    MS. KOENIG: -- which is an area -- okay, 3 is

of unknown toxicology, and again, we feel that that issue,

once EPA goes through those, is going to be resolved, but

we still have the same issue that none of the -- you know,
the List 2s aren't also. So the directive, Number 1, what about List 2s? So if we find out that it's a List 2, then they've lost it for 5 years? So the directive, if you're going to go for this, needs to cover -- you know, and I don't recommend it, because I don't agree with it, but it probably needs to entail also List 2 inerts because they're subject to the same concern, if that's the way you're thinking.

Again, I am not proposing that, because I don't agree with the directive, but again, I would just -- you know, "when in doubt, go without." I feel, as a producer, okay, and I'm a user, okay, forget the certifiers, you know, I live -- this is my living, you know, this -- the program -- and that's what I always says, "You are my servants" (chuckles), "I am your stakeholder, the program is to serve me, and I am just one producer," but that is my job, just like it's your job to manage a program. My job -- if I want to get certification, I have to come to the plate, I have to find the information out, I have a serviced called the Organic Materials Review Institute that I utilize, I utilize my certifier, I do that due diligence, and if I can't find the information, I do without, I don't risk it.

MS. DIETZ: It's 3:00. They should do public
comments on Friday.

CHAIRMAN KING: Yeah. Sorry, we have to keep moving forward. So Kim, did you have a quick comment, or no?

MR. MATTHEWS: Do you want to keep going or do you want to --

CHAIRMAN KING: I do want to keep going. I just want to say one quick thing, and I understand that this is a heavy issue, if you will, but let's focus on one thing that Rick just commented on, and I think you may have caught it, and that is: this is an enforcement issue. So if we have suggestions, ideas, so on and so forth, in the future, not at this particular moment, perhaps you would want to focus on that. Rick.

MR. MATTHEWS: Okay, let's move on to the antibiotic hot button. Again, what the directive does, this one reminds producers and ACAs that sub-therapeutic antibiotic doses are strictly prohibited under the Organic Foods Production Act.

The use of antibiotics is allowed to treat illness when preventive practices and veterinary biologics fail. Okay. They are -- it is allowed, to use. The problem is that there are effects from doing that.

So the next slide provides that this directive
identifies the effects of using antibiotics. An animal that has been treated with an antibiotic can never be sold, labeled, represented as organic. Products from slaughter animals cannot be sold, labeled, or represented as organic. Dairy animals must be managed organically for 12 months before milk can be sold, labeled, or represented as organic. Breeder stock treated prior to the last third of gestation can give birth to an organic animal. Okay.

Again, what the directive does, it clarifies that OFPA and the regulations do not prohibit dairy farmers from treating sick dairy animals with antibiotics, and I repeat from what we had said just at the last slide, treated dairy animals must be managed organically for 12 months following treatment before milk can be sold, labeled, or represented as organic.

Now, when we say "managed organically," that means 100-percent managed organically. Okay. George?

MR. SIEMON: You know, my biggest question about -- I don't know what's my biggest question, but this of course brings up the whole issue of all prohibited medications, not limited to antibiotics.

UNIDENTIFIED FEMALE VOICE: Correct.

MR. SIEMON: If I read this correctly, any medication can be used now as long as you have the 12-
month window prior.

MR. MATTHEWS: We're only talking antibiotics here. We're only talking antibiotics. That was the issue that was of contention between certifying agents and what is the issue that we have addressed.

MR. SIEMON: But this is a clarification of the law, as you've said.

MR. MATTHEWS: For antibiotics.

MR. SIEMON: So I can't take this logic and not see that this applies itself equally to all medication, this whole document as well.

MR. MATTHEWS: We've only addressed the issue of antibiotics --

MR. SIEMON: Okay.

MR. MATTHEWS: -- with this directive.

MR. SIEMON: So then for right now the -- since you've only addressed that, the understanding of the community should be: this is only for antibiotics and not for any other forms of prohibited medication.

MR. MATTHEWS: Yes.

MR. SIEMON: Should that be the understanding of the community?

MR. MATTHEWS: Until we review it for other things. We've only reviewed it for antibiotics.
MR. SIEMON: Okay.

MR. MATTHEWS: That was the issue that was put to us. Okay.

What this directive does not do: it does not allow sub-therapeutic doses; it does not permit milk from treated animals to be fed to organic animals; it does not permit milk from treated animals to be sold, labeled, or represented as organic; it does not allow treated animals to be sold, labeled, represented as organic slaughter stock; it does not allow the feeding of non-organic feed, in any quantity, to treated animals.

And that's where I said on the last slide: managed organically. You can give this animal that is ill a dose of an antibiotic; if that animal was an organic animal, it loses organic status for meat. That animal then has to go through organic management for 12 months from the date of the last administering of that antibiotic, for the purpose of saving that animal's life, before it can produce organic milk.

MR. SIEMON: I'm so glad you brought that up too, because that was my next question, about the feed, because it really brings open the whole feed issue. But just so I'm clear about the 12 months: is that managed organically for 12 months? If you give that calf an
antibiotic 16 months prior to milking, what -- I just need clarification on the whole organic feed on the certain class of dairy animals, we have two classes of dairy herds --

MR. MATTHEWS: We have changed nothing. We have only clarified that a dairy animal can receive an antibiotic and go through a 12-month management organically and still be able to produce organic milk. We have changed nothing related to origin of livestock.

MR. SIEMON: So if it's 16 months -- I have two questions. If it's at 16 months, they've still got to be fed organically all the way through --

MR. MATTHEWS: Oh, yes.

MR. SIEMON: -- and the 12 months not relevant.

MR. MATTHEWS: Yes. You cannot -- you cannot manage that animal organic- -- as a conventional animal after giving that dose and still have it become organic again, you have to continue to manage that animal organically, with this one exception, that you could give it a shot or a suppository, whatever, you know, to correct the animal's illness at that point. It's really a humane issue, in my mind, you're taking a very sick animal, you have a choice, you can take it off your farm or you can treat the animal. Now, where -- in real terms, where is
this going to be important? It's going to be important for young stock, because the farmer already is faced with a 24-month period before that animal is going to be productive, okay. So if you're treating it within the first three months, it's still got to go through the same organic management that it would have, but that animal has lost its meat status as organic. You still have to manage him organically all the way through.

Now, is it practical to think that a farmer is going to treat a mature animal and then keep it on its farm for a year? I doubt it. They're going to get rid of that animal. Okay?

MR. SIEMON: And by your chart, this is -- we have two streams of dairy animals, in the dairy world, and this chart shows that this is for all streams, and so I have another question that's kind of a broader question. Are we real clear that those in the dairy stream that come in with the 12-month have to feed their calves organically from day of birth, last third of gestation forward? I'm not clear on that. But this -- if I'm to follow this conversation and read this chart, we're all clear that no matter what stream you come in, you must raise your calves organically, feed and everything else, besides for this antibiotic exception now, from the day of birth. That is
not the case in the field right now. We need to address that.

MR. MATTHEWS: George, go ahead and run that by me again. I missed it. I was getting corrected on a point that I made before.

MR. SIEMON: No matter how you come into the dairy program, this is a little off-subject, but it's very relevant. How you come into the dairy program, we know there's two streams, no matter what stream you come through, you must raise your calves, that are born on your farm, organically.

MR. MATTHEWS: Right.

MR. SIEMON: And you can't take them off the farm in any way or bring them back, and I'm just referring to your chart here.

MR. MATTHEWS: Yeah. And --

MR. SIEMON: And then I'm informing you that is not the present enforcement out there in the field right now, our understanding. That's maybe another clarification we --

MR. MATTHEWS: And there may be -- the document itself may have created a bit of misunderstanding, because you're -- we're not really contemplating that you take the thing off the farm and then bring it back a day later, or
a year later, or anything like that, you treat the animal, you mark it, and then you manage it organically without using any of that milk, to either be sold to consumers or even used as feed for other -- for young stock, for example.

And George, a technical correction a previous statement.

MR. SIEMON: Okay.

MR. MATTHEWS: Yes, the only question posed to us was antibiotics, but by extension it would apply to other medications.

MR. SIEMON: I think so too.

MR. MATTHEWS: Okay. Becky.

CHAIRMAN KING: Becky.

MS. GOLDBURG: I'm curious whether the NOP has a definition of sub-therapeutic antibiotic use pertinent to this directive. As I understand it, there is no widely-accepted definition of sub-therapeutic, there are a variety of definitions. I know that FDA has no definition. So I'm curious whether -- how you're making the distinction between sub-therapeutic and therapeutic antibiotic use.

MR. MATTHEWS: To me, and the way we mean it --

UNIDENTIFIED MALE VOICE: That's in the Act.
MS. GOLDBURG: It is actually in the Act?

UNIDENTIFIED MALE VOICE: Yes. That's

(inaudible) statutory --

MR. MATTHEWS: Sub-therapeutic is a requirement within the Act.

MS. GOLDBURG: Yeah, but I don't think it's defined.

UNIDENTIFIED MALE VOICE: And I think that's covered in FDA as well.

MS. GOLDBURG: No, there is no FDA definition.

UNIDENTIFIED MALE VOICE: Sub-therapeutic?

MS. GOLDBURG: There is not.

MR. MATTHEWS: Okay. But basically what we're saying is that in the presence of illness that would dictate that you have to bring -- that you have to use an antibiotic in order to save that animal's life, or -- if you're a veterinarian -- basically it's an issue call by a veterinarian. If your animal is so sick that it has to have an antibiotic, or I suppose even if it had gone through a surgery and you needed to have an antibiotic to prevent an infection, this is where the humane part of it comes in, you can go ahead and do it, but there are costs for having treated your animal in a humane way. One of those is that you lose the organic status of that animal
for meat purposes.

    MS. GOLDBURG: Yeah, I understand that, but

just --

    MR. MATTHEWS: And this only applies, really, to
dairy animals, okay?

    MS. GOLDBURG: Yeah.

    MR. MATTHEWS: Any other animal, it loses its
meat status, it's out of the organic anyway.

    CHAIRMAN KING: Jim, then Andrea.

    MR. RIDDLE: Yeah. You've said -- and you have
it stated up there -- that this does not permit milk from
treated animals to be sold/labeled as organic --

    MR. MATTHEWS: Right.

    MR. RIDDLE: -- but yet I've heard you say
verbally that yes, an animal can be treated with an
antibiotic and 12 months later its milk sold/labeled as
organic. So it does allow --

    MR. MATTHEWS: Well, but it doesn't allow it
during the 12-month period.

    MR. RIDDLE: Yeah, but it was a treated animal.

So it does allow the milk from a treated animal to be --

    MR. MATTHEWS: After 12 --

    MR. RIDDLE: Yeah, with conditions.

    MR. MATTHEWS: -- months of organic management.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MR. RIDDLE: Okay. So I just want to address that. And then what I -- this correction you've made about: it applies to other medications --

MR. MATTHEWS: Uh-huh.

MR. RIDDLE: -- so that would include hormones as well. So there --

MR. MATTHEWS: No. Hormones are specific --

MR. RIDDLE: If they're used for therapeutic purposes --

MR. MATTHEWS: This is for illness.

MR. RIDDLE: -- treatment -- yes.

UNIDENTIFIED FEMALE VOICE: Illness.

MR. RIDDLE: Yes. I mean, I don't see the line. It applies to other medications of any category --

UNIDENTIFIED FEMALE VOICE: I'm not a livestock expert, but do you give hormones for illnesses?

UNIDENTIFIED MALE VOICE: Yeah.

UNIDENTIFIED FEMALE VOICE: Yeah.

UNIDENTIFIED MALE VOICE: Sure you do.

MR. SIEMON: Just breeding problems.

MR. RIDDLE: Breeding problems.

CHAIRMAN KING: Next example, Barbara.

UNIDENTIFIED MALE VOICE: Viagra?

UNIDENTIFIED MALE VOICE: Menopause.
(Laughter.)

UNIDENTIFIED MALE VOICE: Just to support -- we have to remember, in the dairy, which is so complex, in the new herd clauses, those animals coming into the program could have previously had antibiotics, could have previously had hormones.

UNIDENTIFIED MALE VOICE: Right.

UNIDENTIFIED MALE VOICE: So we have to be somewhat even here about this because some understand. Not that I agree with the document, don't anybody misunderstand me, but still, I can agree (inaudible) --

MR. MATTHEWS: But it does -- but it does address in some respect the concerns of dairy farmers of the unlevel playing field with regard to health care for the young stock that they have on their farm, that are organic.

MR. RIDDLE: Okay, so that's the --

MR. MATTHEWS: But we're not -- but we're really not --

MR. RIDDLE: The origin of stock allows prior treatment in an animal's life, before it comes into the organic program; then the livestock health care practice must be followed, and it says a producer must not sell, label, or represent as organic any animal or edible
product derived from any animal treated with antibiotics. It doesn't say within a year; it says "must not." So I just -- I --

MS. CAUGHLAN: So where does this come from?

MR. RIDDLE: Yeah, where does this come from? I think -- you know, what's driving this?

UNIDENTIFIED FEMALE VOICE: What about the level playing field for the consumer?

MR. RIDDLE: Edible product --

MR. NEAL: In Section 236 -- Arthur Neal is my name.

CHAIRMAN KING: Arthur.

MR. NEAL: In Section 236 there is no -- what happens, it says that organic animals must be managed continuously for 12 months. Those animals can be considered to -- the milk from those animals can be sold as organic. It says that --

MR. NEAL: It doesn't say "unless treated with a prohibited substance." It can't -- that's under "Origin."

MR. RIDDLE: Right.

MR. SIEMON: Then how come you're requiring the feed -- a 100% organic feed on the second stream, then?

UNIDENTIFIED MALE VOICE: What was that?
MR. SIEMON: Then why would you require a 100-percent organic feed on that one stream of dairy that you're requiring --

MR. NEAL: Because it must continuously be managed organically.

MR. MATTHEWS: The exception to the 100-percent organic feed is only found for whole herd conversion, it is not found for any other situation.

MR. SIEMON: But it -- so you're differentiating between feed and medication at that time.

MR. MATTHEWS: Yeah, we're differentiating between feed and medication.

MR. SIEMON: Except for replacements.

MR. MATTHEWS: One heals, the other one keeps them nourished.

MR. SIEMON: Except for replacements on the one stream. That's another subject.

CHAIRMAN KING: Andrea.

MS. CAROE: Okay, I just wanted -- I really don't have a question but I just -- I want to make a comment on two things that are kind of a by-product of this directive, and one is that an unenforceable section of this rule has been: we have never been able to identify a farmer that's withholding treatment of a sick...
animal, and this will hopefully prevent some of that from happening, because that's -- that's in the regulation, you can't withhold treatment from an animal that's sick, but if a certifier goes a year later, after the animal's died, they have no idea that that happened that way. So that -- I just want to put that in the mind, because I really think that's an important thing, that we've never been able to address.

And then the other thing is, there is a discrepancy between buying a replacement animal at a sale barn and transitioning them and somebody that's growing their own.

UNIDENTIFIED MALE VOICE: Speak up, Andrea.
UNIDENTIFIED MALE VOICE: We can't hear you.
MS. CAROE: I don't think which mic works.
MS. ROBINSON: I don't think it is working.
MS. CAROE: I'll speak loudly. Now, the other issue was the discrepancy between somebody that's raising their young on their farm and buying from a sales barn and transitioning, because those animals could have been treated and fed, and anything could have happened to them. It almost -- it's almost counter-productive to promoting growing the young animals on the farm, if it's easier to buy them from the sale barn and transition them, than to
deal with a young animal that is more susceptible to
disease.

MR. SIEMON: They just clearly said that all
those people that qualify for that have to raise their
calves and keep their heifers rather than go out and buy
other heifers as a shortcome, they just clarified that --
I hope all the ACAs hear that so they can do it.

UNIDENTIFIED MALE VOICE: What was that?
UNIDENTIFIED FEMALE VOICE: I didn't hear that.
CHAIRMAN KING: I think we all missed that one,
George.

MR. SIEMON: They just said about the two
streams of dairy, the ones that qualify for the 12 month,
they must raise their heifers organically and cannot be
selling them and buying back heifers elsewhere as some way
to get around and cheapen the cost of replacements, which
you were just referring to.

MR. MATTHEWS: That's always been in there, we
haven't changed that regulation.

MS. CAROE: I'm missing something.

MR. MATTHEWS: We have not changed any standards
related to the origin of livestock. We have simply
addressed whether or not a dairy animal can receive
treatment for illness and still remain on the organic
farm, and the answer is: yes, you can treat it, you can stay on the organic farm, it can never be used as organic meat, it cannot be used for the production of organic milk for 12 full months, and during that full 12 months it must be managed organically.

UNIDENTIFIED MALE VOICE: And longer.

MS. CAROE: Well, let me just say this, I mean -

MR. MATTHEWS: And it could be longer if you treated a two-day-old calf.

MS. CAROE: Okay. But if -- I understand that origin of livestock has not changed by this directive, but if a farmer had an animal born on their farm, two-day-old baby, that gets pneumonia, okay --

MR. MATTHEWS: Right. And it was born as an organic animal.

MS. CAROE: It was born as an organic cow.

MR. MATTHEWS: All right.

MS. CAROE: They treat that animal, they sell the animal, they cull it out. Another organic farm --

MR. MATTHEWS: That is sold as a conventional animal.

MS. CAROE: Sold as a conventional animal.

MR. MATTHEWS: Right.
MS. CAROE: Another --

MR. MATTHEWS: Cannot come back.

MS. CAROE: -- organic farmer is looking for a replacement animal, buys one at a sale barn, which is not required to have any lineage on that animal, buys that animal, unknowing that it was an organic animal that's gone conventional, bring it in, transition it for 12 months, in effect they're doing exactly what the directive is saying.

MR. MATTHEWS: Well, yes, that -- there is always the risk that an animal that was born organic was treated and then culled from the herd, went into the conventional market. There is the possibility that if the -- if the buyer of that animal, who is organic, did not do due diligence of trying to find out the history of that animal, you might possibly have that animal come back onto the farm.

MS. CAROE: So --

MR. MATTHEWS: Under the regulations, it's not allowed to come, but it is possible that one would.

MS. CAROE: Right, and that was my point. My point is that it allows it to stay on the farm and it doesn't weaken it in any way.

MR. MATTHEWS: Right. That's right. This
option actually would create an opportunity where that is less likely to happen, hopefully. You're more confused?

MR. RIDDLE: Just --

MR. MATTHEWS: Then we should have just left it the way it was, Jim (chuckles).

MR. SIEMON: But again, I made an assumption earlier, but after listening to this, I've got to go back -- assumptions, always gotta worry about them. If you bring in through the one-time exception, you're still qualified for this same use of antibiotics.

MR. MATTHEWS: Yes.

MR. SIEMON: Okay.

MR. MATTHEWS: You're -- the animal that you're bringing in is converted. Now, again, the likelihood of treating a mature animal --

MR. SIEMON: I'm talking about calves, I'm talking about a calf.

MR. MATTHEWS: -- and keeping it on the farm is pretty slim.

MR. SIEMON: I'm talking about calves.

MR. MATTHEWS: Okay.

MR. SIEMON: Because we have two different replacement clauses for dairy, and it doesn't matter which one you're in, all of them qualify for this antibiotic
UNIDENTIFIED FEMALE VOICE: Yeah, that's right.

CHAIRMAN KING: That's a true statement.

MR. MATTHEWS: Yes. Remember --

MR. SIEMON: It's not totally logical, but --

MR. MATTHEWS: Remember that the 80/20 rule for feed is only available to a whole herd conversion.

MR. RIDDLE: During the conversion process.

UNIDENTIFIED FEMALE VOICE: Right.

MR. RIDDLE: Once they've converted --

MR. MATTHEWS: During the conversion process.

MR. RIDDLE: -- all animals must be organic from the last third of gestation. If someone comes in through the 1-year clause -- I'm really confused, coming out of this -- what about those calves? They're fed organic? It's required that they have to be fed organic?

MR. MATTHEWS: Yes.

MR. RIDDLE: But that's contrary to your --

MR. MATTHEWS: Managed 100-percent.

MR. RIDDLE: And that's contrary to your prior policy statement on the two herds, where you had that chart?
MR. MATTHEWS: No, it isn't. No, it isn't. We are not addressing the origin of livestock at all.

MR. SIEMON: Jim, that previous one was replacements, bought replacements. But I hope NOP is hearing: there's a lot of confusion about raising those on those farms that qualify for the 12-month. You need to hear that. There's a lot of confusion.

UNIDENTIFIED MALE VOICE: They're being fed conventional.

MR. SIEMON: Because that's the shadow here -- it's not even the subject we're on, but that's the shadow that's still confusing us.

UNIDENTIFIED MALE VOICE: Yeah.

MR. SIEMON: That document on replacement says brought in replacements, bought, they're saying no matter which way you come in, you have to raise your calves organically, organic feed and all, until we come up with this new exception here, and you can't sell your calves off and buy heifers back for the one year, which is going on right now.

UNIDENTIFIED MALE VOICE: Totally.

MR. SIEMON: So we need to deal with this, it's going on, it's --

UNIDENTIFIED MALE VOICE: That's what the chart
UNIDENTIFIED MALE VOICE: Yeah, that's what your prior chart says.

MR. SIEMON: You need to deal with this, so you all need to hear it. There's a lot of -- we need a directive on this one.

CHAIRMAN KING: But this is -- but, yeah, that's -- so that's another issue that we need to clarify --

MR. MATTHEWS: That's a different issue.

CHAIRMAN KING: -- clearly. I think I need to be heavily medicated right now, I don't know about you.

(Laughter.)

UNIDENTIFIED FEMALE VOICE: Don't ask for directives (chuckles).

MR. SIEMON: Let's move on. Let's move on.

UNIDENTIFIED FEMALE VOICE: Life's like a breakout issue.

CHAIRMAN KING: Yeah, there you go. All right. So Rick, how close are we to --

MR. MATTHEWS: Oh, we're getting a lot closer.

CHAIRMAN KING: Well --

UNIDENTIFIED FEMALE VOICE: We'll move on.

MR. MATTHEWS: I'm not sure that it's going to be any quicker. Now, we can cut it off --
CHAIRMAN KING: I'm just wondering if at some point people would need to go to the bathroom and take a break, so let's --

MR. MATTHEWS: The only thing left is fishmeal and the materials review process.

CHAIRMAN KING: Let's get through antibiotics, at least. Are we done?

MR. SIEMON: We're done. Let's move on.

MR. MATTHEWS: Antibiotics, we're done.

CHAIRMAN KING: What's the will of the Board, do you want to take a quick break now or do you want to finish --

UNIDENTIFIED MALE VOICE: I think we're so off schedule we ought to keep moving, myself.

UNIDENTIFIED MALE VOICE: Let's just finish NOP.

CHAIRMAN KING: I'm hearing "Let's finish NOP."

Rick, if you have to go to the bathroom, tough luck.

(Laughter.)

MS. ROBINSON: We've got seven more slides.

UNIDENTIFIED MALE VOICE: Do you want to try to define "sub-therapeutic"?

UNIDENTIFIED FEMALE VOICE: No, not now.

UNIDENTIFIED FEMALE VOICE: Not right now.

UNIDENTIFIED MALE VOICE: Not right now.
(Laughter.)

UNIDENTIFIED FEMALE VOICE: And whether it's --

(Pause.)

CHAIRMAN KING: Okay, Rick, I guess you're off
and running on the next subject.

MR. MATTHEWS: All right, now we're on to
fishmeal. Go ahead and click again, right button.

What the directive does: reminds producers and
ACAs that Section 205.237(a) allows the use of non-
synthetic feed additives and supplements in organic
production. Fishmeal is an allowed protein supplement.

It's neither organic -- it's natural.

What if the fishmeal contains a synthetic
substance? Fishmeal is a natural. All naturals are
allowed unless prohibited. Fishmeal is not organic. How
much fishmeal constitutes a supplement?

MR. SIEMON: No, no, no, no, go back.

UNIDENTIFIED FEMALE VOICE: Go back.

UNIDENTIFIED FEMALE VOICE: Go back.

UNIDENTIFIED FEMALE VOICE: Put it back on.

UNIDENTIFIED MALE VOICE: Back up.

MR. SIEMON: You had a good question but there
wasn't the answer. Synthetic is defined in our rule that
if a substance is formulated or manufactured by a
MR. MATTHEWS: Fishmeal has never been determined by this Board to be a synthetic product.

MR. SIEMON: But it has synthetic ingredients.

MR. MATTHEWS: It doesn't have synthetic ingredients.

UNIDENTIFIED FEMALE VOICE: Yes, it does.

MR. MATTHEWS: It may have a synthetic ingredient.

UNIDENTIFIED MALE VOICE: Fish emulsion is listed --

MR. SIEMON: The question is: what if it contains synthetic --

MR. MATTHEWS: But fishmeal it --

MR. SIEMON: What if it contains a synthetic substance? That's your question up there.

MR. MATTHEWS: It has never been ruled to be a synthetic substance by this Board.

UNIDENTIFIED MALE VOICE: What if it contains a synthetic substance?

UNIDENTIFIED FEMALE VOICE: Yeah.

UNIDENTIFIED FEMALE VOICE: Yeah.

MR. MATTHEWS: It doesn't matter.

UNIDENTIFIED FEMALE VOICE: Why?
MR. MATTHEWS: It doesn't matter. It's a natural product.

(Cross-talk.)

MR. SIEMON: So if they would --

MR. MATTHEWS: Okay, we're not going to meet --
or meeting of the mind on this, and it's -- under --

MR. SIEMON: Okay, so the answer should be --

MR. MATTHEWS: -- under the rulemaking that has already been done, if you go to the preamble, it says that fishmeal is allowed, and all we're doing is reiterating the fact that a determination has already been made that fishmeal is allowed, and there's no criteria put on that fishmeal.

MR. SIEMON: So as long as it's an FDA product, it doesn't matter what's involved in the fishmeal, if they want to put amino acids in there or something like that and it still be called fishmeal, fortified fishmeal --

MR. MATTHEWS: As long as it meets the definition of what a fishmeal is.

MR. SIEMON: By the FDA.

MR. MATTHEWS: Right.

MR. SIEMON: This is based on the determination of synthetic, and you said it's never been determined to be synthetic, so in order to be determined synthetic,
someone would have to go through the TAP review process, to have it declared as a prohibited material, right, prohibited natural?

MR. NEAL: That's right. That's right, because fishmeal -- fishmeal has not been prohibited, because all naturals are allowed unless prohibited.

MR. SIEMON: But all of us thought that if a natural had a synthetic in it --

MR. MATTHEWS: But you have to remember that all naturals, including naturals that are used in an organic food, the natural, if it was created using synthetics, it doesn't matter, it's allowed, in the last 5 percent of human food.

UNIDENTIFIED MALE VOICE: It's got to be on the List.

UNIDENTIFIED MALE VOICE: Only if it's on the List and we've reviewed it.

MR. MATTHEWS: The same thing doesn't -- no.

MR. SIEMON: Okay, next --

MR. MATTHEWS: No, naturals are allowed unless prohibited under crops and livestock.

MR. SIEMON: So if an FDA-approved additive has a prohibited material in it, that's on our list, then clearly it's not allowed? If an FDA-approved additive has
in it a synthetic -- prohibited synthetic that's on the NOP list, then clearly wouldn't that mean it wouldn't be allowed?

MR. MATTHEWS: I'm still not following the question.

MS. KOENIG: I have an explanation, I think I have clarity.

CHAIRMAN KING: Rose, go ahead.

MS. KOENIG: I think fish -- it's like aquatic -- it's like fish emulsion or aquatic plants, that in reality, if it's a processed product that involves a synthetic substance, that it -- I -- this is my personal opinion, so -- I mean, this is not -- I'm not speaking from a regulatory view, but I view fishmeal as -- what people are saying, if it's -- if there's anything -- if it's, you know, processed in some way, it may in fact have to be petitioned, because similar to aquatic plants or similar to fish emulsion, there may be a procedure, to get to the finished product, that would require it to be petitioned and then perhaps annotated.

MR. MATTHEWS: Yeah. Now, to confuse it even more: If there were fish standards in place, the fish would have to be organic and then it would have to have gone through the process, but it's -- right now fish are
outside our scope, and it's a natural, and so it's
allowed.

UNIDENTIFIED MALE VOICE: Even if adulterated?
UNIDENTIFIED FEMALE VOICE: Yeah, but fish --
that's --

CHAIRMAN KING: Jim, then George, then Becky.
MR. RIDDLE: I'm going to come back to that
preamble that I read earlier today and ask you how it
squares with that when it says "Synthetic ingredients in
any formulated products used as organic production inputs,
including pesticides, fertilizers, animal drug and feeds,
must be included on the National List," and feed
supplement is defined as "feeds." So to me, when it says
"feeds," that's a broad category. And so here, you're
saying that it doesn't matter if it has synthetic
ingredients, where you said earlier that they must be on
the National List.

MR. MATTHEWS: .237 allows non-synthetic
substances to be used as a supplement in organic feed.

MR. RIDDLE: Well, yeah, I have no problem with
that. Fishmeal without synthetics. But once you've added
a synthetic --

UNIDENTIFIED FEMALE VOICE: Right.
UNIDENTIFIED FEMALE VOICE: -- then you've got a
MR. RIDDLE: It's a different issue.

MS. DIETZ: It sounds like a certifier issue to validate that there are no synthetics in that --

UNIDENTIFIED FEMALE VOICE: But not if they're given a directive that doesn't call for that.

CHAIRMAN KING: Hold on, let's stay on track.

MS. KOENIG: But fishmeal becomes fish emulsion, it's a natural that is changed once it's -- unless the fish -- if the fishmeal is purely fishmeal, then I agree with that, but what that question begs is: if it contains a synthetic substance, it then -- that's what I'm saying, then it becomes fish emulsion and it has to go through the process of going -- it's a natural that now has been altered and it gets reviewed.

MR. MATTHEWS: Well, fish emulsion would. We're not talking about fish emulsion, we're talking about fishmeal.

MS. KOENIG: No, but --

MR. NEAL: Just a second, guys, just a second.

CHAIRMAN KING: Point of clarity?

MR. NEAL: Yeah.

CHAIRMAN KING: We're looking for that.

MR. NEAL: There are a lot of issues, that are
trying to be hashed out right now, that are a point of contention, and it all revolves around what can and cannot be reviewed by the Board. What does the Act allow to be included on the National List. If you turn to 6517 of the Act, this is the issue that we face. But it's in there. You go -- it's on the right-hand column of the page, 21-18.

CHAIRMAN KING: 21-18 or 6517, same thing.

MR. NEAL: Okay, (c)(1)(b).

CHAIRMAN KING: Okay.

MR. NEAL: It says -- and let's read --

CHAIRMAN KING: Where are we starting?

MR. NEAL: This says that -- (c)(1) says "The National List may provide for the use of substances in an organic farming or handling operation that are otherwise prohibited under this title only if: (b) the substance is used in production and contains an active synthetic ingredient in the following categories: copper and sulfur compounds, toxins derived from bacteria, pheromones, soaps, horticultural oils, fish emulsions, treated seed, vitamin and minerals, livestock parasiticides and medicines, and production aids."

Now, this is -- what was that, Nancy?

CHAIRMAN KING: Never mind, move on.
MR. NEAL: This talks about active synthetic ingredients.

Now, it sounds like we're back at a phosphoric acid issue, where there may be a preservative used that's not an active ingredient. Well, how do you petition the Board to include a non-active ingredient in a feed formulation for inclusion on the National List if there's no entry point for it by the Act? Because the Act says "active synthetic ingredients."

CHAIRMAN KING: Nancy, then Rose.

MS. OSTIGUY: Am I understanding you correctly that your reading of this says that we can -- and there's part of this I wouldn't have a problem with. The only things that go on the List are things that are in the category that you just read, and it must be inactive, otherwise it's prohibited?

MR. NEAL: No.

MS. OSTIGUY: So you are saying that if it's not an active, then it's okay even if it otherwise would be prohibited if it was active?

MR. NEAL: Correct.

MR. SIEMON: Then why did we go through all that about the aloe preservatives?

MR. NEAL: I don't know.
MR. SIEMON: You don't know. Good, I'm glad you said that.

(Laughter.)

MR. SIEMON: No, I'm agreeing with you, I don't know either.

MR. NEAL: Now, listen, listen, and if you think I'm wrong --

MS. OSTIGUY: Why did we do anything with inerts, then? They're not actives.

MR. NEAL: Inerts is specifically identified in Paragraph 2. Now, if you'll take a look at vitamins that are allowed, on the National List, there are I'm sure some carriers invited that are not on the National List. The Act did not envision for every inert -- well, I won't say inert -- inactive ingredient that's used in a feed formulation or any other product to be considered by the Board because it's too expansive. That means that there are products that are on the market right now that could potentially be in violation under the standards.

UNIDENTIFIED MALE VOICE: You're missing something in the law right now, I'll tell you what it is --

CHAIRMAN KING: Hold on.

MR. SIEMON: You've got to be recognized.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
CHAIRMAN KING: Friday, please, public comment can go forth --

UNIDENTIFIED MALE VOICE: I can help you --

CHAIRMAN KING: Hold on.

UNIDENTIFIED MALE VOICE: -- out immensely on this right now.

CHAIRMAN KING: Not right now.

MR. SIEMON: I've got a new question, just -- because I can see we're really going to be (inaudible) about this. This -- just like my question about antibiotics -- then covers crabmeal and any non-synthetic, non-agricultural material, whether it's got synthetics or not, as long as it's FDA-approved, anything, any and all?

MR. MATTHEWS: Yes. And all of those marine products would change if there were standards for aquatic animals.

CHAIRMAN KING: Rose.

MS. KOENIG: Can you clarify that, Richard. I assume most -- it would change if there were standards for wild aquatic animals, since all fishmeal at the moment is made from -- or virtually all, I should say -- from wild fish.

MR. MATTHEWS: Well, yeah, it's -- I guess -- I say that if we had standards, I'm a little -- I don't know
the correct word. Let's say that I fail to see at this point -- and I could be convinced differently, but I fail to see how you're going to be able to open this up to all aquaculture without a source of organic fishmeal, okay, because there are -- you're going to have to be feeding carnivores fish, and so --

MS. GOLDBURG: Right. But that's assuming that you need -- want to or need to open it up to all aquaculture.

MR. MATTHEWS: Well, that's assuming that it was all opened up.

MS. GOLDBURG: Right.

MR. MATTHEWS: Now, I guess, to use Keith's phrase, I should be a little more precise in the wording, that if there were standards in place, then the -- and it included wild-caught or even aquaculture-raised fish that was available for the production of fishmeal, then that fishmeal would have to be organic, okay.

The real problem is, right now, in the organic system, you wouldn't be able to turn a carnivore into an herbivore, so they're going to have to have a source of food for your aquatic animals that are carnivores, if -- if you went to --

MS. GOLDBURG: If you decided that you need
 organic carnivores.

MR. MATTHEWS: That's right, if you went to the stage of having carnivores covered by the standards. But right now there are no standards for any aquatic animals. I'm just saying that the position that we take now is subject to change should there be rulemaking done in the future that would affect this position, okay?

CHAIRMAN KING: Okay, I have Rose, Kevin, George.

MS. KOENIG: I've had -- this is back to Arthur's statement, and I've had time to kind of think about this and rethink about it, and then the other day I was looking through the preamble of the Rule on Page 8612, and it's Subpart (g), administrative, where it talks about -- and the interpretation or the -- you know, how the National List of Allowed and Prohibited Substances -- descriptions of regulations, okay?

You go into the second column, looks like the second paragraph, where it starts "In this Final Rule," talks about only -- the EPA lists four inerts in that section, but if you go down midway, and I'll read it, "Synthetic ingredients in any formulated products used as organic production inputs, including pesticides, fertilizer, animal drugs and feeds, must be included on
the National List. As sanctioned by OFPA, synthetic
substances can be used in organic production and handling
as long as they appear on the National List."

But again, synthetic ingredients is not the same
as active, it's all, and they talk about formulations of.

MR. NEAL: And I truly do understand the
confusion of that text, of that language, but when you go
back to the Act, this is the authority, this is what we
can and cannot look at. The window that's opened are for
active synthetic ingredients.

UNIDENTIFIED FEMALE VOICE: Where?
MR. NEAL: (c)(1)(b)(i).
MR. RIDDLE: And everything else is prohibited -

UNIDENTIFIED FEMALE VOICE: No. He's saying --
MR. RIDDLE: -- every other synthetic --
MR. MATTHEWS: No.
MR. RIDDLE: I know. You're turning it on his
head from what we've understood before: synthetics are
prohibited unless they're on the List, but what I'm
hearing you say is synthetics are allowed, but only this
category needs to be reviewed.

MR. NEAL: Watch [phonetic] the acknowledgement
of the Act, it says, "the substance" --
MS. OSTIGUY: Where are you reading?

MR. NEAL: This is (c)(1)(b)(i). "The substance is used in production" and does what? -- "and contains an active synthetic ingredient." It does not say "the substance is used in production and it contains itself," there's something else in with this active synthetic ingredient that's being considered, "it contains," "the substance contains an active synthetic ingredient."

MR. MATTHEWS: Mark, you've still got a full afternoon of material to go.

CHAIRMAN KING: Yeah, I know. I know. It just seems -- okay.

UNIDENTIFIED MALE VOICE: You've already wasted a half an hour I could have saved you.

CHAIRMAN KING: Okay. Friday you can do public comment. We need to come back, but thank you.

MR. SIEMON: Can I ask one more question that's a new subject on this one? Just so I understand, of course we all know there's limitations of fish, and I hope there's no other fishmeals out there, but there's no limit on the percent that can be fed here --

MR. MATTHEWS: That's the next slide.

CHAIRMAN KING: Next slide.

MR. SIEMON: I just (inaudible), Rick, trying to
help you out the best I can.

MR. MATTHEWS: Next slide.

(Laughter.)

MR. MATTHEWS: The regulation defines what a supplement is. I've included in brackets there as a supplement to help clarify what that statement is. Clearly it's really intended as something to supplement the feed, it's not meant to be a wholesale replacement of, say, a grain, it's not meant to be fed at an 80-percent level. 80 percent of a protein is no longer a supplement, it's feed. So it's -- it's what is there as a supplement, and you really need to be going back to AFCO and what they regulate for putting together a feed.

And you also have to remember too that fishmeal is going to have an impact on the quality of the meat or the ags or whatever, so your farmer is not going to be -- is not going to be feeding levels that are going to destroy his market.

MS. GOLDBURG: Can I ask you a question, Richard?

MR. MATTHEWS: Yes.

MS. GOLDBURG: Earlier you made a statement about the need for fishmeal if you're going to farm carnivores, particularly aquatic carnivores, but here
you're allowing fishmeal as a supplement, and I'm arguing that there should be a limit on how much of a -- what percentage of the feed it could be in order to be considered a supplement. Is there an implication there for farming of aquatic carnivores?

MR. MATTHEWS: There I don't see -- for example, feeding fishmeal to salmon, I don't see that as a supplement.

MS. GOLDBURG: Okay. If it's 45 percent of the feed.

MR. MATTHEWS: That is their main -- that's one of their main ingredients for their feed.

MS. GOLDBURG: Okay.

MR. MATTHEWS: Okay? You know, when it comes to feeding fish fish, that's -- that's what they eat, that's not a dietary supplement. But again, they're outside the current scope.

MS. GOLDBURG: Right, I understand that.

MR. MATTHEWS: Okay, let's go on to materials review. This one will probably be no less a debate.

There are currently the following stages to a materials review: a petition is received, the NOP reviews the petition, there's a scientific review and reporting on that, there's a requirement for a technical advisory panel
to be involved in the process, the NOSB committee will review and make a recommendation to the full board, and the full board will review and then make a recommendation to the Secretary, and then the NOSB -- I mean the NOP -- goes through the rulemaking process. So those are the things that are happening under a materials review.

Let's go to the next slide, please.

UNIDENTIFIED FEMALE VOICE: Wait a minute, wait a minute.

MR. MATTHEWS: Go back.

UNIDENTIFIED FEMALE VOICE: Go back. Are these going to be available --

CHAIRMAN KING: Could we just get copies of this, these slides printed out, posted, something?

MS. DIETZ: Are the slides going to be posted on the website?

CHAIRMAN KING: Knowing that we're sort of moving along --?

MR. MATTHEWS: Well, the -- yeah, we could probably make -- yeah, we could make the slides available. I'm not sure that out of context they'll always be clear.

MS. DIETZ: But at least so we can --

CHAIRMAN KING: Well, we can put a disclaimer on the top.
MR. MATTHEWS: But this just says the different things that a material goes through in order to be added to the National List.

CHAIRMAN KING: Yeah.

MR. MATTHEWS: Okay.

CHAIRMAN KING: The identified stages.

MR. MATTHEWS: Right.

CHAIRMAN KING: Okay.

MR. MATTHEWS: You had a question, Goldie?

MS. CAUGHLAN: (No audible response.)

MR. MATTHEWS: Okay. NOP is working diligently to redesign the materials review process. We recognize, just as the Board recognizes, that there are a lot of problems with the way the materials review process is working. All too often petitions have been deficient or the report has been deficient, there's been questions about whether or not there's enough in the report to satisfy the needs of the Board in making a determination as to whether something should be recommended or not.

So we're seeing all kinds of problems with this, we're seeing problems with things getting sent forward for review that probably should have never been sent forward. So we're -- we're really doing an evaluation of the entire review process and we're trying to work through
some changes.

We're taking a global approach to this, and the ultimate product is going to be a materials review manual that'll be published up on the website.

The first step in this was the checksheets that we created for the Board's use in the review of materials. We are currently working on NOP procedures, a standard operating procedure for how the NOP reviews a material from the time it's reviewed -- or from the time it's received as a petition until the time that it moves on to the scientists for analysis.

So we're really developing a standard operating procedure for us. We had hoped to have this for the Board before the meeting, but putting it in print has made it a whole lot bigger than we ever thought it was, and it hasn't been fine-tuned to our satisfaction yet, so we're not quite ready to share it with the Board.

We are also at the same time working on developing procedures for scientific review and reporting. We will be sharing this with the Board and seeking their input, because this is essentially the document that is going to be -- these procedures will help the reviewers create the document that you're going to be receiving and then using, in company with your checksheets, to create
your recommendation. So we see that as a critical part of this process. We're getting that started; we will share it with you.

Okay. Next one is that we're taking a look at the way the technical panel has been working, we think that there are rooms -- or that there is room for improvement on that as well, and we are proposing a new technical advisory panel approach which would increase the NOSB's involvement in the review process.

We're looking at this as probably being a five-member panel. The materials committee chair would definitely be a member of that, and then two of the following, which would be the livestock crop or handling, would also serve on that panel.

So you would have at all times three board members a part of the TAP review panel, and instead of the TAP review being done in conjunction with the report from the scientists, it would actually occur after the scientists have put together their report.

This panel would also include somebody from the Environmental Protection Agency and somebody from the Food & Drug Administration, the idea being that this new stage in the review process would enable representatives of the Board to review the report at an early stage, to give

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
feedback to the scientific organization, to say, "This just doesn't cut it and we need you to go back and work on this," or you might find that what they did was fine and the panel may vote to move it forward -- with a recommendation, maybe -- to the committee that the material appropriately belongs with. So then the next stage is to go to a committee of the Board.

Now, we're also looking for that committee --

CHAIRMAN KING: Wait, I think back up a second. Could we back up real quick, Barbara. Thank you.

MR. MATTHEWS: Okay, so you've got -- that's your committee, okay?

MS. DIETZ: So that the petition has been forwarded for a TAP review, the TAP review's in process, there's a time period --

MR. MATTHEWS: We would change the title of that from TAP review to -- it's been sent --

MS. DIETZ: -- scientific --

MR. MATTHEWS: -- forward for scientific analysis, so they would take and where the petition leaves off create the scientific background that is needed now for this new panel to then review it and then to make recommendation over to the Board.

MS. DIETZ: So we are in a sense --
MR. MATTHEWS: Or to send it back to the scientists to gather more information.

CHAIRMAN KING: Did you mean to say "to the committee"?

MR. MATTHEWS: To the committee, yes.

CHAIRMAN KING: Thank you.

UNIDENTIFIED FEMALE VOICE: Well, this panel will get it sooner, but it really might stretch out the review process longer --

MR. MATTHEWS: It might, or it might shorten it. The idea is to do away with the problem of deficient reports --

UNIDENTIFIED FEMALE VOICE: Deferred TAPS.

MR. MATTHEWS: -- and deferred TAPS, and what we're thinking is that if we change -- if we create essentially a new statement of work for the scientists and they follow that procedure and then it comes to this body of five and that body of five then analyzes that report for its sufficiency, then it can go on to the committee of the Board, whether it be the crops committee, the livestock committee, or the handling committee, and then that committee would do essentially what it already does. It may want to do something else, I don't know, but it would then go to that committee.
But if it wasn't ready to go to that committee, then this panel would tell these people "this isn't ready to come to the Board, and therefore this is what you need to do to make this report ready to come to the Board."

MR. RIDDLE: So, yeah, just to be clear, so this five-member panel would replace the three-member TAP reviewers right now --

MR. MATTHEWS: Probably so.

MR. RIDDLE: -- in the stages, is that --

MR. MATTHEWS: Probably so.

MR. RIDDLE: -- what you're thinking, you're proposing?

MR. MATTHEWS: Yeah, that's what we're thinking, that it would actually be the Board that would take over that function, they would do it after the scientific information was gathered. This technical advisory panel would then advise the scientists on whether or not they did an adequate job. If they didn't, it would go back to the scientists, they would fill in the gaps, then it would come back to this panel, and then the panel would then make its determination and send it on to the committee of the Board, for them to do their review, okay, and then that committee of the Board has already got a member from the technical advisory panel on it, that would also be
able to speak intelligently as to what transpired at the technical advisory panel.

CHAIRMAN KING: Well, and clearly there are a lot of things that can be worked on in terms of the format of the report as it comes to the panel --

MR. MATTHEWS: Oh, yeah.

CHAIRMAN KING: -- those are not things we're going to deal with at this moment --

MR. MATTHEWS: Right.

CHAIRMAN KING: -- but we understand that that's kind of work in progress. I have Rose and Andrea next.

MS. KOENIG: And this is from experience, it's just my gut reaction, because it's -- again: in my opinion, the problem has never been with the outside reviewers. You're saying doing away -- as I understand, and maybe I'm not correct. I'm understanding you're saying that you do away with those three external reviewers and you replace them with this five-member panel.

MR. MATTHEWS: That's what we're saying, yeah.

MS. KOENIG: And what I am --

MR. MATTHEWS: In other words, it would go through a true technical advisory panel.

MS. KOENIG: Well -- but what I am -- what I
would argue is that if you have three competent industry-focused and true experts looking at that scientific evaluation, they are much -- and I'm not trying to insult anyone on this Board, but they --

UNIDENTIFIED MALE VOICE: Just everyone.

(Laughter.)

MS. KOENIG: Yeah, just everyone, including myself.

(Laughter.)

MS. KOENIG: -- but I think that they theoretically have much more expertise than -- than any single board member. Because we -- we face this when we're looking at it, that we -- I really personally rely sometimes more heavily on those three outside reviewers than I do on the technical report, depending on the -- you know, the competency of the person who has filled out that review.

So I don't think -- and again, this is my personal opinion: this just makes our process more internal, there's no doubt in that, but I don't -- the problem is not: we need more involvement at that level. What we're doing is internalizing things and not -- we're bypassing getting even more information, which that three-panel discussion really allows.
I think the best part of the whole process now is that external evaluation by those three individuals, other than the board members. So I would argue that -- that this does not increase the breadth of the program.

CHAIRMAN KING: Okay, Andrea, and then Jim.

MS. CAROE: Well, just -- I've got two things now, because I'm going to talk a little bit about what Rose just said and --

I agree that there are technical expertise that we get from those outside reviewers, but I also think that there are times that we read what the technical reviewers have written and realize that they don't have a full grasp of organic, and so it flips both ways sometimes. So that was something we would replace. I don't know if -- you know, it's just something we weigh out.

But my question to you, Rick, is: The two positions that you have, the environmental -- the EPA person and the FDA person, do you see these as a couple of people that are identified for working on this or randomly people that would be interchanging? I'm just worried about the efficiency of -- you know, if we get a different EPA person every time, it might be difficult.

MR. MATTHEWS: Well, we haven't worked out all the details, obviously, because I'm trying to tell you, in
advance, of what we're thinking as possible ways to solve the problems that have cropped up over the last several years from doing materials review, and so the idea is that these would be experts in the areas of the materials that are under review. Okay?

So that when the three Board members are sitting there and they -- the scientists would also be there to answer the questions -- the people that put together the report would be there to answer the questions of the Board, but also you could have EPA and FDA people there to help answer questions of the three panel members from the Board, so that in essence you're getting --

MS. CAROE: I guess my question was more --

MR. MATTHEWS: -- you're getting the Board involved in the scientific information at an earlier stage and at a stage where they've got access to the people who have done the report, as well as people who regulate the products.

MS. CAROE: I guess my question was more in matter of reporting that information that the committee is going to see and the procedures that eventually we'll have, you know, that -- the check -- the check form that we have, the first time we used it, we weren't very efficient at it --
MR. MATTHEWS: Right.

MS. CAROE: -- and we got better at it --

MR. MATTHEWS: Right.

MS. CAROE: -- you know, and I don't know if
you're kind of thinking we're going to be going through
the learning curve constantly or if there's some way that
we can kind of alleviate that a little bit.

MR. MATTHEWS: We're two -- this is the danger
with putting out any proposal while it's -- while it's
still very -- very young, you know. I mean, the egg has
just been inseminated on this one.

MS. CAROE: Well, just take it, then, as
something to consider in going forward.

CHAIRMAN KING: Jim, then Dave.

MR. RIDDLE: Yeah. Well, I appreciate being
part of a discussion that's predecisional.

(Laughter.)

MR. RIDDLE: I mean, it's what we've been
wanting, so here we are.

(Laughter.)

CHAIRMAN KING: So be nice.

MR. RIDDLE: Yeah. For better or for worse.

(Laughter.)

MR. RIDDLE: I guess, you know, I would like to
just propose that this composition -- which I really like
this composition, having somebody from EPA and FDA -- that
that --

MR. MATTHEWS: It's good to hear you like that, Jim.

MR. RIDDLE: Yeah. -- be applied at the review
of the petition, because, you know, OFPA says that someone
shall petition the Board and the Board shall convene a
TAP. You know, so the Board has authority at that stage,
and if we have expertise from FDA and EPA helping screen
those petitions, they can give the expert advice on
legality, as they regulate a lot of these substances, and
then also the NOSB members on there can help direct the
TAP on -- specific to that material, help customize it:
"Okay, from our experience, organic experts, here are some
things to look at."

So, you know, it could really lead to a higher-
quality TAP, which has been a big problem, that scientific
review. So I would just like to suggest that we apply
this concept at that first step and maybe come back to the
people to rescreen the scientific work --

MR. MATTHEWS: So you would like this step to be
used in two different places.

MR. RIDDLE: Yeah. I'm just -- just thinking --
this is a lot to think about, but --

MR. MATTHEWS: Yeah.

CHAIRMAN KING: But just a quick proposal --

UNIDENTIFIED FEMALE VOICE: It gives continuity to the flow (inaudible).

CHAIRMAN KING: Yeah. Dave, and then Kim.

MR. CARTER: I just want to build on that, because I think -- you're right, Rick, you talk about the danger of announcing this, but this is what -- I think if we really think this through and what we're trying to accomplish, you know, this -- this has got a lot of merit to it. I don't want to see completely doing away with the external reviewers, I think they have some value too, so if we can -- if we can keep them as a part of the process but continue this, I think this makes this a really good process.

MR. MATTHEWS: Right. Well, and the reason why we're bringing it up now is because we know that the Board has been kind of antsy as to: what is it that the Department is doing with regard to materials review, and what we're trying to tell you is that we're not doing anything secret, what we're really doing is sitting back and saying, "Where are the problems, and what are the different things that we think we need to do in order to
address these problems?", and there is a role in here for
the Board in helping us to address the problems.

Now if we could -- if there's no other
questions --

CHAIRMAN KING: Kim had one quick question, and
then we'll move on.

MS. DIETZ: Jim, when you had talked about
having EPA and FDA involved at a step when we review the
petition: actually, that's the way it's currently --

UNIDENTIFIED FEMALE VOICE: It's supposed to be
going that way.

MS. DIETZ: -- supposed to be, is that --

UNIDENTIFIED MALE VOICE: Well --

MS. DIETZ: Let me finish. -- that before a
petition gets forwarded to the chair of the committee,
that it has already passed that screen; in other words,
whatever they're recommending has been already passed by
EPA or FDA or allowed for its petitioned use. So now
you're actually really saying three places in the petition
process, but that's just minutiae.

MR. MATTHEWS: Yeah. Well --

MS. DIETZ: And then my other comment is: This
is the first time that I've seen this, and earlier I had
mentioned about a potential conflict of a certifier
reviewing the materials, I see this kind of opening up a little bit for conflict of interest for Board members in that, you know, they have -- they'll be the first ones to see a petition. So I'm just -- I'm a little leery there, that if you have Board members reviewing materials and making recommendations versus outside reviewers, that it could be perceived as a conflict. So that's a first gut instinct that I think we need to just develop.

MR. MATTHEWS: Right. Well, conflict of interest is definitely something that we would have to take into consideration when --

MS. DIETZ: (Inaudible) perception --

MR. MATTHEWS: -- appointing people to that TAP review committee.

MS. ROBINSON: For example, it might be the case that it's not necessarily the chair of the committee that sits on that panel.

UNIDENTIFIED MALE VOICE: Right.

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

CHAIRMAN KING: Okay. So --

MR. MATTHEWS: No. But it's true, especially let's say that it was a material that -- let's say Ann's organization wanted to have a material reviewed and Ann was involved in it and she happened to be the chair of the
committee that would have responsibility for it, so
obviously procedures would have to be in place that Ann
would not be the one participating; even though she's the
chair of the committee, somebody else on the committee
would have to be involved in it.

So -- I mean -- but you're bringing up things
that we haven't reached yet.

CHAIRMAN KING: Yeah.

MR. MATTHEWS: I mean, this is just, really,
bare bones of an idea that we have and just an
acknowledgment of the fact that we're looking at every
single stage of the review process, to bring a much better
product to the Board so that they have the tools that they
need in order to make the recommendation that they're
charged with making, okay, and that's all we're trying to
do right now.

CHAIRMAN KING: And in general terms, I think
you're aware, Rick, that the comments we're making are
simply -- this is the first time we've seen the
document --

MR. MATTHEWS: Right. Right.

CHAIRMAN KING: -- in general terms, we like it;
however, what about this, let's think out loud, let's try
to improve the process.
MR. MATTHEWS: Yeah. But I guess I'm not -- I'm not trying to shut off the debate, I'm just saying that --

CHAIRMAN KING: No, I understand.

MR. MATTHEWS: -- this probably isn't the time --

CHAIRMAN KING: It's 4 o'clock.

MR. MATTHEWS: -- to be doing the debate.

CHAIRMAN KING: It's 4 o'clock, and you were supposed to be done before lunch, pal.

MR. MATTHEWS: Yeah.

(Laughter.)

MR. RIDDLE: Yeah. 15 minutes, I think, I remember.

UNIDENTIFIED FEMALE VOICE: You asked for the whole thing.

MR. MATTHEWS: I was prepared to give you 30 minutes. You asked for it. I guess NASOP's [phonetic] in trouble for theirs on Saturday, because they get the same presentation.

Okay, last slide, I believe. No, second-to-last slide. We're also going to be asking the Board, as a part of this global approach, to develop a standard operating procedure for what it is that the committee does when it does its review and recommendation.
Now, I know you've already got some stuff written up, but the idea is to put it into a standard operating procedure format, and we would be asking the full Board to do the same thing, take what it is you do, put it into a standard operating procedure.

Then those two pieces would then come in to us, okay, and it would become a part of this manual that we're planning to publish on the web.

We're also planning, under this process, to do a standard operating procedure within the NOP on how we go about the rulemaking process. Now, keep in mind that if the scientific -- if the analysis of the scientific work that creates the work product creates an impact on the petition, we would then also have to go back and amend the petition procedures themselves.

So in essence, what we have done so far is we have said: okay, these are the -- here -- these are the checksheets that the Board needs to use to document the decisions that it is making. We're looking to go back a step and say: this is what the scientific community needs to put together for the Board to complete those checksheets. Then we're going to go back to the petitioner and say: this is what you need to supply to the scientific community, for them to do the job that they
Need to do, so that the Board can do the job that it needs
to do, so that it can provide a recommendation to the
Secretary for publication in the Federal Register. Okay?

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, and I just -- I really
appreciate this and see it as collaborative process, and I
just want to come back to OFPA, where it says: The Board
shall establish procedures under which persons may
petition the Board for the purpose of evaluating
substances." So I --

MR. MATTHEWS: The petition procedures are out
there, and what we're going to do is we're going to be
working together --

MR. RIDDLE: Right.

MR. MATTHEWS: -- to figure out: is there a
need for the change in the petition procedures?

MR. RIDDLE: Agree [phonetic].

MR. MATTHEWS: Okay. And the end result on all
of these standard operating procedures and statements of
work for each of the different stages will come together
in the end as a manual for materials review, which would
be published on the web, which then says, to the entire
world: petitioner, this is what you have to do, this is
what your material is going to go through, this is what
you can expect.

So now the petitioner is no longer in the dark as to what really happens once they submit a petition, and right now, they're in the dark more than anybody else.

CHAIRMAN KING: Rose.

MS. KOENIG: I would -- I just want -- as the materials chair, I want to, you know, I guess put in the public record that I feel that as you're going through this process, that the materials committee should be fully engaged from this day on in this process as a cooperative approach to this. I mean, you know, we've been asking for this for a few months, and I -- you know, I hope this move is -- this directive is -- not directive, I better not use that word -- that this is, you know, going towards that, you know, and I'd love to put it on our work plan as -- as something that we can do, but we need to work together, because things can be done a lot more efficiently if we're working together.

CHAIRMAN KING: Yeah, and I think we -- we recognize we're going to do that.

MR. MATTHEWS: Well, but, you know, all we were saying is that, you know, just be calm, let us work through what it is that we think we're going to need to do and where we're going to need the assistance of the Board,
and, you know, really we were trying to identify things, and so now we're telling you exactly what we're thinking, and now you can tell us what you think.

CHAIRMAN KING: Well, okay.

MR. SIEMON: Good work.

CHAIRMAN KING: Yes. That's it.

MR. MATTHEWS: That's it. That is the longest 30 minutes of my life.

CHAIRMAN KING: We do need a break. It's 3 -- essentially 4 o'clock. Be back by 4:15, please.

(Off the record and reconvened.)

CHAIRMAN KING: I'm going to reconvene the meeting. We're going to start with Rose, who's going to do a presentation on the materials review process. This is a presentation on where we currently are.

MS. KOENIG: And I'm going to do it -- I was requested to do it really quickly, so I'm -- instead of bypassing it, I'm going to go through it quickly and just -- just highlight -- okay, so this is the materials process update.

UNIDENTIFIED FEMALE VOICE: Today.

MS. KOENIG: Today. Go ahead, Ann, next. And that's basically what I'm going to talk about next. Go ahead. Okay, so as many people said, that a lot -- and I
wanted to put it in perspective, because I know many of you have sat through these procedures, but a lot have not, and I think it's really important to set the foundation of why we're here and what we're doing and how these decisions are made.

So basically, again, the Organic Food Production Act provided the National List of Approved and Prohibited Substances, it established the guideline for the substances on the List, and it outlined the role of the NOSB in the procedure of publishing and amending the National List. Go ahead, next.

And then just for people -- the -- Section 205.600 of the Organic Rule describes the criteria that shall be used in the evaluation of substances or ingredients in the organic production and handling sections of the National List, and basically it's the -- we deal with the synthetic and non-synthetic substances that are either allowed or prohibited. Go ahead, next.

If you go back to OFPA, the 6517, that's come up a number of times, there's guidelines for prohibitions or exemptions, and basically that is what we're doing. The National List is an exemption. It's not a given. The National List may provide the use of substances in an organic farming or handling operation that are otherwise
prohibited under this title, okay, if the Secretary
determines basically that it's safe, with other agencies,
it's necessarily to the production or handling of the
agricultural product because of an unavailability of a
wholly-natural substitute product and is consistent with
organic farming and handling. Next.

(B), again, "The substance" -- this is what
Arthur was saying -- "contains an active synthetic
ingredient in the following categories," and it lists
them. These categories are found in the National List
section of the Rule.

Again, I look at these as the categories upon
which we base our things. The NOP has taken a strict
definition of "active" in this case. Next.

It is used in the production and contains
synthetic inert ingredients that are not classified by the
administrator of the EPA as inerts of toxilogical concern
or is used in the handling and is non-synthetic but is not
organically produced and a specific exemption is developed
using procedures described in Subsection (d). Next.

And then there's things -- again, the National
List can prohibit natural substances, and we discussed
that earlier. Next.

And then the Secretary basically has to consult,
again, in that section, to determine if it's harmful to the health of the environment, is inconsistent with organic farming or handling and the purposes of this title. And then the specific prohibition is developed using the procedures again defined in Subsection (b). Next.

Subsection (d) is now what they refer to. These are the procedures for establishing the List. Next.

There can be no additions except for those that are proposed by the NOSB or amendments. Prohibited substances in no instances can be included, which are prohibited by the FDA or other federal regulatory bodies. Next.

And then notice and comment, this -- again, as the Department says, there is a procedure which they need to follow in terms of publishing the proposed National List and getting public comment and then doing the final. Next, Ann.

And then this just talks about how a publication has to be proceeded through by the NOP. Next.

And then this section outlines what we'll be discussing in a moment about the Sunset Provision, it tells what our authority is, and we'll be talking about a proposal that the materials committee has come up with to
satisfy the Sunset Provision. Next.

And now these are the requirements, and the
requirements are kind of embodied in that petition process
that we were talking about earlier in that -- what the NOP
is looking at.

Basically, if you look at the petition process,
we already are supposed to be reviewing the available
information from -- I've got some tables -- the EPA, the --
you know, the departments of health and such, and
looking for, you know, other agencies for these types of
information. Next.

We have to work with manufacturers to find out
how they're made and if they contain inert materials that
are synthetically produced. Next.

And then it has to be submitted to the
Secretary, along with the proposed National List, or any
amendments such, after we convene a technical advisory
panel as what to be considered for the National List.
Next.

And then evaluation, and the evaluation
procedure is basically the procedure that we're going to
be following through the meeting.

When we look at these materials, we're not
pulling things out of the air. Within OFPA, there are
specific questions that have to be satisfied in order for us to place this on the National List, and one -- you can go, next -- basically -- go ahead, skip.

But these are -- again, if you go in reference to this, for the sake of time, these are the things that we will be discussing. Compatibility with the system of sustainable ag, this is a documentation that we're going to be discussing again. Next.

And then in addition to the criteria set forth in the Act, there's sections of the Rule that look at processing aids or adjuvants and processing criteria that wasn't necessarily spelled out in the Act, and these are the criteria that we look at in terms of processed products.

Go ahead, next. So you can find that again in Section 205. I'm not going to go through it, but I just want to highlight again: there are parts of the Rule that you need to look at, and these are what we're going to be looking at in terms of some of the petitions, like the tetra sodium pyrophosphate and such.

Next. Next. Next. Next. Sorry, guys. So crops, just want to call the attention, the categories of the Rule that we'll be adding, may, or may amend during this meeting would be either 205.601, which are synthetic

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
substances allowed for the use in organic production, and
there's a number of items that we're going to consider for
this category. None of the materials during this meeting
will be considered for the category 205.602. Next.

Similar, livestock has a category 205.603, one
of the -- the two that we're looking at in livestock are
petitioned for that section of the Rule. Next.

Same with the processing, the 205.605 and .606.

Next.

So the National List update, this is -- Rick
would probably be better at explaining this, but when I
spoke with him before I made the slide, basically, the
Federal Register of May 22nd, 2003, contained the handling
materials; the Federal Register as of April 16th, 2003,
included the crops materials and technical corrections;
and the Final Rule, everyone knows, of 2000 contained the
recommendations. As of when I made the slides in
February, that was the last update, the livestock
materials had not gone to the docket. Next.

So the stuff that -- oh, actually, excuse me.
Materials finalized May 22nd, 2003. As of March 10th,
2003, there were two draft dockets containing the
materials of everything the NOSB approved prior to April
of 2004 meeting of the NOP. Next.
Then so as far as the petition status -- okay, next. These are the materials that we're going to be looking for in the handling committee during this meeting. Next.

Two from the livestock, the moxidectin and the proteinated tea chelates. Next. And then these four substances for the crops committee will be reviewed during this meeting. Next.

These four have been sent for technical review by the NOP, and I just wanted to make people aware that those four did not follow the materials procedure that is outlined following this (indiscernible). They have been sent by the NOP directly to the TAP contractor. Next.

These two substances are under NOP review, they've come, and there is one additional petition, I don't think Arthur's here, but he had told me there was only one other one, and he can update us on that, because he left a message on my phone machine last week. Next.

And then petitions and other status, the potassium silicate was a petition that we looked at, the crops committee wanted to consider it as a pest control, fungal control, for crops, but it's not currently registered under EPA for that, so we're waiting on the manufacturer, as far as the fate of that.
And then the cryolite has been determined from the committee not to be forwarded for a TAP because there was no new additional information, the product had -- substance had been reviewed, it had been repetitioned, but there was no new information to indicate that it needed further technical review. Next.

This is the materials process. I know Rick talked about this new procedure, but this is the materials process that currently the Board has been following, although there has been some deviations from that.

Basically, the minimum time frame for the National Material Review List is 145 days. In reality, if you look at -- you know, there's some that have been -- like soy protein isolate, as Kim said, that's been on the record since 2001. So there is some problems in terms of the timing on some of the materials for -- for various reasons. Next.

Day one through fourteen. Really the NOP staff has evolved at this point, they're supposed to take the petition for completeness, they are supposed to liaison at this point with the FDA or the EPA or any other federal agency that might be involved in a specific material, and make sure that that material is consistent with that other agency, federal agency. So that is the procedure. Next.
After that -- this is -- the materials chairperson should be sending a copy of that -- the materials chairperson should receive a copy of that petition, that petition should then go to the vice chair of the materials committee and the vice chair of the designated NOSB committee, such as the crops, livestock, or handling.

And then really the vice chair of those committees convenes that committee, and they vote, basically, if that petition should go on for a technical review and -- at that point or if they feel right at that point that they can make a determination that it does not need to go, and make a recommendation at that point.

Again, this step has not been followed with some of the current materials, so I just wanted to make, I guess, the public aware that the NOP has -- on those four materials that I indicated previously, has gone ahead and set those for a TAP, bypassing that process. Next.

60 days prior to the NOSB meeting we should receive copies of the review from the NOP, and then our committees come together and we start reviewing that report and -- to get to a decision. Next.

30 days, by that time we've made a decision, we've now filled out these evaluation forms, and you
should be able to access that through the website. Next.

   And then, again, if you need to petition for
documents, you can go to the NOP website. Next.

   The work that we have pending as far as our
committee is: we've submitted -- which I'll review next --
the draft for the Sunset Provision, and within our
Sunset Provision we have guidance documents to come up
with how we're going to prioritize substances for Sunset
Review, and also that we need to produce some guidance
documents for defining what constitutes a review process
for the Sunset Provision.

   So, basically, those two -- somebody had asked:
   well, why don't you have those guidance documents? Well,
partly because we need to buy into our process before we
go through the painful agony of kind of developing these
guidance documents, so the first step is really to buy
into our concept of the process, and at that point, if
there is agreements, the committee would then go forth and
do that work. And then as you can see, through the
conversation we had earlier, we'll probably be more
engaged in redefining the materials process. Next.

   Okay. Hopefully that was -- I'm sorry it was
rush, but -- I did intend to do the full Kim Burton-style
presentation, but I didn't get the opportunity at this
meeting.

CHAIRMAN KING: Well, and just a quick point. I want to thank Rose for all of her hard work, and Rose, I apologize for the fact that you did have to rush, because I know you put a lot of time in this.

MS. KOENIG: It's okay.

CHAIRMAN KING: It's important work, and it's ongoing work.

MS. KOENIG: Right.

CHAIRMAN KING: So thank you for your commitment to that.

MS. KOENIG: So did you want me to go through the Sunset Proposal?

CHAIRMAN KING: Yeah, I think we're now on to Sunset Provision.

MS. KOENIG: Okay. So as set forth, as I explained, in OPFA Section -- and I ask the Board I guess to refer to the section, your tab will say "Sunset Provision Report." For those who -- it was on the web almost a month before this meeting, so hopefully people have had the opportunity to look at it.

I will review it in as much detail as time permits. But basically, in our background information, we just said that this is the reason why we're going through
this: because OFPA has told us that we need to come up
with a policy for the provision.

And first the committee said to date -- this is
the work -- you know, this is what we have in front of us.

Basically, if you look at all the sections within the
National List, going from 205.601 to 205.606, there -- my
count was approximately 154 substances currently on the
National List.

This number is not the same that NOP comes up
with, because I went through, and if one material was in
multiple categories, I counted it as one rather than
three. Assuming that if a review was to be done, say, on
chlorine materials that are listed, that that review would
cover all uses. So anyway, that's where my 154 come from.

And then basically we have, according to the
OFPA, 5 years of -- when the National List has become
fully implemented, to do some kind of review of these
materials.

So what our committee came up with, and this was
proposed as an internal policy and procedure for the
review of substances in accordance with 7 USC 6517(e),
that basically the National Organic Standards Board and
the NOP shall compile and manage a materials database for
exemptions and prohibitions, including an official Sunset
date for each substance on the National List.

According to the NOP, they are in the process of developing and have already a working database. We have kind of our own working database. So this is something that we feel could be easily achieved.

All materials appearing on the National List as published in the Federal Register Final Rule dated October 21st, 2002, must be reviewed by October 21st, 2007. There are materials, as my slides show, that were amended after that date in other dockets, and those would have to be reviewed 5 years from their final Federal Register notice.

So based on the number of materials in any given 5-year period, the NOSB would select approximately one-fifth of the National List for review, you know, each meeting, under -- to comply with that section of Sunset Provision.

Upon the National Organic Standards' approval of the Sunset Provision -- and we're not going to be able to vote on approval this meeting because this document was not into the NOP 30 days prior to the meeting, so this is just for discussion -- the NOP will publish the entire list of materials, 605.601 to .606 inclusive, which shall be reviewed by October 21st, 2007, in the Federal Register and request public comments on the prioritization of

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
materials for review.

So basically the committee decided that in terms of public transparency, that, you know, upon approval we would say okay, all 156 of these are going to be reviewed in the next 5 years, you, public, give us some input in terms of how you think priorities should occur. Okay.

Then the -- after that public comment period would end, then the livestock, crop, and handling committees would choose approximately one-fifth of the substances from each applicable section of the National List each year for review. Committees will consider public comments regarding prioritization of materials for review.

In addition, the materials committee shall provide guidance documents to the committees on how to prioritize materials for review. The materials representative for each committee will be responsible for providing the list of substances that are proposed for review during the calendar year to the materials chairs persons, who will maintain the database. Each committee will work with their representative to the materials committee to determine which of the substances will require supplemental technical information, as set forth in 7 USC 6518(k)(3).
Substances that have adequate technical information provided by prior reviews, petitions, or other documentation may be reviewed based on that information. So this is -- again, the committees would determine if on-hand we have enough technical information to do our review.

The materials committee will provide guidance documents on what is adequate technical information, so upon, again, agreement that this is the procedure, we as the materials committee would come up with a guidance document, a working document, basically, for the committee, to give guidance as to, you know, "Do you have a TAP that was adequate?", for example.

Requests for supplemental technical review will be provided in writing by the committee's representative to the materials committee -- to the materials chairperson. Then the materials chairperson is responsible for communicating the status and supplemental review needs, if applicable, of materials to the NOP representative to the materials committee.

Now, that's a little wordy, but basically, this allows -- if the committee determines that there's not enough technical information, it allows the NOSB to again go to an outside review process to gain more technical
information on some substances. And as Zea commented earlier, there were many substances earlier on in the process that may have only had one sheet of information, in terms of their technical review, whereas substances today that are being reviewed, we're getting a lot more information and they're following the OFPA criteria, we have good form.

So certainly the workload is going to be heavier on materials that just don't have adequate information, and it was the materials committee's opinion that we wanted to reserve the right, based on review, to ought to have a TAP performed on materials that we felt were insufficient, in terms of providing scientific evaluation of materials.

So the NOP is responsible for requesting technical reviews and communicating the needs of the NOSB to their contractor, and, when necessary, the materials chairperson may interact directly with the contractor regarding the status of a substance review. However -- I should say however, but the NOP representative is responsible for making contact arrangements and communicating in the communication.

In other words, in this provision we wanted the materials chairperson to have the ability to talk to the
TAP contractor but we also respect the right of the NOP and actually require them to be engaged in the process and participate in those phone calls so that, you know, there's consistency with what the NOSB is doing and what the NOP requires in terms of their contract with the contractor.

Okay, 60 days prior to the NOSB meeting the list of substances that will be reviewed for the Sunset Provision will be published in the Federal Register for public comment. Committee recommendations for the substances to be reviewed for the Sunset Provision will be posted on the NOP website 30 days prior to the NOSB meeting, and substances that have been -- have specific expiration dates will not be included in the selection process.

So in other words, there are materials, I guess such as methionine, on the List that have a Sunset, within the National List, that stops their use, and those would not be subject to Sunset Provision Review. They're basically off the List.

Recommendation --

MS. CAUGHLAN: Rose, did you count how many of those, actually?

MS. KOENIG: I didn't. There are not many, but
I haven't sat down and counted them, but we just wanted to acknowledge --

MS. CAUGHLAN: Was the Sunsetting commonly done prior to this last few years?

CHAIRMAN KING: Accelerated you mean?

MS. KOENIG: There's just a few, I think --

CHAIRMAN KING: I think there are five or so.

MS. KOENIG: Yeah. Like spirulina --

MS. CAUGHLAN: Right.

MS. KOENIG: -- there was a provision for the use of chilean nitrate, I think --

MS. CAUGHLAN: Boiler chemicals.

MS. KOENIG: So there's a few -- boiler chemicals. So there's a few, not many. But I guess what we wanted to acknowledge, it was that the intent of the Board was to Sunset and end those but -- the meaning of their provision on the List.

Okay, so the third recommendation was on public communication. The NOSB recommends that the NOP post a Federal Register notice on an annual basis, beginning in 2005, amending those materials that have passed through the Sunset process. This is intended to result in requiring future boards to have to review fewer substances in a given year and to facilitate the work of future
boards.

In other words, we wanted to acknowledge that this workload for the next 5 years, it's going to be tremendous, because everything -- all 156 or so materials are on -- became official, I guess, October 21st, 2002, but what we're saying in this recommendation is that as we go through the first one-fifth of the List, once we proceed, we want the NOP to engage in rulemaking on those so that the workload then gets spread out over time and future boards would then not have to deal with such a large amount of materials at one time. So it's an effort, again, to just look towards the future and look at workloads and make things a little bit more doable. And it can be achieved through the rulemaking process. We just have more dockets over time.

Committee recommendations. So basically we recommend the adoption of procedures set forth in this document to meet the requires of the 7 USC 6517(e) of the Organic Foods Production Act, which requires us, again, to review each substance on the National List within three years of its publication, and then materials committee shall write guidance documents to provide a framework for committees on how to effectively and efficiently manage the process. The procedures outlined above may be
modified by future boards to more efficiently manage the
process, just acknowledging that you can write a lot of
things down and have a great plan, but as people go
through the process, there may have to be changes in the
provision to really -- to meet obstacles that may come
forth, that we just can't perceive at this point in time.

That's it.

CHAIRMAN KING: Thank you very much, Rose. I'll
remind everyone tomorrow we'll actually be voting on
recommendations in the afternoon. Does anyone have
questions or comments?

MS. DIETZ: This one we can't vote on because it
wasn't --

MR. RIDDLE: We're not voting on this one.

MS. KOENIG: We can't -- we're not -- this is --

MR. RIDDLE: Yeah, I would like to address that,
because, you know, we set up the 60-day window as a goal,
and this, what, came in about 57 days out. So it
certainly has been posted for a good long time. We also
have a 30-day window for the materials committee
recommendations, and the ones from the crops committee did
not meet that. Those are goals. Those are targets. But
the intent is to have it posted for public comment and for
the Board to be able to have plenty of time to consider
So I think this is a very important and timely topic and we need to have a sense of the Board, so I would like to have us vote on accepting -- not at this moment, right now, but tomorrow, vote on accepting the committee's report so that we officially go on record as accepting the committee's report.

MS. KOENIG: Starting with those deadlines of time, Richard Matthews, on the phone, you know, as I spoke with him, indicated that he didn't have a problem with us kind of voting on it as a working document and then officially voting on it during the next meeting, so there is that provision and we should consider that.

However, on -- I was out of town, so it was sometime last week, when I got home I had received an e-mail from Arthur Neal, indicating their position on the Sunset Provision, which is -- it's pretty different from our position. So we need to come to terms with where we're at on this policy, we need to communicate kind of that -- where that -- and my question to Arthur -- I'm not sure if he's here, oh, there he is -- was I -- and I didn't get a chance to correspond with you because I was out of town, and then -- I still haven't, again, you know, digested all of what you had corresponded to me, but my
question, I guess, to you was: I assume that your correspondence to me was your recommendation on a policy, kind of your alternative. I just don't know where we are. I understand from OFPA that it is pretty clear that we establish our procedures, so I'm not sure how you wanted us to process the information that was in your correspondence to me.

MR. NEAL: The e-mail that we sent to you all was a very well-vetted document with senior management at USDA. We took you guys' recommendation that you sent and we built upon it, to take into consideration the federal process that has to take place to reestablish these materials that have exemptions under the National Organic Program. We did reject your recommendation, we actually accepted the majority of it, but we had to tailor it to fit the federal process, because, as noted, it takes about, what, three years to finish it?

CHAIRMAN KING: A little over, yeah.

MR. NEAL: Yeah, over three years to finish the process. Because there's going to be a Federal Register notice that states what's about to take place, then there's going to be public comment, then there's going to be the development of a proposed rule, then there's going to be more public comment, that helps the NOSB to
prioritize the materials that need to be reviewed, that
the public is saying: okay, there's no longer a need for
this exemption, for the use of this particular synthetic
substance, under the National Organic Program, and it
gives the NOSB time to also make the recommendations to
the Department in regards to which materials should be
considered for inclusion on the National Organic -- I mean
the National List.

But it also takes into consideration, you know,
legal review by the Office of General Counsel, Office of
Management & Budget, the departmental and administrative
review, it -- there's a lot of time that is integrated
into the particular proposal that we sent to you.

MS. DIETZ: I think the question was what do we
do with our document, because we had prepared a document,
just as a working draft for the Sunset --

MR. NEAL: Uh-huh.

MS. DIETZ: -- and I didn't think we could vote
on it, with the timeline, but -- I mean, we could take it
as a committee recommendation and give it formally to the
NOP. And then this week we received your Sunset Review.

So I think from a materials standpoint we're not
really prepared to move forward on the recommendation that
you brought to us.
MR. NEAL: Well --

MS. DIETZ: We could acknowledge both of them, Rosie, I think we formally acknowledge --

MS. KOENIG: Yeah. No, I --

MS. DIETZ: -- them and take it back to the group, but to vote on our docket, I don't feel comfortable doing that.

MS. KOENIG: No, I'm not recommending kind of a vote -- I feel that --

MS. DIETZ: We need to look at them, we haven't had time --

MS. KOENIG: Yeah, we need to really sit down and meet as a committee, and maybe we'll have an opportunity at that time --

MR. NEAL: Well, the issue with that document is that that's the Department's position on Sunset --

UNIDENTIFIED FEMALE VOICE: Sure, we understand that, that's understood.

MS. DIETZ: But the question is -- and I guess maybe Barbara or you -- how do you define your position versus what the policy -- I mean, your position I do think incorporated a lot of our -- you know, the spirit of, I guess, our proposal. There were some, I think, substantial differences in -- and again, I mean, I haven't
thoroughly processed what you had written, but what I
gleaned from that was that things would automatically be
just allowed unless there was substantial documentation
from the public or, you know, some entity came forth with
new information regarding the OFPA criteria.

So -- and what I didn't understand in your
document -- I mean, our -- our document allows for public
comment but it gives the Board the power to convene TAPs
based on the fact that there's some -- let me go back.

Your document assumes that all TAPs were
adequate, it pretty strongly stated that, and as I state
my position again, and this is my opinion, I'm not
speaking for the Board, my position, and what we heard
from some of the public today, was that in fact many of
the substances that came on very early did not have
adequate technical information, and that is the largest
concern, I think, certainly of myself personally and of
the materials committee, is that we feel there are many
substances that were added on early, some of them that
probably will remain on the List, but we want to, you
know, for the future of the industry, the future of the
process, be able to have adequate technical information
for everything that's on that list so that we can kind of
defend --
MS. DIETZ: I think they address that in the document, because there is a section that says -- and again, I didn't think we would be reviewing this today --

UNIDENTIFIED FEMALE VOICE: Right.

MS. DIETZ: -- but it does say, "Based on public comments received, the NOSB may decide that certain substances warrant a more in-depth review, requiring additional information or research that considers new scientific data and technological and market advances," so I think they've left that open, and I don't know if we want to waste all our discussion time on a document that we've had two days to review, so --

CHAIRMAN KING: In fact, I think we should acknowledge it's a work in progress, it's not perfect, that there will be ongoing dialogue with the Department --

MS. DIETZ: But there's urgency.

CHAIRMAN KING: There is urgency, and this does need to happen. And so I guess what we're -- the last thing here is just to see -- that we can work with you on this document, knowing that there is a sense of urgency to get this process started, and move forward with our agenda today and (inaudible).

MR. NEAL: I don't know about the document portion, because the process has to begin.
MS. DIETZ: It does have to begin.

MR. NEAL: It has to begin.

CHAIRMAN KING: Uh-huh.

MR. NEAL: I don't foresee any changes to that document. I don't. I don't foresee any changes to that document, because it acknowledges the fact that the Board may want additional information on materials. I don't know what else there would be --

MS. KOENIG: Well, what I'll suggest, I will convene a meeting of the materials committee, we will discuss the document, and hopefully before the end of the meeting we'll provide at least a position on it, and maybe we can resolve -- we'll make a recommendation on how we can proceed, after we discuss it, by the materials committee. So let's just leave it at that, because, again, we can work with you guys and try to work this out.

CHAIRMAN KING: Okay.

MR. NEAL: One of the things I want to leave you with is that the process should be driven by the comments, because you want to take into consideration that that particular process helps the process to be unarbitrary and uncapricious, non-capricious, and it's fully transparent to the entire public, and it has to fit within a federal process.
MR. RIDDLE: Yeah. And as I read both of these drafts, that's something I see in common.

MR. NEAL: Uh-huh.

CHAIRMAN KING: All right. Next, Andrea, accreditation.

MS. CAROE: Okay. Jim, do you have the copies?

MR. RIDDLE: Yes.

MS. CAROE: In the meeting books is version 7, or draft 7, of the accreditation certification agent compliance procedure for a minor non-compliance. We actually have version 8, or draft 8, and there are minor changes, they've been left in track mode so you can see the changes. They are based on comments, and the back section of this document does discuss each of the comments that we received.

We received comments from one commenter only, but I did address every portion of those comments, so you can see -- and this was sent to the committee, and Jim made some additional changes to it, and there was none further.

But this has been voted on by the committee. It's been sitting around for a long time. I hope to vote on this tomorrow. I think we've all seen this document quite a bit. I mean, it actually was authored before I
was even on the Board, let alone the committee. So, you know, I'm going to defer to Jim a lot on some of the history questions here because I just -- you know. I commented on this outside the Board, so that's, you know, where I started with it.

I don't know that we need to waste a lot of time on this, based on our schedule, other than, you know, take a look at it and -- unless any of these -- there's very few changes, there's some definitions and title changes, and we did hear one commenter this morning ask for the word "major" to be used, and I talked to Jim a little bit about this, I have not had a chance to talk to Michael and Rebecca about this, but there is an opportunity, I think, for a hybrid, where we can put "major" in parens so that we keep the integrity of the language that's used in the Rule but perhaps more clarifying to the users of this document.

CHAIRMAN KING: Okay, Jim.

MR. RIDDLE: Yeah. And in the draft that I just passed around, where you'll really see the most changes is on Page 7, which is the addendum section, and that's where what Andrea was saying about the definitions and the use of the word "major" non-compliance in parentheses there, to clarify the difference between minor non-compliances
and major non-compliances. And then there are also some changes to the headings of the tables that have been recommended by the commenter. But that's basically the substantive changes.

CHAIRMAN KING: Questions, comments?

(No response.)

CHAIRMAN KING: Thank you. Crops committee, Nancy.

MS. OSTIGUY: We don't have anything at this point. The only thing the crops committee will be bringing up actually comes up later, on the compost tea. That's on Friday, I guess.

CHAIRMAN KING: All right. Thank you. Kevin, handling committee.

MR. O'RELL: Handling committee, we have an update on materials used as food contact substances. This was submitted on April 15th, so, again, it wasn't published for 30 days. I think it's our intent to acknowledge food contact substances and give a quick update and then move on in our work plan, essentially, without going in -- I know we're pressed for time, without going into a lot of details on the background information on food contact substances, other than to state that the NOP did acknowledge that food contact substances were
outside of the scope of the NOP, or the NOSB, for material review.

The NOSB has recommended the materials from past meetings to be added to the National List, and there were six materials: activated carbon and periacetic acid and four boiler water additives: ammonium hydroxide, cyclohexlamine, diethylaminoethanol, and octadecylamine. These materials may be considered as food contact substances.

It's the handling committee's recommendation that since these materials were previously petitioned and approved, that the NOSB would place them on the National List. We understand there's still a lot of confusion in the industry regarding food contact substances, and as part of our action of the handling committee, we will be prioritizing our work plan to clarify the qualification of materials for the food contact substance list. This is the quick version.

CHAIRMAN KING: Yes, I understand, and thank all of your patience. I know it's difficult to do some of these justice in the limited amount of time. Did you have a comment?

MR. RIDDLE: A question. I mean, once again, what are we going to do with this?
MS. DIETZ: I think the -- the intent of it was that there's -- the confusion out there is twofold: one, there's confusions on the materials that we did make a recommendation for, and those were the only materials that never appeared on a docket.

So, as a handler rep, I kept receiving calls from people, saying, "Well, I know you have periacetic acid, but my certifier's saying I can't use it," and I'm saying, "Well, it's a food contact substance," and people don't know how to read that list. So until we understand how to read the List, and the public understands, this recommendation was at least put forth so we acknowledge those materials were recommended at one point and that they be placed back on the -- or that they be placed on the National List.

So, again, it's mainly just an acknowledgment, and then the committee is going to go forward and try to hash out exactly how to interpret food contact substance list for handlers, because there's great confusion about that. Does that satisfy you?

MR. RIDDLE: Well, kind of, I mean it gives me more basis for the rationale, but it still doesn't tell me what we're going to do, if we're going to vote to accept this as a committee report or, you know --
MS. DIETZ: It was not sent to the committee in time for that.

MR. RIDDLE: To the NOP?

MS. DIETZ: To the NOP.

MR. O'RELL: To the NOP. I mean, that's -- otherwise, it was our intent to vote on it as a committee recommendation, so then the Board would vote for the --

MR. RIDDLE: You know, I really appreciate the confusion that this attempts to clarify as far as the status of those six substances, because that whole food contact substance list, it's like a square peg in a round hole, it really doesn't fit our needs, and we've reviewed these, on the food contact substance list they have different names or they're combined with other ingredients, they're more a formulated product for a specific use, whereas here, this is generic substance that fits the rest of our format for the National List.

So I support moving that part of it forward.

MR. O'RELL: If it's possible for us to do a vote on that, maybe we can discuss that with the NOP. We certainly would be in favor, on the handling committee, to put this up for a vote with the NOSB full committee.

MR. RIDDLE: It's not a change, exactly, we're not --
MR. O'RELL: No, it's not a change, it's a clarification --

MS. DIETZ: It's an acknowledgement.

MR. O'RELL: -- and continuing to say that our recommendation for these materials, which we all voted on and approved at previous meetings, that we still have that position: that these should be placed on the National List.

CHAIRMAN KING: And it's connecting it to the food contact substance aspect of it.

MR. O'RELL: And it's recognizing the fact that these could also be considered as food contact substances, but there needs to be a lot of clarification on food contact substances as far as the pre-market notification with the FDA on food contact substances, the definition of it.

CHAIRMAN KING: I think it would be difficult to argue with clarity at this point, Kevin, so --

(Laughter.)

CHAIRMAN KING: Questions or concerns?

(No response.)

CHAIRMAN KING: Okay. Livestock.

MR. SIEMON: We have no non-materials standards, so really -- so livestock's so clear we didn't need to
clarify anything.

(Laughter.)

CHAIRMAN KING: Policy development committee, Mr. Carter.

MR. CARTER: Okay. We have two items. Number one is our Board policy manual, which is a living document, that gets addressed as new policies come down the pike. We have two things that have come forward for that in our changes being incorporated, proposed incorporated, in our Board policy manual.

One of them has specifically to do with confidentiality procedures, and particularly with non-public information, confidential business information, and how the Board handles that.

The second is the incorporation or the substitution now of the new materials review forms based upon the forms that NOP developed, that we utilized at our last meeting, so we'll be bringing those forward for your consideration.

Then you're getting circulated around the draft of the statement on compatibility with organic production and handling. The process on that is that NOP had requested a recommendation on the following question, which is:

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
What are the factors (reasons, issues, parameters, strictures, limitations) and constraints that the National Organic Standards Board should use to determine a substance's compatibility with a system of sustainable agriculture and its consistency with organic farming and handling?

As of the last meeting, we had developed 13 criteria, which is listed in the book. That was posted for public comment. There were six public comments that were received. All of those public comments suggested that we drop the 13th item, which was Item M, which is: does the substance facilitate the development of new organic products? There was a lot of discussion saying that that really was not a good criteria, you could use that as justification to approve a lot of items just because they would spur the development of other organic things. So that was dropped, and that is the only change that is in, then, the draft that was just distributed around. Seeing as how there were 13 and one was dropped, we now have a 12-step program for organic compatibility, I guess.

UNIDENTIFIED FEMALE VOICE: Is that in our book or did you pass it around?

MR. CARTER: I circulated -- it must have gone
this way and not -- I'm sorry, I thought you split them in half.

MR. RIDDLE: No, I gave it all to you.

MR. CARTER: All to me, okay.

MR. RIDDLE: Yeah. I didn't want (inaudible).

(Pause.)

MR. RIDDLE: I just want to add that it also, in the draft that is getting passed around now, explains there on Page 2 and 3 how the comments were dealt with, so it summarizes what comments were received and then how they were addressed. It's less than 22 pages in length.

(Laughter.)

CHAIRMAN KING: And we thank you for that.

Okay, additional comments, questions?

(No response.)

CHAIRMAN KING: Okay, great. Now we're on to presentation -- we're on to the 2 o'clock slot, "Presentation of Materials Recommendations," crops committee, and --

MS. DIETZ: Since it's after 5, can you inform the public of what you're going to do, because we're past the agenda time. Are we going to keep going?

CHAIRMAN KING: I think we should present the agenda items, and certainly if there are suggestions from
the Board I'm willing to entertain those, but I see no reason not to present the materials recommendations. We may not have as extensive a discussion as we would have had we started at 2 o'clock. So we'll go through that.

Tomorrow we do have a time slot allotted in the breakout session for additional work, if that comes up, for any recommendations in the morning, and then of course we'll be voting on recommendations in the afternoon.

So at this time, I mean, if you have a specific question, a concern, a point about the recommendation at hand, then certainly make it, recognizing that we're asking everyone here who may have family, friends, plans, things of that nature, to stay over. So let's do it justice but do it effectively and efficiently.

UNIDENTIFIED FEMALE VOICE: A life?

MR. RIDDLE: Yeah, before we go to those materials recommendations, I would just like to hand out the current draft on the 606 Task Force, the commercial availability, and I'll be making that presentation tomorrow morning.

CHAIRMAN KING: Okay.

MR. RIDDLE: But that way people will have it in
hand, and it's highlighted with nice hot pink, that shows the changes.

CHAIRMAN KING: Okay.

MR. RIDDLE: Okay.

CHAIRMAN KING: I think you need to talk about the recommendation and if there are questions or concerns and --

UNIDENTIFIED MALE VOICE: Do you want any quick background information?

CHAIRMAN KING: I think that in the past -- and I'm just -- in the past -- and please bear with us, this is the first time we've used the checksheets, so Nancy's question is: how are we going to do a quick overview.

In the past we had an introduction, a background, what the issue was, what the committee recommendation was, and we would present it in that format, and I see no reason why we can't have a similar format based on the information in front of you, with some chair discretion, Nancy, so --

MS. OSTIGUY: There's going to need to be (chuckles).

MS. DIETZ: Let me, for a minute -- the checklist forms, if you have not seen them, I think they vastly have improved our process, and I think every one of
us have agreed on that. The back sheet really is the one that has the recommendation on it, so if that's what they're going to be going to, if you have copies --

MR. RIDDLE: Yeah, that's the problem. I understood they'd be in the meeting book, and they aren't, so --

MS. DIETZ: So the committee does not have them?

MR. RIDDLE: I didn't print them out, I don't have them.

MS. CAROE: Because they were on the website (inaudible) --

MR. RIDDLE: Right, they were on the website, in the meeting book, so I assumed they'd be in the physical meeting book once we got here.

UNIDENTIFIED FEMALE VOICE: And they're not.

CHAIRMAN KING: Katherine, do you have any copies available that we could share, at least, from a board standpoint? I have a copy here, so I can certainly --

MS. DIETZ: I have a copy.

CHAIRMAN KING: -- and Kim has a copy, so --

UNIDENTIFIED MALE VOICE: I have a copy.

CHAIRMAN KING: Okay. So I think we can get through this. Those who don't have copies or need a copy,
raise your hand and --

UNIDENTIFIED FEMALE VOICE: We'll share.

CHAIRMAN KING: We can have a shared experience.

MR. RIDDLE: I do have another question about the process, and -- as I understand it, you know, the draft we have -- or don't have -- is from the committee, but really what we submit to NOP is from the Board, not just the voting form but the actual evaluation form.

So the whole thing is open for consideration.

If we feel that, you know, the committee is recommending that something be a yes but we think it should be a no and there's additional comments, that should be amended, or open for amendment, per se, so that we come up with a composite from the Board.

MS. OSTIGUY: Right, that is my view also.

MS. DIETZ: And then a point of clarification:

Who's making those amendments, is it the committee chairs, is it the Secretary who's doing that, or would it be --

MS. OSTIGUY: Well, I would hope it's the committee chairs.

MS. DIETZ: Okay.

CHAIRMAN KING: Committee chairs, yeah.

MS. DIETZ: Okay.

UNIDENTIFIED MALE VOICE: Anyone can make them,
but then they record them.

    MS. DIETZ: They would record them and turn them in, okay.

    UNIDENTIFIED MALE VOICE: That'd be good.

    MS. OSTIGUY: I don't know if the rest of the Board -- I have no idea how much my comments, my mumblings here, have been out, but what I indicated is I thought the committee chair should do it, partly because we know what's going on, and it's too much work for the Secretary to try and put it all together.

    MS. DIETZ: Thank you.

    CHAIRMAN KING: I think, yes, that's what we'll be doing. Jim's point is just that people can make a motion to amend, so --

    MS. OSTIGUY: Correct. Yeah, that would make sense.

    CHAIRMAN KING: But the recording part will be the responsibility of the committee chair.

    MS. BENHAM: Mark, I have an extra copy here that somebody from (inaudible) printed themself, their own self.

    MS. CAROE: I think the vice chair is the materials person, so they're really the one, it wouldn't be the chair of the committee but the vice chair.
MS. OSTIGUY: Yeah, that's fine.

CHAIRMAN KING: It's the chair's discretion at the committee level on how it gets recorded. We do know it must be recorded. Nancy.

MS. OSTIGUY: We'll try again?

CHAIRMAN KING: Yes.

MS. OSTIGUY: Okay. So we're going to start with -- as the agenda has -- with the order for the agenda, even though I love alphabetical and it's not.

Soy protein isolate is the one we're starting with, petitioned for use as a fertilizer. The committee's recommendation was to reject the TAP because it did not address the use of the material as a soil amendment, it was focused on food, so we were recommending a deferral.

Do you want any more detail than that or --

CHAIRMAN KING: Do you give a vote --

MS. OSTIGUY: Oh, I'm sorry, you can give the vote, yes. I can do that. The vote was 3 yes, zero no, zero abstained, on that one.

MR. SIEMON: And is that genuinely because we needed this information to make a decision obviously or was it just kind of an irritation that TAP couldn't get it straight?

MS. OSTIGUY: No, it was not an irritation.
Yes, there was irritation, but no, we weren't making a point (chuckles).

MR. SIEMON: Okay.

MS. OSTIGUY: The part of it -- some of the questions we had did get answered this morning, so there was supplemental information, so in our breakout section tomorrow morning the committee will talk about it again and we may change our recommendation at that time. I don't know. It depends on what everybody says. But I'm presenting what we decided, and we didn't have any of the information that was presented this morning, and we felt we needed that, to give it a fair hearing, because the response was: if we were going to do it based upon the TAP as it stood, the recommendation was going to be No, and that didn't seem right.

CHAIRMAN KING: Kim.

MS. DIETZ: Again, I commented this morning on this material, being somewhat involved with it as past chair, I'd like -- I'd like to see if perhaps Arthur and Bob and I could join your committee, because I want to just make sure we have some resolution to -- to this material and what the direction is we need to go with it, whether we vote on it this week or defer it on specific reasons.
And then I also had a problem with this TAP, that, again, that third reviewer was a certified entity. So if we're going to defer it, then I think we need to ask for a third reviewer to re-review it.

CHAIRMAN KING: Jim.

MR. RIDDLE: I just -- I don't understand what your concern is, Kim. I mean --

MS. DIETZ: My concern with -- if I look at -- and this is a blanket concern on the TAP reports, but if I -- reviewer number 3, I think, on most of these materials is a USDA-accredited certifier from the Midwest, and I don't know whether NOP has a comment on that, but to me, I don't know if that's the place for an accredited certifier to be, a reviewer, because they could be -- they could have a biased opinion innately because their material isn't from that region or --

UNIDENTIFIED MALE VOICE: Certifying the person (inaudible) --

MS. DIETZ: -- or they could certify it -- I -- it just -- it strikes me as very awkward, so I question it. I don't know if it's right or wrong, but I would question an accredited certifier being a reviewer of a TAP report.

MS. KOENIG: I would just -- I think that it --
as long as it's fully disclosed, which, you know, we know
that they're an accredited certifier -- I mean, I think
it's analogous -- I mean, there's an accredited certifier
on the -- well, I guess nobody is right now an accredited
certifier, on the Board, but we all -- we all vote on
things and we represent sections of the industry too, so
we actually have, probably, more impact, but we do do
conflict of interest, and I think as long as it's
disclosed and -- so the answer, to me, lies in the
contractor -- how the contractor screens those and makes
sure that if they do have a conflict of --

MS. DIETZ: But the same one reviewed like six
TAPs, so -- I just question it.

MS. CAROE: Yeah, it just --
CHAIRMAN KING: Andrea.

MS. CAROE: They should have --
CHAIRMAN KING: Rose --
MS. CAROE: -- a conflict-of-interest policy
(inaudible) --
CHAIRMAN KING: Okay. Thank you. Andrea.

UNIDENTIFIED FEMALE VOICE: (Inaudible) the
contractor.

MS. CAROE: I just -- I think there's a big
difference between being a stakeholder and being a
reviewer of petitions. You know, innately this group of
stakeholders all have a conflict, at one time or another
we all have a conflict, that's why we're here, we
represent that facet, that's why we're one vote of 15, or
14 at the present time. But providing information in this
way, in order to make decisions, can -- if the person
truly does have a conflict, can sway the entire vote of
the Board because of the information that is selected to
be included on this report.

I don't know for sure if I -- if I agree, but I
-- as -- in my past life as an accredited certifier, I
could see that certain materials being put on the List
were advantageous to me, as a certifier, and promoted
business. So there very well may be that conflict, I
don't know --

CHAIRMAN KING: Guys, I don't really want to cut
this off, but I'm going to in the sense that I see this as
a policy or procedure issue in terms of how the review
process happens, unless -- does one individual or one
individual from a specific sector of the industry have any
more of a conflict than anyone else, so let's move on.

MS. OSTIGUY: Okay, the second item on the List
was 6-benzyladenine.

And I think I know why I'm doing so many of the
materials: is because I can pronounce chemical names.

(Laughter.)

UNIDENTIFIED MALE VOICE: Amen.

MR. RIDDLE: I wasn't -- I had a few points I wanted the committee -- you're going to be meeting again on soy protein isolate, right?

MS. OSTIGUY: Yes.

MR. RIDDLE: In the morning.

CHAIRMAN KING: Yeah, breakout session.

MR. RIDDLE: Yeah, I was -- I mean, we got distracted on the whole discussion of conflict of interest of a reviewer, but I had a few points I just wanted to bring to -- I'm not on the committee, so now is my chance, unless I come to that breakout.

MS. OSTIGUY: Some points on --?

MR. RIDDLE: Yes, on the --

CHAIRMAN KING: Soy protein isolate.

MR. RIDDLE: -- soy protein isolate itself. Now that we've learned that it is hexane-extracted, you know, I'd like to add -- if it is deferred and questions about the environmental impact of that -- the only thing that the TAP says is that it's done in full compliance with environmental regulations. Well, of course it is. But I want some science on how the effluent or -- whatever, what
the environmental impacts of that, now that we know what the extraction process is, and if we are deferring it, also like to have more of a whole-systems approach reflected; this is not just input substitution, we're talking about a source of nitrogen, and nitrogen should come from legumes in a mandatory crop rotation, and I'd like to see that addressed in the TAP.

So I just wanted to make those points for the committee to take.

MS. OSTIGUY: Any others?

(No audible response.)

MS. OSTIGUY: Okay. On to 6-benzyladenine, the -- this material is petitioned for use as an apple fruit thinner. What it does is cause you to lose a certain portion of the fruit on the apple trees, eventually enhancing production.

The committee's conclusions on this material was that it was agricultural, synthetic, and voted to reject the material because hand pruning is an alternative practice that is available and currently used. One of the quotes from the TAP that we used was: "Switching to chemical solutions as an alternative to farmers working in the field is not an example of sustainability, regardless of economic profitability."
The vote on this was 4 yes, zero no, zero abstained. To reject, yes. Failed on Criterias 2 and 3.

CHAIRMAN KING: Comments, questions?

MR. SIEMON: You said that hand thinning is presently commercially being --

MS. OSTIGUY: Oh, yes. It is the only thing that is used.

UNIDENTIFIED FEMALE VOICE: Organic, yes.

MS. CAROE: Nancy, we had a commenter this morning from Valent BioScience that had apparently sent in a comment on this, and have you considered that comment, that came in late? Have you even seen it?

MS. OSTIGUY: That one I am not sure, but again, you know, the crops committee will be meeting in the morning and we will take into account all comments that have been made.

MS. CAROE: Okay. Because it sounded like there was quite a bit of substance in that document that should be considered.

MS. CAUGHLAN: And Rose indicated that there was an OMRI-approved source -- formulation, with a natural source of this substance.

MR. RIDDLE: I did have a question about how the committee came up with the answers yes and no to the
question about it being consistent with organic farming, "No," and I understand the rationale, and then --

MS. OSTIGUY: Okay, where are you?
MR. RIDDLE: Yeah, I'm sorry. Category 3, on the table there.

MS. OSTIGUY: 2 and 3?
MR. RIDDLE: Yeah.
MS. OSTIGUY: Uh-huh.
MR. RIDDLE: Yeah, 2 and 3. -- that it's not consistent, but yes, it is compatible. That doesn't quite seem consistent to me (chuckles).

(Laughter.)

UNIDENTIFIED MALE VOICE: No, but it is compatible.
MR. RIDDLE: But it is compatible (chuckles).
MS. OSTIGUY: Yes, but it is compatible. I think some of the logic here was that it does reduce production costs so it might increase [sic.] the economic liability of the farm, so that would increase sustainability. So there were -- the difficulty on this one was that there were aspects that made it sustainable and aspects that made it non-sustainable.

MR. RIDDLE: Okay. Yeah. And I can --
MS. OSTIGUY: And we're forced to do a yes or
no.

MR. RIDDLE: Yeah, I understand it better, where you came up --

MS. OSTIGUY: So that's --

MR. RIDDLE: Okay.

(Pause.)

MS. OSTIGUY: Anything else?

(No response.)

MS. OSTIGUY: Okay, the next one was urea. Urea was petitioned for use as an insect fruit fly attractant. Contrary to what it says on the agenda, the committee actually had finished its work. What we had been told after the TAP was completed was that the material is not approved for the petitioned use, so we can't approve or not approve it because it doesn't meet EPA's criteria.

So as far as I can tell, we don't do anything on this one. Anybody have an alternative view, that we're supposed to do something?

CHAIRMAN KING: It was my understanding that it didn't meet -- it wasn't a legal label claim --

MS. OSTIGUY: Right.

CHAIRMAN KING: -- the petitioned use and therefore --

MS. OSTIGUY: -- we couldn't --
CHAIRMAN KING: -- we couldn't move it forward.

Rick?

MS. OSTIGUY: So I don't know if we officially reject or what we do with it, but --

CHAIRMAN KING: Do you need us to officially reject a material that does -- the petitioned use does not have a legal label claim?

MS. DIETZ: Can I comment?

CHAIRMAN KING: (Nods head.)

MS. DIETZ: In the past, something similar to this has happened and they've withdrawn the petition versus reject the material, so if you could -- if there's no EPA allowance for it, it's up to petitioner to do that, I suppose, but from a committee standpoint --

MR. MATTHEWS: If there's no EPA allowance, we don't take action.

MS. OSTIGUY: That was my assumption.

CHAIRMAN KING: So we'll just move on with that.

MS. OSTIGUY: Yes.

CHAIRMAN KING: Okay.

MS. OSTIGUY: So --

CHAIRMAN KING: Quick comment?

MS. DIETZ: Again, this is not -- this is, I guess, intended for the public to understand the process:
you know, we're all human, we all make mistakes, and I think --

UNIDENTIFIED MALE VOICE: Speak up.

MS. DIETZ: I said we're all human and we all make mistakes. Unfortunately, this -- in our procedure, as we follow it -- and I explained, between zero -- days one and fourteen the NOP is supposed to review the -- you review the petition for the intended use. In this case, it was urea as the active ingredient in a pheromone, and the petitioner was from a different country, it wasn't a US country, and we assumed when the committee got it the first time that that -- that they had looked at -- that NOP had actually done that research.

Somewhere in the process, it wasn't done. This should never have -- we shouldn't be here even looking at this. So this normally should not have occurred. I don't want people to think that this is how procedures occur, because it shouldn't have gone to this process, but it has, it's unfortunate, and that's where the committee stands on it.

MS. OSTIGUY: It actually sounds like a reasonably good idea, so maybe somebody should talk to EPA.
Anyway: Hydrogen chloride, this was petitioned for use in cotton seed de-linting process. The committee voted that the material was agricultural, synthetic, and to reject it, indicated that the criteria -- both -- well, Criteria 1, 2, and 3 caused the failure of this chemical because of its extreme corrosivity, very reactive; if released, very damaging to soil and plant life; and, as we heard this morning, this is not true, that alternative organic acids may be used.

The vote was 4 yes to reject, zero no, zero abstained. And, again, we will be talking about this one in the morning.

CHAIRMAN KING: Rose, go ahead.

MS. KOENIG: I just want to say: I think it was the spirit of this vote -- again, I think you need to go into that a little bit -- was that we acknowledged the -- you know, the two criteria. Our biggest question as a committee, when we voted on it, was whether there was alternative substitutes.

Based on that TAP report, the TAP report indicated that. We voted based on that information. So this will be one that -- I think that we will definitely reconsider, because we did get the public comment that we thought we would get, so -- that's just -- all I wanted to
MS. DIETZ: I would like to request that crops committee reviews this material that -- take into these things [sic.] for the following consideration.

Number 2, on category 1, where "Is there environmental contamination during manufacture?", you have very good justification that there is, but at the same time, this is a grass material and that -- GMPs should be followed, and that's why we have GMPs, so that potentially things don't happen.

So I think this is one where there is, but you also need to acknowledge that in the TAP it does say that as long as Good Manufacturing Practices are followed, as every material has those, that -- that are considered potentially dangerous. So that was number 2.

On number 3, "Is the substance harmful to the environment?" On the TAP, Page 6, it's specifically stated that there was no residue left on the seed, and so I would like to see that added, even though it is -- the substance is harmful, that they do acknowledge that there's -- it's a pH neutral by the time they receive a seed.

MS. OSTIGUY: Uh-huh.

MS. DIETZ: Same thing on number 5, "Is there
potential for detrimental chemical interaction?", as long
as Good Manufacturing Practices are followed, you know,
that -- that's your deterrent there. And that also this
material is considered a food sanitizer, so I would have
also included it in that section.

MS. OSTIGUY: In number 5.

MS. DIETZ: In number 5. Next page, under
category 2, "Is there a wholly-natural substitute
product?", yes, there are products that identify --

MS. OSTIGUY: Oh, this isn't applicable.

MS. DIETZ: Pardon me?

MS. OSTIGUY: It's not applicable.

MS. DIETZ: Right. Number 4 says yes --

MS. OSTIGUY: Oh, number 2, okay. Number 2.

MS. DIETZ: Number 4 --

MS. OSTIGUY: Okay.

MS. DIETZ: -- you say, "Yes, there are
substitutes" --

MS. OSTIGUY: Uh-huh.

MS. DIETZ: -- whereas the --

MS. OSTIGUY: Yeah.

MS. DIETZ: -- TAPs said they might not be
applicable; and also in your comments that you received
from the petitioner, they said they were not.
MR. SIEMON: And lactic and acetic acid is considered wholly-natural? Am I wrong?

MS. OSTIGUY: It's an organic acid.

MS. DIETZ: And then the only -- the only other comments I had, in the handling committee, if there's alternatives mentioned, then we would have gone forth and asked the -- before we checked new material, we would have gone and asked to have a response from the petitioner, whether or not they've tested those alternatives, so I don't see anywhere in here where we've tried to see whether they've really tested the alternatives. Those are my only comments.

(Pause.)

MR. RIDDLE: This is a tough one for me, I mean as -- if people haven't figured out by now, I'm kind of a conservative when it comes to synthetic substances and didn't think I supported this, but hearing what I heard today has certainly opened my mind to change, and I think as the committee revisits it, it's really going to hinge on annotation; if you do move it forward, there's got to be a very limited use, you know, for --

UNIDENTIFIED FEMALE VOICE: De-linting.

MR. RIDDLE: Yeah. -- for de-linting cotton seed for use in planting. We're not talking about for
livestock feed or something like this. This is to be planted. So that's basically it, for me.

CHAIRMAN KING: Other comments?

(No response.)

CHAIRMAN KING: Anything else, Nancy?

MS. OSTIGUY: No. I think that's all four of them.

CHAIRMAN KING: Okay, great. Now we're supposed to have a break.

(Laughter.)

CHAIRMAN KING: Kevin.

MR. O'RELL: Nitrous oxide was petitioned for use as a whipping propellant for food-grade aerosols, and I know that you want the condensed version of all this, so I'll try to make it condense.

Most of the concern was around the environmental aspects of nitrous oxide and the fact that it is a potent greenhouse gas and has a half-life of 120 years. Also considered -- we answered Question Number 1, adverse effects, yes, but we also considered a magazine article which said that it was an infinitesimal amount, 2 parts per million for total production, but we still felt -- that was answered yes on most of the environmental questions.
It is a grass item, and harmful effects on human health, mostly resulting from the misuse of the product, so we answered yes, but -- from inhalation of laughing gas --

UNIDENTIFIED FEMALE VOICE: Which we all thought we needed at the time we got finished with this.

(Laughter.)

MR. O'RELL: I think we're there now.

VOICES: Yeah.

(Laughter.)

MR. O'RELL: "Is there a natural source?" Not that's practical for commercial availability. It naturally occurs -- nitrous oxide naturally occurs due to the action of soil bacteria. Jim, this is one I'm going to answer before you get to, but on question number 3, we put yes and no, so I know you'll probably ask us that. And that is the substance essential for organic -- for handling of organically-produced agricultural products.

In the petition there were stated uses -- alternatives using already-approved materials but there was some dispute from the petitioner on the effectiveness of these substances to yield a product that's acceptable for the consumer, so we tried to recognize both aspects of it since there was conflicting information.
However, the petitioner did say he was unaware of any tests that have been done on a gas mixture of nitrogen and CO2.

On alternative substances, again we answered yes/no, and under the same conflict: that the TAP had indicated there were but the petitioner said that they were not acceptable to produce a product for consumer quality.

I'm trying to see any other questions that people might have, but maybe we'll just go right to the committee recommendation.

That was first -- we had voted on synthetic non-agricultural, and that was yes 5 votes, with zero nos, zero abstentions, and 1 absent. And then there was a motion to allow nitrous oxide for addition to 205.6, and there were zero yeses, 5 nos, no abstentions, and 1 absence, so the material was voted not to be allowed.

I don't know if there's any questions on that.

MR. RIDDLE: I just had one, and that is, on Criteria -- in category 3, number 6, the whole thing about "Is primary purpose to recreate or improve flavors, colors, textures," et cetera, you explained why you said no as far as recreating texture, because it creates the texture --
MR. O'RELL: That's correct.

MR. RIDDLE: -- but I would say that it should be answered yes on improving the texture, that it does -- its purpose is to --

MR. O'RELL: Do you want us to go yes/no on this one?

MR. RIDDLE: Well, you can do that, yeah, sure, we can be schizophrenic and --

(Laughter.)

MR. O'RELL: We discussed that aspect, Jim --

MR. RIDDLE: Uh-huh.

MR. O'RELL: -- but -- you know, I guess it's how you -- you know, I'm not going to say is, is, but the -- we actually felt that it creates the texture and that's not improving it because there is no texture without it.

MR. RIDDLE: Well, it's -- it's a liquid --

MR. O'RELL: It's a liquid.

MR. RIDDLE: -- so it has texture, but now you pump in the gas, and now it's a whipped liquid.

MR. O'RELL: And that's creating a whipped texture, from a liquid.

MR. RIDDLE: But it's improving it compared to if you just kind of squeeze the can and this liquid came out --
MR. O'RELL: Okay.
MR. RIDDLE: -- people wouldn't be very impressed.

UNIDENTIFIED VOICE: (Inaudible.)

(Laughter.)

MR. RIDDLE: It makes it much more sale-able.
MR. O'RELL: Duly noted.

MS. DIETZ: Well, I think our -- our dilemma was, is that does it create or recreate, and it does neither --

MR. RIDDLE: Yeah, I understand.

MS. DIETZ: -- and so that was -- that was one of the sticklers that we (inaudible), but you could note that, that could be noted on the comments (inaudible).

UNIDENTIFIED MALE VOICE: Thank you.

MR. O'RELL: We could note that on the comments.

MS. DIETZ: It's a tough one. I had one comment, that this committee also -- we had a lot of -- we put a lot of time and effort into this petition, we reviewed it the first time, we did not take any vote on it, we decided at that time we needed further contact with the petitioner, we graciously -- with Arthur Neal and Kevin we set up a series of questions ahead of time, we
sent those to the petitioner, we got a conference call, we got our questions answered, and -- so I think that we can really say that we did a very thorough review of this material.

The one area -- that I do want to go on record -- that we struggled with was setting precedents for this material, because a lot of the discussion was around the ozone gas and the environmental aspects of it. There are materials on the National List currently that do the same thing, and CO2 is one of those. So when we go to re-review materials, we need to look at that, and I will tell you that one of the primary reasons this was rejected was because it was for such a specific use, it was really for one use, and we didn't want to open up the world to having everything as a propellant for one specific use. So I just want to put that on the record, it is -- the greenhouse effect is a detrimental aspect, but there are other materials on the National List that are currently doing that.

MR. O'ReLL: And we did recognize that in the comments on the TAP, particularly when we were doing the "substance consistent with organic farming and handling," noting that other greenhouse gases, such as CO2, are on the National List.
Next, tetra sodium pyrophosphate, TSPP, tetra sodium phosphate was petitioned a specific use as a pH buffer and dough conditioner for use in organic meat-alternative products.

This is a substance that we had reviewed and voted on at our last meeting and had voted to approve as a committee, the NOSB Board voted to approve TSPP, and it came back from the NOP with the request that we re-review this not only with the new forms that were given to us but addressing a specific issue, which is the reason why I'm not going to go into the full explanation of all of the other factors, because we spent a lot of time on TSPP, so I'll focus it around the specific issues which were alternative substances, which we have gotten additional information and determined that there may be alternative substances but we had indicated that these would produce, from information we got from the petitioner, an undesirable product in terms of quality, functionality, unwanted discoloration, undesirable odor, and foul taste.

The other issue primarily centered around this - the product used to recreate texture, and after consulting with the petitioner and understanding, as we heard today in public comments, the intended use of this as a pH buffer and dough conditioner, that it actually is
working too as a processing aid to condition the dough through the extrusion process. The actual texture is being formed by a thermomechanical process, as opposed to the sole use of tetra sodium phosphate.

So we put this through its review again, and the committee recommendation to a motion to allow under 205.605(b), the committee vote was 4 yes, zero no, no abstentions, and 2 absent, and it's synthetic, non-agricultural.

MR. SIEMON: I just need to understand once again: why was this brought back to us? I mean, I had it clear [phonetic] the first time, but -- (Laughter.)

MR. SIEMON: I'm serious, I don't understand.

MR. O'RELL: It's my understanding -- and if NOP would -- wants to -- maybe Rick would be the best to -- let's not take my understanding. Rick is going to come up and address specifically why.

CHAIRMAN KING: Ladies and gentlemen, Rick Matthews.

MR. MATTHEWS: For the record, Richard Matthews.

This material, the first time that you approved it, we included it in a rulemaking action, to add it to the National List. Commenters came back, and about half
of the commenters were opposed to adding it to the National List and basically they said that it violated one of the criteria, and it's the criteria that Kevin has been going over, about creating the texture.

So we, in reviewing the record, were unable to support the Board's position, so we did not submit it to the Final Rule, okay, so it has been referred back to the Board to address the issues that the commenters had raised during the rulemaking process the first time around.

So you're being asked at this time: Is this what you want to do? -- and if so, you need to justify why you're doing it to a greater extent than was done the first time. Okay?

And this is not only affecting this material, but it's also affecting the rulemaking that we're doing now on other materials, we're being challenged more and more to put in better justification for the actions of the Board, and that's why we went to these sheets.

Any other questions on this?

MR. SIEMON: So the bulk of what we're gaining, really, is this form, the category 1, 2, 3, with the explanations there, that's the bulk of --

MR. MATTHEWS: Yeah. Well, what'll happen is that in the future, when somebody comes forward and
challenges one of your decisions, we'll have these forms to go back to in order to try and respond to the commenter in the Final Rule, explaining why you went ahead and did something that the commenter thinks is contrary to the Act.

CHAIRMAN KING: Kim, then Rose.

MS. DIETZ: The specific comment, like Richard said, was that the -- they felt that the primary use of the material was as a texture -- to alter the texture, and so we went back through and revised these materials.

I also just need to put another thing on the record, because this -- this section of criteria was originally drafted by Joan Gasau [phonetic] in Nineteen Ninety -- actually, 1998. I was asked to help her draft this language for this criteria.

And I want to read to this group the exact language that we wrote, because it's a little bit different than what's in the Rule, a little it's almost -- similar, and we -- Joan had been asked to work with the MPPL committee, which is OTA's manufacturing committee, on this criteria, and we had said that the material has to be reviewed and it may be used if -- and you would have to go through these principles, but its primary use or its primary purpose is not as a preservative or used only to
recreate improved flavors, colors, textures, or nutritive value lost during processing, so there's key words in there, except that the latter case is required by law.

So our intent was that, one, the material's primary purpose is not: to recreate any of those categories or recreate something that's lost during processing.

So we really focused on this language when we reviewed because, one, we -- the comments that we have -- and we have a lot of public comments and comments from the petitioner, that its primary use is a pH adjuster, okay, so we focused on that, and yes, it is a dough conditioner and yes, it does alter the texture, but its primary use is: a pH adjuster, and that that is something that wasn't lost during processing, it was actually -- the purpose of the material was to aid in that flow.

So we felt that we covered this criteria very well, if that makes sense to everybody. But you're going to come up against this as you re-review a lot of processing materials, so I really urge -- you know, I'm going to be off the Board, but I urge the handling committee and this Board to really look at how that reads, because it says "primary purpose," and another criteria is "lost during processing." So you have to have both of
those to reject a material based on this criteria, in my opinion, as one of the original authors.

UNIDENTIFIED MALE VOICE: Thank you.

CHAIRMAN KING: Rose, then Jim.

MS. KOENIG: I had -- I have a question on the process the committee went through in terms of exploring the alternatives and the additional information that you received. And, again, it's really to question the process, not necessarily the information that you obtained, just to kind of think about how we go about those things.

So you went to the petitioner to get -- collect the data, or how was that -- refresh me again, you know, because --

MS. DIETZ: We actually pulled all of the public minutes from the last meeting, where we interrogated them, and they provided public testimony, and they provided us with documentation, so we really went back and said -- and re-reviewed it at that point. So that's what we did to -- to validate things had been tested, and you can see where the comments are.

MS. KOENIG: The question I have, again, and -- you know, and it's -- again, you know, I'm not picking on this particular product, but I think we need to be careful
in terms of kind of the data or the information sources that we use. I mean, the petitioners, you know, have a vested interest, in many ways, if it's on the List, so we --

MS. DIETZ: But we'd already voted on this, so we felt we didn't need to focus on that, our focus was: --

MR. O'RELL: Right.

MS. DIETZ: -- was its primary purpose a textured product, and so we -- we just went back as justification, we didn't go back and re-review the material, because we'd already voted on it once; we just put the justification to it.

MR. O'RELL: And we went back and reviewed the Board's comments at the time during this discussion for approval of this -- this substance. So that was just a re-review of everything, with new information where -- in dealing with the one point, that threw it back from the NOP to us.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, I will. I guess I'm uncomfortable with the Board's document, if we are to just accept the committee's form here, stating, as it does in several places, all of these organic products have high consumer acceptance and are certified by responsible
accreted certifiers, when the substance is being used and is not on the National List. I mean, that -- that's a bit awkward, to me, for the Board to be putting in a document, which becomes permanent record, that we acknowledge that a violation is occurring by responsible accredited certifiers, you know, the use of a non-listed substance.

I really don't want the Board to go on record with that --

MS. OSTIGUY: But do we know that? Because what -- because being certified doesn't meant that --

MR. RIDDLE: Well, I assume if we put it in our document, that we've verified that it's true.

MR. O'RELL: What page are you looking at?

MR. RIDDLE: Well, it's category 3, three one, three three. I mean, I have to accept that that is a true statement.

MR. O'RELL: Well, it was statements taken from public comment.

MR. RIDDLE: Yeah.

MS. DIETZ: Do you have a suggestion, should we just remove it, is that --

MR. SIEMON: It's a compliance --

MR. RIDDLE: I don't --

MS. DIETZ: I mean, I don't -- it's not really
relevant to what we're doing.

MS. CAROE: But --

UNIDENTIFIED MALE VOICE: We're --

MS. CAROE: Hold on one second. Sodium phosphates -- sodium phosphates is on the List, and some can interpret that to say all sodium phosphates. Tetra sodium phosphate is a sodium phosphate. I don't agree with the argument, I'm just saying that I've heard it.

CHAIRMAN KING: -- it could be made. All right.

MR. O'RELL: It has been brought up that there is confusion as to whether -- if you go back to the actual approval of sodium phosphate, it specifically indicates it was for the orthophosphates and not for classes of pyro- or polyphosphates; however, that --

MS. CAROE: The way it's in the List, in the regulation --

MR. O'RELL: -- there is confusion -- there is confusion in the industry, but --

MS. CAROE: -- you could justify it.

MR. RIDDLE: Your Honor, I would be much more comfortable --

MR. O'RELL: -- if we strike --

MR. RIDDLE: -- if those boxes contain the findings of the committee rather than the opinion of a
public commenter, who also is the petitioner.

MS. DIETZ: Well, I --

CHAIRMAN KING: Is this work that can be accomplished tomorrow during the breakout session?

MS. DIETZ: I think public --

MR. O'RELL: Yeah, we can do this at the breakout session. We'll review that --

MR. RIDDLE: Yeah. It's just -- I would just be --

MR. O'RELL: It's just for cleaning up --

MS. DIETZ: Public comment is important.

MR. RIDDLE: Well, I understand, but it should be -- I think you get my point.

MS. DIETZ: I do.

MR. RIDDLE: And then it does --

MR. O'RELL: We can -- we will review those references on our breakout session.

MR. RIDDLE: Yeah. And then I have the same comment about improving texture. I mean, we heard this morning in the testimony that it's a combination of the substance and temperature and pressure but temperature and pressure alone do not get the resultant texture that they want, and these other materials they tried don't get the texture. This substance get the texture, it improves the
texture. Those meat analogs would not have the consumer appeal, they would not be improved without this substance, so --

MS. CAROE: I disagree --

MR. RIDDLE: I do think that -- there should be an answer of maybe yes and no in explaining it, but I do think it improves the texture of this substance, just in all honesty.

MS. CAROE: No, I --

CHAIRMAN KING: Andrea.

MS. CAROE: I actually disagree with that, because I do believe that the temperature and pressure does create the texture. The material is facilitating that process, but it doesn't create the texture.

MR. RIDDLE: I'm not talking about creating; I'm talking about improving. It says --

MS. CAROE: Improve --

MR. RIDDLE: -- recreate or improve, and I think on improve, the honest answer is yes.

MS. CAROE: I don't believe so, because it's heat and pressure that's improving the texture. It's not doing anything to the texture other than allowing it to use the equipment.

MS. DIETZ: In number 6 it is addressed, and
you'll see it there, that yes, the TAPs indicate that it is used for texture, but it is not stated to recreate the texture, and as I went -- and as I tried to explain, that this category says the primary use, and everywhere in the TAP and everywhere in public comment, and the fact that we already approved this based on this material's primary use as a pH adjuster we felt was very relevant, and I think it is put in there.

If you would like us to put something else, I think we certainly can put it in there, but its primary use is not to recreate or create texture. So the committee -- at least -- I can't speak for everybody, but we went round and round on this and made sure we had the right answer, so I'm -- I'm not willing to redo this form, so --

MR. O'RELL: I think --

MR. RIDDLE: I just think acknowledgment that a function is to improve texture and then explanation that maybe primary purpose, these others, as you've said.

MR. O'RELL: I think we can add some language in that, recognizing that, Jim, that --

MS. CAUGHLAN: It facilitates extrusion --

UNIDENTIFIED FEMALE VOICE: Yeah.

MS. CAUGHLAN: -- and by facilitating extrusion
it does --

UNIDENTIFIED FEMALE VOICE: Yes.

UNIDENTIFIED MALE VOICE: -- improve the -- creating it.

MS. CAUGHLAN: But it seems like a secondary --

(Pause.)

CHAIRMAN KING: Rose.

MS. KOENIG: I just I guess had a question on the voting. Is there any way -- and again, I didn't look at the minutes to -- to find out. The original vote was what on this, during the --

MS. DIETZ: Actually, I have the original vote.

MS. KOENIG: And can you give us who -- the individuals, what we voted (chuckles), how we stood, because --

UNIDENTIFIED MALE VOICE: What? Tell us how we voted last time?

MS. KOENIG: -- I mean, I'm saying there's --

MR. SIEMON: (Inaudible) tell me how we voted last time.

(Laughter.)

MS. KOENIG: There may be a reason why there's a few people that are not comfortable with it, because there was some -- I'm just trying to recall.
MS. DIETZ: We actually had a lot of different votes on this one, different amendments.

UNIDENTIFIED MALE VOICE: Yeah.

MS. DIETZ: But -- and some withdrawns, this was a very painful material, as everybody remembers, but the -- it was -- a motion was made to allow TSPP as a synthetic under 205.605(b) for use only in textured meat-analog products. The vote was 8 favored, 3 opposed, 2 absent, 1 abstained.

MS. KOENIG: Do you know the recording of those individuals' --

UNIDENTIFIED MALE VOICE: I'm sure (audible) voted against it.

MS. KOENIG: No, I mean, I'm just -- do you know how the -- do you know the individual votes, just -- I'll just try to get that later.

MS. DIETZ: But if you want to look at all the minutes, I have them, you're more than welcome to take them.

CHAIRMAN KING: George.

MR. SIEMON: Andrea brought up the issue about broadening the present phosphate sodium policy. I'd just like to know, did the committee even discuss that, or -- you know, whether to go back and look at that, the
annotation that we have, did you all look at that?

MR. O'RELL: Well, it was discussed in the committee, but, again, you know, the specific petition was for a specific use, and although we acknowledged that the orthophosphates are approved for dairy applications only, at one point they were asked -- petitioned for expansion for soy products. That was voted down.

That's before I was on the Board. I don't know the exact discussion that went into that, but we were trying to address the specific use of tetra sodium pyrophosphate for its specific application it was petitioned for. Because we felt that that was following up from the vote that we had had as a committee, or as a board, at the last meeting. I didn't think we wanted to muddy up the issue.

MR. RIDDLE: But the committee's recommendation doesn't have any annotation; correct?

UNIDENTIFIED FEMALE VOICE: No.

UNIDENTIFIED MALE VOICE: No.

MR. RIDDLE: So even though you only considered it for this one use, it's not being --

MR. SIEMON: -- limited.

MR. RIDDLE: -- limited, yeah, there's no annotation. Did you talk about that?
MR. O'RELL: Unfortunately, in the final vote, I was one of the absent, so I will defer to Kim.

UNIDENTIFIED FEMALE VOICE: I know we didn't.

MS. CAROE: Well, actually, I think we did. I think, in discussion, the -- the annotation was one of the things that flagged this as a texturizer, because of the ways that that was written, and we -- as I remember, and Kim, refresh my memory, but I believe we talked about what other possible uses and would any of those be -- we looked at all the uses that were in the TAP and would any of those be a problem for us, and it didn't appear to be, so we just took the annotation out, for clarity, to simplify, simplification.

MS. DIETZ: Yeah, and, again, the original annotation was for use only in textured meat-analog products, and the comments were specifically against the word "textured meat," and since it -- again, since the primary use of the material is a pH adjuster, we did not want to turn this back around and say -- and confuse it even more, so we just made the recommendation that you have in front of you.

MS. KOENIG: So the implications of that is that if we put it on without annotation, it can be used in processing of any product, for any use, even though what
you just said, as far as your research --

    MS. DIETZ: Yeah.

    MS. KOENIG: -- in terms of pH, you know,

    that --

    MS. DIETZ: The other reason that we didn't put
an annotation is that we have gone through phosphates four
or five times and put four or five different phosphates on
the National List, and every one has been for a specific
use, and if we're -- either we're going to allow
phosphates or we're not going to allow them, and we said,
look, you know, if this keeps coming back because we're
being very restrictive with annotations and then somebody
comes back and says, "Well, it's for dairy" or "it's for
this," either we want them or we don't, and this committee
said: we're going to put it forth without an annotation.

    So the Board has -- you know, they can make a
recommendation, but this committee's was: no annotation.

    MR. RIDDLE: Yeah. I think the more we learn,
the more we know how important annotations are, the more
we learn about how broadly the List is being interpreted.
And so, to me, the lesson is: just like OFPA says,
petition for a specific use, and that -- I would support
an annotation, and maybe you can talk about that, see if
the committee wants to bring anything forward, but
somebody else probably will.

MR. O'RELL: We'll revisit it as a committee.

MS. DIETZ: We could bring the original annotation back, but we've done the justification that we were asked to do.

UNIDENTIFIED MALE VOICE: All right. Thanks.

CHAIRMAN KING: Kevin, is that --

MR. O'RELL: (Nods head.)

CHAIRMAN KING: Okay. I don't know if George or Nancy is doing livestock.

MS. OSTIGUY: I am.

MR. SIEMON: Since I can't pronounce any of the words, Nancy's going to.

(Laughter.)

MS. OSTIGUY: The first one on the livestock list is moxidectin, which is used as a -- it's a topically-applied broad-spectrum parasiticide effective against both internal and external parasites.

We actually considered this one a couple of marketings [phonetic], at least it feels like it. The committee recommended that it was agricultural, synthetic, and that it be allowed -- is that correct? Yes. -- with an annotation for control of internal parasites only.

This was despite the fact that it, in our
opinion, failed on Criteria 1, and that was the reason for
the proposed annotation: because of concern about the
half-life of the material and impact on soil organisms.
We recognized that it is also less problematic
than a material that's currently on the list, ivermectin,
but the annotation was to respond to the issue of its
half-life and soil-organism impact. Much less chance of
any kind of contamination if it was for internal parasites
versus external.

Go ahead, Jim.

MR. RIDDLE: Yeah, I missed the call, I'm on the
livestock committee, so I apologize, but I just had a
question. As I recall, this substance is applied as a
pour-on, a (indiscernible) external application.

MS. OSTIGUY: Correct.

MR. RIDDLE: And so -- and it does provide
external parasite control as well.

MS. OSTIGUY: Correct.

MR. RIDDLE: So as an inspector, you know, and
you have this annotation: it's only for control of
internals --

MS. OSTIGUY: Uh-huh.

MR. RIDDLE: -- but it's applied to the
external, and it controls externals --
MS. OSTIGUY: Uh-huh.

MR. RIDDLE: -- how can that be --

MS. OSTIGUY: Well, the reason for the -- that
very instruction to use the material is because of
internal parasites only.

MR. RIDDLE: Okay. So someone would have -- the
inspector -- I mean the farmer would have to keep records
showing that that is the reason, and still not routine
use, it has to be --

MS. OSTIGUY: Oh, yeah.

MR. RIDDLE: Yeah, all these other conditions
that are already in the Rule.

MS. OSTIGUY: Right.

MR. RIDDLE: So they'd have to have --

MS. OSTIGUY: There should --

MR. RIDDLE: -- documentation --

MS. OSTIGUY: One would hope that there would be
records for the animal, of why they were treated, and so
the records would indicate that it was for internal
parasites.

MR. RIDDLE: Uh-huh.

MS. OSTIGUY: Because then you avoid also dip
operations and that sort of thing.

MS. KOENIG: A question. Isn't -- I know it was
petitioned for an anti-parasitic, it's a parasiticide (chuckles), but, you know, when I went back and looked at it again, the executive summary, I notice that it's a by-product of, actually, an antibiotic. I just wanted to clarify that -- is it in fact an antibiotic or is it a parasiticide?

UNIDENTIFIED MALE VOICE: Can I address that?

MR. RIDDLE: We went through all that.

MS. OSTIGUY: It's an antibi-- it's a parasiticide.

UNIDENTIFIED FEMALE VOICE: Yeah.

MS. OSTIGUY: It's not an antibiotic. I know that we talked about that before. And the petitioner is here also, if you want to ask him --

UNIDENTIFIED MALE VOICE: That was not responsive to the TAP committee (inaudible).

MR. SIEMON: That's why we delayed it (inaudible).

MS. OSTIGUY: Well, and I remember we asked that and you gave --

MS. KOENIG: Right.

MS. OSTIGUY: -- you got us that information about it too, so that was last time around that we'd asked that question and then checked up on it.
But it is not an antibiotic, it is actually a parasiticide, and I just don't have that piece of paper with me that indicates that.

MS. KOENIG: You know, it's just one of those that has been around and --

MS. OSTIGUY: Yes.

MS. KOENIG: -- I just was trying to clarify that, because I'm not --

MS. OSTIGUY: Around and around.

Any other --?

(No response.)

MS. OSTIGUY: Okay, the last one was the proteinated and chelated mineral complexes, used as a supplement in livestock. The committee voted that it was synthetic, allowed, non-agricultural. The vote was 4 yes, zero no, zero abstained.

There was some concern about copper and zinc, on the effect in soil and on soil organisms, but we didn't feel that an annotation was reasonable, so -- so the -- voted for approval.

MS. KOENIG: Is there an annotation? I didn't get that thing that you said --

MS. OSTIGUY: No, no annotation.

MR. RIDDLE: Once again, that was the same call
I missed, and I do have a concern about the source of the protein, and I do have documentation here, Dr. Alfred Walker, who's looked at some of the background on this, and it is a possibility that the protein source could be an animal -- of animal origin, and, you know, I don't know if the committee's going to meet in the morning on breakout or not; if so, I'd just hold this discussion for the livestock committee; but if not, I will like to suggest an annotation that protein source must be -- must not be of animal origin.

And then there is the issue of excluded methods as well. If it's a soy source, it's possible that it would be a product of excluded methods.

MS. OSTIGUY: Right, but those aren't allowed.

MR. RIDDLE: Yeah. The animal by-products, though, I do think needs to be specified.

UNIDENTIFIED FEMALE VOICE: Is that available, commercially available?

MR. RIDDLE: Yes. It's commercially available from non-animal, non-GMO protein sources, so, yeah, it shouldn't be a problem.

MR. SIEMON: We are meeting tomorrow.

MR. RIDDLE: Yeah, okay.

MS. KOENIG: I have a question on -- getting
back to Jim's point, it's a question for Rick.

Is that your interpretation of the excluded method as far as GMO when we place that on there, that that's something that the NOP regulates, on these materials?

UNIDENTIFIED MALE VOICE: (Inaudible) the use of (inaudible).

MS. KOENIG: Well, GMO-derived, for --

MR. NEAL: What's the particular issue, though?

MS. OSTIGUY: The issue is: whether or not, as a -- if you have a non-animal protein, your primary source is probably going to be soybeans. Soybeans are going to most typically be Roundup-ready, which is GMO. Could they use a GMO material for the proteinated chelates, and would that meet the Rule, or does the Rule exclude it because GMOs are prohibited.

MR. NEAL: I won't answer that right off the top of my head. There's a question that I've got for you, though. When you think about this type of annotation, how do you enforce it, how does a certifying agent enforce it, and where do they get their information from?

MS. OSTIGUY: The sourcing from the person manufacturing it.

MR. NEAL: So everybody will provide all of this
information for --

MS. OSTIGUY: Well, you'd know your source.

MR. NEAL: I'm just asking, because that's going to be -- that's going to be an issue, is enforcement.

MR. SIEMON: The average farmer won't have a clue.

MS. OSTIGUY: Well, the farmer won't --

UNIDENTIFIED FEMALE VOICE: But the agent.

MR. NEAL: I'm just asking a question.

MS. OSTIGUY: -- but the manufacturing source would know.

MR. NEAL: Okay. Because what could end up happening is that you eventually have an issue where some farmers may not know, some will, and so you've got another enforcement and compliance issue that you've got to address. That's all I'm -- that's all I'm -- I mean, that's the only question that I've really got.

MS. KOENIG: I guess that that -- I mean -- and it's been on my radar screen for a while, and that's why I'm asking it, and you don't have to answer it now, but the question is, is: again, when NOP looks at those excluded methods, do they just simply look at "no GMO seed," or do they take it to the step of materials, both natural and things that are on the List, such as even
soybean meal, are you checking to see -- or like the soybean isolate, are they from non-GMO sources, when it comes to that -- that --

MR. NEAL: There -- we say that manure from non-organic operations may be used as a soil amendment. We say the crop residues from non-organic operations can be used as a soil amendment. These could be -- I mean, these are soil amendments.

MR. NEAL: Those are naturals. Those are crop -- those are agricultural products we're talking about, those are not synthetics.

MR. SIEMON: Even if they're GMO, is what you're saying.

MR. NEAL: I'm applying it to my soil as a soil amendment, and we acknowledge that.

MS. CAROE: There is nowhere in the Rule that it specifies that a crop input has to be non-GMO, it's not in there. In fact, the cover crop can be GMO. It's not in there.

MR. NEAL: Well, the seeds --

MS. CAROE: The rotation can include a GMO crop that's not sold as organic.
MR. NEAL: Seeds could not be GMO.

MS. KOENIG: Well, that -- that's -- I really --
you know, as we especially look at these protein issues,
and soy, you know, and we're getting into the National
List of these products, I think there's a lack of -- you
know, I don't know if it needs to be in a directive, but
there certainly is a lack of clarity in terms of what --
how you view your GMO policy, because contrary to what
Andrea's saying -- I mean, I would assume the cover crop
in an organic-production practice could not be GMO seed.

MS. CAROE: It's not in the Rule.

MS. KOENIG: So I don't -- and that does have
some implications, because, again, I think, personally,
when I'm putting something on the List, I'm assuming that
if it is a soy protein isolate, or if it's a protein
chelate, in this case, I assume that the GMO policy is
covering the materials list, and if it isn't, I think we
need clarity on that.

CHAIRMAN KING: Goldie has a comment, then
Andrea, then Jim.

MS. CAUGHLAN: I mean, that's the whole point,
is that if in fact this is a learning experience, just as
the whole program is revealing itself as we go, it seems
like moment by moment, and the fact of the matter is: we
all know that GMOs are becoming a far bigger problem in terms of every aspect of the conventional manure and the conventional crop more and more and more. I mean, it flags everything.

So to me it's an issue of: how do we fix it, how do we make bloody sure that those aspects do get incorporated, whether it means additional call for rulemaking, in the interim directives, advisories to the -- but we have to fix it, we cannot just accept it.

MR. NEAL: I'd note that there may be a need for clarification on: how far do you go back, in the process, in terms of this "excluded methods" definition.

CHAIRMAN KING: Andrea.

MS. CAROE: To answer the question you asked first, about enforcing annotations: I can't speak from the crop inputs as much as I can speak from non-organic ingredients in processed products, in which case you do run into a situation where a vendor of an ingredient has no idea what that original carrier corn was grown and whether it was GMO or not, so it is being enforced in -- the best possible, but incomplete, at best, because the information's not there.

Now, I don't know, every time you buy a feed supplement, if you're not buying it from a distributor
that may not have that information because he's, you know,
several points away from the growing of that.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah. Well, the burden of proof is
always on the person who wants to use the substance, to
make sure they use approved materials, and I look at the
List currently, under feed supplements, and I see it as
very similar to the milk replacer, where there's
annotation there: without antibiotics, emergency use
only, no non-milk products or products from BST-treated
animals. So there the GMO issue has been singled out, and
so I think it would be appropriate for that to be part of
the annotation.

And then the animal-origin issue would be
another one that I think we would be very wise to include,
and they are commercially available, the source is
available, according to the petitioner -- I don't have it
in writing, but verbally -- and so I think it makes sense,
verifiable.

MS. CAUGHLAN: I remember we had a discussion
two or three meetings ago specifically on pulling back
from so many annotations, and Keith spoke to this issue,
saying that we were creating, by these extra annotations,
more problems, but I think if -- you know, in -- that that
is not necessarily it, and I think I would rather have it 
be redundant to the state that we state it every single 
time, 
"non-GMO" or "non-excluded methods," rather than to assume 
that it's somehow going to magically (inaudible). 

UNIDENTIFIED FEMALE VOICE: Yeah. 

MR. JONES: Let me just address this. As you 
know, annotations are one of my passions, okay -- 
(Laughter.) 

MR. JONES: -- and the reason they're one of my 
passions is because -- I think, in many cases, they make 
you feel good, but they mean nothing in the field, okay? 
In other words, you walk away thinking you've done the 
right thing, but unless there's a data set out there you 
can capture, unless you have a verifiable annotation, you 
have created a lot of nice language without any regulatory 
impact, okay? 

So you need to be very careful that when you use 
an annotation to prohibit a practice, that the data set 
that you're going to rest on exists, okay, and: it's 
readily available, in other words you can pick up the 
phone and call your supplier and they will know whether or 
not X, Y, or Z exists. 

That's my only caveat: just be very careful.
MS. CAUGHLAN: Well, we should be much closer to that now, given our greater development of databases having to do with --

MR. JONES: You would think so, Goldie. Maybe, or maybe not. I mean, one of the things I think -- it's still amazing: out there, when you pick up the phone to some of these folks, they don't have a clue and don't have any way actually to even know --

MS. CAUGHLAN: Well, if we're not punching it home all the time, they're not even going to create that or look for it.

MR. JONES: Fair enough. But all I'm saying is that: don't just add language for the sake of adding language; make sure that you know, and that you've consulted with certifiers who are certain that they can verify the point that you want verified, because if you can't do that, then you have just created a lot of nice language.

CHAIRMAN KING: Another quick question, then Becky, then Andrea.

But please stay here for a moment, Keith. I understand what you're saying, and I think this message has been clear for a while. From your perspective -- and I -- as it pertains to this specific issue, "excluded

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
methods":

Do you feel, in your opinion, there is another path, to ensure that what we're trying to accomplish in this particular case is realistic?

MR. JONES: Well, let me give you my best professional judgment on where you're wanting to go. You have the ability to add annotation and say: we don't want this product being derived from excluded methods; but when you do that, you have created a dichotomy within your own regulation, okay, because now you're saying: well, in some areas we don't want this to happen, but in other areas --

In other words, if I go -- let's say I want to soybean meal as a nitrogen source for organic production, and I go down to Southern states, or wherever, and get ten 50-pound bags of soybean meal: I have no idea of knowing where that soybean has come from; and, further, there is nothing in the regulation that prevents me from using that soybean meal as a nitrogen source for fertility.

So just be careful, just be care- -- because soybean meal is a natural, naturals are unregulated, okay, we can't get at 'em, okay?

So be careful, as you're thinking through this, that you're not creating this huge dichotomy in your own
regulation, where you're being quite schizophrenic as to what you want to -- what you want to do.

CHAIRMAN KING: Becky, Andrea, Dave, then Rose.

MS. GOLDBURG: I just wanted to make a point, which Keith partially made. I worry about singling out products for no GMO and implying that others -- therefore GMO is okay? and I think we really need consistent policy on it. I don't know, do we need a task force, do we need some directive from the NOP, do we need the policy development committee, or whatever, to consider the issue, but this is not something to deal with scattershot.

CHAIRMAN KING: Andrea.

MS. CAROE: Yes. I just want to remind this Board that these materials on the list are not organic, they're conventional materials, they were manufactured in conventional facilities, for conventional production, and, you know, going back and asking for this: yes, you'll get a supplier that says, "Yeah, it's non-GMO, we never use GMO," they'll say that, they may not -- the information that you're getting is questionable, and I think that kind of talks to Keith's data set: there is not hard -- we're relying on affidavits and comfort language instead of hard facts on it, and taking that back too far into the conventional world, where there is no regulation and the
distributor of that product doesn't have to have that information, it makes it very difficult.

I do understand what you're saying, Jim, the onus is on the user of that material to justify it, but, you know, that -- that is a bit of an issue, and this industry is still, you know, 2 percent, 2 percent, and more likely, if you're going to be a pain in the butt to a vendor to try to get them to track it back all the way to the farm, they're going to say, you know, "forget it, take your business elsewhere," because that five pounds of soybean meal doesn't really mean anything to them.

CHAIRMAN KING: Dave.

MR. CARTER: Yeah. I'm a little more concerned on the -- and I agree with Rebecca on the GMO issue, but on the other one, that Jim brought up, about the animal source, I think that's something where we need to be very specific, because I think, you know, if FDA is moving forward and saying that they're prohibiting animal by-products in feed, you know, there are some things -- and I've been concerned for some time -- that there are some things, such as Vitamin E12 and some other things, that ranchers and farmers routinely use, that they don't know are -- come from animal base, and so I think we need to flag that on this, that there has to be a distinction,
that we're putting the stake in the ground on that, to make sure that we're not going to cross that line.

CHAIRMAN KING: Rose.

MS. KOENIG: And, you know, just to Keith, I guess, although he sat down: You know, I only beg the question because I think it's an area that -- I know, again, OMRI is not NOP, I'm not implying that, but when they look through their technical review of brand names, that is one of the questions that they -- they're posing for -- for inputs, so that it can be in compliance, you know, with the NOP.

So I think there is either a misunderstanding or non-clarity out there in the industry as far as: how far do you take those excluded methods, is it just simply seed source at the farm, you know, does it go to medications that might be derived from GMOs? I mean, there's so many processes now that involve it, and -- and if the NOP's position is it just ends at seeds, that's -- that's your position, but I think it just needs to be clear, so that -- again, you know, this "equal playing field" concept, that everybody has a clear understanding towards that policy.

CHAIRMAN KING: George.

MR. SIEMON: No (laughs).
CHAIRMAN KING: I just wanted to wake you up. Kim.

MS. DIETZ: Maybe just a recommendation. Becky's already suggested maybe a task force be formed, and I know there's GMO decision trees out there, and there's lots of data and worksheets that we could certainly bring together (inaudible) --

MS. KOENIG: But, Kim, I would like -- I mean, I think the directive is much more clear, to the point, because if there is -- it sounds like there -- there is already a thought process and a way that NOP is viewing it. So I don't want to go through a whole task force to come up with a recommendation --

MS. DIETZ: My point was, there's information out there, that you need to look at it, before we have a lengthy discussion like this.

CHAIRMAN KING: Yeah. Okay, so where were we?

MS. OSTIGUY: We're done.

CHAIRMAN KING: You're done.

UNIDENTIFIED MALE VOICE: Yeah.

CHAIRMAN KING: Okay. Well, let's officially recess, and we will reconvene tomorrow at 8 a.m. Please be here promptly as we have lots of work to do again tomorrow. Thank you all very much for your patience.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
(Whereupon, at 6:30 p.m., the meeting was recessed, to reconvene at 8:00 a.m. on Thursday, April 29, 2004, in the same place.)

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TEXAS 75644
CHAIRMAN KING: I'd like to call to order the Meeting of the National Organic Standards Board. First off I'd like to thank everyone for their patience and persistence in your input yesterday; I think it was really valuable.

This morning the first thing we're going to start with is the .606 Task Force report, or the Jim & Kim Show, if you will.

A quick reminder for everyone: please put your cell phones to vibrate; if you have a comment, conversation, so on and so forth, take it out in the hallway, please; and then also, there's a sign-up sheet for Friday public input. I would remind everyone that we have two hours allotted for public input, so please sign up early, if you have comments, because we certainly want you to be a part of that.

So without further ado, I'll turn it over to Mr. Jim Riddle.

MR. RIDDLE: Okay. Good morning, and we're still getting the technology set up, but --

Yesterday afternoon I passed out the current draft from the task force, and this task force is for commercial availability, recommended rule changes, and just...
a little background, while you're digging out that report:

It came to the Executive Committee attention
early this year, I guess in January, that, you know, there
remain issues on commercial availability and the need for
consistency and how it's being interpreted in the field,
and this was actually -- when the Final Rule was published
in 2000, there was a request for comments at that time and
recognition of the need for further rulemaking on
commercial availability, and so it's -- it's remained an
open issue.

There were comments originally submitted,
including comments from the Board, and then further
recommendations on the -- from the Board as it relates to
the agricultural ingredients on the list, 205.606.

And so that was really the basis of the work, the
starting point, of this task force, and the objective was:
to establish acceptable practices to be followed by
certification applicants, certified operators, and
certifiers, for consistent, transparent, and predictable
determinations of commercial availability that provide
regulatory certainty, and commercial availability, really,
applies to two different sections of the Rule, the one
being seeds, where a producer can use non-organic seeds if
it's documented that organic seeds are not commercially
available in the equivalent variety and form, quality, and

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
quantity needed by the operation; and then it also applies to minor agricultural ingredients used in processed products, where a handler must attempt to source organic ingredients if the product is to be labeled as organic, they must attempt to source organic ingredients for everything agricultural in that product, and if it's documented that an ingredient is not available in an organic form, is not commercially available, then the certifier can allow a non-organic form of the ingredient, but there's been no further guidance to provide consistency in how those determinations are being made or to spell out the requirements for the operators to meet in order to state their case.

So that was the background for our discussion, and in the recommendation from the task force, you see a fairly length introduction section, and then background section, which has the definition of "commercial availability," some citations from the regulation and from the preamble, and I'm not going to read through that at all, that's all been posted on the web, and -- yes, George.

MR. SIEMON: Jim, is there an extra one of the handouts? I can't seem to find mine from yesterday.

(Document handed Mr. Siemon.)

MR. SIEMON: Thank you.

MR. RIDDLE: In case it's not commercially
available, we will get you another one.

(Laughter.)

MR. RIDDLE: Okay. So skipping down now to Recommendation 1a, which is found on Page 3. So, Ann, if you can scroll down a ways. All the Board members have this in front of you; I wanted to put it up on the screen so that members of the public could follow along.

I'm not seeing how that -- okay, so the first part of our recommendation was simply reaffirmation of a recommendation the Board made in May 2002 concerning the -- really the title and heading, the paragraph, in 205.606, and part of that is to remove the words "as ingredients," which don't appear in this recommendation, they do appear in the Rule currently, as written, and it's redundant, because when it says "allowed in or on agricultural processed products," "in or on" includes ingredients. So it's not to remove ingredients from consideration.

And then also this section only applies to organic products. "Made with organic" products can include conventional ingredients.

MS. DIETZ: And the other reason that we had originally recommended that we take "as ingredients" off is that materials on 205.606, in processing and ingredients, is defined as something that's put on the label, and processing aids are not ingredients, so there was some
confusion on whether or not people needed to have
processing aids, and it's our everything that everything
needs to be on the list, so we wanted to take away that
confusion and basically state processing aids or anything
used in or on must appear on the National List.

MR. RIDDLE: Right. So that really, 1a, was an
affirmation of the prior standing recommendation of the
Board, and then there's some new rationale which has been
added to this version, and all of the new language is
underlined in the Board's text and the language to be
deleted has strikethrough.

Okay, moving to Recommendation 1b, and this is
where this new draft is recommending some changes to the
previous draft from the task force, and this is in response
to comments submitted to the web posting, and here we are
-- would be -- you know, if the Board supports this
recommendation, we would be calling for replacement of the
current Section 205.606 with a new Section 205.606, which
would be entitled:

Non-organically-produced agricultural substances
prohibited or restricted for use in or on processed
products labeled as "organic" or "made with organic."

And, I'm not sure, maybe that "made with" should
be deleted. Yeah. That's an oversight there. So --

MS. CAROE: Well, wait a second, do you want to
delete it, because you're talking about processing aids as well, and you would want it -- processing aids --

MR. RIDDLE: Okay, no -- yeah. I'm sorry. Yeah, that's -- Andrea. We would leave this in this section. I'm confused. I was -- because the intent --

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. RIDDLE: Yeah. Just to explain first, the intent of this new section would be similar to crop inputs and livestock inputs, where there's a category for prohibited naturals.

There may be certain agricultural ingredients which, after a petition, rulemaking, recommendation, that the Board may recommend are inappropriate for use in organic or should have some restrictions. There's no place on the current 205.605 List for such substances to be addressed. This -- especially the prohibition of agricultural materials.

So this would create a placeholder -- we don't have any specific substances in mind right now, but it would create a placeholder in order to address either prohibited naturals or agricultural substances that need very specific restrictions on their use, and that would apply to a product that's labeled "organic" or "made with."

Okay. And then, you know, it just follows with the language of the text for that section, which basically

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
repeats the title.

Any other questions or comments on that?

MS. DIETZ: Just a comment. The further rationale for doing this is that the current materials listed under 205.606 were confusing the industry there. There were materials on there that people were considering okay to use even though organic substances were out there in the area, so they were using them as a commercial availability list, and that was not the intent of 205.606. Again, the intent was to put materials on there that the Board wanted to restrict in some way.

MR. SIEMON: Jim?

MR. RIDDLE: Yeah.

MR. SIEMON: I'm sorry, I'm confused. 1a and -- 1b is building on 1a? These aren't alternatives, are they?

MR. RIDDLE: Well, yeah --

MR. SIEMON: Because you're talking about the same .606 in both of them.

MR. RIDDLE: Right.

MR. SIEMON: I'm confused, as usual, so --

MR. RIDDLE: Good (chuckles), and I was reading back through it this morning, and I felt the same way: they are contradictory to one another.

In the first instance we were reaffirming an existing recommendation, but now that we have altered 1b --
originally 1b, as you can see, was written to call for a
new Subsection .607, but that's really unnecessary. It
really should just replace .606 and --

MR. SIEMON: So if we've got 1b, we don't do 1a?
MR. RIDDLE: Right.
MR. SIEMON: I wasn't clear.
MR. RIDDLE: Yeah. And I think the task force
should meet briefly during the break outside session to
address that, and maybe we'll just scrap the whole
discussion of 1a and focus on 1b, so --

MR. SIEMON: Well, and we get to 1c, I'll ask
about that one too.

MR. RIDDLE: Well, yeah, I'm ready to go there,
if you are. But yeah, thanks for -- thanks for pointing
that out, George. I did want to mention that.

MS. DIETZ: Yeah. It could just be wordsmithing,
where we say "prior recommendation NOSB May 2002" and just
take away that Recommendation 1a.

MR. RIDDLE: Yeah, just as part of the
background.

MR. SIEMON: Yeah.

MS. DIETZ: Because it's not really a
recommendation.

MR. RIDDLE: Okay. 1c. Now, this one is an
try to deal with the substances that are currently on
.606 and two substances that the Board has reviewed and recommended be added to .606, gelatin and shellac, and our recommendation is that the Board look at those substances again, we use the words "review," but we're not talking about another TAP review or anything to that extent, we're talking about -- the Board has already completed the work on these substances, but now to run them through the choices of A, B, C, or D to determine where they should fall on the National List.

Since there will no longer be that list of commercially-unavailable agricultural ingredients under our recommendation, something needs to be done with each of those substances, they either need to be removed totally from the National List and just fall under the ACA authority of determining commercial availability for that material; or we might choose to recommend some kind of restriction or prohibition on any one of those substances, I'm not prejudging where they should go. Kim, then Rose.

MS. DIETZ: Yeah. I mean, an example is, you know, on the gums, there's an annotation: using water extraction only, and that might -- that would certainly be one that would -- could stay under .606, because it has a restricted annotation.

MR. RIDDLE: Okay. Rose --

MR. SIEMON: But you're recommending --
MR. RIDDLE: Rose.

MR. SIEMON: Sorry.

MS. KOENIG: So the handling committee would then -- I'm just looking at the process. So the handling committee would then make that recommendation based on, you know, some just small process, or -- I mean, how would we get that form of recommendation?

MS. DIETZ: Well, we know that -- I mean, this board, this existing board, has reviewed gelatin and shellac, so those -- I think those are ones that we could easily say, "This is how we recommended originally, this is where they should go," and then bring the others back forward and give some type of background and review as to why we feel that they should be moved, in what place, bring it back to the Board as a formal recommendation and have the Board vote on it.

MR. RIDDLE: But, yeah, it would be the handling committee --

MS. DIETZ: Yes.

MR. RIDDLE: This is kind of a work order for the handling committee.

UNIDENTIFIED MALE VOICE: (Inaudible.)

(Laughter.)

MR. RIDDLE: George, did you have --

MR. SIEMON: So the basis of this one is to have

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
three sections under .606 and divide it up into three
different categories of what the real recommendation is
here?

MR. RIDDLE: I'm sorry --

UNIDENTIFIED FEMALE VOICE: Just one --

MR. SIEMON: You have 3a, b, c, and d --

MS. DIETZ: You'll have 205.605(a), .605(b), and .606.

MR. SIEMON: All right, I'm looking (inaudible).

MR. RIDDLE: Well, yeah, if you're just looking
at a through d in this document, that's not where we're
recommending changing to the Rule, that's just the way that
the task force divided this up as the choices.

MR. SIEMON: Okay. I --

MR. RIDDLE: Yeah. You see a is actually
205.605(a), and then b is to place it on .605(b), c would
be the new .606, and d would be removal from the list.

MR. SIEMON: I didn't catch the five [phonetic].

I see.

MR. RIDDLE: Yeah. Okay. Any other questions or
comments on that part?

(No audible response.)

MR. RIDDLE: Okay, so that's really the substance
of the recommendation from the Board on how to address some
changes to the National List.
The next, Recommendation Number 2, is how to bring consistency and predictability to the commercial availability process, procedures to be followed by producers, handlers, and certifiers, so we just repeat the definition of "commercial availability" from the Rule and then go through determination procedures, and a change in this draft is that those procedures would fall under Subpart (e), Certification section of the Rule. We're not saying what number or creating a new number; we're just saying that it belongs in Certification Subpart (e). So that's a change here based on comments received.

Okay, at the top of the next page: A) "The applicant or certified operator must submit a written report to the certifying agent as part of the Organic System Plan or Organic System Plan Update that provides," and I am going to read through these:

Number 1) "A description of the ingredient and the required technical specifications of the ingredient, including form and quality";

"Estimate of the quantity of the ingredient needed within the specified time period if this is a factor in the requested allowance of a non-organic ingredient," and then in parens: "Quantity, quality, form, and function may be considered for individual product requirements and not for total business requirements for all potential
product lines."

And, Number 3) "Explanation of how the ingredient is used to fulfill an essential function."

So that's the information that the operator must include in the Organic System Plan.

And then, 4) "During the inspection, the application or certified operator must provide information concerning known sources of the ingredient and organic status thereof and provide written evidence of efforts to locate sources of organic ingredients, including the dates when potential supplies of applicable organic ingredient suppliers were contacted."

"Written evidence may include letters, faxes, e-mail correspondence, or phone logs of discussions with potential suppliers. A minimum of three potential suppliers shall have been contacted during the previous 12 months."

Rose.

MS. KOENIG: My question is in terms of kind of the way the Rule is presented, I mean --

MR. RIDDLE: If you can speak up, please, or closer.

MS. KOENIG: I'm sorry. I just don't see any section of the Rule that has this kind of descriptive requirements, so --
MS. CAUGHLAN: Proscriptive is really -- quite proscriptive.

MS. KOENIG: -- so I don't know if this is really -- you want them in the Rule or do you want a directive or -- I mean, this seems more like -- I mean, I appreciate the spirit of what you're trying to achieve, I have no qualms with, kind of, what's written; it's just placement in the Rule just seems a little inconsistent, I guess, to me, that there --

UNIDENTIFIED MALE VOICE: Well, I don't --

MS. KOENIG: It seems like there should be a format where you explain those things, whether it's a definition or a directive or --

MR. SIEMON: Should be a guidance (inaudible) --

MR. RIDDLE: Yeah, and I -- I didn't read through all of the background and citations from the Rule, to save some time, but some of that's explained there, and the language at the top, "Applicant must submit a written report to the certifying agent as part of the Organic System Plan on commercial availability," that fits with the Rule.

And we aren't saying what specific number or how it would fit, we leave that to the NOP, but we just recognize or acknowledge that it is the certification section, it's not the materials list section that needs
changed here, and maybe it can be addressed with a
directive or policy guidance, but it's a certification
issue and not a materials list issue.

Andrea, then Kim.

MS. CAROE: Well, I have somewhat the similar
concern as Rose on this, is that the Rule doesn't state
that you have to call three suppliers, and I think once you
say three suppliers, that's all you'll ever get, and a lot
of folks out there are doing a lot more to find those
organic ingredients, and I think it might be
counterproductive.

And also, telling the certifiers that the
inspector has to look at this, instead of them looking at
it through the application process, I think is getting into
their business; I think it should be broader and say that
"this should be evaluated by the certifier during their
certification process," but telling them to do it at the
inspection with the inspector I think is -- is: getting
into their business.

So some of this, I -- I agree that this is
founded in the Rule and that the Rule specifically states
that you have to -- as a user of a non-organic ingredient,
you have to justify the use of that ingredient with a
search for the organic ingredient, but this has gone a
little bit past that, and although it's great -- guidance
are a great -- a set expectation, perhaps, but I don't think that we can say three suppliers and evaluate at inspection and -- some of that is -- the detail may be too much.

MR. RIDDLE: Kim.

MS. DIETZ: Just a bit of background on this. These recommendations, really, have been in the industry for probably the last three or four years and -- as a kind of -- not written that you have follow this, but people somewhat have been following it.

So the -- let me try to -- there were so many things that you said, that I wanted to comment on.

So that I don't necessarily agree that this isn't going to work, because as -- first of all, as a handler, you're required to have in your handling plan a commercial availability process, okay, so right now, if people don't have what they do, they could, really, be in violation of the Act. So that's the first thing. So this, I think, is very fair for the handling/ processing groups out there to follow, and we have been following it, in some sense.

The other thing is that you have to understand that when you're out there sourcing ingredients, you don't know you're going to be doing that when you submit your application, this is something that's going to happen in the field, so to speak, so you have to document what you've
got, you've got to have a system, and then you've got to follow the system. And so to me, having the inspector actually validate that you've done it is the right place to do that.

So those are my comments.

MR. RIDDLE: Mark, then Rose, then Andrea.

MR. KING: Yeah, I've been somewhat a part of this task force, and first of all, thanks for all the work, because I know a lot of time has gone into this, but one of the things you mentioned, Jim, that sort of caught my attention is Subpart (e), "We're not sure where this should go but we know it should go in the Certification section," and it seems to me that what we're attempting to do, in small part at least, is verify information through the inspection process.

So I don't know if at some point in the future we would want to consider that section verification of information, integrate commercial availability into that, I don't think that section totally does this document justice, but perhaps, as we talk about the inspection process, it could be inserted in there.

MR. RIDDLE: And the inspection process is part of Subpart (e) as --

MR. KING: Yes, in Section 403.

MR. RIDDLE: Right. So we're -- yeah.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
Basically, we're wanting to hand something to the NOP
and --

UNIDENTIFIED FEMALE VOICE: Let them determine
where it fits.

MR. RIDDLÉ: Yeah, from the Board. Let's see,
Rose.

MS. KOENIG: So I guess just clarify on this
Section (a), so is this for all ingredients, would a
potential person have to --

MR. RIDDLÉ: All agricultural ingredients.

MS. KOENIG: All agricultural -- whether they're
using organic or non-organic ingredients or all
ingredients?

MR. RIDDLÉ: All ingredients used in a product
labeled "organic."

MS. CAROE: The non-organic, this is for the
non-organic, this is supporting the non-organic --

MR. RIDDLÉ: It's all agricultural ingredients
used in a product labeled "organic."

MS. KOENIG: So even if it's -- even if you're
finding organic sources, you would have to document --

MS. CAROE: No. No, not for the organic
ingredients, not for ingredients that you find organic --

MR. RIDDLÉ: Oh. Well, no, you've got a
certificate, you've got organic, you've bypassed this, it's not applicable then, because you've already exceeded it. It's only -- yeah, it kicks in when you want to use a non-organic, but applies to all agricultural ingredients used in a product labeled "organic," not in a product labeled "made with," and of course not in one "100%" either, it's irrelevant there, so --

Andrea, did you have something else?

MS. CAROE: Yes, I do. I just want to point out that ingredients are -- can be very specific. Say you were making a product that included spirolina as an ingredient, right now there's two manufacturers that I know of that do organic spirolina, just two. If you called both those manufacturers and they didn't have it available, would you not be in compliance because you didn't call three?

I mean, I think by setting a number, you're not understanding the scope of searching for ingredients. Sometimes the ingredients are quite available, other times they're very narrow, you know, you may be looking for a chocolate that freezes, for an ice cream bar, that's very specific, you know, I mean it's -- it's not necessarily -- I just -- I think the three -- I think once you use that on a certification level, that's -- it's just -- it's not always applicable.
And the other thing I want to say is that the Rule specifically states that a certifier must have enough evidence, before they send an inspector in, that says this operation can possibly be certified, and the certification agency has the right to say, "We want to see that document for the sourcing of that ingredient" before they go in.

Now, if you -- you know, yes, it is the obligation of the on-site inspection to verify the information that was received in the claims that that operation is making, but you're specifically stating here that this is how the certification operation -- certification agent is going to operate, and I -- I just don't believe that we have the right to tell them how they're going to operate. You can tell them what needs to be done and what -- through the process, what you need to get out of it, but where it needs to be done, I think it's inappropriate.

MR. RIDDLE: Well, yeah, and I'd like to respond to that. The first point, on the minimum of three potential suppliers being contacted: that's not being changed in this draft; that was already something that the task force had agreed to in the prior draft. So we're not looking to change that, you know, right now.

And the intent is to bring predictability, so that you know if you have contacted at least three, it
doesn't limit it to three, but at least three, then you have fulfilled a standard, that the certifier can't, you know, change the rules on you at that point. It's to provide consistency and predictability.

And yeah, maybe it's not appropriate/adequate in all instances, but as a rule of thumb, that's what we're trying to establish.

And on the -- yeah, on the other one, which is a change being proposed in this draft, Number 4 there, that was in response to comments, that the -- that this really happens during the inspection, and I hear what you're saying, that the applicant should submit the information on the known sources of the ingredient and organic status thereof in their organic system plan, and that should be reviewed in advance of the inspection.

That's what we originally had recommended. And then the commenter was saying no, that that really should occur during the inspection, and on further thought, you know, I'm thinking that maybe -- that during -- the inspection, you know, part, should only apply to Number 5, that that's when the inspector reviews the written evidence, that -- that's something that happens on a daily basis and can't be submitted as part of the organic system plan, that's, you know, an ongoing process, the attempts to source. It's not something that you do one day out of

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
the year, send in your plan, and you're done.

So I think that is appropriate that that be directed to the inspection process, but Number 4, submitting information on the known sources of the ingredient and organic status, I think is appropriate to keep in the organic system plan.

So when the task force meets, I think we can talk about a change there. Mark, then --

CHAIRMAN KING: I was just going to say, I think this is really good dialogue and this is a good piece in front of us. It sounds like what we're really talking about here, if I may, is the difference between review of application and verification of information throughout the inspection process, and there are -- there are some ways to accomplish the same end through that.

So I appreciate the comments, and in about five minutes I'd like to wrap this up to stay on schedule, so --

MR. RIDDLE: Okay. Okay, so I think we'll continue that discussion in the breakout session.

B, which is really the steps that the certifier would need to follow in making these determinations, and, once again, to bring predictability and consistency to the process, so:

Evaluate the applicant or certified operator's
claim that no organic substitutes are commercially
available in form/quality/quantity needed by the operation
to fill the required function;

2) Verify that the applicant or certified
operator has made a good-faith effort to source organic
ingredients;

3) Verify that the ingredient is not
commercially available in organic form by reviewing the
best-available information, listing known sources of
organic ingredients;

4) Notify the certification applicant or
certified operator of sources information which lists
available organic ingredients if the certifying agent
finds that such ingredients exist;

   And then we're recommending in this draft to
   delete Number 5;

   And then, moving on: Maintain and annually
submit to the NOP an up-to-date list of ingredients that
have been granted allowances in non-organic form, and then
in parentheses: The list shall maintain the
confidentiality of ingredients, suppliers, and parties
granted allowances.

   "The reporting requirement shall be implemented
through the accreditation process by providing ACAs ample
notification and time to adopt data-management systems,"

R & S TYPING SERVICE – (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
and that's a recognition that not all certifiers have the
data-management systems currently in place. This is --
would be a new reporting requirement that will take some
time to implement.

And then the rest of this remains as it came out
of the task force: Require certified operators to update
commercial availability information in each organic system
plan update;

Acknowledge all complaints concerning allowances
granted and provide rationale for determinations. If the
investigation of a complaint provides significant new
information, then the certifying agent must revisit the
allowance; and

Require that products without sufficient
documentation not be labeled "organic." Such products may
be labeled "made with organic ingredients" if they meet
all applicable labeling and product-content requirements
for that category.

Any comments, questions on that part? -- and
this is the last part. Andrea.

MS. CAROE: I -- as I voiced previously with
this task force, I think Number 3 changes the intent of
what the certification agent's role is. The certification
agent isn't to take on the liability of the product. They
are to verify that the justification provided by the
applicant is appropriate. I don't feel that the
certification agent's job is to verify that that
ingredient is not available. They're verifying that the
effort was due diligent but not that it's not available.

So -- I mean, I've said that before, and I
really can't see that certification agents should take on
that role.

MS. DIETZ: I think the same intent, she --
well, I think you're --

MR. RIDDLE: Kim?

MS. DIETZ: I think you're meaning the same
intent that we are. We're not --

CHAIRMAN KING: Yeah.

MS. DIETZ: We're not saying you need to go out
and verify that those are commercially available, saying
verify the documentation --

MS. CAROE: But that's not --

MS. DIETZ: -- that's provided to you.

MS. CAROE: I mean, that's -- the one before
that, Number 2, says "verify the good-faith effort."

I believe that is accurate.

MS. DIETZ: Right.

MS. CAROE: The next one says "verify that it's
not commercially available." I don't agree with that. So
I would suggest, once again, to strike Number 3.
MR. RIDDLE: Well -- yeah, and you're on the
task force, and --

MS. CAROE: I know. I've said it before,
though.

MR. RIDDLE: -- we have considered striking
that, and it's in the draft now, and in -- my sense is
that in order to determine if an operation is in
compliance, the certifier needs to assess not only the
effort but also the facts of whether those substances are
at all available in an organic form.

MS. CAROE: I disagree. I don't think that's
(inaudible).

MR. RIDDLE: This is an attempt to bring
consistency, and yes, there is a need for more information
on commercially-available organic minor ingredients to
give certifiers better tools to make those assessments,
but they need to actually perform some due diligence to
determine if the operation complies or not, besides just:
whether they made a good effort. Rose.

MS. KOENIG: Yeah, I hear Andrea's point. You
know, I look at this -- you know, there -- I guess it's
sort of like -- you know, not to go back to the List 3
inerts, but I will go back to them.

There's probably some ways in the future -- some
ways that the industry can develop these databases for
either -- you know, in this case it's manufacturers, another case might be pesticides.

So I don't know if you want to -- you know, I think maybe our efforts might be better placed: rather than requiring this, is: working on and trying to establish those kinds of lists and sources for certifiers and acknowledge that people who are accredited certifiers should be doing those kinds of things.

You know, I -- I think what Andrea's saying is not that she opposes necessarily that -- you know, the intent, I guess; it's just she thinks -- and I guess I tend to agree -- that the format that it's in -- I think probably does cover it.

MS. DIETZ: And we acknowledge that there is really no place out there right now that has commercial availability lists, so --

MS. KOENIG: Yeah. So, I don't know, I'm just putting forth that it seems like in many cases that we're showing that there has to be some kind of databases, I mean similar to like what OMRI does in brand names, I mean there should be databases used for reference. It's not a requirement, again, but references so that people can get those sources of information via -- I don't know -- NOP website or what have you, so that there is tracking, and I think that the USDA -- I mean, it's not their mandate to
do this kind of stuff, but they do have data-collection kinds of things all the time, that maybe there could be some kind of tracking --

MR. RIDDLE: Right.

MS. KOENIG: -- of the marketplace and what's available.

MR. RIDDLE: Yeah. And I think --

MS. KOENIG: Not only, you know -- as a source not only to help, you know, conventional, but also, if there is organic, that really would be a great service.

MR. RIDDLE: I'd like to wrap this up, and the task force will be meeting during breakout for just fine-tuning this recommendation.

I did just want to point out that the rest of the document explains -- summarizes some of the comments that were submitted and how they have been addressed in this draft.

And I also want to just point out: one of the commenters said something in quite detail, that I encourage you to read, and essentially advocating the removal of commercial availability considerations altogether from the Rule for minor ingredients, and if someone cannot find organic ingredients in significant quantity and they can't meet that 95-percent threshold, then the products be labeled "made with organic," but just...
to take it totally out, but that was contrary to the
recommendation of the task force, but I did feel obligated
to mention that that is another option and something which
should be considered and is addressed in these comments.

  MS. DIETZ: And in closing, remember that we --
we have to have truth in labeling, so most of this is
going to happen in those minor ingredients, where if you
have something that's under 5 percent that you just can't
source -- take organic vanilla, for example, that's just
right now not available, or something like that, you're
not -- and you're going to label properly, whether it's a
"made with" label or an "organic" label (inaudible).

  MS. COOPER: It's not like we're trying to cheat
the system, but --

  MR. RIDDLE: Thanks, Ann.

  CHAIRMAN KING: We thank all of you for helping
us stay on schedule, I appreciate that.

  The next item on the agenda is new for this
Board in that it's a breakout session. The intent for the
first hour is to have three committees in a breakout,
which would be crops, livestock, and handling, those
committees dealing with materials.

  It is at the chairs' -- the committee chairs'
discretion in terms of how they want to involve the
public. The ongoing goal here is to increase the level of
transparency and when we're reviewing it also confirm for you that we do consider public input and that we do take your comments when we deliberate and make decisions on materials.

So I think at this point --

MS. DIETZ: I --

CHAIRMAN KING: Let me finish, one second. So it's at the chairs' discretion. In other words, the public perhaps may just simply observe and then at the end we could have a quick question-and-answer. We'll do this for one hour, then -- if the chair so desires, and then we'll do a quick break. Kim?

MS. DIETZ: A point of clarification with NOP. A number of the committees have to go back and actually make recommendations on materials. Is that something that we can have the public involved in, in deliberating and making recommendations --

CHAIRMAN KING: Observing.

MS. DIETZ: -- and observing? I mean, you know, we've got some materials that we have to take back, soy protein isolates and TSPP.

MR. MATTHEWS: Richard Matthews, National Organics Program. That's really up to the committee.

MS. DIETZ: Okay.

MR. MATTHEWS: The idea is that the committee
would get together, go over the written public comment that was submitted prior to this meeting, plus what you heard yesterday during the public session, and that you would then rework your current position if you believe that there is a need for reworking, or you may come back and say, "We're not making any changes."

Whether or not you take additional feedback from the public is really up to you.

MS. DIETZ: I just wanted to make sure we weren't violating anything.

MR. RIDDLE: Yeah. No, that's an important thing.

MS. KOENIG: I would suggest, though, in terms of process, that -- that the committee would formally recognize or ask somebody if that information is needed, that it's not the arena -- because it's really not fair, this is not -- this is not a section for public comment.

If there's clarification, I think that, you know, it has to be a real specific issue, but certainly people can observe and listen.

CHAIRMAN KING: No, I think that's a really good point, and actually, I think primarily it is for you to observe. Occasionally if the chair wants to recognize someone or you have a pertinent point that deals specifically with that topic, you can make that point.
specifically, then that's fine, and it's at the chair's discretion.

MS. KOENIG: And then the only thing -- also, if the public is involved and the actual petitioner is there, I think that it -- well --

CHAIRMAN KING: This is at the chair's discretion, Rose, we'll let them decide that.

MS. KOENIG: Yeah, but I think there needs to be disclosure of anyone who is presenting -- who is -- if they are called upon, who they represent, because I think it's really important that we have some kind of process so that the committee understands who those individuals are.

CHAIRMAN KING: Okay, duly noted. Well, I want to see what Katherine -- then we'll go to Jim. Katherine, is that the sign-up sheet or the --

MS. BENHAM: The sign-in book -- that's for public comment, this is the sign-up book, so everybody needs to make sure that they sign in.

CHAIRMAN KING: This is sign in for today, as --

UNIDENTIFIED MALE VOICE: Attendance.

CHAIRMAN KING: -- as in "I've attended."

MS. BENHAM: Yes.

CHAIRMAN KING: Yeah. And you don't want to be on her bad list, so sign in now.

(Laughter.)

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
UNIDENTIFIED MALE VOICE: Is the sign-up sheet for public comments --
MS. BENHAM: Public comments out there too.
UNIDENTIFIED MALE VOICE: Out there too, okay, for tomorrow morning.
CHAIRMAN KING: Okay, and Jim, you had a comment.
MR. RIDDLE: Yeah. As I understand it, we're going to -- the crops, livestock, and handling committees are going to break out now, during this first session, before the break, and then after the break I'd like to meet with the 606 Task Force --
MR. CARTER: I'd like to meet with the policy development committee.
MS. COOPER: And I would like to meet with materials.
CHAIRMAN KING: Okay. So essentially -- it's almost 9 o'clock. This first session will go approximately 60 minutes, and then we'll take a break and come back and do the other stuff.
MR. MATTHEWS: For the record, Richard Matthews. I just want to clarify one thing. What I meant by: it was up to the committee chair is not that -- this is not a new opportunity for public comment; it would be strictly for maybe a clarification, somebody who had made
a public comment, if you're wanting clarification you could ask for clarification, if the petitioner's there you could ask for clarification on something. This is not an opportunity for more public input.

MR. CARTER: So when Marty hands a yellow sheet of paper, is that public comment or clarification?
(Laughter.)

MR. MATTHEWS: That's probably public comment.
(Laughter.)

CHAIRMAN KING: Yeah, and I think Rick brings up a really good point. There is work to do during this session, so please keep that in mind and respect the interests of the committee.

So at this time let's go ahead and break out.
(Off the record and reconvened.)

CHAIRMAN KING: Welcome, hope you had a nice break, and thanks for your help during the breakout session.

We're going to start this off with Keith Jones, who's going to do a presentation, or an update, if you will, on the ECERT Program. ECERT, not Easter, Katherine.
(Laughter.)

CHAIRMAN KING: So if you could take your seats and get prepared, we'll get started here.
(Long pause.)
CHAIRMAN KING: Keith, it's all yours.

MR. JONES: Imagine, if you will --

UNIDENTIFIED FEMALE VOICE: You need to get near a microphone.

(Pause.)

MR. JONES: Folks, I apologize that our system's not going to let me be on the record. There's nothing that I'm going to say that's going to be of any sort of regulatory consequence, it's totally educational, you can take good notes, you can talk to me afterwards, you know, we'll make sure that you have the information you need, so --

UNIDENTIFIED FEMALE VOICE: Can you please get near a microphone? It's pretty hard to hear.

CHAIRMAN KING: Yeah, we couldn't --

MR. JONES: I can talk louder, how about that?

CHAIRMAN KING: Thank you, yes.

MR. JONES: All right. From the diaphragm, okay. Okay, let's start over.

Imagine, if you will, a product supplier in Belgium wanting to source NOP product, an accredited certifying agent in California entering data real-time on producers and processors, and Item-S compliance, tracking also in real-time, compliance data related to non-compliances and trim lines in those non-compliances that are
going on around the world. That's the vision of what I'm about to share with you this morning.

Multiple users entering data into a common database that would capture both regulatory information and compliance information for use on a real-time basis.

Okay.

That is the NOP ECERT project, and I'm hoping that I can run this thing. Katherine? Okay, tell you what, let me go back to the tried and true.

Our vision is simply this: to supplement a secure, integrated web-based system for electronic collection, use, and dissemination of information that is required to be submitted under the National Organic Program regulations. Okay.

Real-time submission, access worldwide through a web-based interface, and utilizing data that we're required to collect anyway. Okay.

Now, we have designed this system with our first-line interface in mind, and our first-line interface, folks, is the accredited certifying agents, so we've designed this system with their needs in mind, and also AMS compliance. So that is the two primary user interfaces that the system's designed for.

Now, flowing out of that, because we're capturing this data, will be trade uses as well, which
means that that purchaser in Belgium can eventually go
online, source through our web-based source, and have
access to every NOP product that is certified around the
world. No other system will be able to combine both
trade, product, and regulatory information.

Now, part of this will be proprietary, only USDA
and accredited certifying agents will, obviously, have
access to certain information related in the primary
interface. Okay.

The public side will be the trade side, where
you, as an individual, can go in, type in a keyword,
"potatoes," "corn," "soybeans," whatever, and outflow from
that database will be a list of products that are
certified with the NOP standards around the world.

One of the features that we are considering
building into the system will be a distance measurer,
because we know that people are very concerned about
sourcing product as close as the location of their
processing facilities, so one of the things that we're
considering is doing, at least on the US side, a ZIP code
search, where I, as a processor, could put in a ZIP code
that says -- and my ZIP code in Virginia is 20121, I type
that in, I click on "give me 150-mile radius," and then it
spits out, based on ZIP code searches, products within
150-mile radius of my personal ZIP code. Okay.
Now, what I'm about to show you today represents the first build of this system, and let me tell you how we're putting this together. This system is designed to be modular in approach, we have contracted with a software developer, and what we are building is functionality over time. So what I'm about to show you today will not have all the features in it that I have just described, but I can walk you through what we can do today once we have the system fully operational and then what our future builds will be.

Now, one of the things that you need to understand too is that one of the things that's going on in the federal government right now is a complete integration in US Customs departments' international trade data systems, and for some of you I had talked to about this project before, we actually expected to have it fully up and running this summer. That's probably not going to happen, because what has happened at AMS is that we have been tasked with ensuring that everything we do relating to software, data collection, and things like that, can integrate and interface with Customs ITDS project, okay.

ITDS, International Trade Data Systems, was kicked off back in 1995. It's designed to integrate all of the trade flow data and make more efficient clearing products through Customs. It has taken on an enormous

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
urgency for Homeland Security, and so I, along with other AMS staff, are involved in looking at our systems to make sure that they integrate with ITDS, and that perhaps will slow down the full implementation of the project, so you just need to be aware of that. But regardless, what I'm about to demonstrate and show to you will be where we will be going, okay.

Now, as I said, the primary user -- the primary interface that we've designed is for ACA. ACAs are our eyes and ears on the ground. And I know you guys don't like to hear this, you are our agents on the ground, okay. You're the first line of defense.

So what we've done is designed this system for you, we've designed it to help you submit your data to us in an electronic common format, where you're not going to have to send paper to us anymore. We've also designed it and will design it to assist you in reporting non-compliances to us on a real-time basis so that we can begin to track trim lines related to various sectors of the Rule. Okay. So for the ACAs in the audience: this is really designed for you in mind. Okay.

Now, you will come to a site entry screen like this, and unfortunately, as I copied it off the website, we've got a number of marvelously gorgeous graphics that just didn't show up, okay, so there's some graphics up

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
there, it's got AMS's logo, a little bar that says
"National Organic Program Online Services," which is kind
of what we're calling this.

So you're going to have a username and password.
Marty, what do you want your username to be?

MR. MESH: I forgot my password.

(Laughter.)

(Cross-talk.)

MR. JONES: I'll tell you what I'm going to do,
we're going to use Marty as a guinea pig and I'm going to
-- for his username consider this: "I Cause Trouble
Every Day," okay? That's his username, all right?

(Laughter.)

MR. JONES: And Marty, you'll have to pick out
your own password.

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. JONES: Backing away from the facetiousness:
An ACA will have a unique username that they'll set up,
they actually go into the system and set that up. They
also set the password up, and then that password can be
shared by any person on staff that they feel like needs to
have access to the system. We're not going to be dogmatic
about security at that level, we feel like you need to
make decisions on your staff as to who needs access to the
system, okay? But you'll come to the system, you'll
identify a username, and you'll be into the system. Okay.

You'll come -- as you come into the system, then, you will enter your data, okay? Now, we're going to have much of this data, address and phone numbers, so you will be able to say if it's a corrected address, a corrected phone number, in other words you'll be able to enter to us the latest information, because one of the things that we're noticing is that addresses and phone numbers obviously change over time, the address and phone number that you gave us at the time of your accreditation may not be necessarily the address and phone numbers that you're using today. In most cases -- in fact, I can't think of a case where you didn't update it, but you'll be able to provide the latest information to us.

Now, I don't know how many of you can see the bottom of the screen, but down in this area, this will be information for USDA, so once -- and this actually, unfortunately, says "certified" instead of "accredited," so instead of "accredited," that's actually an error that the contractor is going to have to go back and correct.

But we will verify this data, make sure it is accurate, and then we will go into the system and make sure that -- and in this case, this hypothetical case, this individual's authorized for TM11 issuance [phonetic], shipping to Japan [phonetic], they've been accredited for R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
crops, livestock, wild crops, and processed products.
Okay. So that sets the database parameters. Okay.
And then also it's got the creation of the file
date, any modifications in the date of accreditation.
Okay. That way we can keep track and determine
(inaudible).
Okay, now let's go to the certifying [phonetic]
client screen, and this is probably the most -- I think
the most interesting screen, and also it's going to be
long-term the most useful. This will be the screen that
the ACAs will use to update -- and I say update -- their
client list.
Marty, let's assume you certified Tom, you
signed off yesterday, you come to this system and you
enter in X-Y-Z Organic, Tom Hutchison, address,
information, and then one of the things too that the
system will do is assign a unique identifier number to
this client, okay? That way we'll be able to track the
client throughout the system.
Now, I can't tell you what that unique
identifier number is going to be yet, we're still going
back and forth the contractor as to what makes sense in
terms of using the identifier screen, whether it needs to
be an alphanumeric screen, whether it needs to be
something related to the certifier's name so that we can

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
immediately identify it, we're still going back and forth as to what it's going to look like, but it will assign a unique identifier number.

Then you will click on -- and unfortunately, folks, we don't have web access today, so I can't show you a lot of the functionality, but you'll click on the status of Tom's operations, which at this point will be certified, you'll click on the operation type -- crops, livestock, whatever, there's a drop-down box there, that you can click on what is being certified for, any -- or, I'm sorry, this is processor and handler here, so this would be certified producer and processor here, and then what the operation is certified for, we just click boxes down in here.

UNIDENTIFIED MALE VOICE: I have a question.

MR. JONES: I'd like to hold -- the way I talk is I'd like to hold questions till the end. I can go back and --

UNIDENTIFIED MALE VOICE: I retract that last question.

MR. JONES: I understand.

(Laughter.)

MR. JONES: I can go back and run through any of these slides, and, you know, I'm here as long as I need to be, I know you guys are on a schedule you need to stay to,
I've got this loaded on my system, if we want to gather up afterwards and walk through it in more detail, I'm happy to do that. So I'm here at your disposal, within reason. (Laughter.)

MR. JONES: And then there's, of course, a date creation, a modified date, and certification date, and status change date. This status drop-down box here is where you will go in and identify -- let's say you've identified a non-compliance. There will be a drop-down box, and this will be in the next build, it'll probably be over here somewhere, there'll be a drop-down box that says "non-compliance," and then there'll be a drop-down box on every section of the Rule, 205.404 (inaudible), whatever, okay, and you can click on that, as the non-compliance, and that will, when you click on that, autopopulate a common non-compliance letter, that you will have the choice -- and one of the things I do want some feedback on is whether or not you would like to have this e-mailed automatically to your client, if your client has e-mail access.

So essentially what you would do is you would go to this screen, populate this on a real-time basis with whatever data needs to be populated in the case that we're just talking about, it's a non-compliance 205, let's say .406, for whatever reason we want to use that. That will
autopopulate and bring you to another screen that will be a common non-compliance letter, it'll have boilerplate language in it that we have passed muster at OGC, and then you will insert any applicable information that you feel necessary, and then that letter can be sent either through e-mail or you can print off and send it through regular mail.

But we are considering the e-mail option. We're trying to make this as electronic-focused as possible, as paperless as possible, okay. Now, that doesn't mean you couldn't get into the system and print off the letter for a hard copy or something like that, but you would have the ability to send a non-compliance letter by e-mail.

Another thing that the second build will do is that once this screen is finished and completed, it will autopopulate a common format certificate with standardized language on it, okay. You can print that off at your desk. So you fill this out, it will collect the information out of the various fields, autopopulate into the common certificate format, and you can print that out right at your desk. Okay.

And really, as I summarize, what we're trying to do, folks, is develop, as I said, an electronic system that is the window to the NOP world, for regulators, for traders, for ACAs. Okay. And we believe that within
relatively a short period of time, with -- hopefully within the next six or eight months, we will have this system live and operational, with the functionality that I just described. Okay.

Now, software development within the federal government is always a long and kind of laborious process and it has taken on -- I want to share with you that it's taken on a different kind of flavor now that we have an emphasis on Homeland Security, because we have to integrate with so many systems now, so you just need to be aware of that.

But I hope what you can do, in walking away from this presentation today, is really two things: one, recognizing that we are -- and I know you guys don't believe this -- we are trying to make your life easier, okay, and we're trying to make it more efficient, the process more succinct, and the results more consistent.

And think, if you would, what this means for us in terms of enforcement, where we can look in a database that has non-compliances that's being inputted on a real-time basis, think what that does to us for our enforcement capabilities. We can begin to identify trim lines -- I go back to the 205.406 example. Let's say that over time we're seeing an enormous amount of non-compliances on this section. Well, that gives us some tips, either, one,
nobody understands the section; two, it's poorly written, I mean there's reasons that nobody understands it; three, we haven't done an effective enough job in training on that particular section; or, four, maybe it's just not working on the ground, I mean maybe it's just -- there's just a disconnect with what's going on on the ground and the regulation, okay.

But can you see how having that data will help us make better management decisions and better enforcement compliances, and that's really where we want to be, is that we want to operate, folks, not on supposition, we want to operate on data.

And with that, I conclude my presentation. Katherine, I don't know if I've got another slide in there or not. Yeah, just my contact information.

I'm happy to take questions, walk you through anything you don't understand. Thank you very much.

UNIDENTIFIED FEMALE VOICE: A question.

MR. JONES: Yeah.

UNIDENTIFIED FEMALE VOICE: Okay. Before that one where the non-compliance letter goes out --?

MR. JONES: Uh-huh.

UNIDENTIFIED FEMALE VOICE: -- directly, if it's a non-compliance letter that somebody's supposed to get information in within 30 days, if somebody in real-time,

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
you know, sees this person is noncompliant but the real --
or certification process really isn't completed, it kind
of almost puts like a black mark on this person. I'm not
sure exactly what non-compliances you're talking about,
minor ones as well as major --

MR. JONES: Well, you have to report non-
compliances, okay --

UNIDENTIFIED FEMALE VOICE: And this is only
major ones that --

MR. JONES: Yeah.

UNIDENTIFIED FEMALE VOICE: -- (inaudible)
suspension or (inaudible)?

MR. JONES: Yeah, ones that haven't been
resolved, ones that you've tried resolving, hasn't been
resolved. Now, keep in mind, folks, this is ACA data
only. The world's not going to see this. That particular
-- that particular screen -- that's why I said it's
password-protected.

Now, what I didn't show you is that -- if we go
back to -- if we go back to the trade side, what you will
do on the trade side -- and this is not at all what it's
going to look like, but you will just go in and say, "I'm
looking for corn," and that would be a publicly-accessible
data site [phonetic], okay (inaudible).

The ACA information that I've just described to

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
you in the other screen, the only way that you get to that
is through a password, which you will have, so the
public's not going to see that. That's going to be ACA
data, that's going to be USDA data.

I've got a lots of questions (inaudible).

UNIDENTIFIED FEMALE VOICE: I've got a question.

How would someone know if the client is currently
certified, would it be that it creates a modified date? I
mean, this is a continuation, they're certified in October
2003, then they get recertified again in November 2004.
As an inspector, I have seen numerous times where someone
has been waiting six, eight months past when their annual
inspection date is supposed to be, and still selling
current product, switching certifiers. This also doesn't,

you know, have anything to do with that either. There's -
- the problem now with certificates is not really what's
currently certified.

MR. JONES: Okay. Folks, certificates are good
until suspended or revoked, okay? That's the way the
regulation reads. They are good until suspended or
revoked.

Now, the way you're going to keep track will be
with the certification date, okay? This will change over
time. The screen will also have a modification date, and
every time you go and make a change to this screen, the
database records the date that it is modified, okay? So we'll know, we'll know, we'll know every time an ACA makes a change (inaudible).

MS. SONNABEND: Is that modified date on the certificate that's automatically printing out?

MR. JONES: No. It'd be the certificate date.

MS. SONNABEND: Only that. So we wouldn't know if it's current, if they had had their annual inspection -

MR. JONES: A certificate is good until suspended or revoked, okay?

MS. SONNABEND: Are you going to be able to accept imported data from (inaudible)?

MR. JONES: Yes. Great question, I'm glad somebody asked me. I'm ready for it. Okay.

The question is: are we going to be able to accept imported data? -- and the answer is yes. That was one of the first questions I asked the contractor, is: are we going to make certifying agents go back and recreate their lists? No. Okay.

And let me tell you what we're doing on that. You submitted to us 2003 data. You were required to do so. We have that. We've got it in lots of different formats. Okay, so what we're doing is we're going back and we are -- the program is taking that information that
you sent to us and putting it into a Microsoft Access
database.

In the not-too-distant future, probably sometime
this summer, you will be receiving a letter from the
program, that says: you will submit all data to us
related to 205.400, .404, in this format, which will be a
Microsoft Access database format, it will have the fields
laid out, how we want the fields, because what we're
going to do then is just take and capture that data when
you send it to us and import it into the system.

So what you're going to be doing, Zea, is
essentially you're going to be using this screen to update
at the margins, okay?

MS. SONNABEND: If you're going to already take
our list and give us our list back --

MR. JONES: Yeah. We're going to take the 2003
data that you've sent us, okay, and, like I said, this
summer we're going to send you -- it'll be an Access file,
we'll actually send you the file, and say -- and say to
you: we want the data imported into this system, okay, so
you will -- if everything works the way I hope it does, we
will already have 2003 data in place, you will then send
us the difference at the margins between the 2003 data and
the 2004 data. Everybody understand what I'm saying? The
marginal difference between the baseline database and then

R & S TYPING SERVICE – (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
the database that exists at the end of calendar year 2004.

UNIDENTIFIED FEMALE VOICE: I see a field up here that says "Notes," but I don't see a field that's specifically designated for the crops or the products that are being certified.

MR. JONES: Excellent question. Excellent question. The next build that we will do is these will have drop-down boxes, okay? The reason that build number one didn't have drop-down boxes is that we -- I confess to you, folks on the crops and livestock side, it's pretty easy to come up with the nomenclature for certain products, okay, you can use census data nomenclature and things like that.

The difficulty, and the reason -- (inaudible), that's an excellent question. The reason we -- at the time that we made build one, it just didn't have any drop-down boxes, is that that actually forms the basis of the searchable database. So whatever you use as a search screen -- or a word here, okay, impacts how you'll be able to search, and it's particularly -- one of the things that we're still wrestling with, and I will tell you that both our software developers and myself don't have good answers for, is what we do on processed products [phonetic], because we've got accredited certifying agents that are certifying clients that have got 3,000 SKUs for processed
products, 3,000 SKUs for processed product, okay, and I don't -- neither the software developer nor I have been able to come up with what would be the appropriate drop-down box there for somebody that might have 3,000 (inaudible), okay.

So there's a data question there that we're still wrestling with. I think we've got -- we've got the crops, livestock, and wild crops nailed, because I think we (inaudible), okay, but the process -- nobody's -- nobody's ever really tried to track products at this kind of level [phonetic], so (inaudible). (Inaudible)?

UNIDENTIFIED MALE VOICE: You said that the USDA and the federal certifiers [phonetic] will be the only people that have access (inaudible) because of your relationship (inaudible), if the National Security Agency or IRS comes to you and says, "I'm investigating Marty Mesh" (inaudible), you'll have to make that data available?

MR. JONES: Sure. I mean, this data -- when I say this is between the USDA and the ACAs, obviously any other federal agency would have access to it too, so that if there was a criminal investigation or something like that, we would share that. My point, then, is that this screen, these screens, are not available to the general public.
UNIDENTIFIED MALE VOICE: How much did you pay for the software?

MR. JONES: Well, the first bill was 25,000.

UNIDENTIFIED FEMALE VOICE: (Inaudible)?

MR. JONES: I actually don't know. Folks, now -- I mean, keep in mind, folks, software is a (inaudible), it's based on functionality, okay, and -- and one of the things too is that we were able to build it as cheap as we were, as they were, build it, is because we took a lot of the source code -- (inaudible) you can understand this -- we took a lot of the source code that existed for a program that AMS Fruit & Vegetable had and modified the existing source codes. So the fact that we only spent 25,000 on this first bill is solely related to the fact that we're using multiple -- or we're using a common source code for multiple functionality, and so we're trying to build it as cheap as possible.

But when you look at software, each additional function has a cost, and some (inaudible) as you go up in functionality, you know, and of course I'd love to have all the bells and whistles you can possibly put on it, with software development, the marginal cost actually increases with functionality. In other words, I can build the first module for 25,000; the next module, because I want to add additional functionality, it may take me
$45,000 to build the next module -- and that's just hypothetical, I mean that's not -- I don't know what we're going to spend, but what I want you to understand is that as you build functionality, costs increase.

So we're still figuring out what's the best bang for the buck so that we don't go overboard in functionality but that we deliver the kind of services that you -- that you expect and need.

UNIDENTIFIED MALE VOICE: (Inaudible) things we've discussed in other contexts, been discussed here at the Board, is that when a certifier -- when a certifier permits a client to use a non-organic ingredient because an organic ingredient is apparently not commercially available, or if a certifier lets a grower use a non-organic seed because that equivalent variety is apparently not commercially available, we've been talking about the benefit of having this data come in, and a certifier records this, "on such and such a day I allowed a grower to use X-Y-Z seed because organic was not commercially available," same thing with an ingredient. Is this the kind of thing that you envision coming into this system? It seems to me this would be an excellent conduit to (inaudible).

MR. JONES: It actually is, Dick, and I'm glad you brought that point up, because we actually think that
over time, if the ACAs are doing their job and are
updating this on a real-time basis, then you can go onto
the public side, and let's say you want to see if, I don't
know, a spice is available, or an ingredient, or something
like that; if the ACAs are doing their job on a real-time
basis, you ought to be able to find whether or not that
particular ingredient is indeed available, you know, NOP
(inaudible), okay.

So the seed side, Dick, is a little bit more
difficult, because I think when we have -- and I'm not
saying we wouldn't do this, but I think we might have to
build another screen in for commercial availability issue
related to seed, but on the ingredient side, maybe not,
because the ACAs would actually -- if it's a seed
producer, they could put that information in, and so if I
was looking for a variety of a seed -- I'm thinking off
the top of my head here -- I'll think about it, but it's a
good point.

UNIDENTIFIED MALE VOICE: And what you said was
that if the ACAs are keeping track of all the things
they've certified --

MR. JONES: Yeah.

UNIDENTIFIED MALE VOICE: -- then there would be
a list of what's available --

MR. JONES: That's my bottom-line point, is that
if the ACAs are doing their part and updating this on a
timely basis, then this database that outflows from this
data collection should be the most accurate information
available about the universe of NOP-certified products
anytime, in the world.

UNIDENTIFIED MALE VOICE: What about if a
supplier thinks that people are using a non-organic
version -- an inorganic ingredient, then what's to know
who is allowing the non-organic version to be used, or is
it being allowed (inaudible)?

MR. JONES: That's a level of complexity -- I'd
have to think about that. I mean, that gets in -- as you
can see, you can sit for the next 20 minutes and think out
all kinds of functionality you'd like to see in this
thing, and, okay, I can, you know, do this and I can make
this data go this way and things like that, because
functionality and -- sometimes the cost of functionality
increases, we're going to have to decide how best to
handle some of those issues, but your point's well-taken.
We've identified the system as a way to get to some of
those issues.

Let me get to Leslie, she's had her hand up for
hours [phonetic].

MS. ZUCK: Thank you. You (inaudible)
categories, and a lot of us have our (inaudible) PRS

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
[phonetic] categories, is that what you were talking
about, PRS, is that organic (inaudible)?

MR. JONES: Yeah, Kathy and I have actually --

Kathy and I talked about this. To put everybody's mind at
rest: I actually do talk to a lot of people within the
government.

(Laughter.)

MR. JONES: And Kathy and I have consulted
closely on this --

MS. ZUCK: (Inaudible.)

MR. JONES: Yeah. And one of the things that --
in fact, Kathy and I had a meeting just the other day, and
let me tell you what the problem is, Leslie, in terms --

MS. ZUCK: Because you're dropping a drop-down
box. A drop-down box, you can only (inaudible) --

MR. JONES: That's right. And if those
categories are too broad -- I mean, Kathy and I have
talked about this: if the categories are too broad, then
Kathy doesn't get the stratification that she needs to
sort out --

MS. ZUCK: (Inaudible.)

MR. JONES: -- and I don't think a trader would

either.

MS. ZUCK: (Inaudible.)

MR. JONES: Okay. I mean, a trader needs very
precise stratification, okay, and that's -- that's the big dilemma with process side, is: what is this -- what is this dividing line between the right amount of stratification -- you know, giving enough data to traders where they can make a trade decision based on a product (inaudible) see if it's really available -- as opposed to just having, you know, a list of products a mile long and somebody's got to scroll through (inaudible).

MS. ZUCK: Well, my most important question is --

(Laughter.)

MS. ZUCK: Has it come up at all that -- where -- I -- the Rule doesn't require us to report individual process (inaudible), it requires us to report whether we certify (inaudible), products, but I guess handling, I'd like (inaudible) --

MR. JONES: Here's what we think's going to happen on that. I mean, if we --

MS. ZUCK: I mean, I'll do it, I just --

MR. JONES: Well, and here's what we -- here's what we think's going to happen. I personally believe: why (inaudible).

MS. ZUCK: Well, some people might not, and that's what I'm saying.

MR. JONES: Okay.
MS. ZUCK: And you're saying it's a required field, we have to fill it out, but it's an ACA -- and some ACAs are saying, "I don't want to fill this out."

MR. JONES: But here's what we're going to do, okay? We want this system to work, and if we need to make a reg -- we don't want to have a heavy-handed approach to this, but if we need to make a reg change to get the quality of data that we believe is needed, we would look at that, okay.

MS. ZUCK: (Inaudible) not required.

MR. JONES: No, it's a fair -- it's a fair (inaudible).

UNIDENTIFIED MALE VOICE: This is less of a question, more of a request or a comment, from a certifying agent's perspective, where I think we can -- as certifying agents, we all have our own current data systems, and what you're trying to do is standardize the way we, as certifying agents, track document data (inaudible) certify, which I think is a great role [phonetic], but (inaudible) common nomenclature and what fields are being defined.

That's really important for us in terms of being able to easily import our data from our existing systems into yours. So I request that as you guys, working with your software developer, pin down, "these are the fields
we know we are going to request of you guys, and this is
the nomenclature we are going to want you to use," let us
know so we can kind of develop our system to --

MR. JONES: I have got -- if it would be useful, I have actually got -- it would have to go out as draft, because it's still a discussion document between myself and the software developer, but I could give you a draft of what we believe the database fields will look like at the current time, and that would be useful. If I could get that to you -- it'll be the middle of May by the time I get back to the office, but I can get that to you, if that'd be (inaudible).

UNIDENTIFIED MALE VOICE: What would be most useful is once you've made a decision: this is what it's going to be, so that then we've (inaudible).

MR. JONES: Well, I can tell -- I mean, when I send that draft out, I can tell you that that is the result of the best professional judgment of both myself and the software developer on (inaudible). Now, we have not gone back to the software developer and said, "Okay, build this into the system," we haven't made that decision yet.

UNIDENTIFIED MALE VOICE: You're selling this program very much to us as a service-oriented approach for traders and not only to identify certified products but
also availability, which is another feature in the program, and what I not hear about [phonetic]: will that be mandatory, for ACAs to use that program? -- because what you said, this is a service offered for you to work with and lend the service of (inaudible), but on the other hand, I understand that the Custom authorities will have the possibility to check, you want to get the data out of it, you want to check. So will it be mandatory, then, at the end?

MR. JONES: Well, this system is what we will be requiring ACAs to use. This will be (inaudible) --

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. JONES: Yeah. I mean, if you're a USDA -- if you're a USDA-accredited certifier -- and the reason for that is exactly the issue that was brought up, okay. We are required -- I mean -- and let me -- let me tell you what we went through -- I know you guys have got your hand up, and I'll get to you in just a second.

We went through a very sophisticated process, kind of wrestling with the service side of what we were going to do, and as I sat down with the -- with the software developer, it became very apparent that we could never write software programs to input un-data [phonetic] for uncommon systems [phonetic], that what we had to do is to build a system, essentially build it around a Microsoft
Access database -- and assuming everybody's used Microsoft
Access -- build it around a Microsoft Access database and
then say: this is indeed the system, okay, this is what
we're [phonetic] going to have to use.

Now, we believe that there's so many benefits
around it, in terms of real-time data submission, trade
availability, not only for that but also just for our
ability to track -- track compliance issues related to it,
that at the end of the day, everybody is going to be using
the system without a lot of grumbling and complaining and
that kind of thing.

I mean, I have -- I have not demonstrated --
those of you who might have been in the (inaudible) in
February, I actually demonstrated the program to folks
there. I haven't been in a setting where people didn't
walk away saying, you know, "this thing's really slick,"
"this is really going to make our life easier," okay, "you
guys are doing good work," you know.

So I hope that that's the sentiment that we
continue to find, because, like I said, the presentation
that I made before, that was (inaudible).  Merrill?

MS. CLARK:  (Inaudible) and certifiers
(inaudible).  Are producers going to be (inaudible)?

MR. JONES:  Producers won't even need to get
into this system.
MS. CLARK: They don't need to get in.
MR. JONES: They don't even need to get in it.
UNIDENTIFIED MALE VOICE: I don't know why they would even want to get in it.
MS. CLARK: (Inaudible) for certifiers' information (inaudible) --
MR. JONES: Well, but keep in mind, Merrill, this is going to -- this is going to be used -- this is going to be used for enforcement functions, okay? In other words, we couldn't let certifiers have access to the system because they could go in and click and -- you know, a certifier could write up a non-compliance, a producer could go in and click and say: no, non-compliance doesn't exist, you know.
(Laughter.)
MR. JONES: Okay? I mean, that's not going to work. Okay. So I cannot envision any scenario where you would want a producer in the system.
UNIDENTIFIED MALE VOICE: (Inaudible.)
MR. JONES: Maybe.
CHAIRMAN KING: Well, Keith, and what about if a producer is trying to select a certifier?
MR. JONES: Can I --
UNIDENTIFIED FEMALE VOICE: Keith, I -- and maybe you haven't thought about this, but we have a number
of producers who would not want their -- they wouldn't mind their name and address being listed in the (inaudible), but they're growing crops under contract, they're doing all direct marketing, they don't want to have their crop mix and stuff like that go into a trade source --

MR. JONES: Public release of that information will be optional. As an ACA, you will need to require, okay, or you will need to ascertain from your clients: do they want their name, address, and phone number showing up (inaudible). If they don't, that's their choice, okay, because they've made it. They may say, "My trade" (inaudible) "are just fine, I'm happy" (inaudible), and so (inaudible). So that would be your interface with the ACA.

Marty.

MR. MESH: The -- multiple users can log on. Will there be a record -- (inaudible) logged on (inaudible) the data on our system, who that was? I'm concerned that --

MR. JONES: So you would want to track it at the staff level?

MR. MESH: Well, I'm asking if that's an option (inaudible) --

MR. JONES: Yeah, we can --
MR. MESH:  (Inaudible) our staff entered in --

MR. JONES:  Yeah, we could build -- we could
build a build -- I mean, if that -- if you thought that
was useful, that wouldn't [phonetic] be hard to do, is to
build a field for staffing issues as we modify the data
set [phonetic], okay, and that might be useful -- I don't
know that that's useful for us, because the only thing
that we want to know is:  you came into the system on
April 29th, 2004, and you modified it.  Okay.  Now, at
your management level --

MR. MESH:  We want to know who wrote that
(inaudible).

MR. JONES:  -- you might want to know who
(inaudible).

MR. MESH:  And then my other follow-up question
-- boy, is this slick.

(Laughter.)

MR. MESH:  -- is:  on the drop-down field for
certification, you said you can choose one, but many times
(inaudible) crops, livestock (inaudible), handling all on
the same operation?

MR. JONES:  You can choose multiple [phonetic],
the way that's going to work.  In other words, if they're
both producers and processors, yeah (inaudible).  We've
actually thought about some of this stuff.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
MR. MESH: Boy, are you good in making our life easy.

(Laughter.)

MR. MESH: If we could only [phonetic] read this and some of your directives (inaudible).

(Laughter.)

MR. MESH: We could even keep it organic.

(Laughter.)

MR. JONES: Okay, I know we probably need to wrap up, so --

UNIDENTIFIED FEMALE VOICE: Thanks, Marty.

MR. JONES: -- Mark, you had a question?

CHAIRMAN KING: No, I was just going to follow up, I was saying if a producer was going to actually choose a certifier -- I understand why they wouldn't have total access to the system, but could they go in and find out: oh, by the way, there are now 72 accredited certifiers in North America -- I'm just using an arbitrary number -- and then, you know, similar to what you were talking about in terms of close proximity geographically in terms of sourcing something, could they look at that?

I mean --

MR. JONES: Yeah, I suppose. I mean, once we -- it's a database question, Mark, but we could create a list of accredited certifying agents and do a ZIP code distance...
comparison, at least with domestic producers. So I could put in my ZIP code, 20121, and come up with a list of certifying agents 150 miles from my location, okay. We -- that's doable, you know, and I -- if people have got ideas, I'm -- I want to hear ideas, if you've got ideas that.

Again, I also want to make sure people understand that, you know, software development is not inexpensive, we did this very cheaply, very cost-effective, but the reason we did it is because we're sharing source code. When you have to go out and write new source code, it becomes fairly expensive, okay?

But I don't want to lose good ideas, that's why I'm making this presentation this morning, is that if you guys have got ideas, I want to be able to record those and then kind of sift through those, as to what might make sense in terms of the next build.

Okay, folks, I appreciate it. I'll be around later on, if you've got other questions, I'm happy to sit down and talk to you. Thank you.

CHAIRMAN KING: Thank you, Keith. Thank you very much. In light of the fact we're a little bit behind schedule, I think what we'll do in order to give sufficient time for the compost tea task force report, we'll move that till after lunch, we'll go ahead and
recess for lunch, starting promptly at 1:30, so please be back here accordingly.

(Off the record at 11:45 a.m. and reconvened at 1:11 p.m.)

CHAIRMAN KING: I'd like to officially reconvene the meeting of the National Organic Standards Board.

We'll deal with the morning agenda item of presentation of the compost tea task force. Rose Koenig will have it up on the screen, and we'll discuss that.

And if you'll note in your agenda, there is not a specific order in terms of the committee recommendations noted, so I'd just like to read into the record:

We'll be taking the following committee order this afternoon, for those of you who are interested:

We'll begin with the materials committee, which will just include discussions of the reports there.

Then Andrea's committee, accreditation and compliance will follow.

Then we'll go into crops committee, handling committee, followed by the livestock committee, and then we'll finish up with the policy development committee. So that's sort of --

UNIDENTIFIED MALE VOICE: 606 Task Force, where would that fit? (Inaudible)?

CHAIRMAN KING: Yeah. It was policy, handling, compost. So the 606 Task Force report will be presented
under the policy development committee.

Rose, it's your baby.

MS. KOENIG: Okay. This time I don't have to do
40 slides in five minutes, so I get to shine. Actually,
I'm going to -- why I'm standing up here --

The task force went through many changes of
authority over time. Eric Sideman, who was a past NOSB
member, co-chaired the committee with Dennis Holbrook, and
myself and Owusu were the individuals that -- from the
Board that were actually on the committee, Owusu taking --
Dennis Holbrook being the other co-chair, and then Owusu
being the crops chair, both kind of played major roles;
and then Dennis resigned from the Board, so I became, at
the last moment, able to get some credit, becoming new
chair. I guess that's the best chair you want to be, is
at the last moment, after all the work is done, you get to
gain a new title (chuckles). So now I'm co-chair.

And then Owusu was supposed to do this first
half of the presentation today, and he could not make the
meeting, so I've asked Zea to kind of be my sidekick,
because she was a member of the compost tea task force,
and I've indicated to her that, you know, if there --
comes to a point, especially in the sections that Owusu
was going to cover, if she can help me, if there's any
questions or things that I'm missing, she may come up to
the podium and kind of add some additional information, so just to get you understanding kind of the process and why we're doing it in that order.

So, Ann, the -- it's actually tea 2, t-e-a 2. I can kind of go into the general information too, as we're getting started. You can go to the next slide. Okay.

Now, the Board all has a copy of the documentation, and I'm going to summarize kind of that documentation, but I do encourage everyone to actually go through and read the finer details, because a lot of the literature that's cited -- I mean, I'm going to talk about some of the implications of the literature, but I'm not going to go into them, but the citations are there.

And then for those who are even extremely more interested in the subject, you could actually -- there's a bibliography and you could actually get some of the publications.

And additionally, to those in the audience: the complete copy of the report came onto the website a little bit late, but it is there, so you can access that.

So one of the first questions: why did -- you know, why do we have a compost tea task force? Well, one of the things that was recognized, that there was -- there's a wide usage of compost tea by organic growers but there is a lack of uniformity in the regulation of compost.
tea by certifying agents and the Board felt there was a need to clarify regulations regarding the use of compost tea, and if we all remember -- next slide, sorry, Ann -- when the original compost tea task force looked at a number of issues involved around compost, including making recommendations of alternative methodologies for making compost, almost vermicomposting, and there was a section on compost tea that could not really be resolved, so the compost tea task force was initiated to really do further investigation of compost tea, and that's why the task force was -- was extended: to really look more specifically at the implications of compost tea.

So there was a need to investigate scientific data regarding human pathogen issues, and many certifiers and organic farmers expressed concern about the restrictive natures of the NOP's ruling of treating compost tea as a raw manure.

So in other words, you know, practitioners out there utilize compost tea for a multiple of uses, including nutrients, plant pathological properties, pest control, and they felt that following the 90-120-day restriction on raw manure would really not produce -- you know, not enable them to use compost tea for the properties that they're using it for. So next slide.

Some of the compost tea task force members --
well, Eric Sideman, again, was the chair. He was the next NOSB member. Dennis Holbrook was the co-chair, but he has resigned. Owusu Bandele is an NOSB member. Will Brinton from the Woodin [phonetic] Research Lab; Esper Chandler, Texas Plant & Soil Lab; Steve Diver was a representative at ATRA and he has expertise in compost tea; Clive Edwards was from the Ohio State University. Next slide.

Elaine Ingham, Soft Food Web [phonetic], Incorporated. Myself, member of the National Organic Standards Board. Fred Magdoff, University of Vermont. Pat Milner, USDA, the ARS division. Steve Scheuerell is from Oregon State University. Zea Sonnabend represents CCOF, California Certified Organic Farmers. And Larry Zibilisk, I don't know -- I'm not sure what his -- USDA, ARS. Next.

And we just want to have special recognition to Eric for chairing, and also Dennis, the compost tea task force, in keeping the committee on target, Eric really did a great job; and Steve Scheuerell for the massive amount of work, he really took the lion's share of work to prepare the document and do all the editings of the drafts and completing the final document. Next.

So the areas of expertise that the task force covered was organic farming practices and certification, some of the members had expertise in compost, some had
expertise in compost tea production and analysis, some had plant pathology backgrounds, horticultural and soil science, some of our members had EPA pathogen regulation expertise, food safety, and environmental microbiology.

So basically we felt that, you know, one of the great things about the task force was the diversity and the -- really, the high levels of expertise that the task force members had, and one of the challenges, I think, was the fact that we had people with such, you know, expertise and really were committed, because there definitely were different viewpoints, especially when it came to the human pathogen aspects of the studies, and some of our recommendations you'll see at the end reflected kind of a -- I think -- a learning process and a collaborative effort to try to take diverse views and really fuse them into a regulation that we all could agree with.

And I think it's noted on a further slide that Owusu (inaudible) but I can let you know that 11 of the 12 members supported the compost tea task force report as you see it. There was one member who did not vote in favor of the task force report. That member agreed with the recommendations but did not agree with some of the scientific data and scientific analysis that was expressed in the report, and that individual has been encouraged to do public comment to the Board on that minority opinion,
so you will be likely seeing that.

The member requested that I kind of forward that information to the NOP prior to the meeting, but I just did not feel it was my role to do that. So because we're not voting on this report at this meeting, I will encourage that member to put it in a format that they're comfortable with and take more time to kind of detail that information, but we look forward to seeing that minority opinion.

MR. RIDDLE: Did that person vote against or abstain or do you have --

MS. KOENIG: It was against --

MR. RIDDLE: Against, okay.

MS. KOENIG: -- the report as it stood.

MR. RIDDLE: Okay. Thanks.

MS. KOENIG: Okay. So if you go through the report, there are some definitions, to give you a frame of reference in terms of the information that's in the report, and I'm just going to highlight some of those definitions today. Well, actually, Owusu was going to highlight those. These are the ones he picked out, that he thought was important for you to develop a framework for this presentation.

So "composing" is: A managed process in which organic materials, including animal manure and other
residues -- I guess -- are decomposed aerobically by microbial action.

"Thermophyllic composting" refers to: A time-limited self-heating process in which heat generated by microbial respiration is retained in the mass of a pile or (inaudible) such that vulnerable pathogenic microorganisms are destroyed. Next.

And we just wanted to acknowledge that "compost" is defined by the NOSB task force, and this was presented in the 2002 Task Force Report that was submitted to the NOSB from the original compost task force, of which some of the members overlapped to this compost tea task force.

They define "compost" -- in addition to that described in Section 205.203(c), so we're not saying it replaced it, but it was a broadening recommendation of the definition of "compost" -- as "Acceptable if it's made only from allowed feedstock materials, except for incidental residues that will not lead to contamination; 2) the compost undergoes an increase in temperature, to at least 131 degrees Fahrenheit, and remains there for a minimum of three days; and 3) the compost pile is managed to ensure that all feedstocks heats to the minimum temperature."

The reason why I included that definition was that the report -- in other words, when it speaks of
compost, it -- the recommendations are not only based on
the "compost" definition that's in the Rule but also on
the compost task force recommendation for the broadened
definition of "compost."

So here in the report, and as I'm doing the
presentation, again, we're considering a broad definition
of "compost."

Okay. "Compost extract" is: Any mixture of
compost and water, additives, and adjuvants that is not
held for more than one hour before use. Compost extracts
lack sufficient holding time for microorganisms to
multiply and grow significantly."

So in other words, if you, you know, take a
handful of compost, throw it in a bucket of water, mix it
up, and spray it before -- in that holding time period,
less than an hour -- no more than one hour before use,
it's defined as "compost extract."

"Compost leachate" is: Liquid that has leached
through a compost pile and collects on the ground, compost
pad, or collective" [phonetic] "dishes, puddles, and
ponds." It doesn't sound like a very good thing. Okay,
next.

"Composting additives" are: "Materials separate
from compost and water, that are added in the process of
making compost tea, that are presumed to sustain and
enrich microbial growth. These are distinct from spray
adjuvants, that are tank-mixed immediately prior to
application of compost tea.

Examples include, but are not limited to, the
following: molasses (inaudible) extract, fish-based
products, kelp, and green plant tissue. Next.

And then a "manure extract" is: Water
suspension containing raw, non-disinfected manure when the
suspension is maintained for several hours or more, is
sometimes referred to as "manure tea."

So in other words, when we talked about the
compost extract: the manure is grabbed, thrown in a jug
of water, and basically made into a soluble form. Next.

A "pathogen" is: A microorganism capable of
causing disease or injury, used to refer to plant or human
pathogens. Next.

And then "spray adjuvants" are: Any material
added to compost tea immediately prior to application of
compost tea. These may include materials that are
designed for wetting and sticking agents, plant nutrients,
and those materials that sustain and enrich microbial
growth but, because of short time frame between addition
and application, there is a very low probability of
multiplying undesirable microorganisms in the spray tank.

Next.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
And then "vermicomposting," as it's defined and used in the document, is: A process of worms digesting organic matter to transform the material into a beneficial soil amendment. And basically, if you look in the compost task force report, again, there are different time intervals, which I'm not going to read off the slide, and temperature and methodologies that must be met to meet the vermicomposting standard. Next.

So, you know, the environment that we were working in, in terms of the task force, was that compost tea practitioners have developed a wide array of compost tea production practices for both -- the majority for plant disease and/or fertility management.

However, there are relatively few peer-reviewed studies that exist for compost tea production and use, and this is where the compost tea task force had to, you know, deal with looking at what literature there was available and also what experiments that had been conducted but hadn't yet been written up in peer-reviewed publications, to again come together with that information, to present a recommendation that would satisfy the requirements of our task. Next.

The original, again, compost tea task force recommended that compost tea be allowed but no sweeteners, which means molasses, and those other additives, were to
be added.

The National Organic Program ruled that compost tea should be treated as raw manure regarding the 90- to 120-day waiting period, and I explained that earlier.

And then a number of organic farmers and certifiers believe that this interpretation was too restrictive in terms of how practitioners were using it and their real reliance and perceived need of this material in their organic farming system. Next.

So we approved the establishment of this task force at the November 2002 meeting. Our -- the membership of that task force was determined by the original -- you know, Eric and the chairs at that time and was set on May 1st, 2003. The initial conference call was held on May 9th of 2003, and -- actually, Owusu made a mistake in this -- the final draft was approved on April 6, 2004, with 11 in favor, 1 opposed, and 1 unavailable, and I explained that issue just prior. Next.

In our report, the compost tea task force attempted to distinguish between the practitioner-based knowledge -- in other words the practice and what farmers are seeing, usually anecdotal information -- versus scientific knowledges, that is supported by controlled replicated experiments.

And, again, because like many, I guess, inputs

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
and aspects of organic farming systems, a lot -- there hasn't been a whole lot of funding given to land grant institutions to this type of research, so we want as a group to acknowledge kind of the practitioners, the observations and, you know, kind of hands-on science that farmers are doing, but also we needed to balance that with whatever scientific data that we could obtain.

A major concern of the compost tea task force -- and if you look at the -- you know, read the whole document -- was the potential for human pathogen contamination of edible plants, as regulated by the Final Rule, Section 205.203, and this really was the impetus and the reasoning of why there had to be, you know, concern about this product. You know, if there wasn't a human pathogen issue, I wouldn't be standing here doing this presentation today, it would have been something that the Board could have probably wrestled with more -- a year ago.

So, basically, a lot of the discussion and the presentation of the research focused on the human pathogen component or issue involved in compost and compost teas. Next.

So I want to go a little bit through the methods of production, just in case people are not familiar with it, but basically, methods do vary, because there's
farmers who are making their own setups on their farm, and -- and then there's -- companies are actually selling units [phonetic], so the technology is very diverse.

But water is the primary component, and the compost that's used is the next largest component. Compost tea can differ regarding that water/compost ratio. It also can differ based on whether somebody's putting in supplemental nutrients, or, like I said, molasses or those -- those additives, and also the level of dissolved oxygen, whether -- to what degree it's aerated, if it's aerated at all, those types of issues.

And there are -- again, commercial and homemade brewers are used, so, again, there's a great variability of the methodologies, the inputs that are used into the tea, and the recommendation needs to kind of encompass all that variability. Next.

Typically the ratio is 1 part compost to 10 to 50 parts water. A porous container is used, aeration is achieved via a direct air injection or recirculation of water for 2 to -- 12 to 24 hours, and often compost tea additives are used to enhance the microbial proliferation, and typical additives include molasses, yeast extract, and algal powders. Next.

There are also passive aerated systems, which usually are 1 part compost/3 to 10 parts of water, they're
done in open containers, from 1 to 3 weeks, and they can be done with or without stirring, and compost additives are used infrequently in these types of systems. Next.

Again, the purpose of these compost tea additives is they encourage microbial growth, which means -- you know, most -- especially if you're using it for pest management or fungal control or microbial control on a plant, you're trying to encourage the beneficials, but it also -- it's non-selective, that kind of growth, so if you do have any kind of human pathogen contamination in your tea, they can also grow, because you have now these compost tea additives.

So basically -- there has, however -- and that was an important point that some of the members wanted to bring out: that although, theoretically, you could possibly support human pathogens if present in small numbers -- because these -- again, the additives increase that growth -- we know of no documented cases of foodborne illnesses from the use of compost tea.

However, the studies -- you know, theoretical studies done in the laboratory, you can -- we saw mixed results, some of them which did not necessarily show microbial growth, but there were studies that did show microbial growth.

So the data -- the data showed -- you know,
different researchers, depending on different methodologies, showed different results, but, again, some members felt that it was really important to bring out that no documented causes [sic.] of foodborne illnesses have been recorded, to our knowledge, from compost tea use. Next.

How is it, basically, used on the farm. Well, it can be foliar-sprayed or applied through an irrigation system, you know, it would be an overhead irrigation system, or a sprayer. You can have -- it's used sometime as a stubble digester or a green manure inoculant. In other words, it's applied to crop residue or cover crops, usually after mowing and before incorporation into the soil. Next.

It can also be applied through irrigation systems or sprayers on -- directly to the soil. It can be applied through a drip-irrigation system, you know, because it's water -- you know, basically it's a water-soluble product.

And you can use it with a soil-less media, it's used to moisten media before planting or as a post-plant drench. Next.

You can -- some growers use it to pre-soak seed or vegetative planting material before planting. And then some people apply it to suppress -- manure collection...
points -- to suppress the odor of compost piles, additionally. Next.

Again, the plant growth responses to compost tea is largely anecdotal; in other words, it's: growers have been using it and they've reported yield increases by their sight, but there's been no replicated -- or few replicated studies to prove that it does in fact show plant growth.

But the postulated mechanisms is that you're providing nutrients and/or the microbes may be producing phytohormones, to help increase plant growth.

There's also postulated indirect mechanisms, including, you know: affecting the soil structure; or creating, you know, a microbial-beneficial population around the rise of sphere -- around that root, that can increase or, you know, provide more nutrients; and in terms of plant pathogens, they may be -- those same microorganisms may be producing compounds that are deleterious to other microbes in the soil. Next.

And basically -- and, again, that's where the disease management reports come in, again, a lot of anecdotal reports citing less severe foliar diseases and root diseases using the products.

There have been some scientific studies showing both, again, significant and non-significant results.
regarding disease suppression, and the variability in
compost tea composition has been cited, basically, for
these inconsistencies.

In other words, because you have so many
different systems operating, you have different quality
composts, you have different methodologies and additives
going in, it's really hard to produce -- unless you're
doing a lot of, lot of, studies -- replicated experiments
that are going to give you consistent results. So next.

Again, there were microbial hazards that were
considered by the task force, primarily centered around
human pathogens. The compost tea task force recognized
that this was an area where there was significant data
gaps. But basically the task force considered the types
of variables potentially associated with the deleterious
microbial contamination from a human perspective.

In other words, we looked at kind of the whole
environment of a cropping system and we tried to pinpoint
areas of risk, and then we tried to gather data to suggest
whether these in fact were -- were true. Next.

So the reasoning -- there's things about compost
tea production that should be considered if you're
considering human pathogen populations or you have
conscerns about human pathogens.

One of them is that in some of the compost teas,
you may be using manure, and manure has a high potential
of contamination.

So, again, if you're composting it according to
the Rule, this should reduce it, but there still is an
associated risk.

Another aspect, where there's not much data
available, is compost stability, but the relationship
between compost stability and human pathogen levels is
really -- has not been determined, but the task force did
want to acknowledge that the area of compost stability was
a potential area of research. Next.

Other areas of concern was -- was water quality,
and basically the task force acknowledged that you want to
have clean water to start with.

Sanitation, you want to make sure you're clean,
your machines, effectively, to reduce pathogen
populations, but, you know, the machines and how you
handle those in an operation are an avenue where you could
have multiplications of microorganisms.

Vector access, you know, if these machines are
set up on farms or areas where you have any kind of
rodents, they could potentially contamination a batch of
compost.

Brew time and temperature, depending on how long
it's being brewed and the temperature levels that is
reached could have effects on microbial populations. We acknowledge that compost tea additives -- and within the report there are a lot of literature citings that I would want to call to your attention.

The only peer-reviewed article that the committee could find was that of Duffy, that was just recently published, and in that there were -- again, you know, I'm kind of doing this from the top of my head, but he looked at, I think, salmonella and different levels of molasses, and it indicated that at lower levels of molasses, there were no multiplications of salmonella, but as you increase the concentration of molasses you could get an increased concentration of salmonella.

A lot of the researchers, however, had opinions on this type of research, and I think they are -- some of the criticisms are valid, because this type of research is done under a laboratory setting, where you're putting a known amount of inoculant in an environment that is usually conducive to pathogen growth, and their argument was that these -- this may not be analogous to what happens in the field.

So just a caution that much of the experimentation that has been done thus far, that is either done, the one study, in a peer-reviewed journal is a laboratory-based analysis.
And then some of the research that was presented by, actually, members of the compost tea task force, where they did similar studies with e-coli and replicated it in two different labs, it was the same phenomenon, where they incorporated a certain amount of pathogens to start with, added a molasses kind of solution, and then quantitatively looked at the growth of microbial populations.

The compost tea task force acknowledged that there are crop and environmental factors that could affect microorganisms, and some of that includes plant architecture, things like lettuce and apples, there's some evidence to suggest that those types of crops, because of their architecture and the shapes of leaves and the gaps that exist there, that those plants create an environment that may be conducive to the growth of these pathogens.

So we just want to acknowledge that there's certain crops that may have, you know, higher risk factors.

Additionally, there was some -- some thought about, you know, distinguishing between crops that are typically edible, or typically cooked, or typically eaten raw, as maybe ways that a regulation could be written, but there really was no consensus on how that could be formulated into a recommendation.

And, additionally, environmental factors,
because we're -- we're trying to create recommendations that can be used throughout the -- you know, the country, you know, UV radiation from the sun, temperature factors, they can all affect microbial growth, so there was just an acknowledgment that this is an area of -- of interest and where research needs to be done. Next.

Another factor: if there are actual pathogens present, the contaminant levels of compost teas, you know, if there already are some, they can certainly be a problem with human pathogen associations.

And I'm not sure, Zea, if you have anything else to -- to say about those areas, because as I'm standing here, I'm not necessarily recalling those subcategories, so if you have anything to --

MS. SONNABEND: No (inaudible).

MS. KOENIG: Okay. And then pathogen, again, pathogen survival, a lot has to do with, again, crop architecture, environment, and post-harvest intervals, and that was something that -- actually, pre-harvest interval, and what they were -- what we acknowledged in the report, that there -- perhaps as research was developed, there may be regulations that could be developed based on time from application to the time you harvest.

And then, additionally, there may be post-harvest treatments, such as disinfectants, that could be
used to reduce microbial populations. Next.

The data gaps that the committee wanted to acknowledge, and there are lots of them, there really was no information in the literature on cost benefit analysis, very little literature -- informational literature on the ecology of human pathogens, again, pre-harvest application intervals, compost stability, different feedstocks, phytotoxic reaction to compost teas, and dissolved oxygen content. So these were areas that the compost tea task force felt like they had to acknowledge that they felt that data really was needed in these areas, to develop a good recommendation. Next.

Okay, so now what we've all been waiting for, da-da-da-da, "the recommendations."

So the recommendations from the task force is that:

Potable water must be used to make compost tea and for any dilution before application. So in other words, a clean source of water to start with.

Equipment used to prepare compost teas must be sanitized before use with a sanitizing agent as defined by CFR 178.1010. Next.

Compost tea should be made with compliant compost or vermicompost, using the NOSB Compost Task Force Guidelines set forth on April 18th, 2002, for thermal
compost and vermicompost or compost as defined in Section 205.203(c)(2).

For compost tea, this applies to -- even -- and this is the distinction and the important point, I guess on this recommendation: for compost tea, this applies to 100-percent plant feedstock materials in addition to manure feedstock, which may harbor high levels of fecal bacteria because of non-manure compost.

In other words, if you remember the compost reg, the 90-120 days exists for compost that has manure incorporated into it, whereas plant-based compost, there's no waiting period.

But in our recommendation, there is evidence that even plant-based materials, starting materials, can harbor human pathogens. So it's a more restrictive, I guess, guideline for compost tea, compared to compost. Next.

Compost tea made without compost tea additives, so compliant, in other words compost tea can be applied without restrictions. Next.

Okay, this one's a little mouthful, and I think it's a little tricky, but: compost tea that's made with compost tea additives can be applied without restriction if the compost tea production system -- in other words, the same compost batch, the additives, and the equipment -
- has been pre-tested to produce compost tea that meets the EPA-recommended recreational water quality guidelines for a bacterial indicator of fecal contamination, and this is based on the US EPA recommendations of 2000, and these indicators and the passing criteria are --, and it gives you the two numbers for e-coli and enterococci. Next.

And then -- now, after you've done that pre-test, at least two compost tea batches must be tested, using the accepted methodology, with the average population of indicator bacteria, cross-compost tea batch is used as the measure of passing, and then each new batch of compost -- that means any -- so you test your compost twice, and you can use that compost in that aerator continually, but if you go to another compost pile, that would require that the system quality-assurance pre-test be conducted again, as indicated, and after it passes again, compost tea from the system can be used, with that restriction.

This, again, is a recommendation I think that was a compromise and eventually accepted, 11 of the 12 members of the task force, and the -- I guess the victory here is that there was -- you know, a compromise reached by all parties, saying that -- you know, that we recognize the additives -- the issues with additives but we feel that there can be testing protocols developed and there
are standards out there that the group -- you know, the 
compost task force recommends, that the teas then 
therefore can be regulated with -- with a reduced, you 
know, risk factor in terms of human populations. Next.

If a compost tea made with compost tea additives 
has not pre-tested for indicator bacteria, its use on food 
crops is restricted to the 90- to 120-day pre-harvest 
interval restrictions, and that's similar to what, you 
know, compost -- raw manure is in the Rule.

In the view of the task force, educating 
producers about the potential for contamination and its 
impact on public health and marketing, as well as how this 
recommended quality-assurance testing system would avoid 
potential contamination, will provide compelling 
incentives for producers to follow the rules. Next.

"Compost extracts," oh, "any mixture of compost, 
water, additives, and adjuvants that is not held for more 
than one hour before use, may be applied without 
restriction." So if a grower just makes a compost 
extract, it's used before one hour, it could be used with 
that restriction, and this is based on the feeling from 
the task force that you would not have a proliferation of 
growth in that -- in that time period, that would be of 
any concern.

And then raw manure extracts or teas may be
applied to the soil with a 90- to 120-day pre-harvest restriction, but foliar applications are prohibited. Next.

Compost leachate may be applied to the soil with a 90- to 120-day pre-harvest restriction, foliar applications are prohibited, and compost tea is not allowed for the production of edible sprouts. Next.

And then, finally, and I think a very important recommendation follows:

"The emerging acceptance of compost teas as a biologically-based crop-production tool by organic as well as conventional growers clearly indicates the need for further scientific investigation to validate the benefits and concerns of compost tea.

"The Task Force unanimously urges USDA and its agencies to strongly support additional research on the potential for crop contamination and plant disease, pest control by compost tea.

"There is an urgent national need to address critical data gaps, uncertainties, and variability in existing data that limited the evaluation of potential crop contamination by the current Task Force." Next.

And then, Zea, I'm just going to let you -- I don't know if there were some --
MS. SONNABEND: Yeah.

MS. KOENIG: -- just points that you wanted to state.

MS. SONNABEND: Yes. I just really have two points to make, in addition to what Rose has said.

I think that this task force was very well-appointed on your part, the Department and the NOSB, in that it did start out with people with widely-divergent opinions as well as expertise, and, like any group of scientists getting together, there is quite a bit of scientific bickering over every single fine point in this recommendation, and so it really is much more of a victory than it looks, for us to have achieved a recommendation and a report with this degree of information in it and this degree of concrete recommendations.

And then the other point, in relation to that, is: You know, from the practical certifier/inspector side, is this a recommendation that is really enforceable for organics? -- and I think it is, which is why I supported the recommendation.

Although it sounds like a big mouthful, with the testing protocol for pre-testing and batches and all that, that we've explained, the benefits of being able to use the compost tea so far outweigh the relatively small cost of the testing and the relatively small additional burden.
that it puts on growers, that I think it will be welcomed as a procedure, as opposed to not having the compost tea at all.

So I do think that it is verifiable, that certifiers, you know, are able to work with this, that inspectors can see it in the field, and that growers can achieve this, for the most part. You know, having to do pre-testing will be -- would be burdensome on really small growers who stir their compost tea in a bucket, but those are really the people who need the pre-testing the most (chuckles), because they're not using very sophisticated equipment.

So that's all I wanted to say about that.

MS. KOENIG: And then if you guys had any questions, I mean, we can answer them, I guess. Becky.

MS. GOLDBURG: I was curious about the feasibility of doing the testing for indicator bacteria. Are there some quick tests, Scrip [phonetic] tests or whatever, that -- something farmers can use, or do you have to have a microbiology lab to test?

MS. KOENIG: I mean, I gather that it would actually require a laboratory.

MS. SONNABEND: You do have to take it to a lab, but it's probably a 24-hour, you know, result, and not really very expensive.
MS. KOENIG: And, you know, again, the -- one of the scientists at the USDA, the -- really the food-safety individual who signed off on the report, I think the fact that this testing protocol was there really enabled that individual to have a comfort level with the recommendation.

So although it is cumbersome and there would be a cost associated with it, it does allow at least businesses that are involved in compost tea to continue to market to organic producers, and I think what Zea says is true, I mean the technology is there for rapid testing and other areas, it's just a function of, you know, how much demand there is.

So I -- you know, in the future, if compost tea is the next best thing (chuckles), compared to other inputs, then, you know, perhaps that'll occur. Jim.

MR. RIDDLE: Yeah. I'm really impressed with this report, I think the Task Force has done excellent work. I had a couple specific questions on the recommendations.

On Number 5, the second paragraph, the compost tea, with compost tea additives that's not been pre-tested, and you're recommending that that would be allowed for grain crops intended for human consumption, with no restrictions. Correct?
MS. SONNABEND: 90-to 120-day --
MR. RIDDLE: Oh, it still would be?
MS. SONNABEND: Yeah.
MR. RIDDLE: I'm reading it wrong, then.
MS. SONNABEND: Right. The second line --
CHAIRMAN KING: It's "not intended."
MR. RIDDLE: "Crops not intended for human consumption, ornamental plants, and grain crops are exempt from the bacterial testing and 90-/120-day" (inaudible) --
MS. KOENIG: Yeah, but the concept on that -- and, again, remember how I had said that there was a lot -- considerable discussion on plant, plant species, literature that indicated that there could be certain plant types that harbored bacteria because of their architecture, or the fact that they're eaten raw, you know, such as lettuce and apples.
MR. RIDDLE: Yeah.
MS. KOENIG: The general consensus of the group was that grain crops are mostly -- you know, are processed and that they felt assured that they would be cooked, you know, in terms of human consumption.
UNIDENTIFIED FEMALE VOICE: Right.
MS. KOENIG: And ornamentals are not consumed by humans, but there are -- there is an industry out there that, you know, may -- or, in fact, is producing
ornamental crops. So it just allowed for the use of two
kind of specific plants that we all could agree upon.

MS. KOENIG: I mean, there was -- again, there
was a proposal during the process of many different
reviews that there was a USDA list of most-edible crops
that are cooked versus ones that are eaten raw, but we
kind of acknowledged as a committee that -- that, you
know, we have a natural -- you know, a lot of people are
natural food eaters, in the organic community, so what the
average American eats cooked (chuckles), a lot of our
consumers eat raw --

MR. RIDDLE: Uh-huh.

MS. KOENIG: -- and a lot of us didn't feel
comfortable about using that list as a guidance. So this,
again, was the agreement --

MS. SONNABEND: It's prohibited for sprouted
grains, below.

MR. RIDDLE: Okay, right. And then I also had a
question on 7 and 8, on the raw manure extracts. There
90- or 120-day would apply, but it says "foliar
applications are prohibited." That's a strong word,
"prohibited." So even if there's more than 120 days,
foliar application -- I don't -- what's the basis for
that?
MS. KOENIG: You know, again, a lot of the -- you know, the basis of all the restriction -- the (inaudible) of the task force was human pathogens, and again, because of the composition of that task force, there were individuals on -- you know, you had individuals that had a great comfort level with compost teas, and then there were individuals that had no comfort level --

MR. RIDDLE: Yeah.

MS. KOENIG: -- and this basically was -- you know, that -- coming together of those two groups. Most people -- you know, it's similar to the 90/120 day, why is there 120 and why is there 90?

MR. RIDDLE: Right.

MS. KOENIG: Well, it's an extension of that, they just felt that foliar application -- to be safe, at this point in time, again --

MR. RIDDLE: So it's really: an abundance of caution.

MS. KOENIG: It's abundance again.

MR. RIDDLE: Yeah.

MS. KOENIG: And again, it's based on the data available today -- well, actually, April 6th, 2004 --

MS. SONNABEND: Or lack of data available to --

MR. RIDDLE: And lack of data, okay. I just wondered --

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
MS. KOENIG: So lack of data available.

MR. RIDDLE: -- if there was something I was missing on that --

MS. SONNABEND: Right. No.

MS. KOENIG: It's the precautionary principle (inaudible) --

MR. RIDDLE: No, it's "prohibited," "foliar application of manure tea prohibited," period.

MS. KOENIG: Goldie.

(No audible response.)

MS. KOENIG: Goldie. I'm sorry, Mark, do you want to call on her?

MS. CAUGHLAN: No, that's fine, I forgot --

CHAIRMAN KING: Well, it's --

UNIDENTIFIED MALE VOICE: Goldie's (inaudible).

MS. CAUGHLAN: Well, I was just going to point out that wheat and barley are both used for juicing, sprout and then juice.

MS. SONNABEND: Prohibited for sprouting.

MS. CAUGHLAN: However, it is isn't -- but I think that's another step. In other words, I take that indicator to mean you couldn't use -- the way that read, to me, was: meaning you don't do alfalfa sprouts in a liquid tea, soak, or something like that, I mean -- before they sprout, but where you're taking a mature grain crop
and then you're making a wheat sprout and then you're juicing it, that's a direct --

MS. KOENIG: I think that that is a good point --

MS. SONNABEND: Well --

MS. KOENIG: -- and what we can do is -- you know, we're not voting on this during this meeting, we're just presenting.

MS. SONNABEND: I also think that, you know, while it might be a concern, the chance of anyone using compost tea on a grain crop, economically, is like -- so minimal that I don't think it realistically is going to (inaudible).

MS. GOLDBURG: Sure, but if you're writing a standard, you don't write it to that.

MS. KOENIG: Right.

MS. SONNABEND: Right.

MS. KOENIG: And I think that that's a valid point, Goldie, so what we can do is, you know, make note of that and then just kind of look over the recommendation and see where -- see --

MS. GOLDBURG: I mean, it's also true that commercial --

MS. KOENIG: I think --

MS. GOLDBURG: -- commercial growers can use --
MS. KOENIG: Right.

MS. GOLDBURG: -- compost tea to their heart's delight.

MS. KOENIG: And I think that the intent of the- -

MS. GOLDBURG: With no safety standards, so --

MS. KOENIG: -- the intent of kind of that sprout, we probably thought that we were covering it underneath that, but it's really not defined, so it's a pretty -- I think it's a valid -- a valid point.

MS. GOLDBURG: Conventionally [phonetic].

MS. KOENIG: Thank you. Anything else?

(No audible response.)

MS. KOENIG: Thanks.

CHAIRMAN KING: Thank you very much for all your hard work. That was fantastic. I know it took a lot of time and there were some challenges, so --

MR. SIEMON: I'd like to make a motion of no task forces over five people.

(Laughter.)

CHAIRMAN KING: Rose may accept that.

(Laughter.)

MR. RIDDLE: I have a question about the process.

CHAIRMAN KING: Quick comment.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MR. RIDDLE: I know we're not voting on this as a recommendation, but should the Board go on record as accepting this report? I mean --

UNIDENTIFIED MALE VOICE: Yes.

MR. RIDDLE: Well, I'd move that we accept the Compost Tea Task Force report.

CHAIRMAN KING: Is there a second?

MS. COOPER: Second.

UNIDENTIFIED FEMALE VOICE: Second it.

CHAIRMAN KING: I'll take Ann, I saw her first. It's been moved and seconded, moved by Jim Riddle, seconded by Ann Cooper, that we accept the Compost Tea Task Force report.

All those in favor say aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No audible response.)

CHAIRMAN KING: Motion carries.

MS. KOENIG: Mark, just --

CHAIRMAN KING: Yes.

MS. KOENIG: So a point of process too, is that -- so this'll -- it's on the web, we'll accept public comment, it'll be posted, we'll be taking public comment on the recommendations, and then --

CHAIRMAN KING: Is that your desire?
MS. KOENIG: Yeah.

CHAIRMAN KING: Okay.

MS. KOENIG: Because we need to vote on it in the next -- at the next meeting.

CHAIRMAN KING: Okay.

MS. KOENIG: So we will officially be -- so it'll be posted for the public to comment on, and then we'll be voting next meeting on it.

CHAIRMAN KING: Okay. Now we're to the point in the agenda where we'll actually be voting on committee recommendations, and we're going to start with materials committee, that of course doesn't have any materials but has a couple recommendations.

MS. KOENIG: Okay, the Sunset Proposal, Provision, that was posted on the web, and that we discussed earlier, again, it wasn't up and submitted in time to make a formal vote, so we're not asking for a formal note.

Additionally, the National Organic Program sent us some documentation last week, with what they believe is a better version of our -- you know, they've taken our Sunset Provision, they've reviewed it, they've considered things such as the whole federal rulemaking process, that I think that we considered but, in our naivete of the process, I don't think we really understood the full
implications of a 5-year sunset and what that meant in
terms of the time frame of how we have to proceed in this
process to get it all done by 2007.

I've thought long and hard, and, you know, I've
been -- people say, "Oh, you look horrible" (chuckles) at
the end of the day, there's many reasons why you do, but,
you know, I take this -- you know, this role very
seriously, and I take the Sunset Provision and materials
quite seriously, and I certainly want to do -- you know,
represent the growers that I represent and what's in the
best interests of the industry.

Having said that, and thinking about the
process, I've asked Arthur Neal to come and give him an
opportunity to really fully explain the proposal that
they've worked with, the modifications that they have
made, and we've met as a committee and talked about a few
areas that we suggested needed a little more thought, and
-- so, you know, I don't know if he had time to digest
that information.

But the one thing that I think I always come
back to, and I think we all have to come back to, in this
process -- well, there's two things: one is what our
concept of Sunset Provision is, and partly I think it's
kind of in a misinterpretation of what a sunset provision
is, by the Board. Many times, as we're doing our work,
we've always thought about the sunset, you know, and I've heard it many times, "Well, we don't have" -- you know, "we'll put it on, and in 5 years we're going to be reviewing everything anyway."

So we've looked at it, and we've kind of -- at least myself personally -- have kind of, you know, identified it as a time for full review. However, you know, again, because I'm naive to what a sunset is in a regulatory sense, I think we need to listen and understand what sunset means, you know, as -- as far as regulatory aspects, and that was explained in the letter that -- and the documents that we received prior to the meeting and hopefully the NOP is going to share with us.

So I think we need to be open-minded with the concept of what sunset means in a regulatory perspective, and then, more importantly, the one thing I always have to remind myself is that the sunset is just mechanism, you know, one kind of safeguard in the system, to review. There always is the opportunity to question things that are on the list, okay, and that -- you know, we always have to go back to that point, that at any time anyone has the opportunity to put in a petition to remove something from that list -- and really, that's for the community to understand.

So the sunset we thought was -- you know, again,
some of us thought as "the mechanism," but I think we need
to really rethink what the sunset mechanism is and, again,
just acknowledge that there are -- there is a second
mechanism for the public to address materials that -- that
may need to be considered to either be -- you know, be
considered on the list.

So, with that introduction, Arthur -- or I'm not
sure who in the NOP was going to --

MS. ROBINSON: Mind if I be Arthur [phonetic]?
CHAIRMAN KING: You can be whoever you want,

Barbara.

(Laughter.)

MS. ROBINSON: Do I have to identify myself
again? Barbara Robinson, Deputy Administrator,
Transportation & Marketing Programs.

Thanks for all your remarks, Rose, that you just
made, because a lot of those we are certainly in agreement
with, and hopefully then it'll just make our presentation
a little bit briefer.

MS. KOENIG: No, don't make it briefer.

(Laughter.)

MS. ROBINSON: We do thank the Board for the
recommendation on sunset, we appreciate it very much, and
we understood the amount of time and thought that went
into it. While you were at work on your recommendation,
we also were doing research on our end, about what is a sunset, because we had many of the same questions that you had, and so we did that kind of research, we looked at legislation.

Sunset is not unique to this program, it does happen with many laws or many regulations, and what we found was the following, and I believe most of this we explained to you, but the public probably doesn't know this.

Sunset is not -- is typically an expiration that would occur -- it's a call for a review of the conditions that warranted the law or the regulation in the first place.

In the case of this program, sunset is: a call to review the conditions that warranted putting a material on the National List in the first place.

So try and think about this -- and Rose brought up a very good point. If you have trouble getting your arms around that, that we're asking the public and the Board to review the conditions, not the material, if you have trouble getting your arms around that, remember: since this program has been implemented, only two petitions have been submitted to the Department to remove a material from the National List. One was for cornstarch, on the basis that there was apparently an
organic supply of cornstarch available, the Board considered that and rejected that and left cornstarch on the list; the second was sodium nitrate, and the Board again took public comments on that and the Board decided to leave sodium nitrate on the list.

But that provision is available to any person at any time, so that -- if you want to think of that as the trap door, another mechanism, a failsafe provision, however you want to think of that: that is always there.

Now, from our perspective, sunset is a public process. It's facilitated by rulemaking through the National Organic Standards Board's mechanisms. You are the integral part of this process. The reason that we believe that this must be done with rulemaking, aside from the fact that our lawyers will stand there and tell us "that's the only way you're going to do it," but there's a good reason for that, and I'm going to use these words that you've heard us use, and then I'm going to say something about them:

The reason we do this through rulemaking, with the public fully engaged, is that in that way we pretty much ensure -- not altogether, but pretty much -- we ensure that neither the Department -- and it's important that you understand this, neither we nor you would appear to be arbitrary, or capricious.
Now, we use the words all the time, and, you know, it strikes me that they have a very negative connotation, it makes it sound like you willy-nilly pick things out of the air and decide what to do and, you know, reward your friends and punish your enemies, and that's not what those words mean.

It just means: unintentionally or not, because we all come to the table with biases, doing it in an open rulemaking process is a way to minimize that from occurring.

So the important thing to remember about this, and this is important for the people who are sitting in this room today, two points: if the public does not weigh in -- explicitly, everybody, you can't just think it, you must communicate, in writing, however that is -- to the Board through the Department -- whether you believe there is still a continued need for these materials on the National List, if you do not do that, if we receive no comment on material X, on October 21, 2007, regardless of what the Board thinks, the material goes away. It will not be available for use. If it is a prohibited material, it will be available for use. Okay?

So the public must get engaged in this.

MR. RIDDLE: I missed that last part.

MS. ROBINSON: If there is no public comment, if
the public is silent -- let's just pick a material.
Sodium nitrate. I don't care. Pick anything.

UNIDENTIFIED MALE VOICE: No, that's not a good one.

MR. RIDDLE: No, I just meant --

MS. ROBINSON: Whatever. Material X.

MR. RIDDLE: The part about if it's prohibited -

MS. ROBINSON: If it is -- if it's a material for which there is an exemption, it's an allowed synthetic, and there is nothing from the world at large that yes, this need -- a need continues to exist for this material, then we can only conclude the need no longer exists; therefore, it will no longer be allowed.

If it is a prohibited material and we hear nothing, then we will conclude that it must be okay, and it will then become allowed to be used.

MR. RIDDLE: You mean a prohibited natural.

MS. ROBINSON: Yes.

MR. RIDDLE: Okay.

MS. ROBINSON: Yes.

MR. RIDDLE: Okay, good.

MS. ROBINSON: What did I say?

MR. RIDDLE: That's what threw me.

MS. ROBINSON: Did I say prohibited synthetic?
CHAIRMAN KING: No, you just said prohibited.

MS. ROBINSON: Oh, okay.

UNIDENTIFIED MALE VOICE: You can imagine (inaudible).

MS. KOENIG: Barbara, I just wanted -- because I see alarmed faces and I just wanted to -- because I also was -- the state of shock. The -- what Keith had explained to me, you don't -- in the sense of something that's on the list in either category, you don't have to provide additional information, it's simply a letter stating that -- you know --

MS. ROBINSON: It can be as simple as --

MS. KOENIG: -- Farmer A, "I use" --

MS. ROBINSON: Yes.

MS. KOENIG: -- "X-Y-Z" --

MS. ROBINSON: Yes.

MS. KOENIG: -- "A-B-C-D, E-F-G," I could list 156 --

MS. ROBINSON: Yeah.

MS. KOENIG: -- and say "I need all of these."

MS. ROBINSON: That's --

MS. KOENIG: That's public comment, it stays on.

MS. ROBINSON: All you need to do is put a placemaker down, okay?

MS. KOENIG: Okay.
MS. ROBINSON: Write us a letter: you need this material, the need still exists for this material --

UNIDENTIFIED FEMALE VOICE: So it's not a petition.

MS. ROBINSON: No. In fact, that's one thing the sunset review is not: it is not a petition process.

MS. KOENIG: Okay. So trade organizations --

MS. ROBINSON: Like I said at the beginning --

yeah. Anybody --

MS. KOENIG: -- organizations, individuals --

MS. ROBINSON: Yeah.

MS. KOENIG: -- as long as it's submitted --

MS. ROBINSON: Yeah.

MS. KOENIG: -- then it stays --

MS. ROBINSON: Anybody.

MS. KOENIG: -- everything is status quo.

MR. RIDDLE: And there doesn't have to be any evidence, just a statement.

MS. KOENIG: No.

MS. ROBINSON: No, not -- not --

MS. KOENIG: Status quo.

MS. ROBINSON: No, you're just going to tell us -- all we want to know is: do you believe that there is a continued need for the material? Just write us a letter and say, "We need it." That's good enough, to keep this

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
process going.

MR. ARTHUR NEAL: Arthur Neal, National Organic Program. And what Barbara's talking about is at -- the advance notice of public rulemaking level, because there are three -- and she hasn't gotten there yet, but there are three different levels: advance notice of public rulemaking; proposed rule; and final rule.

MS. ROBINSON: Right. So we will publish an advance notice of proposed rulemaking, and the guts of that will be the document that you already have, the sunset review process, because we tried to develop -- think of it almost like a preamble, okay, what is this process about; for everyone else, this is -- is this on our website yet?

(No audible response.)

MS. ROBINSON: It will be? So that everyone else can read what the Board has been sent.

Now, another point I want to make, before we get to the process a little bit, I want everyone to understand: there's sort of a feeling and people sense: okay, sunset, it's an event. Sunset is not an event. From now on, sunset is an annual activity that will take place. You understand that.

Every year that you add materials, 5 years later someone is reviewing the need for those materials to

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
continue. This is the first board that will initiate a sunset process, but some of you won't even be on the board by the time sunset -- this sunset occurs. But understand that in 2012 -- if we all are still here --

(Laughter.)

MS. ROBINSON: -- in 2012, this big clump, okay, the one that became active October 21, '02, this whole big clump of materials has to go through it again, plus any materials added by the Board through rulemaking in 2007. Therefore, what you want to realize is that sunset is a growing activity, it will become a bigger and bigger job every year, assuming boards continue to add materials to the list. Because it never is just a one-time review to see if it's okay; it goes on in perpetuity.

And that's one reason, that's a very important reason, why the process that we laid out for you through rulemaking, it must withstand this annual action by the Board and participation by the public.

So we could not write procedures for a sunset as if it was a one-time event, we have to put something in place, because what -- again, what you're doing is -- like we've talked about before, here we go creating the process again, for future boards.

So, as Arthur started to say -- do you want me to go through these three stages real quick?

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MS. KOENIG: I -- one -- because -- I think it's important, and one of the questions that I had, in terms of the advance rulemaking:

When it goes to public comment, even on the process -- because what I'm assuming is that we also -- there's going to be public comment on this process? You said it would be on the NOP website, but the first rulemaking is rulemaking of the process; correct?

MS. ROBINSON: No. No. An advance notice of proposed rulemaking is the Department's way of saying to the public at large: we are about to engage in rulemaking, heads up. Now, the public is certainly -- the public is always free to comment to us, Rose, the public can write to us and, you know, windows don't close, we don't say, "We don't care, we don't want to hear from you," we never say that. Sometimes we take what you give us and we think about it, but, you know, we don't take it, but we will always take input.

So the ANPR -- what?

MR. RIDDLE: George had a question.

MS. ROBINSON: Oh, I'm sorry, George.

MR. SIEMON: I had several questions here. So if those conditions are established, question one is: who establishes that condition, one letter is enough, or is it -- somebody makes a judgment that the condition still is
needed?

MS. ROBINSON: Well, let me walk through that.

MR. SIEMON: All right.

MS. ROBINSON: Okay? We put out the ANPR and we tell the public -- and we do, in the ANPR --

MS. KOENIG: No acronyms.

MS. ROBINSON: Huh?

MS. KOENIG: No acronyms.

MR. RIDDLE: Advance notice of public rulemaking.

MS. ROBINSON: Oh, I'm sorry. I'm sorry. ANPR means advance notice of proposed rulemaking. Forgive me, I shouldn't do that. That's the heads-up I was just talking about.

Now, remember back to when this rule itself was being created, there was a Proposed Rule, and then there was a Re-Proposed Rule, but there's -- normally there's a proposed rule, everyone is free to comment, the Department takes the comments, Department digests the comments, the Department is obliged to answer the comments through rulemaking, it does so when it publishes the final rule, and then there's even usually some -- well, very often there's still a comment period that's allowed after the final rule.

But what we will do is we'll publish the advance
notice of proposed rulemaking and we will tell the public: here's what you need to do, and all that you need to do is communicate to us in writing, and we'll probably allow electronic, but let us know whether or not you believe a continued need exists for any or all of these materials, and that's all they have to do, at first.

That then triggers sort of the universe of materials that the Board is going to look at, and it will also trigger -- hopefully not, but it will trigger a subset, which we haven't heard anything, from anybody about.

Now, before -- I don't want to -- Arthur's much better at going through all the particular details of what's going to be involved in the proposed rule, so I'm going to let him walk you through that process, but then we'll take any questions that you have.

MR. NEAL: In the proposed rule, what happens is that the Board has now formulated their recommendation in terms of -- they've assessed all of the public comments generated through the advance notice of proposed rulemaking -- yes, ma'am.

MS. KOENIG: Okay, I think there was a step left out.

MR. NEAL: Uh-huh.

MS. KOENIG: According to your documentation.
So Barbara made it sound like it was simply a little letter, that said yea or nay, and what in fact your policy says is that if something affirms something on the list, then you, as an individual, can say: yes, we need this, that's all the documentation that's necessary. Or -- step one.

UNIDENTIFIED FEMALE VOICE: An ANPR step (phonetic).

MS. KOENIG: Okay. But the other -- isn't this step one at ANPR stage if you say -- you say: hey, there's something on there I don't want --

MR. NEAL: Right.

MS. KOENIG: -- and you said -- sorry, I don't want to say "you," because I'm assuming --

MR. NEAL: Right.

MS. KOENIG: Isn't -- based on your document, a set of information and data that you must then provide, that requires more than just a letter at that stage --

MR. NEAL: Let me explain --

MS. KOENIG: -- and that's an important point, that I think needs to be explained.

MR. NEAL: -- a little more to you. You've got to take into consideration this big picture. There have been years of activity taking place to put materials onto the National List.
When you take into consideration how materials have made it onto the List, they've gone through scientific research, they've gone through public comment, and final rulemaking, so the data that supports materials that are currently listed on the list already have a foundation established.

Now, through the ANPR, you can't tell a commenter what they cannot say. They can say, "We want the material," they can say, "We don't want the material." However, there is a reverse consequence for saying, "We don't want the material," because the same way that a material was recommended for inclusion onto the National List is the exact same way a material has to be pulled off of the National List, which means that if the recommendation is made that "We do not want the material any longer, there's no longer a need," that has to be justified. That need no longer has to be justified -- I mean that need has to be justified.

MR. RIDDLE: I'm confused, then, because I thought things automatically expire unless someone says they're needed --

MR. NEAL: I'm not finished.

MR. RIDDLE: Okay.

MR. NEAL: Now, the Board has the opportunity, because the Board assesses the comments -- because you're
going to get comments that say, "We want it," you're going
to get some comments that say, "We don't want it." The
Board can either attempt to justify the fact that there's
no longer a need for the material or just rest in the fact
that this material has already been vetted by prior
boards --

MS. CAUGHLAN: Has what?
MR. NEAL: -- already been vetted by prior
boards and recommended for inclusion onto the National
List and there is a need that has been established, in
formulating their recommendation.

Do we understand?
MR. RIDDLE: Yeah, so far.
CHAIRMAN KING: We're hoping there's more.
MR. NEAL: Okay.
CHAIRMAN KING: Okay.
MR. RIDDLE: -- to follow [phonetic].
MR. NEAL: If the Board decides that there is no
longer a need for the continued use of a substance, then
that need -- the need has to be justified to no longer
exist, and what Rose is talking about is how you document
the non-existent need for the use of a material, and that
-- that entails that the material has a negative -- what
is it --

MS. KOENIG: It's the three points in OFPA that
we used for -- during the petition process and evaluation.

It's the environmental -- there's a -- you know,
detrimental environmental impacts, a wholly natural
substance is available, and -- give me the third one.

MR. NEAL: And that it's not consistent with
organic farming and handling.

MS. KOENIG: That's not -- okay.

MR. NEAL: So the needs to this [phonetic] --
you'd have to document the substance is harmful to human
health or the environment, the substance is not necessary
to the production of agricultural products because there
is an available wholly-non-synthetic substitute product,
and the substance is not consistent with organic farming
and handling. Kim.

MS. DIETZ: When we had talked earlier from the
materials committee, is it the public that's providing us
with this information or is the Board who's having to
provide this information?

MR. NEAL: Both. It all depends on who's trying
to justify that the need no longer exists. So if the
public makes that statement, that the need no longer
exists, and you've got competing interests, you've got
people out there saying, "There is a need for it" and
you've got somebody saying, "There is no need for it,"
somebody's got to justify the position. And the position
has already been laid for it to be on the list. The
position that has not been lain is the one to take it off.
That's why there is a process by which we say -- a
petition process to remove a substance from the National
List.

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. NEAL: Well, I know, that's why -- that's
why we do not invite that type of activity.

MS. DIETZ: So this board may receive positive
letters and negative letters and then it's the due
diligence of the Board to say: okay, if there is not a
need, then we need to document it with these factors that
you're providing.

MR. NEAL: If there is not a need for it, right,
correct. Yes, Rose.

MS. KOENIG: So -- and again, I had the
privilege of looking at it, so I kind of processed it a
little bit more, and what our -- again, you know, the
points are again: the letter, keeping things on as a
simple letter, again, making a change is the one where the
burden -- I don't want to say the burden -- it's really
the burden of proof, because that's the only way I can
think of it in my feeble mind, is: the burden of proof is
on the person who wants to remove something from the List,
that exists, and this burden of proof that the NOP has
suggested and has offered in their final Sunset Provision
is acceptable to me because it's based on the OFPA
criteria.

We're not pulling things out of the hat, we're
not asking people to jump through new hoops, they're
basically taking those three OFPA criteria, and
additionally, there -- but there is two differences that I
could pick out, and I just wanted to pinpoint -- you know,
point those out.

One is, there is a greater emphasis on the --
because you're asking -- there's a request to really prove
that there are alternatives, with data more than just what
we're getting in some of these TAPs, like -- you know,
I'll give an example of hydrochloric acid, that lactic
acid and acetic acid is available.

The data would have to be provided that the
form, the function -- there's a supply of those things,
that there's readily-available alternatives and they work.
And then -- so that's one difference.

And then the second difference is that there is
an econom- --

MR. NEAL: An industry impact.

MS. KOENIG: -- an industry impact statement, in
addition to the OFPA criteria, that is written into the
language of this final Sunset Provision, and that is the
other, second point that I picked out that is distinct and
different from what you're seeing in a regular petition
process, and I think it would make sense to justify --
Keith did a great job -- understanding why the Office of
Management & Budget requires that. So if you can --

MS. ROBINSON: Two points I just want to keep
making here, for the folks in the audience. You
understand now what we're asking, that when we public the
advance notice of proposed rulemaking, a simple one-line,
two-line communication to the Department is sufficient
for, you know, putting your placeholder down. That is all
that's required.

When we get to the proposed rulemaking stage and
someone wants to argue to allow the use of a material to
expire, we are asking -- as you just heard Rose: that
burden of evidence is on the commenter and it will not be
sufficient to simply go back and find whatever the Board
did, you know, 5 years earlier, or whatever their debates
were, and go get out that argument and restate it, because
the Board, in its deliberations in previous years, had
already determined, regardless -- you know, taking the
totality of evidence it had at the time, it determined
that that material met the criteria of OFPA.

So you must be able to show that the material no
longer meets the criteria, and the only way to do that,
that I can figure in my little brain, is: you must have
some new evidence that we don't know about, and that's
what the Board will then have to weigh.

MS. DIETZ: And you said this was during the
proposed rulemaking?

MS. ROBINSON: Yes.

MS. DIETZ: Okay.

MS. ROBINSON: I mean, you're free to submit --

UNIDENTIFIED FEMALE VOICE: Right.

MS. ROBINSON: -- all of that to us during the
advance notice of proposed rulemaking; we're just not
requiring that.

MS. KOENIG: And that is the note -- you know,
and after thinking about the process, something -- this is
to the Board and to the public: if there are materials
that you -- you know, you now know are going through
sunset, this is the time to start gathering data and
going that information in as soon as possible, because
there's going to be a very short window of opportunity,
unfortunately, unless we can figure out a way to extend
it, that we, as a board, are going to be able to handle
anything that would contradict -- and I'm saying what
exists, you know, any of those second line --

MS. ROBINSON: Right. That's -- yeah.

MS. KOENIG: -- of products, things where we're
going to have to really evaluate, and it appears to me --

you know, and that -- that's the question I have for you.

There was this assumption that there could be
additional -- you know, there is -- and in your provision,
they allow for additional technical information to be
obtained, but in reality, the way things are going in
terms of our petition process, it's not a speedy,
immediate response.

MS. ROBINSON: That's one --

MS. KOENIG: So one of the challenges --

MS. ROBINSON: Right.

MS. KOENIG: -- and I'm asking you, I mean,
because I see this as kind of the area where we could get
caught up, is: how -- and I don't know if you've thought
about it: how can we get access to information quickly,
technical information, if we need it? Because we have,
based on what we were talking about, 90 days --

MS. ROBINSON: That's right.

MS. KOENIG: -- to come up with --

MS. ROBINSON: That's the other thing, is we --

included in the document that we have given to the Board
is a very detailed timetable that lays out this whole
process from start to finish, and if you go through -- I
think if you actually add up all the time in there, I
think it actually adds to 41 months. That's why we're
starting now.

The clock has already begun to tick, from our perspective in the Department. We know what we're up against in terms of OMB, we consider -- we are assuming the Office of Management & Budget will designate this to be a major rule. That has certain significance in the government. Once -- once it is determined that you are engaged in major rulemaking, which means you have a significant economic impact on businesses, of X number of dollars, and once you trip that switch, you trip multiple clearance and review levels throughout government, and you top it all off with Congress getting 60 days to review it themselves.

But it is such a laborious process to get through, that we -- we believe that it must be started immediately.

MR. RIDDLE: I've got two questions. It sounds like if somebody wants something to expire, or be removed, it's very similar to submitting a petition to remove, they've got to -- the burden of proof, the evidence, with new information, you know, is on that petitioner.

But you mentioned that you received two petitions to remove and cornstarch was one of them, and do you know from the records when that happened? -- because I can't find when the Board voted on that.
MS. ROBINSON: I honestly don't know, Jim.

UNIDENTIFIED MALE VOICE: That's inside

(inaudible).

MR. RIDDLE: It hasn't been since I have, and I can't find it in the records. I just wondered -- since you said it, I figured you knew when that happened.

UNIDENTIFIED FEMALE VOICE: We're in our fourth year, so --

MS. ROBINSON: I just made it up.

(Laughter.)

MR. RIDDLE: Well, I didn't know.

MS. ROBINSON: No, I'm just kidding.

MR. RIDDLE: I mean, if you could say what year, I could look back at the minutes --

UNIDENTIFIED MALE VOICE: (Inaudible.)

MR. NEAL: I can't recall.

MS. ROBINSON: The other --

MR. RIDDLE: But the other -- the question is about the 90 days for the Board to review. Is --

MS. ROBINSON: Right. And before you get to your question, let me just address the last part -- something that Rose asked, and that is: whether or not there could be some sort of extension here. I know that we -- you know, that's been talked about, "Well, if the Board is working on it, if the Board is recommending it,"
you know, "isn't that good enough, can't this keep" -- "go on?" The answer is, unfortunately, no, and it's not because you're in a regulation, it's because you are bound by your law. The law is what will cause the lights to go out here. If it was a matter of just, you know, adjusting the regulation, we probably could figure out a way to do it, but since it's a law, you know, that's the brick wall. So we can't do that.

MS. KOENIG: Right. But worst-case scenario, okay, let's just play hypothetical, because I think -- this is just an issue for me. Worst-case scenario, say product A, there's no -- there is a letter of support for it, and then there's another letter, against it, with evidence, okay, and we get this, and the points are really valid, we find that there's enough OFPA criteria, but it was one of those early-on petitions that did not have an adequate TAP, in our opinion, we need to seek additional technical information. That -- and I know you like to have a really big docket, but hypothetically (chuckles) --

MS. ROBINSON: That's not our preference.

MS. KOENIG: Well, but -- I mean, hypothetically, that product could be held back. I mean, the worst-case scenario is: by doing that, you would trigger it off the list. Correct?

MS. ROBINSON: Yes. Are you asking if the rest
of the list could move forward without --

MS. KOENIG: Yeah. The rest of the list could.

MS. ROBINSON: Yes. Yes.

MS. KOENIG: Okay.

MS. ROBINSON: Of course.

MS. KOENIG: So we are -- we're tied -- so there are ways, it's just --

MS. ROBINSON: Whoever is affected by that one material --

MS. KOENIG: -- will be mad [phonetic], right.

MS. ROBINSON: -- are the affected parties, yeah, and you might be hearing from them.

MS. KOENIG: Right.

MS. ROBINSON: But -- yes, but -- now -- and we will do our best to work with the scientific experts, you know -- we do have in AMS a scientific program area, food scientists, microbiological folks. We can consult with them. They have contacts in EPA and FDA. We will do our best to work to make sure that as much technical information as is necessary for the Board -- that we can make it available.

But remember what you're -- you will have to weigh the evidence that is given to you, and there will have to be a -- I don't really want to stand here and say "compelling," but I would assume, if I was in your shoes,
it should be pretty compelling evidence why it no longer 
meets the criteria that you determined it already met.

    MR. NEAL: Well, it's really the need.
    MS. ROBINSON: Yeah.
    MR. NEAL: (Inaudible) there's no need.
    MS. ROBINSON: Right. So -- okay.
    CHAIRMAN KING: I have a quick question. I know 
we're talking about the process and procedures which we'll 
go through here, and I wanted to know the timeline that's 
listed, as --
    MS. ROBINSON: Yes (inaudible).
    CHAIRMAN KING: -- I'm guessing, sort of a -- 
    somewhat of a draft, if you will, in this document, and I 
have been numerically challenged in the past, so correct 
me if I'm wrong, but it appears we have 41 months until 
the deadline --
    MS. ROBINSON: That's right.
    CHAIRMAN KING: -- from -- give or take a few 
days from today. As I add this up, there are a minimum of 
32 months in the process.
    MS. ROBINSON: Right.
    CHAIRMAN KING: Now, that's not a big window.
    MS. ROBINSON: No, it's not.
    CHAIRMAN KING: But as we look at this as a 
board, 90 days clearly --

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MS. ROBINSON: Yeah.

CHAIRMAN KING: -- is kind of "a train wreck waiting to happen" --

MS. ROBINSON: And that -- that's right.

CHAIRMAN KING: -- and so recognizing this difference between 41 and 32, perhaps that's an area we could --

MS. ROBINSON: Well, let's -- you know, I mean, we put down what we conservatively estimate --

CHAIRMAN KING: I understand.

MS. ROBINSON: -- everybody will want to have their hands on this thing and take a look at it.

CHAIRMAN KING: I understand.

MS. ROBINSON: And yes, one of the reasons we did it like this -- and it does look like it's cutting it close, that there's a little bit of a window.

A couple of things you want to keep in mind:

This year is an election year. You know, I'm sorry to bring up politics, but it's a fact of life where we live, and when there is going to be a congressional election or a presidential election, people get a little bit more reticent, they get much more cautious about regulations that any agency -- not just us, but any agency -- is working on, and so there's -- you know, that just tends to slow the process down a little bit more.
To the extent that we can, if there are places
we can save time, give the Board an extra 30 days, take 30
from us, something like that, we'll do it. We're not
going to let this train wreck, Mark.

CHAIRMAN KING: I understand.

MS. ROBINSON: That's what the Board and
importantly that's what this industry needs to understand:
the Department takes it very seriously that this -- you
didn't start this industry just to grind it to a halt
5 years later. That's not going to happen. So we'll get
there. Andrea.

MS. CAROE: I actually have two questions. My
first one is kind of basic and remedial, but tell me:
when this -- when we go through the sunset, we do this
procedure, are we putting something back on the list for
5 years or are we keeping it on the list for another
5 years?

MS. ROBINSON: You are renewing its exemption.
If it's an allowed synthetic, you're saying: we've looked
at it, we've considered all the evidence, we are renewing
the exemption for this allowed synthetic for an additional
5 years, and that 5-year date will be the effective date
of publication of the Final Rule, and that will start the
clock over again, and it should be October 21, 2012, or
earlier, if a miracle occurred and we actually got this

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX  75644
done, you know, in the summer of 2007.

MS. CAROE: Okay. My next question, and this is -- not to be the big black cloud over this, but: what happens if, somewhere along this process, while somebody's reviewing this, including, and not limited to, Congress, somebody says "No" or "We don't like this" or "We want more information" or "We want you to do something different," what happens to the --

MS. ROBINSON: Somebody -- who, like someone in Congress says they want you to look at more?

MS. CAROE: You know, any -- OMB, OGC, anybody along this path kicks [phonetic] this.

MS. ROBINSON: Well, the Department has to work with its federal partners. Now, as far as telling you that you need -- no one from Congress is going to come and tell you, "Well, I want that material and you need to rethink this." That is the Board's authority: to weigh the evidence before it and make that determination. That is your statutory authority: to renew this exemption.

MS. CAROE: I don't think anybody -- I'm not talking about a technical issue as far as whether the material's fit for organic or not, but I'm talking more of a procedural issue or if they wanted something else done.

MR. NEAL: One of the things -- we've taken that into consideration, but that's captured in the timeline,
because something could happen where they say, "No, this
won't cut it," because it happened to us when we -- when
we were developing the proposal, re-proposal, and final,
they send it back, and they can take as much time as they
need.

So that's why the timeline is such, because
those things happen, and if we cut into the timeline, we
cut into the opportunity to meet the deadline.

MS. CAROE: And then what happens?

MR. NEAL: We'll have to find out.

MS. CAROE: Okay. I just -- you know, I don't --
- I don't know how these things work, and I know you guys
go through this stuff all the time, but, you know,
obviously business doesn't come to a screeching halt,
there's got to be something -- you know.

MS. KOENIG: I had a question, maybe -- you
know, and I think it's a good question to ask at this
point. There's a number of annotations, okay, so on the
proposal that you showed us, there was just two choices,
it either stays on or it comes off. There may be cases
where somebody wants it to stay on but they want the
annotation removed, maybe they want an annotation that's
not there. Is this the point where those changes can be
made in the process, Keith, do you know that?

MR. NEAL: It really gets you into --
MS. KOENIG: Because there may be cases where people, you know, write a comment, not necessarily that any of the economics have changed but no -- you know, "this annotation is too small," and they can provide data, but is this the point where they would do that, where there could be made to changes --

MR. NEAL: I will not say straight up no, somebody cannot do that. However, I will say this. That gets you into a petition-type deal and not the continued need for the substance, because after the review process is over, they still can petition to modify an annotation.

See, what happens is that your workload -- you start to conflict your work, you start to conflict sunset review with petition process --

MS. KOENIG: So -- but that's the question. So it's not the forum for doing that, or --

MR. NEAL: No.

MS. KOENIG: Well, that's -- I think it's a valid question, because we need to know, and the public needs to know.

CHAIRMAN KING: Let's just -- there's a lot to discuss here, clearly, and Keith, you've got a comment, but I want to make one point first, and that is that we need to wrap this up, literally, in the next minute. We've got petitioners here, materials to vote on. So if
we could just wrap this up. And one more point before, Keith, you make your comment, is that this will be ongoing dialogue, so you need to understand this isn't the end here, it's just sort of opening it up and asking questions. So Keith. Thank you.

MR. JONES: Okay, I'll take a minute.

Rosie, I think you have to understand, is that once we get into rulemaking -- Arthur made a very good point -- we can't constrain the public to comment, okay, and the public may comment and say, "We want annotation X taken off," "we want Y annotation added." They're free to comment. That's what public comment is about, it's what notice and comment rulemaking is about.

I think as we analyze that set of comments, we're going to be reluctant, though, to accept those comments because we believe that that really is outside of the scope of the sunset process, and let me tell you why we believe that.

We can conclude sunset and then the Board has in its possession public comments, on a range of issues, that it can then take and look at and say, "You know, this is a pretty compelling comment for the removal of this annotation on X material," or Y -- or whatever, you know, whatever the comment is, and then take an appropriate action straight up on that issue, and I think because of
the workload you're going to be facing, it would be more
prudent on your part to stay as narrowly focused as you
possibly could in the material review process.

CHAIRMAN KING: Okay, I just want to make a
quick thank you, Rose, for your questions and thought
process on this and thank the Department for your
comments.

A quick agenda adjustment, I'm going to move the
handling committee up and we'll discuss those materials
now, and then we'll come back with crops after the break,
then livestock following that.

MR. O'RELL: So, Mark, are you ready to --

UNIDENTIFIED FEMALE VOICE: Same order?

MR. O'RELL: Tetra sodium pyrophosphate?

UNIDENTIFIED FEMALE VOICE: Well, nitrous oxide
was first.

MR. O'RELL: Well, we were asked to make an
adjustment in the order.

UNIDENTIFIED FEMALE VOICE: That's fine.

MR. RIDDLE: What's going on?

MR. SIEMON: We're trying to get (inaudible)
before our break.

CHAIRMAN KING: And there's some people who need
to catch flights, and clearly we're a little bit behind,
so I want to get to materials, just so you understand.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MR. RIDDLE: Yeah, I appreciate it.

CHAIRMAN KING: It's not a coup, Jim, we're --

MR. RIDDLE: No, I just like to know (inaudible), because I thought we had a process.

MR. O'RELL: If everybody's comfortable with the change in the agenda now: tetra sodium pyrophosphate, as we discussed yesterday, was petitioned for the use as a pH adjuster and dough conditioner.

Following our report yesterday on tetra sodium pyrophosphate with our handling committee recommendation, we had discussion on the Board. We've incorporated -- when we had our breakout session we incorporated some of the comments from the Board, we also considered public comment that was made yesterday, and let me just go -- because we did this and we don't have copies for everybody --

CHAIRMAN KING: Arthur's going to try to pull it up for --

UNIDENTIFIED FEMALE VOICE: Just the voting form.

MR. RIDDLE: Yeah, that's just a blank.

MR. O'RELL: Just the voting form. But let's just go through and note the changes we did make, starting with Category 3.

UNIDENTIFIED FEMALE VOICE: Category 2.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MR. O'RELL: Okay, Category 2, yes. We did make an addition on Category 2, Question Number 2, "Is there an organic substitute?", we had marked "Yes," but in our documentation and comments we also noted that this -- that what the petition stated with organic lecithin as an emulsifier was not applicable in this situation, it was confirmed by public comment and some other information that we had received prior to the meeting.

So we've marked "yes/no." Okay, Jim.

MR. RIDDLE: Yeah, I'm sorry, but I don't see anything to follow, but I'm trying --

MR. O'RELL: You don't have the sheet?

MR. RIDDLE: No.

MR. SIEMON: (Inaudible) your regular sheet.

MR. RIDDLE: Yeah, I thought they'd be in the meeting book.

MR. O'RELL: Okay, moving on now to Category 3, and when the committee met in its breakout session, we considered the comments that were made regarding the public testimony that we had put in the documentation column, which we agree we do not want as a board or a committee to endorse a product that may be on the marketplace or recognize products on the marketplace that shouldn't be.

So we are striking, in Question Number 1, under
"Documentation," the -- starting with Public Testimony 91902, Dr. Bossy, "There are products currently labeled 'Certified Organic' in the marketplace."

We are leaving in Public Testimony 91902, Page 84, Tom Harding, "All these organic products have high consumer acceptance," period.

We are striking "and are certified by responsible accredited certifiers."

Any questions on --

(No audible response.)

MR. O'RELL: Number 2, "Is the substance consistent with organic farming and handling?" We had marked originally, as a committee, "Not applicable." We are changing that --

UNIDENTIFIED FEMALE VOICE: It was an error.

MR. O'RELL: It was an error, typo. -- to "Yes."

MR. SIEMON: Was it supposed to be "Yes" all along?

MR. O'RELL: It was supposed to be "Yes." It was a typo. And then we are striking again the same verbiage, Public Testimony 91902, Dr. Bossy, "There are no" -- "There are products currently labeled 'Certified Organic' in the marketplace."

And then the final comment on the Public
Testimony by Tom Harding, "and are certified by
responsible accredited certifiers," striking that
sentence, that half of the sentence, leaving in "All these
organic products have high consumer acceptance."

Number 3, "Is the substance compatible with a
system of sustainable agriculture?" We had marked "N/A,"
so we're striking all documentation in that column.

Now, Number 6, "Is the primary use to recreate
or improve flavors, colors, or nutritive values lost in
processing?" We have added three sections. The first one
is a note from the TAP, tetra sodium pyrophosphate, TSPP,
on Page 2, "The specific use petitioned is as a pH buffer
and dough conditioner for use in organic meat-alternative
products."

We are also including, from public comments made
yesterday, testimony from Dr. Garish Ganjyal and Steve
Ham, MGP Ingredients, quote: "Currently no alternatives
exist for the functional properties displayed by TSPP when
used in small amounts in this proprietary process.
Extrusion processing is used in this proprietary process,
which involves high-temperature and high-pressure cooking
for a short duration. TSPP is unique because it has a
high melting temperature and thus withstands the
extrusion-processing conditions while maintaining its
functionality."
We are also adding a quote from an e-mail that was sent on behalf of the petitioner to the handling committee, stating: "Texturization in the finished ingredient is the primary result of the thermomechanical process during the actual extrusion process; i.e., pressure heat shear at the die plate, forming heads, et cetera."

Now we go to the handling committee recommendation to the full board. We had discussion based on new information -- or public comment and information from the Board, and we have -- we took a second vote, there was a motion by Kim, seconded by Andrea, and let me just pull this up and read this from the computer.

(Pause.)

MR. O'RELL: The motion was to allow TSPP under 205.605(b), with annotation, in quotes, "for use in meat-analog products."

This is going back to the original annotation that was voted on on the last Board meeting and striking the word "texture." That vote was 6 yes, zero no, zero abstentions, zero absent.

CHAIRMAN KING: Discussion?

MR. SIEMON: I guess I'd just like to know if that annotation causes any trouble whatsoever for the use of the product, I wouldn't think it would, so --
UNIDENTIFIED FEMALE VOICE: We -- no.

MR. SIEMON: Okay. Great.

CHAIRMAN KING: Andrea.

MS. CAROE: I just wanted to comment on that. We had relooked at the not using an annotation and the concern that this would be used --

UNIDENTIFIED MALE VOICE: Andrea? I'm sorry.

MS. CAROE: The concern was that if there was no annotation, that it could open it up, actually, to improved texture in other products, specifically meat. So that's the reason we came up with an annotation that broadly covered the petitioned request but didn't expand it to where it would not meet criteria -- the criteria for inclusion on the list.

MR. RIDDLE: Yeah, I just want to express appreciation for the work of the committee.

MR. SIEMON: You going to do that with a motion?

MR. RIDDLE: Yeah, I --

MR. O'RELL: Should do that with a motion?

MR. RIDDLE: Yeah, sure, I'd move approval -- no, I'm not, I am not going to move the approval.

UNIDENTIFIED FEMALE VOICE: It dies because of lack of second.

MR. RIDDLE: You guys almost tricked me.

(Laughter.)
MS. DIETZ: I'll make the same motion: to add tetra sodium pyrophosphate on 205.605(b) as a synthetic, with the annotation as a meat-analog --

UNIDENTIFIED FEMALE VOICE: For use in.

MR. O'RELL: For use in meat-analog products.

MS. CAROE: I'll second.

UNIDENTIFIED MALE VOICE: Jim, you could second it.

MR. RIDDLE: It already was.

CHAIRMAN KING: It has been? Who seconded?

MR. RIDDLE: Andrea.

CHAIRMAN KING: Andrea seconded. All right, so it's been moved and seconded that we consider the addition of TSPP to .605(a). Correct?

UNIDENTIFIED FEMALE VOICE: .605(b).

CHAIRMAN KING: .605(b), sorry, with the following annotation: "for use in meat-analog products."

Is there any discussion?

MS. GOLDBURG: I'm going to raise one point, because I think I'm going to vote against this material, and that is, I think that when we do vote, we ought to consider whether we need organic meat-analog products.

MR. CARTER: Yeah, I have the same concern.

UNIDENTIFIED FEMALE VOICE: (Inaudible)
discussions (inaudible)?

CHAIRMAN KING: Okay. Further discussion?

MR. SIEMON: Well, if we're going to go that far, my concern always is, if you do that, then you have a "made with" product and you'll still have it out there -- instead of being 95-percent organic, you're going to have it 70-percent organic, and we've actually done a disservice, because the market will always go to that lower one if they -- if that's what you're enforcing [phonetic], so to me, that's really important.

MS. CAUGHLAN: I think that's a very valid --

CHAIRMAN KING: Goldie, go ahead.

MS. CAUGHLAN: No, I said I think that's a very valid rationale.

MS. KOENIG: Can you elaborate on it a little bit, what you're --

MR. SIEMON: Well, if we prohibit this material, then they'll just put a "made with organic" claim and it'll be 70-percent organic, if we allow it, then people are able to make a meat analog, whether we need it or not, at 95. You're not going to stop the product from being on the marketplace and trying to go out to the organic consumer. Now it's a choice of enabling that to be 95 or we limit it to the 70.

CHAIRMAN KING: Kim.
MS. DIETZ: This same discussion we went into detail about 20 pages of the original time we voted on this material, and remember, if this material is also considered a processing aid, it does not need to be on the label. So on a "made with" product, you may have one ingredient and it'll be a hundred-percent grain and on a "made with" label. So there is confusion out there to the consumer, and that's why we did not originally recommend a "made with" label.

CHAIRMAN KING: And I just -- I actually voted for this recommendation, I had a similar concern with George and I made the point of the "made with" category, and I guess one of the things that helped me to support it is: understanding, as I walk into a grocery store, that there are lots of consumers who -- vegetarians, primarily -- who do consume this product and who are supporting it. And the second was that -- and I could be wrong on the math here, but it was .5 percent of TSPP in the actual ingredient that then goes into the final product, so I think we're --

MR. O'RELL: 10 percent in the final product.

CHAIRMAN KING: So we're talking about a pretty small percent. Dave.

MR. CARTER: Well, I just -- one of the things I'd like to ask too is just -- on the Category 1, down
there under Number 10, the documentation says "as noted, tetra sodium pyrophosphate has been linked to kidney damage; however, all reviewers shared the consensus that the levels used in food manufacture should not pose a serious risk for most consumers," that's --

(Laughter.)

MR. CARTER: That doesn't give me a lot of confidence, that it "should not for most consumers."

That --

MS. DIETZ: That's what is written in the TAP, that's verbatim.

MR. CARTER: Okay.

MR. O'RELL: Yeah. I mean, the problem with that, that is exactly -- it's verbatim language from the TAP, but the fact is that if you look at the GRAS standing [phonetic] and everything else associated with the safety, it's not considered at these levels for a food additive, it's really not a concern.

CHAIRMAN KING: So if I'm hearing you correctly, Kevin, that science was based on much higher usage.

MS. DIETZ: There was another reference in the TAP where it said that most of the health risks were related to the medical industry, not food.

MR. SIEMON: Should we add that?

MS. DIETZ: It's in there, it's on our notes.
MS. CAUGHLAN: I'm just realizing that in our annotation we say "for use in meat-analog products," but this is really for use in meat-analog processing aid or ingredient that goes into the final -- you understand what I'm saying? There's a step there.

MS. DIETZ: (Inaudible) as a processing aid in meat analog --

MS. CAUGHLAN: Right. It's actually --

MS. DIETZ: (Inaudible.)

MS. CAUGHLAN: Pardon?

MS. DIETZ: That was the original annotation, and so we just felt that was the best one, but whether it's a process or a product, it ultimately is the final product.

MS. CAUGHLAN: And it's in there.

MS. DIETZ: And it's in there.

MR. O'RELL: Mark.

CHAIRMAN KING: Yeah.

MR. O'RELL: Can I address the kidney damage? If we're reading from the TAP, "extrapolation from rat models may overestimate kidney damage from sodium pyrophosphate as a food additive," and then it says, "but, overall, phosphate consumption may be more relevant because sodium pyrophosphate readily converts to orthophosphates," and orthophosphates we do have on the
National List for approval --

UNIDENTIFIED FEMALE VOICE: For use in dairy.

MR. O'RELL: -- in dairy foods.

MS. KOENIG: And this wasn't -- it's not a comment to this product, it's just a general comment, because -- I mean, we heard it yesterday, and I guess I -- after thinking about it, I was a little uncomfortable with this notion that because something is GRAS or the idea of Good Manufacturing Practices makes something okay, because if that was the -- you know, that is the assumption, I mean that's why you have GRAS, that's why you have FDA, that's why you have testing, but in the -- in the OFPA sense, I mean, if that was the case, then there would never have been a criteria to ask the question.

You know, so the question -- somebody begged the question, because even though in that world, you know, there is that assumption, I don't think that we're supposed to put that in every category, that with Good Manufacturing Practices things should be okay.

I think that category acknowledges -- should acknowledge the data that is out there, and it can say with -- you know, "with GRAS it is" thing, but I don't think that we should just always just go over that and say, "Oh, of course," because we could answer that for everything, you know, pesticide use is fine as long as
you're wearing applicators, but -- but we know in reality, as practitioners, that that's not always the case, and to me, that's why the criteria was -- is there, so that's all I wanted to say.

MR. O'RELL: Right. But I think that's only one factor that we're considering; we're not basing the whole thing on the fact it's GRAS. In addition, the substance, in terms of anything linked in damage to human health, is very sketchy in the TAP.

MS. KOENIG: No, (inaudible), I'm not talking about this product, I'm just saying as we go through these forms, there's a reason why those questions are there, and the answer to everything is not "because it's GRAS," you know, you're supposed to think more about it, in terms of a more holistic concept.

MR. O'RELL: I agree. I think we did for this review.

MS. KOENIG: Okay.

MR. SIEMON: Call the question [phonetic].

UNIDENTIFIED FEMALE VOICE: Call the question.

CHAIRMAN KING: The question's been called.

MR. SIEMON: Twice.

CHAIRMAN KING: "Twice," George says. Okay, so, again, we're voting on tetra sodium pyrophosphate to be added to 205.605(a), with the following annotation: "for
use in meat-analog products." All those in favor say aye.

MR. O'RELL: Wait, we've got to take a motion.

CHAIRMAN KING: We do, sorry. All right.

MR. SIEMON: It seemed so easy.

(Laughter.)

CHAIRMAN KING: I know. So we'll start --

UNIDENTIFIED MALE VOICE: Rookie mistake.

CHAIRMAN KING: It is a rookie mistake.

(Laughter.)

MR. SIEMON: Dave always did it in a different order each time, so --

CHAIRMAN KING: Yeah.

UNIDENTIFIED FEMALE VOICE: Katherine, are you going to be calling the vote, were you wanting to record?

CHAIRMAN KING: Are you recording the vote?

UNIDENTIFIED FEMALE VOICE: Just total.

CHAIRMAN KING: Huh?

UNIDENTIFIED FEMALE VOICE: Just total.

UNIDENTIFIED FEMALE VOICE: Do you want me to record the vote?

CHAIRMAN KING: Please.

UNIDENTIFIED FEMALE VOICE: (Inaudible) the yeas and nays and abstain --

CHAIRMAN KING: Hold on.

UNIDENTIFIED FEMALE VOICE: Give me a minute to
put everyone's name down.

CHAIRMAN KING: All right. All right, we'll start over here, and we won't go the same way every time, okay, but we are going to start with Ann this time.

MS. COOPER: Yes.

CHAIRMAN KING: Ann says "Yes." Rose?

MS. DIETZ: Yes.

MS. COOPER: Yes.

MS. KOENIG: Yes.

MS. CAROE: Yes.

MR. SIEMON: Yes.

MR. CARTER: No.

CHAIRMAN KING: Andrea's "Yes," George is "Yes," Dave is "No."

MR. RIDDLE: A reluctant yes, hesitant, a slow yes.

(Laughter.)

CHAIRMAN KING: Mark, yes.

MS. DIETZ: Kim, yes.

MS. OSTIGUY: No.

MR. O'RELL: Yes.

MS. CAUGHLAN: Yes.

MR. LACY: Mike, yes.

MS. GOLDBERG: Becky, no.

CHAIRMAN KING: Okay, so we have 3 no's out of
13, so we have -- we have 10 yes votes, 10 yes, 3 no's.

UNIDENTIFIED FEMALE VOICE: 10 yes, 3 no's.

CHAIRMAN KING: 1 absent. Okay.

MR. CARTER: You forgot to ask if anybody has a conflict.

CHAIRMAN KING: Oh, yeah. Dave just noted I forgot to ask: Does anyone have a conflict they'd like to disclose? Sorry. That's my second rookie mistake.

MR. SIEMON: I'm in the meat business.

(Laughter.)

CHAIRMAN KING: Just for the record: George is in the meat business.

(Laughter.)

MR. SIEMON: That's why. I have five heifers (laughs).

CHAIRMAN KING: All right, motion carries. Okay, Kevin, it's yours once again.

UNIDENTIFIED FEMALE VOICE: Is the next one nitrous oxide?

MR. O'RELL: It is, if I can find it.

(Pause.)

MR. O'RELL: Okay. Second material from the handling committee is nitrous oxide. We presented that yesterday, indicated that it is petitioned for use as a propellant, talked about some of the environmental
concerns and the greenhouse effect. I know -- in the interest of time, I'm not going to go through all of that.

The committee recommendation: there was no change, there was no public comment given, and there was no discussion from the Board. So the committee, on the vote to allow nitrous oxide for addition to 205.6 failed, in a vote: yes, zero; no, 5; no abstentions; and 1 absent. That was as synthetic non-agricultural.

That was rejected, and that is still the handling committee recommendation to the Board.

CHAIRMAN KING: Discussion?

(No audible response.)

CHAIRMAN KING: Is there a motion to consider the recommendation?

MS. CAUGHLAN: I move.

CHAIRMAN KING: Goldie moves we consider the recommendation. Second?

MS. OSTIGUY: Second.

CHAIRMAN KING: Nancy.

UNIDENTIFIED FEMALE VOICE: Who did the motion?

MR. O'RELL: Goldie did a motion.

MR. RIDDLE: What's the exact wording, what's the wording of the motion?

MR. O'RELL: It's: to allow nitrous oxide for addition to 205.6, synthetic non-agricultural product.
UNIDENTIFIED MALE VOICE: To allow?

UNIDENTIFIED FEMALE VOICE: You have to vote to allow.

MR. O'RELL: The motion is to allow.

(Pause.)

CHAIRMAN KING: Okay, does everyone understand the motion?

(No audible response.)

CHAIRMAN KING: All right. Here we go. Any refusals, any conflicts?

MR. SIEMON: Oh, yeah, I want to start thinking about whip cream.

(Laughter.)

CHAIRMAN KING: Yeah. You're not in the whip cream business, okay.

(Laughter.)

CHAIRMAN KING: Okay. We'll start with Becky.

MS. GOLDBURG: No.

UNIDENTIFIED FEMALE VOICE: The motion is --

CHAIRMAN KING: The motion is to allow, so a "No" vote means you will not allow it, we understand.

VOICES: Right.

CHAIRMAN KING: Okay. Mike.

MR. LACY: No.

CHAIRMAN KING: No.
MS. CAUGHLAN: Goldie, no.
MR. O'RELL: No.
MS. OSTIGUY: No.
MS. DIETZ: No.
CHAIRMAN KING: No.
MR. RIDDLE: No.
MR. CARTER: No.
MR. SIEMON: No.
MS. CAROE: No.
MS. KOENIG: No.
MS. COOPER: No.
CHAIRMAN KING: That's 13 no's, zero yeses, 1 absent.

Do you have anything else?
(No audible response.)

CHAIRMAN KING: Okay, I think we'll take a quick break, 15-minute break. My watch shows about 3:15, we come back at 3:30, and we will start with crops.
(Off the record at 3:15 p.m. and reconvened at 3:30 p.m.)
CHAIRMAN KING: Just real quick, as a board, finish up one quick order of business with the processing committee and then we'll move on.

MR. O'RELL: Yesterday we -- the handling committee submitted a written report, which was an update on materials used as food contact substances.
Unfortunately, this report did not get the 30-day published, so we can't vote officially on the recommendation, but what we'd like to do is to propose that we have a Board vote to accept this document, and then at least it will be posted again on the website and we can take future action.

From the handling committee, we are going to be working more on food contact substances and we'd like to recognize these six ingredients -- or six materials that we have formally approved for addition to the National List.

CHAIRMAN KING: Is there a motion to accept the report?

MS. DIETZ: I'll make the motion.

MS. CAUGHLAN: I'll second.

CHAIRMAN KING: Kim Burton moved that we accept the food contact substance report, and Goldie Caughlan seconded.

Discussion?

(No audible response.)

CHAIRMAN KING: I don't think we need an individual vote on this. All those in favor say aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No audible response.)
CHAIRMAN KING: Motion carries. Anything else?

MR. O'RELL: That's it from the handling committee.

CHAIRMAN KING: Thank you, Kevin. We'll move on to the crops committee now.

MS. OSTIGUY: Starting with soy protein isolate, the committee met this morning and discussed the comments that we received and the public testimony yesterday, and the motion was to reject the TAP and request information that does address the material used as a soil amendment.

The vote for rejecting the TAP was 4 yes, zero no, and zero abstentions.

CHAIRMAN KING: Discussion? Andrea?

MS. CAROE: In the TAP, on the first page, in the first paragraph, the last sentence, it says, "No information concerning its use in either conventional non-organic or organic plant fertilizer was found," so they looked for it and they didn't find it.

I guess I'm asking: if you're sending it back, what are you expecting them to find in the second look that -- because clearly they looked for it, they just -- there's no information there. We're sending it back for more information, but they have acknowledged that there is none.

(Pause.)

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
MS. OSTIGUY: I'm not quite sure how to put this nicely. I'm not sure how -- and this is nothing about you, this has to do with the reviewer.

(Laughter.)

MS. OSTIGUY: I'm sorry. I saw the --

MS. CAROE: (Inaudible.)

MS. OSTIGUY: I saw the look on your face and was like "Oh my God." No.

MS. CAROE: "Did I ask the wrong thing?"

MS. OSTIGUY: No, no, no. This is the -- the TAP contractor again.

This particular TAP reminded me of the original ones before they started doing some decent ones. I believe, based upon notes that I've taken and such, that there are some questions that they didn't attempt to answer. One does not need specific details about soy protein isolate specifically to be able to answer the concepts of what happens when you use these kinds of materials, which are some of what we want to know about, use in soil, it's not -- you know, you don't have to know -- the studies don't have to have been done specifically on soy protein isolate only, but anything that is similar to it, and I do not have the impression, based upon this TAP or our prior experience with this TAP contractor, that they would have asked questions in that context. I would
at the very least like to know that. But --

MS. CAROE: Okay. Well, as I understand soy
protein isolates, they are an extracted piece of a plant,
not changed or synthesized in any way but just a
sophisticated pull-out of that one piece, and I'm pretty
familiar with the process from my lab background. That
material is already in a plant. How different is using
this material as using a green manure of soybeans? As far
as -- as far as the interaction in the soil --

MS. OSTIGUY: There can be tremendous
differences with the bacterial interactions when you have
extracted all the other parts of a green manure from it.

MS. KOENIG: It's the C-to-N ratio.

MS. OSTIGUY: Excuse me?

MS. KOENIG: It's the C-to-N ratio. In a green
manure --

MS. OSTIGUY: I can't hear you.

MS. KOENIG: In a green manure you have carbon
in association with nitrogen, and part of that nitrogen is
-- part of the carbon is broken down by some of that
nitrogen. In a product where you just have solely
nitrogen, it's a more quick release. And we're not saying
that, you know, that's either good or bad, but we're just
saying that there's implications in terms of that use of
nitrogen versus of other types of nitrogen in the system
and we want that to be -- to be comprehensively covered.

And additionally -- and I'm sorry, Nancy, I
don't want to pull -- the discussion that we had after we
relooked over the definition of "synthetic" and -- there
was some discussion, you know, whether this in fact was a
natural, which was different than what the commenters
said, so there was kind of a change in position among the
members in our committee as far as the way we were looking
at that.

But that said the processing, the hexane
extraction process, was not covered in the TAP, and
because manufacturing of the soy protein isolate is one of
the OFPA criteria, we felt that we needed additional
information about the manufacturing process in the sense
of using hexane as an extraction material. We wanted to
specifically know the environmental consequences and
properties of that hexane and, really, whether there are
alternatives to that in -- in just the criteria of
manufacturing.

MS. OSTIGUY: Kim.

MS. DIETZ: So my question is, because we have
defered materials in the past and not given really good
guidance on -- well, that's not true. We've not got back
what we asked for.

So when we revised these forms, I was the one
that recommended that if we defer, that we be specific in what we believe.

So all I ask this committee is to make sure that you are specific, if we're going to defer this material, so that we get what we need, so that this gentleman does not go on six years [phonetic] without voting on this material.

So I can support that, because I want this to have a very thorough review with this material and make sure we're doing the right decision, so that's just what I would request and that -- you know, that we give a detailed guideline to the TAP contractors.

MS. OSTIGUY: Jim.

MR. RIDDLE: Yeah. Yeah, I think there are a lot of detailed questions here, and I would like to add to it. Rose just mentioned about the environmental effects of hexane, and I don't see that in the list yet, because we didn't know --

MS. OSTIGUY: It's in my notes.

MR. RIDDLE: Okay. -- because we didn't know that was part of the manufacturing process for sure.

MS. DIETZ: That's not true. It was in the original petition, and it was in the flowchart supplied to the contractors, so I don't know what --

MR. RIDDLE: Okay. Well, the TAP acted like
they didn't know.

MS. OSTIGUY: We didn't look at the material.

MR. RIDDLE: So I guess I was misled by reading the TAP.

UNIDENTIFIED FEMALE VOICE: Yes.

MR. RIDDLE: And then also the role of legumes in the crop rotation, the whole systems-type questions. And then I just have a question about what you mean, what the committee means, the -- in your questions there, the fourth line from the bottom, it starts: Answer, Category 1, Question A, "Is soy protein isolate persistence?", I imagine "persistent," but then, "can in concentrate"?

MS. OSTIGUY: Yeah.

MR. RIDDLE: What does that -- do you know what that --

MS. OSTIGUY: It -- in --

MR. RIDDLE: Oh, "can 'it' concentrate," okay. Okay.

MS. OSTIGUY: Some of these, I know the answer. They didn't answer the question.

MR. RIDDLE: Uh-huh.

MS. OSTIGUY: I can provide information.

MR. RIDDLE: Yeah. Well, you're not being paid $4,000.

UNIDENTIFIED FEMALE VOICE: We're board members.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
(Laughter.)

MS. OSTIGUY: But I also want to make it clear that we aren't clueless about what the answers are.

MR. RIDDLE: Uh-huh.

MS. OSTIGUY: I --

MR. RIDDLE: Yeah.

MS. OSTIGUY: You know, I can do some of this off the top of my head without a problem.

MR. RIDDLE: You know, and I can support deferring it; I just don't have a lot of confidence in this particular -- you know, our contractor to follow through.

MS. OSTIGUY: Well, they have been done -- doing a much better job generally and a much better job when we ask for information when it's been incomplete.

MR. RIDDLE: Yeah, but I look at the -- yeah. Some of these others, the urea one is not very helpful either.

MS. OSTIGUY: Yeah. They have -- they have, though, improved. And it may be that this is actually a non-synthetic, you know, that -- it may be that fundamentally inaccurate of a TAP.

MR. SIEMON: That was my question.

MS. OSTIGUY: Yeah.

MR. SIEMON: You were not able to determine that
this is a synthetic?

    MS. OSTIGUY: Well, that was where we went
around and around in the conversation this morning, was:
is it a synthetic? is it a non-synthetic?

    MR. SIEMON: Okay. Then we're stuck.

    MS. CAROE: Well -- I mean, logically, it's --
to me, it's a non-synthetic, because it's --

    MS. OSTIGUY: After hexane extraction?

    MS. CAROE: It's not molecularly changed. The
extraction is simply a method in order to take out a piece
of the original plant. It's not changed.

    MS. OSTIGUY: Andrea, there was disagreement,
that's all I can tell you.

    MS. CAROE: Well, I can tell you I believe it's
non-agricultural. I mean, it's been manipulated in a way
that it is -- no longer has its agricultural identity, but
it's not synthetic.

    MS. OSTIGUY: Andrea -- yes, I hear what you're
saying. We had -- there were people that were -- stated
your opinion, there were people that stated others. There
was no conclusion that we were able to reach, as a
committee. Richard?

    MR. MATTHEWS: Yeah. I need a bit of a
clarification on something. This is Richard Matthews,
Program Manager, National Organics Program.
I'm not sure I heard correctly a few moments ago when there was discussion about the fact that there was a question written onto the sheet and Nancy says she knows the answer?

MS. OSTIGUY: I know the answer, but I -- I could not -- this is not a test for them, but I'm not the one that's supposed to be supplying everybody with the answer. Now, I could write those out.

MR. MATTHEWS: Then I think you should, because this Board has the responsibility for reviewing the material, this Board is appointed --

MS. OSTIGUY: This --

MR. MATTHEWS: Wait a minute.

MS. OSTIGUY: This is not --

MR. MATTHEWS: Let me finish.

MS. OSTIGUY: -- going to finish the questions, though.

MR. MATTHEWS: That's okay. Let me speak my piece.

This Board is appointed because of expertise that they have, and I have serious problems with a board that would take the attitude that they know the answer to the question that wasn't answered by the scientists but they're not going to answer the question because they're not paid $4,000 to do TAP, and that is exactly what was
said.

MS. OSTIGUY: That is not what I said.

MR. MATTHEWS: So, folks, if you know the answer to something fill in the blank, if there's something you don't know the answer to you can't fill in the blank, then send it back, but don't send it back, because you don't want to fill in the blank.

MS. OSTIGUY: That is not what was said, Richard. The reason for sending it back was lack of information. There are some things in here that they did not answer, that yes, I can't answer, and I would be willing to write those down.

CHAIRMAN KING: I would entertain a motion to consider.

UNIDENTIFIED FEMALE VOICE: Specifically what's the information that's --

UNIDENTIFIED FEMALE VOICE: There is a motion on the table.

VOICES: No.

UNIDENTIFIED FEMALE VOICE: Oh. No, okay.

MS. KOENIG: May I just say one thing, you know, as a comment to Richard and Nancy. I think -- you know, and I understand Nancy's point, and I don't -- I think -- I guess what we want to say is that we can supply information, but part of a technical review is actually to
review the literature. I mean, it may be my opinion, and it may be Nancy's opinion. I mean, I have had basic bio-- you know, we both have Ph.D. shift in sciences, but I'm not going to write down "Rose says" -- you know.

In order for me to document that and do it as a scientist, I would have to do a literature review and do a comprehensive analysis of those things, and I think what Nancy is saying is that she knows, you know, based on her scientific background -- just like I said, carbon-to-nitrogen ratio -- but, you know, to be -- to do a scientific evaluation, as a scientist, it's our job to go into the literature and referee publications and document that fact. That's part of the scientific process.

So Richard, we will do our job and we will supplement information, but in order for us to do a literature review on things, it's a considerable amount of time, and what we're saying is that we can look at data -- I mean, to me, our role -- and correct me if I'm wrong -- is to use our expertise to analyze documentation, to see if we can support it or not support it.

If there's areas that we don't support, then we need to confirm that. But I think what's Nancy's saying is it's -- you know, if we have time, we can do some literature review, but the idea of contracting out that information is for a contractor to actually gather that

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
information and do literature review.

So -- that's just my comment.

CHAIRMAN KING: Is there a motion to consider?

UNIDENTIFIED FEMALE VOICE: Let George have his 

(inaudible).

MR. SIEMON: I just had a basic question, that 
maybe is too basic, but: If it was synthetic, is it 
possible for you to consider this as a fertilizer? 
Because one of the TAP reviewers says no, you can't, if 
it's -- so I just need that clarification.

MR. RIDDLE: Well, that's --

MR. SIEMON: If it was declared synthetic, is it 
possible to consider it as a fertilizer? I just need an - 
- I don't -- that's the basic -- I've read the law here, 
under what they refer to as -- 6508(b); I just need to 
know what ya'll -- I need some help.

MS. KOENIG: Can I -- just from the basics of 
the committee, if it was a synthetic, if it stays within 
that category -- and again, this is my opinion after 
sitting on conference calls and getting kind of a general 
feeling of the group -- it would end up being synthetic, 
not allowed, because there's plenty of natural sources of 
nitrogen out there. Okay?

All the reviewers said it was synthetic. You 
know. So if we use the documentation provided to us by 

R & S TYPING SERVICE - (903) 725-3343 
5485 S. LIVE OAK, GILMER, TX 75644
the contractor, then we would go the route of: synthetic, not allowed.

What we're saying, as a committee, is: hey, this may actually in fact be a natural, and we may not even have to go there, but from the information that was provided, we see there is an extraction method involved in that, and we place -- there is some concern that there perhaps are other materials that could be used in an extraction process that may warrant us to look at it as a non-synthetic but, however, may stick it in a "prohibited" category, with an annotation only allowing certain extraction methodologies.

So that is really, you know, kind of where the committee stands in terms of thinking at this point, but none of us were comfortable based on the lack of information and not having the ability to go into textbooks, at this point, to make a decision at that point, we did not think that that was, you know, in the best interests of the industry or the petitioner.

MR. RIDDLE: I move we defer.

MR. SIEMON: Second.

CHAIRMAN KING: It's been moved and seconded that we defer, moved to Jim Riddle, seconded by George Siemon.

Further discussion?
(No audible response.)

CHAIRMAN KING: Hearing none, for a vote, we'll start with you, Ann, this time.

MS. COOPER: Yes.

MS. KOENIG: Yes.

CHAIRMAN KING: Andrea?

MS. CAROE: I'm going to abstain.

MR. SIEMON: Yes.

MR. CARTER: Dave, yes.

MR. RIDDLE: Yes.

CHAIRMAN KING: Mark, yes.

MS. DIETZ: Yes.

MS. OSTIGUY: Nancy, yes.

MR. O'RELL: Kevin, yes.

MS. CAUGHLAN: Goldie, yes.

MR. LACY: Mike, yes.

MS. GOLDBURG: Becky, yes.

UNIDENTIFIED FEMALE VOICE: That's 12 yeses, 1 abstention, and 1 absence.

UNIDENTIFIED FEMALE VOICE: 12 yes and 1 --

UNIDENTIFIED FEMALE VOICE: -- 1 abstention, 1 absence.

UNIDENTIFIED FEMALE VOICE: Why was it deferred?

UNIDENTIFIED FEMALE VOICE: Inadequate TAP.

MS. OSTIGUY: Additional material.
MR. RIDDLE: It's in the committee's report.

CHAIRMAN KING: "Additional information needed."

MR. RIDDLE: "Details to be provided by committee."

MS. OSTIGUY: Okay, 6-benzyladenine. Is everybody ready? Okay. The committee discussed the public testimony that was presented yesterday. After the discussion the committee voted that the material was synthetic and rejected its addition to -- its addition to the National List because hand pruning is an alternative practice that is currently available and currently used.

The vote to reject -- or the vote to add was: zero to add, 4 no's, and zero abstentions. Discussion?

MR. SIEMON: I just -- is there anyone that can confirm that people already hand-thinning? I heard yesterday that was the only way. Is that -- it is? Rose.

MS. KOENIG: One of the -- you know, again, in committee discussion, the -- the alternative hand thinning came up as a discussion item, that we thoroughly discussed, and one of the benefits of placing this on the web was we were hoping we were going to get public comment from farmers who felt that this was erroneous -- you know, not erroneous, but it over-- -- you know, a tax [phonetic] that was just too much, that they really needed these things.
The only public comment that we received was that of the petitioner, which really was a repeat of the same reasonings for including it.

So based on the fact that there was no public comment from farmers and producers stating they needed this, we assumed our -- that that alternative was not needed.

MS. OSTIGUY: Jim?

MR. RIDDLE: Yeah. In order to have a vote, I move that it be added to the List.

CHAIRMAN KING: Is there a second?

MS. CAUGHLAN: In order to have a vote I'll second it.

(Laughter.)

CHAIRMAN KING: It's been moved by Jim Riddle that we add 6-benzyladenine to the List, and seconded by Goldie Caughlan. Discussion, further discussion?

(No audible response.)

CHAIRMAN KING: Hearing none, we'll proceed to vote, beginning with Becky.

UNIDENTIFIED FEMALE VOICE: That doesn't work. Start with Rose. Just alternate.

CHAIRMAN KING: All right, we'll start with her.

MS. KOENIG: No.

CHAIRMAN KING: Rose says "No."

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
MS. GOLDBURG: No.
MR. LACY: No.
MR. RIDDLE: No.
CHAIRMAN KING: No.
MS. CAUGHLAN: Goldie, no.
MR. O'RELL: No.
MS. OSTIGUY: No.
MS. DIETZ: No.
MR. CARTER: No.
MR. SIEMON: No.
MS. CAROE: No.

UNIDENTIFIED FEMALE VOICE: 13 no's, 1 abstention.

CHAIRMAN KING: 1 absence.
UNIDENTIFIED FEMALE VOICE: Absence, I'm sorry.
MS. OSTIGUY: The next one was urea. Urea, the committee discussed, there was no additional information that was presented. Urea was petitioned for a use that doesn't exist with EPA, so we really can't even consider it.

MR. SIEMON: And this, used in a trap, is required for EPA clearance?
MS. OSTIGUY: Yes, it is. As an attractant, it does have to be listed. Now, it's probably not a difficult listing to do, but somebody would have to go
through that process; and if somebody did, we have all the
materials, then, to add it to the List at that time.

    MS. DIETZ: Yeah. And this -- historically,
we've done this before, we just archive the petition and
archive all the information, that if it does come back up,
then we can re-review the material, but it's just
considered archived.

    MS. KOENIG: I make a motion to archive it.
    MS. DIETZ: I'll second.
    MS. OSTIGUY: Okay.
    MR. SIEMON: Do we need to vote on it?
    MS. DIETZ: Yeah, I guess we do have to vote.
    MR. RIDDLE: Well, it's clear, it's in the
record --

    CHAIRMAN KING: And I would entertain a motion
to add to that that we're accepting the committee's
findings, so if we could --

    MR. RIDDLE: You accept that as a friendly
amendment?

    UNIDENTIFIED FEMALE VOICE: Yes.

    CHAIRMAN KING: So it's been moved that we
archive the information on urea and accept the committee's
findings. I'm not sure who made the motion. Rose made
the motion.

    UNIDENTIFIED FEMALE VOICE: Archive what?
UNIDENTIFIED FEMALE VOICE: Archive the petition and the TAP report.

CHAIRMAN KING: And accept the committee findings. Do we need an individual vote on this?

UNIDENTIFIED FEMALE VOICE: And who made the motion?

CHAIRMAN KING: Rose.

MS. OSTIGUY: Rose, seconded by Kim. Question, when you say you're accepting the committee findings, you're referring to the committee findings that it is not EPA-approved?

CHAIRMAN KING: Yes.

UNIDENTIFIED FEMALE VOICE: The whole review and everything.

UNIDENTIFIED FEMALE VOICE: We haven't really detailed it.

UNIDENTIFIED FEMALE VOICE: We have not, no, received a report on their actual findings beyond (inaudible).

CHAIRMAN KING: My understanding is we're accepting the finding that it's not a legal EPA label claim.

UNIDENTIFIED FEMALE VOICE: That's correct.

UNIDENTIFIED FEMALE VOICE: That's what I wanted to clarify.
UNIDENTIFIED FEMALE VOICE: And it's -- basically, the committee recommended for deferred, so deferred and we're archiving it.

CHAIRMAN KING: Okay. We're going to start with Andrea this time.

MS. CAROE: Yes.

MS. GOLDBURG: Yes.

MR. LACY: Yes.

MR. RIDDLE: Yes.

CHAIRMAN KING: Yes.

MS. CAUGHLAN: Yes.

MR. O'RELL: Yes.

MS. OSTIGUY: Yes.

MS. DIETZ: Yes.

MR. CARTER: Yes.

MR. SIEMON: Yes.

MS. KOENIG: Yes.

MS. OSTIGUY: Last one, for crops --

UNIDENTIFIED FEMALE VOICE: What's the vote, please?

MS. OSTIGUY: 13 yes, zero no, no abstentions, 1 absence.

MS. CAUGHLAN: No, it's 12, 1, and 1. I mean --

CHAIRMAN KING: No, 13 --

MS. CAUGHLAN: You're right. I'm sorry.
MS. OSTIGUY: 13 yeses, zero no's, 1 absence, no abstentions.
(Pause.)
MS. DIETZ: Come on, girlfriend (inaudible).
(Laughter.)
UNIDENTIFIED FEMALE VOICE: Oh, but our table's not ergonomically correct.
CHAIRMAN KING: Pressure. Pressure.
(Laughter.)
MS. OSTIGUY: Okay, the committee considered the information that was provided yesterday during public testimony, and also the public comments that were received on hydrogen chloride's use for de-linting cotton seed.
A motion was made -- I believe by Rose, I don't remember who seconded it now -- to add hydrogen chloride to the National List, with the annotation "for de-linting cotton seed for planting."
The vote was 4 yes, zero no, zero abstentions.
MS. DIETZ: I just want to make sure that you incorporated my changes into the original document, that I asked.
MS. OSTIGUY: Yes, it'll be going in. Any other comments?
MR. SIEMON: This hydrogen chloride is the same thing that was with the soy product; right?
MS. DIETZ: No.

MS. OSTIGUY: No.

MR. SIEMON: No?

MS. OSTIGUY: Are you thinking of hexane?

MR. SIEMON: Well, okay --

MR. RIDDLE: It's one of the materials, yeah.

UNIDENTIFIED FEMALE VOICE: It's one of the two materials in the extraction process, yes.

MR. SIEMON: That's what I mean.

MR. RIDDLE: After the hexane, then the other steps. Yeah, you're right.

CHAIRMAN KING: Okay.

(Pause.)

MS. OSTIGUY: Is there a motion?

MR. RIDDLE: I move approval, with the annotation as stated by the committee.

UNIDENTIFIED FEMALE VOICE: I'll second it.

UNIDENTIFIED FEMALE VOICE: Can you read the annotation again, please.

MS. OSTIGUY: "For de-linting cotton seed for planting."

CHAIRMAN KING: Okay, it's been moved and seconded, and we're voting on hydrogen chloride, with the following annotation: "for de-linting cotton seed for planting." So we'll start with George.
MR. SIEMON: Yeah -- yes.

UNIDENTIFIED MALE VOICE: Was that two votes or-

(Laughter.)

MR. SIEMON: Well, I'm trying.

UNIDENTIFIED MALE VOICE: You're here in Chicago; you never know.

(Laughter.)

UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED MALE VOICE: Yes.
CHAIRMAN KING: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED MALE VOICE: Yes.
MS. OSTIGUY: Yes.
UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: And yes.
MS. DIETZ: I just want to commend that process on that material, because that was one that -- I think we remember it was originally a "No," we got public comment, and thank the committee for taking that back, that was --

MR. RIDDLE: And what about your comments on

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
the language, that's just between -- the rest of us don't need to review that?

MS. OSTIGUY: Yeah, we've done that. GRAS.

There was just comments --

UNIDENTIFIED MALE VOICE: Not now, you voted on it.

MR. RIDDLE: I know, we already voted, and

(inaudible) --

UNIDENTIFIED FEMALE VOICE: I trust that

(inaudible).

MR. RIDDLE: Okay.

CHAIRMAN KING: Okay.

MR. RIDDLE: Yeah.

CHAIRMAN KING: Is there anything else from you?

MS. OSTIGUY: No.

CHAIRMAN KING: Okay. That concludes crop committee materials. And next is livestock.

MS. OSTIGUY: I get to do more.

CHAIRMAN KING: Yeah. It's just a little marathon, Nancy.

MS. OSTIGUY: Yes. Yes. Well, yeah, when you let Kevin go first, I was wondering if I'd lose my voice.

The first one on the list is moxidectin. I have a couple of changes on the evaluation criteria, I have no idea how the errors came up, but they -- I made them.
I can say is that they happen on occasion.

On Category 1, Number 3, the documentation has that the half-life of moxidectin is up to 6 months;
actually the citation in the TAP, on Pages 5 and 6, is 2 months. So that shows up again in Question 8, Category 1, and Question 9, Category 1.

In addition -- well, no, it does have "binding tightly to the soil," so it -- it basically doesn't go anywhere.

The committee, when evaluating this material, found that it was synthetic and voted to add the -- and in the vote to add the National List, the vote was 5 yes, zero no, zero abstain, with the annotation: "control of internal parasites only." Comments.

(No audible response.)

MS. OSTIGUY: Motion. The annotation, again, was "control of internal parasites only."

CHAIRMAN KING: Is there a motion to consider?

MS. GOLDBURG: I so move.

CHAIRMAN KING: It's been moved by Becky.

Second?

MS. COOPER: Second.

CHAIRMAN KING: Seconded by Ann.

UNIDENTIFIED FEMALE VOICE: And the annotation again --? I just want to make sure (inaudible).
MS. OSTIGUY: "Control of internal parasites only."

CHAIRMAN KING: Dave, you're on the hot seat.

MR. CARTER: Okay. And starting off let me just say, this one causes me more trouble than any, just --

CHAIRMAN KING: Oh, this discussion.

MR. CARTER: -- the whole parasiticide -- no, this is about -- this is just explaining my vote, but --

The fact that ivermectin is allowed kind of shades everything else, so I will vote Yes.

MR. RIDDLE: Yeah, I'm torn on this one too and, yeah, share Dave's concern that ivermectin is on the list.

From all that I've read, gathered, this is a more environmentally sound substance than ivermectin, but I do still have some concerns about its environmental impacts and also just the cultural practices that we really base organic livestock production on, I don't think we've done near enough to prevent parasites, and I don't -- that hasn't been discussed at length in the TAP, I don't think.

And, yeah, I've come to the very firm conclusion that I'm going to abstain on this.

(Laughter.)

MR. RIDDLE: I'm not going to oppose it, but I just can't bring myself to support it.

CHAIRMAN KING: Well, I'd like to thank Jim for R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
having the longest recorded in history (inaudible) --

MR. RIDDLE: (Laughs) To abstain.

CHAIRMAN KING: Yeah.

MR. RIDDLE: Non-vote.

CHAIRMAN KING: Yeah, non-vote, exactly.

UNIDENTIFIED FEMALE VOICE: It's a vote with the majority.

UNIDENTIFIED FEMALE VOICE: Yeah.

CHAIRMAN KING: Okay, I'll vote no.

MR. RIDDLE: We're not voting yet, are we?

CHAIRMAN KING: Yes.

MR. RIDDLE: Oh, that was the vote. I abstained. I thought we were just still discussing.

MR. CARTER: It seemed like it.

(Laughter.)

CHAIRMAN KING: If someone wants to move to reconsider, that's fine.

MR. RIDDLE: No, no. I abstained.

CHAIRMAN KING: All right. So: no.

MS. DIETZ: Kim, yes.

MS. OSTIGUY: Yes.

UNIDENTIFIED MALE VOICE: Yes.

UNIDENTIFIED FEMALE VOICE: Yes.

UNIDENTIFIED MALE VOICE: Yes.

UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: 11 yes, 1 abstention, 1 absence, and 1 no.

MS. OSTIGUY: Okay. Last one is proteinated chelates, and there was some additional discussion this morning, when I was busy with the crops committee, so I do not know what happened with this one.

MR. SIEMON: We added an annotation, but otherwise everything remains the same.

MS. OSTIGUY: Well, I don't even know what the annotation is, so somebody's got to do this --

MR. SIEMON: I can tell you what the annotation was: protein source must be of mammalian or poultry --

UNIDENTIFIED FEMALE VOICE: I can't hear a word you're saying.

MR. SIEMON: Okay, Nancy's going to lead us through this, but we did add an annotation today that said: the protein source must not be of mammalian or poultry origin.

MS. OSTIGUY: Okay, I can finish up that. Okay, what the committee recommended was that chelated minerals be added to the list, that it is a synthetic, with the...
annotation: "Protein sources must not be of mammalian
or" --
(Pause.)
UNIDENTIFIED MALE VOICE: -- "poultry origin."
MS. OSTIGUY: -- "poultry origin." The vote --
George, do you know what the vote was? -- because I wasn't
there.

MR. SIEMON: It was 4-0, in favor.

MS. OSTIGUY: And the committee vote was 4 yes,
zero no, zero abstentions. Discussion? Kim.

MR. SIEMON: It was 5-0, excuse me.

MS. OSTIGUY: Oh, 5-0?

MR. SIEMON: I'm sorry. We didn't -- we had 2,
then 3. It was 5-0, committee.

MS. DIETZ: My question, as the same as
yesterday: is this material commercially available for
all farmers with this restrictive of an annotation? -- and
I'm not a livestock expert, but -- I mean, I assume you're
having to supply a bunch of farmers or livestock people
with this material, and is it commercially available, do
we know that for sure, with this restrictive of an
annotation?

MR. SIEMON: We had the same concern, but we had
a document from someone who did research and said it was,
so it's not like two -- two sources, but we had one
written source that there was, so -- it's a good
challenged.

MS. OSTIGUY: Jim first, and then Andrea.

MR. RIDDLE: And it --

MS. DIETZ: Nationwide? I mean, I hate to --

MR. RIDDLE: Well, it -- yeah, and from the
information that was provided, the animal-origin sources
would be very rare, that's not what's typically out there,
so what is available is the vegetative sources of protein,
but for cautionary purposes we are saying that the animal-
origin sources would not be allowed. So it's not like
we're taking something away.

MS. OSTIGUY: Andrea.

MS. CAROE: My question is: Is it easily
identifiable, which materials don't contain --, I mean is
that information that the vendor of the product will have,
or -- I mean, you're saying that the protein generally
doesn't come from them, but is it all -- I mean is it --
does anybody know where that is and where that isn't? I
mean, if you can't identify -- if you can't justify that
you're within the restriction, then you can't use it
because you --

MS. CAUGHLAN: I don't (inaudible).

MS. CAROE: I'm just asking. I could see that
that might be a problem, for people to actually get the

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
documentation that verifies that they are working within that restriction.

MR. RIDDLE: Well, I'd just respond, you know, that that's always a problem with any material, just -- making sure that it is from allowed substrates or allowed ingredients. So I don't see the burden of proof here any different than for other synthetic substances that are on the list currently.

UNIDENTIFIED FEMALE VOICE: With annotations.

MR. RIDDLE: Yeah, with annotations.

MS. CAROE: With annotations. But that doesn't always mean that this is going to be -- I mean, just because we've always done it before, I don't know if it's --

MR. RIDDLE: Well, yes --

MS. CAROE: Especially --

MR. RIDDLE: -- from -- the information from the petitioner is that yes, that information is available. Whether that is available -- or the information is readily available for everyone in the industry, I really can't answer that, but it is for the petitioner, and therefore, once it becomes an annotation, it is something which can be complied with.

MS. CAROE: The reason that I'm asking is because if you're saying it's rare that it would be from...
those sources and it's difficult to find, how much are we
gaining by putting people through that extra rigorous
step, to -- do you see what I'm saying?

MR. RIDDLE: Yeah. Well, it's a precautionary

--

UNIDENTIFIED MALE VOICE: Yeah.

MS. OSTIGUY: Kim.

MS. DIETZ: I'm going to wait (inaudible).

MS. OSTIGUY: Dave.

MR. CARTER: On this particular issue, yeah, I
think the precautionary principle is prudent for us to
follow. And I think that on the area of animal-source
products in any feed or feed supplement is going to be
more -- there's more and more pressure on FDA and the like
to start getting into that and to go into things that
ranchers and farmers have normally assumed were not
sourced from animal sources and to begin looking at that,
and so I think we need to establish where we're going to --
where we're going to draw the line on that, because -- I
think from the standpoint of the integrity of the system,
and particularly, the organic consumer out there expects
that we are not going to be using anything from animal
sources in feed.

MR. SIEMON: I hope -- I don't think it's been
said already, but I just want to make sure everybody's
clear that these -- these materials are actually presently allowed, and we -- we thought we ought to review them to see, because of the FDA, so we went through them, to see, and we're actually continuing to allow them except now we're offering this annotation. It's a little bit different, but it's already allowed.

MS. OSTIGUY: Kim.

MS. DIETZ: I just sense a lot of restlessness in the audience when we gave that annotation, and I am really uncomfortable voting on an annotation on a material we already allow unless I'm really confident that that's available to everybody. So if it's currently allowed, then -- I'm just not convinced that that -- that's true, and I -- we had people coming up here, we had everybody chit-chatting, and I just am not comfortable knowing that that's really the proper annotation, with that much restlessness, and without hearing the public comment on it, so I don't -- I don't understand that. There's not a motion on the table yet, obviously, so if someone wants to make a motion --

MR. RIDDLE: Yeah. Well, I move that proteinated chelates be placed on the list, with the annotation: "Protein sources must not be of mammalian or poultry origin."

MR. CARTER: I'll second it.
MR. SIEMON: Is that the right motion -- just so we're really clear -- since it's already allowed through the one --

UNIDENTIFIED FEMALE VOICE: I think you're just adding an annotation.

CHAIRMAN KING: So the specific motion is only to add the annotation?

MR. RIDDLE: Well, no, it's to -- it would be to add it to the list under the feed supplements section.

CHAIRMAN KING: Okay.

MR. SIEMON: Yeah, because it would be added, to be annotated.

MS. KOENIG: I guess I'm -- I'm confused. So you're saying that we voted on -- this was one that we voted on prior? No.

MR. RIDDLE: No, no.

CHAIRMAN KING: No, no. That's what I was clarifying.

MS. KOENIG: So why are you saying that it's already on the List, then?

MR. SIEMON: Because it's an FDA vitamin and mineral allowed under the Rule. It's already (inaudible).

UNIDENTIFIED FEMALE VOICE: It's implied, you say, by -- because it's under a category that's --

MR. SIEMON: Yeah. A broad category. So my
interpretation of this vote is really about adding the
annotation or not. If it fails, it's still allowed, it's
just not allowed -- I mean, we need to clarify it, because
we could get in trouble here.

CHAIRMAN KING: That's right.

UNIDENTIFIED FEMALE VOICE: Well, what --

MR. SIEMON: We should vote on the annotation,
in my opinion, so we don't get in any confusion here that
a "No" vote means it's not allowed at all.

MS. DIETZ: Right. If I really had the right
intention, I would have made the motion without the
annotation, we'd have voted on it. So right now we have a
motion on the table, with the annotation.

MR. SIEMON: Okay. So -- then if this gets
voted down, then we'll have another vote going the other
way, no problem.

CHAIRMAN KING: So let's review the motion, once
again, please. Jim, if you could.

MR. RIDDLE: Yeah. Well, the motion would be to
place it on the National List, with the annotation:
"Protein sources must not be of mammalian or poultry
origin."

UNIDENTIFIED FEMALE VOICE: And who was the
seconded vote?

UNIDENTIFIED MALE VOICE: Dave.
MR. CARTER: Second.

MR. SIEMON: Maybe before we vote: Is there anybody in the audience that knows anything about the availability? -- because I hear a lot of cautions here about non- -- according to what we're doing here. Dave?

MR. ENGEL: Thank you for asking. I don't know anything about availability --

MR. RIDDLE: Identify --

MR. ENGEL: Oh. I'm David Engel, dairy farmer from Wisconsin.

I don't know anything about availability, but I want to repeat the question that I asked the committee earlier, in maybe a little bit different context.

Chelated proteins are so prevalent in the industry that I -- and I asked you specifically, when you quoted, Jim, Mr. Walker as a proof that there was availability of non-animal-sourced chelated proteins, that it was -- you could get them. I don't know. You guys don't know. Be really careful with this.

UNIDENTIFIED FEMALE VOICE: Right.

CHAIRMAN KING: Okay.

MR. SIEMON: Okay.

UNIDENTIFIED FEMALE VOICE: Kelli.

CHAIRMAN KING: Kelli.

MR. SIEMON: I would have called that an opinion
versus information, myself, but --

MS. SHEA: Kelli Shea. Thanks for asking for input.

Because I don't believe we really addressed varying sources of this product, I really think it's a good idea to look at the annotation like you are, but I don't believe you have the information to do it.

Because this product is currently allowed for use, did you consider deferring the vote until you could get additional information on whether or not it is available in the preferred source you're discussing? It would not cause harm to farmers because it currently is available, you would be able to do due diligence, get the information you need, to make the wise choice.

UNIDENTIFIED FEMALE VOICE: Time to vote?

CHAIRMAN KING: Is there a motion to strike? There's a motion on the table, there's a motion on the table that's been seconded.

MR. RIDDLE: Well, yeah, I just want to respond to those comments, because, you know, I think there's no way we want to be allowing animal-origin supplements here anyway. I mean, this -- this petition has been before us for quite a long time, and I think, in an abundance of caution, in today's environment, we do have a reason to move forward.
So I call the question and go to a vote.

UNIDENTIFIED FEMALE VOICE: It starts with you.

MR. RIDDLE: That's right. I vote yes.

UNIDENTIFIED FEMALE VOICE: Who did the second on this?

MR. CARTER: I did.

CHAIRMAN KING: Dave Carter did.

UNIDENTIFIED FEMALE VOICE: All right. Okay, go ahead.

CHAIRMAN KING: I abstain.

UNIDENTIFIED FEMALE VOICE: No.

UNIDENTIFIED FEMALE VOICE: No.

UNIDENTIFIED MALE VOICE: No.

MS. OSTIGUY: Yes.

UNIDENTIFIED MALE VOICE: No.

UNIDENTIFIED FEMALE VOICE: Yes.

UNIDENTIFIED FEMALE VOICE: Yes.

UNIDENTIFIED FEMALE VOICE: Okay, wait, wait one second.

MS. COOPER: Yes.

UNIDENTIFIED FEMALE VOICE: Wait one second, please. I've got to go up. So Ann, yes. Rose?

MS. KOENIG: Yes.

UNIDENTIFIED FEMALE VOICE: Yes.

UNIDENTIFIED FEMALE VOICE: Andrea?
MS. CAROE: No.
UNIDENTIFIED FEMALE VOICE: George?
MR. SIEMON: Yes.

UNIDENTIFIED FEMALE VOICE: Dave?
MR. COOPER: Yes.
UNIDENTIFIED FEMALE VOICE: 7 yeses, 5 no's, 1 abstention.

MR. SIEMON: Chair, what's the vote required?
CHAIRMAN KING: Two-thirds, I believe, or --
UNIDENTIFIED FEMALE VOICE: It doesn't pass, because it's 8 to 5. Abstention goes majority.
CHAIRMAN KING: Let me pull out the calculator. We need a two-thirds.
UNIDENTIFIED MALE VOICE: Two-thirds of 13.
CHAIRMAN KING: Yeah. Motion fails. Seven comes out at 53 percent. We had 7 yeses.
MR. RIDDLE: And the abstain goes with the majority.
CHAIRMAN KING: Abstain does go with the majority.
MR. SIEMON: Yeah.
UNIDENTIFIED FEMALE VOICE: Yes, it does.
UNIDENTIFIED MALE VOICE: Did you count that, eight?
CHAIRMAN KING: No, I did not.
UNIDENTIFIED MALE VOICE: Yeah, it's still 62 percent.

CHAIRMAN KING: Yeah, still not enough. We needed nine.

UNIDENTIFIED FEMALE VOICE: Motion fails.

MR. SIEMON: Okay, is there another motion?

MR. RIDDLE: Well, I move to --

UNIDENTIFIED FEMALE VOICE: (Inaudible).

CHAIRMAN KING: Hold on.

UNIDENTIFIED FEMALE VOICE: Can you summarize what's going on, please?

CHAIRMAN KING: The votes were -- it was 8 to 5-

UNIDENTIFIED FEMALE VOICE: It was 7 yeses --

CHAIRMAN KING: 1 abstention. Go ahead.

UNIDENTIFIED FEMALE VOICE: 7 yeses, 5 no's, 1 abstention, 1 absence.

UNIDENTIFIED FEMALE VOICE: Okay.

CHAIRMAN KING: The motion does not carry.

MR. SIEMON: And I'm looking for a new motion.

MS. KOENIG: I'll make a motion to defer the material.

MR. CARTER: I will second it.

CHAIRMAN KING: Rose has made the motion to defer the material, Dave Carter has seconded. Discussion.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
UNIDENTIFIED FEMALE VOICE: Are we going to defer based on request for more information?

UNIDENTIFIED FEMALE VOICE: Well, that's what we're going to discuss.

UNIDENTIFIED FEMALE VOICE: Motion to defer, second by Dave.

CHAIRMAN KING: Correct. Is there discussion?

Rose.

MS. DIETZ: Yeah. I based the deferral on gathering information on the commercial availability of plant -- non-mammalian sources of -- of the protein, proteinated chelates.

CHAIRMAN KING: So Rose is specifically saying the deferral is to gather more information concerning the sources indicated.

(Pause.)

CHAIRMAN KING: Is there discussion?

MR. RIDDLE: Yeah. So who's going to do this gathering, and how -- I mean, this is not to send it back to the TAP contractor, correct, this is for the Board to solicit the information?

MR. SIEMON: (Inaudible) two confirmations, I guess.

MS. DIETZ: If we -- this is just going off the top of my head, but if we go back through and put this on

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
the recommendation sheet for the next meeting, that the motion was to defer based on information on commercial availability, then we see what kind of public comments that we get, and we could use that information.

So I urge the community and the livestock industry to comment and to find out whether or not you have commercial availability sources based on that original annotation, and let's be specific in the document from the livestock committee.

CHAIRMAN KING: Rose.

MS. KOENIG: But I would also urge the committee to do just minimal research (inaudible), you had one source, you said, try to get, you know, that three sources, just in case public comment doesn't come in, so we can proceed.

CHAIRMAN KING: Are you agreeing to do minimal research, Jim?

MR. RIDDLE: No, I'm just agreeing with what she was saying.

CHAIRMAN KING: I'm just kidding.

(Laughter.)

UNIDENTIFIED MALE VOICE: (Inaudible.)

UNIDENTIFIED FEMALE VOICE: Okay, I'm ready.

File the motion.

MR. SIEMON: We'll seek public comment.
CHAIRMAN KING: Okay. Question's been called. We begin with me. The motion is to defer. "Yes."

UNIDENTIFIED FEMALE VOICE: Yes.
MS. OSTIGUY: Yes.
UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: Yes.
UNIDENTIFIED MALE VOICE: Yes.
MR. CARTER: Yes.
UNIDENTIFIED MALE VOICE: Yes.
UNIDENTIFIED FEMALE VOICE: 13 yeses, no no's, 1 absence.
MR. SIEMON: Mark, it was the committee's will to make a statement about the antibiotic directives, so is this the time to bring that up? -- I was told.
CHAIRMAN KING: Sure.
UNIDENTIFIED FEMALE VOICE: It is?
MR. SIEMON: I don't know.
UNIDENTIFIED FEMALE VOICE: (Inaudible) voting?
UNIDENTIFIED FEMALE VOICE: On the recommendations.
MR. SIEMON: I'm --

UNIDENTIFIED FEMALE VOICE: Are we on committee reports, or where are we at?

UNIDENTIFIED MALE VOICE: Yeah, it's still committee reports.

CHAIRMAN KING: We're on livestock.

MR. SIEMON: Okay.

UNIDENTIFIED FEMALE VOICE: Is this it for materials?

CHAIRMAN KING: No, no, no. We still have more materials; we're just finishing up livestock.

MR. SIEMON: This just a resolution the committee put forward --

UNIDENTIFIED MALE VOICE: Actually, we're done with materials.

UNIDENTIFIED MALE VOICE: We're done with materials.

CHAIRMAN KING: Oh, we are, that's right.

UNIDENTIFIED MALE VOICE: That's right, we're done with materials.

UNIDENTIFIED FEMALE VOICE: Unless there's a policy material.

CHAIRMAN KING: A policy material?

(Laughter.)

CHAIRMAN KING: Dave, do you --
MR. SIEMON: Okay, the committee put forth a resolution, a simple paragraph, to revisit this, which I'll be glad to read, and then a series of background, why they felt this was proper to send this message forth. So I'll read the paragraph; even though you all have it, I'll read it for the audience.

"The National Organic Standards Board respectfully requests that USDA National Organic Program withdraw the 41304 Antibiotic Guidance Statement and work collaboratively with the NOSB to develop policy guidance with is consistent with the Livestock Healthcare Practice standard, statements made by the NOP in their preamble, "NOSB Recommendations, Consumer Expectations, and the Principles of Organic Livestock Production."

MS. DIETZ: A question on process. I haven't seen this document --

MR. SIEMON: Yeah.

MS. DIETZ: -- and you're asking the Board to vote on something that we've never seen and it's just been put forward in front of us, so -- again, I'm a stickler for giving me time to read (inaudible) --

MR. SIEMON: I agree.

MS. DIETZ: So I can't support it.

MR. SIEMON: That was my concern, about process,
too, but --

MS. DIETZ: Yeah.

MR. SIEMON: -- but it is just a paragraph that we're putting forth, but --

MS. DIETZ: It just goes to -- you know, we're asking the NOP to give us time and -- to look at things and to look at policies and to follow process, and we're not doing it; I just disagree. Not that I disagree with the contents, that I'm aware of [phonetic].

CHAIRMAN KING: So, point of clarity: George, you're just forwarding the paragraph, the resolution, with the statement you just read; correct?

MR. SIEMON: Correct.

CHAIRMAN KING: The rest is background information, supporting information.

MR. SIEMON: Uh-huh.

CHAIRMAN KING: So technically that's what we would be voting on.

MR. SIEMON: I believe that was the committee's vote, uh-huh.

CHAIRMAN KING: Okay. Rose, then Dave.

UNIDENTIFIED FEMALE VOICE: So you're only sending this, you're not sending the whole thing?

MR. SIEMON: Well, we are sending the whole thing, but the -- what we need to vote on is the
resolution, again, because of the time to look at it. Now, we could wait to tomorrow, I guess. I don't know how to deal with this, this just --

MS. KOENIG: Well, I think that the spirit of the intent is good, you know, and I think that there's more than one directive out there. I think it's the role of the Board to look at all of the directives and compose a letter really fully commenting on them, in a constructive way.

So it's not that I'm not -- you know, again, I agree with the spirit of it; I just don't think that this is the process by which we want to communicate and I think it's something that we could handle, you know, perhaps in an executive committee meeting and people could work on the ways to compose a document and then put it forth with more thoughtful ways of addressing the issue.

So my -- again, I -- I'm -- I guess I move to -- to just -- to keep -- the issues are there, and we're all aware of them, but, really, think about the process by which we want to address it.

MR. SIEMON: I don't know if we need a movement -- I mean, a motion, do we need a motion or not, just -- to not --

CHAIRMAN KING: Did you move to consider the resolution?
MR. SIEMON: No, I (inaudible).

CHAIRMAN KING: Rose, are you moving that we consider this an executive committee call?

MS. KOENIG: I'm moving to accept the document as a point of reference for the entire Board, but any action should be taken at a later point, through the executive committee process, to really consider, you know, what -- how we want to deal with the policy directive.

CHAIRMAN KING: Second?

MR. RIDDLE: Could you restate your motion, before I can second it? I'll second it, I think.

MS. KOENIG: All right, let me clarify.

CHAIRMAN KING: Perhaps in ten words or less.

MS. KOENIG: Yeah. I'm asking -- basically, the motion is: to defer the issues to the -- to defer the issues at this meeting and allow the executive committee to process all the policy statements and come up with a format to address the issues.

MS. DIETZ: I'll second that.

CHAIRMAN KING: Does anybody have this motion down? We're going to ask you a third time, Rose. Is the spirit of the motion -- and Nancy, could you say that, I think you've succinctly --

MS. OSTIGUY: Move to defer the motion and send it to the executive committee for consideration.
MS. KOENIG: I'm saying to --

MR. SIEMON: Well, there wasn't a motion that you can defer.

MS. OSTIGUY: Or move the resolution, whatever, the topic, issue.

MR. RIDDLE: As I first understood Rose, what I heard her saying was to -- the Board to vote to accept the committee's resolution and forward it to the executive committee for action.

MS. KOENIG: What I'm saying is that: accept the document --

MR. RIDDLE: Yeah. Okay.

MS. KOENIG: -- we're accepting the submittal of the document, similar to: we accept a task force --

MR. RIDDLE: Right.

MS. KOENIG: -- as an internal document, or as a document --

CHAIRMAN KING: Do you consider this --

MS. KOENIG: -- but it's not a policy, it's not our view on policy.

CHAIRMAN KING: Do you consider this a friendly amendment to your motion?

MS. DIETZ: I don't, as a seconder, I'm going to take back my second on that motion. It's not what I thought, so --
CHAIRMAN KING: The second has been withdrawn. Could we restate the motion. Are you sorry you made the motion?

(Laughter.)

MS. KOENIG: What I'm saying is -- I mean, I think it's --

CHAIRMAN KING: Do you want to withdraw the motion and --

MS. KOENIG: Okay, I'll restate the motion.

MR. SIEMON: Are we saying we want to defer any response to the --

MS. KOENIG: Yeah, it's not --

CHAIRMAN KING: Hold on, hold on. I'm asking, are you restating the motion --

MS. KOENIG: My motion is to -- I guess the motion is for the executive committee to respond to the directives from the NOP and formulate a process and a response based on available information, based on input.

MS. CAUGHLAN: What I heard you say was all of the recent directives.

MS. KOENIG: Yeah, that they need to analyze it-

MS. CAUGHLAN: This does not relate to that --

MS. KOENIG: Exactly.

MS. CAUGHLAN: -- and just now I didn't hear a
MS. KOENIG: I'm saying all directives.

CHAIRMAN KING: Hold on, hold on.

MS. DIETZ: Here was the motion --

CHAIRMAN KING: This is the --

MS. DIETZ: -- for the executive committee to respond to the directives from the NOP and formulate a process and response based on information.

MR. SIEMON: Input, maybe.

MS. DIETZ: Inputting information, which includes this kind of stuff.

CHAIRMAN KING: Goldie, are you proposing a friendly amendment?

MS. CAUGHLAN: I was trying to clarify, and she just clarified.

CHAIRMAN KING: Okay. Is there a second? We have a motion on the table, and the motion reads: for the executive committee to respond to the directives from the National Organic Program and formulate a process and response based upon input information. Is there a second?

UNIDENTIFIED FEMALE VOICE: Based in input information from whom?

CHAIRMAN KING: I'll entertain friendly amendments, but first we need a second to have the actual motion considered. Is there a second?
UNIDENTIFIED MALE VOICE: Rose is the first?
MR. CARTER: I will --
CHAIRMAN KING: Is it a second?
MR. CARTER: No, it's not a second. If that's going to tie, I will make a --
CHAIRMAN KING: Motion fails.
MR. CARTER: I will make a new motion: that we direct the policy development committee to bring forward to the executive committee a statement expressing the sense of the Board on the directives that have been issued by NOP.
MS. KOENIG: I'll second that.

(Laughter.)
CHAIRMAN KING: Dave. Remember, she's typing this in, so --
MS. DIETZ: Yeah, I'm fast, but I ain't that fast.
CHAIRMAN KING: Yeah.
MS. DIETZ: Say that again, please.
MR. CARTER: Okay. That this Board directs the policy development committee to bring forward to the executive committee for consideration a resolution concerning the sense of the NOSB on the policy directives issued by the National Organic Program.

UNIDENTIFIED FEMALE VOICE: Did you get a

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
second?

CHAIRMAN KING: Yeah, seconded by Rose. So it's been moved and seconded that --

MS. DIETZ: That the policy committee -- direct the policy committee to bring forth to the executive committee for consideration a resolution of policy directive issues by the NOSB.

CHAIRMAN KING: Issued by the NOP.

MR. CARTER: Let's do -- bring forward to the executive committee a resolution concerning the sense of the NOSB --

MR. SIEMON: Sense?

MR. CARTER: -- regarding the policy directives issued by the National Organic Program.

(Pause.)

CHAIRMAN KING: Do you want to read it back.

MS. DIETZ: Okay, I'll try it again. Direct the policy committee to bring forth to the executive committee for consideration a resolution concerning the sense of the NOSB regarding the NOP policy directives. I hope that's good enough.

MR. SIEMON: Is the word "sense" (inaudible)?

CHAIRMAN KING: Are you okay with that?

MR. RIDDLE: Yeah, sense of the Board.

MR. RIDDLE: Yeah. Dave, you know, this resolution that the livestock committee has brought forward was passed, I believe unanimously, by the committee, and I'm just wondering if your motion would account for or allow this resolution to be fed into the policy committee's considerations.

MR. CARTER: Absolutely. No, I think that we would look at this -- the policy development -- I mean, as a point of information, the policy development committee this morning began to draft up a statement along this line but we didn't have all of our committees there so we were hesitant to bring it forward until we at least got it out, because three of our members were in other meetings.

So I think this resolution, as well as the one that we were working on, we would bring together to address the sequence of directives that were issued over the last couple of weeks.

MR. RIDDLE: Okay.

CHAIRMAN KING: Goldie.

MS. CAUGHLAN: Point of information. So the executive is going to put this together and, to use the USDA word, vet it (inaudible) rest of it to the Board?

MR. CARTER: My thought is that the policy committee would bring this forward to the executive committee. The executive committee is the only committee
that is authorized to act in the absence of the full board, so the executive committee, you know, can act on it. What I thought is for the executive committee -- the role of the policy committee is to do some of that detail work on the policy issues and bring them forward, then, to the appropriate committees or to the full board for consideration. In this instance it would come to the executive committee.

MS. DIETZ: Dave has made the motion. We don't have a second.

MR. RIDDLE: Rose did right away.

MS. KOENIG: I seconded.

MS. DIETZ: I didn't hear that. Okay. That's fine. My only comment, again, is to -- if this board would please give all its members adequate time to review documents and -- so that we make sure we have a very good process and it's consistent.

CHAIRMAN KING: Duly noted, but I think in this case it was practically unavoidable, so I do appreciate the work of the committee. Is there further discussion?

(No audible response.)

CHAIRMAN KING: Hearing none, we'll proceed to vote on the motion, beginning with --

MR. CARTER: We don't need a roll call on this, this could be --
CHAIRMAN KING:  All those in favor signify by saying aye.

BOARD MEMBERS:  Aye.

(No audible response.)

CHAIRMAN KING:  Motion carries.  Okay, I think that's everything for livestock.  Is that correct?

MR. SIEMON:  Yeah.

CHAIRMAN KING:  Dave, you're still on the hot seat, policy development committee.  Is there anything to-

MR. CARTER:  Oh, gosh.  Yes.  Policy development committee this morning met and reviewed two issues.  The first one are the amendments to the Board policy manual.  Two areas of change were made and posted for comment, that being, specifically, the confidentiality requirements in the Board policy manual; and the second one, to address the change in the materials approvals forms that we've been used, to incorporate those and substitute them for the ones that we previously had in the policy manual.

So I would move that we amend the policy manual as recommended by the policy committee.

MR. RIDDLE:  I'll second.

MS. OSTIGUY:  Second.
CHAIRMAN KING: We've got a tie second. We'll take Goldie.

MS. CAUGHLAN: I think it was Nancy.

CHAIRMAN KING: Oh, I'm sorry, Nancy. Moved to Dave, seconded. Okay, it's been moved and seconded that we accept the proposed amendments to the Board policy manual. Is there discussion?

MR. RIDDLE: Yeah, I do want to just point out that Dave said there's just the two changes, but actually there's a few more than that, there's deleting the whole peer-review section, there's changing the name of the processing committee to "handling," and there's a whole bunch of things that were pending because we didn't deal with any non-material issues in October, so just to be clear, but it's all there in your meeting book, so it's -- it's pretty comprehensive changes.

CHAIRMAN KING: And just a point of information, it's my understanding this has been on the -- posted on the web for quite some time, so --

MR. CARTER: It's not only been posted on the web, it's been color-coordinated on the web.

UNIDENTIFIED FEMALE VOICE: Yeah, it has.

CHAIRMAN KING: Yes. Yes. The most colorful document.

MR. CARTER: Yes, sir.
UNIDENTIFIED FEMALE VOICE: Call the question.

CHAIRMAN KING: The question's been called. All those in favor of accepting the proposed amendments signify by saying aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No audible response.)

CHAIRMAN KING: Motion carries.

MR. RIDDLE: Yeah, and it just -- I'll follow through with sending a cleaned-up copy to the NOP, that actually deletes those green things and adds the yellow things, as they should be, and moves the colors and saves them for another day.

(Laughter.)

CHAIRMAN KING: It's a colorful comment.

(Laughter.)

MR. CARTER: Okay, the second item is the compatibility with organic production and handling, and before we go into the consideration of this formally, I just want to recognize that Jim particularly has done an incredible amount of work on this, he has carried 95 percent of the workload on this, including developing 22- and 23-page drafts of material with background, and I want to acknowledge that.

This was posted. There were six public comments.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX  75644
that were received. All of the public comments recommended that we drop from there Section M, which read "Does the substance facilitate the development of new organic products?", so the policy development committee has recommended, then, that we move forward the statement of "compatibility with organic production and handling," with the deletion of Section M, and I would so move.

MR. SIEMON: I'd second.

CHAIRMAN KING: Moved by Dave, seconded by George.

MR. RIDDLE: And the revised version was handed out yesterday --

UNIDENTIFIED MALE VOICE: Yes, draft 5.

MR. RIDDLE: Right, draft 5.

CHAIRMAN KING: Okay. So it's been moved and seconded that we accept the report, omitting Section M; right?

UNIDENTIFIED MALE VOICE: Well, it's not to accept the report, it's a recommendation.

MR. CARTER: Yeah, it's a recommendation.

CHAIRMAN KING: Okay. Discussion?

MS. KOENIG: I just had kind of a question. This is on the OFPA criterias that we use in the materials process, so I was just wondering if there -- do you have any ideas of how we might be able to incorporate these
concepts into that, either as an appendix or -- I mean, because we're voting on it here today and kind of gone through this process, but how do we translate that to those sheets or get to that information? Kim?

MS. DIETZ: I think that when -- at least originally, when we were drafting this document, we said that it would be used as a guidance document in the material review process, under compatibility, and -- so that was my understanding of where this would be used, and I think -- and that's why we all supported it, and we've been using it in handling, specifically annotating what sections, so --

MS. KOENIG: So you're saying -- so just keep it in the Board policy manual, with the --

MS. DIETZ: Yes, as a guidance document.

MS. KOENIG: Okay, that's just --

CHAIRMAN KING: Jim and Dave.

MR. RIDDLE: Yeah, and that's one thing I was going to suggest, if this passes, that I'll add it to the version of the Board policy manual that I submit, and then it also should be provided to TAP contractor and reviewers so that they have it handy, and then committees should use it when they -- questions come up about compatibility.

CHAIRMAN KING: Okay.

MS. KOENIG: So I guess -- how would we notify --

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
- or do you want the materials chair to notify the -- I mean, do we have -- you know, we have to somehow move to get that -- not a motion, but how do you see --

MR. RIDDLE: Uh-huh, take action.

MS. KOENIG: Who do you want to get it to NOP to make sure that --

CHAIRMAN KING: Is there --

MR. RIDDLE: I think the offer from the materials chair would be --

MS. KOENIG: Okay, I'll do it.

MR. RIDDLE: I remember when they testified in October it was a question they had --

MS. KOENIG: Right.

MR. RIDDLE: -- "What do you mean by compatibility?"

MS. KOENIG: Okay, I'll --

CHAIRMAN KING: Let's limit discussion to the actual motion to accept the recommendation. Is there further discussion?

(No audible response.)

CHAIRMAN KING: No.

MR. SIEMON: Call the question.

CHAIRMAN KING: The question's been called.

Voting on the recommendation, compatibility with organic production and handling. All those in favor signify by

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
saying aye.

BOARD MEMBERS: Aye.

(No audible response.)

CHAIRMAN KING: Motion carries.

MR. CARTER: That's all for policy.

CHAIRMAN KING: Okay. All right.

UNIDENTIFIED MALE VOICE: And then the 606 Task Force --

CHAIRMAN KING: Yeah, we'll do -- I was going to do Andrea real quick, and then we'll come back.

MR. SIEMON: That's fine.

CHAIRMAN KING: Andrea, I think you had a quick item that --

MS. CAROE: Yes. We have draft 8 of the compliance procedures for minor non-compliance, and it's a vote to accept that guidance, and I put that in that -- in that frame because this is a guidance, this is educational information for certifiers, okay, it's --

MR. SIEMON: And that's not in here, is it, not in --

MS. CAROE: No. It was handed out yesterday. Right?

MR. RIDDLE: Yes.

CHAIRMAN KING: Yes.
MR. RIDDLE: Yeah, and there have been no changes to that version that was handed out.

MS. CAROE: There's been no changes from that version, and that version had very few changes from draft 7, which has been up on the web. Received one public comment, and there were -- those few changes that were made were based on the public comment.

MR. RIDDLE: So I move the approval --

MR. SIEMON: I second.

MR. RIDDLE: -- of draft 8, I guess it is.

MS. CAROE: Draft 8.

UNIDENTIFIED MALE VOICE: Hard work.

CHAIRMAN KING: Moved by Jim, seconded by George, I believe.

MR. SIEMON: Yes.

CHAIRMAN KING: Okay. Is there discussion?

(No audible response.)

CHAIRMAN KING: Hearing none, we'll proceed to vote. All those in favor signify by saying aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No audible response.)

CHAIRMAN KING: Motion carries.

MS. CAROE: Just shows you how sexy a certification is [phonetic].
CHAIRMAN KING: Actually, you get the ribbon for most efficient today, Andrea.

(Laughter.)

CHAIRMAN KING: Jim, I believe you have a document from the 606 Task Force.

MR. RIDDLE: Yeah. Well, I made the presentation this morning, there was good robust discussion, and some --

UNIDENTIFIED MALE VOICE: (Inaudible.)

(Laughter.)

MR. RIDDLE: -- and there had -- some public comments as well as Board comments, so there was a need for the task force to meet during the breakout session, and we did some changes, which the members there in attendance all approved, and I redrafted and printed it out and got it copied, and it's less than 22 pages, and it's here for your consideration, and I'll just highlight what changes have been made, very quickly.

And it's not page-numbered, I apologize for that, but on the fourth page, there's a change, in the middle of the page, which is the end of the "Background" section, and some information that was previously Recommendation 1a has been moved into "Background Information," where it was a discussion of some previous NOSB recommendations.
UNIDENTIFIED FEMALE VOICE: What? I'm lost.

MR. RIDDLE: Okay. The fourth page, you see where it says Recommendation 1a?

UNIDENTIFIED FEMALE VOICE: Yeah.

MR. RIDDLE: The two paragraphs right above that used to be in 1a, in a former life; now they have been downgraded to "Background Information," because they are, really, historical. So they're not part of our new recommendation.

UNIDENTIFIED FEMALE VOICE: And that is fair [phonetic].

MR. RIDDLE: Okay. Then in -- 1a is what used to be 1b, but it hasn't changed content-wise.

Okay, then on the current 1b, the only change there is on the opening paragraph, second sentence, where it says, "In order to be consistent and transparent with the material review process, each substance currently located in 205.606 shall be reviewed for reclassification by the handling committee to determine if the substance" blah blah blah.

So it's just that -- this is not a re-review, not a TAP review, it's just reclassification, and it's a directive or request to the handling committee.

Okay. Recommendation 2, no changes to the first two paragraphs, and there's a change to the large A
heading paragraph, to read: "For a non-organic agricultural ingredient used in a processed product labeled as 'organic' to be determined as not commercially available, the applicant or certified operator shall submit," and the rest of that remains the same, but just that lead-in to the sentence was something that had been brought up this morning, so that's been added.

And then Item Number 4 was changed from "during the inspection" to "during the certification evaluation," so that gives the certifier flexibility. Some of this may happen at inspection, some of it may happen in the office.

So that was in consideration of comments.

MS. DIETZ: Just one question.

MR. RIDDLE: Yes.

MS. DIETZ: And I'm not sure if this covers it or not, you can tell me if it does, but if -- if -- not during the certification evaluation but in mid-year a material becomes -- it's not available organically -- I mean, we have due diligence to contact the certifier and say, "This is what I'm going to do." Is that acceptable in this, is it covered during --

MR. RIDDLE: Yeah. My understanding would be --

UNIDENTIFIED FEMALE VOICE: It's part of evaluation at that point, but the --

MR. RIDDLE: Yeah.
MS. DIETZ: Okay.

MR. RIDDLE: Evaluation is ongoing on something like --

MS. DIETZ: Okay. All right. It is considered ongoing from a certifier/handler relationship.

MR. RIDDLE: Right.

MS. DIETZ: Okay.

MR. RIDDLE: Whenever there's a change in the organic system plan --

MS. DIETZ: Okay, they have to -- okay.

MR. RIDDLE: -- you have to notify --

MS. DIETZ: Okay. That's fine.

MR. RIDDLE: -- be updating your plan.

Number 5, at the very last line there, we added amongst -- "The written evidence may include ingredient evaluation reports," so it says: "Written evidence may include letters, faxes, e-mail, correspondence, ingredient evaluation reports." That could include like certificate of analysis about an ingredient of whatever. So a little more flexibility.

And then also, at the top of the next page, the words "as applicable" were added, "a minimum of three potential suppliers shall have been contacted."

Okay. Then under B-2, there was 2 -- there was -- previous 2 and 3 have been merged into 1, which now
reads -- I mean, you've got to -- in the context: "The certifier shall validate that the applicant or operator has documented that the ingredient is not commercially available in an organic form by reviewing best available information, listing known source of organic ingredients."

So it really puts the focus on the certifier to validate the operator's documentation.

And then the last change is to add a post-script -- I couldn't think of a better word --

UNIDENTIFIED MALE VOICE: Epilogue.

(Laughter.)

MR. RIDDLE: That is new language, and that is:

"The 606 Task Force acknowledges that this recommendation does not apply to organic seed determinations. The Task Force recommendations that the crop committee and/or policy development committee develop a draft organic seed recommendation which is consistent with this recommendation." So we just don't want any confusion.

And then a similar sentence is added at the very very end, under "Conclusion": "A comparable and consistent recommendation is needed to address organic seed issues."

So those are the changes, trying to incorporate
as many of the comments as we could. So I move its
adoption.

CHAIRMAN KING: Is there a second?

MS. CAROE: I'll second.

CHAIRMAN KING: Moved by Jim, seconded by

MS. OSTIGUY: I don't understand why Recommendation
2a, Number 5, the top of the next page, where you
have added "as applicable," could you explain what this
means.

MR. RIDDLE: Andrea, could you explain what this
means.

MS. CAROE: Sure. This is to accommodate
situations where the ingredient is very specific and two -
- three reasonable sources are available, so it is a
guideline that three is a reasonable or a typical number
but there may be situations that require more or less than
that.

MS. DIETZ: I have to agree with that -- I just
see that as weak, I don't know where -- are the certifiers
able to determine if it's applicable for three potential
suppliers, and -- and that would be after the fact, so --

MS. CAROE: Well, I guess -- I would have to
say: in the negotiation between an applicant and

certifier, that is a discussion that they would have, as
far as the applicant coming to them and explaining the
challenge.

MS. DIETZ: Yeah, I -- I guess, as a handler, if
I have "as applicable" in my handling plan, I can always
make justification as to why I only chose one and try to
get that through, so I -- but at the same time, I can
understand that if there's not three suppliers, at least I
tried for three, you know, and the -- and again, I feel
that the industry has somewhat supported a minimum of
three sources, and so I -- I just -- I think that's too
weak and I'm not sure I support it, but I --

CHAIRMAN KING: Is there a motion?

MS. DIETZ: We have a motion on the table.

MR. RIDDLE: Well, yeah, and that can be amended
to delete if someone --

MR. CARTER: We could strike that.

MR. RIDDLE: Yeah, to strike --

MS. DIETZ: I would like to make a motion to
strike "as applicable" and just put in "minimum of three,"
and at least you can document where you've tried three
different sources and you've only gotten one.

MR. O'RELL: I would second it.

CHAIRMAN KING: So moved to Kim to strike the
words "as applicable," and seconded by Kevin. Discussion
on that motion?
MS. OSTIGUY: Kim and I had, I think, different reasons for questioning that one.

(Laughter.)

MS. OSTIGUY: I was actually wondering more about what you were saying earlier, Andrea, about how if you only require three, then that's all that folks are going to do. Kim's amendment doesn't address that issue.

CHAIRMAN KING: So you don't support --

MS. DIETZ: Well, I can just tell you that we've historically, again -- from the processing group, we have agreed, through our MPPL committees and through lots of different trade -- through the trade organization and through the handling committee, that a minimum of three has been something that our industry could live with, and so that's why we said a minimum of three.

CHAIRMAN KING: Is there --

MS. DIETZ: You have to have a number, if you want somebody to do something, so that's -- that was the magic number that we all said we could live with.

CHAIRMAN KING: Is there additional discussion on the motion on the table to strike the words "as applicable"?

MS. DIETZ: There's a motion and a second.

MR. RIDDLE: Yeah, there's a motion and a second to strike. Yeah, I'd just like to comment on it.
Essentially, it's here as an attempt to compromise, and, you know, that's the role I was playing in chairing this task force. You know, certainly the will of the Board, you know, will be determined here, so -- you know, I think it does -- you know, my personal opinion is that it does weaken it and make it less predictable for both certifiers and operators. That's my personal opinion. Kevin?

MR. O'RELL: My only comment, to support Jim, is that yeah, I think we added it in there as a compromise. I'm not sure I personally was comfortable with it at that time, and reviewing it, I do agree that I think it's weak, and I think a minimum of three is reasonable for processors who are trying to locate organic sources of materials.

MS. CAUGHLAN: Good-faith effort, is that a -- making a good-faith effort is really what we're saying. What about putting that kind of language in there?

MR. RIDDLE: Well, we're trying to quantify what a good-faith effort is. When is it good enough?

MS. DIETZ: Okay, call the question.

CHAIRMAN KING: The question's been called. We're just voting to strike the words "as applicable."

All those in favor signify by saying aye.

BOARD MEMBERS: Aye.
CHAIRMAN KING: Opposed, same sign.

UNIDENTIFIED FEMALE VOICE: Aye.

UNIDENTIFIED MALE VOICE: Aye.

CHAIRMAN KING: Okay, 12 yeses, and -- you want a head count or --

UNIDENTIFIED FEMALE VOICE: Do a hand count.

CHAIRMAN KING: Let's do a quick hand count. We had two no's, I think, is that correct? All those in favor, signify by raising your -- one of your hands.

MR. SIEMON: I'm abstaining.

CHAIRMAN KING: We have 1 abstention and 2 no's. Okay, so now we're back to the original --

MR. RIDDLE: Yeah. As amended.

CHAIRMAN KING: -- motion to accept the report, the recommendation, as amended. Is there discussion?

(No audible response.)

CHAIRMAN KING: Hearing none, we'll proceed to vote. All those in favor signify by saying aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No audible response.)

CHAIRMAN KING: Motion carries.

MR. RIDDLE: Wow, and that task force is disbanded.

(Laughter.)
UNIDENTIFIED MALE VOICE: Which means they buy beer tonight.

CHAIRMAN KING: That's right. Does anyone have anything else?

I would entertain a motion to recess.

MR. CARTER: So moved.

MR. O'RELL: Second.

CHAIRMAN KING: It's been moved and seconded.

We recess. Thank you all very much.

(Whereupon, at 5:05 p.m., the meeting was recessed, reconvening at 8:00 a.m., April 30, 2004 place.)

CHAIRMAN KING: I'd like to officially reconvene the meeting of the National Organic Standards Board.

The first thing we have on the agenda today is public input, but before we get started on that, Dave has indicated to me that he has a quick announcement, and I think it's important that we hear this before public input so you have an idea of what we're thinking. Dave.

MR. CARTER: Okay, thank you, Mr. Chairman.

I asked Mark this morning for a point of personal privilege, I usually don't wake up unprovoked by something other than an alarm clock, but this morning I got to thinking that I really think that it's important that this Board makes some sort of statement before we leave Chicago today in regard to some of the policy directives that have occurred, and I -- I know we did some things yesterday that talk about taking some things forward from policy development to the executive committee, but I can't help but think that it's important for us to make some sort of statement at this meeting, so I just wanted to announce my intent, before we adjourn this morning, to offer up a very short resolution that would just express the disappointment and concern of this Board over the lack of advance notice or consultation by NOP in the issuance of certain policy
directives. So I just want to announce my intent to offer that before we adjourn so that it's not a surprise to the Board members and we can be thinking about that. Thank you, Mr. Chairman.

CHAIRMAN KING: Thank you, Mr. Carter. Just a quick -- some housekeeping issues with public input. We have 35 signed up. We've allotted approximately 2 hours, 2 hours and 15 minutes, on the agenda. Several Board members have expressed to me today we clearly understand the importance of public input, therefore will extend the public input, to the best of our ability.

However, we have posted 5 minutes, I would ask you to understand that you have 5 minutes, stick to that, get your message to us in an efficient and effective fashion, and we appreciate that.

The court recorder has asked -- clearly we have a full room today. Your comment is extremely important to this process. In order to get this on tape, we ask that any conversations you have, please take those out in the hallway, that don't relate specifically to what's happening at that time.

Also, if you have cell phones, pagers, things of that nature, please turn to vibrate, turn them off.

And without further ado -- hold on. Jim Riddle.

MR. RIDDLE: Yeah, just a few things to add to
that, Mark. In case -- I just want to say that if you
haven't signed up, you still can sign up, and that's on the
back table -- or it's up here right now. And also, if you
do have a proxy, under the Board's rules, you can carry one
proxy, which gives you 5 additional minutes to speak, and
if that's the case, please announce that when you start
your comments.

And Kim is the timekeeper and has a sign for
1 minute, to give you a warning, but if you don't see her
sign, your 5 minutes still elapses, but that's just
politeness on our part. And if you did comment on
Wednesday, you can still offer additional comments today.

So just wanted to be clear about all of that for
everyone.

CHAIRMAN KING: Okay, the first person I have
signed up, who registered in advance, is Mark Kastell.

MR. KASTELL: Good morning. My name is Mark
Kastell, and I'm a hired man. I work for farmers. I'm
here today representing the Cornucopia Institute, based in
Cornucopia, Wisconsin, and I'm here today to send a clear
message to United States Department of Agriculture
Secretary Ann Veneman.

In the emerging battle between organic consumers
and family-scale farmers, who literally have built the
organic industry from the ground up, and in this battle
against the forces of evil, the corporations who have shown they are willing to compromise organic integrity in the pursuit of profit. The USDA's National Organic Program has taken sides in this fight, the wrong side.

As we started to connect the dots, it soon became obvious that in virtually every instance -- maybe this is what Mr. Carter was referring to -- the NOP has been willing to water down the organic standards. That evidence is so overwhelming that there are no longer any discernible dots left to connect, and left with a black page.

Many of the NOP directives have made it possible to organic factory farms. I wouldn't call these farms. This is dumbing down the organic standards. However, our customers are not dumb. Organic consumers are not dumb. They understand that God created cows and other ruminants to eat grass. Circumventing the pasture requirement is just flatly wrong.

They understand that livestock needs access to outdoors in order to encourage their natural behaviors and to ensure good health and longevity. Furthermore, they understand that the law and federal regulations require this access, and they are demanding proper enforcement.

They understand that the need by factory farms to bring in cheap replacement cattle from conventional operations is proof positive that these farms are not
creating the healthy environment for livestock that is required by the law that we're trying to respect here today.

We are at the precipice of a very tall cliff, and economically, let me tell you on behalf of the farmers that I'm here representing today, it is a long, long way down. We are running the risk of destroying the credibility of organic agricultural in the eyes of the consumer.

Consumers Union, publisher of Consumer Reports magazine, has taken the responsibility of monitoring eco label claims. It is incredibly distressing that because of corporate abuse and the actions or inactions of the NOP staff, because of this, they have felt it necessary to question the value of the "organic" label, especially on imports.

One other subject matter that I'd like to bring up is imports and the question of the credibility. I got an e-mail yesterday from one of the CEOs from one of the most respected processors and marketers of organic food. He's incredibly concerned about the lax oversight by the NOP on foreign certifiers, some domestic certifiers, we now see farmers and processors shopping from certifiers, we see organic food from name-brand companies from Guatemala, Chile, Mexico. Here's broccoli from China. Can we trust that the same way we can trust our indigenous farmers and

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TEXAS 75644
our good certifiers here?

At any rate, in closing: We have lost confidence
in the ability of the USDA's National Organic Program to
protect the integrity of organic agricultural. We call on
Secretary Veneman to execute regime change at the National
Organic Program. We need management and staff at the NOP
who are qualified, have a strong background in organic
agricultural, and respect the organic community. More
importantly, we need folks at the NOP who respect the
organic community, and our leadership as represented by
this Board and the power that you hold by federal law, by
virtue of federal law.

And I thank you very much for your comments -- I
thank you very much for the opportunity to elicit these
comments. Thank you.

(Laughter.)

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah. Mark, just a question, or,
actually, a clarification.

MR. KASTEL: I'm sorry --

MR. RIDDLE: You mentioned a concern about the
imported products, and under the regulation, they have to
meet the same regulation, and any foreign certifiers have
to be accredited by USDA, and this issue came up, I think
it was Wednesday, about the site visits of foreign
certifiers, because there is major concern that the domestic certifiers have been visited but foreign ones have not, and the response to questions -- and I just wanted to inform you, since you weren't here, and other members of the audience, is that that process of visiting the -- I think it's -- nearly 40 foreign certifiers is to begin in June.

MR. KASTELL: Yes, that's -- that is the concern that I was articulating here, and -- but furthermore, even within our domestic infrastructure here for certification, Jim, I have anecdotal reports from both processors and farmers that if -- in fact, a very intimate experience with one, who's a member of a cooperative, I've worked with, where the farmer was -- his farm plan was turned down by an IFOM-accredited [phonetic], very responsible organization, and he simply shopped for a different certifier and he's now delivering organic product.

So this is happening on all levels. Again, one of the problems is we've created this ceiling, rather than the floor, in the marketplace, we can't create a higher level of respect for some certifiers, and these are usually the farm-based -- farmer-based organizations that helped build this industry, there's no way for them to communicate with their customers that they're really doing the right job and add value to some of these products that are being
responsibly produced. So those are the two basis --

MR. RIDDLE: And I did have a question also about
the pasture. You made a very strong statement there about
the need for access to pasture, and the Rule requires
access to pasture, and "pasture" is well-defined in the
Rule. Are you aware of livestock operations that are
actually not providing pasture, say to their milking herd,
or something like that?

MR. KASTELL: Jim, I -- my concerns in that area
are twofold: one, reports of, you know, a dryland dairy
with a muddy feed lot, to me, compared to my farm, that's
not pasture.

And secondarily, although there are some dairy
producers in this country that have pasture-based
operations with larger herds, that's an aberration. Most
of these confinement outfits, the -- really, the logistical
constraints of trying to move a thousand to 3,000 to 5,000
cattle onto fresh paddocks in a true environment where
they're going to gain any reasonable amount of their feed
intake from pasture, it's a very dubious concept, and I
want -- and the farmers that I represent, who can produce
with 50, 70, a hundred cows, the kind of milk, if you're
using milk as an example, that consumers want.

I do not want these folks who are working so hard
to be at a competitive disadvantage. There has to be strict oversight and enforcement, and I'm not confident that's happening right now, Jim.

MR. RIDDLE: Well, we need to move on, but if you have actual evidence, that would be very helpful, to bring that to the livestock committee. Thanks.

MR. KASTELL: Okay. Thank you.

CHAIRMAN KING: Thank you. The next person is Kelly Casper.

UNIDENTIFIED MALE VOICE: And on deck --?

CHAIRMAN KING: Marty Mesh. Thank you for reminding me (inaudible).

MS. KASPER: Hi. My name is Kelly Casper. I'll be reading mine, as well as I have a proxy from a farmer. It is --

UNIDENTIFIED MALE VOICE: So that's 10 minutes.

MS. KASPER: Alice Rules [phonetic], executive director of Georgia Organics. This is Eddie [phonetic].

"I am the mother of a 2-year-old child and a strong believer in supplying my family with healthy organic foods. I've spent a great deal of time and energy receiving the benefits of organic foods and other natural products, such as cleaning supplies, shampoos, et cetera.

"I am well aware of the problems that have
occurred due to pesticides, the overuse of antibiotics, and factory farming in general. Due to my findings, I have chosen to supply my family with organic natural products whenever possible. This has been an extremely expensive proposition, but it is something that both my husband and I strongly believe in. We believe that spending extra for a gallon of organic milk is not only allowing us to have a product free from growth hormones and antibiotics, it is also allowing us to support what we believe in with our money.

"In essence, each time we spend a little extra for an organic product, we are voting for that company and industry, hence Horizon Organic.

"It is very saddening to me to discover that the 'organic' label is being bastardized in front of our very eyes. I realize that money makes the world, and especially this country, go round, but in the instance of the 'organic' label, I hope that the big-money corporations are not allowed to push out the small farmers, who started the organic movement by doing things the right way.

"I have been a supporter and investor for Horizon Organic. My family has access to their milk at all times. However, it is very disappointing to discover that this company is held to a different and less-
demanding standard than the small farmers out there.

I personally am a vegetarian; however, my husband and my child both eat chicken. I am fully supportive of them, and one of their favorite items that I buy is the Applegate Farm chicken sausages. Now I have learned that the preservatives, which were legally approved, have been added to their products.

"As a consumer, I am at the mercy of the companies which I have put my faith in. They in turn are held to a certain standard by this board. If that standard is lowered, without the consumer being duly informed, an injustice is being done.

"That is why I am here today. I want my voice to be heard. This is something I strongly believe in, and when I buy something that is labeled as 'organic,' I hope that the label actually means something. If the powers that be have their way, enough loopholes will be added that the label will be nothing but a way to increase their profit by charging a higher price for something that is marginally different than the conventional product.

"I'm here today in the hopes that this Board will hold true to the mission of organic farming and not be swayed to institute shortcuts and loopholes by companies chasing an almighty dollar at the expense of consumers, such as myself and my family. Thank you."
And then the proxy by the farmer. "George Organics, a non-profit organization promoting organic and sustainable growing for the health of Georgia's land and people, is writing in response to concerns about the weakening of organic standards in our country.

"Georgia Organics is a membership-based organization of farmers, consumers, gardeners, and agricultural professionals who are committed to healthy farming and food.

"The National Organic Standards Board bears the responsibility of maintaining the integrity of our organic rules and policies and remembering the values that brought forth these rules in the first place. We recognize this is a tremendous job and one that endures enormous pressure from a variety of external influences. The Board must regard public trust of the organic standards as tantamount, superseding corporate or individual interest.

"Equally important is the commitment of organic farmers to public and environmental health. These two audiences should not be forgotten in the interests of third-party profits and politics. Georgia Organics urges the National Organic Standards Board to not fear from its mission in ensuring high-quality products and standards that respect farmers and consumers.

"If the Board continues to allow the loopholes
that are becoming more and more apparent, then the Board very well may be the architect of its own demise as farmers and consumers gradually abandon the process for something better. We remain hopeful that the future of organics holds more promise than current predictions."

    Thank you very much.

    CHAIRMAN KING: Thank you. Jim.

    MR. RIDDLE: Yeah, I would just like to respond. Kelly, thanks for your comments.

You mentioned especially in the proxy about the Board allowing loopholes, and I feel obligated to go on the record to state that -- especially with the preservatives in ready-to-eat meat products, that that was not an action of the Board, it was done with no knowledge of the Board, substances were interpreted to be allowed as preservatives in these products, these are new compounds, they're not on the National List, they have --

The company was following the rules petitioned to the Board to have those substances reviewed, and the decision was made to allow them, without consultation of the Board, so I just want to be clear what the record is on that.

    MS. KASPER: And make clarification that I don't think I was stating this board, it was the -- there's another board that was there.
MR. SIEMON: NOP.

CHAIRMAN KING: The program.

MS. KASPER: I'm sorry, I think I -- yes, so it wasn't -- I'm sorry, I mis- -- I did not explain myself very correctly, but it was important to GO so --

MR. RIDDLE: That's why I felt a need to clarify.

MS. KASPER: Thank you. Good. I'm kind of new at this. I appreciate it, thanks.

CHAIRMAN KING: Thank you. Next is Marty Mesh, on deck is Urvashi.

MR. MESH: While USDA -- Marty Mesh, Executive Director of Florida Organic Growers and Quality Certification Services.

While USDA has done many things right and I would like to give them more "atta boys" and positive reinforcement, the ever-ticking clock causes me to focus more on the discussions in the areas of concern. It does not mean (inaudible) things are not appreciated, and I'm sorry that USDA higher-up program staff aren't here to hear my positive comments and issues of concern to consumers.

I also want to express thanks on behalf of organic cotton growers, those of us who buy organic cotton products, and supporters of a more ecologically-sound
production systems to the crops committee for considering public input and changing the recommendation in the entire board for the decision which affects cotton seed -- organic cotton seed for planting.

As an organic farmer for over 25 years and being involved in the community and the industry for over 30 years, I'm concerned about the confidence that consumers may lose in the "organic" label. This loss of confidence has been the result of some of USDA's actions, the process or lack thereof, and most recently by the directives. Even the name, "the directives," brings to mind the old Soviet Union and Eastern European countries, where a directive would be issued from party officials and blind obedience was mandated, without comment, without revision, and without representation.

We again urge the NOSB to weigh in and the NOP to reconsider some or all of the recent directives. NOP acknowledged that a mistake was made in the title, and now we would like -- the NOP must acknowledge a mistake may be made in substance. How possibly could fishmeal, fortified with prohibited materials or containing prohibited materials be considered natural and not up for certification program to question the use of any amount.

As a board member of the Organic Trade Association, and my comments do not reflect the official
position of the Organic Trade Association --

(Laughter.)

MR. MESH: -- I urge the NOP to improve its
communication with the Organic Trade Association, which
would result in less and less problems, more positive
reinforcement, and consumers that maintain confidence in
the "organic" label. It is in the industry's best
interests to maintain confidence in the National Organic
Program and organic products in the marketplace.

The recent directives play right into the hands
of those who attack organic agricultural at every
opportunity, for now we can't maintain that materials are
reviewed before they were put on the National List and
used in the field.

While I think that some flexibility to a degree
is reasonable and Florida organic growers used to have a
policy on unintended applications which would result not
in the loss of certification for 3 years, the current
policy -- I mean guidance -- I mean directive, goes too
far in potentially allowing multiple uses in applications
of inert ingredients that will make consumers wonder and
facilitate attacks on the organic industry.

This seems contrary to the Organic Foods
Production Act purposes, along with the other directives.

Remember uniform standards, consumer confidence, and an
increase in trade, the basic purposes of the Organic Foods
Production Act.

I have to comment on the livestock variance
which was put in the Rule, recognizing that disasters will
happen. It is in the Rule, and the USDA will set
themselves up for possible legal action if some process is
not implemented to deal with the valid request based upon
the livestock variance on feed when a natural disaster
happens.

At the recent meeting at Beoflock [phonetic]
with internal certifiers, it was very easy to see that
many, many, many of the certifiers who have been
accredited by USDA were totally or basically unfamiliar
with the regulation. These accredited foreign certifiers
still have not had a site visit, and USDA should verify
that its accredited certifiers are at least demonstrating
that they are getting it right most of the time.

My compliments to the compost task force. I
have a question. I thought I saw in yesterday's
presentation that after two tests and a follow-up test,
that it meant that the system would no longer need to be
tested. Maybe I misunderstood. So I just -- on the
record, I finished early, and I will designate my
remaining time for the good of the cause.

UNIDENTIFIED MALE VOICE: For previous
infractions.

(Laughter.)

MR. MESH: "We'll credit it against your account."

CHAIRMAN KING: As always, thank you, Marty.

Urvashi's up next, and I believe it's Bart Reid after that, on deck.

MS. RANGAN: So I believe I'm taking Angela's proxy time, that's from Florida Organic Growers, so Consumers Union would like to thank them for their time.

Good morning. It's really been quite a few days for all of you and for all of us out here, and my heart's pounding, so -- I think there's a lot of anger in this room. People in this room deserve what's been happening the last few days, you deserve more.

We're all spending a lot of money and a lot of time coming to these meetings, and the goal of these meetings is supposed to be to improve the standards, and ever since the implementation of this program, I know we at Consumers Union an a number of these folks back here have been doing nothing but watchdogging what the National Organic Program is doing, and it's really a travesty to consumers, to farmers, to certifiers, to inspectors, and it's very rare to find an industry where you actually see all of those stakeholders sitting on one side of the
fence, saying, "Please maintain high standards."

It was enlightening to hear the National Organic Program's presentation, and it was enlightening to learn how they arrived at some of these directives. It's also enlightening to know that they think that there aren't any significant changes and that the public has no right to comment on these directives. That is bull honky, and we have a right to comment on these, this is a public program, and so I'm going to continue to do that.

The goal of this program is not, as one of the NOP staff said, to level the playing field. The goal of this program is to create a consistent and meaningful label for consumers, that adds true value over conventional production, because that's why consumers are buying organic, because it adds a premium to the product.

At the very least we expect those standards to be maintained. At the very best, we hope that there'll be improvements in the standards over time.

As director of the eco labels program for Consumer Reports magazine, I'll tell you that there are other label programs, that are running up right behind organic, that are doing a pretty good job of maintaining standards and improving them over time. It's a lesson that can be learned by this program, which set the precedent for all of them.
Things of particular concern -- and I'm submitted for the public record our press release that we did yesterday, and I'll give that to Katherine, the fact that the USDA is drastically cheapening the meaning of organic.

These directives actually, even though this isn't a safety program, start to undermine the public health implications of this program, which is somewhat remarkable.

I want to go back to pesticides for a minute. I know I spent my whole time talking about it before, but it's worth mentioning again. I got a lot of questions, even from people here: What are EPA inerts? What is List 3 and List 2? Why do we keep throwing these things around?

I want to say for the public record what List 3 inerts are. Inerts are not benign ingredients, inerts are not the active ingredient in formulations. Really heavy-duty synthetic formulations require a carrier that's also heavy-duty synthetic to carry it into the system.

List 2 -- List 3 ingredients, it's 56 pages, if you care to go to EPA's website, of ingredients. It includes ingredients of unknown toxicity. We don't know what the toxicity is of the ingredients, and according to EPA, an inert ingredient was placed on List 3 if there
were no basis for listing it on any of the other lists; that is, it wasn't toxic and it wasn't non-toxic, so it needed to go on this list.

The agency will continue to evaluate these chemical substances, as additional information becomes available, to reclassify as List 1, 2, or 4. List 3 is unknown, and it's prohibited in the OFPA and it's prohibited in the regulations.

List 2, potentially toxic inert ingredients, high priority for testing inerts. Many List 2 ingredients are structurally similar to chemicals known to be toxic. Some have data suggesting a concern. There's a reason why these lists exist, there's a reason why the OFPA prohibits them, and there's a reason why the regulations, even though they never said "before use," mean that you can't use these things and you have to determine what's in them before you use them. That's what the public expects.

The fact that now prohibited pesticides can easily be used on these things is ridiculous. That's zylene, toluene, formaldehyde, here's some others, ethylbenzene, succinonitrile, methylisobutylketone, naphtha, toluene trichloroethane, these are all on List 2. There is no way that the public is going to fly for these ingredients being used on crops, especially unknowingly.

Who's responsible for that? Who's responsible,
if we find those pesticide residues on the food?  Are the
certifiers responsible?  Is that what the NOP is doing?
Are the farmers responsible?  Because there's going to be
liability issues that arise from that, and so someone
needs to take those under consideration.

The next thing I want to turn to is fishmeal.  I
heard Richard Matthews say that there's no need to
regulate -- there's no need to review fishmeal because
it's a natural ingredient.  Wow.  Consumer Reports just
came out with 12 natural ingredients in dietary
supplements that are incredibly dangerous, we'd like the
FDA to get them out.

Ephedra is a natural ingredient.  It's not okay,
it's not safe.  We know that fish contains ingredients
that are not safe for consumers.  Despite the fact that we
learned that you could mix in synthetic preservatives and
that those didn't need to be reviewed, and that was just
absolutely amazing, on top of the fact that we've got
tuna, the most common fish that's eaten in this country,
laden with mercury.

The fact that an organic label can now be used
on a can of tuna and not mean anything, including the
NOP's lack of testing for it or requiring for it or even
needing the NOP program, I want to take a little bit of
time to talk about what FDA considers to be the public
health concerns with fish right now, and especially tuna. For a 22-pound toddler, the weekly reference dose is 7 micrograms of mercury. Two ounces of canned tuna provides a dose of 20 micrograms of mercury. A 44-pound 5-year-old, the weekly reference dose is 14 micrograms of mercury. A 6-ounce sandwich, that's what a sandwich is, of tuna, would provide that child 61 micrograms of mercury. That is more than four times the recommended reference dose, or the reference dose allowable.

For a 132-pound woman, the reference dose is 42 micrograms of mercury, and you get it again, a 6-ounce can of tuna is still the same reference dose for that woman, it's 61 micrograms of mercury. That woman, if she ate a tuna sandwich a week, would exceed the reference dose by 50 percent.

If we don't test fishmeal for mercury and we start allowing this to not only be fed to fish but to cattle, which -- incidentally, cattle don't eat fish, but --

(Laughter.)

MS. RANGAN: -- what are we doing? This is not what consumers expect out of this program. If a consumer sees an organic label on a fish, they're going to expect more than this, and the fact that we're going to feed it
to our cattle does not get around this issue. Mercury
doesn't really go away, it's a metal.

The last issue to deal with today is that Consumers Union believes that USDA is on a very slippery slope of allowing drug use in organic production. It is of particular concern when we heard clarifications to the fact that it isn't just antibiotics that could apply on the dairy farm but any drug, including growth hormones? You're going to have a lot of explaining to do to consumers by the time we get there.

So my advice is: the answers are very simple, to address these problems, that's the good news. There's a lot of bad news today, but the good news is, how do we find out what's in pesticide formulations? Take EPA up on their program for their pesticide registration list. EPA has offered to review pesticide formulations and crack the code for manufacturers, to allow them to list it as appropriate for the National Organic Program and without violating confidential business information.

It seems like a more logical way to go to get these pesticide formulations approved, so we know what's in them, so we know it's appropriate for use, before we use them. What about the fish? Fish is food. The NOP does authority over food. So don't allow the use of any organic label on fish until the standards come out
properly, and get moving, because the advice has been
conflicting from the National Organic Program, they --
these are significant changes to what they have said
before, so they have an obligation to get those standards
ironed out, to work with the National Organic Standards
Board and get those out for public comment. Let's get on
with it, let's do it, let's test for mercury. These
aren't difficult things to figure out.

On the antibiotic issue, the OFPA says no
antibiotics. We already started with the slippery slope
on herd replacement and that a herd can be one cow, and
now we're at the point of: any cow can come out of
organic production at any time and receive any drug to
treat illness? I'm going to be going back and looking up
to see what growth hormones do over that year, are there
any last implications? do you give a shrink hormone after
a growth hormone?

(Laughter.)

MS. RANGAN: We appreciate your time. Thank you
very much for your hard work.

CHAIRMAN KING: Rose, then Andrea.

MS. KOENIG: Thanks for your comments. I mean,
one solution to the fishmeal, for those out in the
audience, would be to petition it as a natural prohibited,
and if you could, you know, go through the website and go
through that process, that's one way. If in fact, you
know, there are high levels of these heavy metals, it's
the logical way to go about that issue.

MS. RANGAN: Thanks, Rose, we'll do that.

MS. KOENIG: As far as the -- you know, the
List 3 and List 2, I mean, we had a task force that had a
different recommendation than that -- of what is in the
directive. You know, we'll work our best to try to see --
see what can be achieved.

MS. RANGAN: Thank you.

CHAIRMAN KING: Andrea.

MS. CAROE: Rose made my comment, so --

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah. I appreciate your concerns
and share your concerns and just once again want to make
it very clear that none of these directives were developed
in consultation with the advisory board, even though our
charge under statute is to advise the Secretary on
implementation of the Act, and implementation is a
process, it's not an event that happened October 21st,
2002.

I was especially astounded to learn that this
pesticide policy was developed with no consultation of
EPA, when EPA controls pesticides and has the organic
registration program. What would you advise the Board
that we do or what do you see our next steps, not just for
the Board, that should be done in response to these
developments?

MS. RANGAN: Jim, thank you for that. Your
point's well-taken, and I think that since the National
Organic Program can't seem to consult with the EPA on
pesticide registration, I recall this board a few years
ago brought in someone from the EPA. I believe that's how
this pesticide registration program got started. He
seemed very willing to help out with the NOSB, they seemed
very willing to sit down with you and crack codes and make
this program work.

So I would say you're going to meet with a
pretty helpful EPA on that level, and that would be my
recommendation. In my first public comment: what
Consumers Union would like to see is we'd like you to make
a recommendation to mandate this organic pesticide
registration program for pesticide formulations. It's a
voluntary program for manufacturers.

If you're a pesticide manufacturer, you don't
have to do it, and if you don't want to do it, it's --
like you're a farmer and you don't want to be certified
organic, then you don't have to be organic, you can make
your pesticide formulation and go along the conventional
production route.
But if you want that added value, if you want to add a premium to your product, then let's get it straight that you actually have value added in your product and that it's appropriate for organic production.

CHAIRMAN KING: Rose.

MS. KOENIG: Just a clarification. And I think -- it sounds like you understand. As far as my recollection on that program, it is a voluntary for -- you know, and it doesn't allow List 3, it basically allows only those formulations that contain List 4 --

MS. RANGAN: That's correct.

MS. KOENIG: -- and it's a dual label. So it still does not eliminate this List 3 directive issue. I mean, that would identify those formulations that are in contact compliant. So we could, you know, through that again develop a database of knowledge for those products, which I think is the way to go, those -- you know, we need to inform people, you know, the information's out there, so you don't have this, you know, difficulty in identifying. That is, to me, the cautious way of going about it. But the labeling program is not the answer to this List 3 issue.

MS. RANGAN: It's one way of solving the problem.

MS. KOENIG: It doesn't solve the problem of
that directive, it doesn't solve the problem, because if
that directive is still out there, you could still have
this labeling program and those things could be listed.

MS. RANGAN: You're correct. The directive
itself needs to be rescinded. I'm sorry if that goes
without saying, but --

(Laughter.)

MS. RANGAN: I mean, the directive itself can't
stand while you mandate that. I understand implementing
two contradictory programs, but --

MS. KOENIG: No, but I'm just saying I don't --
I think it -- you know, that's not -- what I'm trying to
say is that's not the solution.

MS. RANGAN: Yeah. That's fair enough. I'm
just saying that I'm looking at these directives, and in
picking up the phone and calling EPA before I got here:
EPA's not going to give that information to farmers,
they're not going to give it to certifiers. It would be
an illegal violation, I guess that's redundant, of
confidential business information. They're not going to
do it. So this whole "You try, and if you can, great, and
if you can't, go ahead and use it" is not -- is not a
policy.

MR. RIDDLE: Yeah, I was just -- I wanted to add
that it's -- their labeling program is not solution for
the List 3s and List 2s, but the mechanism is a door for a
correction to solve it, and the phone call hasn't even
been made.

CHAIRMAN KING: Thank you very much.

MS. RANGAN: Thank you.

CHAIRMAN KING: Next up is Bart Reid, with Brian
Condon on deck.

MS. KOENIG: Just one comment on the List 3. We
-- I believe we have a process, which is the petition
process, which we've already proved -- we've added one
List 3 inert -- actually, two List 3 inert on my tenure
on the board. That process has been established, and I
think that that is the process that should be followed,
because we then can review those List 3 inert. It
doesn't allow any List 2 inert, that I know of. I mean,
I guess they could be petitioned. But there is a process;
the process has worked.

For those farmers who have had formulations,
they've come forth to the Board, they've petitioned, and
we've solved the problem for those producers, and I have
not heard, in the last couple of meetings, of any farmers
who have come forth and told us there is a problem that
exists on this issue.

CHAIRMAN KING: Thank you. Rose. Sorry about
that. Bart, we are now ready.
MR. CONDON: Howdy. My name's Brian Condon, and I'm actually up next. Of course, I'm not Bart. Bart is in Texas right now.

CHAIRMAN KING: So Bart is up, all right.

MR. CONDON: Yeah.

UNIDENTIFIED MALE VOICE: We have a statement from Bart.

MR. CONDON: Yeah.

CHAIRMAN KING: Oh, so you're reading both.

MR. CONDON: Yeah.

CHAIRMAN KING: All right.

MR. CONDON: So really I guess I could be up here for 10 minutes.

CHAIRMAN KING: 10 minutes, that's right. Okay.

MR. CONDON: We'll try to not do that. In any case, the first thing I'm going to do here is read a letter that Bart wrote to the USDA in response to the April guidance statement having to do with the scope of the NOP. And just so you know, Bart is a certified organic shrimp producer in the state of Texas, and he feels that the directive did a certain amount of damage to him. So here goes Bart's letter to the NOP.

"Dear Mr. Jones: I would like to petition you, the NOP, and the USDA to initiate immediate rulemaking concerning the status of organic seafood, and particularly..."
previously certified organic farm-raised seafood, shrimp
in my case, that was certified by the USDA/NOP-accredited
third-party certifier, Quality Certification Services.

"The Permian Sea Shrimp Company has spent
considerable sums of money to obtain an organic
certification and the latest guidance statement from the
NOP totally usurps all our efforts and leaves us in
financial jeopardy as a business. We have product in the
market with the NOP seal as organic, and we have many
customers that are purchased and are in negotiation with
us to purchase our shrimp due primarily to the fact that
we have obtained this certification via the NOP rules.

"The USDA recognizes fish and aquatic animals as
livestock. In all programs that USDA offers, like the
non-insured crop disaster program and Farm Service Agency
loan programs, aquatic animals are listed as livestock.
Most all 50 states' agricultural departments recognize
fish and aquatic animals as livestock. It is only
appropriate and logical for the NOP, a USDA division, to
recognize aquatic animals as livestock.

"The organic rules have a base of rules and
procedures that are suitable for any livestock regardless
of specificity for specific breeds or species. There are
parameters within these rules for feed, stocking
densities, and ranging requires, water, health, welfare,
and processing that can be applied universally to any livestock and used universally to certify any livestock.

"We recognize that specific rules can and should be appropriate in the long term, but initially there are enough basic rules that apply to all livestock that certification is possible. The certification using basic rules is a starting point, and the individual companies that obtain certification can provide additional information to develop species-specific rules in the future.

"There is no way to develop rules for every individual animal and plant that a producer may wish to produce for the organic market, and to separate aquatic animals out from livestock is equivalent to separating out rice from terrestrial crops because it grows in water.

"The market definitely respects the USDA's NOP certification, and that is why we have sought and obtained this certification and why our market is using this very certification to develop confidence within their markets. The latest guidance statement erodes this confidence and will cause a significant burden on Permian Sea Shrimp Company and its customers, who have purchased our shrimp under the confidence that the certification was real and backed up by the NOP.

"Specifically, Permian Sea Shrimp Company will
be financially and materially harmed and devastated by the new position of the NOP, and we ask that you initiate immediate rulemaking to clarify and alleviate this situation for us, our customers, and the organic retail community.

"We realize that organic seafood in general is a complicated situation, but farm-raised seafood, livestock, has a place in the organic market and is in the scope of the current NOP rules.

"We certainly will be willing to assist in developing any specific rules that are needed in the future but insist that the basic livestock rules are sufficient to allow the certification of our shrimp and other conforming fish and aquatic animal operations under the NOP and using the NOP seal.

"Permian Sea Shrimp Company asks that you initiate rulemaking on this and consider our petition to maintain our certification and NOP's authority to support our certification in the marketplace. This not only will avoid financial ruin for us but instill confidence in the market for NOP's program and reputation and continue to develop a consumer confidence and awareness for organic farm-raised seafood. Sincerely, Bart Reid, Owner, Permian Sea Shrimp & Seafood Company."

So that was the letter from Bart. This is just
an excerpt of a letter that QCS had sent to the USDA last week, responding to the guidance statements back in April. I'm just going to read the last paragraph or two.

"In summary, we request that the USDA honor the simple statements that the NOP has issued previously via three concrete actions: 1) engage in immediate rulemaking to establish standards for aquatic animals; 2) allow beyond the current 18-month provision those aquaculture producers meeting current NOP standards to use the USDA 'Organic' seal in the marketing of their product; and 3) protect consumer confidence and organic producers by disallowing the use of the 'Organic' label on aquaculture products that do not meet NOP standards, products that also undercut the price of those that do meet the standards.

"This lack of clarity on the issue in the past has gotten the organic industry into the current conundrum, and we hope that the NOP will act decisively, publicly, and promptly on the matter in order to restore order and confidence in the organic marketplace."

And that's all I've got for now.

CHAIRMAN KING: Thank you. Dave.

MR. CARTER: I'm sorry, what was number 2 that you just said?

MR. CONDON: Number 1 was: engage in immediate
rulemaking. Number 2 was: to allow the use of the
USDA/NOP seal beyond the 18 months, as provided in the
guidance statement.

MR. CARTER: And also, just -- while I know you
refer to them as guidance, and when they were they posted
they were issued as -- or they were listed as guidance,
but we were informed earlier this week that those were
directives, and that is an additional level of concern
that many of us have.

MR. CONDON: Okay.

CHAIRMAN KING: Thank you, Brian. Next is Brian
Leahy, and Liana is on deck.

MR. LEAHY: I'm Brian Leahy. I'm President of
California Certified Organic Farmers. We are a trade
association of -- made up of certified organic producers
and handlers.

I'm here mainly today to talk about one of our
lines of products, I would suppose, best represented by,
say, Traditional Medicinals, a tea company --

UNIDENTIFIED FEMALE VOICE: What?

CHAIRMAN KING: Can you say that again.

MR. LEAHY: Can you hear? Traditional
Medicinals is a tea company that's been in company since
1974. I'm not sure if they were here Wednesday or not. I
have something written, that I'll submit afterwards, from
them.

The recent guidance/directive that -- on the Scope just destroyed a long-term existing organic line, which is the supplemental teas. In Traditional Medicinals' case, they have a simple tea, it's peppermint, and they make a claim, they say it may promote digestion. Because of that claim, it then falls under FDA's regulations, and USDA is now saying that they cannot regulate -- they can't use that organic claim any longer, which we think is creating real confusion in the marketplace, it's really destroying a traditional organic line.

This is exactly why we came to USDA, was to establish, you know, standards so that we can market organic products and everyone's on the same level. USDA's now saying that because of this claim, they are thrown into the world of "consumer beware."

So we think it's a real problem, and I think it -- it brings up three real problems with this program right now. One is the communications. It would have been very easy for USDA/NOP to have told the regulated community that "we are considering this change, is there a way we can talk about this first and maybe come up with some solutions," and we think there are solutions, we think this could be as simple -- something as simple as an
MOU between FDA and the NOP and just take care of this problem. We just think it's -- they opted out of a long-standing category of organic goods. So I think that is -- that is probably "the" biggest problem here, is simply the communications between the regulated community and the program itself.

I think that's really -- that's what we had to say, is -- and I know it's not your -- this board's problem, but it's your problem to communicate to this -- to our regulator and say, you know, this -- we did not establish the National rule to destroy organic trade, we set it up to facilitate it. So thank you. Is there any questions on this?

CHAIRMAN KING: Dave.

MR. CARTER: Thank you, Brian, and I think your point is excellent, because when you take a look at some of the interpretations that are made, it's not only just USDA having jurisdiction over organic and that doesn't then involve FDA or EPA or, you know, whatever, but even within USDA, the fact that it's -- that NOP is within the Agricultural Marketing Service, and so therefore it doesn't relate to NRCS or whatever, that the importance of at least developing some memorandums of understanding, inter-agency and intra-agency, so that there is consistency, I think is something that is doable, you
know, even if there's no legislative changes or new rulemaking down the road, that that would at least be a good set, and I appreciate you bringing that forward.

MR. CONDON: You know, if they didn't -- if USDA backed out of every product that some state regulation also talked about, or federal regulation, it'd be just about everything, we've got this many rules, you know, coverage everything, so -- this one just seems like it's -- it's a cop-out, to be perfectly honest.

CHAIRMAN KING: Andrea.

MS. CAROE: Brian, the Traditional Medicinals products, are they making a structure function [phonetic] claim (inaudible)?

MR. CONDON: Yeah, and they claims they -- in peppermint is: it may promote digestion.

MS. CAROE: So that's what puts it as a dietary supplement?

MR. CONDON: Yeah. And then they have -- on their box, then, that the consumer sees, they have to have the FDA dietary supplement label on the back.

MS. CAROE: Now, could you -- I don't know if you know this or not, but I'm not -- I'm trying to figure this out. Functional foods, where do they fit in and are they not making a structure function claim and would they then fall as a food -- I mean, there seems to be several
different shades of gray between food and dietary
supplement.

MR. CONDON: There are, I mean -- and -- you
know, the Rule -- the organic Rule, it's very clear, it
says -- it does -- agricultural products meant for human
consumption, agricultural -- you know, herbal teas
definitely fall within that, and they have since the very
beginning of organic, it's just -- you know. So -- and,
yeah, I don't know -- right now there's a turf war between
FDA/USDA on, you know, "what do we regulate?", and in the
industry right now, one of the hottest fads in food is to
make all kinds of dietary supplements and just all kinds
of claims. I mean, I sold kiwis because they were an
aphrodisiac back in the '70s.

(Laughter.)

MR. CONDON: And the Farmers Market in
San Francisco, they sold pot for a while.

MR. CARTER: Did you say kiwis?

(Laughter.)

MR. CONDON: You know. But does that fall under
FDA? I -- you know, there -- I don't know, but it's --
it's -- as soon as they start opting out of long-term
existing businesses because some other regulatory agency
has some claim in it, what kind of business alliance
[phonetic] is that? We had -- one of our prospective
clients was working with our processing person, Jane
[phonetic] Kennedy, two days after this came out, she
called, crying, on the phone, you know, "This has
destroyed" -- "My life savings have been aiming at going
into this particular business, USDA" -- "I had every
reason to believe that it was part of this regulated
scheme, and now, out of the blue, comes this directive,"
and that's -- I mean, that is also one of the main
problems, is communications, you know, let's talk about
these. Existing businesses, that's -- it seems like a
kind of a basic, you know, sense of dignity, is to talk to
each other first.

CHAIRMAN KING: Andrea.

MS. CAROE: As a certifier, Brian? I mean, the
USDA has kind of kept this open, that certifiers could
have their own standards and certify to them and do them --
- I don't know, basically, organic 5 years ago
(inaudible).

MR. CONDON: Yeah.

MS. CAROE: As a certifier, do you see that
that's something that would be attractive? I mean, is
that --

MR. CONDON: Yeah.

MS. CAROE: -- you would do or -- I mean, it's
really tough for you answer, I (inaudible) --
MR. CONDON: No, I think it's an excellent question, because when this directive came out, you know, there's all kinds of categories in here, and some of them make a lot of sense, they -- in my mind, to make organic cosmetics is kind of goofy, I mean you -- it's just -- it's not food, you know. Our standards were agricultural based, you know, and unless -- and if other industries, like cosmetics, pet food, right now, those make perfectly good sense to have, you know, different standards, non-USDA standards, but this one, peppermint tea, I mean that is -- that's food, you know, and that's why we set up this regulatory scheme.

So I don't -- we have no problems doing other standards, we think that the marketplace will be there, but we also remember the confusion, you know, people were -- even under the California act, you could have 2 percent organic ingredients in that thing and then the whole label said nothing but "organic." It was very confusing and very misleading. And the herbal tea people, dietary supplements, I mean, they fit under the program, and they just think that it's going to be a race to the bottom and a lot of confusion.

CHAIRMAN KING: Thank you, Brian. Liana's up next, and Harriett is on deck.

MS. HOODES: Good morning, all. This is Liana
Hoodes. I'm the Organic Policy Coordinator for the National Campaign for Sustainable Agriculture, Organic Committee.

As always, I'm going to really stick a lot to process here, and so -- I'm going to jump around a little bit at first, though, and make a few comments on some of the directives, guidances, whatever they are, and our comments on them. Mainly we have a comment on the whole damn process, that's broke.

(Laughter.)

MS. HOODES: So -- but I would like to say: in terms of the antibiotics in livestock, we would like to state unequivocally: this decision is about protecting management styles and not about animal health care. It's always been possible to raise healthy animals without the use of antibiotics, in general -- there are specific cases it's needed -- in an organic system, but it is probably not possible in a factory farm setting, and that -- this change is clearly catering toward factory farm settings, and that is a problem, in addition to the process to get to that guidance or directive.

Similarly, inerts, the issue of the allowance of inerts if you don't know you have them is a real big problem in terms of this label and the consumers' expectations about not having this in their -- in the organic

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TEXAS 75644
system at all, and it seems to go way out of the -- what
was normally expected, those normal decisions we wanted
you as a board to have to make. This is way beyond any of
that.

On the sunset provision, I just would like to
make a comment. Our pressing for a couple years for you
folks to be able to hire an executive director, this is
directly related to that. This is coming up on some
massive work that you folks have to do, and if -- you're
amazing -- I didn't even start by thanking you.

You are an amazing volunteer board that has done
incredible amount of work, and the least that we, as in
representatives of our government, and our government
could do for you is to get you an executive director that
-- to staff out some of this massive work that you have
already and that is coming up on you.

I do want to thank you for this forum, I want to
thank you for my being able to speak to you, and also for
us all to listen to all of the comments. We appreciate
that in an ongoing way.

We, as National Campaign Organic Committee,
continue to object to the treatment of this OFPA-mandated
board by the Department. We specifically refer to the
NOP's refusal to move the recommendations of the board
through a regulatory process and their increasing
usurpation of the statutorily-defined role of the NOSB.

Where are those years of recommendations, and what is the process used to determination which ones will become regulation? You folks could join in the refrain, since you have heard it from me for years now, those exact words.

In addition, we object to the practice of the NOSB -- of the NOP making materials decisions without the NOSB or without public notice and comment, and we question severely their authority to do so. In this the NOP has crossed the line. The responsibility to review and make recommendations to the Secretary regarding National List as outlined in OFPA is the most important statutory role of the NOSB.

So here we know that the NOP's move from the issuance of policy statements, that were sort of Q & As on the website, to what on the surface may appear a more formal process of what were guidances, and may still be guidances on the web but are now directives, is confusing. Those statements have gone through no more rigorous notice and comment, and while nominally welcoming input, really offers directives that materialize on the web and appear to be effective immediately.

We encourage you as a board to become much more active on your own behalf in supporting those pierces of
process that you need to move through. We will as a community support you in standing up for not accepting these directives, these guidances, that violate the law and violate your statutory role.

We will be proposing some language that we think the NOP should go to rulemaking, defining guidances, directives, regulations, and your role. That has never been done. Many other agencies have those clear-cut lines so everybody knows which is which. None of us in this room know what a guidance or a directive is, and we all deserve to at least know that process.

CHAIRMAN KING: Jim.

MR. RIDDLE: Thanks, Liona, for your words of support and encouragement and your marching orders for our future lives.

(Laughter.)

MR. RIDDLE: I was thinking last night, you know, about the past two days and the Board here, and -- I mean, it's -- it's what keeps me going on the Board, the fact that people came so well-prepared, and we've dealt with a myriad of issues, and done it in a very thoughtful manner and a respectful manner and an inclusive manner, trying to take into account public comments and the comments of diverging views on the Board. So I'm very pleased and proud of our process.
I want to comment on the executive director issue. Some of us have worked very hard to get that in the legislation, the appropriations, $100,000 for NOSB executive director, additional funds for peer review and for TAP reviews, and that money was appropriated by Congress.

When we've asked about that, we really haven't gotten information from the program, but it's my understanding that a couple weeks ago, Undersecretary Hawks was asked by Senator Herb Cole a question about these three items, and Undersecretary Hawk responded that the NOP was just about to hire an executive director for the Board.

We don't know anything about that, and you'd think that the Board, according to OFPA, has the power to hire an executive director and we'd have a role in establishing the job description and reviewing candidates, and I think we need to follow through with that. The money's there, and we need to take action, the Board needs to get more assertive on that.

I also want to inform you and other members of the audience that in the last couple months, leadership of the Board has written two letters, the last one went in last week, signed by 11 members of the Board, expressing our concerns, particularly about the materials review.
process and how we are not able to exercise our statutory authority the way things have been going for the past four months, with petitions being submitted and materials being allowed, which are not on the list, and going to TAP reviews without our screening.

This is very disconcerting to the Board, so we share your concerns and have been trying to take some actions and will continue to take actions.

MS. HOODES: And I in no way meant to imply that you weren't taking actions --

MR. RIDDLE: No, you clearly said we were.

(Laughter.)

MS. HOODES: And I do hope that you know that we are going on the Hill specifically on those issues, those three questions have been asked several times of the Department, about the director and the TAP review and the peer review panel, and I note that in OFPA the quote is "requires the Secretary to" -- quote -- "authorize the Board to hire a staff director," is the exact language that -- in OFPA. And yes, we need to continue to push Congress on these issues for you, on behalf of you, because you do work so well on behalf of us. Thank you.

CHAIRMAN KING: Liana, thank you for your comments and support. Thank you very much. Harriett. On deck is John Clark.
MS. BEHAR: Okay, my name is Harriett Behar. I'm a full-time organic inspector, a grower of organic vegetables since 1973, and certified organic since 1988. I'm also an avid organic consumer.

I'm concerned that the NOP is not going through the OFPA-mandated process of NOSB review and public comment on many of their directives and materials issues. The "organic" label is a privilege. It appears that the NOP, through their most recent directives, are allowing access to the organic market that is not based on a whole-systems approach of promoting soil, plant, and animal health but, instead, eroding the fundamental regulatory framework supporting that "organic" label.

I urge the NOSB to exert their OFPA authority, both as the materials list guardians and as the statutory advisory counsel to the NOP, to be even more proactive in fulfilling their role in the public private [phonetic] partnership given to them under the OFPA when guidance, directive, or other NOP provisions are put forth, and I'm extremely disappointed that the NOP process does not consult the NOSB and the broad expertise and stakeholder support that you represent.

I'm concerned that the recent NOP directives set many dangerous precedents. The inerts and pesticides, as a precedent, this directive allows producers to use
possibly prohibited products as long as they are unaware of the toxic List 2 or 3 inerts. This encourages manufacturers to hold back information in order to have access to the organic producer input marketplace.

In the future, fertilizer manufacturers, processed ingredients suppliers, et cetera, could choose not to release information as a way to gain access to the organic market. This is the precedent. Future NOP personnel and NOSB boards could use this precedent that permits this type of secrecy in order to just allow use of unknown materials.

Consumers wish the precautionary principle to be in place when putting their trust in organic products, and this allowance of unknown products seriously compromises their trust.

Lastly, this puts a significant burden on both inspectors and certifiers to work on obtaining information from suppliers, when the producers should prove themselves that their organic system plan meets the Rule, not that they do not know what they are using and therefore it should just be allowed.

Antibiotics to be used in animals that are at least one year prior to organic milk production: first, I believe this directly contradicts of the OFPA and the NOP rule, which does not allow antibiotic use in organic...
animals or edible products from organic animals.

It is a human health concern that overuse of antibiotics, both directly admitted to humans and animals, are causing antibiotic-resistant bacterial strains to develop. During inspections it would be difficult to track that all uses of the allowed and present antibiotics are meeting the specific requirements of this directive.

The temptation to use antibiotics for problems in animals less than one year from organic milk production is great. This also substitutes an input use for a preventative proactive approach that mandates that farmers develop healthy living environments for their animals, that promote health. The use of antibiotics to routinely control pneumonia in calves does not encourage the producer to improve the sanitation, ventilation, and stocking rates in the calf barn.

I understand the need for humane treatment for young animals, and if the NOP feels this is absolutely necessary, I would feel much more comfortable, although not in complete support, with this allowance if it was mandated that a veterinarian verify that the antibiotic was needed and that they administered it. This opens the door to any type of animal health product to be used in animals one year from organic dairy production.

Fishmeal. The precedent here allows any
secondary ingredient to be included in a non-synthetic product that is fed as a supplement. The allowed use of ethoxyquin, a prohibited preservative, embedded in this "natural" fishmeal opens the door for other items to be bundled into any "natural" products, such as synthetic amino acids, mammalian and poultry by-products, or other non-allowed materials.

In addition, this directive allows fishmeal as a livestock supplement, and this includes cattle, who do not naturally choose to eat fish.

Scope. I believe this directive sets the precedent allowing the use of the "organic" label on products that are outside the scope, whether they are certified or not, and this will confuse the consumers if organic throughout the marketplace truly does not have a meaning.

The word "organic" should be reserved only for those products that are certified by an accredited certifier, not those who just want to gain financially from the "organic" label, with no certification.

I urge the NOP to expedite work on standards for the areas mentioned in the Scope document in order to close this dangerous loophole.

Finally: I'm concerned that consumer confidence in the "organic" label will be eroded based on these

MR. SIEMON: You know we've taken a stand about the antibiotics and a lot of these issues, we've -- we've taken a stand once, twice, thrice, you know. So do you all -- I'd like to ask you and even several others: are we to the point of wanting to open up the Rule again and rewrite the Rule?

MS. BEHAR: Well, the Rule says that animals should be -- for emergency use, to preserve the animal's life, that antibiotics can be used, but the Rule is very clear that antibiotics are not allowed in animal products or edible products from organic animals.

So I believe that the Rule is very clear that antibiotics are not allowed.

MR. SIEMON: But the USDA lawyers say it's not clear, and they've interpreted it that way, so the only thing left is to either do rulemaking or the lawsuit-type thing, so --

MS. BEHAR: I believe, yes, that the consumers and many organic supporters believe that if the Rule needs to be opened, to strengthen, that statement that I just said, then we should open the Rule.

CHAIRMAN KING: Thank you, Harriett. Dr. Clark, and Jonathan Landeck is on deck.
DR. CLARK: Thank you. My name is John Bill Clark, Cassopolis, Michigan. I'm a certified organic farmer. I have a proxy from another organic farmer in my neighborhood, name is Roger Outlaw, Niles, Michigan. Strange name, on this morning, I guess.

CHAIRMAN KING: I was going to ask you about that.

DR. CLARK: I wish to second the idea of regime change, and I would illustrate that by asking how many members of the NOP staff are here in this room at this very moment?

I count -- how many? One -- she may not even be considered a member of NOP, I'm not sure.

CHAIRMAN KING: No, she's very much a member, and she works very hard, and we do appreciate the fact that Katherine's here, so I will make that clear.

MS. BENHAM: Thank you, Mark.

(Laughter.)

DR. CLARK: But when she has any function in --

CHAIRMAN KING: You don't want to be on her bad side, so --

(Laughter.)

DR. CLARK: -- in directives, I -- I don't think I want to blame her for the directives.

I don't disagree with anything that's been said.
so far except that it's always a puzzle to me, why do we
even bring up List 2, List 3, List 4 inerts, because
pesticide use is incompatible with organics paradigm.
We've been farming livestock, fruit, fish, honey,
vegetables. Livestock includes beef cattle and sheep, and
now we're getting into some birds and hogs. But we've
never seen any need for antibiotics or parasiticides, not
even for the sheep.

So you have just approved a parasiticide which
is also considered insecticidal and antibiotic, and I will
state my -- my favorite way of putting the organic
paradigm: pesticides cause pesticide -- pest problems,
and when you stop using them, the pest problems go away,
usually. And that's not limited to herbicides or
insecticides, it goes to the full spectrum, -iocides of
all kinds.

Bear with me for a careful reading of
6517(c)(1), Part A must precede Part B for every material
and note that after A-B-3 is for non-synthetic, non-
organically-produced materials that have survived A-2 and
A-3. That leaves no place for synthetics in handling.
They are strictly forbidden by 6510(a)(1). There's no
place on the National List for these. If used, products
are remanded to the "made from" label.

Congress was very clear and specific about this.
That's why they created the "made from" category. Handlers, and only handlers, are entitled to use this category and the 5-percent non-synthetic National List-listed ingredients for making their products.

Certifiers are not entitled nor responsible for certifying "made partly from" products. They certify only 95 to a hundred products without synthetics, and certified ingredients on the ingredient panels, neither their seal nor USDA's "organic" seal is permitted by statute on these products. Certifiers who defy this are risking lawsuits by consumers, producers, and handlers, who have every right to use the "made partly from" label down to 50 percent.

Now that percent organic labels are permitted, this is not a demeaning of a "94-percent organic" label. 70 percent for certain exports doesn't mean that 50 to 70-percent "made from" products should be prohibited.

Do you realize how many minor ingredient producers, like Trout Lake Farms in Oregon, have been put out of the organic business? Why do you persist -- and I'm talking to NOP now -- in this liability risk-laden practice of permitting synthetic ingredients and brow-beating handlers who have a statutory right to use these materials, if products are labeled properly?

Congress never intended for NOSB or certifiers...
to bear the burden of relisting/rehashing the FDA GRAS List. That's why they provided the "made partly with" label. They also designed the three-tiered labeling regime to avoid misleading consumers. That's also why the ludicrous attempt by NOSB to squeeze synthetic ingredients into the review process, that was never intended to include them, has been so difficult and convoluted.

A texturizing synthetic, TSPP, in a one-ingredient product, with no disclosure on the ingredient panel?: How low can you get? People buy that product, who are on low-salt diets, or maybe sensitive to synthetics, and they don't get any disclosure that it's in the product? The annotation at least should include a requirement to put that on the ingredient panel. It's half a percent? -- I heard yesterday.

Okay. All feed -- oh. The 5-percent allowance for non-organic ingredients does not translocate to feed. All feed must be 100-percent organic. Evasions of this by pretending that mineral supplements -- mineral supplement concentrates are not feed is clearly not conforming to the statute. No synthetics here either. Complete feed should be made complete by using diverse organically-produced crops, not with some short of chelated proteins or synthetic amino acids.

Okay, slightly more here. Compatibility with
organic resides primarily with alternatives, both practices and materials. The Secretary hasn't determined -- when I brought this up, tried to bring this up, yesterday, about 6517(a) and (b), it has to be (a) and (b), not just (b) without (a), and George came back, he came over to see what I was thrashing around about, George came back and looked at what I said, he brought it to you, and then he came back with: the Secretary hasn't determined that it's harmful to human health, and go through the other two categories and that.

What has NOP been doing for the last 14 years? Policy -- policing any attempt to deal with the food safety and residue testing in 6518(k)(5) and 6511(c)(2)(b)? Those things are part of the law, and they've been totally ignored by NOP.

I would second the idea that you need an -- you have the right and the need for an executive director, whatever you call it, that would be selected not by USDA, and the process for appointing members of the Board should be also controlled by the organic community at least, if not you.

I found out from Dennis Blank [phonetic] yesterday, or the day before, I can't remember which, he FOIA'd certain documents from USDA and found out that the three red herrings in the Original Proposed Rule,
radiation, sewage sludge, genetically-engineered things, the FOIA'd letters that showed that those insertions into the Original Proposed Rule, came from higher up and outside -- well, higher up in USDA and from outside corporations.

I hope I haven't violated confidentiality with Dennis, but I thought that should be public knowledge, if it isn't already. So thank you very much, again. Any questions?

(No audible response.)

MR. LANDECK: Thank you very much. I'm Jonathan Landeck, from the Organic Farming Research Foundation. This is imply a statement to acknowledge the diligent work of the NOSB and an encouragement to continue this work, and especially to echo the comments made by several of us, to be a bit more assertive in your role, in your interactions with the NOP, and to pursue further clarification of your role and scope of responsibilities. Again, thank you very much for your -- for your fine work.

CHAIRMAN KING: Thank you.

UNIDENTIFIED MALE VOICE: And he had offered that time to me (inaudible) --
(Laughter.)

CHAIRMAN KING: And I saw several Board members wanting to support him in his statements.

(Laughter.)

CHAIRMAN KING: This is Richard Wood, and we have Merrill Clark on deck.

MR. WOOD: I'm Richard Wood, the Executive Director of Food Animal Concerns Trust, or FACT. FACT is a non-profit organization that advocates for humane and sustainable farming practices to improve the safety of meat, milk, and eggs, and to promote humane and sustainable animal husbandry. Our formal comments are being passed around.

Kathy Seus, FACTS Farm Program Manager, presented comments to you on Wednesday on NOP's overall role and problems with that role. I thank you today for the opportunity to provide brief comments specifically focused on the issue of antibiotics, antibiotic use, with dairy livestock, as described in the Guidance Document issued on April 13th, or the Directive, however we want to refer to that.

FACT acknowledges that Section 205.236 of the Organic Rule addresses the origin of livestock. This section defines how livestock can be moved into an organic herd and, even though the meat from these cows cannot be
marketed as organic, how after 12 months the milk or milk products can be so labeled.

Some organic dairy farmers have asked for a clarification on this section. Kathy on Wednesday addressed our concerns with this section as well. However, this concern and this entire section of the Rule deals specifically with the origin of livestock and nothing else, and a number of dairy producers have been faithfully following this protocol.

FACT also strongly supports Section 205.238, stipulating that organic livestock producers must not, quote, "sell, label, or represent as organic any animal or edible product derived from any animal treated with antibiotics," unquote.

It is our understanding that organic dairy producers have been carefully following this protocol when marketing both meat and milk and dairy products. This prohibition is central to what it means for a product to be organic as we all understand, and in our view it is a basic assumption that consumers make as they go to the dairy cooler in the grocery store.

FACT also strongly affirms that a sick animal must be treated with therapeutic drugs, including antibiotics, even though the animal is under organic management. The Preamble to the Organic Rule states
clearly that the producer must not withhold medical
treatment from a sick animal to maintain its organic
status.

However, the Rule also states that if livestock
are treated with antibiotics or any synthetic substance
not included in the National List, then the product cannot
be labeled as organic. We all understand that.

FACT believes that the Guidance document, or the
Directive, on livestock health care undercuts the intent
of the Preamble and the substance of the Organic Rule
itself. The Guidance Statement pieces together portions
of 205.236 and 205.238 to come up with a seemingly new
section in the Rule altogether.

The Guidance document takes the provision of
.236, that milk can be marketed as organic after 12
months, and pastes that provision into .238, so that now
the "origin" provisions apply to antibiotic use as well.

FACT opposes this "cut and paste" approach to
implementing the Organic Rule. We believe this revision
undermines the integrity of the "organic" label as meaning
"no antibiotics." It goes against the current practice of
organic farmers, dairy farmers, and will undercut consumer
confidence in organically-produced products of all kinds.

FACT is joined in opposition to this position,
or this -- to this guidance, our opposition is joined by
the Union of Concerned Scientists, the Center for Science in the Public Interest, Environmental Defense, and the Institute for Agricultural and Trade Policy.

This new Guidance is a major change to the organic standards. During the NOSB meeting on Wednesday, and probably yesterday as well, I wasn't there, though, there's already been much debate and a large amount of confusion about the meaning and intent of this document. However, there is an established procedure for making significant changes that allow for a well-informed public debate where all stakeholders have the opportunity to respond. That procedure is the rulemaking process. This Guidance should be withdrawn by the NOP and submitted for public debate as a proposed modification to the organic rule. The Campaign to Keep Antibiotics Working, or KAW, is submitted a letter to USDA Secretary Veneman to ask that this step be taken. FACT is a member of KAW, which has a combined total of more than 8 million supporters.

We see this Guidance Statement as a significant change that deserves full and formal scrutiny by the NSOB -- by the NOSB --

(Laughter.)

MR. WOOD: -- and by all stakeholders. Sorry about that.

(Laughter.)
UNIDENTIFIED MALE VOICE: It's a Freudian slip.

(Laughter.)

MR. WOOD: We want all stakeholders, regardless of their name, to be involved in this, organic farmers, processors, suppliers, the consuming public, and we ask that this Guidance be withdrawn and submitted to rulemaking. Thank you very much.

CHAIRMAN KING: Questions.

MR. RIDDLE: No question, but I want to just thank you for that statement.

MR. WOOD: You betcha.

CHAIRMAN KING: Thank you.

MR. SIEMON: They've been called worse.

(Laughter.)

CHAIRMAN KING: Primarily by you.

(Laughter.)

CHAIRMAN KING: Next is Merrill Clark, and Carol King is on deck.

MS. CLARK: Thank you. My name is Merrill Clark, Roseland Organic Farms. We are primarily producers of organic livestock, and I was a charter member of the NOSB back in '92 to '96.

Actually, I view the role of this particular NOSB to be particularly challenging, obviously, and that's been noted this week. Difficulty as it was for me to wade
through the waters of the charter NOSB and try to figure out things like what elementare [phonetic] is before anything else was even discussed, plus becoming a livestock committee chair and consumer rep, this board has to leap other -- other hurdles, policy development criteria. Much improved, however, material review procedures, and a way of accommodating each other's special concerns that I find particularly refreshing, so congratulations on that. But you have this other hurdle, of dealing with the directives that have already been mentioned. We did not have anything like that in the original board I can tell you. You also -- actually, we didn't have enough, it was kind of a little laid back with the NOP at that point.

At the very least, I was known as one who never met a synthetic I could vote for --

(Laughter.)

MS. CLARK: -- many of the votes were 5 to 1, 6 to 1, and, well, there goes Merrill again.

(Laughter.)

MS. CLARK: I'm still that way (chuckles).

Which brings me, of course, to antibiotics, ivermectin, moxidectin, and fishmeal, plus the pesticides and inerts and everything that are popping up, that no one would ever think would ever really be coming up, both by NOP and,
unfortunately, some NOSB activity that I can't agree with. The cut-and-paste, however, is certainly going on, and the paste jars at NOP must be quite large at this point.

We'll be petitioning, actually, talking about it ourselves, to remove ivermectin as a synthetic pesticide, which is what a parasiticide is, and an antibiotic, they're nothing but synthetic pesticides, let's realize that, with maybe moxidectin, after that, advertised as a, quote, "better" parasiticide, don't like it, not to mention a response to that antibiotic directive.

It's clear pasture -- non-confined, organic animals, such as ours, and many others out there, in the organic stream are never particularly threatened by parasites to the extent that they have to have a synthetic pour-on parasite poison for internal use, when alternative animal lifestyles and management practices, including outdoor pasturing, are included and are available and in place.

Parasiticides, antibiotics, whatever you want to call them, mean nothing but a deterrent to animals, and, again, as somebody mentioned, the huge potential for parasite resistance. Why do we want to trap an animal in a situation that they're being diminished, not enhanced. Pesticides are doing that.

I agree with Kathy Seus, who spoke yesterday, or
Wednesday, suggesting that the NOSB work on animal
husbandry standards a little bit more completely. I know
you have the problems with the varying parts of the
country, but to me -- I remember what Bill Welsh used to
say: I can't grow pineapples in Iowa. If we can't
sufficiently grow or raise a dairy animal somewhere in
boggy, wet Arkansas, okay; should we throw in materials to
kind of make it work? I don't think so. That's where you
kind of go a little bit to -- downhill, let people bloom
where they're planted, and keep stuff wherever they are,
that works with where they are, work with the earth.

Can both NOP be doing -- can the NOP really be
doing more, actually, to discredit organic production in
the eyes of consumers and the producers, who resort to
none of the aforementioned synthetics?

Why are consumers demanding organic meat and
milk? We've heard it before: no pesticides, no anti-
biotics, no parasiticides. What's going on here between
where I was and where we are now, lots of good things, but
these are really troubling.

A quick look at materials criteria, for
moxidectin, for instance, which was just voted unanimously
and -- on the Board just yesterday. Harmful to the
environment? Yes. Adverse biological chemical
interactions? None that have been found. Thank you, but
how could they not have harmful interaction in an organic farm system? Binds to the soil? Yes. Adverse on non-target species? Yes. Sounds adverse to me. How many criteria not satisfied needed to kick a material off the list I've never understood. Some people have said, you know, you have to comply with all of them. Well, it doesn't matter. If one's good, it doesn't matter if the -- all the -- aren't other [sic.], it's -- antibiotics and paracides don't even pass the first three qualifications, that talk about "Consistent with organic? No," "Not harmful to the environment? No," and "Are there substitute practices? Yes."

I heard on TV last night a headline that was stated, said what they were starting to do -- "What are they starting to do with your food?" Thank goodness they weren't referring to organic food at this time. But, you know, somebody else out there will be starting a challenge, the liability, if we don't -- if we aren't really careful with what we're starting to allow. Thank you.

CHAIRMAN KING: Jim.

MR. RIDDLE: Thanks, Merrill. I just want to clarify a couple things, and that is: I think I heard you say that our vote on moxidectin was unanimous, and there were --
MS. CLARK: Maybe not --

MR. RIDDLE: -- I think 3 votes against and 1 abstained --

MS. CLARK: I'm sorry.

MR. RIDDLE: -- with a lengthy disclaimer.

(Laughter.)

MR. RIDDLE: As I recall. But also, then, after we received, at the end of the day, a couple different people asked me about the annotation on moxidectin, because it's quite short, what we passed, "internal parasites only," and you look at the annotation on ivermectin and it's quite lengthy. But I just want to clarify that that lengthy annotation on ivermectin is really a restating of the section in 205.238, and so it's redundant, and that same restrictions apply to moxidectin, it cannot be used for slaughter stock at all, ever. The only allowance is for breeder stock when used prior to last third of gestation and not during lactation, for breeder stock; and dairy stock, when a minimum 90 days prior to the production of organic milk. So those override both of those parasiticides.

So I just wanted to make that clear to everybody, that this wasn't an allowance for slaughter stock or a more liberal annotation than ivermectin.

MS. CLARK: I get it, but it's still squeezing
in something --

MR. RIDDLE: No, I --

MS. CLARK: -- that begins to start the ball rolling downhill.

MR. RIDDLE: I understand your concerns, and that's why some people voted against.

MS. DIETZ: I'll tell you what the official vote was: 11 yes, 1 no, 1 abstention, 1 absence.

MR. SIEMON: I just wanted to make a statement about -- you said petitioning for materials. You know, after hearing what we heard yesterday about the sunset clause, it's rather obvious that we need the organic community now to start petitioning materials that are becoming more and more obvious they don't belong on the List --

MS. CLARK: I was hoping there was a petition form right here, that we could pick up and start doing it.

MR. SIEMON: -- because, first off, when you and I were together in '92 and '93, things have changed so dramatically in our knowledge, there's materials that we put on there in good faith, that really now, to us, seem obviously the wrong decisions, and maybe --

MS. CLARK: So you all --

MR. SIEMON: Maybe we're still making wrong decisions, but --
MS. CLARK: Somebody has to petition, you don't stimulate that; is that right?

MR. SIEMON: We can't do that. We need the organic community to help us, because there are materials that in the past were wrongly put on there, to come forward now and to start -- trigger that process.

CHAIRMAN KING: Dave.

MR. CARTER: And just to follow up on that, because that's -- as I said prior to my vote -- and the second-most-lengthy, I think, disclaimer. But, you know, given the fact that ivermectin is on there, then you start to phrase things -- as long as that's on there, then let's have something that's less egregious than ivermectin, but if, you know, the community wants to step forward and petition both of those things off of there, I don't think many of us on this board would have any problem with that.

MR. RIDDLE: Right. And those petition forms and instructions are on the NOP website, and you basically follow the same procedures as you petition to add something, well, you petition to remove it, but then you need to address the criteria and your specific objections need to be in the context of the criteria.

MS. CLARK: Yeah, we need to definitely be doing more of that.

MR. SIEMON: But I would do that material by
material and not lump things together.

MS. CLARK: Okay.

CHAIRMAN KING: Yeah, good point, George. Thank you, Merrill. Annie Kristo [phonetic] is up next, and Tom Harding is on deck. Wait, I'm sorry, you're right. It's Carol King. I apologize. Annie, you're on deck.

MS. KING: Actually, I have Amy's vote [phonetic] by proxy, and I am losing my voice, I apologize. We would first like to thank the Board for all your hard work, and I understand we're probably beating a dead horse here, but I do have a statement regarding the dairy replacement and the antibiotic use that I would like to read.

The contradictions in the National Rule referring to the organic dairy production must be corrected. In reference to the guidance document, which is now going to be issued as a direction, posted on the NOP website on 4/14/04, Nova New York Certified Organic (indiscernible) would like to make the following statement.

Section 205.238(c)(1) says: "A dairy animal treated with antibiotics cannot be sold, labeled, or represented as organic."

Section 205.236(a)(2) says: "Milk or milk products must be from animals under continuous organic
management beginning no later than one year prior to the
production of the milk or milk products that are to be
sold, labeled, or represented as organic."

The meaning of these sections is clear: an
animal treated with antibiotic or other prohibited
substance must leave the herd and can never be considered
organic again. Allowing treatment with antibiotics does
not comply with this section of the Rule for "continuous
organic management." By definition, continuous means
without interruption.

To allow a dairy producer to treat a cow with
antibiotic or other prohibited substances, then keep her
on the farm and manage her organically for a full year, is
problematic. Who's going to monitor that animal and be
sure her milk is not sold as organic or fed to organic
calves? This is going to encourage some dairy producers
to cheat. There's no way a certifier can monitor what
happens on a dairy farm day to day.

It is essentially allowing a continual state of
transition, which was clearly not the intent of the Rule.
The contradictory nature of this guidance goes hand in
hand with the origin of the livestock Guidance issued on
April 11th, 2003, and I know that's a dead horse too, but
we're still trying.

Section 205.236(a)(2) is clearly referring to a
one-time whole-herd transition, and the last paragraph of
that section states that once an entire distinct herd has
been converted to organic production, all dairy animals
shall be under organic management from the last third of
gestation. The intent of the Rule is clear, after dairy
transitions of the herd to organic production, from that
point on all animals must be managed organically from the
last third of gestation.

The Guidance documents of 4/11 and 4/14, which
we have now been told will be referred to as directives,
leave the interpretation wide open. To correct this
inequity to dairy producers is simple. If the intent of
the Rule is followed, once any operation transitions their
herd to organic production, all animals must be managed
organically from the last third of gestation.

There can be no distinction between dairy farms
that transition before or after the NOP went into effect
or whether they transitioned with 100-percent organic feed
or used the feed exemption. It is discriminatory to new
farms and detrimental to the organic dairy industry as a
whole. Once a farm is certified for dairy, all animals
must be managed organically from the last third of
gestation. This includes any replacement heifers
purchased and brought onto the farm.

Requiring all animals to be managed organically
from the last third of gestation was the clear intent of the Preamble. It is the interpretation that is fair to all producers. It is the interpretation that maintains the integrity of the organic dairy industry, and it is the interpretation that consumers expect, are willing to pay for, and deserve. Thank you.

CHAIRMAN KING: Next is Tom Harding, and I believe it's John Cleary on deck.

MR. HARDING: Did you skip somebody, I thought, or --

UNIDENTIFIED MALE VOICE: No, she spoke --

CHAIRMAN KING: She spoke for Amy.

MR. SIEMON: We were so eager to hear you talk.

(Laughter.)

MR. HARDING: Thanks, George. Well, good morning to everyone.

I just want to start off by saying that this process is incredible, and the work you're doing is incredible, and I don't think we say that enough, and I want to thank not only all of you on the NOSB now, I mean, I've seen an enormous improvement in processes and the way you're looking at it, and we're going back and correcting a lot of work that was, of course, in some cases a mistake in the past, but that's an imperfect world that we live in, and that's the nature of it, but I want to thank you.
very much for it.

Knowing that it's not [sic.] imperfect world, I want to thank the NOP, because they've also laid some very important documents no the table, continue to raise the hair on the back of our necks, to make sure that we're focused on some very important issues.

(Laughter.)

MR. HARDING: We've asked for this document, by the way, for two years. Now we've got it and we don't like it. Now we have to do something about it, if we don't. But I want to tell you there are some pieces in these documents that are very important to us.

But I want to remind you that the work you're doing is critically important, I want you to focus on history, because there's a lot of history in this room, some we like and some we don't, there's a big industry out there who would like to see us -- perhaps either be part of us or see us fail, and I think it might be that they want to be part of us. We've got to make sure that the level playing field is very high and the consumers are always engaged in this process.

So don't give up this important work, continue to push hard, and even when we disagree, Jim, it's okay with me. I think it's very important, the process that I saw for the last two and a half days, it's an excellent
process, you've done an enormous job to improve it, and that includes the people in the NOP, both those who were in the room earlier and not in this room now.

The other thing I want to say is that it's very important that we recognize where we are today, because 25 years ago, when there was no OMRI, there were certifiers running around the country, who were barely making the standards survive at farm level, who were organizing materials and evaluating them.

I was involved in one of them. We never approved ivermectin. George knows that. I look over here, Dave. We never approved it. We brought in the best of experts.

The fact is, is that we do have materials on the list. They're there for a reason. Some view those as tools, others as weapons and hazards to the industry, and I remind you that the rules were twice the withdrawal of the label for the use of antibiotics on dairy herds and in meats, up until we got the law.

So we need to fix this problem. We have not, with this new document, now called the Directive. We are still unclear, you just heard from this lady before me, we still have problems understanding where the dairy herd is.

I was operating with -- a lot of my dairymen were -- we were certified no antibiotics, 12-month
transition, when all around me there were other dairymen being certified who were using antibiotics and who were not waiting 12 months. So we do need to put this consistency [sic.] and fix the inconsistency right now.

The other things that are very important, for me anyway, the new directives are on the table, so what, let's go at 'em, let's be proactive, and let's camp on the Hill.

The other thing that's very important is the materials process. I think you've improved it enormously, but let me tell you, there's a lot of work on the table yet, and I want to remind you again that we want to grow the industry, and there are some needs for what I would call environmentally less-hazardous materials to be put in this process, you put a few on the List yesterday, in the livestock, in the soils, and also in processing. These are important things. But make sure we continue to manage the bar very high.

Our main objective is to grow the industry at a very high level.

Supplements in fishmeal, I would just like to know what the hell a supplement is and how much a supplement constitutes in the feeding of an animal, any kind of an animal. I want to remind you there are people working on organic fishmeal, and so we don't want to
discourage that work by opening up the store, but at the same time, we're using fishmeal, let's quantify it. Let's quantify, at least some guidance, what a supplement is. I've already said enough about antibiotics, but whether you believe it or not, there's probably a bunch of farmers out there saying, "Woo, I am really happy about this," and there's a bunch of people in this room that are sad, and some consumers very confused. So we need to fix it.

The other thing that's really important is to change. The scope of work that came out, that's now -- it went from a guidance to a directive, I'll tell you, there's some pretty meaty stuff in there, and I would encourage us to put the flag and plant it high. We don't want to lose the word "organic."

We don't want to lose any part of this industry that can grow, whether it be a tea or a supplement or a pet food or a fish. Everyone knows that I think wild fish are better than farm fish, but that's another whole discussion, and I stand by that.

Let's plant this flag and let's not let the FDA or any other department within the government take the word "organic" from us, and you need to be [phonetic] damn mad and damn correct to make sure that doesn't happen.

The other thing that's truly important is that...
we don't give up. In fact, we should never give up. We might abuse one another, and we might fight like hell, but we do stand for a common set of objectives, that's: to build an organic industry with integrity.

The other thing that's very important to me is that we look at the communications, you open this in transparency.

MS. DIETZ: Time.

MR. HARDING: You have made this process. I encourage you to continue to do that, and I want to encourage you, as I close, absolutely build this partnership, this public-private partnership, with the USDA, don't let anybody off the hook, and hang in there, because there's no other partnership like it in the world.

There's none in Europe, there's none in Japan, no consumers at those tables, no industry at those tables, they just make the laws. Thank you very much.

MR. RIDDLE: Yeah, Tom, thanks for your comments, and I wanted to ask, when you said "camp on the Hill," I just want to be clear: you're saying that members of the industry, community, consumers, take their concerns to Congress over some of these issues, that's what you're saying as one option?

MR. HARDING: Absolutely.

MR. RIDDLE: And then you also said something
about, you know, some farmers out there being happy about
the antibiotic directive --

MR. HARDING: Uh-huh.

MR. RIDDLE: -- possibly. We haven't heard from
them. We have heard from farmers and veterinarians about
some missing tools in their toolbox --

MR. HARDING: Right.

MR. RIDDLE: -- never antibiotics, and those --

MR. HARDING: I agree.

MR. RIDDLE: -- have been petitioned, have been
considered, and have been recommended by the Board, and
they have never appeared on the National List --

MR. HARDING: Absolutely right.

MR. RIDDLE: -- where we are still missing the
livestock materials that the Board's recommended, and I
think if we had those tools we wouldn't be in the
predicament that we find ourselves in now, and, once
again, I don't know if there's anybody to ask, but that's
a question of mine.

MR. HARDING: You're right, Jim, you're right.

MR. RIDDLE: What's happened with those
livestock materials?

MR. HARDING: And we need to find out where they
are and why they aren't on the table and why they haven't
been voted on and why aren't they put on there. What I
said about the antibiotics, I can tell you, there are
people in this room, there are people not in this room,
that feel very different about antibiotics than perhaps
you and I do, and I can promise you that if we ask most
consumers, the perception is: no antibiotics, yet that's
not the case in some cases.

I would strongly ask the Board to move those
issues back to the table, those materials that we have
recommended and do need, and get them back on the plate,
and I'm not sure that the course of action we have with
the antibiotics, no matter who we make happy, is going to
be good for the industry as a whole, but I think whatever
we do, there must be a level playing field, and all
certifiers must be playing under the same set of rules and
interpreting those rules the same consistent way for
consumers.

Anything else?

(No audible response.)

MR. HARDING: Thank you all very much again.

CHAIRMAN KING: Thank you, Tom.

MR. SIEMON: I think we ought to give additional
time for praises for us, every -- a half minute, instead
of praising us, they get a half-minute longer, I really
do.

(Laughter.)
CHAIRMAN KING: Thanks for setting a precedent, Tom.

(Laughter.)

CHAIRMAN KING: John Cleary is up next, and Eric Bremmer is on deck.

MR. BREMMER: Mr. Chairman, Eric Bremmer, from (inaudible), New Jersey, I'm going to proxy my time to John Cleary. I just want to additionally state that (inaudible) appreciate the quality of the composition and the work of the NOSB, and thank you very much.

CHAIRMAN KING: Thank you.

UNIDENTIFIED MALE VOICE: You have ten and a half minutes.

CHAIRMAN KING: Because of the kind comment, of course.

(Laughter.)

MR. CLEARY: And I'll -- I'll still try to be concise. My name is John Cleary, an accredited certifier from Vermont Organic Farmers, which is the certification program owned by Nova Vermont. We certify about 300 operations in Vermont. Nova Vermont also represents another -- a thousand organic consumers that are Nova members.

I want to thank the NOSB for the incredible work that you all do, and also to thank the National Organic
There's been a lot of concern and criticism today of some things about the National Organic Program, and I want to, as a certifier, make sure that I acknowledge that, you know, we highly respect both the individuals and the regulatory role of the National Organic Program and sincerely look to having a positive constructive relationship to build this public and private partnership, that is, the National Organic Program.

The key thing in having this partnership be successful really is this Board, and at the risk of being redundant, I have to say some of these things, because the farmers that we represent at our last annual meeting gave me a mandate to come here to affirm the role of this Board as the advisory committee that continues to work on these interpretation issues.

So I know you all know that, we can't say it enough, but this Board is critical to the success of this program, because in order for the National Organic Program to be successful, we need to have transparency, we need to have public participation, and we need to have organic expertise. Those are three things that this Board provides, in an excellent format, and we can't lose those things.

One key thing about the lack of process in
interpreting the standards, and I'll be honest about this, as a certifier, certifiers are nervous about asking the NOP questions, because we're scared that we're going to get an answer that has been developed without any consultation from the organic community, without any consultation from the NOSB.

As a result, we found -- just the things that people have mentioned -- inconsistent interpretations among certifiers, farmers who don't know what the rules are because they hear different things from different people, and certifiers, like myself, kind of stuck in a strange place where we're truly trying to do the right thing, truly trying to follow the regulation, but getting conflicting messages.

Even when we do get clarification from the NOP, in terms of guidance documents or directives, and as we look at those things as compared to the guidance that we receive through NOSB recommendations, we're not clear how we're supposed to use that information that we get, and we're not clear what process was followed to come to those conclusions. And as a certifier, that's a real problem for us.

One key thing that will help, that's been mentioned before, is hiring an executive director. I just encourage you all to keep pushing on that, and I encourage
the NOP to make sure that the NOSB is a major player in
the hiring of that person.

I'm going to move on to a few specifics.
Regarding the antibiotic Guidance document, I'll say it's
something we've been very sensitive to in Vermont and in
the Northeast, in determining: what do our farmers need,
and this document came out, actually, just in time before
our recent meeting of our livestock and dairy advisory
committee, and we talked about this quite a bit, and we've
gone out, we've asked our farmers -- we have a dairy tech
program that works closely with our transitioning
producers and our existing organic producers, and we've
heard from the farmers, they're saying, "You know what?
When we transitioned, we thought that this was going to be
a really big deal and we were going to need these
antibiotics for our calves and for our young stock, but we
found out that we don't," and we have not heard from our
farmers that there is a need for increased use of
antibiotics in organic production. So I wanted to put
that out there.

In addition, a major concern for us and for the
farmers that we represent on the dairy side is this
12-month conversion, continuous conversion, process.
Nowhere else in federal regulations have I seen parallel
and inequal standards that are applied arbitrarily,
depending on the time frame or your method of transition.

Clearly this does not maintain to the standards, and I know you all have worked a lot on this, but I feel like the antibiotic issue and the transition issue will both be solved by pushing, in any ways we can, for Rule change, to clarify that the 12-month conversion was only meant to be for a whole-herd conversion and not as a continuous conversion.

So I'd just encourage you to keep working on that.

MS. DIETZ: Time.

MR. CLEARY: I can continue on to the proxy time, is that true?

CHAIRMAN KING: Yes, you have a proxy, five more minutes, yes.

MR. CLEARY: The next thing -- again, just to reiterate, the NOSB livestock medications that were approved, our farmers need those things, it's really critical, and as a certifier, I'm in a really tough position, to have to say either -- to tell farmers "either you have to sell this animal or you can't treat it in the human way that's required," even though we know those materials are allowed.

Just encourage you and to ask if we could get a
response at some point today, maybe from the NOP, about
the status of those in relationship to FDA.

Last thing, a separate topic, but also something
that I haven't heard anything -- haven't heard much about
today is this issue about National List products, multi-
ingredient products that are on the National List,
phosphoric acid, you know, fish emulsion, or seaweed
issue, and it also kind of brings in the
fishmeal/ethoxyquin issue, is we need to clarify, and it
may take some changes to the National List, this issue of
adding synthetics to other natural materials and what
effect that has.

My recommendation is that the National List
should only have single-ingredient things, rather than
multi-ingredient formulations, and that all ingredients
have to be reviewed, rather than just saying, "Well, if
it's on the list as an allowed synthetic," any synthetic --
the example is that you could add, you know, urea to --
or another synthetic fertilizer to a fish emulsion, and
under the Guidance that we've received through various
letters, that would now be allowed, because, you know,
fish emulsion is an allowed synthetic.

The other thing I wanted to point out about
that: The only way that certifiers, like us, know about
this phosphoric acid issue is because these letters kind
of bounce around on the internet, you know, one letter
goes to a certifier here, from the NOP, someone else hears
about it somewhere else, and, you know, we're calling each
other and -- so this a lack of communication between the
certifiers and the NOP is a real problem.

One thing I'd like to present, people have
talked about a little bit, a number of certifiers in this
room have organized a new organization of accredited
certifiers to work on these communication issues, and we
sincerely look forward to working closely with the NOP and
the NOSB to clarify some of these issues.

So that's all I have. Thank you very much for
your time.

CHAIRMAN KING: Thank you. At this time we have
a break scheduled, and when we come back, I have Eddie
Daniel, with Angela -- and I can't pronounce --

UNIDENTIFIED MALE VOICE: Cadell [phonetic].

CHAIRMAN KING: -- Cadell on deck. So we'll
take a 15-minute break.

(Off the record at 10:00 a.m. and reconvened at 10:17
a.m.)

CHAIRMAN KING: Thank you for allowing us to
take a break, and one quick comment.

I want to thank everyone for their well-thought-
out public comments, they are very important, we take them
very seriously, and we will be adjusting the agenda accordingly. However, I will remind everyone that there are a couple factors out of our control.

One is that there is an ACA training this afternoon in this room, which means that we cannot be out of here any later than 12 o'clock. At our current rate, it's going to be challenging to accomplish that, so I would just suggest -- you do rightfully have five minutes; however, if you can keep your comments a little bit shorter, that will allow us to get everyone's comments in.

And at this time, one -- another issue. It was mentioned earlier that the Board has responded with an official letter concerning process, that being materials review among that, among those processes, and because of the lack of time, that sort of thing, I was literally forced, as chair, to distribute this letter, asking Board members to review and support the letter in 24 hours or less.

As you might imagine, considering we all travel, and we have professional endeavors and, believe it or not, other lives as well, that was difficult to do, and in that case I know Kim was out of her office and had -- you know, basically managing multiple priorities, and at this time I wanted to just give Kim some time for a brief acknowledgement.
MS. DIETZ: Thank you. I'll time myself, two minutes.

I had told this Board that I would formally acknowledge that letter, so I'm going to do so for the record. I'd like to formally acknowledge the dedication and hard work of this Board. As representatives of this industry, it is very important that we work together to protect the word "organic."

As mentioned earlier, the NOSB drafted a letter to the NOP with regards to the materials review process. I did not sign the letter prior to its submission because of the short time frame we were asked to review it.

As promised, I will formally go on the record to say that I support the letter's directive on the materials review process.

As past materials chair, I can tell you that it is essential that we have a full understanding of the process and our roles in that process.

I also plead with the NOP and this Board to respect the fact that each and every one of us deserves to have an adequate time period to review documents. I will continue to object to any policy or recommendation on something where -- he's telling me --

MR. MESH: One minute.

MS. DIETZ: One minute.
(Laughter.)

MS. DIETZ: I will continue to object to any policy or recommendation unless given an adequate time period to fully understand what I am reviewing. It is disrespectful to each of us to push things through the process. Thank you very much.

CHAIRMAN KING: Thank you, Kim. Next we have Eddie Daniel, and Angela, you are on deck.

MR. DANIEL: My name is Ed Daniel, I'm Vice President of Bushinboy [phonetic] Farms. We grow Pacific white shrimp in Florida, in fresh water, and we are currently certified antibiotic-free, alum-free [phonetic], and specific chemical-free. The board of directors of the company made a decision, based on sales and marketing, to go a hundred-percent organic. This is two years ago. So the chairman asked me, "What do we have to do," and I told him, "Well, we can be certified based on the NOP rule, but there's one problem," because I had -- at a conference, I had a talk with Richard Matthews, and the NOP's stand [phonetic] was that you couldn't certify shrimp because you would have -- you needed to have certified organic fishmeal, and as long as you have certified organic fishmeal, then you could certify your shrimp organic. So I asked the board for a million and a half dollars, so I got a million bucks, plus we bought Tilapia [phonetic]
Farm and we contracted for certified organic feed for the -- Tilapia, and we also are building a processing plant to process the fishmeal so we'll have certified organic fishmeal. Then with my certified organic fishmeal, I should be able to have my certified organic shrimp.

But then later on there was a guidance, some ruling, that, well, shrimp can be certified under livestock, and livestock doesn't require to have certified organic fishmeal. So I said wow, that's good, we're still going to continue with our program of providing a certified organic fishmeal, and we can be certified organic, USDA organic shrimp, based on the livestock regulations, and -- so we sent a formula to the feed manufacturer, using conventional fishmeal, of course excluding any material that would be prohibited, and we promise our customers, because they're the ones who ask us, "We want organic shrimp," so this year we're producing 2 million pounds of shrimp, that should be -- should be organic.

Recently, as you all know, there is another Guidance, statement that came out, saying that we cannot have our certified shrimp. My only question is -- I don't want -- I'm not asking for any favors, I just want: what do I have to do to have my certified organic shrimp, that my customers are requesting? We are willing to follow any
regulations and do whatever has to be done and spend the money that has to be spent to do it, but what are the rules? -- and we would appreciate if they can't keep changing the rules while we're doing it, and all I do, the board of the company, I just ask them for what I want and they give me what I want, because they tell me what they want. So I can't keep (chuckles) -- you know, "What's going on here?"

Also I'm helping change company -- a shrimp processor in Ecuador also, and they are certified organic by Nature Land, and they don't even have to use certified organic feed, they can use conventional grain, also fishmeal, as long as it doesn't have any prohibited material.

Now, I stopped them from doing this last year, even though they could, I told them, "No, we'll get you certified organic by the USDA." Now they're telling me, "What we gonna do?" And apparently they are going to be sending in shrimp that are certified by Nature Land, which is an accredited agency, by the USDA.

Now, they wanted me to market that product for them, but I refused, because I don't want to market any shrimp that's not USDA-certified organic. And they also would like to do that, they can produce up to 10 million pounds of shrimp a year, that's certified organic.
So, again, my purpose for being here, just to ask the NOP, "Tell me what I have to do," and I'll do it. And I would like an answer somehow from them --
(Laughter.)

MR. DANIEL: -- sometime this week, or I give them a few more days next week.
(Laughter.)

MR. DANIEL: Because I don't want a refund from the USDA, okay, I don't want the million and a half back, I just want to know what to do. Thank you.

CHAIRMAN KING: Thank you.
(Applause.)

CHAIRMAN KING: Angela is up next, and Ray Green is on deck.

MR. MESH: We designated her time for Urvashi earlier.

CHAIRMAN KING: Oh. Thank you, Marty.

MR. MESH: I'm being forthright and honest.

CHAIRMAN KING: Ray, you're on. I see Ray's on his cell phone. Ray, do you want to -- okay, no, he's hanging up.

MR. GREEN: Good morning, NOSB Board members, and I have to say "dittos" for all of the quality work that you're all doing, and I know a good portion of that comes from the California delegation. You can't hear me?
UNIDENTIFIED MALE VOICE: Not quite. Get a little closer, just in case.

UNIDENTIFIED MALE VOICE: Speak up, Ray.

MR. GREEN: Okay. So "dittos," and special thanks to the California contingent.

I'm here representing over 3,000 companies in California that are engaged in the production and processing of organic products, and I want to introduce perhaps something that the NOSB Board, as well as the NOP, possibly have not considered, which is: the activities, the directives, the guidance documents, the guidelines, whatever we care to call them, how they may affect state organic programs. At this point in time we only have two of them, but it does have an effect.

To save time, I'm going to read just a short, short paragraph and then enter into the record here just a two-page excerpt from the California Administrative Procedures Act of 2002.

"No state agency shall issue, utilize, enforce, or attempt to enforce any guideline, criterion, bulletin, manual, instruction, order, standard or general application, or other rule which is a regulation as defined in Section 11.342 unless the same has been adopted as a regulation."

So some of the guidance documents and directives
that come are possibly not enforceable, and since we are
going to be funding all of the appeals for administrative
law judges, the guidance documents and directives and
policy statements that are being issued may not have the
force of law in some states, that have to actually follow
an administrative procedures act.

So as you're making some of these, please
consider the implications and the effect that it could
have on state organic programs, and I'll give this to
Katherine to enter into the record and I'll stop there.

CHAIRMAN KING: Thank you, Ray. Questions?
(No audible response.)

CHAIRMAN KING: Okay. Moving on, Cissy Bowman,
and Mack Devin is on deck.

MS. BOWMAN: Hello. I'm Cissy Bowman. I'm
president and owner of Indiana Certified Organic, an
accredited private certifying agency. I also have the
proxy for Jay Feldman, of the National Coalition Against
the Misuse of Pesticides, although I'm signed up in two
places, so do you want me to speak all at once?

CHAIRMAN KING: Yes.

MS. BOWMAN: Okay. I'm going to start with the
incamps [phonetic] statement. We would like to address
compliance -- the compliance and enforcement directive on
pesticide use, and because it directly impinges on the
statutory authority of the National Organic Standards Board under the Organic Foods Production Act and its responsibility to ensure compliance with the standards of the Act. As we understand this directive from the National Organic Program on allowable inert ingredients and pesticide products used in organic production, we believe it is in violation of the law. This directive does not ensure that the materials introduced into organic production are in compliance with the standards set forth in the process of review.

This failure to comply with the statute goes to the very heart of the law, that is intended to establish reasonable production practices and consumer confidence that organically-labeled products are held to a clear standard of review distinct from other laws and programs.

The directive as we understand it would allow inert ingredients listed by EPA as List 2 or 3 inerts to be used in certified organic production if the certifying agent and producer, after a reasonable effort contacting a manufacturer, EPA, and other USDA-accredited certifying agents, are unable to ascertain whether inerts in a pesticide are allowed under the NOP.

This approach erodes the clear standard of the Act and allows hazardous and potentially hazardous substances to be added to organic production.
As the NOP knows, OFPA mandates that only the NOSB may propose substances for inclusion on the National List of synthetic substances permitted in the production of organic products.

By its action USDA fails to understand the purpose of the National List. OFPA Section 21.18 requires that the List contain an itemization by specific use or application of each synthetic substance permitted. It also states: "The National List may provide for the use of substances in an organic farming or handling operation that are otherwise prohibited under this title only if the Secretary determines, in consultation with the Secretary of Health & Human Services and the Administrator of the Environmental Protection Agency, that the use of such substance would not be harmful health and the environment, is necessary to the production or handling of the agricultural product because of unavailability of wholly-natural substitute products, and is consistent with organic farming and handling."

Use of the language "only if" mandates the Secretary to determine that each requirement identified in Section 21.18(c)(a)(i), (ii), and (iii), is met before a synthetic substance is considered for inclusion on the National List.

Thus the National List cannot be a list of
synthetic substances just generally recognized as safe or
registered by EPA or under review and can only be
considered if identified in Section 21.18(c)(b)(i) for use
in farm production or as a synthetic inert, Section
21.18(c)(b)(ii), in an approved pesticide, and must be
based on a case-by-case determination of safety, need, and
consistency with organic methods.

As designated by OFPA, the NOSB and the
Secretary are directed to consider only three classes of
substances for inclusion on the National List. The
managers of the Senate House Committee [phonetic] report
on OFPA stated that:

"The National List may include exemptions for
substances otherwise prohibited but which the National
Organic Standards Board and the Secretary determine are
harmless to human health and the environment, are
necessary because of the unavailability of wholly-natural
substitute products, and are determined to be consistent
with organic farming practices. Such exemptions, however,
must meet one of the three following criteria: the
substance is used in production and contains a synthetic
active ingredient in the following categories," I will not
waste time by reading all of this to you, because I'm
assuming by now you guys already know it, but -- you know
that section, I'm assuming.
Why is this inert issue important for organic growers and consumers? The organic industry is successful because of the trust that exists between the industry and consumers. Consumers are willing to pay a premium price for organic food in order to provide healthy food for themselves and their families and to support sustainable agricultural practices.

In order to maintain this trust, consumers must feel confident that practices and materials used by organic growers and processors adhere to the highest standard and provide labeling disclosure when that is not possible.

The standards and the National List, however, need to remain strong in order to maintain consumer trust, on which the organic industry is based and thrives. Thank you.

And I also want to say I am aware that some of my comments, and this comment, is really directed at these directives and not at the NOSB, I understand that you guys are not responsible for those directives.

Okay. I'm going to -- I have a very scattered public input because I've had so many thoughts, so I'm going to be jumping around between NOP and NOSB, and I hope you'll bear with me.

With regard to this pesticide List 2 and 3 issue
-- or this inerts 2 and 3 issue: as a certifier, we've developed a process for trying to identify what's in -- what are the ingredients, and what we do is when we have a farmer that wants to use a product, an input, and we don't have an ingredients list on it, we contact the manufacturer, we have a letter that we send to them, we have forms that we have them fill out, we offer them confidentiality statement, and in that process, in over a dozen cases, we have never had one manufacturer refuse to provide us, under confidentiality, with the ingredients, including inerts, for these materials.

On the plane here I had the interesting experience of riding with almost an entire planeful -- it was a small plane -- of people from Cargill, and I noticed all of these Cargill things and said, you know, "What are you guys going to Chicago for?", and they said that they had a meeting, and I said, "Well," you know, "could I talk to you about" -- you know, "that you sell inputs to farmers," and they said yes. And so I said, you know, "Well, if like one of my organic farmers wanted to use soybean meal, or something like that, could you give me verification that it's identity-preserved" [phonetic] "GMO-free?" They said, "No problem."

They also told me that they would release to me
inert ingredients in any of their materials. I have the
guy's card. Okay. I think that this is something that
can be done. We've been doing it. And quite frankly, I'm
not very interested in going backwards on this and saying
if we don't know, then it's okay. Now, this -- that's,
again, an NLP issue.

This is an NOSB issue. With regard to your
committees, in the past -- and I know George remembers
this -- committees used to have members of the public
come, they would meet and have members of the public come
and help discuss things with them. I think with regard to
materials review, having some members of the public maybe
be on there as like a task force, when you're dealing --
wouldn't it have been great to have some organic cotton
growers, you know, when you were working on hydrochloric
acid?

So I suggest to you that maybe you should find a
way, or try to find a way, to bring members of the public
with experience in before we get to the point of the
meeting here; you might have a lot more clarification on
what's really happening out in the field. And it was done
in the past, so I don't know why it can't be done again.

GMOs. Gosh, yesterday, I got upset when I
started hearing, "Oh, well, is that only about seed?"

There is no difference between planting a roundup-ready
soybean in the ground and grinding it up and putting it on
the ground. I'm sorry. Consumers -- when they said no
GMOs, they didn't mean just no GMO seed, they meant no
GMOs. I'm a grandmother. I raised my kids on organic
food. They didn't have GMOs back then. But when my
grandchildren were born, I told my kids, "I don't want
them eating GMOs." This is the first generation of
children that are being raised on food that's genetically
manipulated. If GMOs are going to be in organic food, I
guess I'm just going to have to make sure I feed them
stuff I grow myself, because there is no way I'm going to
let those little boys be eating GMOs.

Yesterday there was some discussion about a
database. I just want to bring up one point about that.
I certify a lot of Amish farmers, and I think that if they
knew their names were going to be in a database that was
shared with every agency in the government, they're
probably going to get out of organics.

It's going to affect the dairy industry greatly,
there's a lot of transitioning Amish farmers, but I can
tell you right now, if I go back to my Amish farmers and
my Amish grower groups and tell them that's going to
happen, their bishops are going to tell them "We're not
going to be part of this anymore."

They didn't even get certified, a lot of them,
until it was required by law, and I think that this
infringes on their freedom of religion, and -- so it's
just something I think that needs to be taken into
consideration.

I also want to talk about antibiotics. My
daughter was just in the hospital for 14 days, in
intensive care, with an antibiotic-resistant staph
infection. She is on four months of oral antibiotics,
it's a new formula they hope will work. Before that they
were talking about four months of a permanent IV of
antibiotics, meaning that she could not work, someone had
to take care of her. She's 29 years old. The antibiotics
issue is huge. It's not just about whether or not we're
getting them.

I also want to speak to you from my heart: I've
been a proponent of this program for a long time, but I'm
-- after some of the things I've been hearing with these
directives and with regard to the GMOs, I'm getting kind
of ashamed, I really am. I've told a lot of people that
this made a difference. We've got to make sure it
continues to make a difference, we really do. Thank you
for your time, and for all of your hard work, you guys are
great.

CHAIRMAN KING: Andrea.

MS. CAROE: Cissy, it's my understanding from
the presentation yesterday on ECERT that there would be an
opportunity to remain confidential as far as your listing.
I may have picked that up wrong, I think we have to
clarify that, but --

MS. BOWMAN: I know there are a lot of
questions.

MS. CAROE: Well, I mean -- and I think there is
for them too, that it's in development, and I think we
were -- we were presented with something that is in
process, but I -- I believe that question was asked,
regarding confidentiality, and specifically, I believe
that anybody that's listed will have to sign a release
with their certifier, is the way I remember that.

MR. SIEMON: Yeah, that's what I heard too.

MS. CAROE: So just to ease your mind on that
one little issue, is I think we will have some protection
--

MS. BOWMAN: I just have to speak for my Amish
farmers because they're not going to come here and speak
to the government for themselves.

MS. CAROE: And, you know, there's a variety of
reasons why I think people would want to keep their names
or their addresses or their products somewhat
confidential, so -- I do believe that protection is going
to be in there, and I believe the program has heard the
concerns on that, so hopefully we'll be able to deal with that issue.

CHAIRMAN KING: Kim.

MS. DIETZ: Cissy, I wanted to comment on the materials process (inaudible) this, but the process that we went through with this group of materials I think was the best that we've ever done this far --

MS. BOWMAN: I agree.

MS. DIETZ: -- so it builds into that, that the committees have to have recommendations posted on the web 30 days prior to a meeting, and that's the opportunity for people to comment and to submit written comments and to tell the Board what you think of that recommendation, and then we take those and then come back to the meeting with them.

So I agree that we need public input, but I'm not sure how we -- how or if we could even go about getting people involved during the material process.

MS. BOWMAN: I wasn't necessarily talking just during the materials process, but in committee discussions. George could tell you how it was done in the past.

MS. DIETZ: Okay.

CHAIRMAN KING: Jim, then Dave.

MR. RIDDLE: Yeah, I just wanted to follow up on
that too, because I think it is -- you know, a valuable suggestion is more public involvement in the materials process, but I think the responsibility does rest here with members of the public, because we certainly would be open to accusations of favoritism, you know, who do we leave in? who do we leave out? kind of thing, and that's why we've tried to, you know, make sure that whatever's been petitioned is available on the database right from the get-go, so people know what's even entering the pipeline, and then all the way through our recommendations, so that that can be commented on. So I just wanted to, you know, say that.

Where I do see the expertise being drawn in is in our task force process, such as the compost tea task force and other task forces we've done, that that's very valuable. So I just wanted to say that.

MS. BOWMAN: I don't think I've used all of my 10 minutes. Could I just say a couple more things?

MS. DIETZ: You know, and I stopped the clock, so I --

MR. RIDDLE: Well, you can always respond to comments -- I mean questions.

MS. BOWMAN: I just have one more very -- really short thing to say, and that is that it seems like USDA is making my job a lot harder, as a certifier, and if I am
really a government regulatory agent and they're going to
tell me what to do and make this job this hard, I think I
should be on the payroll.

(Laughter.)

MS. BOWMAN: And I also want to add --

MR. RIDDLE: You're an agent.

UNIDENTIFIED MALE VOICE: Go, woo, woo.

(Laughter.)

MS. BOWMAN: I also want to add that if I were
to change OFPA today, I would say that you guys should be
compensated for loss of productivity and for the time that
you spend. I think that that was one of the worst parts
of the law, is the fact that you guys don't get anything
for the hard work that you do.

UNIDENTIFIED FEMALE VOICE: Yes.

MR. CARTER: Did that get in the record?

CHAIRMAN KING: Yeah, can you say that again.

(Laughter.)

CHAIRMAN KING: Dave had a question, then Nancy.

MR. CARTER: No, Kim and Jim covered mine, as
far as the public input.

CHAIRMAN KING: Nancy.

MS. OSTIGUY: I actually do, though, want to
second what Jim was saying about the difficulty of pulling
in individuals in the committee meetings, who gets
included and who doesn't, I don't want to get accused of favoritism, so what I happen to like about our new process is the fact that it's posted, anybody can comment, anybody can call me up, call a board member up, write us, tell us what they think, rather than me, as the chair of the crops committee, saying, "Oh, I would like so and so to tell me about this."

MS. BOWMAN: But not every farmer has access to the web.

MS. OSTIGUY: That's true. But it is a whole lot better in terms of broad public participation than me requesting specific information from a specific person.

MS. BOWMAN: I know, I've -- I've personally called with regard to issues, I just -- and I don't have to be their certifier, I call farmers and just say, "What are you doing," you know, "What's happening," and maybe that -- I just ask for -- you know, "Who do you know that's doing" blah, you know.

But, again, you know, I can tell you right now there aren't that many farmers who use the web, and they're not going to start. And there used to be a mailing that went out from NOP, you could sign a postcard and get a mailing, and I don't think that exists anymore.

UNIDENTIFIED FEMALE VOICE: It's too expensive.

MR. RIDDLE: Nothing about this, I just am
concerned about kind of our schedule, I know you --

CHAIRMAN KING: Right, (inaudible) people --

MR. RIDDLE: -- but we've still got a lot of
people signed up, and we have never cut off public
comment. I mean, we represent the public, it's important
for us to hear, and I'd just like to suggest that if
there's a need for another room, that NOP should start
making arrangements for the afternoon, because I think we
need to hear public comment, and that's the top priority,
people have spent their time and money to come, and we're
not going to cut that off.

CHAIRMAN KING: Duly noted. I think if we stay
on schedule and everyone considers the time, that we can
be done in an efficient manner.

MR. RIDDLE: Okay.

CHAIRMAN KING: So let's please try to stay on
track. Next up is Mack Devin; Lynn Coody is on deck.

MR. SIEMON: No more praise.

(Laughter.)

CHAIRMAN KING: Right. Just get straight to the
issue. Mack's not here. Lynn, you're up.

MS. COODY: Hello again. I'm Lynn Coody from
Organic Ag Systems Consulting, in Eugene, Oregon, and my
consulting practice is focused on assisting certifiers in
meting the accreditation requirements of the NOP.
I consider the policy directives recently released by the NOP to be stunning in the sense that I've been thinking about them for days and I've had a hard time figuring out just what to say at public comment about them, but luckily I did recover enough this morning in order to write down a few thoughts in order to give public comment and break my -- and not break my commitment to talking to the NOSB.

To me, the most disturbing aspect of these directives is that they were devised and promulgated without the consultation with the NOSB. Although it may be the NOP's legal right to make some interpretations of the Final Rule, it is not the NOP's right to make drastic changes to the organic standards without careful consultation with the NOSB and with the public. That's part of the Organic Foods Production Act.

Not only is it not right, it's counterproductive, and at the end -- and the end result is unacceptable in that it created a regulatory environment that is untenable.

For example, the inerts directive forces certifiers to act in violation of the Organic Foods Production Act by allowing synthetic materials that are on the EPA inerts List 2 and 3, which have not been reviewed by the NOSB, and certainly not been approved, this is
clearly in violation of the NOP and it puts certifiers in a very difficult position, possibly even a legally untenable position.

The fishmeal directive allows farmers to feed livestock a toxic preservative, ethoxyquin, which is commonly known to be in the commercially available supplies of fishmeal, with -- basically using fishmeal as a carrier for an unapproved material. This could be extended to other synthetic materials easily if you take the NOP's directive further.

The antibiotics directive results in organic dairy products derived from cows who may have been treated with antibiotics, a situation that has been vigorously protested by consumers since before the NOP was even established.

Simply put: These directives are not right. I have been involved with writing industry standards, laws, and policies for over two decades, including having had the honor of representing farmers and certifiers during the negotiations and drafting of the Organic Foods Production Act.

I know what the intent of these provisions in the OFPA mean, I know what it means when we put in there that the NOSB must approve and recommend to the NOP about the use of synthetics materials. This simply has not been
followed in some of these directives.

Since the time of the drafting of OFPA, the voices of farmers and certifiers, and even the NOSB itself, have been tuned out by the NOP. What I see now is that NOP directives to certifiers twist both the intent and the plain reading of the law, creating a system of regulation that forces certifiers and producers to act against their own better judgment and the long-held understanding of the elements of organic production systems.

During this NOSB meeting, I've been very grateful to see wonderful examples of the NOSB listening carefully to public comment and reconsidering their positions, mostly on materials, which has been a major focus of this long meeting we've just been through, and in light of the ideas of the public, they -- the positions have been changed.

Although I -- I've thought hard to try to remember even one example of the NOP responding to public comment in recent times. I have been unable to think of even one example.

I urge the NOSB to continue and amplify its effort to uphold the organic standards as we understood them back in the days when we were writing OFPA and specifically to work to get the NOP to reconsider the
contents of the policy directives.

Thank you once again.

CHAIRMAN KING: Thank you, Lynn.

MR. RIDDLE: A very quick comment, I said this before, but Barbara wasn't in the room and --

Yesterday, Barbara, when we were talking about sunset, said that it's a process, not an event, and clearly implementation is a process, not an event, it's something that happens every day.

CHAIRMAN KING: Thank you, Jim. Next up is Weenonah, I can't make out the last name, and she has a proxy from James Christianson. On deck is Richard Kanak.

MS. BRATTSET: Thank you. My name is Weenonah Brattset. My family and I own and operate a 250-acre beef and grain farm in southeastern Wisconsin. For many years my husband and I employed sustainable farming practices because we believed we had an obligation to treat the land with respect.

Several years ago, at the urging of friends and neighbors, we decided to begin the process to become certified organic. At first, the many rules and regulations governing organic certification seemed overwhelming. However, as we studied and learned more about these rules, we were continually impressed with how sensible they were and how, as we became more involved in
the process, these rules and regulations made more and more sense.

My husband recently passed away, and now my adult children have helped pick up the work which he did. They too are committed to organic agriculture. We are willing and eager to abide by the rules governing organic production because they make our way of life sustainable. We have found that our products are sought after by people eager to find healthy food.

For small arms, like ours, being organic makes the difference between barely getting by and being able to command a fair price for the food we produce.

Unfortunately, we're seeing an effort on the part of the National Organic Program staff at the USDA to weaken organic standards for the benefit of corporate agriculture. This is shameful. It's also somewhat enlightening. Can it be that mega-dairies and huge chicken farms need to steal the label "organic" to be profitable? -- because that's precisely what the NOP is allowing them to do when they bypass the rules which honest organic farmers follow and respect; or is it that these corporate farms see organic agricultural as a threat and wish to make the "organic" label meaningless?

I've included with this letter a list of issues which are of concern to those of us who truly value

organic agricultural, and I won't read them, but they're attached, for the record.

It's past time for a change at the USDA's National Organic Program. It's time for Secretary Veneman to respond to the concerns of organic farmers and consumers. We need leadership which is respected and trusted. We need transparency in all of the NOP's actions. We need accountability from USDA and the NOP. And we have no intention of settling for any less.

And I would like to tell you people all thank you so much for your volunteer work, and I know what volunteer-ism is and how time-consuming it is, and I and all the people that I know in this organic movement really appreciate your efforts.

And now I'll read a letter from Jim Christianson, who is my next-door neighbor and a dairy farmer and, for obvious reasons, couldn't get up at 3 o'clock and come with me this morning, so (chuckles) --.

Jim Christianson is a third-generation dairyman from Jefferson, Wisconsin, area. The land he farms has been in the family since 1955. In 1999, when conventional milk prices dropped $6.50 overnight, Jim decided to become certified organic with OTCO.

The changes were mostly on paper since the land and herd had always been managed biologically. He began

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TEXAS 75644
selling organic milk to Organic Valley in 2001 and has never looked back. The following are his comments to the NOSB and the NOP:

"Organic has been a Godsend to my family and me. There is little doubt that I would have gone out of business when milk prices dropped in the '90s, just as I watched many of my neighbors do. Now our farm is thriving and my cows have never been healthier.

"I want you all to know that I am very concerned about the future of organics when I hear about some of the recent decisions that have been passed out. I am also worried about how long it seems to take to change and enforce organic rules. My cows go outside and graze pasture. It's not only the way God meant cows to eat, it's the law with organic.

"I understand that there are organic dairies that do not pasture their cows or that have too little pasture for the size herd they are managing. You need to do whatever it takes to make sure that the requirement for pasture is enforced uniformly for all organic dairymen.

"As a fairly small producer, with a closed herd, I often have certified-organic replacement heifers for sale, but I usually have to sell them at the conventional auction, because the way the Rule is being enforced, many larger producers are allowed to use conventional heifers.
"I have written letters, filled out surveys, and signed petitions in favor of closing this loophole, but nothing seems to be happening. The extra premium that I would get from selling organic heifers would make a big difference on our farm.

"Please enforce the Rule that says that once a farm is converted to organic, all the calves must be organic from the last trimester. In fact, the situation seems to be getting worse, since now I understand that organic dairymen can not only buy conventional heifers, with unknown background, but they can even give antibiotics and conventional feed to their calves born on the organic farm. Antibiotics have no place on an organic dairy, not even with calves. If you start allowing antibiotics on dairy farms, customers will abandon organic milk in droves.

"The last thing on my mind has to do with health-care medications that have been approved for use in organics but are still not allowed because they have not been finalized into law. Organic dairy farmers need these tools to treat our cows. Particularly important for me is to be allowed to use aloe vera, which I used to use, and propylene glycol to take care of milk fever. We need to be able to use something as soon after it is voted to be allowed as possible. To have to wait two or three years
is ridiculous.

"My neighbors often ask me, 'What is the most difficult thing to deal with when changing to organic?' My answer is always: 'Good information.'" Gradually, over the years, there's been more and more information available to us.

"Therefore, when the USDA changes the rules on what we can use and what we can do, it causes a lot of confusion. We end up not knowing what we can and cannot do. We have a very good thing going, with organic. Please don't mess with it just to make it easier. The consumer won't believe that organic is any better than conventional. Thank you." From "James Christianson."

I thank you very much.

CHAIRMAN KING: Thank you.

MR. RIDDLE: I have a request. I mean, this subject has come up a couple times now, at least, about the materials, livestock materials, that the Board has reviewed and approved, and I just have a request that before we adjourn, that we could have an update from the staff on the status of that.

MR. SIEMON: That'd be great.

CHAIRMAN KING: Next is Richard Kanak, and I believe it's John Chernis on deck.

MR. KANAK: Hi. My name is Richard Kanak. I'm
an organic consumer. I have two proxies I'd like to read, plus my own statement, if that's okay.

CHAIRMAN KING: Only one proxy allowed, you get a maximum of ten minutes.

MR. RIDDLE: A total of ten minutes, one way or the other.

MR. KANAK: That's pressure, then, right?

CHAIRMAN KING: Yeah.

MR. KANAK: Okay.

CHAIRMAN KING: We're confident you can do it.

MR. KANAK: Well, I'm going to start with the easiest one first. This is from an Amish farmer, received over the internet, and it's a little difficult to read because sometimes -- the way it was written. But anyway, here it goes.

This is from Rufus Yoder, in Belleville, Pennsylvania. This is his statement:

"We are a certified organic from PCO. We are a dairy farmer and have 20 cows and about 70 acres of land. We put a big effort to this farm. But the problem is that the NOP, without the approval of the NOSB, decided to allow the large organic dairy farms, like Horizon and others, to purchase conventional heifers and then phase them into organic production. This clearly puts sustainable farmers, like us, who make extra efforts to
care for their animals, at a competitive disadvantage, and we do not want this to happen. We need to draw the line in the sand where it belongs. We want the rules to be kept the same. We very badly need better or new management in the NOP." This is signed "Sincerely, Rufus Yoder."

I'm going to read my own statement, and then if I have next time I'll read the next proxy.

The organic standards must be such that we consumers do not have to be concerned that there are degrees of organics. Purchases are made because of what is not in or not on the item. I once read a statement attributed to Warren Porter, a toxicologist from the University of Wisconsin, and this is a quote: "There are more than 77,000 pesticides out there right now. Not a single one of them that's been registered has been tested for neurological, hormonal, or immune function or impact on those functions. People need to understand that just because a pesticide is registered, that does not necessarily mean that it has no biological activity."

That was the end of the quote.

It is very a difficult and time-consuming task to keep up with this ever-changing world. It is very difficult to read the fine print of ingredients on the labels of all too many items. It would be a full-time
just to be searching that all the -- what all the
ingredients are, let alone knowing the reason for the
inclusion in the package.

The simple solution should be: looking for the
USDA "organics product of the USDA" on the label, but this
is not the case. The New York Times of Wednesday,
February 26, 2003, highlighted several issues of
questionable practices which were accepted as organic by
the USDA: organic livestocks being fed non-organic feed;
and uneven enforcement of the outdoor grazing
requirements. Would the NOP have made a different
decision if there were not so many questionable areas in
the standards? The NOSB must take steps so the USDA
organics label is not under constant pressure to be
revised to accept as organic: questionable practices.

Mad cow disease is an example of the results of
questionable practices. Is not the rule that allows non-
organic dairy cows to be converted to organic production
also a questionable practice?

Do I have time for my next proxy?

MS. DIETZ: You have 7 minutes left.

MR. KANAK: A lot of time. I can slow down,
right? I'm just too nervous, that's all.

This is a proxy before the National -- I'm
sorry. It's from the Churches' Center for Land & People.
It's from Tony Ends, and I begin:

"My name is Tony Ends. I offer testimony regarding organic farm policy from several vantage points. With my wife Della and family I've worked for ten years to establish a direct-market-approach produce enterprise and small-scale livestock farm in southern Wisconsin. As such, I live and work in a farm community and care deeply about my neighbors and countryside.

"I've written on farming and farm issues for daily newspapers and agricultural publications. I worked full-time at an institute for sustainable agricultural research and education for four years, helping agronomic soil scientists and farmers design and fund on-farm research projects in Iowa, Illinois, and Wisconsin.

"I presently lead a USDA small business innovation research project that is establishing a yield and marketing cooperative in Wisconsin. In July 2003 I was appointed part-time director of Churches' Center for Land & People. This ecumenical effort for farming people promotes justice, earth stewardship, and community. The Center was organized during the 1980s farm crisis and has been active in Iowa, Illinois, and Wisconsin, expanding services to Minnesota last year. People of Lutheran, Catholic, Episcopal, United Methodist, United Church of Christ, Presbyterian, and Quaker faiths support our work.
"From long-standing experience, I address you with a sense of urgency. Trends that have driven agriculture to consolidate and specialize in endlessly large scale are well-documented. Over the past 60 years they've almost completely undermined local infrastructures and support for farming communities across our region.

"In shackling our farmers to federal subsidies and excessive reliance on fossil fuels, they have also placed US food security in jeopardy. In the past 15 years, direct marketing, premium production, and value-added enterprises have brought some relief from oppressive consequences of agricultural industrialization.

"Sustainably integrated and organic farming practices that spawn these new trends have benefited many thousands of alternative growers and producers. If National Organic standards, however, bring industrial practices to these new areas of farm and food production, neither the people nor the land will benefit. Young farmers and farm couples will not have a chance to enter agricultural. Local economies will not regain the ground they lost to global and corporate interests in conventional food and farm production.

"The rural revival of our nation desperately needs to happen, for food safety, food security, sustainability will never take place. I ask you to
broaden your board membership and to ensure representation of these interests in ongoing development and implementation of National Organic standards. I ask you to help save organic farming from being lost to the same trends that have caused conventional agricultural production to cannibalize itself. I ask you quite simply to oppose genuinely free market and fair trade practices in your policies and rules for the common good of the democratic majority instead of the private gain of a very few."

CHAIRMAN KING: Thank you. Yes, Kevin.

MR. O'RELL: Mr. Chairman, I would just like to go on record of saying that I'm disappointed today to hear that people are coming to use public comment period for making public and personal attacks to companies. I don't feel that that's what public comment is for in this forum. It's for commenting about organic standards, commenting about the National Organic Standards Board and the National Organic Program, and it's not -- in my opinion, it is not a place for public attacks and personal attacks on companies or individuals. I would just like to urge the public not to use this tact.

CHAIRMAN KING: Thank you, Kevin.

MR. SIEMON: As well as positive. Just don't use any brand names or company names. We're talking about
policies here, doesn't matter, positive or negative, just
don't do it.

CHAIRMAN KING: This is clearly your time to
express your thoughts and feelings, and we appreciate
that, just try to keep them somewhat generic and don't
refer to specifics. We may not have all the facts. Do
you have a comment?

MR. RIDDLE: No. I just -- I -- well, yes,
then.

(Laughter.)

MR. RIDDLE: No, I'm uncomfortable as well, and
I just second what Kevin is saying. I think it's one
thing to talk about scale issue or systems issues, but I'm
uncomfortable and really don't think it's appropriate to
be singling out companies or individuals, but anyone is
free to speak as well, so --

MR. O'RELL: I recognize that. Thank you.

CHAIRMAN KING: Thank you, Kevin. Next is John,
I believe it's Chernis, and on deck is Michelle Wander.

MR. CHERNIS: No, that's okay. Sorry I don't
have papers to hand to you, I decided last night at
8 o'clock to come. I'm a certified organic farmer. I
farm 5 acres of vegetable crops in central Illinois, and I
wish there were more growers here, I think they might have
been able to make it had the timing been a little bit
different, it's -- it's hard to get here at prime planting season.

I guess I have two comments, and I'm afraid that we're losing the small grower under the present setup. I'm one of the few growers in our market that's certified, but I'm among many that have farmed organically for 15, 20 years, and they're leaving primarily -- or they're not becoming certified primarily for two reasons:

One, what seems to them -- who -- they sell the produce primarily locally, that the rules are overly burdensome in terms of recordkeeping, they just don't fit their scale of operation, the detail needed. You can still come on these farms and track what happened, but just the transferring of records to meet the certification standards are quite time-consuming, and I think that if some thought would be put into it, we could get at this and reduce this load.

Secondly, they also point to the fact that NOP is consistently changing the rules, and without good process, and -- so they really feel that -- as if it's become to mean nothing, and if we lose them, if they no longer use the term "organic" to describe themselves, we'll lose their consumers, and their consumers are the ones that primarily have helped made this whole thing become a word, it helped make the definition, "promote
organic" and why it ended up becoming a word that USDA has now defined.

So I guess, in the end, you know, I urge you to, one, try to get back this local small grower, and small isn't really below $5,000, small is -- can be pretty big and still just sell in your local area, and 5 acres can become -- we have 600 -- my yearly activity log has 600 line items. My harvest log has another 6-, 700 items. It's really burdensome, and it really would help no inspector get to what happened.

So -- and also just redefining and having good process, it takes time to get the rules right, and they're ever going to -- they're going to be ever-changing, but you guys need to be supported. Thanks.

CHAIRMAN KING: Thank you.

MR. CARTER: Two things. Number one, obviously I support completely what you say about the disruption and the changing of the rules in midstream, it is an evolving process, but we have to have some consistency, and that I think is what this Board is trying to push for.

In terms of the scale issue and the small growers, I think that one of the things that is the strength of the Rule today is that it doesn't prohibit additional labeling claims on there, and I think that those of us that work in those areas, those are some
things that we need to continue to work on, is to get some parameters around areas, such as locally produced or certified GRAS finished [phonetic] or those type of things, that can be brought in as additional claims.

I think the computer is getting more savvy as they go forward, to read what's in there, and we need to make sure that there's some integrity on those additional claims as we go forward.

MR. CHERNIS: But you're forcing growers to move away from a term that they wholly support, because it's being redefined in the marketplace.

CHAIRMAN KING: Jim.

MR. RIDDLE: I also wanted to just very quickly respond to your concerns about the burdensome recordkeeping, and the Rule does allow for a lot of flexibility, that the records be appropriate to the operation, so a small grower can have, you know, records that are appropriate, that meet the lot numbering or something, of a different operation.

And I also wanted to point out that there are some standardized templates for vegetable growers, that are on the ATRA website (inaudible) tools --

MR. CHERNIS: Sure. I have -- my spreadsheet's a little bit better than that one, and it's a total line item on Excel as well, but -- I mean, I -- I guess my
point being that -- is that we've worked really hard to keep the records that we're being asked for, and we're not being told, "Oh, you don't need any of that," we're being asked that we need -- that they want to be able to track it, and so more clarification -- and some examples -- I guess a specific example would be: so we write things in notepads and then we process them to the -- to a computer, or we transfer them to computer. That process I don't think really helps anyone. Just having those data sheets in a pile for our type of operation should be sufficient. If an inspector asks me, what happened on this date, I could find that information.

But having to transfer all that to -- and we have a computer -- I put a computer in our barns so we could facilitate this, but it's really -- takes my employee an hour a day to input everyone's -- what they did that day. It's overly cumbersome when you could still get at the -- I could simply have a list of -- a materials list of what we use. Do you really need to know which crop I sprayed on it? You need to know what day, but do you need to know which crop and which field? I have five acres, "I sprayed it out there." I mean, I could tell you -- I could answer the question, and if you decided to -- I mean, the only caveat I would see is: let's say you then banned that product, or I was using a product that wasn't
approved for use, so all the -- so the grower would risk, if they didn't want to keep that record, that they -- well, their whole crop would be uncertified, and they should be allowed to take that -- that risk, but --

CHAIRMAN KING: I encourage you to work with your certifier. Thank you. We have another question, Andrea, and then Rose, did you --

MS. DIETZ: I don't.

MS. CAROE: I just want to point out that if you truly feel you're meeting the intent of the Rule and your certifier disagrees, there is a process for an appeal, and that process is in there as an education to both you and the certifier and the community at large, and it shouldn't be looked at in a negative way but in a way that we get further clarification, we bring these issues out, we talk about them, and so I encourage you, if you really feel that what you're doing, your manual methods of maintaining the data --

MR. CHERNIS: Uh-huh.

MS. CAROE: -- are sufficient to meet the intent of the Rule, then you have that right to ask for --

MR. CHERNIS: Yeah. I think my point here would be that for me, certification -- being certified was an easy step. I didn't want to lose control over the term, and we can -- we can handle the recordkeeping, but five
other growers at our market have said, "To hell with it,"
so how do I convince them that "No, it's not so
burdensome" and so forth, because the way it reads and the
thing they get confronted with, you know, everybody's up
in arms over, you know, seed, you know, how can I prove to
them that I got -- you know, these are really -- getting
more instruction on that and showing examples of
flexibility -- "Well, you could do this" -- would really
help these growers make that move and say, "Okay, I can do
that, I can make" -- "I can give them that information."

MS. CAROE: Yes. Commercial availability is an
issue we are spending a lot of time on. We're starting
with minor ingredients, but as our Guidance has suggested,
we are talking about further taking that into the seed
commercial availability. We see this as one of those
growing areas where we're constantly filling in the detail
as we go. So we hope to be able to do that for you, we do
understand that's a huge challenge, and please understand
that, you know, it's not unheard, it just is going to take
some time to work out the sophisticated details of that..

MR. CHERNIS: Just more clarification on it to
help growers --

CHAIRMAN KING: Thank you, sir, I'm sorry, but
we have too many --

MR. CHERNIS: Sure.
CHAIRMAN KING: I really, truly am. Thank you for your input. I'm just trying to work everyone in.

MR. CHERNIS: No, no, I didn't want to be here anyway.

CHAIRMAN KING: All right. Thank you. Michelle, and then Rachel is up next.

MS. WANDER: Hi. I am a professor at the University of Illinois, I'm a soil scientist.

MR. RIDDLE: If you could state your name, please.

MS. WANDER: This is Michelle Wander. -- and I have a proxy for Lloyd and Deanna Shaffer [phonetic] from Elkman [phonetic], Wisconsin, and, being an educator, I'm -- really thank you all and the people who have spoken today for the education that I have already gotten, and I'm sort of I guess catching up with realizing how much of a communication and education role that you all play, and you need to maybe do better, and I know that's ridiculous to ask a group of people that's volunteering all their time, but it seems like this organic discussion of the concept and the intent is of critical importance, I hope that --

UNIDENTIFIED MALE VOICE: It's a little hard to hear.

MS. WANDER: I have to be that close, wow.
Okay. And I -- so I hope that the comments -- and I know they will be taken seriously by you. As I said, I'm an academic, so I go to a lot of committee meetings, and I realize that very often the meeting is not heard, and that's because the level above can either just check off that that meeting was held and they proceed with their assumptions and their conclusions already, so I know that -- my hope is that our testimonies today will help you get done some things that I suspect you want to get done.

I'm a person who's been interested in organic for a long time, for nearly 20 years, I've been working on this topic, studying soil organic matter, which is believed to be one of the critical aspects of well-managed organic systems.

People who are certified use lots of practices that are intended to improve and basically enhance the characteristics of organic matter so we achieve efficient nutrient cycling and on and on, and I've had the luxury, really, of using say big science and lots of fancy tools so that I could prove or understand what was different about organic systems than conventionally-managed systems.

I have to confess to you today that my work hasn't done any or very much good for practical managers to do a better job at being organic stewards, and that's because the basic caveats or philosophy of organic
management is pretty good, it's basically common sense systems management, and this goes for crops and livestock systems, as we've heard many people attest to today, and the standards that were negotiated socially within communities within context were very, very reactive and intelligent, easy to inform and to maintain checks and balances.

Now that we've gone to a system that's regulated at a higher level, this puts a lot of very good things that were in place at jeopardy. I have a colleague who's a legal scholar and he talks really about how when you go to rules, how they become actually vulnerable and in a way how science serves as a handmaiden to undo social goals, and I heard his comments, they were about fisheries in Africa, but I really heard them having a lot of meaning for what I see is going on in organic.

There are a lot of things that -- even though I said a moment ago that the science that I've engaged in, I think there's a lot of things that scientists can and need to do that will help with the standards, will help with some of the discussion, but I think by getting engaged in these sort of technical small points, in some ways you get off of the -- off balance when you get -- are engaged in this discussion of organic, because it really is -- people use terms that are not -- as a scientist I don't regularly
use, about philosophy and values, that are subjective, but
they're shared and they're common in this community, and
these are the things that, yes, while you should use
scientific input, you really need to go back to your base
and your community to have these discussions and have
process that lets this be negotiated, and I know you all
try to do that, and you're getting undercut.

And I guess the reason I'm motivated to come
here and talk to you about this is that I hear students
who I see as a critical future, and I know some of you, as
former students, where really this is important that the
public and these students who care very much buy in,
they're walking away from organic, they're reviewing it
with skepticism, and they're choosing between growers at
local markets and who's got the best local face or
commitment that they hear, and this is really a tragedy
for, I see, the people who have done the really heavy
lifting, and I know many of you have done that heavy
lifting.

So I'm very concerned about that, and I guess
it's this really -- you know, I have some specific cases
where I think the stewardship aspects that are
specifically managed, that science will help you with, are
one territory, and I think that the work that people like
myself do, we can go in and help organic do it better, but
the truth is, a lot of what we learn and publish will be 
immediately adopted, sometimes be more effective at the 
stewardship component of organic production. Right?

We saw in the Nature article on organic nature 
being given -- organic being suggested to be less 
sustainable than no-till when you include a cover crop. 
Right? So organic is going to be pounded and pressed to 
make that case over and over.

Where organic will always hold the upper hand in 
the cards will be the broader goal set of sustainability 
if they hold onto that. If you trade away care about 
social goals, about health and these larger, more 
subjective, difficult-to-grapple-with concepts, organic 
should, in many ways, lose the strong competitive edge 
that it should have, and this is really where people 
involved in trade, you know, corporate partners, need to 
protect the brand, and if they're smart, they will -- they 
will retain their traditional base.

And I guess that's really my main message, and I 
think that some of the issues, say in GMs, are really 
instructive, where we could talk about how BT toxin 
doesn't persist in soil so it must be safe, another 
person: well, is this specific case an allergen or not? 

Don't get caught up in the petty small pieces, 
you know. It's the philosophy and multiple sets of goals
that you have to go through that really will keep you safe, and that's really by entertaining it, you know, and I encourage the NOP to use the Board as the shepherds of the philosophy, you know, and that's: as a citizen. And I guess -- because there were so many engaging ideas, I'll try to contain myself here. The comments of Lloyd and Deanne Shaffer from Elkman, Wisconsin, submitted on April 28th, which I do appreciate the date because I know this time of year is very stressful on producers.

"We have a small family dairy farm with 50 cows. We have been shipping organic" --

UNIDENTIFIED FEMALE VOICE: Louder, please.

MS. WANDER: "We have been shipping organic milk for approximately one and a half years. We abide by strict rules set out by our certifying agency. We were under the impression that the NOP was set up to make sure that certifying agencies were all uniform, that they will and have the same rules. What is the NOP doing by changing the rules? They should be enforcing the strict standards that the certifying agencies have set forth. The Secretary of Agriculture should only be appointing people that are devoted to the organic" -- or "devoted to organic agricultural and to the NOSB. We are organic farmers because we believe in what we are doing. NOP is
making a mockery of the organic farmer. They are taking organic out of "organic." Everyone should have to follow the strict standards in this country and in others. We feel that the organic industry is doing fine before the governments decided to get involved. Now they are," and then the word got cut off, c-h, unless that means something to somebody. Thank you.

CHAIRMAN KING: Thanks. Next is Rachel, and then Jane Brandley is on deck.

RACHEL: Good morning, or afternoon now, I suppose. My name's Rachel, and I live in Chicago, and I'm a third-generation Chicagoan. I've been a vegetarian for 12 years, and I'm involved locally with organic gardening clubs and Organic Farmers Market, which is held in West Humboldt [phonetic] Park, if any of you are familiar with the Chicagoan area. I'm also a chef.

So for this reason, and many other reasons, I am concerned about the direction of the word "organic." I am concerned when it comes to the federal government getting involved in regulating such a thing. I think that organic by itself is a manifestation of natural processes of Mother Earth and can in and of itself not necessarily be regulated.

But, of course, we work with corporations and we work with the global economy, so we have the government
stepping in and trying to mandate it, and I become very scrupulous [sic.] and very weary of their intentions, because most of the time the government is working hand in hand with the corporations because they're the ones that pocket the money to them for their campaign funds or whatever else.

So that's where you get things like the EPA petitioning for toxic sludge to be considered organic, that's where you get Lists 1, 2, and 3, with synthetic chemicals that nobody's even heard of and -- so I am impressed that everybody here volunteers, and I'm sure that you guys all have a very committed self to organics.

But I'm also here on a proxy, so I'll just read that.

CHAIRMAN KING: Unfortunately, I need to announce: we have official Board policy for written proxy, so I'll give you the full five minutes, I'm forced to enforce it today, and I apologize for that, due to time constraints.

RACHEL: Written? I don't understand what you're saying.

CHAIRMAN KING: You didn't provide a written proxy. Do you have a written proxy?

RACHEL: I have a proxy written, yeah.

CHAIRMAN KING: Thank you, you're fine.
Continue. Never mind.

RACHEL: Oh, you turn it in, and after I cross my e-mail off.

Okay, the testimony's from Nathan Hetterick [phonetic] before the National Organic Standards Board today. "My father and uncle are the president and co-president and owners of Village Edge Farms, LTD, a certified organic dairy farm and a member of the Organic Choice Co-Op. Village Edge Farms is located next to the little village of Nelson in the area of west-central Wisconsin, along the Mississippi River. The farm was homesteaded in 1865 by David Hetterick and has been owned and operated by six generations of the Hetterick Family. Brothers Greg and Dennis, along with their families, now operate the family farm.

"One of the family highlights has been the process of becoming an environmentally safe certified organic dairy farm. In 1991 the Hetterick Family went away from the chemical and commercial fertilizers that pollute the air, soil, and water. By 1997 the farm was partially certified organic, then two years later the cows and all the land that was farmed was certified organic. In the year 2000 Greg and Dennis met together with other sustainable and organic farmers to start the formation of Organic Choice, with the dream to market their own dairy
products.

"Our farm and families are our biggest pride and joy. The Hetterick Family is very proud to work hard together to provide a better product for the consumer. The family is also proud to provide a healthier environment for the next generation to come.

"One of our concerns is the use of GMO contamination in organic crops. While we typically support new technology, we are very suspicious of the push for GMO crops. Now only have they not been adequately tested, but they are being forced upon farmers by market pressures and not simply offered as one choice of many.

"We do not believe that GMOs offer any benefit to any creature that consumes them, and we do not want cross-contamination of GMO crops with our certified organic crops. Please keep the concerns about GMOs and organic farmers in mind.

"We support strong standards for organic farming. While no farmer would attest to enjoying the red tape and paperwork necessary to become certified organic, we truly believe that we offer a product that is superior to conventional farming techniques.

"We strongly urge you to support the need for standards for organic personal-care products, fiber, fish, and seafood and pet food, the need for an ongoing peer-
review panel as mandated by the OFPA in the Final Rule to
oversee the USDA's accreditation program, the need to
conduct on-site evaluations of foreign certification
agencies approved by the USDA, the need for an NOSB
executive director staffed to asset the 15 volunteers
onboard, the need for a technical advisory panel, contract
announcements to be publicly posted, and for bids to be
solicited in an equitable and transparent manner.

"The need for NOP enforcement actions, including
suspensions and revocations of certification to be
publicly posted. Currently there is no public record of
NOP enforcement actions.

"We, along with the members of Organic Choice,
oppose recent action by the USDA's NOP to allow companies
to use substances not on the National List, sodium lactate
and potassium lactate as processed-meat preservatives and
phosphoric acid to fortify aquatic plant extract
fertilizers. These actions were taken with no
consultation of the NOSB, who has authority under the OFPA
over the National List, actions by the NOP to undermine
the NOSB's statutory authority over review of petitioned
substances and the National List. NOP's two-track
[phonetic] dairy herd interpretation, which requires
family farms that convert their entire herd to organic
production, to raise all replacement heifers as organic
from the last third of gestation while allowing factory-style operations to continually introduce conventional heifers so long as they are managed organically for one year prior to milk production.

"This is wrong and undermines the effort of farmers like us, who are still family farmers, lack of outdoor access for poultry, as evidenced by actions of the NOP to mandate certification of the country hen, the lack of NOP implementation of over 50 NOSB policy recommendations.

"In closing, I also wish to say that we need a management change, regime change, at the USDA's National Organic Program. We want someone who has extensive experience in organic agricultural and is universally respected by organic farmers and consumers. We have lost confidence in the present management and do not believe they are working towards the best interests of the organic farmers, who are truly farmers of integrity and care about the environment.

"We do not want people who are only concerned for those enterprising and greedy farmers who only enter the organic market for the money. Please keep standards high and farmers accountable. We work very hard to ensure the consumer gets the highest-quality organic product we can provide. Keep the standards high so other farmers can
do the same. Thank you for your time. Nathan Hetterick."

CHAIRMAN KING: Thank you. Next is Jane Brandley, and on deck is Dave Engel.

MS. BRANDLEY: Yes, I'm Jane Brandley, and I'm here to read my own statement as well as a proxy statement, and I'll start with the proxy, if you don't mind.

This is from O Farm [phonetic], John Bobbi [phonetic], Executive Director, and they are in Brussels, Wisconsin. This statement is to the National Organic Standards Board for submission to the National Organic Program, from John Bobbi, Organic Farmers Agency for Relationship Marketing, Executive Director.

"The Organic Farmers Agency for Relationship Marketing is a farmer marketing agent in Cummin."

[phonetic] "We represent organic field crop cooperatives and farmer marketing associations in a region that spans the major grain-producing areas of the United States, over an 18-state area and Ontario, Canada. A number of our member organizations market their farmers' grain into the world market. In addition, O Farm members, organization farmers, produce organic milk and livestock.

"We wish to bring to your attention the following points of concern to our farmer members in maintaining the integrity of the organic industry: 1)
The integrity of organic feed and grains must be continued to be maintained and the standards strictly forced. Weather conditions are already stressing crops over a large part of the US, pointing to another tight year of feed and grain supplies, especially for livestock. Significant amounts of grain may be important. Organic standards and certification requirements need to be strictly enforced.

"2) Dairy heifers should be raised according to organic standards from the pregnant cow on through to the freshening animal. Organic dairy producers should not be allowed to bring conventional dairy heifers into their herd at any point.

"3) The pasture requirement standards should be uniformly interpreted and strictly enforced.

"And 4) The NOP has matters before it that were brought for resolution up to two years ago. NOP's inaction in deciding these matters has the potential to compromise the integrity of organic to farmers, consumers, and the entire industries. Matters before it should be decided and acted upon in a timely manner.

"We respectfully request for NOP to act upon matters before it and take necessary steps to protect the integrity of organic grain, dairy, and livestock producers, because their livelihoods and incomes depend
upon it," and he thanks you "for your consideration, John
Bobbi."

My statement, I'll begin by saying I am just a
consumer, and I'm probably more confused than I was
before, about what organic is. I live in Lake Geneva,
Wisconsin. I've had a college education. I have my own
small business. I raised four children, and I have a
grandchild.

I make this trip here today because eating
organic is a way of life for me. I gladly spend three to
four times what one would spend for conventional food
because I believe it affords me the best opportunity of a
long and healthy life. However, I am not happy to spend
that kind of money on food that is labeled "organic" but
has been adulterated by the use of unapproved additives,
chemicals, or other so-called safe items.

What I'm hearing is that factory farms are to be
allowed to call themselves organic. There is no way that
factory farms and "organic" can be synonymous. In the
face of a mad cow disease outbreak, the USDA lied about
the amount of testing done. That lie not enough, they
tried to strong-arm other countries into reducing the
amount of their testing. How can we trust an agency that
lies to the public? How can we trust an agency that
appears to be bent on destroying the public trust in
organic labels?

The agency is being asked today to fund a director and to maintain the integrity of the "organic" label. Those are legitimate and reasonable requests. If the USDA and NOP continue to erode the integrity of the "organic" label, it will be up to the individual to research each and every bit of food they eat, every item they put on their body. It will be up to organic organizations to investigate every item that calls itself organic and make that information available to the public.

Presently I do my best not to buy so-called organic products that are put out by large food producers, and I won't mention any names here. I do not trust that these large producers are totally honest about their organic ingredients.

I no longer donate to my representatives because they do not hear me. No one in the government seems to be listening. My giving goes to organizations that I believe will preserve organic food sources, will encourage the intelligent use of our land and resources, will disseminate the information we need to make safe choices in food and other products we use in our ordinary daily lives.

Organic has become a thriving business. It will continue to grow and prosper because we cannot trust our
conventional food sources. Company who want to get into the organic business should recognize the reasons behind the lack of trust in conventional foods and understand they will not win a share of the market without garnering the public trust.

I would just like to add that this has been an eye-opener for me today, because I am just a consumer, I do read labels, I try very -- to be very careful about what I eat and what I feed my children, even what I feed my dog. I don't eat meat. I'm concerned now about the fish.

We out there in the public who buy these products want to know that there is someone who is being honest and honorable about this "organic" label, and while you all are volunteers, you all seem to have our best interests at heart, the truth of the matter is: you are a board, and someone in the government someplace is really pulling the strings and making the decisions, and it's discouraging to the average public, but I thank you for your time and effort.

CHAIRMAN KING: Goldie.

MS. GOLDBURG: I just want to respond that I heard you twice refer to yourself as "just a consumer." Don't ever do that.

MS. BRANDLEY: Well, but I'm not in the trenches
(chuckles), I just buy.

MS. GOLDBURG: Well, I would urge you also not to -- not to stop having faith in the "organic" label, recognize that it is a process, recognize that we all have to guard against many forms of attack, not the least of which is the expansion of genetically-engineered crops, which is a very -- and other such technical situations, continue to believe in this, you have four grandkids, I have five, and I'm interested in my own health, but I'm much more interested in the future and in maintaining a future that we can all see our children going into, so please don't lose faith in this process. Thank you.

MS. BRANDLEY: Well, I continue to buy organic, because I certainly can't buy conventional.
(Laughter.)

MS. BRANDLEY: But I would like to know that when the label says "organic," it is what I believe organic to be, and I don't want to -- I don't want to see any of that other stuff in it.

MS. GOLDBURG: Your participation is very much a part of that process of maintaining integrity. Thank you.

CHAIRMAN KING: One quick comment. Coming from the retail background, like Goldie, what I would add to that is that: yes, you are in the trenches, you're the front line, you're the end user, and what you think and
care about matters, and we need to hear that message and we need to respond to that message, so thank you very much, seriously, for coming here today.

MS. BRANDLEY: Thank you.

(Applause.)

CHAIRMAN KING: Kim.

MS. DIETZ: On behalf of someone who works for a large corporation and one of the first acquisitions in the organic industry, we have been leaders in this industry, we follow all the rules, each and every one of us have been instrumental in implementing these standards, so while organic foods is a personal choice and I will always stand behind that, I do take offense to the daggers and everything being thrown against large corporations, because we too are just as invested as each and every one of you in this audience, and it's not fair to say stuff like that. Thank you.

CHAIRMAN KING: Okay, next is Dave Engel, on deck is Leslie Zuck. We have approximately 15 minutes and we have five people, that's all I'll say.

MR. ENGEL: David Engel, a dairy farmer from Wisconsin, and the Executive Director of the Midwest Organic Services Association.

I too want to provide great encouragement and thanks to the Board, to the National Organic Program and
their staff, and to all the pieces that I referred to in my last public comment two days ago, because we're all working together. I think, you know, in the interest of time, I would just like to make one observation, and I don't think Marty will mind my using him as an example, but all of the comments that have been made today have been, I think, good, they have a context, tomorrow is another day, we have to go forward and practically and considerately take things into consideration in our own spheres on our daily work lives, our personal lives, and as the collective here, but, you know, the organic industry, when it started -- the reason we're here now is because we wanted to be here now.

The minor, relatively minor, intensities that have come up these last few days are all part of a process that we're going through, and, you know, Marty got up and said some very fine words about the directives, et cetera, how we need to change them, but on the other hand, you know, he was part of an effort to approve a very specific product for a very specific industry, and I think we all need to have that kind of leeway, that kind of honor and respect from everybody, because we're all in it together, and what was good for one person may not be of interest to another person, but in the sum of things, a lot of what we're talking about here today needs to be taken in a
larger context. I don't think we're "going to hell in a
hand basket," but we need to keep working together.

CHAIRMAN KING: Thank you, Dave. Leslie, and
then Jean Zanzaville.

MS. ZUCK: Leslie Zuck, Pennsylvania Certified
Organic, an accredited certifying agent, in Pennsylvania,
and I have to say that I agree with everything that
everyone has said about all the wonderful work that the
Board has done, how's that for a collective compliment.

CHAIRMAN KING: We'll take that.

UNIDENTIFIED FEMALE VOICE: You still just have
five minutes.

(Laughter.)

MS. ZUCK: Our farmers in Pennsylvania are,
however, very upset about the antibiotic directive, and
they say to me that they work very hard to raise their
animals organically and now they see the door being opened
to those farmers who do not make those efforts and who may
now resort to antibiotics, especially for their young
stock.

The farmers who manage their farms organically
do provide humane treatment to their animals, they will
administer a prohibited medication to an animal to save
its life or to reduce suffering, and we know this, because
they -- they call us and they ask us what do they do now
with that animal, and we -- we do tell them that the
treated animal would have to be a non-organic animal and
so forth, and this happens occasionally, and it's usually
a few calves, maybe as many as five or six, and, you know,
with this new directive, the farmer would be allowed to
keep the calves in the herd, and that's not necessarily a
bad thing, and I think the farmer would agree that he
would like to continue to be able to do that.

However, the consequences are also that it would
be increasing the practice of treating animals with
antibiotics, parasiticides, et cetera, et cetera, and our
farmers do consider this a significant weakening of
organic integrity.

Because once these materials are on the farm,
they're ready available and they will be regularly used.
Essentially, calves and heifers will be managed no
differently than conventional calves and heifers,
including perhaps medicated milk replacer or calf feed.

Okay. As an accredited certifying agent, we are
being directed to allow this practice, in violation of the
Organic Foods Production Act, which prohibits the use of
antibiotics and other prohibited materials. If we as a
certifying agent -- if a certifying agent doesn't follow
the directive to allow antibiotics in violation of the
Act, the certifying agent will have its accreditation
revoked.

The same goes for pesticides with unknown inert: if we allow them, we violate the Act; if we prohibit them, we violate the directive. Same goes for the fishmeal, preserved with ethoxyquin: if we allow it, we violate the Act; if we prohibit it, we violate the directive.

I'm not sure how much longer we can go on in this schizophrenic state or how much longer the organic community can really put up with it, and I don't know the answer, but I do know that there are a lot of really smart people in this room and we need to put our heads together and figure out something very soon, because this is very urgent. Maybe we need to march on Washington, I don't know.

At the very least, I think that we need to have an implementation period for the certifying agents and producers to swallow these directives, you know. We can't be expected to implement them instantaneously, and that's a real -- a difficult burden, especially on the producer. It's like we told them yesterday they were supposed to be doing this, and now tomorrow they have to be doing that. So that's a problem.

And I have an announcement to make: any accredited certifying agents who would like to join the
new certifying agents organization, or are thinking about joining, to meet us in the lobby at 7:30, at this hotel, and we're going to have an informational dinner meeting at 8 tonight. If anyone would like to attend that and has already done so, let myself or Dave Engel or Valerie Francis know so we can put you on the reservation list.

CHAIRMAN KING: Andrea.

MS. CAROE: Leslie, you had mentioned that in regards to the antibiotic directive that came out, that -- I guess you're not satisfied but you do see some benefit to this -- that it might be a good thing if they could keep those few animals on the farm.

In that vein, do you see that there is any suggestion that you or the community can make for how this could be implemented with some restrictions or something that would alleviate your concern that this would initiate overuse of these materials?

MS. ZUCK: Whenever this issue has come up before, in the exact vein, you know, "should we allow antibiotics up to 6 months," or any of those kind of exceptions, our farmers have been adamant and said that they've done -- you know, for them, the cost benefit analysis don't allow it at all, because they're doing that now, for the most part, and if they have to sell a calf or so, they don't mind. They feel that it's more important
that we have strict standards.

MS. CAROE: That wasn't my question. My question was: Could this be implemented with something attached to it, something more, that would prevent it from being overused? I mean, I understand you're saying if it's in or out, you prefer out, because you think it (inaudible) --

MS. ZUCK: Well, the my answer is: No.

CHAIRMAN KING: Thank you. Next is Jean, then Steve LaFayette, and Kelly Shea will be our last comment today.

MS. ZAZADIL: Hi. I'm Jean Zazadil, I'm a consumer and interested or concerned citizen. I'm not going to read my own comment, because everything has been said more eloquently before, but I do want to comment on the praise for the Board as well as the statements of Thomas Harding.

I am reading the proxy of Jim Cone [phonetic] of Almar [phonetic] Orchards in Flushing, Michigan:

"My wife, five children, and myself, along with four full-time and many seasonal part-time workers grow 40,000 bushels of organic apples on our 250-acre farm. We used to grow with conventional methods and almost went broke because of the cost of chemicals, low market prices, and cheap foreign imports. Sven years ago we started
transitioning to certified organic production, and now, as
an organic grower, I can make a decent living for my
family and afford to hire other people that went to spend
their life growing food for others.

"Our farm is more sustainable now that we do
organic production because it has less reliance on costly
chemicals that damage my soil and negatively impact the
environment.

"Almar Orchards now grows in harmony with Mother
Nature, letting her do most of the work in controlling the
pests, insects, and diseases. We use very friendly
chemicals like hot pepper juice, soap, garlic, vinegar,
and Neem [phonetic] oil, molasses, liquefied fish and
seaweed, insect mating disruption, diatomite herb
[phonetic], and kaolin clay.

"Our farm is now teeming with wildlife because
of the absence of harsh chemicals. I only wish that I had
started growing organically 25 years ago, before my wife
and I started rearing our children on the farm.

"Organic farming is part science and part
religion. Probably only other organic farmers truly
comprehend that statement. One cannot be close to God if
you are out there poisoning His Earth. Organic farming
takes a lot more labor, a greater understanding of the
complexities of life that is interacting in and on the
land. It is a proactive approach instead of the conventional reactive method of spraying a chemical to fix a problem that shouldn't have occurred because it could have been prevented.

"The conventional apple-growing industry is going broke, without government support dollars. Look at the hundreds of millions of dollars that were given to growers the last three years, and yet 23 percent of them still went under, according to the Michigan Department of Agriculture, here in Michigan in the last three years. If you lower the standards for organic certification or change the rules to make it easier to grow organically, you'll substitute man-power and brain-power for chemical-power.

"Factory farms and corporations will overpower the family organic family operations. If consumers become confused about what organically-grown food really is, or lose faith in the certification process and enforcement, or think for one minute that government is manipulating the system and the rules to help big business may get another buck, then the increasing demand for organic food will shrivel and die. My farm and most of my other pioneer organic farms of the 21st Century will also die. They will probably be resurrected as housing projects.

"Please don't listen to big business, but
instead, listen to the simple little organic farmer, for he is the meek of this Earth."

Thank you.

CHAIRMAN KING: Thank you. Steve LaFayette, and then Kelly, you're on deck.

MR. LAFAYETTE: Good afternoon. Thanks for your time and the opportunity to speak with you. I am going to forego my own personal statements, I've given copies, on organic acid-free paper, and I'm just going to read the proxy statements of two other farmers, but quickly try to just make the connection that I am here as a consumer, I'm -- I know we're all consumers, but I'm not affiliated with any organization, I'm not a member of an organization, I don't farm; I shop.

But I am here to speak for a few farmers that I have a great admiration for, who grow things that -- you know, I try and grow these same foods and I kill 'em half the time, so I have a --

(Laughter.)

MR. LAFAYETTE: I have a great appreciation for what they do. And one of the main other reasons why I'm also here to make the connection is that I have health issues, I have allergic reactions to certain foods, which you can read about in my statement, but it speaks directly to my concerns, that have been already voiced and
articulated regarding organic labeling and to the larger issue of organic marketing.

So just to just straight into the proxy statement here, of Jeff Webster, he wants to make some comments regarding the federal program of organic certification.

"My name is Jeff Webster, and I'm Secretary of the Sierra Club National Agricultural Committee. I'm speaking for myself and not for the committee at this time. I'm concerned about means testing regarding organic production and processing of our food. I'm also concerned about the possibility of the federal certification process not checking with producers and processors regarding compliance of set-forth organic standards.

"I would hope that at least an annual inspection be done by certified federal inspectors regarding the use or misuse of chemicals introduced into the process, that should not be there. Also there should be a soil test done each year of any land that is certified to be organic. There should be an annual test run on all food crops on farm that are part of the organic program, to ensure that they meet the strictest standards of organic purity, in addition to the above monthly checks at random, an unannounced should be conducted at any processing facility preparing organic foods for human consumption.
The organic food in question should be checked at every step of the processing and packaging process.

"If any of the above checks are not done or if they fail organic standards set forth" -- "set forth, the land, grower, and procedures should be held liable for not meeting these standards and put on non-producer or -processor status for a period of six consecutive months for the failure. At the end of the six-month period, the system in question is checked again, and, if in compliance, will be allowed into the organic chain of food production for humans again.

"The entire process of organic food production should be very transparent and open to public inspection. Federal organic standards should be at least as rigid as the traditional organic certification processes and was. The health of our nation and its food supply is an issue of the highest importance."

And again, because of, you know, my own food allergies to specific foods, you know, I clearly understand how, you know, even -- you know, how our health is inextricably connected to the food we eat.

The other proxy statement here is from Larry Gilbertson.

"The testimony" -- no. As Larry: "I farm a small certified organic dairy in central Wisconsin. This
farm has been certified nearly three years and has been farmed that way at least three years prior to certification. Milk from about 40 cows is sold organic, and all herd replacements are from on-farm births. It has been a closed herd for many years, well before being involved with organics. All winter forage and summer grazing come from this farm. No split conventional crop or livestock production is done on the farm.

"I have deep concerns for organic food and the people who look to the USDA "organic" label. They want to feel assured that what they are buying and paying a premium for truly meets organic standards and that those standards are consistent for all production.

"There is little need for a National Organic standard if favoritism and exemptions are granted to large influential deep-pocket farm operations that do not want to or can not follow the standards set by the National Organic Rule.

"When stories of these exemptions come out in the press, it destroys the whole organic program for everyone, save perhaps only the few getting the favors, at least in the short term. Those consumers looking for food produced in more earthly friendly way and the small producer following the rules are directly affected. The small producer feels his work is in vain and the consumer..."
trusts nothing. Those on the outside, looking in, the
conventional producers scoff at the whole organic movement
and label it all as" -- "and label it all as. They are
only in it for the money.

"This is real unfair to the people who have
worked hard in the cause and believe in what they do. The
National Organic Program needs people who understand
organics and have a passion for this alternative type of
food production in this country.

"If the present leadership of the National
Organic Program is only really versed in conventional
production methods and maybe feel there is really no
difference, then this leadership should stay in the
conventional USDA community and not be in a position where
exemptions can be granted to rules for a select few, rules
such as: poultry outside access; or being able to feed
non-organic feedstuff because organic costs too much; or
replacement heifers slipped into large operations, that
were not raised organic due to limited supply, and waiting
to cash in quick on the rising organic market, and a whole
host of other shortcuts.

"With organic sales increasing annually, there
are many who wish to destroy this whole thing and make it
go away. Companies producing GMO crops do not like the
organic community, suggesting there may be consequences to
using their products, and they don't like the complaints about contamination with pollen drift or production mix-ups.

"Conventional food production is threatened with loss of market share. When bad press comes out regarding some organic rule that was suspended in favor of large production and the almighty dollar, those who wish to destroy the whole organic movement are just smiling."

So I'd just like -- and as far as this last sentence, I'd just like to include myself. You know, Larry and I would wish and request upon the Board to appoint people to the National Organic Program that will protect the integrity of the program.

So thank you for your time.

CHAIRMAN KING: Thank you very much.

MR. LAFAYETTE: And Larry and Jeff, thank you for your time.

CHAIRMAN KING: Thank you. Kelly.

MS. OSTIGUY: Before you start, Kelly: I need to leave, Rose is going to leave, this is not -- the public comment has been absolutely wonderful; we have a plane to catch, so I apologize.

MS. SHEA: I'm not even going to be two minutes, okay? This is Kelly Shea, with Horizon Organic Dairy. I had no prepared statements for today, but in light of what
I've heard in this room since this morning, I really felt that I needed to stand up and speak, and not only to the NOSB but to this audience also.

I'm appalled by what I saw here today. I really believe in activism and in bringing people together to effect change, but when it's based on untruth, I cannot support it. I spoke to the consumer today who stood up here -- great lady with the little boy -- and said it's very disappointing to discover that Horizon Organic is held to a different, less-demanding standard than the small farmers out there.

Who is Horizon Organic? We are a dairy marketing company, with 260 to 300 independent family farmers supplying milk to us. We are held, our company and our farmers, to the same standards as everyone else. And when I asked this lovely lady where she got her information from, she pointed to another person in this room and said that actually she was a consumer of Horizon Organic products and was shocked to learn from this person that we employed these type of practices.

Horizon Organic, since its inception in 1991, has fought for organic foods produced without growth hormones, antibiotics, or dangerous inputs, and if you really want to talk about the truth, you should talk about that. If you want to talk about the truth, you should
talk about the fact that Horizon Organic just gave all of its producers a voluntary raise, but that kind of good news is not brought up here. Untruths are brought up here. And if there is an enemy to the organic industry, it is not from without, it is from within, and I suggest we get ourselves together. Thank you.

CHAIRMAN KING: Thank you all for your public comment, it's a very important part of the process, we appreciate it, it is considered, and we appreciate you taking time out of your busy schedules and lives to come here, to help this program.

Unfortunately, we have to move very quickly --

MR. CARTER: Mr. Chairman.

CHAIRMAN KING: Yes, Dave.

MR. CARTER: If you would formally close the public comment period, I have a motion that I would like to make very quickly, while we're --

CHAIRMAN KING: Thank you. The public comment period is formally closed.

MR. ANDERSON: As I mentioned this morning during a point of personal privilege, I would like to offer for the Board's consideration a resolution that simply says:

The National Organic Standards Board expresses its strong opposition to and concern with the National
Organic Program's issuance of significant policy directives without consultation with or advance notice to the NOSB. I would so move that resolution.

MR. RIDDLE: Second.

UNIDENTIFIED FEMALE VOICE: Do you have that in writing, for the record, so that I don't have to remember what you said?

MR. CARTER: Yes.

CHAIRMAN KING: Okay, moved and seconded.

Discussion.

(No audible response.)

MR. CARTER: This does not do anything to change the motion -- the motion yesterday directs the policy development committee to bring forward some further, but I just -- as I mentioned this morning, I thought it was important for this Board to make a statement before we leave Chicago.

CHAIRMAN KING: So it's your intent that it's read into the record.

MR. CARTER: Right. Moved and seconded, this was a formal motion.

CHAIRMAN KING: Discussion?

(No audible response.)

CHAIRMAN KING: All those in favor, signify by saying aye.
BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

MS. DIETZ: I'm going to abstain.

CHAIRMAN KING: 1 abstention.

MR. SIEMON: Can we do our work plans offline?

CHAIRMAN KING: I would suggest by next Friday just submit your work plans, and then any unfinished business concerning recommendations, information, and the like, please have that to Katherine by next Friday, if at all possible. That's May 7. Next meeting.

(Off the record and reconvened.)

CHAIRMAN KING: All right.

MR. RIDDLE: An update on the status of the livestock materials that the Board's recommended, and we heard from the FDA in October, and we've heard it come up from several public commenters, the need to move that forward, so I just wanted people to know, on the record, where that's at.

MR. JONES: The document has been completed, it is at Office of General Counsel, they've raised a number of questions about the document, they have significant concerns about the level of documentation associated with the materials. We are going back in consultation with OGC and attempting to answer their concerns. But that's where it's at, and it won't move forward until those concerns
get answered.

MS. DIETZ: Keith, are any of those materials on the docket that we have re-reviewed from the May meeting or are these all --

MR. JONES: The docket contains everything through May 2003.

CHAIRMAN KING: Any questions, comments?

MR. RIDDLE: No, that's all. I just wanted to know and have it in the record where it was at, so -- some things may get kicked back to the Board if there's clarifications on kind of our language or --

MR. JONES: I actually don't think it's -- you know, and this is what I know at this point, and I am drafting that docket, it is in my control, okay, so my conversation with OGC at this point leads me to believe that it is a drafting process, that the information that we have is sufficient, it's a question of getting it in the docket. I do not anticipate that we'll need to come back to the Board.

We have gone through the consultation process with FDA on all of those materials. Some of the materials I think that were mentioned in public testimony this morning, as many of you know, are off-label use and will not be included in the docket. Propylene glycol for the use of treatment of milk fever is an off-label use for
that material, and that will not be included in the
docket.

CHAIRMAN KING: Other questions?

MR. RIDDLE: Thanks, Keith.

CHAIRMAN KING: Thank you very much. Quickly,
at our last meeting we had tentatively said we would like
to have an NOSB meeting in conjunction with Expo East.
I believe the proposed dates were October 12, 13, and 14,
so if people could confirm that on their calendars
quickly.

MS. CAUGHLAN: Is the 12th, 13th, and 14th the
date of --

CHAIRMAN KING: -- the meeting. Expo would
follow.

MS. CAUGHLAN: Expo would follow it, as it is
this time.

CHAIRMAN KING: Correct. It's my understanding
it begins on the 15th, Expo.

MR. O'RELL: You know, Mark, the only thing that
I would raise is a question -- for those people who have
to be there for the full length of Expo, like we have to
be for the full length of OTA, this is for seven days that
we're out on the road, and for people who travel all the
time, it's really tough.

CHAIRMAN KING: Yeah.
MS. CAUGHLAN: But it's important, for a lot of us, to be able to combine those two.

MR. O'RELL: Then hold them overlapping somehow, to cut the time, if that can be done.

MR. SIEMON: As much as I agree with Kevin, because I'm going to be here nine days, it also brings a lot more public commenters, the other side of the coin.

MS. CAUGHLAN: Yes, and that's very important.

MR. SIEMON: The other side of the coin. So it really is a toss-up -- it's a tear, it really is. And Goldie, they're proposing that we meet Tuesday, Wednesday, and Thursday, and then Expo starts on Friday, is the proposal.

MS. CAUGHLAN: Right.

MR. SIEMON: So it's a little better than this, where we've got a day lag in here.

CHAIRMAN KING: Right. Right.

MS. CAUGHLAN: Or a day of recovery, no matter how you -- depending upon how you look at it.

MR. RIDDLE: Just one other factor, and Rose is gone, but, you know, there's that whole sunset proposal or process out there, and there -- if that does kick in, there's a certain period where the Board would have to meet, and so that may impact or we need to kind of coordinate or think about that in our meeting schedule,
but for now let's set it at this --

    CHAIRMAN KING: Well, thank you, Jim, that is an important point, we may need to adjust based on the sunset provision, but for now, if we could agree on October 12, 13, and 14, that's Tuesday, Wednesday, Thursday, we'll just move forward with that.

    MR. RIDDLE: Okay. As far as our next executive, will you just send -- executive committee meeting, will you just send something around?

    CHAIRMAN KING: Yeah, I'll send an email.

    MR. RIDDLE: Yeah.

    CHAIRMAN KING: Okay. Thank you. Any other business?

    MR. SIEMON: I move to close.

    MR. CARTER: I second.

    CHAIRMAN KING: It's been moved and seconded that we adjourn. The meeting of the National Organic Standards Board is officially adjourned. Thank you.

(Whereupon, at 12:08 p.m., the meeting was adjourned.)

UNITED STATES DEPARTMENT OF AGRICULTURE

NATIONAL ORGANIC STANDARDS BOARD MEETING

Meeting held on the 23rd day of October, 2003

at Radisson Barcelo Hotel
2121 P Street, N.W.
Washington, D.C.

TRANSCRIPT OF PROCEEDINGS
MEMBERS OF THE BOARD:

DAVID E. CARTER, CHAIRMAN
MARK KING, VICE CHAIR
JIM RIDDLE, SECRETARY
KIM M. BURTON
OWUSU BANDELE
GEORGE L. SIEMON
ANDREA CAROE
GOLDIE CAUGHLAN
REBECCA J. GOLDBURG
DENNIS HOLBROOK
NANCY OSTIGUY
ROSALIE L. KOENIG
MICHAEL LACY
KEVIN O’RELL

THE CHAIRMAN: All right. If we can reconvene
the meeting. I can only reconvene the meeting when
Katherine lets me reconvene the meeting. We’ll
reconvene the meeting. Anyway, I want to welcome
everybody back for day two of the NOSB. This morning we
are going to spend dedicated exclusively to public
comment. If you do want to comment, there is a signup
sheet at the back. You need to sign up to give public
testimony. We would ask that out of courtesy that
everyone silence their cell phones, and if you have
conversation you need to carry on please do that in the
hallway so that we can stay focused on the folks that
are presenting public testimony. For those of you that
were not here yesterday, this meeting is really
dedicated to two areas, and the over arching thing is
materials, but today what we’re looking at is a part of
that. The other part of it is going through some of the
materials that have already been reviewed by the NOSB
and using a standardized format to kind of harmonize how
we come to our decisions. But what we want to focus on
today is the criteria that the Board utilizes in the
materials review process that deals with the
compatibility with organic agriculture. And we’re going
to be talking later on this afternoon about that
criteria, and coming up with our guidance document or
our instructions how we use that, and so we’re
particularly looking for input on that this morning.
That being said, this is public comment and as members
of the public you’re free to say really whatever you
want in your five minutes when you come forward because
this is your time to give us some input. So everyone
will be asked -- will be limited to five minutes on
their comments. Jim is our official timekeeper here,
and he will hold up the official NOSB authorized form
X93-4, the one-minute speaking form. So just when he
holds that up you’ll know that it’s time to wrap up your
comments. So we’ll start at the top of the list and
work down, and leading off the comments this morning is
Jim Pierce, Organic Valley, and then next up will be Dr.
Mac Devin.

MR. PIERCE: How are we doing for sound on
this microphone? Good morning. Like the swallows to
the cliff of Capastrano or the buzzards to Hinkley, Ohio
the NOSB has returned to the Barcelo Hotel in
Washington, D.C. A lot of the usual bird watchers are
here to witness his spectacle along with plenty of fresh
curiosity seekers. Ever the optimist trapped in a
cynic’s body, I honestly hope no one leaves here
disappointed but I am glad to have the opportunity to
illuminate some concerns. For the record, my name is
Jim Pierce, self-appointed certification czar at Organic
Valley, a certified organic farmer owned marketing
cooperative proudly boasting over 600 members moving
over a million pounds of organic milk every day. My
main interaction, one of my main interactions with your
Board besides street theater has been to assist in
championing 17 materials for inclusion on the National
List for livestock use. My constituency is confused and
frustrated. The messages they’re hearing from the
National Organic Program are mixed, muddled or non-
existent, especially recently concerning livestock
materials. I found it very disturbing to learn that the
agenda for this meeting has been usurped, that nothing
from your Board’s committee work plans is going to be
advanced, that two proposed rule amendments are still
not published, and that the third docket, the one that
matters most for the 600 plus Organic Valley farmers
since it will presumably include livestock materials and
recommendations is not yet scheduled for release. The
challenge today is like a high school essay. We’ve all
been given the same assignment, write a five-minute
essay titled in substance review and evaluation, what
constitutes compatibility to consistency with a system

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
of sustainable agriculture, organic production, and handling. Better than what I did on my summer vacation. Fortunately for you all it’s open book and the answers are right in front of you. God bless Jim Riddle, the policy committee, and everybody who assisted them to compile this draft document titled Compatibility with Organic Production and Handling. Friends, this wheel has been rolled. The 1990 Farm Bill defines sustainable agriculture to include an integrated system of plant and animal production practices. In 1994 in an NOP report to the NOSB titled Moving Toward Sustainability States organic management methods protect the environment, minimize pollution, promote health, and optimize biological productivity. And my favorite nugget of insight from the 2001 revised Codex guidelines, the consumer will not be deceived concerning the nature, substance, and quality of organic food. To this most helpful guideline I would offer you another quote first poorly pronounced in the native dialect and then translated, the life of the land is perpetuated in righteousness. That’s the state motto of Hawaii, first quoted by King Kamama [ph] III in 1947 after being passed along countless generations part of the oral fabric, the life of the land is perpetuated in righteousness. Indigenous peoples, anyone in fact, who
puts their hands into dirt on a regular basis
understands this instinctually. Righteousness is
sustainable and compatible. Righteousness can be
synthetic or processed. Righteousness certainly can be
a recent discovery, but righteousness is also
availability. It’s transparency. It’s accountability
and consistency and unfortunately what the farmers and
handlers are getting from the National Organic Program
is not entirely righteous. I urge you as a citizens’
advisory board representing us to stand strong in
solidarity and demand better service from the USDA
program, which you have been mandated by law to advise.
We need the tools and recommendations that you work so
hard on now. The four-year sunset on the signing is
over half gone putting the organic poultry industry in a
very awkward spot. Ten other livestock materials are
trapped in a semantical vortex between FDA and USDA,
which could have and should have been resolved in an
early September meeting that was unfortunately
cancelled. Even though technical corrections like the
reinstatement of carrageenan to the list has taken over
three years jeopardizing the certification of otherwise
righteous handlers. I repeat we need these tools now.
I would also remind you that the paradigm of organic
production is for better or worse practiced in the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
conventional world. Economic practicality must be weighed along side animal welfare and environmental sustainability. The National Organic Program celebrated its first birthday three years ago. An unruly infant, this baby is looking like it will be a terrible two for the record books. I shudder even to think what it’s going to be like as a teenager. Maybe I’m being too critical. From a comfortable distance the NOP is working pretty well for most people in most situations. The USDA enjoys significant respect by consumers. The NOP Web site has improved dramatically, and at least one blatant attempt to circumvent NOP process through appropriation amendment was resoundly defeated, all with an NOP that is inarguably understaffed without adequate resources and forced to sail in uncharted waters. Stick those feathers in your cap understanding that there’s still a lot of work to do. Paint a clear bright line. Don’t leave here without determining exactly what constitutes compatibility with a system of sustainable agriculture, and you will have once again accomplished the excellent work that we have come to expect from you all. Thank you and God bless.

One of the things I forgot to mention in this part too is that under our policy is that a person may submit a
written proxy to the NOP or NOSB requesting that another
person speak on his or her behalf, but no person shall
be allowed to speak during the public comments period
for more than ten minutes, those people carrying
proxies, so I just always like that line added at the
outset. Okay. We got Dr. Mac Devin, and then following
that will be Tom Hutcheson.

MR. DEVIN: Good morning, and hello again.
The last time you guys met I talked to you about a
compound that my company produces. I’m a veterinarian
with Fort Dodge Animal Health. For the record, my name
is Mac Devin, and I’m back here today to keep it before
you. And interestingly enough in a nice fashion given
what you’ve been talking about. Moxidectin as it turns
out among the ivermectin and nobimycin [ph] compound
family, which is all housed under the term
macrocyticlactin [ph] happens to be a whole lot more
friendly to the dung dwelling insects, and indeed that
are affected by the excretion of these various compounds
is parasiticides. As you have been told before, it is
very friendly to the dung dwelling insects, primarily
the scrabbidy [ph] which would be the ones we call the
dung beetles, and in other people’s terms the enviro
beetles because these guys are the ones who are
responsible for manure management out on the pastures.
We talk about sustainable agriculture. That involves animal agriculture. And with the economic issues that Jim has just mentioned, that’s important because if we have large populations highly concentrated on grazing lands then manure management becomes an issue. So consequently we have to have products that are not harmful, that encourage those populations so that we have adequate manure management. These beetles are very important in that they bury that waste and actually put it down in the root zone where the nitrogenous parts of that waste can be utilized by the plants to produce forage. Extremely enough the product that you currently have approved, ivermectin, is very damaging to those beetles at the excretion levels in the manure, eight parts per billion whereas moxidectin up to 260 parts per billion does not damage the emergence of the larvae. So I would encourage you to as you review these compounds to at least look at the importance of that manure management issue because if you look at animal agriculture, particularly where you have very high population densities, that is a very serious issue and certainly an environmental issue as we think about run off from pastures. Much of our grazing land in this country is land that is not necessarily flat. It’s on quite a bit of slope, a lot of streams in the area, and
those are things that you as a Board have to address as you select these compounds. That’s really what I came here to say, and I appreciate your time. And I’ll be glad to take any questions if you have any.

THE CHAIRMAN: Questions?

MR. DEVIN: That was easy. Thank you.

THE CHAIRMAN: Okay. Tom Hutcheson, and then we’ll go to Mike Condon.

MR. HUTCHESON: A couple of items to hand out. I have 30 copies so there will be a bunch left when we get to the -- Tom Hutcheson, associate policy director for the Organic Trade Association. First, congratulations to all on this first anniversary of the publication of the final rule. It is very exciting to have come to a point at which we are led to move to more specifically articulate the principles of maintaining organic integrity through handling. Regarding compatibility with organic systems, please keep OTA’s principles of organic production in mind along with the Codex principles, copies of which are circulating. OTA wishes the Board great success in refining these ecological system management principles, and OTA is more than willing to work with NOSB as it develops and refines specific handling criteria from these principles of the management of energy flow and material cycling,
the basic parameters of ecological science. If it were
an easy task it would have already been done. I for one
do not expect any easy, simple, or quick solutions but
it is very important work and every further step taken
will make NOSB’s decisions more robust. Thank you.

THE CHAIRMAN: Questions for Tom? All right.

Mark Condon, and then Liana Hoodes.

MR. CONDON: Good morning, everyone. I’m
representing the American Seed Trade Association. Let
me just give you a little background of our group.
Founded in 1883, the American Seed Trade Association is
one of the oldest trade organizations in the United
States. Its membership consists of over 800 companies
in North America. We have many members that are very
much involved in development of organic seed or organic
agriculture production. I have three issues that I
would like to bring to your attention today that we have
reviewed. The first one is the current exception
allowing the use of conventional untreated seed in
organic production. The second issue is the inclusion
of seed pelleting, film coating, and priming services
within organic seed production, and lastly the
acceptance of food grade permitted substances in organic
crop production system. AST wishes to point out that
the permitted use of convention and untreated seed is a
major exception to the required use of organic inputs in
organic crop production. While we acknowledge that the
availability of seed varieties produced organically is
still limited continuing to allow crop producers to use
cheaper untreated conventional seed will now only
perpetuate low supplies from organic seed. Currently
the majority of producers of organic seed are failing to
sell sufficient quantities of their inventories. The
current exception serves as a disincentive now to
growers to purchase more expensive organic seed. The
situation is also causing many organic producers to
consider dropping out of the organic seed production at
the current time. ASTA therefore feels now it is time
to establish formal deadlines where organic seed is
mandatory for organic crop production. To facilitate
the move toward mentor use of organic seed AST would
like to assist USDA in establishing a national data base
of organic varieties to be published on the Internet.
We point out that it currently has a target date of the
end of this calendar year as all members are going to
develop national data bases to promote the use of
organic seed stocks. ASTA also believes there’s a need
to have an additional section of the NOP rule developed
for seed technology companies that provide pelleting,
film coating, and priming services. Currently such
technology is being evaluated under Sections 205.601, 205.602, and even 205.605. However, these things only refer to processed organic foods. The difficulty is that film coats and pellets are processed products, which cannot be labeled under the current language. This oversight needs to be addressed due to the complexity of pelleting and film coating formulations. The seed industry must have the option of labeling organic seed with these technologies as 100 percent organic or made with organic. And lastly the seed industry advocates acceptance of food grain permitted substances in organic crop production systems. Currently those allow food grade synthetics in Section 205.605 must be evaluated again for the use in organic crop production. And as supported by NOP staff there needs to be immediate acceptance, not re-evaluation of materials permitted in food processing for use in organic crop production. We appreciate the opportunity to present our views to the National Organic Standards Board, and remain at your disposal for any clarification or additional information on these or other seed-related topics. Thank you.

THE CHAIRMAN: Thank you. Questions? Yeah. Kim, then Jim, then Mark.

MS. BURTON: I’m trying to take notes at the
same time. It’s very challenging.

MR. CONDON: Yes. I can imagine.

MS. BURTON: You had mentioned that synthetics should be reviewed for crop production, and just a reminder the process for us to review any material would be to petition it.

MR. CONDON: And we intend to in the future.

MS. BURTON: So somehow we need to know what you’re looking at or what exactly you’re talking about before we can do any action, so I encourage you to go to the Web site and look at the petition process for those materials.

MR. CONDON: Thank you. We will do that.

THE CHAIRMAN: Jim.

MR. RIDDLE: And I just want to add to that you made a reference to the 205.601 and 602, and those are materials used in crop production. It’s the 605 that is food handling, food processing, so that would be the appropriate point to petition for inclusion on 601 with the synthetic allowed for use in crop production, and seed treatments is a category under OPFA, which can be considered so the door is open for consideration. That’s not a given that something will end up on the list but the door is open. The question I have concerns the production of organic seed from foundation or...
certified stock, which from my understanding is often
treated to preserve germination and storage. So how do
you get to organic seed when that parent stock can’t be
used under the regulation and prohibition of treatments.
I mean that’s an issue I hear from seed producers.

MR. CONDON: It’s a very big issue, and
actually it is the number one issue that we believe is
limiting the supply of organic seed. Our position
simply is we believe that seed treatment should be
allowed in the breeding process of seed. We do not
advocate treatment of the finished product that would be
available to producers, but we believe there would be no
residue in the breeding process, and so therefore it is
really a moot issue. And that one specific regulation
is basically preventing many seed companies from
developing many organic varieties, and I highly
encourage you to look at that particular proposal as
well.

MR. RIDDLE: And to follow up on that, that
could be part of a petition itself that the limited use
of a certain material be requested with a restriction on
its use only in the production of organic seed but not
in the breeding program.

MR. CONDON: I’m sure you’ll be seeing our
petition shortly.
THE CHAIRMAN: Mark.

MR. KING: Could you speak a little bit more in detail to the demand for organic seed versus conventional price difference? You talked about inventories, seed companies considering dropping out.

MR. CONDON: Well, just in general seed is not a homogenous commodity in terms of pricing. I couldn’t really respond because quite frankly different varieties have different price structures. But the general fact is that the process verification steps that people need to go through to certify organic seed does constitute additional regulatory and other type of processing steps, which will in fact increase the price of seed. And what we see now currently happening is that because of the current exemption people are basically still relying on conventional seed because the producers prefer to have a cheaper seed, and this is actually reeking havoc in the process. The growth in organic seed is still modest. I think it’s one to two percent of what is generally produced, and that’s a very, very estimate figure. We don’t envision it to be a major portion of the seed industry but it is a segment of the industry that there are specific entities that wish to address that and to become very specialized in that.

And for that reason it’s that segment we wish to
represent their interest and make sure that whatever the
rules and regulations are that at least this segment of
the industry is giving a good opportunity to at least
comply with what we believe is the sound ideals of
organic seed production.

THE CHAIRMAN: Other questions? Yeah, Rose.

MS. KOENIG: I actually did a presentation
this past summer on seeds and had the opportunity to
look at the data bases and also speak with some of the
seed companies that were currently engaged in organic
production. And as far as the data base there are
actually through the Organic Materials Review Institute.
I think there’s a number of organizations that if you go
to the Web there is access at least of the companies.
It doesn’t list every single variety. So if you’re in
the process of preparing something like that, I think
there are -- there’s information out there already
compiled. I guess the point when I spoke to some of the
companies that were producing seeds there were a few
major points that I recall that the heads of those
companies told me. One was more of a quality issue that
they hadn’t convinced themselves yet that they could
bring -- get the quality because they were dealing with
many smaller producers. It was more of a quality
control issue at the company, not necessarily a material
issue that I heard from that particular producer. Just
locating the growers that already were certified and
figuring out the mechanism to work with a lot of -- a
large number of producers to get the same quality
control. So I think that’s very different than
necessarily materials aspect of it. And then
additionally one of the concerns was the technologies
for some of the crops, more specialization, such as the
greenhouse cucumbers or seedless watermelon where you
need to use certain techniques and chemicals in that
process to actually produce a seedless. So I spoke to
that person and said those types of things would
definitely have to be petitioned. And then, you know,
again I recommended similar to what Jim is saying if
it’s really a very specific use if you narrow down the
use to that specific purpose, I think it’s just a matter
of then you can really explore the alternatives. So I
think if your group does do that application process to
certainly be very definite and provide some of the
background and technical information. And then as far
as the seed coats go, I know again the Organic Materials
Review Institute isn’t the USDA but they have one seed
comp[any], Harris has a coat that I think is -- well, it’s
a natural material that is already on there so there are
some pelletorization techniques that do use natural,
more of a natural process, and if those do exist, and Harris is a major company, you have to look at again are there alternatives out there, if there are companies that are producing alternatives using natural products. You have to consider that when you’re doing your petition.

MR. CONDON: I will do that. It’s just that organic seed production is a major departure from conventional seed production. It’s going to take some time to kind of move it in that particular direction. I think you all appreciate that. Just two things. One, please view our Web site, www.amseed.org. We have a very comprehensive policy position paper on organic seed that outlines many of the concerns and what we can comply with and what we cannot comply with. And that’s listed on my thing. And also just to be aware that the American Seed Trade Association has established an organic, a standing organic committee, within the association so the first meeting of this committee will occur in January in Savannah, Georgia. So at that time we will be reviewing a lot of that, and I’m sure get the consensus from all segments. We represent not just vegetable seeds but corn seed, soybean seed, and a whole lot of seed, and hopefully they’ll be bringing to you a consensus position on many of these issues in the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
future.

MR. RIDDLE: And just one quick comment. You mentioned your Web site, and I was going to ask about that. I’m glad to hear there’s a committee and you got policy up there. Do you have listings yet of the companies producing organic seed and varieties through your Web site?

MR. CONDON: Not at the current time.

MR. RIDDLE: Okay. But, yeah, as Rose mentioned ATRA has some of that. Are you familiar with ATRA?

MR. CONDON: Uh-huh.

MR. RIDDLE: And then OMRI does but it really comes down to a certification issue at this point, and there is a complete listing of all accredited certifiers on the NOP Web site, and if they’re aware of all the availability that’s going to help move it forward as well, so you certainly are free to provide information to accredited certifiers.

MR. CONDON: As a matter of fact, the chairman of that committee is an organic certified of seeds so we have industry plus, you know, organic certifiers involved in this committee.

MR. RIDDLE: Thanks.

THE CHAIRMAN: Thank you very much. Any other
-- okay. Next up is Liana Hoodes, followed by Emily Brown Rosen.

MS. HOODES: Good morning. I’m Liana Hoodes with the National Campaign for Stable Agriculture. I’m at a real disadvantage. I have to read my own handwriting here. It’s quite a challenge. I’d like to start by congratulating you all and the NOP on the one year anniversary of the implementation of this program. While we don’t want to make light of the years of work which have come before, you both have completed the one-year mark of a really Herculean effort of launching this new and innovative program for a national standard and a label. This is just an amazing amount of work and has really moved forward quite a bit in the past year. At the NOP you’ve done a lot of work with few staff with greatly increased Web communication to joining hands with the community to face the assault on the livestock feed standard, and initiating the one-time internal audit with ANSI. To you on the Board, we know that the federal advisory committees in government are usually made up of dedicated volunteers. I believe that you all have raised that bar the work of a volunteer. It is amazing and we are all out here often stunned at the level of work that you perform in the program on behalf of us all. Your work has not only been on standards,
materials, and the National List, but for us the work is really important in continuing to uphold the public trust, listening, responding, and giving voice to the concerns of us out here. That is a major piece that we thank you for and consider as a big part of your job.

And we at the National Campaign Organic Committee along with many, many other groups have been out there on the Hill and elsewhere advocating for increased funding and increased attention to the work of this Board and to the program. In that light I ask you to consider the growing pains of a program in its infancy, continue to evaluate and improve the program while we all celebrate its success. In the spirit of the one year look at the program we have produced this short piece on some emerging trends and challenges in the program. It is a very short case study that concludes with six recommendations that we ask you to take to the department and to your congressional delegation. These recommendations to USDA are, 1, publish a time line process and protocols for USDA in addressing NOSB recommendations made since the final rule. 2, establish a permanent peer review panel. The NC audit addresses the international norms for an internal audit but it does not as far as we know meet the requirements for establishing a peer review panel. 3, bring the NOP into

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
full compliance with ISO 61 and ISO 65 guidelines. 4, develop a program manual for the NOP’s accreditation program in compliance with ISO 61, which is approved by the NOSB and made available to the public. 5, recognize third party accreditation programs as recommended by the NOSB to reduce the expense and time consuming burden to certifiers of double accreditation. 6, recognize that all entities involved in organic, producers, handlers, certifiers and consumers must have full appeals rights. The process for these appeals procedures must be promulgated through notice and comment rulemaking. Finally, know that when all is said and done the failure of USDA to implement congressional intent jeopardizes consumer confidence in organic. Thank you.

MS. ROSEN: Hi. My name is Emily Brown Rosen. I’m glad to have another opportunity to address you today. A couple of things first before I talk a little bit about compatibility just based on what happened yesterday. I think we had a really nice opportunity with the FDA coming in. I’m really glad that that happened, and that discussion was very productive. I think that this is a real break through, and I think we
got some clear signals from them that they’re willing to
work on language and it is a matter of semantics on a
lot of these products that you’ve worked hard to review
and recommend. I think that work could be done very
expeditiously to scrap some language and revise some of
those annotations, send them back over there, get them
to sign off, and get it in a docket and get it out. I
think there would be no reason to slow down on that now,
and it is something that really needs doing. I also
want to talk briefly about the whole idea of the sunset
review. I know there’s been ideas floating around how
to handle that. It’s going to be a huge project
obviously, and the process is long. We see the process
takes long to review materials, so I would suggest this
idea of I think it came from NOP to publish a Federal
Register notice announcing the eventual sunset review,
and just letting the public sign up for items that they
think deserve attention. And I would recommend not
waiting to do that. I recommend doing that as soon as
possible considering that, you know, it’s been taking
three years to get dockets published. I think we should
start that now. Then the critical ones that need review
can be addressed, and then we can -- and also from the
point of view of the contractors who said yesterday that
it’s hard to budget their time. They don’t know when

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
the assignments are coming in, and they have a certain amount of money to work with. You know, you have this reserve. If you identify some critical ones that need doing, then they can budget their time better, their staff better, and get the work done in a more timely way. So I’d just ask you to consider that. Moving ahead, compatibility. This is clearly a really important role for the NOSB under your authority of reviewing materials to the OPFA criteria. And I think it was initially written into that also with the concept of this is criteria of flexibility of criteria that compatibility is not a hard and fast thing. It’s basically -- urge you to consider basing it on principles of work and production as your Board did in 1994 recommended how to evaluate this criteria based on principles of organic production. And there was some developed at that time and your Board has developed them again now. You have a good set of principles to work from. It’s similar to Codex principles and Codex also has, I’d like to remind you, has moved forward with their criteria for input evaluation this year. So we have a new draft there, and I highly advise you to incorporate that into the whole compatibility thing. The number one criteria under Codex is any substance must meet the following general criteria. It’s
consistent with principles of organic production as outlined in these guidelines. I think that gives you a lot to hang on, a lot of good considerations to work from. Let’s see. You know, the general principles we all know, and this is the point where you get to on the TAP review to say does it meet all these principles, does it meet most of these principles, do we have doubts about some of the suitability here, and that’s why I also urge you to consider the precautionary principles, which has been widely applied in Codex, IFOM [ph], and international considerations. And it grants you a little bit of flexibility and a protective nature for the organic consumer. I’d just like to read this. When an activity raises the threat of harm to human health and the environment precautionary measures should be taken even if some cause and effect relationships are not fully established scientifically. In this context the proponent of the activity rather than the public should bear the burden of proof. I think this is where it’s your job to protect the organic consumer when something doesn’t appear to be fully warranted to meeting all the criteria for the organic rules. And that’s really it. Any questions?

MS. KOENIG: I had a question on the viewpoints on this concept of the sunset provision and
publishing a list. I kind of thought about the same
system myself, and I guess the only question to you
would be if you publish a list and you don’t get any
comments does that mean that the product is accepted or
-- you know, needed or not needed. How do you interpret
some of the comments -- certainly we get comments, you
know -- if there are no comments when we publish
something, does that mean everyone is satisfied and
therefore it stays on or does it mean that...

MS. ROSEN: Well, then it would probably be --
that’s probably a legal question. I mean, you know, you
probably are -- you’d have to look at the statute and
required to review the list, but there’s probably many
ways to do that, not with TAP reviews. So I probably
wouldn’t be -- you’d have to get NOP to give you counsel
on that. I’m not sure what you would be required to do.
I have a feeling you’d get comments. I personally know
you’d get comments on the rules. There’s a number of
things that we’ve identified that just need
clarification or reconsideration. And I think if we had
that list on the table up front it would be easier for
you to divide up the work over the next couple of years
and get started on it.

MS. KOENIG: I guess your -- there’s two ways
to look at it. I think the approach of publishing that
list when it’s certainly to facilitate so that we don’t have to use a lot of funds to perhaps repeat a lot of work or look at things...

MS. ROSEN: Right. You can identify the things that are generally acceptable, yeah.

MS. KOENIG: Right, but so what -- what I’m hearing from you is you see the utility of that publication in terms of time management.

MS. ROSEN: Well, I think it makes it a public process too. It’s not like you’ve chosen exactly what needs -- I know that’s something you’ve been struggling with. It gives the public -- you know, and you can see the volume and quality of these comments, and you can judge -- you know, give you a guide to what’s really critical.

THE CHAIRMAN: Kim.

MS. BURTON: We have gone through like four or five versions of how to review the sunset, and the latest one is pretty much doing exactly what you say, just publish the list, receive the public comments, and then start reviewing them that way. We couldn’t really determine a fair way or an accurate way or prioritization or anything other than...

MS. ROSEN: I mean I don’t know if it has to be a Federal Register notice but a notice of some sort...
and then get it started, yeah.

MS. BURTON: So we do have another draft on
the table.

THE CHAIRMAN: Jim.

MR. RIDDLE: Yeah, just a comment to the
Board. You brought up, Emily, the Codex guidelines, and
I just wanted to point out to Board members that there
are excerpts from Codex in the draft on compatibility
that I handed out yesterday under addendum F so there’s
excerpts from the Codex principles, and then the
complete new revised criteria for materials review.

MS. ROSEN: Do you have them in there because
I have some more copies right here.

MR. RIDDLE: Oh, okay. Yeah, they’re already
in. I pasted them in.

MS. ROSEN: Oh, okay.

THE CHAIRMAN: And also the precautionary
language is included in one of the documents that the
policy development committee distributed yesterday too.
Other questions for -- okay. Thank you, Emily. Dave
DeCou, and then Hubert Karreman.

MR. DECOU: Good morning. My name is Dave
DeCou. Thank you for the opportunity to talk with all
of you. I got to speak to you for a few moments
yesterday. Among many other things, I am an organic
grower, and one of the issues around concepts of consistency and compatibility with sustainable agriculture or organic handling or whatever the other terms are it’s imperative from a grower’s point of view that flexibility be maintained in the working actions of those rules. As a grower, I’ve watched other growers convert to organic, and the first inclination is always to go for a substitution. Well, I used to use this. What can I substitute that’s organic. In the end almost everybody who succeeds as an organic grower goes beyond that, and comes up with an entirely new system, a new way of looking at it and that requires flexibility on their part and flexibility within the parameters that we are given. So I see the same thing being necessary probably in the food handling, organic food handling level, with that flexibility in new systems. We need to leave opportunities for people to find another way to achieve a product of whatever the product may be of equal quality, if it’s organic probably higher quality. I see that in the organic produce industry that our organic produce is typically always equal to and often higher than conventional produce, not that I’m promoting anything. Then I’d like to reiterate several other things that were stated earlier. Look at the international standards. Don’t go in opposition to them...
at all. In the long run as growers what do you want to do. Most of us sell locally. A few of us ship out of the country. We want to be able to do it without having to go, oh, my God, I got to keep track of this other little detail here in my paperwork because when I ship it to Japan I can’t use this or that or whatever it may be, so let’s not deviate from the possibility of harmonization so that we can all have a very similar definition of organic across the globe. And the precautionary principle just makes a great deal of sense to me. Our consumers are considering that the products that we provide are as healthy as they can possibly be and let’s be pretty cautious about that. Thank you.

THE CHAIRMAN: Questions for Dave? Thank you, Dave. Hubert Karreman, and then Urvashi Rangan.

MR. KARREMAN: Good morning. Hubert Karreman, Pennsylvania. If the Board is willing, I’d like to finish up something from yesterday. That was an excellent session. I’m really glad that happened. I’d like to maybe emphasize that please streamline the process for the veterinary materials you already voted on last year that were already endorsed by this Board, those troubled items. Please include the items with the simple annotation under veterinary directive with a valid client patient relationship, and this will enable
the Amduga [ph] clause. And please create one category under livestock materials. You’ve already set precedent for that with the one category under the processing materials. Then items won’t be tagged as Madisons technically and the FDA will not need to assert their regulatory authority over them as we heard right from them yesterday. As this process is hammered out, I’m hoping that the NOP might grant some latitude, perhaps as the FDA would put it regulatory discretion to the accredited certifiers regarding these materials. Since these were already voted on to be allowed and it’s basically a technical rewriting for them to pass into the Federal Register, I’m hoping that you could maybe give them the accredited certifiers just a little wiggle room or so until they’re in the register. It kinds of freaks out farmers when they treat a cow with gluconate and they get a noncompliance. It just really freaks them out. It freaks me out too. So perhaps regulatory discretion may be the most important term that came out of yesterday’s meeting. Now in substance review and evaluation what constitutes compatibility consistency with the system of sustainable agriculture, organic production and handling. I think we all agree that humane treatment of certified organic livestock is paramount but let me quote 205.238(c)(7). “The producer
of an organic livestock operation must not withhold medical treatment from a sick animal in an effort to preserve its organic status. All appropriate medications must be used to restore an animal to health when methods acceptable to organic production fail. However, livestock treated with a prohibited substance must be clearly identified and shall not be sold, labeled or represented as organically produced.” That’s quite a vexing statement especially for guys like me that are out in the field and for all the farmers. Basically a farmer cannot withhold appropriate medical treatment, yet if he or she uses prohibited materials the animal will be removed from the herd. In essence, the farmer is being punished for doing what’s best for the animal. That’s quite the Catch 22. In agriculture we humans are in control, but is it control with compassion for the animals under our care when they’re hurting or is it by cold calculation in a purely mechanical reductioness way. In order to keep compassion high in the standards for humane care, I would suggest a line of treatment with a prohibited material within the first year of life when the young animals’ immune systems are still developing. This is much more scientifically based than the no prohibited materials after the last third of gestation. The last
third of gestation clause has absolutely no scientific basis. It is a number pulled out of thin air, and it should be done away with. Do require the strict organic feeding and management from birth with the allowance of therapeutic use of perhaps prohibited material but only for individual cases diagnosed by a veterinarian. And I will virtually guarantee you’ll hear a collective sigh of relief from both small farmers and large farmers. To guard against cold calculation and reductionist extremism please also free yourselves from the excipient and preservative quagmire. Please stay focused on the active ingredients when it comes to veterinary compounds for the relief of pain and suffering. Excipients will hog tie many of the compounds that are critical in helping to paint the big picture of organic agriculture as compassionate and truly caring for the animals within the system. Thanks.

THE CHAIRMAN: Okay.

MS. BURTON: Can you repeat your simple annotation for me?

MR. KARREMAN: Yeah, in the beginning there?

MS. BURTON: Yeah, under veterinary directive with.

MR. KARREMAN: I think it’s simple. I mean it’s straight up. It’s a few words. Under veterinary
directive with a valid client patient relationship, and that enables the Amduga clause to kick in.

MR. BANDELE: I just had a question. One concern that I would have would be that if you put that under veterinary directive then veterinarians with more training in conventional would be more apt to recommend those synthetics. Could you respond how you see that?

MR. KARREMAN: You mean it would kind of open up the door that way?

MR. BANDELE: Yeah.

MR. KARREMAN: Okay. I stand in front of you here, and I know how to use alternative veterinary medicines. There’s probably in all honesty maybe six or ten of us in the country that know how to use them for livestock. There’s a lot of alternative veterinary medicine in cat and dog and horses. So when I come to you and last year I came to you asking for these products, I’m thinking about my colleagues out there that have no clue about alternative medicine but they’re out there any time of the day or night, and they want to do what’s best for the animal. And it still would be only like for emergency uses. It’s not like a routine daily thing. I mean keep all the feed and all that stuff as strict as you can make it, and I mean it. But it’s to relieve that occasional pain and suffering when

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
a veterinarian, not me or even me, says, gee, this animal needs some synthetic morphine or whatever to relieve pain. First, there’s no alternatives to that in the holistic world, and secondly most vets are conventionally trained, and they wouldn’t know anything else. Does that answer your question? I don’t think it opens the door because there’s such a few compounds. It’s not like they’re going to be dispensing it. It would be the use at the time for that animal, and it would be recorded.

MR. BANDELE: But I think what you said in a way kind of goes along with my concern that if they don’t know alternatives then they would be more apt to deal with the synthetics. Not you because in terms of being in tune with organics, but the other folks out there.

MR. KARREMAN: Well, all I can say is I truly hope that there’s an educational process for other veterinarians out there that are working with an occasional organic farmer too. I have a high concentration. I got 53 certified organic dairies and three beef certified farms. Most guys only have one or two in their area. So they’re not going to really stay up on it. And, believe me, I try when they call me from Illinois, when they call from Wyoming, whatever, I talk

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
with them. And, you know, I try to teach them stuff but there’s only so much you can do but there will be an educational process. That’s a matter of time. But we need these things right now. I can go home tonight and be called out for an emergency, and I may need to use one of these compounds. And so I’m hoping that the NOP will not throw a noncompliance on the certifier of that cow because I used a synthetic or a colleague did. That ties into the timing thing. I mean time is of the essence.

THE CHAIRMAN: Mark and then Kim.

MR. KING: Yeah. Just a quick real life example of something that happened, so a question for you. A local dairy farmer called me a couple weeks ago and had a cow that had they thought either hip dysplasia, injured spine, something kind of, you know, conditions were slick in the pasture. Maybe the cows were playing, romping, whatever, slid.

MR. KARREMAN: She was down?

MR. KING: Yeah, couldn’t walk, couldn’t do anything, in extreme pain, that sort of thing. Can you elaborate on an example like that?

MR. KARREMAN: What I would do, let’s say?

MR. KING: Yeah.

MR. KARREMAN: Okay. What I’d do on a cow
like that, I’d probably do electro acupuncture, and I’d probably give it homeopathic hyperokin [ph] and coniumac [ph]. And what a conventional practitioner would do, would immediately reach for flunixin [ph] and dexamethazone [ph]. Dexamethazone is a steroid so that’s way out. So the flunixin [ph], which is one of those items, could be used for your guy’s cow and his vet out there -- her vet, sorry. Whoever, you know, because they might not have learned acupuncture, and maybe they don’t even care to but at least they’re helping that animal and the organic consumer wants humane treatment. Because if they find out that there’s animals out there not being treated to relieve pain and suffering, that’s going to give a black eye to organics. And you’re also going to find if you don’t allow any synthetics, none let’s just say to be absolute, you’re going to have veterinarians slipping in things or you’re not going to have good record keeping. We’re under the assumption there’s going to be proper record keeping with the hope that the veterinarian respects the farmer’s right to be organic. But if you really say no to all that you’re possibly going to run into that, and that would be terrible.

THE CHAIRMAN: Kim.

MS. BURTON: My comment to your question would
have been that as a Board when we review material, we should be looking at alternatives and if there’s a better alternative then we should be giving that recommendation. So only the materials that are on the list could a veterinarian use anyway so we already looked at those. It’s not carte blanche to all medicinals.

MR. KARREMAN: Oh, no, not at all. No. The materials you are grappling with and the NOP has to get through or not or whatever, I honestly don’t think you’re going to see a whole lot more of medicinal compounds from the veterinary perspective trying to get in the door. I really don’t think you’re going to see a whole other 15 of them all at once come at you. Last year was critical because the rule was being implemented.

THE CHAIRMAN: Andrea.

MS. CAROE: Are you suggesting that this annotation under veterinarian directive be for all the medications on the list, and the reason I ask is are you suggesting it should be for aspirin and things that the farmer could administer himself?

MR. KARREMAN: Well, they also can buy aspirin over the counter. I guess strictly maybe from a self-serving standpoint but also for the animals, I’d say it

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
would be good if a veterinarian were to be involved with the decision, but that’s not going to always happen, you know, because farmers can take care of little problems themselves. I don’t know. I would say at least on the prescription label things, at least that. Okay. Thanks.

THE CHAIRMAN: Thank you. We have Urvashi, and then followed by Doug Crabtree.

MS. RANGAN: Good morning. Some of you may not be able to see me behind this but good morning. My name is Urvashi Rangan. I’m from Consumers Union. We’re the publishers of Consumer Reports magazine. We’re a nonprofit independent research institute, and our sole mission is just to provide information to consumers so they can make better informed purchasing decisions. I’m the director of the Eco Labels project. Our goal is to rate the credibility of environmental labels in the marketplace. And as many of you well know, we’ve been watching the organic label for some time, and all the organic labels are posted at ecolabels.org. I first want to thank everyone for all the work in the past year, and to say congratulations for the one year anniversary markets. It’s pretty remarkable, and obviously sales of organic are doing very well. And Eco Labels has given the organic label
on food a highly meaningful rating. The concern that
the Consumers Union has, and we remain having, is that
sales should not be driving the standards of the organic
label. And we are concerned about the cashing in on the
organic label and exemptions that are granted to the
standards in order to make the label custom fit the
product or the ingredient. I want to talk about
materials review, and more specifically I want to talk
about materials that just aren’t reviewed as a result.
And I’d also like to point out in the August issue of
Consumer Reports we have written an article on the
challenges to the organic program, and what consumers
should be watching out for in the coming year with
regard to the standards. And I’m happy to hand that out
to you. The first thing I want to focus on is cosmetic
labeling and personal care products. Consumers Union
has been testifying on this at the last NOSB meeting,
and we continue to be concerned about this. The
labeling that is being used on cosmetic products is
egregious. It is not following the labeling regulations
on food. Consumers Union has made repeated inquiries to
the National Organic Program over the last several
months asking who is regulating the word organic on
cosmetic products. We have yet to receive a response
from the National Organic Program, and we would like a
response to that. There are several problems with
cosmetic products labeled as organic. First of all,
they do not comply with several of the standards that
are present for food. Water is of course the one
ingredient that is exempt if you add water and food. It
doesn’t seem to be exempt in cosmetics. I know there’s
a lot going on in the background as to hydrosols and
added water and what is added water, and will it be used
in the calculation of organic ingredients, but none of
this information is being publicly disclosed. I’m
chasing down this information in the shadows, and
consumers have the right to know what’s going on
especially since labeling has already been allowed on
these products. Any ingredient that is nonorganic seems
to be able to be used in these products whether it’s a
heavy synthetic like hydrogenated castor oil, and one
could ask could we see an organic label on anti-
bacterial soap. I wonder, and I’m concerned that that
will be able to happen based on the lack of standards
that are in place right now, and the lack of enforcement
going on in the labeling. Where are the standards for
cosmetic labeling? Why is labeling being allowed before
the standards are fully formulated, and who is enforcing
the standards on it? As a result, I’m sad to report
that Eco Labels has rated the organic label as being not

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
meaningful on cosmetic products, and that is what we are showing now on our Web site, and that is what we are going to be telling consumers. So if there’s any lesson to be learned from that, we hope that when we get to labeling fish that standards will be in place before the organic label is allowed on fish. Consumers Union is still concerned about the fact that fish that is laden with mercury and PCBs will be able to carry the organic label. We hope and encourage you to develop those standards and submit them for public comment so that the aquaculture standards for organic will not end up in the same morass that cosmetics are in. Chasing down all of these problems takes a lot of time and work, and a lot of us come here time and time again because we’re chasing down these problems. I’m not sure if this is a symptom or truly part of a more systemic problem with oversight, but a one year, one time audit of the National Organic Program is not oversight. It is not what the Organic Food Production Act states, and consumers need accountability from this program. They need to know that it is transparent, and as a result a one time audit this year is not sufficient to meet oversight for the National Organic Program. Thank you.

THE CHAIRMAN: Thank you, Urvashi. The other thing you mentioned the article you had in the Consumer
Union. I notice this month also Progressive Grocer has got a fairly extensive article on the debate surrounding organic cosmetics. So it was a good article as well.

Questions? Yeah, Jim.

MR. RIDDLE: A quick comment. At the May meeting I had brought along and had in front of me a bottle of Ground Forest organic herbicide. Well, since then I was in Maine at my sister’s and there in her bathroom was a spray bottle of Organic Power bathroom cleaner.

MS. RANGAN: That’s right. Cleaners are next.

MR. RIDDLE: What’s organic about that?

MS. RANGAN: That’s correct.

MR. RIDDLE: Is the consumer being misled by use of the term organic on these kind of products?

MS. RANGAN: I think there’s no question that they’re being misled and that it is in fact deceptive labeling on those products. The fact that all sorts of other ingredients could be used that are not certified organic ingredients is absolutely just because it’s exempt now from review or it will be exempt doesn’t make that product an organic product to the consumer, and frankly this focus on whether the ingredient is organic is one question but if you’re looking at the product as a whole you have to assess whether the product as a whole...
whole is also meeting organic standards.

MR. LEITERMAN: Good morning. I’m Dan Leiterman with Crystal Creek representing organic farmers all over the United States. And thank you very much for having me here. We had a lot of good education yesterday with the FDA, and I think I want to reflect on a lot of the comments you heard this morning. I don’t want to repeat them but I want to reiterate too. Last year in October we had a deadline to get some materials accomplished and reviewed, and I want to applaud the wisdom and the leadership that this Board and NOP had. It offered our industry in dealing with livestock materials a great guidance, and we proceeded during the year very nicely. The certifiers out in the field had flexibility. They used common sense, and even though there’s a lot of questions and some discrepancies on interpretation there is the ability to work through that. Consequently, there is a movement forward. However, just recently in the last month or so there’s been a great deal of confusion with the issuance of the
comment that materials cannot be used unless it’s on the national registry and finalized by the NOP. It threw turmoil into the materials handling process again. Last year we had leadership and direction from the NOP that if the materials were voted on by the NOSB that it could be used they were considered in transition, and that was very, very helpful. And I think you’ve heard comment this morning requesting for some kind of intermediate stage, administrative discretion, however you want to term it, but you have a train going down a track at this point and it’s proceeding very nicely, and at this point we see there’s a couple of rails being punched out. And for somebody to come and say, well, we’ll put those rails back in in about three to six months might not answer the problem. You see, so we would request that something be looked at for the voting that you’ve already undertaken and it’s been working nicely. We understand the process, and I’m talking about materials that have been voted on already. I understand the process for new petitions bearing in mind that the petitions that you voted on have gone through the process, and even though the TAP reviews may have been questionable the process was worked on, and, you know, it worked pretty good. So what I’d like to recommend is that some kind of intermediate acceptance period,
administrative discretion, call it what you will for the
next three months or however long it takes. Don’t punch
the rails out. We got a lot of things to do out there
for the livestock in maintaining health. I liked the
clause comment in recognition that the FDA is out there
and the EPA. We function under those guidelines. We
work understanding that they have claims requirements
and labeling requirements. And if the Board looks at
their mandate and makes recommendations what they feel
is allowable for organic under the context of FDA and
EPA that’s fine with us so we’re looking for that
guidance. The second comment on Anduga. I’ve got two
veterinarians on staff. We’re an educational company.
We try very hard to teach producers how to prevent
issues. I think that takes us a long ways towards
avoiding the use of crisis management with antibiotics
and drugs and hormones. But I want to caution you on a
couple points that there’s a lot of material that’s
dietary that I would hope does not come under the
inclusion of Anduga that producers can be allowed to use
materials at their discretion if they’re allowed for
organic use and they meet FDA requirements. Let’s
please not include them as a drug. And I found
yesterday there’s a fine line relative to claims on
dietary material. And I don’t want to have that fogged
up too much. I mean if it’s a dietary material and it’s
good for the animal and it’s preventative in nature, and
the claims are not there and they’re not minimal, let’s
not make that an Anduga issue. So that’s all I had to
say for today. Thank you very much.

Brian Leahy followed by Marty Mesh.

MR. LEAHY: That’s a hard act to follow. I’m
Brian Leahy. I’m the president of California Certified
Organic Farmers. We own a certification agency but we
represent producers for the most part. I came here for
a little history lesson and concerns. The really
organic farmers are really just conventional farmers,
the guys I learned to grow from were large scale
conventional Republican guys, tried the chemicals, and
just said this is a lousy way to farm, you know. This
toxic chemistry base is not the way to go for farming.
They are really innovative people, and that’s who we’re
really attracting right now in our program is some of
the most innovative corporate farms in the country, and
they’re trying organic. And they need the same tools to
compete with their conventional program, and that’s the
real concern is that we lock organic into a system
that’s really outdated. By the time we start attracting
Brian Baker and the materials people we had already lost
50 years of good biological base research. And, you know, we’re starting from a behind position at it is, and we need to catch up, and we need the tools to compete with conventional agriculture. You know, in the marketplace which has driven organic for a long time we’re already seeing real reductions in premiums. This year in the vegetable production there was a couple of months when the conventional guys were getting a better price than the organic, and the good organic farmers were just swapping their organic lettuce and what not into the conventional market. On carrots right now you can buy organic carrots for about the same price in the larger retailers, and we’re seeing that in the farmers markets too because so many people now are in farmers markets. So what we need to remember is this biological based farming is really the best way to farm, and we need to encourage it and to do that we need the technology and the innovation that our science can provide so this is just a plea not to lock ourselves into some sort of time warp. The other -- I also get a lot of calls from people trying to come up with new innovations for agriculture, and they are really getting discouraged because they are doing what they believe fits into the organic philosophy that they’re not seeing their materials improve, and they’re spending lots of
money on research. And if we don’t allow them a consistent program that they know if they do these steps they can get this thing approved and then used, we are going to really stop the flow of innovation, so that’s a main concern. Another concern that our producers are really calling me about is a lack of consistency in the applications of rule where the rule is clear. A simple example is the rule for one reason or another says that the USDA still needs to be a certain color. And so we have told our producers that, and one producer alone spent a million dollars to get into compliance, and then other certifiers have allowed their clients to go with a color scheme that fits their marketing. That’s a simple thing but it creates a lot of hardship and ill will for the program as a whole. Things are more complicated such as the use of antibiotics in existing herd for milking. A lot of certifiers are saying you cannot use that. Some are, and it creates real confusion among the producers. And that’s why we did this federal rule was for consistency in the marketplace, and so everyone feels they’re on the same playing field. So that’s my concerns, and thank you.

MS. KOENIG: I guess I just need some clarification as far as those -- you know, in terms of
materials. I’m not quite sure what you’re suggesting.

MR. LEAHY: What I’m suggesting is that we, you all, keep an open mind that -- we figure out what the basic philosophy of organic is. It’s a biological process. We’re trying to work with the soil, rejection. It was easy to really reject the inappropriate technology, organic phosphates, the really harsh fertilizers. So then we have to say, well, how are we going to give the farmers the tools to grow food in this marketplace and compete with the conventional people that are using these chemical tools. That enhances soil life, that creates a healthy environment for the food. The whole basis of organic was that you create a healthy soil, and a healthy soil leads to a healthy plant and healthy food, nutritious food. And it’s easy to get locked into not using new approaches and new techniques. So I guess I’m asking for an open mind and just remembering the very basis of organic, which was giving the farmers tools to work with nature to create the healthy soil. Does that answer it at all?

MS. KOENIG: Well, I mean the techniques and such. I guess our charge is really the materials, and I guess if there’s specific things in terms of the petition process or criteria that we use or now that we’re re-evaluating kind of some of those methodologies,
and how we’re looking at things, I think those are fair suggestions and such. I think you have to be really careful about just tailoring the needs of a program to solely the marketplace. I think you have to have a consistent philosophy instead of criteria, and then if those aren’t working, that’s what I’m saying, if you have some suggestion as to some of the specific materials and where there were areas in the criteria that you think perhaps maybe not fairly judged it, I think those are useful comments but just blanketly saying that we need more tools it’s really hard for us to kind of judge what you’re saying. So I’m saying your comments are good but please be more specific. Maybe you could forward those.

MR. LEAHY: Yeah, really I’m talking -- I mean some of it is just a plea not to get locked in. You know, when we started organics and said, well, it’s just not synthetic, we’ll go to synthetic, and if we start doing more research on soil biology and soil health, we may find that there are certain fertilizers that don’t disrupt soil life, but they allow farmers the nitrogen that they need. So as time evolves, as research evolves and we start learning more about what is healthy soil and what’s going on in the soil then let’s figure out what really works and what isn’t. Even the term

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
synthetic sort of like in botany right now the whole filo planning, all that kingdom, that’s out the window and innovation is in recategorizing. You know, it’s not stagnant. And I don’t want organic to be -- that’s probably the main plea. Let’s use -- we know what we want, which is we want a healthy soil, we want a healthy farmer, farm worker, and we know it was easy to say -- phosphates and DDT and all that. That was nonsense, and we can get rid of that. And that was an easy day’s organic. But now we need to grow as our science and our knowledge grows, so I guess that’s what I’m saying. Definitely the marketplace -- the consumers, most of them have no clue really what organic is but they kind of know in their heart what it is, and we can’t play with that, you know. We have to respect that. We build that marketplace. They have certain expectations, you know. They keep saying keep organic organic. We can’t just say we can make it easy for the producers but we do have to allow the producers to grow and use science as it comes along.

THE CHAIRMAN: Okay. Jim and then Mark.

MR. RIDDLE: And, Brian, one of the last things you said in your formal comments really caught my attention. I just want to make sure that I heard you correctly. What I thought I heard you say was that
you’re aware of some accredited certifiers that are
allowing the use of antibiotics in existing organic
dairy operations?

MR. LEAHY: Yeah. There’s a spirit of the law
and there’s the letter of the law. Now when we read --
we and many other certifiers when they read -- our
certification company, when they read the rule it says
you can use -- if an animal comes from outside that
dairy herd, it could have had the use of antibiotics on
it. We also see it as if that animal is inside that
herd you cannot use antibiotics on it, and then continue
in that dairy herd and eventually milk it a year later.
And we see the herd as a closed system. It’s on one
farm. The herd is the herd. And then other certifiers
see it as that animal is not really part of the herd
until it’s milking. And we see that as really -- I
don’t read it that way. I don’t read the letter of the
law that way, and I definitely don’t read the spirit of
the law that way.

MR. RIDDLE: Yeah. There’s a separate section
of the rule which deals with the ongoing prohibition of
antibiotics. There’s the door and there’s, you know,
varying interpretations of that conversion issue, but
once the herd is converted and the animal is on the farm
it cannot be treated, I’m surprised to hear this. And
if you’re aware of something or any of your producers, anyone, there are complaint procedures to document that, and I would encourage use of those.

THE CHAIRMAN: Mark.

MR. KING: It sounds like some of what you’re saying, Brian, and correct me if I’m wrong, is in looking at the materials review process and the structure of that, if you will, we need to consider new developments, science, things that are happening in the industry, and so my question is related to that. And understanding what Jim and so many others have said on this Board over time that organic agriculture is really a systems approach inputs can be part of that system so can you speak in your opinion to the system’s approach from an education ongoing sort of perception in the industry, if you will.

MR. LEAHY: Sure. I mean that’s a good -- we have -- you know, there’s only a handful of organic farmers that have more than ten years of experience. They came to -- almost every one of them came from a chemical approach, so they are learning. It’s an incredible learning curve, and in California we don’t have -- the land grant universities are just backing into organic now so there’s no way to turn to find out how to do this. So what the farmers are doing is...
they’re taking their existing mentality and they’re applying that to organic. And, you know, the hope is that after doing this for 20 years or so, that’s how long it really takes to learn to integrate, they will start to see this as a holistic system, and the real advantages in the crop rotations and using all the tools of organic. So we backed into organic. We were just biological farmers because we were into wildlife and plant diversity and all that, and our neighbor said, you know what, what you’re doing happens to fall under the Organic Act of -- California Act of ’79. But most of the farms you go on to them that are organic, it’s still fence row to fence row farming. They are proud of these farms. And that’s the kind of stuff eventually we need to get out of that cycle. But, you know what, these guys are courageous as it is, and what we see with the larger farms is they start organic in a small way, and they start learning a lot in their conventional. They really start to reduce the most toxic chemicals. They start looking at soil again. So when I got this guy, George Tantomental [ph], he’s like 80 years old. They’re farming 60,000 acres for God’s sake of vegetables, and then he started organic. And it was like, George, I said, you know what, this is making farming fun again, and they’re taking what they know and
they’re applying it to other places. So that’s the kind of stuff that we want to encourage. The goal of organic was always to return agriculture back to a biological base. That’s the goal. If you keep that, keep your eye on that ball, it’s simple. What we all do is simple.

MR. MESH: Marty Mesh with the Florida Organic Growers Qualify Certification Services. First, thanks to the department for standing firm on their actions on the feed issue, posting denials and revocations, as well as continuously trying to make the Web site more functional. For example, I think the transcripts of the NOSB meetings are up there. I also want to appreciate the actions of the department on the continued progress towards getting a peer review panel established by taking the important first step of having an external review done of the USDA accreditation program. Partly because of the National Organic Program, we do have better response and action on the parts of land grants that Brian just mentioned, and on the parts of NAS, RMA, EPA and FDA, so I appreciate the NOP a lot and know that they’re a small staff with very limited resources has essentially accomplished a great deal. I believe that those limited resources could be made more effective by
having an NOSB executive director to move the Board work forward on a day-to-day basis and provide consistent interaction with the NOP staff. I believe the NOP could take better advantage of what I call a hyper participatory industry, which is open to volunteering when they feel the work is in line with their work and values is respected, and is actually taken into consideration. I am one of the founding board members and retiring board members of OMRI, and was impressed with the staff and board’s time just to develop a response to the request for input. You guys were handed this yesterday. It’s quite a well thought out, well written document that took an incredible amount of time, and I wonder if it’s just going to be put somewhere and that’s it. So the NOP could make better use of those organizations with the industry and people willing to give their time. The memorandum of understanding between OMRI and the National Organic Program should be moved forward, finalized, and the NOP should take advantage of national nonprofit organizations that are willing to help. This Board, the National Organics Standard Board, volunteers their time. Committees get input from stakeholders and make programmatic recommendations which many times seem to go nowhere. And I realize that the regulatory process takes a long
time but this contributes to disconnect between the industry, the community, the National Organic Program staff, and even what I perceive as even between the NOSB and the NOP staff. I believe the Board is supposed to deliberate and make recommendations, which the National Organic Program staff should find ways to put into regulation. They need to take more advantage of your willingness to do a lot of work, which you do. There needs to be a better and consistent communication and dissemination of information between the National Organic Program and its certification agent so that all certifiers find out information not from the people that certify or from the press but from the department. The inconsistency on what’s going on is disheartening for those of us that deal with the stuff every day, day-to-day on the ground. And livestock issues especially are problematic. Brian just mentioned antibiotics being used on young calves by some certifiers and not by others. Those types of issues are huge issues when you’re on the ground trying to explain to some producers why they can’t do something every day. Does the NOSB have direct communication with agencies like EPA and FDA? I found yesterday very helpful, and it would seem like you could do your job better by having more effective and better direct communication. I’m not sure
if Jim Pierce’s statement earlier that methiamine is halfway through its time period on the list is accurate if indeed the register hasn’t even been published, and it won’t go into effect until the day after publication. I know that Barbara was on the agenda, and I didn’t get a chance to -- and didn’t get a chance yesterday to do an update but I think the NOP update to the Board and the public is very important. Old presentations have included even the NOP presenting its budget, its budget and expenses which help give a better understanding for someone like me who is going to meet later on with the congressmen on the Appropriations Committee who, believe me, ask very tough and hard questions when I always go there saying the program needs more resources. I still have 30 seconds left. Yeah. It’s incredible. I’ll give it up to Michael.

THE CHAIRMAN: Questions, comments for Marty?

MR. MESH: Are you all going to address the question whether you have direct communication with agencies like FDA and EPA?

THE CHAIRMAN: Yes. We are having that discussion as we go forward about how does -- we brought this up yesterday in our work session, how does the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Board interface with the agencies.

MR. MESH: Because those guys were incredibly impressive yesterday.

THE CHAIRMAN: You bet. No, it’s an important point at least -- in the discussion that we’ve had with the Board is we move things forward, how can we have that direct interface to fulfill our role. So now you’ve cut into the 30 seconds that you allotted to Michael.

MR. RIDDLE: He’s down to one minute now.

THE CHAIRMAN: Go ahead, Mike.

MR. SLIGH: Well, thank you for allowing this opportunity. I’m Michael Sligh. I’m policy director for the Rural Advancement Foundation International, and I’m co-chair of the National Organic Committee for the National Campaign, and what seems like an ancient member of this illustrious body. And I’m glad to see the discussion that took place yesterday. I thought the presentations were excellent. I thought you got a lot of good guidance. I bring praise to the department and to this Board, as well as words of encouragement and some words of caution. I won’t reiterate the six points of architectural deficiency that we worked very hard to elaborate to you, but we do ask that you take those points seriously, and that you put those points on your
agenda of your next meeting in anticipation to really understand and get to the bottom of those deficiencies before it does jeopardize organic integrity. I also want to speak a little bit about the materials review, and recognize that I thought Rich’s point was important yesterday when he said that it’s important to find TAP reviewers who have real life experience with material. But I also think it’s going to be terribly important to find real life TAP reviewers who understand the seventh criteria, and that you must also create a benchmark for this seventh criteria in a meaningful way that will provide advice for future boards as this goes forward in time. I think that when we envision the seventh criteria, we were thinking about the principles of organic and sustainable agriculture. We were thinking about the precautionary principle. We were thinking about does this material cause scale bias. Does this material support a particular size scale over another. Does this material encourage product substitution opposed to a knowledge based approach to organic. As an organic farmer myself, that was what I saw powerful was that it could be knowledge based, that we were looking not to have to buy more and more materials and to use more and more things. We were looking for how can we use our knowledge of that natural systems to apply that
toward prevention and toward health. And I caution us that we want to be conservative. We want to think carefully about a never ending list of materials that may be more aimed at convenience or at a particular scale opposed to a real need out there to move the system forward. I also think that the ongoing role of the Board -- I want to kind of put back on my former Board member hat and just say a few remarks about in envisioning this Board we saw this Board as being a new fresh approach to a partnership between government and the public and the industry, and that you have dual responsibilities that must be taken equally seriously. Yes, indeed, you must provide timely publicly vetted thoughtful and concise and consensus advice to the department. You must meet their needs on a timely basis. They’re under a set of pressures, and you must be able to meet their needs. You also must be continually accountable to the broad civil society and to the broad stakeholder community that was outlined so clearly in the statute. It’s very important that you continue to commit on an annual basis to get out in the countryside. The farmers don’t live here in D.C. or in Chicago or in Austin. You got to commit one time a year to go to an annual conference of the farmers or to the countryside and ask how is this program working, how can
we improve it, what’s good about it, what needs to be changed, and to take that information and translate that into recommendations to the department. It must be a two-way street. That is an equal part of your responsibility. I think the need for a closed session, there’s a rare need. I would hate to see the classic school board technique become a norm for this Board where you have your real discussions in private, and then come with a face to the public. That’s not -- that was not our vision for this Board. We intended it to be very transparent. We had few tough questions in our day, and we managed to do them in the public way, and I think it will build confidence for both you and the department if you continue to go the direction of public meeting. Oversight of the TAP review is in your jurisdiction including the development of convening that body and overseeing that body, and you must take that statutory authority seriously. Marty has already said about the issue of the budget. Give them an opportunity to talk about the budget because if they’re short on resources that needs to be a part of the public record so that we can help defend that and encourage that direction. So put it in writing, and put it on the agenda.

THE CHAIRMAN: Okay. Thank you, Michael.
MR. SLIGH: Thank you.

THE CHAIRMAN: I would just like to follow up with your suggestion about getting to the countryside because I think that that is something that however it can be accomplished not only for NOSB but for NOP. I’m wondering what suggestions you might have. I’m thinking about some other FACA boards like the Small Farm Commission when it was put together and how it went around. But what suggestions might you have for getting out to the countryside?

MR. SLIGH: Well, I mean exactly that was the tact that we took at the founding board was to say let’s go out across the country and hear because we know it costs a couple thousand dollars to come here. And if you’re on a farming schedule it’s just not going to be real. I look at the upper Midwest that has that organic conference. Over several thousand people are coming to that event. You could have a listening session there. You could have a board meeting there. You need to look for those opportunities to take advantage of where farmers do gather and tap into that. One-third of the farmers don’t have access to Internet. The Web thing is a great deal but one-third of the farmers don’t have access. You got have a hard copy mailing list. You got to communicate with the broad people out there that are
not going to come to Washington and not find the Web
based. So I hate to see you go just strictly to a Web
based approach.

MS. BURTON: Mike, you commented on the closed
sessions, and you had heard some rumblings over the last
couple of days on that, so I just wanted to kind of give you
my opinion on it. It’s not that they’re closed sessions
other than it’s a chance for this Board to work on our
relationships with each other and to spend some time
together...

MR. SLIGH: Yeah. Yeah.

MS. BURTON: ...developing that, and there has
been past boards have done that, and Caroline Brickey
was adamant about at least a half a day prior to the
meeting for this Board to get together just to relate
one on one versus in a public setting. And a lot of
times like we had a dinner last night. It was great
just working on those communications. So I am the one
who advocates that because I think it’s important for us
to have a little bit of time. We all have very busy
schedules. We fly in. We fly out. We work, work,
work, work, and we don’t get to know who we really are
on this Board, and I think that’s imperative that we
have that.
MR. SLIGH: Well, I think social time, a bus ride out to see a farm, and getting out in the countryside are good ways to bond, and we use those tools to bond but making a formal closed session I think on a regular basis sends a message that’s probably not that helpful to build trust, so I’d just look for informal ways to do that opposed to making it some formal part of your normal -- you know what I mean.

MS. BURTON: We’re kind of bound because if we don’t say we have to be here at a certain time then half of us won’t show up because we have other lives so it’s a tough thing.

MR. SLIGH: Yeah, I appreciate that.

THE CHAIRMAN: Other comments, questions?

Thank you, Mike.

MR. SLIGH: Thank you. Keep up the good work.

THE CHAIRMAN: Rachel Jamison, followed by David Engle.

MS. JAMISON: Hi. I’m Rachel Jamison. I’m here today on behalf of the Washington State Department of Agriculture Organic Food Program, and on behalf of the National Association of State Organic Programs. I have statements from both. I will start with a statement given to me from my supervisor Miles on behalf of NASOP. The National Association of State Organic
Programs requests that the NOSB include the following points in the NOSB statement that would define what is “compatible with the system of sustainable agriculture and are consistent with organic production and handling.” The NASOP board would like to offer these brief points to address the relationship of production and handling inputs within the larger context of this statement. A substance must, 1, not be harmful or damaging to the environment including soil, water, and air by its intended use and manufacture and transport, 2, not negatively impacts human or animal health by its intended use, manufacture, or transport, 3, be necessary for the production or handling of a given product, 4, not have an allowed natural substitute, and, 5, not be a substitute for loud and effective mechanical, cultural or biological methods or practices. I think a lot of those issues were addressed yesterday anyway but I had to say it anyway. So the next statement is on behalf of WSDA Organic Food Program. It’s a lot more specific. NOP 205.404 granting certification B3 requires that organic certificates list categories of organic operation including crops, wild crops, livestock or processed products produced by the certified operation. The NOP currently does not require an organic certificate to include a list of the specific crops.
and/or processed products produced or handled by the certified operation. As I just said, NOP 205.404 B3 requires that only categories be listed. The WSDR Organic Food Program would like the NOSB to recommend that organic certificates be required to list specific crop varieties and/or process products for two main reasons. One is the inspection audit. When inspecting a certified handler verifying that a product being handled is in fact certified is difficult without a certificate that lists specific varieties. For example, certified food processor making a frozen mixed vegetable pack consisting say of peas and carrots when an inspector goes and asks to see certificates verifying the organic compliance of those ingredients if the certificate only reads mixed vegetables as an inspector we don’t have a way of verifying that mixed vegetables includes the carrots and peas that are being processed. Two regards -- the other reason is international certificates, and this I’ve had some recent experience with. When inspecting a certified handler verifying that imported products being handled that have been certified by the NOP accredited for an agency are compliant with the NOP and not another governing body standard is difficult. Many ISO guide 65 accredited certifiers inspect multiple international standards.
Unless otherwise specified, the default standard to
which the products will be inspected is the standard of
the governing country within which that certifier is
based, not necessarily the NOP. NOP accreditation of a
certifying agent does not mean that the certifier is
always certifying to the NOP. For example, with coffee
most coffee grown is grown outside of the United States
and certified by foreign NOP accredited certifiers. If
while inspecting a coffee roaster certificates indicate
that a foreign NOP accredited agent has certified
organic coffee it’s hard for the inspector to verify
that, A, the coffee has been inspected to the NOP and
not to say EEC 209291, and, B, the specific varieties of
coffee being roasted are in fact certified. With the
current certificate requirements a potential exists for
coffee being roasted by a U.S. based company certified
by a U.S. based NOP accredited certifier to be roasting
coffee that if it is actually certified because the
certificate doesn’t require that the specific variety be
listed that it’s been certified to a standard other than
the NOP. Without requiring that organic certificates
list specific varieties of crops produced and/or handled
issuing NOP compliance certificates is like issuing a
driver’s license without a name. They indicate without
question that someone is able and legal to drive. They
just don't specify who.

THE CHAIRMAN: Questions?

MS. KOENIG: I guess it’s a question. I just don’t quite understand, and I can understand, I guess, with the larger -- when you’re processing something but I mean if I list a variety of Mazuna [ph], how the heck is the inspector going to know is it some -- is it variety A. I mean Mazuna is Mazuna, and unless you’re a geneticist or really understand a variety, a variety is just a kind. I mean it’s not even a nomenclature.

MS. JAMISON: I think that’s a really good point. The National Organic Program doesn’t do well to address the needs both of larger producers and their processors, and of smaller producers and processors because obviously for a small mixed vegetable farmer, you know, it is laborious to list 50 or some odd varieties of vegetables, and they obviously might and more than likely will change out of season. But also as an inspector it’s my responsibility to verify with the larger operations that a processed product or processed, you know, where we’re using ingredients that are from other countries have in fact been inspected to the NOP. We owe it to the consumers of the product, and we owe it for our own integrity as a certifying agent to know that when our tag goes on a product that all of the...
ingredients have in fact been certified and inspected to the NOP standard. It’s a good question. I don’t know how it can be addressed.

MS. KOENIG: I mean it just doesn’t seem like variety is a solution in my mind. I mean if somebody is doing a proper inspection at the farm level shouldn’t they be verifying those kinds of things? Isn’t that what the whole process is about?

MS. JAMISON: Right. It’s hard, however -- yes, it is what the whole process is about. Recently just to use an example, I was doing an inspection of a fairly large coffee roasting facility. In doing the audit of all the certificates, I noticed that one of the certificate, Kraubs [ph], who is in fact NOP accredited, when I looked at the certificate and it identified what standard the bean was produced to it was produced to the European standard and not to the NOP, and I’ve seen crop certificates that list the NOP. So I mean when it’s only organic coffee then how can I say, well, you cannot sell your Costa Rican bean, your Mexican bean, and your Nicaraguan bean because those are certified by this agency. You know, there needs to be a way that I then can differentiate what is in fact allowed.

MS. KOENIG: Those are not varieties. Those are origins of production, right?
MS. JAMISON: Those are actually varieties of beans. There’s a Nicaraguan bean, a Mexican bean. Yeah, they are varieties.

MS. KOENIG: Okay. So those actually are beans that -- Costa Rica can be producing a Nicaraguan bean.

MS. JAMISON: Exactly. Yes.

THE CHAIRMAN: Okay. Jim, Mark, and then Owusu, and then Kim.

MR. RIDDLE: Thanks, Rachel. I really appreciate the comments that you shared about the deficiencies or limitations on the amount of information that’s on certificates. As a long-time inspector I’ve looked at a lot of certificates, and I don’t think that the mandatory categories necessarily limit the information. There can be additional information such as produce according to NOP, but it’s not mandatory at this point. And the compliance, accreditation, and certificate committee is aware of those deficiencies, and did some work on it earlier this year, constructed a draft recommendation that was circulated amongst the committee, and discussions with NOP. You know, there’s several options, I would say, to address this but I think probably the most promising is electronic certificate data base where all certifiers enter more...
complete information into the same data base for the
generation of certificates, and then that -- certain
fields of that are available to buyers so anyone can go
on and find out just what’s certified to what standard
by whom, and on what date, so it’s available in real
time. So it is an ongoing issue that the Board is aware
of. Certainly NOP is working on trying to address as
well from my understanding.

MR. KING: Strictly from the promotion of
trade, which is what you’re talking about with the
certificate, I understand that in some cases listing
like in the coffee bean would be appropriate, and I
think there’s an example of that. But beyond that, I
think looking at the farm plan and the application all
of the supporting information as an inspector is a way
to accomplish that as well.

MS. JAMISON: Oh, it definitely is. I mean
I’m not in any way saying that the farm inspection
doesn’t do well, but when that farm inspection
translates into a certificate, and that certificate
needs to be used in an inspection of a processing or
handling facility it needs -- because in our program we
have inspectors that do a lot of producers. We have
inspectors that do a lot of processors. And so I’m not
there to look over the farm plan and be at the farm of
this place knowing that, oh, yeah, mixed vegetables covers peas, carrots, plus 1,000 other varieties. So there needs to be some way of really efficiently tying the two together.

MR. BANDELE: I just wanted a clarification. When you’re saying varieties, are you talking like for example let’s take the vegetables. Are you talking about species or are you talking about cultivated varieties?

MS. JAMISON: Cultivated varieties. For instance, carrots. I mean there are thousands -- I guess cultivated varieties. Instead of mixed vegetables it would be carrots. You wouldn’t have to...

MR. BANDELE: That’s not a variety, a cultivated variety. You’re just talking about species.

MR. BANDELE: Okay. Now to follow up on that, do you see any distinction between the need to do that on the international versus the national? I’m thinking in terms of what we’re talking about like a small mixed producer here. Do you still see the need to list every particular species, and then what would happen in the case of a farmer changing his plan due to crop failure? Does that mean that he grew something different under your scenario that that would not be certifiable
MS. JAMISON: I think that it will be applicable more to the larger producers as opposed to the small mixed variety but again with the need for consistency there needs to be some way that these certificates capture all of the crop categories that are being grown.

THE CHAIRMAN: Okay.

MS. BURTON: As a producer, that kind of scares me because we used to have to list everything that we manufactured. When we go through an organic handling plan and we submit our application to our certification agency we have to provide to them formulas, certificates for every raw material ingredient profile reports, and we submit that to the certification agency who in turn should give that to an inspector. So to have to list every single product on our certificate, I think there’s pros and cons to it. Every time we add a new product or delete a product we have to update our certificate so where it may be handy for the producer it certainly isn’t for the manufacturer or the processor.

MS. JAMISON: Yeah. I don’t know specifically how to address it but I do believe it needs to be addressed whether there be a certificate or a data base or a requirement on the part of the certifier to have
available to other certifiers complete list, and have
the certificates remain generic, I don’t know, but
something needs to happen so that when those products
are being traded among certified entities their
compliance to that national standard can be verified.

THE CHAIRMAN: Andrea.

MS. CAROE: Okay. I fully understand that the
requirements of the rule in regards to what is printed
on the certificate is minimal. That said, the
requirement is also there that a manufacturer have an
organic system plan, and in that they have to show
evidence that they’re compliant with the regulation
which requires them only to use ingredients that are
certified to this regulation. So whether that’s on the
certificate or not there still needs to be evidence to
support that part of their compliance. So in that I’m
not sure that the certificate is going to be the answer
to require a long dissertation of detail of the
certification or if that can be provided another way
that gives them the flexibility and ability to provide
other types of documents that facilitate trade in the
marketing of those organic products.

MS. JAMISON: Yeah. I mean I definitely do
believe that it is also the responsibility of the
certified handler to insure that all the products
they’re sourcing are certified to the NOP. However, even those of us in the industry know that it can be confusing trying to differentiate what products have been certified. I mean in Washington State, for instance, we have farms that are certified with three different standards.

MS. CAROE: But the requirement of the vendor to provide to the manufacturer is something that shows up and it’s before they market that product so...

MS. JAMISON: You’re correct, yes.

MS. CAROE: So I think as an inspector going to a manufacturer you should be able to see evidence of that. If that’s deficient then that’s a different issue than the certificate. That’s an issue of compliance with appropriate organic ingredients.

MS. JAMISON: I can see that, yeah. I think it’s more complex. I think there are more complex issues especially when you’re dealing with products being traded internationally especially when our handlers are told source products from NOP accredited certifiers, so if the certifier is accredited to the NOP it’s an easy assumption to make that a certificate for the product that you’re getting is in fact certified to the standard.

MS. CAROE: I don’t believe that that
statement that source from NOP accredited certifier is appropriate. It’s source NOP certified products.

MS. JAMISON: Uh-huh.

MS. CAROE: And the assumption that all accredited certifiers certify only to the NOP is false.

MS. JAMISON: No, I actually that misstatement. Yeah, that isn’t true, but it’s hard and it’s going to be an educational curve for our handlers to fully understand that.

THE CHAIRMAN: Okay. Thank you. All right. I know it’s 10:00. That’s when we have a break listed, but we have David Engle. We have Kelly Shea, who has submitted a proxy to allow Dr. Karreman to provide an additional comment, and I have one written statement to read in so if you’re game we’ll stay here for that, and then take a break or if you want to take a break now.

MR. RIDDLE: So that’s it?

THE CHAIRMAN: Yeah.

MR. RIDDLE: No more signups?

THE CHAIRMAN: No. No more signups.

MR. RIDDLE: Well, ask if anybody who hasn’t signed up.

THE CHAIRMAN: No, we’re not going there.

MS. CAUGHLAN: Dave, are you going to go back to the two no shows?
THE CHAIRMAN: Yeah. Oh, that’s right.

That’s right. We do have some no shows. Okay. Then let’s take a 20-minute break here and come back. And if you haven’t signed up, and you do want to give some testimony there’s signup sheets at the back.

***

[Off the record]

[On the record]

***

THE CHAIRMAN: As I said before, we got David Engle. We got Kelly Shea, who has filed a proxy. Robert Hadad. Also, I want to make sure because there’s two sheets at the back that if you wanted to give public comment there’s a public comment sheet back there which is separate from just the sign-in sheet, so if you went in and signed in the sign-in sheet thinking that that was signing you up for public comment you need to sign up on the other one. So we will -- I will call upon David Engle.

MR. ENGLE: So my name is David Engle. I am the executive director of Midwest Organic Services Association. But today I’m primarily here as a farmer, and I’ve been to maybe seven or eight of these meetings and I think they are excellent. I really enjoy the public comment part. I agree with a lot of what has
been said even though as Richard Matthews said yesterday
a lot of what we hear is repetitive. We’re here talking
about the same things it seems time and again. But I
also want to thank everybody, the NOP, the staff, the
NOSB and all of us representing our various organic
industry counterparts, our community counterparts, and I
too would like to celebrate the one-year anniversary
that we’ve come to, and if you would allow me to share
in a somewhat different format what I feel is the same
thing that everybody has been saying, but I’m going to
try to do it in a different way. I’ve never done it
before but we’ll see. He said just don’t do it off key.
This is called an organic anthem, To Farm This Land
Organic. It’s written to the tune, a Stan Rogers tune,
Northwest Passage. How many of you have heard of Sir
Albert Howard, Aldo Leopold, Rachel Carson? Good. But
if for just one time we would farm this land organic,
and see the hand of Howard reaching for the horizon it
would be so fine there would not be all this panic in
sweat and mud with tears and blood, this truth we set
our eyes on. For 50 years the chemicals and sprays have
harmed the planet. For 50 years we’ve taken Mother
Nature for granted. Now the time has come to be more
humble and wise. Lest one day we awaken to a rather
rude surprise. Ah, but if for just one time we would
farm this land organic, and see the hand of Howard reaching for the horizon, it would be so fine. There would not be all this panic in sweat and mud with tears and blood. This truth we set our eyes on. Leopold and Carson both wrote and warned about stuff like this, that the web of life and a silent spring simply cannot co-exist. And still we’re so dang wrapped up in our technology and greed. We think we’re cool but we are fools to play God with the seed. Ah, but if for just one time we would farm this land organic, and see the hand of Howard reaching for the horizon, it would be so fine. There would not be all this panic in sweat and mud with tears and blood. This truth we set our eyes on. And so many of us now around the world are trying hard to farm in tune with Mother Nature we’re trying not to harm. The life in the soil and in the water and in the air, we’re learning lots of new things and what we’re learning we share. And but if for just one time we would farm this land organic, and see the hand of Howard reaching for the horizon, it would be so fine. There would not be all this panic in sweat and mud with tears and blood. This truth we set our eyes on. And for those of us who do not farm, let us have no fear. We can choose to buy our food from those whose farms are near. And if that food is organic then how wonderful,
how great, but if we wait for all who eat to care then
it will be too late. But if for just one time we would
farm this land organic, and see the hand of Howard
reaching for the horizon, it would be so fine. There
would not be all this panic in sweat and mud with tears
and blood. This truth we set our eyes on. And so it is
our time will come, our time will come just so for each
of us one by one our time will come to go. And when we
meet St. Pete he’ll ring that bell, and he will say dear
friend, you farmed organic. You did very well, let us
pray that more folks will take and farm their land
organic, and see the hand of Howard reaching for the
horizon, then it will be so fine. There will not be all
this panic in sweat and mud with tears and blood. This
truth we set our eyes on. Much of what we’re talking
about...

THE CHAIRMAN: What I say is your time is up
but, David, what were you saying in your...

MR. ENGLE: I was just going to say much of
what we’re talking here today about today, one of which
is by request to the National Organic Program is
compatibility, the issue of compatibility and criteria
for it, and then the other thing that’s coming to me is
process. And I think we’re doing well. We need to
remember as Brian was indicating where this comes from

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
and what the final result is that we want. We want good
organic food, and it comes from land, and it comes from
a farmer, and as Michael said many of them cannot access
this form here, and yet this form here has so much
effect on the farms and how they do things. So keep up
the good work.

THE CHAIRMAN: Thank you. Okay. Kelly Shea, who has proxied or asked to bequeath her time to Hubert Karreman for...

MR. KARREMAN: Well, I certainly can’t follow David’s moving song. I apologize. You don’t even want me to try. But I did -- I wanted to just respond a
little further to Owusu’s question regarding opening up
the barn door, so to speak, to a lot of synthetics, that
all veterinarians just use synthetics instead of having
the incentive to look into alternative treatments, which
of course we want for soils, crops, and livestock. And
I guess I’d give you the example of like coughing
calves, very typical on dairy farms up in the Midwest,
Northeast, wherever. And let’s just say -- and this
would be on the thought I had which apparently I found
out is the OTA position on raising young stock, that
you’re allowed to use a prohibited material, let’s just
say up to the first year of life. I’ll just say that.
Maybe six months, eight months, a year. Let’s say that
prohibited material is an antibiotic. Okay. I can tell you from my experience when I’m called out to my farmers you have a pen of coughing calves. The farmer is tipped off that there’s one calf sick, and that calf will have its ears drooping, it will have wet lung sounds, it’ll have a fever of 104, 105, and it will die if you don’t give it an antibiotic. But chances are if there’s like 15 calves the other 14 are quite happy. They’re eating. They cough a little, a little dry cough, low grade fever. But they’re still looking good. That’s when I definitely use the alternative treatments. We don’t just bang them all up with an antibiotic, just that one really sick one. And there’s various conventional tools and vaccines, stimulants that would be allowed to do that. So, you know, perhaps you could have it if you were to go there as a one-time treatment in life for that animal within the first year of life when their immune system is still developing. You would have caring compassionate, you know, treatment for livestock. You’d have the veterinarian tending to the young animal whether it’s a little sheep, a pig, calf. I do believe the organic consumers would like that. I don’t really think they’re going to rally and protest that that animal should necessarily be banned forever from production. That’s my own feeling. I grow up in the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
suburbs outside of Philly. I know how a lot of consumers think that way, the organic folks. I just wanted to really kind of touch on that. And the other thing -- I guess I do have five minutes but I don’t think I’ll take the whole five minutes. Yeah, that will be an educational process, okay, of those other veterinarians, you know, that only know conventional stuff. I know Dr. Detloff [ph] from Crystal Creek, he has a book coming out. There’s a book I have a chapter in coming out from Iowa State on holistic livestock management. Hopefully, that’s a kind of academic book. I have my own book coming out which is hopefully a neutral kind of thing on pharmacology of plants and how do use them. So there’s things happening but we definitely need to keep in mind, you know, the one animal, the two animals that need that treatment even if it’s an antibiotic type thing in the first year of life. And I don’t think you can prove that the antibiotic if it is in there would be in the milk a year later even by easing the FDA regression scheme of figuring out the no effective limit or whatever even if you were to bump that up six months, eight months, whatever. I don’t think scientifically it would be there. The Europeans allow occasional use. However, you have to watch that because if you use an antibiotic or prohibited material,
I shouldn’t hit on antibiotics that much, sorry, a
prohibited material too often you will have a
disincentive for companies like Dan’s to make things.
Okay. But like once in a lifetime, I think that’s
pretty reasonable. So hopefully that answers your
question a little further.

THE CHAIRMAN: Yeah, Jim.

MR. RIDDLE: Just a clarification but I heard
you say that you thought that the organic trade
association allowed or would recommend the use of
prohibited material, antibiotic, in the first six months
or one year. Is that accurate what you said, correct?

MR. KARREMAN: I thought I understood that to
be the case. May I...

MR. RIDDLE: Well, if I could ask Tom
Hutcheson from the OTA...

MR. KARREMAN: I don’t know for sure.

MR. RIDDLE: ...what the AOS, the American
Organic Standards, says about that.

MR. KARREMAN: Yeah, perhaps.

MR. HUTCHESON: This is a policy post AOS that
was developed by the livestock subcommittee of the QAC
in concert with the QAC chair and OTA’s executive
director and was expressed last year at an NOSB meeting.

MR. RIDDLE: Okay. So that is an OTA policy.
MR. HUTCHESON: Yes.

MR. RIDDLE: Okay.

MR. HUTCHESON: And that’s medicines, not all prohibited materials.

MS. CAUGHLAN: Would that include antibiotic?

MR. HUTCHESON: It would, yes.

MS. CAUGHLAN: On the OTA?

MR. HUTCHESON: For the first year only.

MS. GOLDBURG: Can I ask one, Dave?

THE CHAIRMAN: Yeah. I’m sorry. I didn’t see you had your hand up.

MS. GOLDBURG: Yes. That’s okay. Hugh, you’re proposing a policy for the first year of an animal’s life. Clearly you’re talking about dairy cows, I think. Would you extend this policy to other sorts of animals like chickens that don’t live all that long?

MR. KARREMAN: You’d probably have to be species specific. I’d say for poultry...

MS. CAUGHLAN: But you would still extend it with a different time limit.

MR. KARREMAN: Well, you know, to be really honest I’ve never understood this but beef cattle are treated very differently than dairy cattle. I’m not really a beef practitioner but it’s the same genus and
species as dairy cattle. I don’t see why they’re
treated so purist like compared to dairy cattle because
you have a beef animal that’s going to live to be about
18 or 24 months. You could cut back perhaps that
emergency one-time use for pneumonia when it’s 2-1/2
weeks old until for beef cattle, I don’t know, until
five months instead of a year. I don’t know. But still
you have to take into account certain scientific
realities with animals. Their immune systems are not
confident. They’re under passive immunity with
colostrums until about three months of life, and then
they’re on their own. And that stress time is when they
get hit bad. And you can have great organic management
and might have a few farms that they don’t have problems
with calves but a lot of them, they don’t look good.
They look pretty ratty, but then they’ll come out of it
at about a year’s time, time and again, and they look
good. They’re a little smaller because maybe they were
parasitized or had some problems but they’re sleek,
shiny and everything at about a year. Before that, I
don’t think they got all the strength or reserves that
an adult animal would.

MR. HADAD: Good morning. My name is Robert
Hadad, and I’m the director of farming systems for the
York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Humane Society of the United States. I’d also like to applaud the NOSB’s efforts for doing such a great job under I think extreme duress, and I hope that your efforts will continue if allowed to. I’m very concerned about the quagmire surrounding livestock medication situations, and I think there’s a lot of great suggestions that have been brought up today. There’s a lot of great expertise out here that could really help in addressing the situation, and I think these resources need to be tapped into. So I really emphasize that we really need to fix this problem because as mentioned before there’s kind of this paradox going on where you can’t use things but you have to use things that’s not organic, so I mean you got to deal with this. There’s still the issue of outdoor access for poultry. Those things are still up in the air, and believe me porches and balconies for chickens just don’t cut it. And when consumers find out what’s going on, they’re not going to buy it literally. This whole thing is undermining consumer confidence. I mean just as it’s starting to build up, you know, to have this thing being torn down underneath them is not acceptable. The issues of interpretation of the regulations as just haphazardly as whoever comes in the door as we’ve seen in certain circumstances is just not acceptable either. We need
transparency and we need consistency. The issues of inconsistency again in the whole certification process is quite serious. Some certifiers are allowing some practices, others not. Some certifiers are not doing what they should be doing while others are being forced to do things that they know don’t follow the spirit of organic practices. And I’ve been involved in organic agriculture for 25 years. I farm organically, and I am not certified because I’m not going to at this point. There are many, many farmers that are jumping ship, but I’m a supporter but I don’t like seeing my role change as being a watchdog. And some of the suggestions have been to deal with some of the situations as, well, we’ve got a process that we got to start talking about getting these situations straightened out from people who are watching. Well, getting that information, real precise detailed information to file complaints, A, shouldn’t be our job, and, B, it’s hard to do accurately. I mean there’s a lot of hearsay and there’s a lot of rumors. There’s a lot of information that’s being passed around, that’s being talked about that may be confidential that if it wasn’t confidential that we could blow the lid off things, but that’s not the way this thing should be running. It should be running based on something that has been put together accurately, and it hasn’t. The
farther this program has moved forward the behinder it
seems that it’s getting, and again consumer confidence
is being threatened. That’s what’s really holding this
whole thing together is our hope that the consumers are
going to buy into this, and make this an economically
viable option. I mean we know that on the ecological
level it is a viable option but it needs to be
profitable, and if the word certified organic is being
dragged down it’s not going to last. And we at the
Humane Society of the United States have been very, very
supportive of the organic program. We helped do a lot
of background work on livestock regulations years ago.
But in all good conscience it’s hard to become a
supporter and remain a supporter when we’ve got these
serious issues. So I’m really hoping that we can fix
this, that we can tap into all the expertise that’s
around here and that things are not done behind closed
doors or in far off buildings but we can have an open
dialogue where people can be tapped into and get some of
this work accomplished so you can be sure that we really
can do a good job of this if the system allows us to.
So thank you very much.

THE CHAIRMAN: Questions or comments? Okay.
I didn’t announce who was next but we have Christopher
Ely. And then we’ll go back and start catching up on
some of the folks that weren’t here when they were
called. I have to remember who that is. Go ahead.
Doug Crabtree and John Immaraju will be next. So go
ahead.

MR. ELY: Thank you. My name is Christopher
Ely. I’m from Applegate Farms. For those who aren’t
familiar, we are an organic fruit or meat processor. We
are nationally selling fully cooked meat products, and
have been for over 50 years. We were doing organic
about 15 years ago so we have quite a bit of experience
in it. And there are two issues which I find coming up
that are starting to create problems within at least the
meat industry, the organic meat industry, one being food
safety. We’re being under the jurisdiction of the FSIS,
USDA. We have the strictest guidelines and regulations
for food production in the United States of any segment
of the food industry. And some of these new
regulations, for example, one that is coming up in
November called Listeria risk assessment are starting to
conflict with organic regulations, and they are
basically requiring us to use certain products in our
production of meat to assure safe pathogen free products
out on the marketplace to consumers. And as much as we
have for 35 years never used chemicals in any of our
meats, nitrates, phosphates, fluoridates, and such, this
is putting us in a terrible situation. And we’re not quite sure how to address it and still remain organic. And this issue, I mean I don’t need to go into a lot of detail meaning there are certain products that the USDA is recommending everybody to use to fight Listeria, e-coli, salmonella, but these issues need to be addressed because it could basically injure this part of the industry. My second issue is just about a year ago a major customer of ours was requiring that all of our farms and slaughter facilities, et cetera, be inspected for humane growing and humane slaughter, and my answer back to them was we’re organically certified, and they said that doesn’t mean a thing. There are no organic standards for humane. And basically they were right, particularly humane slaughter. And this is an issue when you think that McDonalds lives to higher standards than the organic people do when it comes to humane slaughter because they’re following Temple Granden’s [ph] guidelines, and there are no guidelines. And if you were to argue humane growing in organic, it’s open to interpretation by one inspector to the next. I’ve been on organic farms that are certified organic, and I would never use them because in my opinion they are not humane in the way that they’re providing, for example, water or feed though they are providing it but not in
ample quantities, and that’s just an example of what’s going on. And we really need to nail this down because this could be an issue. And people assume that organic is more humane, and, you know, reality is we have not defined it, and we’ve left it with interpretations and words like adequate, and adequate doesn’t mean anything. And we need to be very definitive in our regulations of humane and to somehow get them into the NOP’s regs. Thank you.

THE CHAIRMAN: Goldie, then Owusu, then Becky. Just stay at the podium for a few minutes. Okay. Go ahead, Goldie.

MS. CAUGHLAN: I worked in retail as a consumers representative and those are consistent. We sell a lot of product, so excellent. You used the word required, then you later said recommend relating to -- Listeria is nothing to fool with. We all know that. So would you clarify?

MR. ELY: The new risk assessment regulation, and I have not torn it apart completely but in reading summaries of it they are going to classify plants, meat processing plants, in what they do to control Listeria. And if you don’t meet certain requirements you’ll be put onto a category, a high risk category, of which you will get intensive inspection by the USDA which any plant in...
the United States, and we no longer process though we
used to be a processor, we no longer process and we
contract about 20 plants in North America to produce for
us. All of them do not want to be in that category. It
puts them in a very, very bad position particularly for
liability.

    MS. CAUGHLAN: This is part of the Homeland
Security stuff that has fallen...

    MR. ELY: This goes beyond Homeland Security.
    This is just pathogen control which is zero tolerance.

    MS. CAUGHLAN: I understand, but there is --
some of the regulations, as I understand it...

    MR. ELY: Yes. Yes.

    MS. CAUGHLAN: ...are flowing from that.
    Increased enforcement or whatever. So the high risk
category. But again at this point they haven’t
required.

    MR. ELY: The words required, if you have ever
dealt with the USDA in a meat plant they sometimes don’t
use the word required, but they have other ways to
enforce it, and I’ll just leave it at that. It puts you
in a very uncomfortable position.

    THE CHAIRMAN: Owusu.

    MR. BANDELE: Basically I have the same
question that Goldie has, required versus recommended,
but one other part I would like to ask is that do you take into account the history of the disease at a particular plant or that’s not taken into account?

MR. ELY: Yes. Yes. Yes. There is that. But, you know, I’ll back this up by also saying our experience in dealing organic meat is that organic meat is no more pathogen free than commercial meat. In fact, we actually find higher counts of salmonella in our poultry than we do in commercial poultry. And that puts -- we’re already bringing into our facilities a pathogen inoculated product if that’s the way to put it that creates a real bad situation to begin with.

MS. GOLDBURG: I was wondering if you could tell us in a little more detail what USDA is I guess recommending for pathogen control for Listeria.

MR. ELY: Example. They’ve actually classified certain categories of ready to eat meat products such as hot dogs, sliced deli meats, et cetera, already in a high risk category. And to remove it out of that high risk category so you don’t get intensified inspection they’re saying we require that you will -- here are the requirements. One of them is you can use sodium lactate. You could use sodium diacetate. Sodium diacetate is buffered vinegar. But you can’t say
vinegar on your label. You have to say because there
are standards of identity for vinegar for the USDA and
it must have a certain pH, and you buffer it and use
that pH. Those are two examples of what those products
are not approved on the NOP approved list at the moment.
If you go -- if you don’t use those then, yes, you could
get away with not using them, but as I said then it puts
you in an intensified inspection system, and that
intensified inspection system is hell, to put it
bluntly.

MS. GOLDBURG: How are those used in the meat
processing?

MR. ELY: I’m sorry?

MS. GOLDBURG: How are those two compounds
used in the meat processing?

MR. ELY: You add them into as part of the
ingredients, and they are there to control pathogens
simply.

MR. KING: To what degree are they added?

MS. CAUGHLAN: And would you name those again,
please?

MR. ELY: Well, it varies on the meat product
but it can be anywhere from 1 percent to 5 percent. It
depends on their effectiveness. And, for example,
botulism is the only known chemical to control botulism.
is sodium nitrate, but they now found another product, sodium lactate, which is a -- they always refer to it as an organic acid if you understand my term of organic here. And they do find that also can control botulism.

MS. CAUGHLAN: What were the two things that you mentioned?

MR. ELY: Sodium diacetate, which is buffered...

MS. CAUGHLAN: No, no. The vinegar and the...

MR. ELY: Which is vinegar. Sodium diacetate, which is buffered vinegar, and sodium lactate, which is a salt of lactic acid, lactic acid which is created by bacteria and sugar.

THE CHAIRMAN: Let me go down the list here because I got Kim, Kevin, and then Mark.

MS. BURTON: It sounds to me like these are perfect materials for petitions.

MR. ELY: Exactly. But the unfortunate thing it’s coming so rapidly. This is my concern.

MS. BURTON: Well, it has up to three years.

MR. ELY: Pardon?

MS. BURTON: We’ve had that for three years.

MR. ELY: Oh, no, no, but I’m saying the USDA is moving so rapidly on these changes that it’s hitting faster than not.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. BURTON: I’d encourage you to get those in fairly quickly. We have some meetings coming up.

MR. ELY: Okay.

MS. BURTON: We have funds for TAP reviews. And that would give us a good opportunity to look at alternatives and look at the regulatory uses and needs and all that. That’s really your only option at this point is to petition for use of those.

MS. CAUGHLAN: Or if those were mandated it would obviate.

MS. BURTON: Even if they’re mandated they still have to be on the national list at USDA or FDA or whatever would supercede our list, but they still have to be approved materials similar to vitamins or anything else unless it’s a food context substance material. That is, you know, a whole different area, but it sounds like these are ingredients that are actually put in the product and so they do have to be on the national list.

MR. ELY: Correct.

THE CHAIRMAN: Kevin.

MR. O’RELL: Actually between Becky’s question and Kim’s comment on petition, those were the two areas I was going to cover.

MR. KING: I may be asking the obvious but it York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
sounds like you’re saying that this is the solution to
perhaps...

MR. ELY: It is the most tried and true
solution because if you want to use something else, you
have to do scientific studies and prove to the USDA that
any other system you use is effective. And if you’re a
small company -- Oscar Mayer can do a scientific study
because they have a band of scientists to do that for
them, hence they patent quite a few products in the
United States because of that. If you’re not Oscar
Mayer, you can’t do scientific studies. It just would
take too many years and too many dollars.

THE CHAIRMAN: Kevin is reconsidering his
previous action.

MR. O’RELL: Based on the comment you just
make now, are some of these alternatives concerns of
handling methods and practices as opposed to chemicals?

MR. ELY: You can -- today I will say that
meat plans and HASA programs have some of the best
handling practices today. We’re working in rooms that
are 35 degrees. This is beyond the most sanitary,
cleanest operation that you can possibly do because you
still have the danger of Listeria contamination or
salmonella contamination problems.

MR. O’RELL: So you’re taking it from the HASA
York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
or GMP’s control of the two where you have to have a chemical solution or preservative solution.

MR. ELY: Some -- you know, it...

MR. O’RELL: You can’t do this alternatively with the HASA plan?

MR. ELY: There is another alternative that is not yet proved by the USDA that is being used in Europe, and you might consider it a more natural way. Just at the moment it’s -- you know, we are trying to get the USDA to approve it to allow us to use that system, but it might be two or three years before that’s allowed.

THE CHAIRMAN: Rose.

MS. KOENIG: It’s maybe more of a statement than a question but I mean this is just -- this is the writing on the wall. I mean there’s going to be a lot in the future as far as food safety goes, not only in your industry but even in fresh fruits and vegetables down the road.

MR. ELY: Correct.

MS. KOENIG: Is there a process upon which -- have you been involved in the process upon which these regulations have come down, and is there -- or OTA as far as really trying to educate about the industry, and because of the long time it takes to do these material reviews, and you as a producer may not be able to -- or
us really pull information from the companies that are actually producing those compounds that they’re recommending. The other alternative is really being engaged in the process, and as regulatory things take place really being more proactive and educate about the industry and some of our concerns rather than just reacting to kind of this...

MR. ELY: You’re absolutely.

MS. KOENIG: So I’m asking you was there a process that have you been involved in the general audience, is OTA involved or is USDA -- are we involved in this type situation?

MR. ELY: I personally have been on for about a year now the Livestock Subcommittee but that’s more on growing issues versus processing issues because I’m not sure there’s a -- or I may be wrong, is there a committee that talks about meat processing? I mean there’s so few of us. Organic Valley is here, and there’s me and I don’t know quite -- there maybe might be two more in the United States. We’re not a huge group. But because it’s probably the last of organic segment that people haven’t -- that’s just coming alive now.

MR. SIEMON: My only comment is this is once
again the kind of thing we had with the boiler compounds. We have a conflict between organic and the basic cold pack relationship. It’s a lot about the relationship. You’re in the plant. You’re bagging your 5 or 10 percent of production, and then you’re affecting their whole status. So this is again part of the infrastructure that we run into time and time again.

MR. HUTCHESON: I’d just like to reiterate something Rose said that it’s happening not only in meat but across food production where having somebody -- a major sprout producer very concerned about the new regulations, about chlorine use and what he’s done is come up with an alternative risk assessment tool that he believes should be able to be used, and I can only encourage the Board to examine alternatives and take this up as an agenda topic some time in general to see how the program -- see if you can work with the program to figure out ways to help producers.

THE CHAIRMAN: For the record, that was Tom Hutcheson. All right.

MR. MESH: Michigan State is having an organic food safety conference next spring.

THE CHAIRMAN: Okay. Marty said that Michigan State is having a food safety conference next spring, organic food. Okay. Very good. All right. Then I
will go back to see if Doug Crabtree. Okay. John
Immaraju. Okay. Then the last oral statement that I
have here is Lynne Cody.

MS. CODY: Hi. My name is Lynne Cody. I’m a
consultant with Organic Ag Systems Consulting in Eugene,
Oregon. I’m here today to talk about the issue of
compatibility as you asked us to do. I wanted to let
you know that I have written materials list with OMRI
for the OTA for various certifiers around the world,
including the original materials list that became OMRI
that came out of Oregon CCOF, and I’ve also written
materials list for IFOM, so I do have some experience
with writing materials list. I am also the person who
originally suggested the concept of using criteria in
OFPA, and then was counted on by Kathleen Merrigan [ph]
to draft those criteria and negotiate them with a number
of different stakeholder constituencies. I wanted to
say today that when we originally were talking about
this seventh criteria about consistency with organic
principles -- methods, we did consult with many, many
different constituencies including environmental consume
groups. Many, many discussions occurred around this.
We were thinking at the time that it was the principles
for organic that should be considered, and we did have
principles of organic originally that we tried to get
into the law but they were kind of weeded out as time
got along. We were not aware of the precautionary
principle at the time because it was a concept that came
out later on after we had these discussions, but I do
feel looking back on things that this is actually a very
concise statement of what we intended. Secondly, I’d
like to say that yesterday I was very surprised to hear
about the concept of taking the use categories out of
the National List. OFPA specifically says that
materials must be listed by use. I’d like you to go
back to that and make sure that you are being very --
having very careful consideration of this concept. When
one writes a materials list annotations and use
categories are balanced so that you can use list
categories to basically create annotations for large
blocks of materials. That’s the way our National List
and almost every other organic materials list that I
know of is constituted. Under that annotations are used
to make specific limitations for materials that explain
how they can be used or under what circumstances
specific materials can be used. A lot of care has gone
into creating the materials list as we know it. It came
from the private sector originally. It was -- a long
time ago ALFANO [ph] did a long -- ALFANO, which is now
the Organic Trade Association, did a long study that
compared all of the materials lists from around the
country. We found 95 percent agreement at that time.
The National List is an outgrowth of that, and all of
these materials lists do list by use. So a lot of care
has gone into creating both the use categories and the
annotations. I feel that a change in this way of
drafting the materials list is a significant change, and
it would have impacts on consumers because consumers
have based their public comments and their acceptance of
these materials on the current limitations that are
defined both by use categories and annotations. For
operators and certifiers it would mean a very big change
in production practices and the way that operators are
certified, and I feel that because we’ve already gone a
long way thanks to the NOP based on creating
international agreements this is another thing that
would be threatened by a change in the materials list
that’s not very, very carefully formulated. Yesterday I
heard the NOP staff state that such a change is possible
under their current authority and could be done as soon
as the next round of the materials list coming out in
the Federal Register. I also heard the staff say that
if the Board did not want this to occur you needed to
make a recommendation for caution or to prevent that
from happening. I stand here to urge you to please make

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
that recommendation. Do not allow this change to occur
without very careful consideration. Thank you very
much.

THE CHAIRMAN: Thank you, Lynne. Questions?
Rose.

MS. CODY: When I talk about accreditation no
one ever had any questions. Here I am ready for a
question.

MS. KOENIG: I had a question because actually
we’re looking at OFPA on some of the new forms that we
may use as working documents as we go through this
process, and I just have -- and this is my own pet
peeve, I guess. And since you -- somebody had told me
you had helped draft those language and maybe...

MS. CODY: I was a lot younger than though.

MS. KOENIG: Yeah, and I understand because
the one that has the substance is used in the production
and contains an active synthetic ingredient in the
following categories.

MS. CODY: Right.

MS. KOENIG: Were you meaning -- because I
always say it either is an active -- I mean substance c
contains something. What were you meaning by that?
Were you mixing up like a brand versus a generic at that
point?
MS. CODY: At that time we were not very -- we
did not really fully understand the difference between
generic lists and brand names list. There was no such
concept as a brand name list. So we were not totally
clear about that issue, but I can say that that list of
exemptions has largely been forgotten in the way that
materials lists have been formulated since then. It was
the clear intent of the people drafting the law in my
opinion, my experience, that those were the only
categories for which synthetics could be allowed, and
Emily pointed that out yesterday in her talk too.

MS. KOENIG: I guess the question under -- you
know, you had and production aides, and then you put
including. You did not put not limited to, and you just
included netting, tree wrap seals. I mean there was no
place really for any kind of mined minerals of any kind,
you know, whether...

MS. CODY: Because my minerals were natural so
we didn’t...

MS. KOENIG: I mean like -- not mined,
synthetic like some of these supplements or like
potassium silicaine is one of the products that are
coming up.

MS. CODY: Those categories, originally the
farmer group that I was representing did not craft the
list to contain those exemptions at all. Those were put in by consumer and environmental groups who were worried about the effects of just using the criteria, which they considered to be a big open-ended net to allow many different types of synthetics in. And so what they did was they took a current materials list at the time, which like I forget who it was that was saying we shouldn’t keep -- we should make sure that we can evolve. This is a case where things were put in the law that don’t allow the evolution of the production aides category to evolve. But that was something that was again put in at the last minute without a whole lot of discussion and understanding about what the effects of it were just like the types of changes that we’re doing now. So that’s one of the reasons that I know that we have to be very careful when we’re making conceptual changes in the way that things are listed, and the way that things are evaluated to make sure that we understand for the future what implications they have so...

MS. KOENIG: Many of the -- not many but there are certainly examples on the list that are not consistent with those production aides like...

MS. CODY: There certainly aren’t.

MS. KOENIG: ...some of the post-harvest.
MS. CODY: There certainly are. And not just in crop production either. Most notably, not in crop production.

MS. KOENIG: So are you saying that some -- I guess even though you had taken the -- I mean you had taken like a census at that point in time sort of like what Brian is saying. Now the industry has evolved, we’ve gone through this materials process. We’re recognizing that perhaps things have to be more broad to encompass at least some of the production practices that now -- because a lot of changes in the industry, so how do you -- so what do you recommend in that sense? I mean you’re saying stick with the categories, yet we’re saying we’re beyond some of those categories at the present.

MS. CODY: I’m saying that it’s time for the categories possibly to be revamped but not to be wholesale disregarded. I feel that in my view, and as an experienced writer of materials list, having more categories is better than having less. For example, if you had a category that said just livestock drugs as opposed to sanitizers and cleaners and everything being mashed in together, then all of those FDA concerns could be addressed in that one section, and the other they wouldn’t be having to deal with FDA labeling and wording.
for things that really are intended to be sanitizers. So that could even be an annotation for the entire category of livestock drugs that it has to satisfy FDA labeling or whatever would work for wording for the FDA. It would also mean that you could make specific provisions in that category for those materials that are prescription drugs versus nonprescription drugs. Those are the kinds of things you could write in the annotation specific materials. So I feel that both tools are necessary, the listing categories as well as annotations, and I do not support having them taken away without a lot of careful consideration and transparency and consultation with the public, which I think if you’re wondering whether you’ll ever get any comments on your review of other materials, you know, the re-review of materials, if this kind of change is made I will guarantee that you will get wholesale because you’ll have one big category you’ll get a whole big categorical complete about the list that now there’s not enough specificity about the materials and therefore we want all these materials off the list because the annotations are gone. That’s the problem that you’ll get if you do it that way. It will reduce the list versus increasing it over the long haul because people will not stand up, will not stand for the gigantic broadening that will

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
occur without the use categories, specifically the use categories. The annotations, you know, you can craft those individually but the use categories make a big, big, big difference in the lists. That’s all.

THE CHAIRMAN: Mark.

MR. KING: In your opinion based on what you just said if we were to increase the number of categories in a specific section of the National List could that effectively reduce our need for annotations...

MS. CODY: Yes.

MR. KING: ...and still make the list more operational?

MS. CODY: Potentially it could, yes, because as I tried to explain this is hard to explain in five minutes so thanks for asking that question. Actually the way a list writer works is that you balance the use of categories with the use of annotations. If one goes up the other one may be able to go down somewhat, but we have so few categories and they cover -- especially in livestock it’s especially difficult, they cover so many disparate types of materials that’s why you end up with so many annotations.

THE CHAIRMAN: That’s a good point.

MS. CODY: Thank you, Mark, for asking that
question. That’s just what I wanted to be able to say.

MS. CAROE: Lynne, we’re struggling with materials that get listed under a specific use, and then that same material, which is found to be innocuous and perfectly acceptable for organic practices, later we find out that there’s another use for it that doesn’t fit in that category anymore so we’re ending up doing triple TAP reviews for the same material.

MS. CODY: Right. That’s because you’re relying more on annotations than on listings, list categories.

MS. CAROE: I was talking specifically about materials that end up in a category like sanitizers and disinfectants but are also used, you know, somewhere else.

MS. CODY: Some in another category?

MS. CAROE: In another category.

MS. CODY: Well, then you just list them in two different categories.

MS. CAROE: But it’s not just list them. I mean in order for something to be put on the list in another place requires to go through the process again.

MS. CODY: Well, that’s true, that’s true. That’s because OFPA says you have to list by use, and so as soon as you start listing by use you may have to
reconsider material for another use, but at least if you had them listed in more categories you could potentially at least in processing say if you had livestock and crops or livestock and processing. You may have to list them twice. But at least under processing you could potentially have less complicated annotations which would at least for processing eliminate the re-review of that material for processing.

MS. CAROE: Well, okay. I guess the next question I have for you is what you reference your definition of use because I could say use is for crops, I could say use is for livestock, I could say use is for handling in a very broad stroked term or I can say use is for cleaning a water steam line.

MS. CODY: That’s right. That’s a really good point. What I’m urging you to do is to take the more detailed definition of use categories, not just crops, processing, and livestock. In that case you could just have an alphabetical list, all the synthetics, the allowed synthetics, and all the prohibited naturals for processing crops and livestock. But I don’t think that serves the regulatory purposes well. I don’t think it serves the consumer well, and I don’t think it serves the certifier and the operator well because there’s no – it’s so general that you would end up with so many
annotations to make it acceptable to the public that the regulatory angle of it like you said having to re-review everything all the time for different tiny uses would be burdensome, more burdensome than the other way around. That’s the way I see it.

MS. CAROE: I don’t know if...

THE CHAIRMAN: Oh, I’m sorry.

MS. CAROE: ...you have a specific annotation that you wouldn’t be re-reviewing for a new annotation for a new use. I don’t understand...

MS. CODY: I don’t have that off the top of my head but I’d be happy to work with you to come up with examples on that.

MS. CAROE: What I’m trying to explain, Lynne, is that if you have a very specific category that a material is ending up in and you’re going to use it for another, you’re still going to re-review it to put it in a new category as much as you re-review it if it has a very specific annotation, so I don’t understand why you feel that it would be beneficial to have more categories.

MS. CODY: Because normally the way materials lists normally work is that they are hierarchical so the smaller changes occur at the smaller levels, and it’s
only when a large change occurs that you would have to put it in another use category like is it a fertilizer and is it also used in processing, which there are cases like that. Some of the synthetic processing aides can be used as synthetic fertilizers. In that case it’s clearly -- if you have it listed under processing already we know it can’t be used as a fertilizer, but it may be able to be used, and I’m not very knowledgeable about processing, it may be able to use say for baking cookies and it may also be able to be used for preserving meat or things like that in which case all of those things are covered as an allowed synthetic listed on the processing list. You don’t have to have every single little thing like you have now. Anyway, you almost need to sit down and go through examples to show how this works on a very specific basis so it’s probably not the best place to discuss it here. But I’d be happy to work up some examples showing why sometimes you would have to relist it versus -- you would have less problem, less likelihood of having to relist it versus changing the annotation. Anyway, that’s been my experience in writing all these materials lists. I just got done with a big one for fiber processing for the OTA where this was -- became even more apparent to me than ever before so I know you’ll be seeing that soon. You can take a
look there.

THE CHAIRMAN: Okay. Let’s -- because I mean there’s a lot of stuff and obviously this is a work issue here that we can’t solve during public comment.

Jim.

MR. RIDDLE: Well, yeah. I’ve been waiting to make a response here because Andrea’s question certainly is a really good point and something we’ve wrestled with since I’ve been on the Board, and in OPFA 6517(b), content of list, the words used the list shall contain an itemization by specific use or application of each substance, so that tells me we’re talking specific use or application as the guidance there to work from. But I think this can also be handled in the instructions to the TAP contractors that, okay, someone petitions for a material and a specific use, but let’s look at the universe in the TAP review process and other potential uses compatible with the criteria in organic system, and then as the Board deals with the material let’s not be limited only to the original petition use and where we place it.

THE CHAIRMAN: Michael, I think wants to...

MR. SLIGH: I just wanted to say one real quick historical point was that when we took the votes on materials on the original list many of the votes were
very close, and it was the annotations themselves that
allowed the Board to even put many of those materials on
the list at all, and if you take away the annotations
you are going to have a bit of an outcry, a national and
international outcry, so you must be very careful on how
you deal with that.

THE CHAIRMAN: Okay. Obviously, this is going
to be a big issue for us, so I appreciate it. Okay. I
don’t think that there’s anybody else at the back that
has signed up. I do have a couple of written things. I
shouldn’t put a candy in my mouth before I -- okay. The
first comment here to be read into the record is from,
I’ll probably slaughter the pronunciation here, but John
Immaraju. I’m writing to find out as to when the May
14, 2003 NOSB recommendations will proceed to the next
step and be added to the National List. We have a lot
of growers who have been regularly asking us to when
they can go back to using our products, ecozin [ph],
amazine [ph] and ornazin [ph] on their organic farms.
We have informed them that the NOSB has approved and
recommended that tetrahydropherferal [ph] alcohol THA,
FA, and EPA list inert ingredients in our formulation be
added to the National List. This delay is causing
extreme hardship for us, the manufacturer, as well as to
enlighten growers who seen the benefit of using our
products. I feel it will be of true service to the organic farming community if the listing process is speeded up. Perhaps the first anniversary of the NOP is a good time to move all the noncontroversial approved materials to the National List and bring it up to date. Any information on this time line would be much appreciated. Thank you for your help in this matter.

Regards, John M. Immaraju, Ph.D., AMVAC, manager, international product development. The second item is a statement to be read into the record, the position statement on organic dairy replacement to origin of dairy livestock from the Northeast Organic Dairy Producers Alliance. The Northeast Organic Dairy Producers Alliance, NODPA, held its annual meeting on August 22, 2003, in Albion, Maine. There were over 75 farmers representing Organic Dairy Producers in the Northeast at attendance at this meeting. States represented at the meeting included Pennsylvania, New York, Connecticut, Vermont and Maine. As a group, we represent over 350 organic dairy farmers. Vote was taken at the meeting on the issue of organic dairy replacements, and the vote was unanimous in support of the last third of gestation for all dairy herd replacements, and in support of all organic dairy farmers working under the same set of standards. As
representative of Organic Dairy Farmers of the Northeast, we strongly disagree with the NOP’s current interpretation of the origin of dairy livestock. We believe that the contradiction in the rule regarding dairy replacements was an oversight during the assembly of the final rule, and that the mistakes should be corrected to be in line with the intent stated in the preamble. The language in the preamble of the NOP rule is perfectly clear in requiring all livestock to be raised organically from the last third of gestation once the farm is certified organic as opposed to current NOP interpretation, which allows buying in of conventional heifers and managing them organically for 12 months. With the current interpretation, we feel that the NOP has neglected to act on substantial public and NOSB input in regard to all herd replacements being organic from the last third of gestation. We also strongly object to the double standard resulting from NOP’s current position. This results in the lack of equal protection for organic dairy producers. All organic producers should have a level playing field and the same set of standards regardless of their date or method of certification. Sincerely, Northeast Dairy Organic -- Northeast Organic Dairy Producers Alliance, NODPA, and representatives listed below. And those representatives

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
are listed so we’ll enter this into the written record.

With that, I think we have completed the public comment period. I don’t see anybody else in the audience waving their hands that they weren’t called upon, so I appreciate the input. This is very helpful, and we are now at 11:30. So I would recommend that we break now for lunch. Then we come back in an hour and start at 12:30 rather than -- yes, George.

MR. SIEMON: Well, just I have another this afternoon.

THE CHAIRMAN: Okay. Because we have the two things that we have on the agenda for this afternoon are the discussion of the compatibility document, and the Board election, but because of the work that we have tomorrow then I would hope that perhaps if we get some time this afternoon, we can start in on at least at the committee level working through that process to bring forward for tomorrow. Does that make sense? Okay. George.

MR. SIEMON: My concern is if we’re going to look at the proposed policy that was put forward about compatibility that’s what our objective, we’re going to do a little writing by committee. That’s always a concern. But I was wondering is there any way we could put it on the Power Point so the community can see it.
MR. RIDDLE: That’s the plan.

MR. SIEMON: Okay. That’s the plan. Then we can write on the Power Point till we make changes because it is so frustrating to be in the audience and not know the document. Okay, good.

MR. RIDDLE: Yeah, absolutely. And also to add to that there are two copies of the 23-page committee recommendation extra, and it’s really just pages 7, 8, and 9 where the options are stated, so if anyone in the audience would like these with the understanding that if anyone else in the audience wants copies that they share then you can have the paper but really the only parts that needs photocopied as the working draft is the options pages that you can find there. But, yeah, already anticipated. Got it on a disc and we’ll have it up on the screen, the options, option three, the recommendation.

THE CHAIRMAN: Okay. We will recess. We will come back at 12:30.

***

[Off the record]

[On the record]

***

THE CHAIRMAN: Let’s reconvene the meeting.

Again, I will admonish everybody to turn their cell
phones to silence or vibrate because we don’t want another embarrassing incident like happened this morning. Anyway, this afternoon we’re going to spend time now going through the development of the document on compatibility with the system of sustainable agriculture and consistency with organic farming and handling. As I said, we had the policy development committee that has been working through this process. I appreciate the comments this morning during the public testimony that gave us some input on that, and so with that I will turn it over to the chair of the policy development committee to lead off the discussion.

MR. KING: Thanks, Dave. Yeah, the policy development committee was asked to develop a statement that defined compatible with the system of sustainable agriculture and organic handling, so we have a 22-page document that’s been developed in the last few weeks. There are three pages primarily that do list three options that will be on the Power Point. And Jim Riddle is the primary author. The committee worked together on this, and as I understand a lot of the motivation for this particular document came from a good hot sauna and a plate of veggie stir fry. So because -- and ping pong. Let’s not forget that. So at any rate because Jim is the primary author we’re going to ask him to sort
of give us an overview of the options, and I’ll let Jim comment a little bit on the format of input.

MR. RIDDLE: Thanks, Mark. Well, just like everybody who commented this morning during the public input session, the Board was also charged with answering the question of what is in materials review, what is meant by compatible, consistent with sustainable agriculture and organic farming and handling. And instead of starting totally with a blank slate here this afternoon, I had suggested to the policy development committee that we do some initial drafting just to have something on the table for consideration because despite how much fun it is to draft by committee it’s easier or more rewarding to at least start with something even though the end product may look quite different in the end. And I just want to explain a little bit about what the committee went through. I did put a draft together initially, which is essentially option one in your document, and with some supporting language. And we had an initial conference call 2-1/2 weeks ago with Keith, and I guess Becky, Mark, Dave and I, Nancy is on the committee but couldn’t make that because of her own schedule and the very short time frame we were working under, and we regret most of the calls that that was the case. But it was all turned around in a 2-1/2 week
period here. Well, during that initial call we had been
giving some thought that we review really two distinct
types of substances, those used in production, and
there’s criteria for production materials and then
handling materials. And so coming out of the first call
the change that the committee recommended from the
initial draft was to break the draft into two separate
statements, one to be used for the evaluation for
compatibility of production materials versus handling
materials. So that is option two was to pull those
apart. And I circulated that back to the committee, and
then we had a second conference call a week later
another Friday afternoon, and in both of these calls I
learned the meaning of the word robust. They were very
honest, exchanges of information, and I must -- I just
really want to hand it to Keith for how you communicated
and how the committee, we went head to head, and I’ve
never been pushed so hard for free as I was in this
process, but it was a good pushing. And coming out of
that second call Keith made it very clear to us that
what’s most helpful for the program are measurable
criteria or factors in order to understand what is
compatible and consistent, and so that led to the
drafting of option three. And that’s still up for
discussion whether it meets that goal of being
quantifiable even using, as Keith said, soft measurements. It doesn’t have to always come to numbers per se but something that you could hold up and measure. And so that’s the -- option three is a bullet point format, and then the policy development committee met here on late Tuesday afternoon, and made some more revisions to option three, and then adopted that as the recommendation and that was a vote of 3 to 0 with two absent. So Becky wasn’t there or Nancy so it really is a draft. And I approach this very much with the understanding that the Board first saw this, the other members of the Board, yesterday, and it’s been a very tight time frame to get something on the table. And I am anticipating changes, deletions, additions, whatever, to this draft. So what I would propose as far as how we manage this afternoon would be to work from option three the committee’s recommendation unless people have other desires or think it would be better to go back to either of the other options or an option four, which does not exist at all.

THE CHAIRMAN: Kim.

MS. BURTON: Just a couple general statements. One, thanks for acknowledging we just got this yesterday. It’s not easy for the Board to work on stuff like this when we just got it, so I hope we can all --
know we can all get through it. You have some opening comments on the first pages. Do you want us to go through that now or to make recommendations at a further date as far as drafting language in some of the different recommendations and questions we have on that and the preface.

MR. KING: Your question is the preface, not the actual option, and it...

MS. BURTON: Right now I’m talking the whole documents because I do have some comments on some other areas of the document only having had about an hour to read it.

MR. KING: Yeah, I don’t see why we can’t consider...

MS. BURTON: I mean I would rather start from the beginning if we could.

THE CHAIRMAN: Okay.

MS. BURTON: And then I don’t have a problem going to three.

MR. RIDDLE: Oh, yeah. I think that’s fine, and we all understand the focus will eventually be the option.

MS. BURTON: And especially because nobody -- the other thing was no handler representatives are on this committee, and there’s two of us, so we really need

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
to make sure that we go through this pretty thoroughly.

MR. SIEMON: Just one of your assumptions was that it needs to be some way measurable, and I heard that can be soft but yet in Barbara’s breakdown of the three categories, this being the third one, the other two are supposed to be the much more measurable objective, and this was one that was more attitudes, so I just got to ask a question about measurable on this category going back to Barbara’s memo which was about the three different breakdowns. Let’s talk about consumer perception. You can do a survey and get the people don’t want antibiotics and dairy. That’s data. I mean we’re not going to go out and do that though.

MR. RIDDLE: That’s my understanding that it’s possible to measure but it doesn’t mean it will be measured in every instance.

MR. SIEMON: I don’t want to open ourselves up to a task that we’re not going to do here.

MR. RIDDLE: Right.

MR. KING: And I think one of the things we discussed if memory serves me correctly is that it’s possible to recognize, so keep that in mind that you can read the statement and recognize what we’re talking about. You may not be able to measure everything numerically but you can say, yes, this is happening or,
no, this is not. Does that make sense?

MR. RIDDLE: Yeah, and I just want to add that the options that we addressed, we tried not to duplicate any of the other criteria so those stand on their own. This is only the additional things that are, as Keith said, implied in the statute but if it’s stated in the statute it’s already a requirement, but when that criteria of compatible with a system of sustainable agriculture, what does that imply? What is our understanding at this point in time for guidance on how we interpret that in the materials review process.

MS. BURTON: So this is a guidance document when we review the category of compatibility and consistency.

MR. RIDDLE: Right. And, yeah, a couple of other things on that. Whatever we come up with here at the end of today is still a working draft.

MS. BURTON: Right. Oh, yeah.

MR. RIDDLE: We’ll play with it tomorrow when we go back and revisit some of our materials but it will be posted for public comment and would be adopted at the next meeting hopefully but it also will end of the day be used by the NOP as any material is moved forward in the regulatory process if questions come up so it has to work for them. So it’s a collaborative here despite
what our recommendation is, but we’re not attempting to
do the finished product by the end of this meeting but a
working draft we can take forward.

MR. SIEMON: And we’re going to start off with
option three is my understanding.

THE CHAIRMAN: Well, we’re going to start off
going through I think the overall document but to why
the committee got to option three. I think we want to
do some of that, and even before you start in I guess I
would ask -- and again the Board had recommended that we
try and get microphones on the table with the NOP so we
can have a little more of a participatory session here,
and I know it’s difficult but, Keith, particularly any
comments that you want to offer before we start wading
through this is being the person that’s introduced the
term robust and to...

MR. JONES: Yeah, into the vocabulary.

THE CHAIRMAN: Into the vocabulary.

MR. JONES: Let me make a couple of comments.

First of all, I think we at the program really do
appreciate the amount of time that’s gone in on this
even though it’s a short time frame that you worked
under. And we did hold your feet to the fire. I mean
we do believe that this is an important undertaking and
an important effort. I do want to remind you of the
fact that what you’re trying to do is define consistency. I mean you’re trying to put some bench marks around consistency, if you will. You’re not trying to reinvent the wheel, you know. You’re not trying to go beyond the statutory language. You’re simply trying to say what consistency means in the context of this particular statute. I think in fairness to the full Board there should be a couple of things that are talked about. One of the things that I advocate and continue to advocate, and it was indeed rejected by the committee, but I think it’s important nonetheless is that one of the ways that you could look at this question is that it is an outflow of the decision processes from the first six criteria. In other words, if all of the triggers are met in the first six criteria you then by default have a product, a substance, that is consistent with sustainable agriculture. I advocated for that approach because I’m not very smart. I try to make things as simple as possible, and that is a very simple process. In other words, you’re not trying to define something that doesn’t have a definition but you’re simply looking at your existing work products and then as it flows out that becomes the consistency question. That was rejected by the committee because I think the committee
felt that there needed to be some more around this whole notion of consistency. I only caution you in this regard that you can’t go beyond the statute. In other words, you got to make sure that this ties back in some way to the statute and the regulations. We can’t in defining consistency now have extra regulatory requirements that perhaps we’re going to impose on people. You can ultimately say you would like to see this as part of the regulation. That’s again your prerogative. But you need to be careful there in wrestling with this. The final thing I’ll leave with you is that we are very serious about making sure that these processes are measurable, and I think you have heard that from a number of your commenters this morning that is the way to get you out of some of the dilemmas that you face and some of the discussions that you kind of get yourself into is to have more objective bench marks where those bench marks are defined. You know when you hit the target, and as Jim well knows and the members of the committee that was the question that I continue to pose to the committee. How will you know when you’ve hit the target? And not only how will you know when you’ve hit the target, but is it transparent and readily understandable enough that the public knows that the target has been hit too. So that is in the
general statement, my comments, and I appreciate that.

MR. SIEMON: Yesterday when we talked, I think it was in the morning we were talking about we’re not supposed to approach issues just outside the law, yet we got into issues that were cultural, I’ll call them, for better use, issues like we have like child labor. I really need clarification between -- Barbara yesterday said we’ll defend, if you have a basis for that or some data for that, we’ll defend what you all decide. And what Keith just said, which is stick to the statutory. So I find those conflicting, and before I got into this conversation I need to understand that because there’s issues in here I didn’t think we were going to approach personally in this thing.

MR. JONES: I don’t think anything Barbara and I said are inconsistent. I mean I think what we’re saying is that we’re respectful of the process that comes out of this. If we can believe that it can be defended, we’ll defend it. Okay. I don’t know what’s going to come out of this process, and I think the reluctance -- my only admonition is just stay focused, I guess perhaps focused on the statute and regulation may be -- but just stay -- you know, stay focused, and make sure, George, that the points that you can come up with can be defended. In other words, you can put some
measurements around those, and you can say, yes, we can
defend this and this is how we know that we have bench
mark. The beauty about the process that you’re going
through is the consistencies not defined by the statute.
The statute uses consistency but it never defines what
that is, so you do have some latitude in terms of where
you go because it is not a defined term by the statute.

MS. ROBINSON: Let me give you an example of
what Keith...

MS. KOENIG: Can we move a mike over to that
table?

MS. ROBINSON: Let me give you an example.
When Keith said you don’t want to impose additional
regulatory requirements something, let me give you an
example of that. Suppose you decide that in order to
show something is compatible and consistent you, and
you’ve heard us say we want it to be measurable, you
come up with the idea of saying, well, the material is
compatible and consistent if it can be shown to be three
times more safe than what FDA has set, some limit that
FDA has set or EPA and some other material. I would say
you’ve over stepped your regulatory authority there
because you don’t have the right to take another
agency’s safety requirements and manipulate them and say
that -- you see where I’m going with this, you just
tread into a safety area that you don’t have authority
for. In effect, what you’ve said is that FDA should
have set the threshold higher. That would be an example
of putting out a measurement and getting into a
regulatory area that you really -- you don’t have
anything to stand on. Now as far as -- I don’t think we
really need to -- I don’t want to keep going back to
this thing about child labor. I just truthfully pulled
it out of thin air as an example. But if you feel --
you know, when you talk about things like how labor is
used to make something, you do have your regulation and
your act is based on appropriate stewardship of
resources. I would interpret resources not only to be
the physical or the -- yeah, the land, the air, and the
water but the people, the human resources as well. So
that’s how I would accommodate it if you felt that
strongly about something, and you wanted to be able to
incorporate it, so I don’t think there’s really any
compatibility there. But I really -- I don’t want to
see you keep going back to something like, you know,
bringing up social issues and child labor stuff and like
that because I think it’s going to derail you from where
you’re really trying to get to today. Like I said
yesterday construct the most logical, the most
reasonable scenarios that you’re likely to be

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
confronting, and we’ll worry about the far flung exceptions and weird stuff later but try to stick to something sort of reasonable.

THE CHAIRMAN: Well, what I’d like to do, and I’m going to sit back and let the committee lead the discussion here, but I think the document as a whole kind of walks through the discussion of the rationale and the background behind then what gets down to what is option three, and option three really contains a listing of bullet points to try and get it down to the things that I think Keith was trying to get to of specific things that you could look at. And I think at that point then we can start to go through each of those individually and see, you know, if that conforms, but it least takes us from the general context down to the specific recommendation. Rose.

MS. KOENIG: I just have a question and it’s a broader question. It’s really just in the form of guidance document concept because when we asked OMRI I guess to do that presentation there was a recommendation I think from both groups about guidance documents on synthetic versus nonsynthetic, and agricultural versus nonagricultural. And those are defined, you know, as this is not defined, you know, in the definition section so I guess I just wanted -- and maybe I should have
asked it then but is this the same kind of idea that OMRI was looking at in the form of those types of things too that are not clear within these criteria? Was the basis behind asking for this definition -- I’m saying that I think it’s good because it wasn’t defined or because you think it needed more clarity or both?

MS. ROBINSON: Both.

MS. KOENIG: So you don’t think that like TAP reviewers coming back and saying things were synthetic or nonsynthetic even though it’s defined if we do produce further guidance documents it’s for clarity in that sense as long as it doesn’t conflict with the definition.

THE CHAIRMAN: Okay.

MR. RIDDLE: Yeah, and I wanted to -- the reason why this is vague, I would say, I mean it’s in the statute compatible with a system of sustainable agriculture, and it’s an organic regulation but all of a sudden you have that term sustainable agriculture not defined in OFPA but it was defined in the 1990 Farm Bill, so there is a statutory basis for -- and that’s early on in the document that we quoted that. Mark had found that and contributed that to this draft, and I’ll just read that for people who don’t have a copy. The term sustainable agriculture means an integrated system
of plant and animal production practices having a site
specific application that will over the long term
satisfy human food and fiber needs, enhance
environmental quality, natural resource base upon which
the agriculture economy depends, make the most efficient
use of nonrenewable resources and on farm resources and
integrate where appropriate natural, biological cycles
and controls, sustain the economic viability of farm
operations, and enhance the quality of life for farmers
and society as a whole. I think the first three of
those we pretty well cover off in the other criteria,
you know, the environmental measurements, but sustaining
the economic viability of farms, and enhancing quality
of life for farms and society as a whole does then
bridge into -- a better example, the child labor issue,
which is one of the points in the option. So it really
broadens. When it is in OPFA it broadens the scope of
the factors that can be considered. It does become more
than an environmental assessment.

MS. KOENIG: And that was one of my confusions
on this being a guidance document versus what several
commenters I heard saying this is the seventh criteria,
and to me it’s not a seventh criteria is what I’m
hearing. There’s no regulatory -- this is a guidance,
and we can certainly keep social issues and all that,
but again it’s an evaluation of those that we have to
take into consideration and hopefully measurable ones.
But again it’s not a seventh criteria for us.

MR. RIDDLE: The seventh criteria is already
there. This is how we understand it.

MR. KING: Exactly.

MS. KOENIG: Okay. Just clarifying that.

MR. SIEMON: It’s in OFPA.

MR. RIDDLE: Right. Right.

MR. KING: And this is our attempt to better
understand the meaning of that.

MS. KOENIG: I was going to say that
definition is -- that’s from the SARE. SARE was formed
in 1992, I think. I think that came from the SARE
program.

MR. KING: It may have stemmed from there but,
yeah, Congress defined it so that’s how we got...

MS. KOENIG: So that’s also sustainable
agriculture research program definition because that’s
what they base their granting program on that same
definition.

MR. KING: And we felt -- you know, we’re
trying to be consistent with other things that are
happening so to not make this too confusing.

MR. RIDDLE: And just to respond to Keith’s

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
point about the seventh criteria being the outflow of the first six, we discussed that. We seriously considered that but we looked at the congressional language, the congressional report, and then also Codex, which US is a signator on, the Codex guideline, and it’s our understanding as a committee that each of the criteria stand on their own. Otherwise, why would it even be there. You’d functionally eliminate the seventh criteria if by definition it just meant you meet the other six, and there would be no reason to have a seventh criteria. So then we took the understanding from that point forward that it does stand on its own so therefore we need to provide guidance on what it means.

MR. BANDELE: Jim, back to the SARE definition. I thought somebody along the line they included that social equity along with...

MS. KOENIG: This is the one that when you go through the SARE program at least in the southern region when you look at grants, that’s how that program defines it.

MR. KING: So are people comfortable in moving forward with looking at the specific option at this point or are there more questions in general?

MS. BURTON: Just a couple things. Nothing big, I don’t think. On the first page just a couple of

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
-- because I just saw this was -- the third paragraph, the last sentence, it says while the NOSB routinely makes compatibility and consistency determinations the Board has not established a guidance document to insure that determinations are made in consistent, transparent, and equitable manner. I think that’s a lot to expect out of a document. That’s just my opinion. And that this guidance document should just assist us in the process, and that would be my recommendation that we don’t limit ourselves to everything that it’s supposed to do. So this is what I would recommend, while the NOSB routinely makes compatibility and consistent determinations the Board has not established a guidance document to assist in that process because I don’t know if it’s going to insure that we always are consistent, transparent, and equitable.

MS. KOENIG: You could say in that process in an effort to make.

MS. BURTON: Sure. Sure. That’s fine.

MR. RIDDLE: I think we need to keep those placeholders there.

MS. BURTON: I don’t want it to be -- it assures that we do that.

MS. KOENIG: Yeah, in an effort to make it more consistent and transparent.
MS. BURTON: Okay.

MR. KING: Yeah, I think leaving the terms and just softening up the language a little bit.

MS. BURTON: Yeah. Thank you. That’s what I...

THE CHAIRMAN: Can you re-read that, Kim?

MR. LACY: Let me throw another thing in there before she reads it. I had a similar concern. I just put help right in front of insure.

MS. BURTON: To help insure?

MR. LACY: Right. Would that satisfy you, Kim?

MS. BURTON: Yes, that would satisfy.

MR. RIDDLE: I do have the whole document on the disc.

MR. SIEMON: I don’t know. I mean if we’re going to go through it word by word, I’m still concerned about the audience. If we’re going to go through the whole thing. I thought we were going to jump to the options.

MS. BURTON: Well, I think that’s a downfall getting a document -- and that’s why I asked whether you want us to comment now or comment later.

MR. RIDDLE: It depends on how many. Well, I’m set up for that. Well, we’ve got all afternoon. It
doesn’t mean we have to use it.

   MS. BURTON: Can I tell you what our

   recommendation is? It’s just one word.

   MR. KING: So the recommendation now is just
to insert the word help, is that correct?

   MS. BURTON: Yes.

   MR. KING: Okay. The document is up.

   MR. SIEMON: The third paragraph, second to

   last line, the word insure.

   MR. KING: Yes. Insert the word help, help

   insure.

   MR. RIDDLE: Well, this will be -- I’ll just

   insert them as we go along. We don’t have the changes

   because we can compare them by looking at the previous
draft.

   MR. KING: We can just make it a different

   font color.

   MS. BURTON: And then it’s also in number

   three.

   MR. KING: Okay, Kim, you have another comment

   about...

   MS. BURTON: And the same sentence is in

   three, current situations and practices.

   MS. CAUGHLAN: Where are you?

   MS. BURTON: Page 2, current situations,
practices.

MS. CAUGHLAN: Where on the page?

MS. BURTON: Second to the last paragraph.

MR. RIDDLE: The same sentence. Okay.

MS. BURTON: You have under current situations and practices the handling, page 3 of 3, the 1995 handling recommendations. Just for a point of clarification.

MS. CAUGHLAN: Where on the page?

MS. BURTON: Page 3 of 3 on the bottom, point of clarification. On November, 1995 the Board recommended this materials review criteria for handling, and I thought that the handling criteria is already in OFPA and it’s in the regulations as far as what you should be reviewing handling materials under, so these numbers -- it’s continued on page 4 where you have all these consumer perceptions, historic precedents, and all of these criteria. Could you just clarify this because this isn’t going to supersede what...

MR. RIDDLE: Oh, no. This was just for historical reference and that was not the handling criteria recommendation.

THE CHAIRMAN: Can you pick that up on the mike?

MR. RIDDLE: Yeah, can you hear me okay?
MS. BURTON: So can you tell me what this is then?

MR. RIDDLE: Well, this was pretty early on in the drafting process and just trying to provide guidance to the program back in ’95 on just what the criteria should be.

MS. BURTON: And then the other criteria was formally adopted because I worked with Joan Kasell [ph] on that so this is just for references.

MR. RIDDLE: Yeah.

MS. BURTON: But you have it under current situations and practices, and that’s my comment. You have it under current practices, and that’s not the case. Our current practices are using the most recent recommendations that the Board made that is in our criteria of evaluating materials.

MR. SIEMON: Where would I find that? Is that in this document?

MR. KING: Well, I think what Kim is referring to is 205.600, and that this is historical information that led to the development of 205.600 so that we need to at least position this differently within the document.

MS. BURTON: It’s not currently -- we’re not currently reviewing materials under this criteria. We...
have criteria that came after this that the industry
recognized.

MR. RIDDLE: That’s a good point. I don’t
know how we change that but I certainly can insert a
sentence that just puts that in a proper context.

MS. BURTON: Because maybe evolution of
practice -- handling criteria.

MS. CAUGHLAN: Instead of current situational
practices you mean.

MR. KING: Or just historically speaking the
following information was considered while developing,
and then just go into something that states clearly this
isn’t the current practice.

MS. BURTON: Because what the industry agreed
on is what we’ve got right now and we’re evaluating
against.

MS. CAUGHLAN: Is that the right sentence?

MR. RIDDLE: No, but it applies to this as
well.

MS. CAUGHLAN: Okay.

MR. RIDDLE: It applies to both. Everything
starting from that in 1994 down is really presented just
for historical context. I’ll just put in bold the
following are presented for historical background.

MR. JONES: We just want to remind the Board before you get perhaps sidetracked here is that the criteria that is spelled out in 205.600(d) only applies to substances used as a processing aide or adjuvant. So it’s only when the use as a processing aide, which is defined by regulation were an adjuvant, which is not defined by the regulation, that those criteria come into play so just be aware of that.

MR. SIEMON: And then for the rest of the ones in the original seven are the ones that we’re using.

MR. JONES: That’s right, and for anything that’s not a processing aide or an adjuvant you’d have to revert back to the original criteria.

MR. SIEMON: So very well. These for ’95 still are Board guidelines even. If they’re not for processing aides, they still could be valid still.

MR. KING: Well, and I think Keith’s point is it clearly separates the two, the handling and processing is in the regulation, that production is in the statute, and so that we’re only referring in this case to the handling which is in the regulation and this criteria. And the reason that came in is through defining a system of sustainable agriculture. We also looked at defining a system of organic handling and/or processing, so that’s sort of where this is leading.
But the two are clearly different in that sense.

MR. JONES: Actually what we’re saying is crops, livestock processing ingredients not including adjuvants processing aides are all in the statute. The processing aides and adjuvants are statute and regulations.

MR. SIEMON: I don’t want to beat what Kim just said in disagreement but, Kim, it seems to me that that still is a standing policy of NOSB from that meeting. It says here this is dealing with number seven, the question or assignment today, this is what the NOSB Board did on number seven. It says right there it’s adequate to meet the other six criteria. At least that’s the way I’m reading into this because they’re going into some of these same issues. So it might be historical but it’s not replaced by those six in the law. This is a stand alone as far as I can read, and I don’t see anything -- the 2001 is the principles. I think these are all valuable just to see what the past Board did.

MR. RIDDLE: And that’s why they’re represented.

MR. SIEMON: Yeah. We can move on.

MR. RIDDLE: To help us be consistent and compatible with the Board in 1995.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. KING: Yeah, and I’m sorry if I implied they were replaced. I shouldn’t have said that. This is really how things sort of came to be.

MS. KOENIG: Although correct me if I’m wrong, Kim, the evaluations that we’re using as far as when we go through those materials we’ve been using just the ones within the rule, not the OFPA...

MS. BURTON: Yes.

MS. KOENIG: ...criteria. Take any of the processing materials that we looked at even in May. We always used those materials that -- the criteria in the rule, not these.

MS. BURTON: Right.

MS. KOENIG: Maybe that was not correct.

MS. BURTON: Well, I was involved in drafting the current criteria that we use for processing with Jim Kasell, and to my recollection it was our intent to use the ones that we currently use as criteria for evaluating materials in processing. And this document we have before us was prior to that. It was not a document that was agreed upon by the entire industry. From this came the criteria that we’ve got, so that was my point, and that we’re not currently using this criteria in evaluation of those materials. That’s all I
really wanted to say. We can keep it in there but I just wanted to make sure that it’s not...

MR. RIDDLE: Are you happy with how I put it in context?

MS. BURTON: Yes. Thank you.

MR. RIDDLE: Those two items are historical reference, and I can scroll back up to where I inserted that, and at the top of the page. It only references -- or presented for reference. I’m glad I looked at it again. The following citations or excerpts.

MR. KING: So it sounds like we’re comfortable with that. Do we have other general comments before we move to the options?

MR. SIEMON: Just so I understand because we’re supposed to be using the word sustainable agriculture. Did you all then decide that this definition from 1990 was inadequate as compared to just adopting that? We just got through reading it. Was that -- I see some of them are in your options but as compared to make it simplistic since we have a legislative reference did you consider just using that like combined with our principles, those two...

MR. KING: If I understand you correctly, you’re just making a general statement including that definition and not going further with bullet points?
MR. SIEMON: If we’re supposed to be defining what’s sustainable agriculture system, sustainable agriculture here, and we have a definition I’m just asking did you consider adopting this?

MR. KING: Well, I think we tried to reflect that in all the options but in general terms just adopting just that definition and nothing else we could fall short of our assignment.

MR. RIDDLE: Well, and of course it’s a two track assignment, and that is compatible with a system of sustainable agriculture, and consistent with organic farming and handling, so that meant we had to address both of those pieces. The sustainable agriculture says nothing about organic farming and handling, especially not handling.

MR. KING: Does that answer your question, George?

MR. SIEMON: Yeah. I’m actually just trying to -- I’m reading the law, and it doesn’t say consistent with organics, so I’m just trying -- number seven is just about sustainable ag.

MR. KING: Yeah.

MR. SIEMON: So you just added another...

MR. RIDDLE: Yeah, but OFPA does say consistent with organic farming and handling as well.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. SIEMON: In another section you mean because number seven just says...

MR. KING: A different section, yes.

MR. SIEMON: I’m trying to deal with our homework assignment. It says compatibility with a system of sustainable agriculture. So now I’m asking why not just -- I’m just reading the law. I didn’t make the law up.

MR. RIDDLE: Our assignment, what was posted in the Federal Register, was in materials review what is meant by compatible/consistent with a system of sustainable agriculture/organic farming and handling. Those are two phrases that are used, and we need guidance on it. We’re trying to wrap them into one recommendation.

MR. KING: That’s what’s on the agenda.

MR. SIEMON: Okay. Let’s go.

MR. KING: And that clearly sort of states where we are going with it.

MR. RIDDLE: And then in the back in one of the addendums it became addendum G does cite those various statute references which the compatibility of sustainable agriculture but also the references from OFPA and then from the rule on consistent with organic farming and handling. Anything else on the larger...
MS. BURTON: In the conclusion, you’re saying the conclusion is that all these factors must be taken into account, and I don’t know if we’ve made that determination. I think it should say should be taken into account until we come up with the final recommendation on...

MR. RIDDLE: You’re on option three?

MR. SIEMON: What reference?

MS. BURTON: I’m on page 5 of 5, for conclusion.

MR. RIDDLE: Okay.

MS. BURTON: The statutory, regulatory and guidance documents cited above indicate that ecological, social, and economic impacts, nutritional value, consumer perception, and international considerations must be taken into account when the NOSB evaluates substances for compatibility. And I think the word must is too strong in this conclusion statement.

MR. SIEMON: I agree. So we have can, could, should.

MR. JONES: Dave, if I could comment a little further too. I think we have a concern when you start characterizing what the statute and the regulation does, which is what this paragraph does. It’s characterization of what the statute and regulation...
supposedly does. The statute and regulations say what they say. I mean the plain reading of those or what you come away with, and I think we have struggled with any time that there’s a characterization of what those statutes and regulations imply. You may want to just word this into a simple sentence that says all statutory and regulatory requirements have to be met, end of story. Okay. But when you start characterizing what those statutes and regulations do we get nervous.

MR. KING: Would it be acceptable to drop the statutory and regulatory and just say that ecological, social, and economic should be considered? Would that be another option? I’m just throwing that out.

MR. JONES: Yeah. You could take the first part of that sentence and just begin it with the word ecological.

MR. RIDDLE: How about if we scratch statutory, regulatory, and guidance and just say the document cited above indicate that ecological blah, blah, blah should be taken into account because then we’re not linking it to an interpretation of statute.

MR. JONES: Jim, let me tell you why we have concern over this area. We are a signatory to Codex. Okay. We may argue, and probably will argue, in a lot of different venues positions that are vastly different
than other signatories to Codex. We will always argue whatever the U.S. government position is on a given issue. And so when you say that Codex should be adhered to, well, yeah, okay, but we may have positions that are antithetical to what Codex says and we’re going to argue very strongly on. Okay. So that’s why we have concerns when these things start getting characterized as to what should happen or must happen or things like that. The thing that you want to focus on is that all statutory and regulatory requirements have to be met. Okay.

MR. KING: I just had a quick comment, and then I think Rose had a question. So what I’m hearing you say, Keith, is that these are really good references that we use for information purposes but to not then take that, characterize it as part of the document, simply to use it as strong support for the final product.

MR. JONES: Right.

MR. SIEMON: So I suggest the sentence starts with the ecological and social myself.

MR. KING: Rose, did you have a comment?

MS. KOENIG: Yeah, I just said you might want to just do in conclusion, and just state, you know, sustainable agriculture should include, and then just state what you are because you’re basically saying --
you’re concluding that -- it’s assuming that based on the above information. It just says sustainable agriculture should include considerations of the following. It doesn’t say it must include but those are the things that you should include. You might say sustainable agriculture as it is consistent with organic farming and handling should include -- that’s basically what you were trying to do so that’s what you can conclude.

MR. JONES: But keep in mind, folks, and then I’ll shut up and let you guys proceed, but you’re trying to put parameters around consistency. Jim’s point is well taken that sustainable agriculture is already defined. That is a defined term. It exists. You don’t have to define sustainable agriculture. Your task is to put fence posts around compatibility and consistency. Okay. So taking on Rose’s point actually maybe you want the sentence to say when consideration or in consideration of compatibility and consistency these things should be considered because that’s what you’re trying to...

MS. CAUGHLAN: In determining compatibility is really what we’re saying.

MR. RIDDLE: That’s fine with me.

MS. CAUGHLAN: In determining compatibility.
MR. KING: Okay.

MS. KOENIG: Just basically taking that last sentence and somehow working it in your first sentence.

MR. SIEMON: If that’s the homework assignment let’s use that as a precept.

MR. KING: Okay. So what do we have up there now, Jim? You just dropped the first part...

MR. RIDDLE: Right.

MR. KING: And I think we’re hearing maybe to add compatibility and consistency to the beginning of that. In considering or in determining, I think is the term that...

MR. RIDDLE: But that’s at the end of the sentence.

MR. KING: Good point.

MR. SIEMON: Just start with ecological.

MS. KOENIG: Somehow word it so that that -- and you just should say that you’re just making a statement as to what our assignment was.

MR. RIDDLE: Okay. I see. I get it.

MR. SIEMON: And we went to the word should.

MR. RIDDLE: Yeah, got it.

MR. KING: How does that look to everyone?

Are we comfortable at least in general terms, does that make sense to everyone? All right. Hearing no
comments, are we ready to move on to the options? Take it away, Jim. Not literally of course.

MR. RIDDLE: Well, since we have the whole document up, are there any comments first on the option one or two or do we move directly to option three? Are people comfortable or do you want to consider or comment on the first two?

MS. CAROE: I just have one question for option two.

MR. RIDDLE: Okay...

MS. CAROE: Where do medications for livestock come in, A or B?

MR. RIDDLE: A.

MS. CAROE: So they’re organic farmers?

MR. RIDDLE: Yes. There actually are materials...

MS. CAROE: It just seemed like that applied more to farming than livestock production. That’s why I asked.

MR. RIDDLE: And I...

MS. CAROE: I know, but I mean medication, I don’t know, it just seemed like more inputs, field inputs, and that sort of materials were being considered when that was written. I just wanted to verify...

MR. RIDDLE: No, I think it’s a very valid
criticism not of our work but of the criteria
themselves. I don’t think they really addressed the
livestock issue, the livestock medications sufficiently
or envisioned that when they were written, and that’s
why the Board in a different work has tried to provide
some guidance on how to interpret each of the criteria
for livestock. I think that’s a different assignment.
But I fully agree.

MR. KING: Are there other comments concerning
the options?

MR. RIDDLE: We’ll go right to option three
then.

MS. CAUGHLAN: I would prefer to go to three.

MR. KING: Yeah, I think that seems to be the
most appropriate. Do we have comments on option three
in general terms specifically?

MS. CAROE: Well, as I read through this in
the pro part of this option three is that is presents
tangible criteria, and I still find the criteria are all
judgment calls. They’re not what I would call tangible.
I mean you’re still making judgment decisions, and I
don’t know that you’ll ever get away from that but
they’re still judgment. Tangible to me means...

MR. BANDELE: I have the same concern. I’d
just take out tangible and say criteria.
MR. RIDDLE: Fine.

MR. KING: Okay. Did you get that, Dave?

Okay. Comments on the specific points, verbiage.

MS. CAROE: G, maintain the authenticity and integrity of organic products so that the consumer will not be deceived. I don’t like that.

MR. KING: I felt the same way about received and the way that -- but it is from Codex so...

MR. RIDDLE: No, we can change it. It’s just a reference point. It’s our document, our guidance, our recommendation. George.

MR. SIEMON: I was going to suggest we say something like satisfy the consumer’s perception for authenticity and integrity of the organic product.

MS. BURTON: Yes, be positive instead of negative.

MR. SIEMON: So my suggestion is satisfy the consumer’s perception for the authenticity and integrity of the organic products period. And drop that whole receiving -- satisfy the consumer’s perception for the authenticity and integrity of organic products. Authenticity is your word too but I’m trying to work with some of the sense of these.

MS. CAROE: This is one of those areas where tangible to me seems far fetched because how are you...
going to do that?

MR. SIEMON: Do a survey of consumers.

MR. RIDDLE: Yeah, it’s possible that it could be measured through survey.

MR. SIEMON: Do you want antibiotics in organic dairy products, you know.

MS. CAROE: But you’re not saying even on a specific area. You’re saying in general it meets their perception.

MR. KING: Right. And you could do a survey based on specific areas that they perceive of the industry so you could measure it. I understand what you’re saying but by design.

MR. SIEMON: Or you could read public input from past rules and get a lot of tangible data about what people want.

MR. RIDDLE: Or any time a material is petitioned...

MR. KING: One at a time. Yeah, Keith has a comment too.

MR. JONES: I’d just remind the Board that as far as a lawful definition of integrity if you’re complying with the regulation all the lawful requirements have been met. I mean the product is determined to be on its face to have integrity.
MR. SIEMON: I’m willing to drop authenticity and integrity.

MR. JONES: And so I think you need to be careful or at least give serious consideration to implying that integrity is measured by something other than full compliance with the regulation. Okay. Because when you do that you’re sending quite mixed messages to consumers. Now certainly consumers can weigh in on the use of any individual material. You do that quite often in your deliberations and taking public comments how is this going to play out. But I think when you give the impression, and I think you have here, give the impression that something is other than full compliance with the regulation you’re really sending mixed messages.

MR. KING: Okay. George has...

MR. SIEMON: Well, you know, I’m trying to react to what’s been given here so this is a little tough because I’d be satisfied just to say satisfy the consumer’s perception of organic products and drop that whole just to follow...

MS. CAROE: Or just drop out and integrity.

MR. RIDDLE: Yeah. I like authenticity.

MR. SIEMON: Okay. Authenticity is fine. Whatever works.
MR. KING: Becky has a comment.

MS. GOLDBURG: I just want to comment on two different items.

MR. SIEMON: Well, let’s get through this one.

MS. GOLDBURG: Yeah, so I didn’t...

MR. KING: Let’s finish this and then we’ll come back to you. But I’m comfortable with George commenting in that consumer perception has been a driving force in this marketplace, so it needs to be in there but I don’t know how others feel about dropping at least integrity, perhaps even authenticity.

MR. RIDDLE: I don’t want to go on the record against integrity. But, no, I hear what Keith is saying, and I think there are numerous places in the rule where integrity is mandated but here it’s as we’re considering a potential material to add how will that impact consumer’s perception of integrity. Would it undermine integrity if we added this material to the list and endanger consumer perception.

MS. CAROE: But Keith’s point is if you put it on the list and it’s used it is organic integrity because it’s on the list, and it’s within the regulation.

MR. RIDDLE: But this is in our deliberation.

If somebody comes forward and says I got data people are
going to stop buying organic products if you put this on
the list because it undermines the integrity of the
organic system. That’s a valid consideration. You’re
really dealing with the perception.

MR. KING: Hold on. I think Goldie had a
comment, and then we’ll go to Dave. Do you want to
chime in, Goldie, or was that just...

MS. CAUGHLAN: Well, I think perception is --
I’m struggling with this because we’re talking -- the
way it’s worded we should probably just get away from
that part of it but I wasn’t put off by the wording
which said that the consumer will not be deceived
concerning the nature, substance, and quality of the
food. And the reason I wasn’t put off by that, and the
reason that I rather liked it and don’t view it as a
negative statement not to offend but marketing so
frequently -- I mean consumers right now believe that
there’s no pesticides used in the growing of organic.
They believe that there’s no synthetic substances used
in organic processed foods, so we have a lot of -- so
when we talk about consumer perception and try to equate
that with the same thing as saying organic integrity
those are two different things. You can have what we
fully believe is strong and organic integrity, and you
can still have a consuming public, which I think we do,
which perceives a whole different substance, and that’s
the weakness of our catch up in terms of education.

MR. KING: Dave was up next, and then we’ll
go...

THE CHAIRMAN: Okay. Well, I just -- I think
the only thing that’s really cumbersome is that you got
these modifiers. You’ve got the perception of
authenticity, and to me authenticity is authenticity. I
mean you can have the perception of authenticity and it
can be a phony, right, you know, new and improved, and
so I think that we need to really talk about consumers
desire, the consumers concern, whatever. I mean it’s
not -- to me perception a lot of times is not reality.

MS. CAUGHLAN: Well, you just said it’s the
other way but it’s the same...

MS. BURTON: Expectation.

THE CHAIRMAN: Expectation. I like that word.

MS. BURTON: Marketing 101.

MS. ROBINSON: Guys, this is -- let me come up
here. This is fine. You know what would help is if you
-- if instead of listing these as factors suppose you
just -- everything you got here is just cool, okay, but
at the front of all of them if you turned them into
questions is this substance because keep in mind what
you’re doing. You’re not talking about, you know, the
product. You’re talking about this substance you’re evaluating. Does the substance, the use of it, promote ecological balance. Does the substance affect global warming. Does the substance conserve biological diversity, dah, dah, dah, dah. I kind of like this expectations idea for consumers but again I see nothing wrong with your looking at a substance and you don’t want that substance to reduce or undermine the integrity or the authenticity although I take Dave’s point. It’s quite correct. It’s either real or it isn’t. It’s not just it feels real, it looks real.

MR. KING: But we have a real seal.

MS. ROBINSON: And you have a real deal too.

But if you -- sometimes if you just phrase these things as questions and really keep those words the substance it’ll keep you focused on what you’re doing, and then it fits. I mean Jim is absolutely right. You don’t want something to undermine integrity. It’s okay to have that in there. So that’s a thought. Also, when you’re doing this sometimes it’s helpful to just say to yourself what would be incompatible. Sometimes that helps you get to what is compatible by trying to figure out the things that you would reject out of hand. That’s just a suggestion.

MR. KING. Okay. Becky, then Kim, then Rose.
MS. GOLDBERG: Am I allowed to go on to new 
points yet?

MR. KING: I think we should finish this 
thought and then we’ll come back to you.

MS. GOLDBURG: That’s what I thought. That’s 
why...

MR. KING: Okay. All right. You’re still on 
deck. So Kim.

MS. BURTON: And the reason that we’re 
deceived is because there’s lots of marketing data out 
there that is now available on organic products that 
would be very beneficial with this G if it was worded 
correctly, and if we leave it open enough we have data 
right now in spins and all over the place that would be 
very helpful, so if we leave it open and we have 
expectations and perceptions, we can quantify that right 
now today so that was...

MR. KING: Can you elaborate on that? What do 
you mean specifically? I understand what you’re saying 
but do you want to be more specific or not? Do you 
think it’s -- so you’re saying general is better.

MS. BURTON: Absolutely.

MR. KING: Okay.

MR. RIDDLE: Which language are you 
supporting? I just want to be clear on where you’re at.
MS. BURTON: Satisfy the consumers expectations for the authenticity and integrity of organic, and that is measurable right now in the organic industry with marketing data.

MR. KING: Are you saying you should say organic and not organic products?

MS. BURTON: Organic products.

MR. KING: Okay. Do we need -- are we okay with this point? Can we in a general sense agree on that?

MS. CAROE: Well, are we going to change it based on the substance, the substance in a product?

MS. BURTON: We could do that.

MR. RIDDLE: Well, I’d like to comment on that.

MR. KING: Let Jim comment and then I wanted to elaborate on it.

MR. RIDDLE: Yeah, I think Barbara raises a really good idea. If only we would have had another conference call. I could have taken another sauna and played some more ping pong. How I’d like to respond to that is that we don’t do that right now. We don’t try and do that right now, but we craft an option four which turns it into questions but without making any substantive changes to the content but just keep focused.
on the content here, and then see which would work
better but I think you’re on the right track.

MS. ROBINSON: I just offer that because it
helps you stay focused on what it is you’re trying to...

MR. RIDDLE: Is that okay?

MR. KING: Go ahead, Andrea, and then I wanted
to comment.

MS. CAROE: Well, I’m just looking at the
point, and is the point saying that if you use a
material in an organic product it won’t meet the organic
expectation of the consumer or is it saying that the
material doesn’t meet? I still don’t -- what I took
from Barbara’s point is stay focused on the fact that
you’re talking about a material. We haven’t addressed
the material in this point. We addressed organic
products. Are you talking about organic products that
use the material?

MR. KING: Well, that’s how I understood
Barbara’s point, and I don’t want to necessarily speak
for her but it sounded like to me she was talking about
if this substance or material is used in a product
that’s labeled as organic would it meet the perceived
expectation for dah, dah, dah, dah.

MR. RIDDLE: And the way this is drafted right
now, you have to go back to the lead-in paragraph, the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
first half of any of these sentences is in order to
determine if a substance that’s used to manufacture is
compatible the following factors must be considered. So
all of this is already in the context of reviewing the
substance but it might keep us more focused to just
repeat that in a different format.

MS. ROBINSON: Well, look at the discussion
you’re having.

MR. RIDDLE: Valid point.

MR. KING: So good point and George...

MR. SIEMON: I would like to ask that we go
through the first paragraph first if we could because it
is the whole thing here, right? Just like you said. I
have some changes. So I think we should go through the
first paragraph before we jump down to the bullets. Is
that all right?

MR. KING: I don’t see any reason why we can’t
back up and...

MR. SIEMON: We could even go in order. We
could be radical, you know, we could even go down the
list.

MR. RIDDLE: It’s all open. I think we should
have started there.

MR. KING: Go ahead, George.

MR. SIEMON: I think again the word must has
to be revisited. In order to determine if a substance that’s used are compatible, the first question I have is about the word must. I’m not so sure when I looked on these bullet points we’re going to be able -- we’re going to be hung up that we have to look at every one of these points. I’m not sure with our TAP process we’re going to be able to deliver a must on these issues.

MR. BANDELE: Some of them aren’t applicable. Some of them are only applicable to livestock.

MR. SIEMON: All right. Let’s talk about must.

MS. GOLDBURG: It should be...

MR. KING: Let George...

MS. GOLDBURG: ...considered as applicable.

MR. KING: Let’s consider that while we’re on George’s point. Becky, what was -- as applicable?

MS. GOLDBURG: Yeah, something like that. That would fix the problem.

MR. KING: Okay. And Dave is putting that up, so let’s stay with that so we can...

MS. BURTON: And must should be changed to should.

MR. KING: Nancy, go ahead.

MS. OSTIGUY: I actually disagree because all we’re saying is we must think about them. That’s what’s
we’re saying with must consider, so you can say it’s not relevant. So must means that you can’t skip the question because you don’t even want to think about it in the first place. I think we should think about it, and then if it’s not applicable because it’s livestock and we’re not dealing with it, okay, you still considered it.

MR. RIDDLE: I have a compromise.

MR. KING: Okay, Jim.

MR. RIDDLE: A compromise would be to delete must and say are to be considered as applicable. It’s not as strong as must but it’s still a directive, are to be considered as applicable.

MR. KING: Nancy is saying okay. Becky. Okay. Do we have other concerns or comments for us?

MS. GOLDBURG: I have a concern with number eight only because...

MR. KING: Well, wait, I was talking about just the first paragraph.

MS. GOLDBURG: Oh, okay.

MR. KING: If we’re done there then we’ll go with that. Okay. George is not done.

MR. SIEMON: Okay. So then the way this is written if I read it that we’re limited to the factors listed. If there was some factor we haven’t thought of...
are we -- can we go there still or do we need a statement that says -- I find it’s the limiting thing. There could be things we’re not thinking of today.

MR. KING: Or we’re unaware of at this time, yeah.

MR. SIEMON: But yet we were told to up barriers here so I understand that but these to me reflect the kind of concerns that we want to look at but that’s opening the door.

MS. CAUGHLAN: Or among those to be considered.

MR. SIEMON: Well, that’s why I’m trying to bring it up because this is a definitive statement as far as I can read even though we just added some -- you just consider it, skip right over it, but what if there’s other factors, put them in later or do we want this kind of language...

MR. KING: Andrea, do you have a comment?

MS. CAROE: Well, I mean the problem we’ll get into is if we’re not transparent if we don’t write down what that criteria is. We can’t add it later. I mean, you know, tomorrow you want, you know, I don’t know, farm boxed or something like that, you know, you can’t do that to the petitioners. They have to know that in advance. It’s got to be transparent.
MR. KING: Go ahead, Rick, and then Jim.

MR. MATTHEWS: Andrea is on the right road here because part of what you got to take into consideration this document isn’t only for your use. It’s going to be what is provided to those who are going to be filing petitions so that they know what it is you’re going to be looking at. Now just because you create one today doesn’t mean it can’t be amended down the road. The thing is that you want to put everyone on notice as to what it is you’re going to look at. If you change that later on, and then put everybody on notice about the change, that’s fine.

MR. KING: I want to make one quick comment, and then go to Jim concerning Rick’s comment. So in the future, let’s say five years down the road, some sort of unpredictable or intervening event, you know, a future board can certainly draft new language or adjust criteria as see fit -- as they see fit.

MR. MATTHEWS: Yes.

MR. KING: Okay.

MR. MATTHEWS: You’re not binding future boards. Future boards could decide that your actions today don’t fit where they want to be 15 years from now.

MS. KOENIG: And they will.

MR. KING: Yeah, I’m sure they will at some point.
point, yeah.

MS. KOENIG: We’re doing it now.

MR. KING: Go ahead, Jim.

MR. RIDDLE: Rick said what I was going to say.

MR. KING: Okay.

MR. SIEMON: I think instead of as applicable, I think when applicable would be a little better because as applicable could be a little confusing that these all -- consider these as applicable.

MR. KING: Yeah, I can see your point. When applicable.

MR. RIDDLE: Are there any English majors?

MR. KING: Okay. Do we have other comments on the introductory paragraph? Okay. Seeing none, we’re going to Rose who has a comment on A.

MS. KOENIG: I don’t think A is workable because I just went in to that lovely two-page document and if you thought we were going to leave anything out, don’t worry. It’s in this document. I mean it’s just for the price we’re paying these individuals I mean there’s a lot of information in that. I’m not saying that either we -- you know, we have to look at the criteria and figure out which ones. Most of these are -- I would say you could use this as the guidance of your
criteria but not included in the criteria like all the criteria should encompass the most important points within your organic production and handling document but most of these -- a lot of these are repetitive of what you have down. So, you know, if I was a TAP reviewer and saw that page and then saw this page, I’d hand back the contract and say this is just one of the criteria. You know, it’s just, you know, I think we need to either embody the most important things that are in this document within those criteria rather than reference that document.

MR. KING: All right. So point A, be more specific. Take point A and...

MS. KOENIG: I would say take point A out. I think that the information in here is very important. We need to pick out the most important points that we think are consistent to sustainable ag and organic ag rather than just handing them that whole sheet. And I think some of them are already in your criteria so we need to kind of compare that to what we have down here and make sure we have the most important points embodied into our document.

MR. KING: And I think if I recall correctly the principles have gotten us to this point. We felt that they were important. I do see your point though.
If you’re a contractor, and that’s the very first point on here, and then you look up principles you’re like, oh, my God, can I have 10,000 just to start. But, Jim, if you want to comment on that because I know we have talked about this quite a bit.

MR. RIDDLE: Yeah, and I’ve gone both ways on this. I hear exactly what Rose is saying, and I hope that I’ve already extracted the relevant points that aren’t already covered by another criteria from our principles. Kind of at the end of Friday or whenever how it got back in there was looking at the newly revised Codex criteria, the number one criteria, as Emily said yesterday or maybe today consistent with the principles of organic production as defined in these guidelines. They’re holding that up and then you go back to their principles, and they really match up with our principles, and so that kind of, well, maybe we should keep that in there as number one, but I see the problem...

MS. KOENIG: My thinking is that you might be able to put it in your introductory paragraph that that should be a guidance. I mean they should look through it but that’s not necessarily -- we don’t want them to go through and pinpoint everything. You use this document to form your concept as you’re a TAP reviewer,
and the most important point that you have to cover are these.

MR. KING: Okay. Barbara, you had a comment?

MS. ROBINSON: At one time when I was talking with you about compatibility and consistency, I had suggested that you look at your principles for ways to help you define compatible and consistent. But I actually think my problem with A is kind of like Rose’s problem. It’s sort of like saying, okay, in order to find if the material is consistent and compatible, it has to be consistent with our principles of consistency and compatibility, kind of like defining it using a definition to define itself but then in any event if you read through the principles carefully every one of your principles must already be satisfied by an organic system plan. I mean those are embodied in the regulations. You go back and read the preamble. You read the beginning. What does every plan have to consist of. I think you would have already, you know -- you’ve already met those by the time you get to reviewing a material because you had had so why do it again. I guess I sense that your concern that if you take that out that somehow you’ll neglect these principles, and that can’t be the case. You wouldn’t do that.
MR. SIEMON: I think the six criteria deal a lot with them as well.

MS. ROBINSON: They do. They do. So I think you already will be bound by those. You already do that, but then you have these additional more specific criteria or factors that help you define compatibility.

MR. KING: With that in mind, Dave has put some language he’s inserted in the paragraph, and I don’t know how -- if people would like to comment on that, advantages, pros, cons.

MS. CAROE: Well, my comment on Barbara’s comment. In regards to the organic system plan this criteria is for nonorganic ingredients, so I don’t see how the organic system plan applies to the criteria to accept a nonorganic ingredient. The regulation regulates organic ingredients. This is the nonorganic ingredients that can go in it. Am I wrong? But I mean I...

MS. ROBINSON: You’re right.

MR. RIDDLE: Yeah, this is substance evaluation.

MS. CAROE: So, you know, the organic system plan is not related, I don’t think.

MS. ROBINSON: If somebody comes to this Board and asks you to approve Chilean nitrate, you’re not
being asked to approve Chilean nitrate in a vacuum. You
have to approve Chilean nitrate because it’s being used
to produce product X. It’s being used on a farm. It’s
being used in a processing plant. It’s going to be
added to a product. But all of the rest of that,
Andrea, all of the rest of that, subtract out the
Chilean nitrate, all must obey the principles of organic
system plan, the plant that’s using it, the farm that
uses it. So I guess what I’m saying is you’re not
chucking the principles. Those have to be recognized,
would have had to get there. And in every organic plan
that a producer provides to a certifying agent it
specifically must state how you are using synthetic
materials in accordance with this regulation. You have
to write that down. You have to keep that kind of
record, and you have to negotiate that with a certifying
agent so that you can show that even using that material
you are in compliance with the spirit and intent of this
law and its regulations.

MS. CAROE: So you’re referring to like the
utility requirements and the pest control requirements
and sanitation requirements.

MS. ROBINSON: Exactly, yes.

MS. CAROE: Okay.

MS. ROBINSON: Replenish and maintain long-
term soil fertility. That’s a principle. Chilean nitrate itself, I mean you’re going to evaluate all these substances but you’re going to do it within the context of those principles.

MR. KING: Yeah, I think that was clarified.
Jim, go ahead.

MR. RIDDLE: You had asked, Mark, our reaction to Dave’s proposal. That would be deleting A but moving it as a place marker in the introductory paragraph, and I’m comfortable with that. I guess I would like there to be some linkage but that it not open up a whole new can of worms like Rose was saying as a factor in itself. It’s actually 20 factors, for instance, so this just makes a linkage. Is that comfortable with you?

MS. KOENIG: Yeah, I mean you’re saying you need to do it in the spirit of our principles, you know, that your whole analysis should be reflected in what we believe is our principles but not every -- and then we highlight the things that are the most important as it pertains to sustain -- because most of these -- they all pertain but some of them are very specific in the ones you really want to highlight. And that whole idea is to highlight and reduce so that you can get -- you want a document that you can afford to produce that gets to the points that are the most important to the group rather
than covering -- if we could get somebody to cover it all, yeah, that would be the best document, but in the real world we only have a finite amount of resources.

MR. KING: I see your point. Goldie, you had...

MS. CAUGHLAN: But the obvious would be that you would not not give them the copy of the principles.

MS. KOENIG: Oh, yeah, but that’s a thing because now here’s the time to really reference it. I mean you should have looked at it all the way.

MS. CAUGHLAN: In its context it is the background. It is the underlying value system that brought us to that obviously. I like it this way better.

MR. KING: Yeah, please consider this as a strong supporting reference, if you will. Okay. Do we have other comments on the points? Becky, yes.

MS. GOLDBURG: Yeah, I had one. My first comment is I think fairly trivial. In most of the points we say something to maximize or minimize or whatever. In the case of global warming we just say impact on global warming. We should probably say minimal impact or minimal or something like that.

MS. KOENIG: Minimize.

MS. GOLDBURG: So that’s a small comment. My
other comment is broader, and I think maybe even more broad if we’re intending these criteria to sort of reflect the principles because the principles say a lot about environmental considerations that actually isn’t in the list here because Jim tried not to make this too duplicative. At the same time I find criteria B, promotion of ecological balance, incredibly vague. And I say that as someone who actually at one time got a Ph.D in ecology.

  MS. BURTON: I think it’s easier to say that you adversely do not affect ecological balance.

  MS. GOLDBURG: Well, there isn’t defined ecological balance, we don’t want to get into all that stuff but...

  MR. RIDDLE: Finish your thought.

  MS. GOLDBURG: You know, we need to talk about no pollution, maintenance of geo-chemical cycles and things like that, and I think we ought to maybe rewrite B and maybe C now too to be some sort of environmental criteria or series of environmental criteria.

  MR. KING: Are you suggesting combining the two or just elaborating on each individual point?

  MS. KOENIG: Defining it more in detail.

  MS. GOLDBURG: I’m not sure. I’d have to, you know, look at it.
MS. KOENIG: Well, the thing is if it’s something you actually want to be able to quantify you have to be pretty defined.

MS. GOLDBURG: Right.

MS. KOENIG: I mean if you really want bench marks those are too vague.

MS. GOLDBURG: Well, I don’t think C is necessarily all that vague but B is really...

MS. KOENIG: Well, C though there’s a thing -- I’m not sure that’s the word you want to say because when I see biological diversity, I see you want to increase biological diversity in many of these systems. You don’t want to decrease them. But you’re saying conservation, and I know what you’re saying. You really want to...

MS. GOLDBURG: I think this means the natural system so we don’t want to have a substance that ends up in...

MS. KOENIG: But that’s what I’m saying.

MR. RIDDLE: Maintain or improve. That’s a phrase used in the rule, natural resource list.

MR. KING: Well, if you have things in mind that we can actually...

MS. KOENIG: Well, this is a draft so they could...
MR. KING: I know, but I’m just -- while we’re talking about it, it’s...

MS. GOLDBURG: Yeah, I think it’s not something to write by committee.

MS. COOPER: So, Becky, with the biological diversity if that’s sort of the wild diversity then how can we get to the plant diversity on the farm?

MR. KING: Can you say that again louder, Ann?

MS. COOPER: My question was because I had sort of taken diversity as -- and it is sort of backwards having conservation of diversity but insuring diversity of plant stock, of breeding stock, of seeds and stuff like that, but if we’re looking at this biological diversity as diversity of the environment as opposed to on the farm and of plants and stuff, so how do we insure that because I think that that’s important so we don’t have line one kind of tomato left.

MS. KOENIG: But the thing is that sometimes also you have to look at these in terms of the materials that we look at, synthetics, okay. Sort of like take a synthetic and see if it goes through the system. There’s going to be certain categories, and that’s the whole thing, you know, you kind of look at it as a whole but things like peroxides and sanitizers would never make it through many of these systems although their use...
is essential in the systems, so I don’t know how you
embody that concept. And the same thing with a lot of --
because they’re tools getting back to -- Brian is not
here, but many of the tools don’t necessarily -- I mean
I hate to say a lot of them are not necessarily
consistent with these types of ecological principles or
sustainable ag. So I don’t know how to say it but in
certain ways we have to create some kind of balances
like Brian said in his comment. You know, you need to
have the tools within your system, yet you want to do it
in a way that you’re still evaluating those tools but if
you set up such a stringent system by a strict
definition it really would be hard to take some of the
products we currently have on our list and the industry
feels that you should stay on the list I don’t think a
lot of them might not get through the system. I’m not
saying that that’s -- but I’m just saying if you do that
mental exercise to go through that.

MR. KING: Goldie.

MS. CAUGHLAN: But these are to be considered.
Remember, we’re not creating a checklist that has a
total at the bottom as Keith analogized yesterday. It’s
simply that they are in our mind that we are considering
them, and that’s no different than how we evaluated
every material since I’ve been on this Board is that we
consciously struggled with all of these issues and we know some percentage of them we’re not comfortable with but we are constantly considering the balance or the good of -- or the necessity.

MS. KOENIG: I mean I’m just talking out loud because again this is really new information, and I’m just trying to process it.

MR. KING: And I think you bring up a really valid point. After just a quick comment, Keith, and then we’ll call on you.

MS. CAUGHLAN: But I’m hearing you say that you’re uncomfortable with it because it would rule and it’s just a consideration.

MS. KOENIG: I think all these things are -- I think that in theory all these factors are really great, okay, but if we’re writing a document on sustainable organic agriculture, I think all those concepts are embodied in the definition. But what our charge is figuring out materials that can be applied in those systems so really to me the essential thing to do is figure out maybe a shorter list that really are those factors sort of like what they have to have.

MR. KING: I understand what you’re saying, and there are two different things. One is initially we don’t want to make this so cumbersome that no material

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
will ever get through this in present day sustainable organic ag, which makes perfect sense to me. Okay. But then secondly if we just simply have a base line of the bare minimum I’m not sure that gets us where we want to go in terms of promoting where we hope to be years down the road. But one more thing and then we have several people that want to comment, and that is it’s my understanding these are things we’re considering when we think about criteria seven. We’re not talking about writing...

MS. KOENIG: But you’re better off instead of saying ecological balance. Are you concerned about the water? Then put the water down. If you’re concerned about the air pollution, put air pollution down. You know, you’re taking one vague term of sustainable ag, you know, that means a lot to everyone else. Well, if you think that means a lot try ecology. That means a hell of a lot to even more people, you know. So you need to just define it as water is water, if it’s air, it’s air. And then it makes it easy to have bench marks because, yeah, you can go to the Clean Water Act, and you can get numbers. If heavy metal is your problem EPA has a list on heavy metals. But they don’t have a list on ecological balance. Those are more concepts and you can’t put numbers on concepts.
MR. KING: All right. So more specificity in this case. Keith, Jim, and then Andrea.

MR. JONES: A point that we would make for consideration is simply decide on what’s important. Decide on the concepts that you want that’s important, get them written down today. I think you obviously seen that you’re not going to solve this question in the afternoon. Then as you work on this, and as you get public input you can continue to hone and perhaps begin to think about weighting or prioritization or something like that, but the challenge that is in front of you today is to get those broad place holders down so that you don’t miss something. And get them down on paper. Get them as close as you can possibly get them today, but move on. And then get this document where it’s got your place holders. Then Rose’s point is well taken. You can then take and take care of those place holders to get the language of the place holder, you know, exactly the way you want it.

MR. KING: So by considering, for example, you’re saying ecological balance way too vague, but we know that’s a priority and out task in hand in the future would be, okay, what specifically do we mean by that.

MS. KOENIG: Because I think when you go and
we’re all done with the task and you put the -- you
know, you give it to a TAP reviewer they have to be able
to have a reference sort of like what Barbara is saying,
they got to be able to search the literature and come up
with a scale or a number. And I’m not saying all
numerical values embodies ecological balance but there
are factors and there are studies that do look at water,
that do look at air, that do look at heavy metals, and
most of those again are in -- I mean it’s in the rule.
I mean we talk about air, we talk about heavy metal, we
talk about certain things.

MR. KING: Okay. Jim, then Andrea.

MR. RIDDLE: I appreciate what Keith said
there a lot, and that is to keep place holders in and
see if we can further refine them, but once they’re gone
they’re gone, so today is the day to keep place holders,
but I think on that particular one the promotion of
ecological balance that I struggle with whether that
should even be included because all the factors that we
might use to measure it may already be in the other
criteria. Are there adverse effects on the environment
from the manufacture, use or disposal. That’s one. And
then are there adverse biological or chemical
interactions in the agro ecosystem. Those are already
mandatory. So those may cover it. We may find that we
don’t need to refine it further. But for now if we can just keep it as a place holder in this draft, I’d be happy with that.

MR. KING: Andrea. Yes, finally.

MS. CAROE: All right. In setting up this list of criteria, in setting up any requirements in this regulation the US and the EU have been different in philosophy. The US set a criteria that they don’t fall below. The European set a higher criteria that they allowed to derogate off of and come down off of. That’s the way they work it. We’ve never worked that way. We set a criteria, this is the rules, this is what’s out there. I think we need to continue to do the same thing with the criteria for materials that these petitioners are looking at. And they need to have bench mark numbers, and whether that’s Clean Water Act or the criteria for what is a wetlands, and that exists and it is tangible, or what is a rain forest. Those definitions are out there. I think we need to put down real things, and not have will consider because then the petitioner is investing in something they have no idea how this Board is going to think about whether they’re consistent or not consistent with a vague idea. I don’t think that’s really fair.

MR. KING: I think we’re in agreement on that,
and I think your point really builds on Rosie’s that if we look at it as Keith and Jim have said place holders for today, have them be as part of that draft, and then we can further define those place holders perhaps by looking at the statute or the regulations to see if it’s already supported, and if not where do we go, you know, to further define that.

MS. CAROE: Each one of these is a filter, and if you look at all of them together that is taking it -- I don’t think any one of these has got to be so strict because once you do that like Rosie said nothing is going to make it through the filter except water, and, you know, I mean that’s it, and not so sure about water. I mean that’s the truth of the matter is. The fact that we’re looking at it from so many different perspectives is what’s going to make it a thorough evaluation. It doesn’t have to be one item to the -- you know, to that level.

MR. KING: I’ve been superseded by another chair.

THE CHAIRMAN: I see lots of squirming going on. We’ve been at it now for two hours so let’s take a 15-minute break.

***

[Off the record]
[On the record]

***

THE CHAIRMAN: Okay. Let’s see. We’ll turn it back over to discussion. During the break Becky came up and said that she and Rose have caucused during the break and they have some things to offer. So, Mark, as I turn it back over, you can call on them.

MR. KING: Yeah, one quick thing. We hope to be really completed in this process in about an hour for today just looking at sort of the place holders that Keith said so let’s continue with the discussion, and we’ll start with Rosie and Becky since they have some valuable input.

MS. GOLDBURG: Okay. We have tremendously valuable input, and we propose not trying to redraft items B, C, and D, but rather striking them from the explanation of compatibility because they are all environmental criteria that really fall under another National List criteria, which have a lot to say about the environment. That said, we think that it may be quite valuable for the Board now or in the future to explain some of the other National List criteria because they really aren’t all that specific when it comes to dealing with certain environmental considerations. But given that the criteria already talk about things about
like environmental contamination during the manufacture, misuse or disposal of a substance and so on, B, C and D are somewhat redundant to the first six criteria.

MS. KOENIG: What we’re saying is sort of like what Keith said the environmental ones are really embodied in the other criteria really strongly. The social -- if you notice, we didn’t include E, which is renewable resources recycling. Those aren’t really embodied in the other criteria. But as Becky said, we feel that even though they’re embodied in the other criteria they need to also have a little bit more definition so that we can actually put in those bench marks, be it water, air. You know, spend a little bit more time defining in those sections because if not -- if we do that, it’s not bad to have it here. Actually having that preamble, all those things again are in the principles so it’s not saying that you’re not looking at them but what we’re saying is we now really want you to concentrate on those aspects of sustainable ag that are not embodied within the other criteria, which really are economic and social factors and such.

MR. KING: So a quick comment, and then we’ll go to Jim, so we have our general introductory paragraph, however, beyond that these are the specific areas as you’ve stated that we’ll look at. And Jim
MR. RIDDLE: Yeah. Well, I can go along with that for B because I do think ecological balance is covered off by the other more specific criteria, and I also agree with the need for some guidance on some of those down the road. But now that we moved the reference to the NOSB principles just as some kind of a reference point in the introduction part of that understanding was looking at those principles and seeing if there’s some particular points that we want to highlight in these. And I feel that biological diversity is not covered by the other criteria, and the same thing with impact on global warming or minimizing impact on global warming. I don’t think that’s covered. I think that’s a stand alone that is relevant, so I guess I’m not comfortable with that. So long as we see this as a draft and the place holder type approach, I’d rather keep C and D in there myself at this point.

MS. GOLDBURG: Just to make further comment. I’m not going to fall on my sword over C and D, but criteria two is the substance, manufacture, use and disposal do not have adverse effects on the environment. That’s about as broad as you can get.

MS. KOENIG: You can define that and say -- we could put under this consideration of, you know,
endangering habitat. We could embody those in there, but what I’m saying in terms of a TAP review let’s go back to what are we doing this for. We’re doing it to make the function easier for somebody who’s preparing a TAP and then for us to evaluate a TAP. It’s much easier to do it in a systematic fashion so when you get to those criteria -- it’s sort of like you’re asking them to be redundant in certain ways and repeat information. And I think that two again we can have those same points but let’s logically put it where the statement is the most strong towards that in particular.

MR. RIDDLE: Yeah, but we aren’t defining those others here today. We aren’t providing any guidance or...

MS. KOENIG: Well, what we’re proposing is that we take those and go back to the other criteria and see which ones do overlap, and then this way your last one can really spend more time maybe detailing the ones that they don’t focus on. It’s just a proposal suggestion.

MR. KING: Okay. Nancy had a comment, then Keith, then Owusu.

MS. OSTIGUY: I actually agree, and I didn’t talk with Rosie and Rebecca during the break, but I think repeating them isn’t necessary. Now we might need
to define what we mean by the environment and include these kinds of things. I think they should be included. But to be repetitive is one thing that drives me nuts about sometimes the current TAPS is when it’s addressed in five different places.

MS. KOENIG: And they cut and paste.

MS. OSTIGUY: Yeah. And all they do is cut and paste, which is what I would do too so I’m not criticizing them for doing it, but it’s difficult as a reader. If you would like to have a succinct summary of a topic why repeat it in three places.

MS. KOENIG: Unless you’re trying to weigh the importance, and that’s valid. If you think that it is so important that you have to weigh it in every category then I think there’s a validity in checking it twice but then that should be a decision that you make as a group understanding that. Every time you repeat something usually it means that you’re repeating it because you’re weighing it as a very important factor.

MR. KING: Keith, you had a comment.

MR. JONES: Yeah. We actually envisioned that you’ll have so much fun wrestling with criteria number seven that you won’t go back and wrestle with the rest of the six. I say that facetiously but there are certainly areas in the other six criteria that need this
analysis just as you’re doing with criteria number seven, and I think Rosie’s point is very well taken is that as you begin to look at how these sections interlink and relate to one another you will come across with some understanding as to the outliers that are not addressed in any of the other criteria, and that actually need to be embodied in number seven. But it’s only doing that kind of systems thinking that you’ll begin to identify the outlier, so I think Rosie is really on the right track here and shouldn’t be dismissed out of hand because as I said in my slide yesterday you can begin to assign proxies for some of these other points and the other criteria, you know, bird kills related to environmental manufacturing or something like that. You can begin to work on those things if the place holder is already there. And I think that’s what Becky is saying is that, look, there’s a broad place holder here that’s already in some of these other criteria. We need to acknowledge that, go back and wrestle with what that means, what’s the upshot of that, but really focus on those things in number seven that are really the outliers that are not captured in any other place.

MR. KING: Owusu.

MR. BANDELE: You were talking about B, C, and
D. I have a concern with D, the global warming. I fully understand the importance of it and agriculture’s potential contribution to those problems, but any process that releases carbon dioxide in the atmosphere would contribute. I’m just wondering how would you envision the quantification of that impact.

MR. KING: Jim.

MR. RIDDLE: For further development.

MS. GOLDBURG: Yeah. I want to respond to it. I think that’s actually one of the most quantifiable things that’s up there that you can think about the various greenhouse gases and their CO2 equivalents and manufacturing and what not. And if you really wanted to, we probably don’t want to come up with numbers, but I think someone is going to drive their SUV to work during the manufactures of a substance and so on. There’s going to be some impact on global warming, but what we don’t want is a process where probably either huge amounts of CO2 are released or lesser amounts of some of the more potent greenhouse gases.

MR. KING: Okay. So as a general statement here, I’m hearing that we have our place holders. We’ve listed place holders. And we’re talking about striking some, elaborating on others. To make the best use of our time, I think that what we’re saying really is that,
again this is a working draft, from an action item standpoint that we will look at the statutory requirements, the regulatory issues to find out is there crossover with any of these, and if so, and it’s a stronger statement, it may eventually be dropped. But as a general rule are we comfortable with what’s up there. Do we still want to strike those two for now, consider it.

MS. KOENIG: I’d like for you to say they’re going to be embodied in the other criteria, not struck because it’s a whole document.

MR. KING: I understand. I understand.

MS. KOENIG: I mean I don’t think we can look at those criteria in isolation, and as long as they’re embodied, and I think they can more easily be embodied in those criteria, then I mean a great example is every time we do a TAP people want to know about economic impact. Hard to get, and some of that data will not be available, but if you have it under the sustainability criteria then if it is available we can force the point for more elaboration on that subject. And, again, that’s a very hard one to do but just because it’s difficult doesn’t mean we shouldn’t at least try to generate the data.

MR. KING: Jim.
MR. RIDDLE: Well, I agree totally with what both of you have said, and Nancy’s point of not having — eliminating redundancy unless there’s a point to being redundant like you were saying. But until we’re further elaborating the others is there a problem with leaving these here for now and then shift them over to where they’re more appropriate later so we don’t lose them. I mean...

MS. KOENIG: Well, I think we pointed out that even those have to kind of be redefined but I mean I don’t really care what you do with them. I mean as far as — I mean I do care. I mean if you want to keep them there and work on them, that’s fine. The more work the merrier.

MR. KING: We have two people that have comments, but let me just ask this very obvious question, and it’s one of a starting point. Is the starting point this document referring back to everything else we know or is it as Keith had suggested, I think, the first six criteria, and then moving on from there, so we focused on this, which I’m comfortable with, but I just throw that out as...

MR. SIEMON: Our homework assignment is taking for granted one through six, how do we enhance seven to compliment one through six. B, C, and D got to go. You
know, it’s things that are already covered. If we need to recover them somewhere else then we’ll go there but we can’t be duplicative or this will get all muddled again. Complimenting one through six, B, C, and D got to go. We got to move on too.

MR. RIDDLE: Well, so far we’ve deleted A, B, C and D.

MS. KOENIG: Don’t take it personally.

MR. RIDDLE: No, no. At least we have something to delete.

MS. KOENIG: We thought that E was actually one that wasn’t necessarily covered with that focus than the other ones because really how energy resources are used. Does it encompass any kind of renewable resources. That we didn’t feel really was necessarily embodied in the other criteria.

MR. RIDDLE: And it’s clearly covered in the definition of sustainable agriculture.

MS. KOENIG: And that might be recycling of nutrients in the sense of, you know, like some kind of other products. It’s not just energy. It’s recycling systems.

MR. RIDDLE: Renewable resources.

MR. KING: Andrea.

MS. CAROE: Well, I just have a question over
our definition of maximize and reduction. Maximize, what does that mean? Now much is maximized? How do we define that? Is there a way that we can...

MR. KING: Well, I would answer that as sort of a positive influent on the review of sorts in a general sense. I understand what you’re saying.

MS. CAROE: So promote is more appropriate than maximize?

MS. GOLDBURG: We don’t want to maximize the use of renewable resources.

MR. KING: Yeah, that does make sense when you think about it.

MS. GOLDBURG: Let’s cut down as many trees as we can.

MS. KOENIG: You want to decrease the dependency on nonrenewable...

MR. RIDDLE: It’s versus nonrenewable resources.

MR. KING: Yeah. Yeah. So...

MS. KOENIG: Decrease the dependency on nonrenewable resources.

MS. CAROE: So do you want to say that...

MR. KING: Or potential to promote. I mean we’re thinking about a system or a model that does promote the use of a renewable resource versus a
nonrenewable.

MS. KOENIG: Yeah, then you decrease the dependency on nonrenewable resources.

MR. RIDDLE: And reduction should be reduced there.

MR. KING: Reduce the dependency of external inputs or nonrenewable resources. I mean I don’t know, do we need to take it that far? Do we need to add on external input or the use of nonrenewable resources? Is that what we mean by external inputs, nonrenewable?

MS. GOLDBURG: External inputs especially nonrenewable resources.

MR. SIEMON: I think it could be and recycling period because the material we’re talking about is an external input itself. That can stay too.

MR. KING: Good point. It is considered by default an external input in many cases.

MR. RIDDLE: Yes.

MR. KING: Yes, but. Go ahead.

MR. RIDDLE: But a fundamental principle is organic agriculture minimizes the use of synthetic inputs. That’s a fundamental principle, and it’s one that’s not capture in the other six criteria. So it’s — you know, I think it’s important to either leave it in or move it to its own stand alone point.
MR. SIEMON: That would be probably the best but let’s just leave it in right now. It belongs here.

MR. KING: So we just want to leave external inputs. We’re not going to add nonrenewable resources. Are we going to consider...

MR. RIDDLE: Promoting the use of renewables.

MS. CAUGHLAN: How is it worded?

MR. SIEMON: As far as place holders, I think we can leave it.

MS. CAROE: What goes in must come out. I don’t understand that so if...

MR. KING: He’s saying off farm inputs or out. That’s why we’re trying to define it further. Okay? Do we really mean nonrenewable resources that are purchased and brought into or onto an operation. I think that’s what we’re trying to get at.

MR. RIDDLE: That’s a fundamental concept of organic agriculture.

MR. KING: Exactly.

MS. CAROE: Okay. Can we apply this to a material just so I can get a feel for how we would be looking at this?

MR. KING: We’ll do that tomorrow.

MR. SIEMON: I was thinking microbial compound, that might do recycling rather than bring
manure from the outside. I’m just trying to think of something what we’re talking about here.

MS. CAROE: Okay. But this also applies to processing aides for handling, these criteria, so I mean take something that’s already on the list like glycerine or something like that. How would that apply?

MR. RIDDLE: But it’s as applicable.

MR. KING: Yeah, so it may or may not apply to every single one.

MR. RIDDLE: It may or may not.

MR. KING: Can we leave that as sort of a place marker for now. We got one going through.

MR. RIDDLE: The next one, let’s just...

MR. KING: Let’s look at F.

MR. SIEMON: I had a hard time knowing what material would positively influence the welfare. I know it would positively influence health of an animal but you have specifically up here natural behavior and welfare, so could you give me an example of material that would affect that versus health. Health, I understand. But this is a little different twist you’ve thrown at me. What material would affect the natural behavior and welfare of an animal that isn’t all about the health that’s covered in the rule?

MR. KING: When I think of natural behavior, I
think of the environment that they live in almost more
so than a material.

MR. SIEMON: So fence post would be a
material?

MR. KING: Well, I mean I see your point. I’m
just thinking out loud.

MR. SIEMON: I’m just trying to -- renewable
plastic fencing because it’s less harmful to the animal?
I’m just trying to think of something.

MS. CAROE: No, it would just be more like fly
control or something like that maybe.

MR. SIEMON: Okay. That’s a...

MR. KING: It could be, yeah, like pest
management. In the case of pest management, I think in
the regulation it already talks about natural over the
others.

MR. RIDDLE: Yeah, but that’s in terms of
practices. Here this is a substance evaluation.

MR. SIEMON: It’s about a material that
influences their natural behavior and welfare.

MR. RIDDLE: So it’s consistent.

MR. BANDELE: Well, do you want the material
to...

MR. RIDDLE: And I think it’s appropriate to
say, I’m sorry, Owusu, positive influence on the health,
natural behavior, and welfare if you’d like to add that.

It is a separate way of looking at it but...

MR. SIEMON: That definitely would help make
the sentence make more sense to me is add health. I
just thought that might be covered somewhere else.

MR. RIDDLE: No, it’s really not.

MR. SIEMON: Okay. Then I would suggest F
that we add on the health natural behavior and welfare
of animals.

MR. KING: Okay. Owusu.

MS. KOENIG: Meaning all three?

MR. RIDDLE: Yeah, as applicable.

MR. BANDELE: The material having a positive
influence.

MS. GOLDBURG: When applicable.

MR. RIDDLE: When applicable.

MR. BANDELE: The material having a positive
influence on the natural behavior. Aren’t we more
concerned with the material not interfering with the
natural behavior?

MR. RIDDLE: Yeah, but we tried to phrase it
in a positive instead of the absence of a negative.

MR. KING: Back to your point.

MR. BANDELE: I think those are two different
things. I think if you’re looking for material to
positively influence the animal that’s one thing, but if you’re looking for a material not to interfere with the positive, I don’t think that that’s interchangeable to me. And I thought that would be a bigger concern with a synthetic.

MR. RIDDLE: So what you’re -- does not have a negative influence.

MS. KOENIG: Well, I think it goes back to Barbara’s point. If you change those two questions, which we probably will, it’s going to read does it have an influence, negative or positive, however you want to put it. I mean these things are probably going to come into the form of a question because it’s for a TAP reviewer to analyze so I think that’ll be washed out when we change it into a question.

MR. KING: And I think if we think in terms of are these things in general that we want to be here and we can word smith a little bit more later as we put it into action, if you will. Jim, go ahead.

MR. RIDDLE: Yeah. I think it’s really a fundamental question though is do we phrase it what is the influence on, blah, blah, blah, or does it have a positive influence or does it not have a negative influence.

MS. KOENIG: What is the influence? We want
to know both. They probably have...

MR. RIDDLE: But we’re looking for qualitative
guidance, I think.

MS. KOENIG: But you want to know -- I mean
qualitative can be positive qualitative, and there can
be negative in the same thing. Mostly everything has
pros and cons. So you really want to know on all those,
you want again that literature research. You don’t want
to form -- we want to be objective. We don’t want to
value judge. We can’t value judge in our questions.

MR. RIDDLE: No, but I saw this as setting
some bench marks which can be used for the value
judgment, and I agree in terms of what the TAP reviewer
-- we want to know pros and cons. We don’t want to lead
that, but how we determine whether something is
consistent and compatible, it has to not have negative
influences or...

MS. KOENIG: I just don’t think these are
black and white. Mostly everything has a -- you could
probably take any of these peroxides, go back to hydro
peroxide, okay, the reason why it’s so great is because
it kills a lot of bad things because, you know, the
reason why it’s bad is because if you analyze it for
biodiversity it kills a lot, and then it becomes bad.

So I think the thing is you want to know the non-value
judgment, what does it do in the system, how does it affect things in one way, how does it affect things another way, and then you look at both of those and decide which is acceptable.

MR. KING: And one thing, I think what we’re talking about here is we do want to know the pros and cons, but ultimately we may judge it based on the positive indicators that we find.

MS. KOENIG: Right. Exactly. Exactly. But you don’t just ask for one, and then not get the other. That’s value judgment.

MR. KING: Yes. I think that’s a valuable point, and yet I understand what Jim is saying. We will most likely look at it...

MS. KOENIG: Right. We’re going to take -- you know, we want to -- certainly there is based on that definition if you look at -- based on the rule there is a slant as to what is -- what we’re promoting and what we’re not promoting. But you don’t really ask the TAP reviewer necessarily to analyze it only in one way.

MR. RIDDLE: I’m looking at the questions in our material review form, are there adverse effects, is there the potential for detrimental interaction, are there adverse biological or chemical interactions. I mean those already have value judgments built into other
criteria, into the other questions that are being asked. So I don’t see this as inconsistent to have that kind of terminology here.

MS. KOENIG: Yeah, I see what you’re saying in that sense then.

MR. KING: Can we in general agree though that these are areas we do want to look at in the end as positive indicators for animal behavior and health, however you -- okay. And we do want to leave this one in there.

MR. RIDDLE: Yeah, we’re not hearing that.

MR. KING: Okay. On to -- well, we kind of covered...

MR. RIDDLE: I think we’ve -- we’re satisfied in our expectations for G.

MR. KING: So H.

MS. KOENIG: We didn’t go -- why don’t people just bring up on what they have issues now because we weren’t going line by line. We were kind of bringing up...

MR. KING: Well, yeah, we’re, I guess, deciding do we want to leave these in there, okay, as place holders, if you will.

MR. SIEMON: Is protection the right word versus something like encourages. Protection is kind of
like relative. You got a standard already, and that’s a hard...

    MR. RIDDLE: I don’t know.

    MR. KING: Well, and again I guess we want to look at this as do we want to consider economic viability as the question for today, and we can work smith and have more action at the committee level. Is everyone in agreement that that’s something we want to consider?

    MR. RIDDLE: It’s part of the sustainable agriculture definition.

    MR. SIEMON: I heard say why don’t we just drop including Codex, international standard regulations, and why don’t we say equivalent or stronger.

    MR. KING: Andrea.

    MS. CAROE: Well, I would say does it conflict with international and existing standards so that we can also look at AOS and other standards as well. International alone?

    MR. KING: Keith.

    MR. JONES: Let me tell you this gives me --
this phrase gives me pause, and let me tell you why.
The United States does not like to tie itself to any
given standard other than its own out there. It doesn’t
want to minimize its flexibility, and in fact we may
find ourselves where we want to argue a position that is
different than a consensus position that exists in the
rest of the world because we believe it is best for U.S.
producers. And what I would like to see these points
is, you know, we need to do what is best for U.S.
producers and handlers. If that is an issue in
international trade, then that has to be addressed at
that level. In other words, that will be addressed in
the negotiations that occur on international trade, but
we should not unilaterally disarm, and I would encourage
the Board not to take the approach of unilaterally
disarming but always insure that the Board’s decision is
like straight up what is the best options for U.S.
producers and U.S. processors and then let that get
sorted out through the trade process.

MR. SIEMON: But does that mean we can
consider this? We don’t have to be bound by it or
limited by it but it’s a consideration how it interacts
with international.

MR. JONES: Well, I think it might be a
fleeting thought. You might come to the conclusion
that, okay, this is different, okay, but what I’m saying, George, is that I don’t want you to be constrained by doing something in the best interest of American producers just because it may be different than existing regulations out there or other regulations.

MR. KING: Okay. One quick question, and then Andrea, Jim, and Owusu. So, Keith, to put your language into action if we look at a TAP review in the future and it said -- and it had international standards listed like it does now, and is this in harmony, if you will, for lack of a better term, you still see that as important but not to limit us by...

MR. JONES: Well, I think that information is useful. I think it’s usefulness is limited though because you should not be constrained on any decision that you make other than what is best for U.S. producers and processors. In other words, the fact that the material is not used in Europe while interesting should not affect your vote. You are here to represent U.S. producers and U.S. processors. Okay. It is a point of information. It is an interesting point of information. It should not be where you make your final judgment.

MR. KING: Andrea.

MS. CAROE: Can we at least look at the rationale that international standards have made on a
particular material as they apply to our other criteria so, you know, if it’s not allowed in the Netherlands because, you know, they’re at sea level and they’re worried about their water or, you know, whatever, it may not be applicable but it may be important for us to understand their rationale for not allowing the material or allowing the material.

MR. JONES: Yeah. I would be careful though, Andrea, about drawing absolute conclusions and saying what has happened in the Netherlands therefore is a perfect analogy for what is going to occur in the U.S. Okay.

MS. CAROE: That’s not what I said. That’s not what I said. I said reviewing the rationale as it applies to our criteria, so look at their reasons for doing certain things, and if they influence our decisions on our other criteria so bring it back in house.

MR. JONES: Yeah, I wouldn’t preclude any use of any data sets out there, okay, in terms of your decision-making process, but I do not ever want to see a board come to the conclusion that because a material is not used in Europe or not used in Japan or not used wherever that we can’t use it. Okay. That just can’t be.
MR. KING: Okay. We got Owusu, Rosie, George, Jim, Rick.

MR. RIDDLE: What, you’ve reordered it?
MR. KING: What?
MR. RIDDLE: Well, earlier I was up here with...

MR. KING: Okay.
MR. RIDDLE: I’ll be quick.
MR. KING: Okay, go ahead.

MR. RIDDLE: What I’m hearing is it’s a valid consideration, some valuable information that we should have but shouldn’t lead to any foregone conclusion or be the rationale for our recommendation, but what triggers the tap reviewer to ask those questions, right now there’s really no basis by keeping this in as a factor, and I’m very open that it be rephrased, so equivalents, that’s a problematic term here, I think. What we need to know is the status, international status, and then that’s just part of our consideration, so I think it’s important to keep in the mix because this will trigger asking the question and getting us the information so that we can protect American farmers and handlers.

MR. JONES: The way I would handle this is that just as you use your principles as a point of reference, I would ask as a point of reference the use
of material in other international regulations. I would
not make it, if I had a preference I would not make it a
part of your criteria. It should be some information
that you’re aware of, that you’re cognizant of. Okay.
But it should not in any form be part of your decision
process because again you’re here to represent you’re
here to represent U.S. producers, U.S. processors, U.S.
interests. Okay.

MR. KING: Okay. Owusu.

MR. BANDELE: Yeah, what you just said is
basically how I felt about it because in the past we
have had materials whereby we looked at what happened
like the Chilean nitrate, for example, so our standards
were different. But I still think that’s a very
important piece of information when you look and see
maybe across the board that material is not used for
various reasons. I still think that’s good background
material in the evaluation.

MR. KING: Rosie.

MS. KOENIG: I mean that’s what I was going to
say. I mean we’ve been using -- I don’t remember about
the Virginia Tech people, but I know most of OMRI under
the background information would always say
international status, and then they would say whether it
was allowed.
MR. KING: Status among international.

MS. KOENIG: So I mean we could put -- I mean
I think again background information, not necessarily
criteria.

MS. BURTON: Why don’t you just put identify
international organic regulations so it’s just, like you
said, it’s just reference material.

MR. MATTHEWS: Identify the status of the
substance within...

MS. KOENIG: And then -- yeah, just identify
it.

MR. MATTHEWS: It seems to me that what we’re
really talking about are the experiences of others,
which really gets back to what are the environmental
impacts of this? What are the human health concerns
with this product? It’s not so much if we allow this
product are we consistent to the rest of the world.
Like Keith says, we don’t care if we’re consistent with
the rest of the world. Really we’re looking for what’s
best for organic farmers here in the United States in
producers and handlers in general. But when you come
right down to it, it seems to me that where this is
leading is that these issues should already be addressed
under what environmental impacts do they have. What
human health concerns are associated with this material.
MR. KING: Extremely speaking from a criteria standpoint.

MR. RIDDLE: Yeah. Yeah.

MR. KING: And I think we’re in agreement that this is useful information to have. So Dave and then Andrea.

THE CHAIRMAN: Well, I just -- one of the things, how does it affect farmers in the U.S., but I think one of the things we’re seeing though is a lot of farmers or processors or whatever in the U.S. are also engaged in international commerce, and so I think that that’s at least a consideration that we got to look at how does this line up. Now I agree completely with Keith. We got to represent what’s best for the environment and the farmers here but I think to at least identify this is important.

MR. MATTHEWS: Well, that’s a good point too because whatever regulations we establish here once you allow the material here you’re allowing the material everywhere unless there’s a law within that area that prohibits that. So, yeah, that’s a valid point. Everything we do affects producers and handlers worldwide.

MR. KING: Andrea.

MS. CAROE: Just a really quick point. I mean
we’ve already established that we can say does this meet
the organic consumer’s expectation. Why can’t we say
does this meet the international organic consumers
expectation because farmers in the U.S. are entering
international trade.

MR. JONES: Andrea, you can. I mean you
obviously can write this thing any way you want. I just
want to caution you on trying to make a decision based
on consumer perception in Europe or consumer perception
in Japan or something like that. I mean the thing that
I remain concerned about is that, yes, international
trade is important. It is a growing market outlet for a
number of organic producers. There’s a notion here
though that there will at some point in time be
equivalents, okay, and I don’t know that I share in that
optimism. I mean I think you’re always going to have
elements of compliance with other countries’ standards.
Okay. And there may be just certain times where we use
a material that another country doesn’t use, and if you
want to ship product to that country you’re just going
to have to comply with their standards. That’s just a
fact of life. Okay. That’s the way trade occurs now.
It’s the way trade will occur in the future. And while
again while I think this is useful information I don’t
want to ever see a board make a decision on saying,
well, we know this is really the best for U.S. producers. We don’t have the same environmental concerns that the Netherlands have, okay, but because it’s not allowed in international trade we’re going to turn it down. I think that is a mistake. I think we really always need to look at what our needs are first, act on those needs, and let those issues then get sorted out in the trade arena.

MR. KING: Okay. Rosie, and then Goldie.

MS. KOENIG: Well, I guess this is a question for the intent of that when you guys were going through the thinking process. Was your intent, was it to identify the substances that people had prohibited or was the intent to just see if it was allowed? I mean because there’s two ways. I mean I can understand if you’re saying, well, we want to see what they prohibited because we want to see the reason or the rationale behind it so we can include that. Maybe there’s information in the Netherlands that we’re missing here to make our TAP more complete, and that’s very different than saying, well, let’s just see if it’s there. So is the assumption that it was that and that’s why we want to look at it. Where were you coming from in terms of that equivalency?

MR. KING: To me it was just embracing or
understanding that we live in a global market place, and
I think Keith’s hit on the real point here. We’re
talking about U.S. farmers. It’s not our intent to go
beyond that but...

MS. KOENIG: So you were looking at it then
from an economic issue. Could doing this hold up
economic trade?

MR. KING: Well, trade in general. There are
a lot of different factors in trade, economic being one
of those. So that was my read on it knowing that as
Dave said some U.S. companies, farmers, handlers will
engage in international trade, therefore, it is
something to at least know about.

MS. KOENIG: Okay. So could it be linked to
H? Could it be linked to H? If your intent was trade
or economic viability, could you like something saying
if it is a -- is there international implications -- is
it consistent with somewhere in the H somehow
pinpointing that somebody know that’s your intent. What
I’m saying when you have that status, I don’t know what
your intent is as a petition reviewer. I don’t know if
you want me to look at economic data or you want me to
look at it in terms of environmental perspective or
both.

MR. KING: Well, Jim, go ahead, and then we
got Goldie.

MR. RIDDLE: Yeah, right. I’d just like to respond to that. Several rationales, I guess, for including it. One is the question is being asked right now as part of the TAP reviews but there’s no basis for that question being asked. This gives the basis because now it’s part of our understanding of compatibility as there’s a whole world out there. And we’re charged with protecting the public interest of U.S. farmers and handlers, and if we’re going to place something on our list that’s going to be a barrier until equivalency can sort it out we just need to know that. We need to know what its regulatory status is in regards to the rest of the world. It doesn’t mean we shouldn’t put it on there but we need to do it with full knowledge so that we don’t get accused of you guys have approved something, and now we’ve lost millions of dollars of markets because you didn’t even think about its impact on our behalf.

MS. KOENIG: Okay. So back to the definition of sustainability, which is compatible in terms of the same -- so you’re saying that last one, enhance the quality of life for farmers and society as a whole, is that where it fits within the frame work of sustainability?
MR. RIDDLE: Yeah. It’s not related only to the economic viability of farm operations. This is bigger than just the farm. This is society as a whole linkage, handlers as well. And this is one where I’m really comfortable keeping it in neutral phrasing like what Dave has done, what Keith had suggested. We just need to know the facts.

MS. KOENIG: I guess the only thing is that I think that that -- we can move on. I just think you need to pinpoint actually the information you want.

MS. CAROE: It’s not a criteria right now.

MS. KOENIG: What’s that?

MS. CAROE: It’s not a criteria.

MS. KOENIG: Yeah, because right now we could get the same information. It’s allowed. It never was looked at, and the EU, it’s not listed in the EU. You know, so unless there’s...

MS. BURTON: Redundancy from the beginning of the TAP, starting at the TAP usually.

MS. KOENIG: Well, it’s not required in the TAP but what I’m just saying...

MR. RIDDLE: Right. This gives us a linkage.

MS. KOENIG: But what I’m just saying is I don’t -- unless you pinpoint a specific question then we’re just -- we’re likely just to get the status, and
if that’s all you want, that’s fine. Okay.

MS. CAROE: But what do you do with it? You don’t have a criteria. It’s not accepted...

MR. KING: It’s reference material. I put this...

MR. JONES: It’s the point that you just want the information. The program can provide that. The program with every petition can simply say, okay, you know, you think this is useful. Here’s its status worldwide. In other words, just because it’s currently being asked by the TAP doesn’t mean it needs to continue to be asked by the TAP, and it doesn’t mean that you can’t get it in some other way if you find that kind of useful in just your thought process. Again, I’m just very concerned about putting something in a document that we’re going to publish for petitioners who will come away with the understanding that this is a criteria that you’re going to use to make a determination in terms of go or no go, and that’s not what I’m hearing you want to do. You want to be aware of the information but you simply only want to be aware of the information. Okay. Is that what I’m hearing?

MR. MATTHEWS: And possibly could you just ask for that at the time of the petition when they’re filling out the petition. Why not say as a part of this
petition you need to tell us not only its different uses but what is its standing within the international community.

MS. KOENIG: Actually that might be better because then they might find out that nobody else allows it so they may say, you know, it’s not likely, you know. It may give them a little more information.

MR. KING: Goldie, Dave, then Kim.

MS. CAUGHLAN: I’ve been thinking about the other -- the whole other aspect of it, which is that we sometimes are extremely myopic or whatever when it comes -- what if that substance has been approved in those other countries, and we frequently don’t look very closely at research that’s been done in other areas or what is its record of safety, what was its record of safety for the health in that country when it was used. Did they use it for a time and then prohibit it? Was it a different type of manufacture? I mean...

MR. JONES: But, Goldie, that’s not a trade issue. That’s a data set issue related to some specific questions that you already asked, okay, and so I think the point needs to be recognized that you get at some of these other questions without asking this one. Okay.

MS. CAUGHLAN: If indeed we do get -- if indeed the TAP reviewers -- I don’t recall many times
the TAP reviewers ever look at international historical uses of a substance, and that’s my point. And I’m not looking at just the economic impact here.

MR. JONES: But you might not even get that data with the way the question -- because the way the question is right now it’s a go, no go question. It is equivalents with international organic regulations including Codex. It’s go, no go. Okay. And what you’re saying is that there is...

MS. CAUGHLAN: International research is what I’m saying.

MR. JONES: There is some research. There’s some data sets out there. Behind any decision that an international community has made that would be useful that’s an entirely separate issue than a go, no go decision based on a trade. Okay.

THE CHAIRMAN: Okay. Rick made my point.

MR. KING: Okay. So Davis is off. Kim, you had a point?

MS. BURTON: I just heard Keith saying that perhaps we capture this somewhere else in the process, and perhaps even USDA provides us that information, and if they’re going to be reviewing the TAP then they’re...
going to be going through FDA, EPA. Perhaps that’s the area where they provide us -- if you’re just simply looking at material information on where else it’s at, and if you have that data base, then they provide that to us in the TAP process right at the get-go.

MR. JONES: And one of the things too that I want to caution you on about looking at Codex, Codex is a guideline. It has no value in international trade other than a guideline. It is a reference point but it is not a standard in terms of international trade.

Okay. And you have regulatory schemes in the European Union that are 190 degrees different from what we do here in the U.S. which means that you might have the material approved for use in the European Union that would never even get on anybody’s radar screen. Okay. So again that goes back to my argument about this notion of equivalency. Embodied in the statement is the notion of equivalents that doesn’t even exist in the real world in terms of regulatory schemes or regulatory structures. So I think it’s just problematic from the get-go, and I think there’s a lot of different ways to get at the tangible questions behind this research, the experience, that kind of thing, in other questions that get asked without taking it head on from a trade standpoint.

MR. KING: Okay. I had Arthur next.
ARTHUR: Keith just answered, I mean provided
the statements that I was going to provide.

MR. KING: Okay. Jim, you had a point.

MR. RIDDLE: Yeah, just one other part of the
rationale for including this is the OMB circular 119,
which is executive agency directive that in the interest
of promoting trade your agency should consider
international standards and regulatory applications.
And if there’s some other way to make sure that we’re
going to be able to get that information, and it is being considered --
earlier today we were talking about seed treatments. It
can certainly be a case made that seed treatments are in
the interest of U.S. producers for U.S. agriculture, but
one impact of us approving that would be none of the
things grown from treated seeds could be sold as organic
outside of the U.S. I just want to make sure that we’re
going to be able to get that information as...

MS. KOENIG: That’s why if you linked it with
H somehow because you’re really talking about economic
viability. That’s why I asked you is it the economic or
the trade issues you’re concerned about or is it the --
all the reasons why they wouldn’t want it on the list,
and if it’s economics then it’s appropriate at least to
get the status. Like Keith said, it shouldn’t make or
break your decision, but then you’re aware of it and the
context of trade in some sense.

MR. KING: So in this case I think we all agree we want the information. The question is how do we get the information, and it sounds as if we have options other than this to get the information. So the question is do we want to take it out of here while still protecting the fact that we see this as valuable.

MS. KOENIG: Can we -- going back to H...

MR. KING: Realizing, you know, we have about 15 minutes.

MS. KOENIG: If it said instead of protection promotion or does it promote would be the question, not necessarily protect but does it promote the economic viability of organic farms at home and abroad. That implicates that you’re going to want them to look at one of the -- the domestic economic viability and international economic viability.

MS. CAROE: We had looked at the word encourage too.

MS. KOENIG: Or domestic and foreign markets you could put on it.

MR. KING: Yeah. And again what Rosie is proposing is combining the two essentially, H and I.

MS. KOENIG: Because then it’s actually -- it’s embodied in a criteria that you can then understand
in the context of what you’re asking.

MR. KING: And I guess I have a question for the department, two questions. One is this acceptable in your eyes and, two, how can we insure that it is part of the information we receive when we get a TAP.

MR. JONES: Well, there’s a couple of ways that we can do that. We can obviously ask the petitioner, you know, to supply that through the petition process, you know, just as a point of information, status and other -- using other regulations. And as long as you tie it to just a cognitive fact of trade, I think that’s fine. It’s this notion that there’s a go, no go decision based on equivalents, okay, and that’s the way the current phrase is written so if you get rid of the phrase and yet capture what you want in H, we don’t have any problem with that.

MR. SIEMON: The only problem I have with what Rose recommended is that the economic viability is actually part of the sustainable definition so personally I’d like to still see it stand alone, but at the same time gather that information on the international somewhere else.

MS. KOENIG: The other thing is like let’s use an example because it’s easier for me to -- let’s say...
the question was does the substance from the economic
viability of organic farms both domestically and abroad.
If somebody was doing that in a TAP report, say they
were looking at hydro peroxide, and you found out that
hydro peroxide as a post harvest treatment, you know,
helped prevent post harvest diseases, so in essence you
got more yield, okay, so you have more domestic
production. But then if they looked and then you looked
at the broad market and found out that it wasn’t allowed
in the EU, well, it wouldn’t necessarily promote
economic viability overseas because there could
potentially be trade barriers. That’s all they would
have to say in that thing. Not that there exists, but
that that was just an issue. And that’s all we need to
know, it’s an issue.

MR. KING: Dave.

THE CHAIRMAN: I would speak against combining
those two because I think that they really are distinct.
And the way that it’s phrased up there, it’s very
confusing because now is our charge to protect the
economic viability of farmers, organic farmers, in
Venezuela, you know...

MS. KOENIG: No.

THE CHAIRMAN: Because the way it’s phrased up
there, I just -- I think that, you know, the term about
economic viability covers a lot of things, and identifying international agreements or regulations is separate from that. I can’t make that total connection because I think there’s a separation, and for -- and I don’t know why we get hung up on this but I just think that it is useful to identify the international agreements, and then when that information is provided to the Board we can use that to make a judgment of -- you know, if this thing is found to be really nasty in the Netherlands then we ought to, you know, take a look at it or if it’s good somewhere else that’s a factor that we use to run through the filter to see how it affects U.S. farmers.

MR. KING: Can’t we simply ask for the information. Okay. All right.

MS. KOENIG: Barbara has got it.

MR. KING: Barbara has got it. Then we got Jim.

MS. ROBINSON: I don’t like grouping them together either but what you could do is -- I think Keith is right. You don’t want to get into this equivalents business, but you want to know the information, and Dave just had a really good example because suppose you’re considering material, and you didn’t know but it has been used in a foreign country,
and it had like devastating experience with results. So why don’t you just say like you have impact on global warming, impact or effects or experience in other markets. Then you can say was it a positive experience or a negative experience, and you take that into account and you just add that in when you’re looking at how you would evaluate this material. So just instead of I being what it is, just say experience in other markets, international markets or foreign markets.

MR. RIDDLE: And that would include its regulatory status as well.

MS. ROBINSON: Yes, you can do anything.

MR. RIDDLE: I wanted to come back to what Keith was saying as far as how the information can be gathered. I agree it should be part of the petition but that’s biased information, and so I want a -- I mean that’s submitted by the petitioner. It’s not necessarily factual. That’s their information they’re providing to the department. I want another check. I want unbalanced whether it’s the TAP contract or the department.

MR. KING: Yes, Rick.

MR. JONES: A comment I was going to make quite some time ago, and it relates to a comment that Goldie was making that had to do with it sometimes shows
up in a TAP, other times it doesn’t show up in a TAP. I
want to remind you that this is only one small piece of
the puzzle that we’re all working on. And we want to
come out with a better statement as to what needs to be
in a petition. We want to come out with a better
statement of what we want from the reviewers, so this is
a perfect example of something that we need to include
that may not already be addressed adequately somewhere
else. Just keep in mind that we’re not saying throw it
out. We’re saying that this can be used in other spots
that we’re also trying to shore up and make it more
effective.

MR. KING: In Rick’s general message what
we’ve heard is look at this holistically or as a system,
and so point well taken. Okay. Are we comfortable with
that? Can we move on? Identify the experience in
foreign markets. Okay, good. Onward, upward, downward.

J, minimum quantity necessary to achieve a desired
function.

MS. KOENIG: I don’t understand that.

MS. BURTON: What’s the minimum to achieve the
technical function -- desired function. I like
technical but I think...

MS. KOENIG: But we can’t control minimum. I
mean we either approve it or not approve it. I mean we
don’t -- we can’t say -- I mean unless you want to get
into annotations that you only can use two ounces per...

MR. KING: Yeah, I can’t wait to do that. So, Kevin, if you could just speak from your experience
because processors probably aren’t going to use more
than they need to, are they?

MR. O’RELL: No. Customarily those things
cost money so you’re going to use -- and they have
negative effects because a lot of the functional
ingredients only work in a narrow range to give you the
desired finished product effect. If you exceed that,
you can have negative effects. If you go less than
that, you can have it too. It’s like a bell shaped
curve. But I guess I’m questioning a little bit as to
along with what Rosie said, are we going to -- let me
ask you what the thinking in putting it here was.

MS. KOENIG: I have a...

MR. KING: We’ll got to Rosie, then Jim, and
keep Kevin in the whip here.

MS. KOENIG: Are you trying to say that are
there other potential substances that would allow less
of a -- like, for example, on acid there’s strong acids
and there’s weal acids, so if you’re looking at quantity
you can use less of a strong acid to achieve the same
result, so that’s the only place where to me a quantity
would -- and then what’s the justification because
there’s again pros and cons. Weak acids are safer
but...

       MS. GOLDBURG: Isn’t that already covered in
one of the other criteria?

       MR. KING: Yeah, it is in some ways, and I
guess...

       MR. RIDDLE: Which one?

MS. GOLDBURG: Alternatives.

MR. RIDDLE: Alternatives.

       MR. KING: Yeah. It’s also really covered in
labeling too. I mean if you’re going to exceed a
certain percent or...

       MR. RIDDLE: It’s crops. It’s...

       MR. KING: Yeah. That’s true. That’s true.

MR. RIDDLE: The desired function is not just
product related. It could be crops. It could be
livestock, pest control.

       MS. CAROE: And also it may vary depending on
what product you’re using in terms of wash material for
fresh produce. It may be different for lettuce than it
is for sprouts or something. I don’t know. I mean how
would you answer that question if it’s a very generic
material?

       MR. KING: Well, that’s an example especially
if you’re washing fresh produce where to get the desired safety effect you might have a certain level where someone may think more is better. You see what I’m saying?

MS. BURTON: There’s usually guidelines to materials.

MS. KOENIG: I guess the only place you could do it -- the only example we have in our rule is Chilean nitrate where you’re limiting the amount because of an environmental factor but that’s not necessarily -- but that does not -- you wouldn’t look at that as a criteria. You would review it, and that would be your conclusion from doing a good TAP review, not necessarily -- you don’t want people to -- that’s like saying I want you to find the minimum quantity, and they can’t do that. That’s for us to decide after we’ve looked at the body of information.

MR. KING: Perhaps we should restate it that we just simply want to know -- and I think we get this from those TAPS, what is the normal use or how does it, you know, the dose, the amount applied per acre. I mean we -- George.

MR. SIEMON: Well, now that you brought up Chilean nitrate is the restriction due to the environmental or is the restriction due to try to
encourage rotation and use of other products? Isn’t that compatible with sustainable and organic principles?
Now you brought that up. I was really off the subject, but that really ties right in with this compatibility issue what you just...

MS. KOENIG: But number two says the substance, manufacture, use that does not have adverse effects on the environment and are done in a matter compatible with organic handling is one of the criteria. It’s criteria two.

MR. RIDDLE: That’s what we’re trying to determine.

MS. KOENIG: But I’m just saying is that already embodied in what we’re asking, do we need to ask it again? Is that the point that you’re trying to get?

MR. RIDDLE: Yeah. Yeah, essentially.

MS. KOENIG: So the same criteria too.

MS. CAROE: So between that and the alternatives you cover it.

MR. SIEMON: Criteria two in the alternative.

MR. O’RELL: The point is to try to get the information about its application in terms of trying to limit its quantities. I mean it may be we want to limit it like we did with sodium nitrate but that will be once we know its application and its effect on the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
environment and other things that it can impact.

MR. RIDDLE: But like George says though it’s really its impact on the system. It’s not a straight environmental impact but it’s to encourage crop rotation and natural nitrogen cycling.

MS. KOENIG: All right. Okay. Then the other question that you would ask are there established best management practices...

MR. RIDDLE: For use of the substance.

MS. KOENIG: For use of the substance or best manufacturing practices, and what are they.

MR. KING: That’s a good point.

MS. KOENIG: Okay. That’s what you’re asking. although they may not be applicable to organic systems that’s all you’re going to get. I mean they’re not going to probably have it but that will give you an idea of how it’s recommended in conventional ag. Then you have something to say, okay, this is how it’s used.

Knowing the product, is that sufficient or do we want to reduce that?

MR. KING: Well, and I think what we’re talking about here is two things. One, is this really a criteria or we want a way to get the information to make a decision that fits this in some way, which is your point. How do we get the information that allows us to
make a decision that in the end we’re confident means
that we’ve used the minimum quantities...

   MS. KOENIG: Well, you can ask for the best
management practice. The best management practice is we
limit -- the minimal amount to get the desired effect,
but that’s...

   MS. BURTON: Usually the manufacturer gives
you those, and that’s their...

   MS. KOENIG: In crops, no. Not necessarily.
A lot of experimental stations will go it. It just
depends...

   MS. BURTON: Like in handling we would create
our own best manufacturing practices. An MSDS sheet
would give you more technical limits, so we have the
technical data somewhat. It just depends on I guess
where you’re looking.

   MR. KING: So we’re kind of back where we were
at before. It’s important information. How do we get
the information for consideration so we can make a sound
decision.

   MS. CAUGHLAN: I’m confused as to why it’s
presented as a criteria because I don’t see this...

   MR. KING: It’s a draft.

   MS. CAUGHLAN: No. I’m saying it’s a
consideration but it’s just not a criteria.
MR. RIDDLE: I agree. I saw this one as problematic. I put it in as a place holder for this discussion.

MR. O’RELL: Isn’t this -- if we’re asking for information this is something that could be in as we say we’re going to modify the TAP petition for the petition process and be requested for information of application and use and whatever the substance is as opposed to...

MS. KOENIG: Is there a regulated minimum requirement?

MR. O’RELL: ...being a factor listed because we’re not...

MR. RIDDLE: Yeah. We get that information and then with our other factors for compatibility we can assess the information we get against those established factors. I think Rosie had -- are there BMPs, are there GMPs.

MR. MATTHEWS: Right. Right. And this fits right into what has been kind of talked all along is Rosie is right and saying it the way it is. We talk about the best management practice. Well, you’ve got a criteria in there that’s asking about how it’s manufactured in the industry, so why not as a part of...
flushing out those criteria as well tell the TAP
reviewer that we want you to address this along with
this particular criteria. Make sure you include this
kind of information. We can also turn to the petitioner
again and say you have to address his criteria, include
this kind of information in your response.

MR. KING: Consider the substance
manufacturer, for example, please include PMPB.

MS. KOENIG: Yeah, under that criteria.

MR. KING: Okay. All right. So I think we’re
going to strike it and move on.

MR. BANDELE: I was just thinking though some
of the newer products may not have a best management
practice but if we knew the recommended rate that would
at least give some information that the manufacturers
recommend.

MS. BURTON: They have to put in the petition
their recommended use. It’s already there in the
petition.

MR. KING: All right. K, no mining
manufacturing using child labor or through any
violations of international labor organization
conventions.

MR. BANDELE: I’d like to have a clarification
in terms of the international labor organization

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
conventions, what’s meant there.

MR. RIDDLE: Well, those are -- well, once again I don’t know if the U.S. is still a signator here or not but those are -- I don’t have those as an appendix here. It’s just a piece that didn’t get done but they do exist. They are stated, transparent...

MR. BANDELE: What’s the nature of them?

MR. RIDDLE: Pardon?

MR. BANDELE: The nature of them.

MR. KING: He’s asking in general.

MR. RIDDLE: Yeah, well, no child labor, no slave labor. I don’t have -- we’re not talking about farming practices. We’re talking about a substance once again. Not Board members. That’s why I clearly put in no mining or manufacturing using. We’re not talking about once a product is used on the farm.

MS. KOENIG: I think the question is is there because again then while in Korea or while in -- let’s a better friendlier country so it don’t look like...

MS. ROBINSON: Call it reliance.

MS. KOENIG: While in France they’re using child labor or something like that, wherever. Because if you say no, they would have to extensively go through -- you want to get a general idea.

MR. RIDDLE: Barbara got a good -- reliance
on...

MS. CAUGHLAN: We want the status of.

MR. RIDDLE: Does not rely on.

MR. KING: Is there reliance on.

MR. RIDDLE: Once again, we shouldn’t shy from being qualitative here.

MR. KING: Okay.

MR. RIDDLE: And this is one linked to the definition of sustainable agriculture, the good of society as a whole.

MR. KING: And we may find out that I is pertinent or may not be pertinent.

MR. RIDDLE: Right. Right.

MR. KING: In general terms are we in agreement we want that as a factor?

MR. BANDELE: Yeah.

MS. GOLDBURG: Yeah.

MS. KOENIG: The only thing is -- well, I’m trying to think...

MR. KING: Almost. Almost there.

MS. KOENIG: No, no. I’m just trying to think how hard it is for somebody to get that information, how you can direct a contractor to it. For brands it’s certainly easier because you know where the company is although they can do overseas operations.
have mines, and there’s only certain mines or something
like that in certain areas. It’s just how -- I mean we
can keep it in and see how it comes out. If all the
TAPs have not enough information to be found then we may
have to...

    MR. RIDDLE: This is one where the petitioner
would have the burden of proof.

    MS. CAUGHLAN: If we’re going to go there it
isn’t just mining or manufacturing using child labor.
As we know, the international situation with chocolate
right now has been blown open around the fact of slave
labor in parts of Africa and other parts so that it
isn’t just mining and manufacture. If we’re going to go
there...

    MS. GOLDBURG: Well, it’s not just children.

    MS. CAUGHLAN: Right. Anything involving.

    MR. KING: We’re talking about working
conditions.

    MR. RIDDLE: Wouldn’t that be manufacture?

    MS. CAUGHLAN: No, it isn’t manufacture. It’s
actually harvesting and the working on the plantations,
whatever.

    MR. RIDDLE: Handling production.

    MR. KING: Yes.

    MS. ROBINSON: There are countries that -- you
know, there are human rights agreements in countries that refuse to sign, and there are countries that do. There is documentation. I know that the state department keeps track of stuff like that. The first question out of the chute is from the petitioner where is the stuff made. If it’s made right here in the U.S. of A, and that’s the source of it, then don’t worry about it.

MS. KOENIG: Well, that’s not true because there can be a lot of different manufacturers.

MS. ROBINSON: That’s true. That’s true.

MS. KOENIG: You’d have to look at all manufacturers of that generic...

MS. ROBINSON: That’s true, but the information is obtainable. I mean if there’s nothing wrong with asking for this, and you’ll find out soon enough whether this is so unbelievably difficult to get that all you want to do is whenever a material comes before you and you’re talking to people, you periodically stand up and say, and by the way don’t buy this from a company that doesn’t sign up for human rights. Maybe you just incorporate as a matter of your principles but, you know, it’s okay to recognize it.

MR. KING: Jim.

MR. RIDDLE: And the ILO may not be the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
appropriate reference point but for now it’s a place
holder and gives us a chance to see if there’s something
more appropriate.

MR. KING:  Owusu.

MR. BANDELE:  I think there’s another use too, and that is if folks know that we’re concerned about
this issue, and then when the TAPs go up on the Web
site, et cetera, then some information may come from
other sources.

MS. CAUGHLAN:  That’s a very good point, very
good point.

MR. KING:  Yeah, that’s very good actually. Okay. So we’re all in agreement this one stays. We’ll
move on. Where are we at?  L, consistency with
substances historically allowed in organic production
and handling. I like it. My question is how do we
determine consistency with, and I just throw that out
for...

MS. KOENIG:  I think you look at the
historical status like we do with...

MR. MATTHEWS:  I would caution that historical
not be ancient history but also -- I mean it could be
ancient history but it should also be what’s there on
the National List at this time as well, so I mean when
you talk historical make sure you’re looking at the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
entire span.

MR. KING: Okay. I got Kevin, Kim, and Nancy.

MR. O’RELL: Well, Richard touched on some of what I was going to say, but in addition to is this something that we’re trying again to just obtain information for or do we use it as a factor in our criteria for determining a substance for use, and how does that affect new products that come that may not have a historical background?

MR. KING: Well, I think one of the things at least I heard in conversations with the program and at the committee level is that, yes, consistency is important in general, and so looking at what the Board has done not just in the past but perhaps in an ongoing role, I heard that as important. I got Kim, Nancy, then Rosie, then Jim.

MS. BURTON: Yeah. My question was just where were we going with this because to identify the historical use, we typically do that in the TAP report already. Are we establishing this as criteria, does it have to have historical use or again is it just reference material because we don’t want to stymie the technology. I jotted down sodium nitrate. We got the whole spiralina issue, and that’s not a historical use. That’s a good way to look at something because we need
to know whether it had historical use, but are we using this as a criteria for evaluating something. So I was just wanting to know what was the intent with this, and maybe further clarify this statement. If we’re just looking for historical use, then let’s just ask for it.

MS. CAUGHLAN: Yeah, what is the historical use but seeing...

MR. KING: I got Nancy, Rosie, Jim, and now Goldie.

MS. CAUGHLAN: I don’t know that it has to be consistent.

MS. OSTIGUY: My only question is how far back in history do we want to go? You know, if we pick 20 years ago there’s things that we might not think are acceptable at this point so do we really want that information even, so there might be -- we might want to further define this by saying, you know, starting from this year forward we want that information. There’s going to be a point where it’s superfluous. If it was 20 years ago, we’ve all decided that it’s not something that we’re likely to use.

MR. KING: Well, I can give you two, OFPA or the -- I’m just throwing those out but that’s a good point. Yeah. Okay. Rosie.

MS. KOENIG: I think -- sort of what Kim said
but the -- you know, we’re looking for -- the definition of sustainable agriculture has nothing to do with historical use of anything. So you put it in the history section. Now there are things that may be historically used that, yes, are sustainable but just because it’s historical doesn’t mean it’s sustainable. Do you know what I’m saying? So that’s why it doesn’t belong in seven.

MR. RIDDLE: Well, I think it does belong in seven. I think it needs to be both historical and current use, needs to be taken in consideration, but it’s only one factor. Just because something doesn’t have historical use and is inconsistent with current does not mean it wouldn’t be approved. It’s just something to consider.

MS. KOENIG: Yeah, but when you have it under the definition of something because don’t forget in the section we’re defining sustainability. Okay. The assumption is to me when you’re looking at history means that if it is historically on there means that it is sustainable. If it wasn’t historically there then somebody judges it as not being sustainable. Maybe I’m...

MR. RIDDLE: No. If I could just respond. We
got a whole host of criteria, and we approve things that
don’t pass all the criteria, and I just see this as
relevant factor to be considered just like any of these
others, and just because something has been used and is
consistent doesn’t mean it should be approved. We
should say enough is enough on some things, on others
say this has never been approved before, so what?

MS. KOENIG: I’m not arguing in terms of
background information. Okay. I’m not begging that
question. I think it is useful information. It’s just
-- I mean we get that all the time. It was listed by
CCOF and it wasn’t listed by Washington State, so I look
at it and say, well, that really gives me a lot of
information. Does that mean Washington never looked at
it or did they -- so if you’re going to do an analysis
of why it was or why it wasn’t it’s good information but
when I see that historical stuff there was very few
agencies that actually did a materials process, and we
don’t know whether -- if somebody could provide us the
information that, yes, Washington looked at it and the
reason why they decided it shouldn’t be added with this,
and I can agree with that criteria.

MR. RIDDLE: But don’t just look backward.
Look forward. Do we want future determinations to be
consistent even of our own consistent with ourselves?
Do we want future boards to be consistent?

MS. KOENIG: Yeah, and we do.

MR. RIDDLE: Okay.

MR. KING: All right. Now I’ve got Goldie, Kim, Owusu, Barbara, and Rick.

MS. CAUGHLAN: I’m going to pass because I...

MS. BURTON: The re-review process flashed at me.

MS. KOENIG: Okay. I can buy it. Good argument, Jim.

MR. KING: All right. That was quick. Owusu.

MR. BANDELE: I’m having trouble with these being either make or break or just things to consider, and it seems like the more we talk about it is just things to consider, things to consider, and then if you take like, for example, some of the stuff that’s been used historically by certifiers like they list three, et cetera, wouldn’t really have any relevance either. I understand we could consider it but I don’t see it as a make or a break. And this is true with most of these.

MR. KING: As Jim said, these are not stand alones. They’re important but no single point up here is a stand alone. Barbara.

MS. ROBINSON: I just was going to add two points. One, ask the question again. Put it in the
question. And, secondly, you might have approved a
material or a previous board may have approved a
material, and you’re looking at another material that is
so similar. This is not just, well, did we approve it
before or did somebody approve it before. It’s not
just the re-review. It’s also consistent with historic
previous approvals or prohibitions. It’s in effect
asking you to be consistent with the previous record.
Okay. So I don’t see anything wrong with having it in
there. And then I think where Rose is going is this is
how you’d argue it if we were actually looking at a
material and you got to that criteria. And Rose would
say just because that Board approved it back then
there’s no reason to approve it again. And that would
be giving it the kind of discussion and weight which is
the exact reason why you ought to have it in here, so
you can ask that question when you get there.

MR. KING: Okay. I got Rick, then Goldie.

MR. MATTHEWS: And mine parallels very well
with Barbara’s. If you read this it says consistency
with substances, plural, historically allowed. And what
I’ve been hearing in conversation has been predominantly
this substance, its historic aspects, whether it’s been
used or on the National List for similar use or
whatever. So you do, I think, need to differentiate
between the two. You’re talking about that particular
substance’s history, and then you’re talking about
similar things like ivermectin versus moxidectin, so I
just wanted to point that out.

MR. KING: And I think the way we want to
record that, we know it’s here, but two different, very
different things. This particular substance, how was it
used in the past or has it been used in the past, and
then how does this substance relate to the universe of
substances, and is it consistent. Okay.

MR. MATTHEW: The second version that you just
did is actually what this statement says. It’s not what
we were discussing.

MR. KING: Okay. I got Goldie, then Andrea.

Sorry.

MS. CAUGHLAN: Again, it was just what I was
going to say, and now it’s been said. Wonderful how
that works. I’m beaming it out.

MR. KING: Good energy.

MS. CAROE: Can we just clarify it then to say
consistency with this substance or similar substances?

MS. ROBINSON: Or previous substances or other
substances.

MR. KING: Yeah, I think -- and again we can
word smith a little bit later but in general terms is
this what we’re trying to say. I think that’s where we want to go.

MR. RIDDLE: And I just flashed on something when Rick was speaking that should it also say and practices.

MS. CAUGHLAN: Well, organic production and handling practices.

MR. RIDDLE: Yeah.

MR. KING: Then what do we say in our opening -- no, you’re right. It’s just substance use and manufacture.

MR. RIDDLE: So is it consistent with practices that are used.

MS. CAUGHLAN: Substances or practices...

MR. RIDDLE: We are. The substance, but is it consistent with other substances and practices.

MS. ROBINSON: Right. You’re confusing your definition with your criteria. You’re using your own definition again to define what...

MR. RIDDLE: Yeah, I understand that. That’s a problem.

MS. ROBINSON: You’ll naturally do that, Jim. I think you’ll naturally consider the practice and how it’s used but just stay with the substance.

MR. RIDDLE: As the noun, yes. We’re also
measuring it against other substances that are historically allowed but also other practices. This is a systems approach. This is another like concept that - - I didn’t capture this the first time. I’m actually having a new idea of my own.

MR. KING: Okay. And I just...

MR. RIDDLE: I don’t know. Just something to throw out there because we do look at things not just in the context of substance evaluation but in the whole system the practices. How does it match up with the practices that are historically allowed.

MR. KING: Dave, then Owusu.

THE CHAIRMAN: Okay. Yeah, I would weigh in on -- I think Jim is on the right track because I think, you know, if you’re going to look at parasiticide you not only measure that against another parasiticide but then you also talk about pasture rotation or other practices in a holistic system or an organic system that may be an alternative to the substance.

MS. CAROE: We already look at alternatives.

MR. RIDDLE: Yeah.

MR. KING: Okay. Hold on. I got Owusu, then Andrea, I want you to make that point, and then Barbara.

MR. BANDELE: It may be implied but I was thinking we’re really looking at consistency with
substances historically allowed or disallowed because some of the substances -- you know, we may have a record also of those being disallowed.

MR. KING: Yeah, I think...

MR. RIDDLE: That’s a real good point.

MR. KING: I think that should be considered.

I think Andrea’s point is important.

MS. CAROE: Well, I mean what you had just said about practices, Jim, we look at when we look at alternatives because when we look at an alternative to material it’s not just one for one, it’s what can you do in place of using this material. So I think it’s covered. I don’t think it has to be put in here. I think this should be kept simple and to the point and focused on what we...

MR. JONES: Jim, it really is covered. I mean you already go through that rumination around practices when you look at alternatives, okay, and your threshold question is are there alternatives for this substance, and if your conclusion is yes then you’ve already identified that set of...

MR. RIDDLE: But I’m not thinking of it only as an alternative practice to use of a substance but is the substance -- how does it match up with the practices that are currently allowed as an alternative.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
necessarily.

MR. JONES: But you would already get at that question in the other criteria...

MS. CAROE: The alternatives to using the substance in terms of practices or other available materials.

MR. KING: Then that’s criteria six so...

MR. RIDDLE: That’s fine. I throw out ideas.

MR. LACY: Sometimes they stick, sometimes they don’t.

MR. RIDDLE: That’s right.

MR. KING: Barbara disappeared. She must not have a comment now. Okay. So where are we at, are we okay with this? Is this where -- do you want to leave it at that? Okay. All right. M, compatibility with the precautionary principle, i.e. when a substance is used manufacture raises threats of harm to human health or the environment precautionary measures should be taken even if cause and effect relationships are not fully established scientifically. The proponent of a substance should bear the burden of proof to demonstrate compatibility. I’ve heard precautionary principle a lot today, so I think we’re in agreement that is something we want to look at. Kim.

MS. BURTON: I’m in charge of safety at our
plant so I think of a minimum requirement for wearing a respirator or something for using a cleaning chemical or dumping ink into a drum or something like that. You have minimum requirement. And I almost read this as that we should even take further measures regardless of what an MSDS sheet says. And even though there’s no scientific data to that if it doesn’t require a mask then we should require one because that’s the best thing to do, but it’s very vague and it’s subjective. In a manufacturing plant, I see this as a problem. I see this as a problem statement. And the proponent should bear the burden of proof to demonstrate compatibility so as we look at materials and handling they have an MSDS sheet that has personal protective equipment requirements, and are we going to say, well, you bear the burden of truth. Prove this further, and we’re going to require more protection. So to me it just seems like we’re getting into regulatory areas that are really not our burden.

MR. KING: Okay. And that’s what we’re to consider. I got Mike, Nancy, and Rebecca.

MR. LACY: I just couldn’t figure out on this one how you were going to measure the threat of harm to human health and the environment if you’re not going to take into account scientific information.
MS. OSTIGUY: I’ll actually go for both of them. To address what you brought up, Kim, if you were going to follow the precautionary principle and you had a chemical that was being used, and for other chemicals or for let’s say much higher exposure than you could ever anticipate from a chemical of interest you might wear protective equipment. Would you have to under the precautionary principle for a level that there’s absolutely no scientific documentation that there’s any particular harm. The answer is actually no because you have to consider the effect of wearing the protective equipment, so it’s looking at the whole. Now if there are some scientific data saying that harm is possible but we haven’t -- don’t have irrefutable proof in some ways it’s like looking at global climate change. There are people that will argue on one side and people that will argue on the other, and the question is do we proceed as if global climate change is happening or do we proceed as if it’s not. The precautionary principle would tell us to proceed as if it is. So you’re using scientific data. It’s just instead of -- you know, when we are doing statistical analysis of our data we set our chance of erroneously concluding that nothing is -- erroneously concluding that something is happening when nothing is at 5 percent. We don’t want to do that.
the same time we have an error of the opposite
happening. It turns out that actually if you look at
that error in most studies the chance of -- if you have
a study that was -- that concluded that nothing was
happening, the data error is typically within the range
of 40 to 60 percent. What that means is that you have a
40 or 60 percent chance of having concluded that nothing
was happening when something was. That’s the opposite
of the precautionary principle, which is the way we
currently work in science. We’re very conservative
about saying that something is happening, and the
precautionary principle in some way flips that. So
that’s the way to think of it. Where you might make the
error, are you going to say that something is happening
when it might not be or are you going to say that
nothing is happening when something might be.

MR. KING: Okay. I got Rebecca, Owusu, and
then Mike and Rosie.

MS. GOLDBURG: I strongly think that the
precautionary principle is part of our philosophy of
dealing with substances. However, as it’s articulated
there and how I think of it in policy discussions the
principle is usually enunciated with respect to health
and environmental effects, which are other criteria. So
if we only want the precautionary principle to deal with

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
the other criteria that have to do with human health and
the environment, I’m not sure it belongs in this
compatibility list. If we are concerned with the
precautionary principle with respect to recycling of
resources or welfare of animals or labor, then we need
to leave it in here. And, you know, I can’t quite
cconvince myself that we are but I’ll leave that open.

MR. KING: Okay. Thank you. I got Owusu,
Mike, then Rosie.

MR. BANDELE: I just kind of see this as being
used in situations, emergency type situations, and the
problem in terms of the precautionary principle often
times it’s really difficult to make the cause and effect
being scientifically. Sometimes that takes years and
years, but there may be cases in which something is
apparently happening even though we can’t prove it
statistically. So I think it’s important. My only
concern is the legal ramifications of us turning down
the material without scientific basis, you know, and
then the legal implications of that response to the
petitioner’s concerns.

MR. KING: Yeah, that’s certainly a
consideration. Mike.

MR. LACY: Owusu stole my thunder. I think I
would be satisfied if you could put up there when a
substance, its use and manufacture raises threat of harm
to human health or the environment as evidenced by some
type of scientific information or there’s some
scientific basis to that. Then the rest of it would be
okay with me.

THE CHAIRMAN: Give me that language again,
Mike.

MR. LACY: It’s not very good. I’ll have --
how about if I give it to you in the morning.

MR. RIDDLE: So you’d be taking out even if
cause and effect relationships are not fully established
scientifically, and modifying that so that it does lean
on some science.

MR. LACY: As long as you had some scientific
basis on the front end of that sentence, that would be
acceptable.

MS. KOENIG: I guess -- everybody thinks they
know what this means.

MS. BURTON: I’d like to put it to use
somehow. I’m having a problem with that.

MS. KOENIG: I’m thoroughly confused of how
through the TAP process that somebody -- what would we
ask...

MS. BURTON: Let’s look at flavors. Okay.
Flavors are flammable. They’re flammable. They contain alcohol. They’re a flammable liquid that you have to by law handle in a certain way, organic flavors, conventional flavors. You can’t mail them through the U.S. mail. You can’t ship them Fed Ex because they have to have special handling. So it’s a material that has -- it’s a substance that raises a threat to human health. It’s flammable. And it can harm -- I imagine harm the environment. The precautionary measures for any material and handling, and I’m not sure how it -- I assume crops or anything else, you’re required by law to already have protection in place for the human. Not so much the environment that I know of but -- well, and the environment because dumping -- disposal. So I feel regulatory covers this. I’m not against it but I just don’t see where it’s applicable.

MS. KOENIG: I don’t understand how what information -- like how would the TAP reviewer look at that, and how would they analyze this information because what I’m thinking when I read that is that if anything could be potentially harmful to human health then it wouldn’t therefore be sustainable is what you’re saying in this category. That’s the only way I can interpret it. But I don’t know, is that -- what do you mean by putting it in there? Do you just want us to
like have that umbrella that this is something that we should understand as we go through the sustainability criteria or like how does that become a criteria? How do we value it, how do we judge it, how do we measure it.

MR. KING: Okay. I got Jim, Nancy, and then I think Keith. Okay. We’ll strike Keith.

MR. RIDDLE: You know, my simplified version of precautionary principle is better safe than sorry. You know, look before you leap. But that didn’t quite seem like it captured -- was adequate. To me I think it’s a critical and consistent approach to organic agriculture. Organic agriculture is not necessarily science based, but we know it’s right, you know. We know it’s farming in harmony with the earth even though everything that we prohibit we don’t empirically have the data upon which to base the prohibition. But we have taken the better safe than sorry approach towards agriculture, and so here I’m very open to rephrasing it, but I think it’s critical and it’s not only human health and environment. I think those are already covered in other criteria or more directly linked but I think it does have a place in the compatibility discussion. And I think by having it in there is exactly what’s going to give us the legal basis for a challenge if we don’t have
it, but then we make a determination, oh, we’re just not really comfortable with this. We don’t have all the empirical data to reject it but we don’t have any reference to precaution. I think we’re more vulnerable to not be consistent, transparent and all that. So, you know, I’d like to play with this...

MR. KING: Well, two things. One, I got Nancy next and then Kim and Keith, but I wanted to go to Rebecca real quick. You listed three things earlier besides human health and the environment that you felt were important, and could we just jot this down.

MS. GOLDBURG: The question I raised was whether we want to apply the precautionary principle to anything other than human health and the environment with other criteria, and I ticked off three of the considerations up there that wasn’t comprehensive. And I would really like an example of where we would want to apply the precautionary principle in a labor setting or an animal welfare setting or whatever else is up there because...

MR. RIDDLE: Consumer perception.

MS. GOLDBURG: Consumer perception.

MR. RIDDLE: That’s clearly one.

MS. GOLDBURG: So you would say that the burden of proof is to establish that there won’t be a
problem with consumer perception when we approve a
synthetic material. I’m just not sure about that.

MR. RIDDLE: Not that there won’t be a problem
but it’s something that we need to address. Are
consumers going to reject organic products, are they
likely to. We aren’t going to know empirically but if
something GMOs, radiation.

MR. SIEMON: Cloning.

MR. RIDDLE: Cloning.

MR. SIEMON: Cloning is a good example.

MR. RIDDLE: Yeah. RVST.

MS. BURTON: Okay. I think I have it because
to me if we have scientific basis established where it
causes human health and environmental, we will have that
data so I would recommend that you simply insert the
word when after the third sentence, effect relationships
-- basically when science is not established. So let me
see if I got this right. When a substance is used and
manufacture raises a threat of harm to human health or
the environment or whatever else we want to put in there
precautionary measures should be taken even if the cause
and effect -- or should be taken when scientific data is
not fully established or something -- see where I’m
coming, Rosie?

MS. KOENIG: Well, a good example is list re-
inerts, I guess.

MS. CAUGHLAN: Can’t hear you, what?

MS. KOENIG: List re-inerts. By definition, we don’t know. So try to use that. Use that because that would fit in my mind so prove to me how we can judge that like how that fits in it. I think maybe by example.

MR. KING: I think you just said it.

MS. KOENIG: I know, but I don’t...

MR. KING: You don’t know so...

MS. KOENIG: So therefore -- okay, so in other words if things aren’t established we’re going to take the high road.

MR. RIDDLE: That gives us a basis to stand on.

MS. KOENIG: All right, so that’s the precautionary.

MR. KING: Kevin, I had you down.

MR. JONES: Well, I was just going to try to throw out some examples but that’s it.

MS. CAUGHLAN: It’s better than the RBST because the RBST offends -- it offends...

MS. KOENIG: So the document by saying EPA has classified that as of unknown toxological. EPA has classified it. That’s fine with us. That’s our bench
MS. BURTON: Where no regulatory body has identified a risk or something like that.

MS. KOENIG: No. It’s when -- it’s like the bench mark is if a regulatory body cannot -- have not figured out the scientific data themselves...

MS. BURTON: Right. Right. Right.

MS. KOENIG: ...how can then we make a decision. We’re going to take the precautionary principle because...

MS. CAUGHLAN: Radiation is a better...

MS. GOLDBURG: Yeah, I think that’s a good consumer perception example.

MR. KING: Okay. All right. So are we -- let’s look at where we’re at.

MR. RIDDLE: How about just delete of harm to human health and environment, just raise threats or

MS. GOLDBURG: Concerns.

MR. RIDDLE: Concerns, yeah.

MS. GOLDBURG: And I’d put the words something about -- do we have burden of proof in there? Yes, we do. Okay. That’s fine.

MS. CAUGHLAN: The cloning was a really good...

MS. GOLDBURG: Okay. So just raises concerns,
and then we’re going to strike threats of harm to human health or the environment. Yeah, that -- that’s a good foundation.

MS. KOENIG: I think this is one that if the question was asked it would be more clear. Does the substance -- would the precautionary principle apply to the substance and why, and then I can understand it.

MR. RIDDLE: Just rejection by consumers could be one.

MS. KOENIG: But you’d have to establish it somewhere even with soft data.

MR. RIDDLE: Yeah, I agree. And it links to others.

MR. KING: Owusu, then George.

MR. BANDELE: If we used list three in that situation though there’s not any scientific basis for not allowing those.

MR. RIDDLE: No. It doesn’t mean they’re prohibited. We can consider them case by case.

MR. BANDELE: We got the word in here when there is scientific basis.

MR. RIDDLE: But they can be considered.

MR. BANDELE: So there are some situations where there is no scientific basis but we still take precautionary...

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. KING: Yeah.

MR. BANDELE: My point is I don’t think that scientific basis, the first part, should be there.

MR. KING: So, okay. Should we just not have scientific in there?

MR. BANDELE: I don’t think so because he goes on to say that when it’s not fully established.

MR. RIDDLE: Oh, I see, yeah. We don’t want to -- it’s probably better below.

MR. BANDELE: Right.

MR. KING: Is not fully established. Okay.

MR. RIDDLE: When a substance is used or manufactured raises concerns precautionary measures should be taken...

MR. KING: I think Owusu’s point is what if there isn’t any scientific data.

MR. BANDELE: No, but it says not fully established so that takes care of that.

MR. KING: Okay. So you’re okay with that.

Okay. Good.

MR. RIDDLE: And this is a draft.

MR. KING: Yes, it is. It is. Okay, so are we okay with that one? All right. They’re having their own conversation. Now George has a couple of things he wanted to bring up about possible additions.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. SIEMON: Yeah. I was given this assignment before I had this draft so one of the things I’m disturbed about is we really aren’t saying preventative management here or anything like that, and I think we need to have something that if a material encourages or is compatible or enhances preventative management is a criteria that we should have here. And I think that will be the case where that will swing us over a tad to remember, oh, this does help preventative management. I just don’t see anything in here about that, and it really isn’t covered in the other criteria. So I’d like to suggest something, enhance preventative management or...

MR. KING: Can we all just focus on the conversation, please?

MR. SIEMON: ...something like that. I don’t know what the right wording is but compatible with preventative management.

MR. KING: Okay.

MR. SIEMON: I think there will be a material -- I just hate to see us do this without the word preventative in this document. It just seems...

MR. KING: Yeah, and so George’s proposal is to add, and Dave has something up there, encourages or enhances preventative management.
MR. SIEMON: I don’t really have an example, no.

MS. KOENIG: Methianine. You could argue that it’s preventative, you’re preventing disease.

MR. SIEMON: So that’s my first one.

MR. KING: Okay. Are we all okay on that?

MR. RIDDLE: Yeah.

MR. SIEMON: Okay. The next one is more complicated but, you know, I heard Brian Leahy say today, and it’s so true, organics is always based on healthy soil. And I know we all think that but I have man example. So I had one that said, this is rather hard, helps promote plant and animal health through soil fertility. And while I can get in a lot of trouble on that one, I’m going to go back to the calcium decision we made years ago where we didn’t allow it as a fertilizer but we allowed it as a feed additive. And with organics in my world you always want to feed the soil, which feeds the plant, which feeds the animal. And so for me to have not allowed to feed the soil but to allow us to feed directly to the animal violated one of the foundation principles of organics. There may not ever be an example again like that. But to me that was a classic compatibility with organic systems and principles that we -- I didn’t agree with the decision.
THE CHAIRMAN: Can you give me that language again, George?

MR. SIEMON: I’ve been struggling with this. Helps promote plant and animal health through soil fertility, and unfortunately I only had that one example. I wish I could think of another one.

MS. CAUGHLAN: That’s a good one.

MR. SIEMON: So that’s a foundation.

MR. KING: So this really goes beyond criteria five, which talks about soil organisms. This is general...

MR. SIEMON: I’ve read through these trying to get ready. I just can’t say how these are covered myself. This is truly compatible organic system type stuff, soil health.

MR. RIDDLE: And see, yeah, it used to be covered off by the linkage to the principles.

MR. SIEMON: I even had questions about that. It was biological activity. But anyway let’s not go there. We already threw that one out.

MR. RIDDLE: Yeah. That’s why it wasn’t -- it had its own...

MR. SIEMON: So somebody help me out on this point then. If we’re not allowing synthetic fertilizers then what does that say about this particular point?
MR. BANDELE: We do allow synthetic fertilizers if we choose to.

MR. SIEMON: That question was never really resolved because some people say that OFPA disallows us from doing that.

MS. KOENIG: That was a prohibited practice.

MR. KING: Yeah. Right. So your question really focuses on fertility in general here, and what do we mean by that.

MR. SIEMON: No. It focuses on the fact that we’re talking about a synthetic substance, and this is soil fertility, and the act does not allow that.

MR. BANDELE: That’s a complex...

MR. SIEMON: So you’re saying it could be not a fertilizer that decreases soil fertility.

MR. BANDELE: No, I was thinking of fertilizer so you’re right in what you’re saying.

MR. KING: Yeah. That’s an issue, and then I think that Emily’s point is too that a practice or a system or...

MR. RIDDLE: To me fertility is too narrowly defined there. I think we’re really talking about oil ecology, soil health. Plant and animal health -- but that is the fundamental principle. I know where George is headed.
MR. SIEMON: People have found tremendous -- much better advantage feeding the soil than feeding the animal the same material.

MR. HOLBROOK: By virtue of what he just said you’re feeding the symptom. You’re not feeding the cause, and by putting it in the soil you’re eliminating the symptoms potentially.

MR. KING: Say that again.

MR. HOLBROOK: Well, he’s just talking about the product, what was it, calcium...

MR. SIEMON: Calcium hydroxide.

MR. HOLBROOK: You’re using that as a feed supplement because you have a deficiency in the soil most likely which is not producing it through the plant itself. And so there you’re treating the symptom versus the cause so if you’re able to use that in your soil fertility program you’re going to increase that potentially, thereby you’re going to be able to gain more in the diet that that animal is going to be pasturing off that land.

MR. KING: And so what we’re really saying is to focus on the source, and the source is the soil or the beginning of the system. And so let’s not put what we believe is a band aid in a feed issue or nutritional issue that could essentially go all the way back to the ...
soil.

MR. HOLBROOK: Right.

MR. SIEMON: The difference is a synthetic issue as to the branch.

MS. OSTIGUY: Yes, because you can also apply the same logic to soil that why do you have the deficiency there. Is it a matter of solitium [ph] being deficient just because of the rocks that are there, et cetera, which isn’t that equivalent to the animal issue of deficiency in the food that you’re trying to replace but it depends on what you’re adding it for. Is it to replace something that you’re not doing well in the soil process.

MR. SIEMON: And the thing we ran into that one is just the basis of some are very long term. They don’t have an immediacy of availability versus some that were more available, and so the answer was there’s long term ones available so let’s not allow that but that didn’t help the immediate year one, year two problem, so it’s the somewhat long term versus short term, and that’s why we rejected the product. We didn’t think it was -- we thought it was too short term.

MR. KING: And I think there are two separate things here that George is saying the soil is the
foundation, and Nancy brings up the issue if you can envision a circle or a cycle at what point are we choosing to intervene here.

MR. RIDDLE: Yeah, and in option one and two was included by having the definition of organic production, which really captures this in there. I’m not hearing opposition to this. I think it could use more work, refinement on that. I just wondered if there are any other ideas, any other concepts that we’ve missed.

MR. KING: George, do you have anything more on your list?

MR. SIEMON: No.

MR. KING: Does anyone else have a suggestion, something that could be added in general terms today without an extreme amount of work smithing but that we should at least consider. I mean which is not to say that we can’t add something later. Okay. Thank you all very much.

THE CHAIRMAN: All right. Thanks, and I really want to commend not only the work of the policy development committee but the committee as a whole here for this because I think this is a really good strong step forward for us.

MS. CAROE: And the NOP.
THE CHAIRMAN: Yes. You’re absolutely right.
The comments from the NOP as well because I think this
demonstrates how we can come up with some good workable
documents. Now I think we’ve been here for -- it’s 4:00
in Chicago, which is when you were hoping we’d be done
with this part, but why don’t we take another 15-minute
break, and then we will come back for the Board
election.

***

[Off the record]

[On the record]

***

THE CHAIRMAN: Reconvene the meeting. Can
somebody find Dennis. I’d like to have a full
contingent. There he is. Okay. I almost had to use
Jim’s phone. The magic phone. We’re at the time on the
agenda for the election of officers, and the procedure
that we have in our Board policy manual is election of
officers shall be elected for terms of one year by
majority vote at the annual fall meeting of the Board.
Candidates may be self nominated or nominated by another
member of the Board. Should an officer resign or fail
to serve a full term the executive committee shall
appoint an interim officer. The interim officer shall
serve in the capacity until the next regularly scheduled
meeting of the Board during which an election will be held to fill the remainder of the term, the important part being that the election is by majority vote so if there is more than one person that is nominated for a position, we will do it by secret ballot. If there are more than two people nominated for a position, we will continue to vote until somebody has a majority vote. Before I open the floor for nominations for Chair, I’d like to take a point of personal privilege. And I think as everybody knows last month I announced to the Board that I would not like my name to be placed in nomination for reelection as Chair.

MS. OSTIGUY: And he’s changed his mind.

THE CHAIRMAN: No, and I have not changed my mind although dinner last night was -- yeah. And I think everybody knows that I really wasn’t a candidate for it the first time around but this time I was adamant that I will not allow my name to be put into nomination. But I just want to say that when I was elected two years ago, and after the shock wore off, I guess, I sat down and really laid out three things that I wanted to accomplish as Chair and for the Board, and I shared these with Ken Clayton and A.J. Yates a couple weeks ago. But the first thing was that we were in a critical time for the Board, and I draw the analogy from my work...
in cooperative development that it’s the importance of making the transition from the steering committee or the organizing board to a board that is an operational board for a federal regulation, and the procedures that we’ve done to do that. The second thing as Chair was I wanted to make sure that provided the opportunity for all of the voices of the organic community to be heard at this table so that there was open and transparent discussion. And the third thing that I wanted to accomplish was to build really a collaborative, cooperative relationship with the program, and I think we saw this afternoon how we can move things forward when that relationship exists. I think that in many of the instances I feel very good about the last couple of years, and it was during the last four months that really then some things began to happen in terms of communication, my relationship with the agency that I began to feel increasingly frustrated and even somewhat a little jaded. I called it getting a case of the willies for those of you that know Willie Lockrits [ph]. But when those type of things happen, I always think that it’s, you know, time to recognize that it may be best to change the people in the discussion, and the only one that I can control right now is the one that sits right here, and so I think and I made the decision that I
think it’s best for me to step aside and for someone else to come forward and to fill this chair, and to continue the work that is so important in developing the communication, the relationship with the program making sure though that the integrity of this Board is never compromised. And so the only thing that I would ask is whoever fills this chair that all of us around the table and everyone in the audience give them their full support because I found that so important for the last two years. This Board has been an incredible resource. And final thing I want to say is I want to thank all of you, and excuse me while I choke up a little bit, but the opportunity to serve as Chair of this Board when the national organic rule was implemented a year ago, and the opportunity to serve as the Chair of this Board earlier this year when the organic community stood up, and I think this Board was out in front, standing up to protect the integrity of the organic rule are two things that I will never forget, and I will always -- Sue and I will always appreciate very deeply. So thank you all from the bottom of my heart, and with that I would accept -- the floor is open for nominations for the position of the Chair. Is there a nomination for the position of Chair? Okay, Kim.

MS. BURTON: I’d like to nominate Mark King.
THE CHAIRMAN: Okay.

MS. CAUGHLAN: Second.

THE CHAIRMAN: It’s been moved and seconded that Mark King’s name be placed in nomination. Is there any other nominations? Are there any other nominations?

MR. LACY: I move that nominations be closed.

THE CHAIRMAN: Okay. There’s been a motion that nominations be closed.

MR. SIEMON: Second.

THE CHAIRMAN: And seconded. All in favor of Mark King as Chair of the NOSB signify by saying aye. Opposed, same sign. Motion carries.

MR. KING: Well, I graciously accept, and I’m honored and Dave will certainly be a tough act to follow but I look forward to working with everyone closely, and appreciate your support thus far, so thank you very much. This is a very exciting industry and one that I am grateful to be part of.

THE CHAIRMAN: Thank you for accepting, Mark.

One of the things I should have clarified too because I asked the question at the dinner last night and it was the will of the Board that the transition happen after this meeting, so don’t -- one more day to bring a whole new meaning to the term lame duck. The floor is now
open for nominations for the position of Vice Chair.

    MS. CAUGHLAN: I nominate Jim Riddle.

    THE CHAIRMAN: Okay. The name of Jim Riddle has been placed in nomination. Is there a second?

    MR. LACY: Second.

    THE CHAIRMAN: It’s been seconded. Are there any other nominations? Are there any other nominations? Are there any other nominations? Hearing none, I will accept a motion that nominations be closed.

    MS. CAUGHLAN: I move that the nominations be closed.

    THE CHAIRMAN: Is there a second?

    MS. CAROE: second.

    THE CHAIRMAN: All those in favor of Jim Riddle as Vice Chair of the NOSB signify by saying aye. Opposed, same sign. Motion carries. The Board is now open for nominations to the office of Secretary.

    THE CHAIRMAN: Okay.

    MR. LACY: I will second it.

    THE CHAIRMAN: Okay. The name of Kim Dietz has been nominated and seconded. Are there any further nominations? Are there any further nominations? Are there any further nominations?

    MS. CAUGHLAN: Motion to close.
THE CHAIRMAN: A motion has been made to close
nominations. It’s been seconded. All those in favor of
Kim Dietz, signify by saying aye. Opposed, same sign.
Motion carries. And I should offer, Mr. Riddle, would
you like to say something as Vice Chair and Kim as
Secretary?

MR. RIDDLE: I say quite a bit. Well, I do
want to use the opportunity to express my admiration to
you, Dave, and appreciation. It hasn’t been an easy
time but it’s been a good time, and I think this Board
has functioned well. We continue to improve in our
procedures, and so I’m really glad that you’re still
going to be on the Board, and I look forward to
continuing working with you. And about the only thing
the Vice Chair does is, I think under our policy manual
is manage the Board policy manual, and then occasionally
touch the gavel. But I’m honored to serve on the
executive committee in that capacity.

MS. BURTON: Well, thank you all. George, for
Kim Dietz. That was the first time I was officially
recognized. It was strange. I too am very proud of
this Board. I think we’re a great group of people, and
we work very well. And what we did today accomplishing
that set of criteria has been a challenge for this
industry for 10 to 15 years, so I commend all of you on
doing a good job at that. I also would like to announce
that I’m going to step down as materials chair. I think
it’s time for somebody else to take over materials.
We’re starting with a new phase. We’re starting with
new procedures. And I thoroughly enjoyed materials, and
I think it’s been great just like being Chair it’s been
great to be with materials at a time when we just
implemented this rule, and I look forward to supporting
this Board further.

MS. CAUGHLAN: And you’ve done a terrific job.
I think we all are indebted to you tremendously.

THE CHAIRMAN: Okay. With that, there will
obviously be some reorganization. The new Chair will be
working with members of the Board to talk about the
committees and how we restructure those. And so I think
that this is a good team, and again I just want to say
as the outgoing Chair that this Board is an incredible
Board and the resources that are here, I think the
organic community is well served. So with that now as
far as how we move toward tomorrow when we get into this
with the materials that we have in front of us, I think
the comments that I’ve heard from a number of folks is
we need to prioritize the committee’s need to prioritize
so let me throw it out to the committee chairs right now.
how we want to handle any time tonight or in the morning
or how we want to handle the agenda tomorrow. George.

MR. SIEMON: I need to just understand
tomorrow. It looks like it’s all -- is it working
sessions, non-whole Board working sessions, right?

THE CHAIRMAN: Well, it’s going to be yes and
no. And Barbara and Rick, can you explain to us maybe
your thoughts on how...

MR. MATTHEWS: This is supposed to be set up
tomorrow so that you can break into three groups dealing
with crops, livestock, and processing materials. Then
you would ultimately come back together to work through
the documents at the full Board.

MS. KOENIG: So we’ll have one set of
documents for the whole process. The committees would
bring their...

MR. MATTHEWS: Yeah. The committee would work
out theirs for their respective materials and then they
would bring their documents to the full Board, and then
the full Board would create the one master document.
And they’re supposed to have this out tomorrow so that
there will be a couple of tables, one on each side, plus
different configuration from where you are now.

THE CHAIRMAN: Okay.

MR. MATTHEWS: So it’ll actually be a large

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
table so that you’ll be facing each other when you come back together but it will still provide three different working areas.

THE CHAIRMAN: Okay. George, Jim, Rose.

MR. SIEMON: So there’s four different sessions, or even more. There’s five -- the whole day is basically working sessions so are we expecting the breakouts to be in the morning and then the whole group together in the afternoon?

MR. MATTHEWS: Yes.

MR. SIEMON: Is that the...

MR. MATTHEWS: They’re going to break out and you’re going to work as committees to do the first set of the reports. Then you’ll come back together and make sure that you’re all in agreement and then develop the master document.

MR. SIEMON: So then do we need to have it so we’re meeting at different times or can all three committees meet at once because of the overlap?

THE CHAIRMAN: I think we’re going to deal with the overlap issue as best we can just because we got to take advantage of the time that we have here and the folks that are double committed will have to...

MR. MATTHEWS: And what you’ll be doing is that we have brought CDs with all the TAPs on them so...
that there will be one available for each of the
committees, and you’ll be able to work from your actual
laptop then.

MR. SIEMON: I’ve got a conflict so I was
wondering if I could have the livestock first thing in
the morning. Would that be possible?

MR. MATTHEWS: Well, livestock, crops and
processing will all be going at the same time.

MR. SIEMON: All at the same time. I thought
we just said there was conflict.

THE CHAIRMAN: No, we’re going to be going at
the same time but we will then be coming back as a Board
to, you know. This is a little bit of an experimental
process so we’re going to -- Jim and then Rose.

MR. RIDDLE: Yeah. I don’t know how many
materials each committee has. Some have more than
others, but I’m assuming, I just want to make sure this
is correct, that each committee when they first get
together in the morning is going to set the priority or
the order based on some kind of choice, not necessarily
alphabetical but we -- I don’t know if it took -- I
won’t -- it took us a long time to go through one with
one person, I don’t know that we’ll all get through all
of them, so I think we need to be selective in
prioritizing what we start off with, see how it goes,
then just not set ourselves up for failure.

MR. MATTHEWS: And you could be creative. For example, if you had three people on the committee, one could take category one, another one take category two, another one take category three, and then you kind of discuss it together. I mean it’s not that you have to take them one at a time and everybody work through it. You guys are free to do it however you want. What we are doing is we are providing the mechanics so that you can break up into three groups and use electronic TAP reviews, but then how you decide to work it amongst yourselves is totally up to you.

THE CHAIRMAN: Barbara, did you have -- okay. Rose, and then Kim.

MS. KOENIG: Can we get a hard copy, at least one, because it’s really sometimes hard for me to kind of scroll up and down. It’s just I’m not efficient.

MS. OSTIGUY: Several of us have brought hard copies. I brought one, and Goldie said she brought hers.

MS. KOENIG: For all of them?

MS. CAUGHLAN: I think so. I think I have them all. Actually Kim had sent out the one and so...

THE CHAIRMAN: You printed them all. Okay.
MS. CAUGHLAN: I printed those up.

MS. CAUGHLAN: I haven’t cross checked it but I think that was it.

MS. BURTON: Point of clarification, some of the materials are deferred, and there are some that were deferred that had TAPs and they have enough information to complete, but then there are some that don’t. Of the ones that have information, do you want us to work on those or wait till the next meeting when we actually come forward with our...

MR. MATTHEWS: You’re only working on those that you made a recommendation to us on.

MS. BURTON: That we voted on.

MR. MATTHEWS: You’ve already approved the material, and we’re looking for -- and those that you may have disapproved, but anything that was approved or disapproved we want to convert it into those terms.

MS. ROBINSON: All the materials are in the book...

MR. KING: Yes.

THE CHAIRMAN: Okay.

MS. ROBINSON: ...that you’re going to do. And every material has a set of forms, so then all I need to do is go back and look at the TAPs.
THE CHAIRMAN: Okay. TAP and minutes and experience and all of that. Okay. Now the last thing that we need to talk about this afternoon that’s on the agenda is the next meeting of the Board. And, Barbara, you had talked about a January-February. I know we’re operating under a continuing resolution right now. But does that still fit within the program’s -- because I know January and February gets...

MR. SIEMON: How about the last two weeks of January?

THE CHAIRMAN: Well, the second to the last week of January is out for me unless we want to do this in conjunction with the National Bison Association annual meeting.

MS. CAUGHLAN: Or eco farm is the 21st.

THE CHAIRMAN: Or eco farm is...

MS. ROBINSON: February would be better.

MR. JONES: Yeah, BIOPOC [ph] is around Valentine’s Day, three days, I think, either side of Valentine’s Day.

MS. KOENIG: Ann and I have a meeting here the 15th, 16th, and 17th so if it was before or after that, that would be okay.

MR. SIEMON: How about the first week of February?
THE CHAIRMAN: How about 18th, 19th and 20th of February?

MS. CAROE: I think that might be BIOPOC. Is it the 18th through 20th that’s BIOPOC?

MS. COOPER: It’s school break too here.

THE CHAIRMAN: What’s that?

MS. COOPER: School break. Washington’s Birthday break is that week so schools are out if people care.

MS. CAUGHLAN: The school break starts the 16th, is that right?

MS. COOPER: Yes, the 16th through the 20th.

THE CHAIRMAN: How about the 9th through the 11th?

MS. CAUGHLAN: Oh, February. We’re still February?

MR. KING: Yes, February.

MS. CAUGHLAN: 9th, 10th, 11th of February.

THE CHAIRMAN: Yeah. Rose said she’s out then.

MS. KOENIG: Well, is it possible either the 18th to the 20th or before the 14th just so that...

MS. BURTON: She’s here already.

MS. KOENIG: I mean I just don’t want to make two trips two days after to the same place.
MR. KING: That’s another point.

MR. RIDDLE: Does it have to be here?

THE CHAIRMAN: No, that’s...

MS. KOENIG: All right. Have it in Florida. I could show you some farms. Marty can help.

THE CHAIRMAN: She’s not responsive on that, having it in Florida.

MS. ROBINSON: It’s cheaper -- believe it or not, it’s cheaper to be here because to go some place else not only do we have to transport you but we have to transport all of us too.

MR. SIEMON: 9th, 10th, 11th.

THE CHAIRMAN: 9th, 10th, 11th.

MS. CAROE: Or the 11th, 12th, 13th. Did we already say that was out?

MS. GOLBURG: I can’t do any of that.

MR. SIEMON: BIOPOC is usually around Valentine’s Day.

MR. MATTHEWS: BIOPOC [ph] is 19th, 20th, and 21st.

THE CHAIRMAN: Okay. So 11th, 12th, 13th.

MS. GOLDBURG: I don’t think I can do the 13th.

THE CHAIRMAN: 10th, 11th, and 12th.

MS. CAROE: 10th, 11th, and 12th is great for those of us that are on the west coast and have to
travel.

MR. KING: Yeah, you don’t have to leave on Sunday.

MS. COOPER: I can’t do that.

THE CHAIRMAN: You can’t. Okay. What days are out for you in there, Ann?

MS. COOPER: Basically both the weeks of the 9th and the 16th.

MR. RIDDLE: How about the first week?

THE CHAIRMAN: How about the 3rd through the 5th?

MS. GOLDBURG: I have a board of trustees meeting for my organization.

THE CHAIRMAN: What dates does that go?

MS. GOLDBURG: It’s the 4th through 6th in Florida. How about the last week of February, the week of the 23rd?

THE CHAIRMAN: The last week of January is the week of the 26th.

MR. SIEMON: The upper Midwest conference is Friday, Saturday, and Sunday.

MR. RIDDLE: 26th through 30th, somewhere in there.

MS. CAUGHLAN: That would be good.

MR. SIEMON: That’s the upper Midwest.
conference.

THE CHAIRMAN: Rick.

MR. MATTHEWS: How about the first week in March?

MR. SIEMON: That’s Expo.

THE CHAIRMAN: That’s Expo.

MS. CAUGHLAN: If you want to do it in conjunction. If we’re going to make it that close it would be good to have it...

THE CHAIRMAN: With Expo. I mean we’ve done that before.

MR. SIEMON: Expo is March 5 and 6 -- 4th to the 6th, so we could do it the 1st, 2nd, 3rd.

THE CHAIRMAN: No. OTA is in Chicago this year.

MR. SIEMON: How about connect it to Expo March 1, 2 and 3.

MS. CAUGHLAN: Yes.

MS. ROBINSON: Where is it?

THE CHAIRMAN: Anaheim.

MR. SIEMON: That goes against trying to do it in D.C.

MR. ELY: When you tie it in with Expo there’s a lot of activities surrounded around Expo that are part of our business function as well so it’s just...
MS. KOENIG: Can we go back to discussing Florida in February. You’re willing to go in California in March and travel. Orlando has really cheap air fare. THE CHAIRMAN: Well, we were rationalizing by saying...

MS. CAUGHLAN: We heard from Michael Sligh. We’ve heard from others, and we remember the history of this Board. I mean there have been -- there’s been one meeting that hasn’t been either in D.C. or Austin or back here, and Anaheim, so perhaps it won’t be this one but I think we’ve got to struggle with that. I think that it’s not responsive to the needs of the community if we just say we cannot go to the inner lands. THE CHAIRMAN: Okay. When is the upper Midwest conference, Jim?

MR. SIEMON: The 27th, 28th of February.

THE CHAIRMAN: So the upper Midwest conference is the 26th, 27th, 28th. If we did the meeting the 23rd, 24th, 25th.

MS. COOPER: Of what month?

THE CHAIRMAN: February.

MS. COOPER: I can do that.

MR. MATTHEWS: Lacrosse is out. I’m sorry. That area there costs us an arm and a leg every time. It really does. I mean if we have three meetings it’s
already going to cost us 90 grand. If you go to
Lacrosse we probably won’t be able to have three
meetings because it’s going to cost us more than the
normal $28,000 to $30,000 for a Board meeting. I’m
sorry. That is just too expensive for us to do.

THE CHAIRMAN: Okay.

MR. SIEMON: Let’s go back to January.

January is out because we got a material responsibility
here, you all. I’d really rather we met in January. We
didn’t do any materials this meeting. Even December for
that matter.

MS. COOPER: What’s the last week of January,
the week of the 26th?

MR. SIEMON: That’s what I advocated but it
didn’t work for somebody.

MS. COOPER: The week of January 26, anyone?

MS. GOLDBURG: I’m holding the 27th and 28th,
but if it pans out I just won’t go.

MR. SIEMON: I’d like to suggest January 26,
27, 28.

MR. KING: I can do that.

MS. COOPER: Remember those on the west would
like to travel on a Monday and a Friday.

THE CHAIRMAN: March.

MS. CAUGHLAN: Again, consider what that does.
to the materials that are waiting review. We have to look at the benefit of the consumer and the petitioners.

MR. SIEMON: How about December 16, 17, 18?

THE CHAIRMAN: Okay. Well, let me just take this sequentially then. The last week of January is out for...

MR. SIEMON: Nancy.

MS. OSTIGUY: Well, do whatever.

MR. KING: Nancy says do whatever.

THE CHAIRMAN: The first week of February is out for Rebecca. Dennis is grimacing. Okay.

MR. HOLBROOK: Yes, my hand is up. That two-week period is not good for me.

THE CHAIRMAN: The week of February 9 is out for Ann.

MR. SIEMON: It’s tough for me. I had plans.

THE CHAIRMAN: Tough for George. The week of the 16th of February is out for Andrea.

MS. CAUGHLAN: Three people.

THE CHAIRMAN: Okay. Four people. The week of the 23rd.

MR. RIDDLE: The 26th on is out.

THE CHAIRMAN: Okay. Well, let’s look at the 23rd, 24th, and 25th, and I know folks don’t like to
travel on Sunday but, you know, sometimes it happens. Travel happens. So let’s look at those dates.

MR. RIDDLE: I’d need us to quit early on the 25th.

THE CHAIRMAN: Okay. Just remember from here on the 25th you’re traveling back with the time zone so it’s not quite as bad as coming from the west here. Okay. Those are the dates and we will -- Rick.

MR. MATTHEWS: Okay. If you’re going to go with the 23rd of February all work will have to be in by the 23rd of December. It also means -- I’m just giving you a heads up, and you’re going to be working on your 30-day period to put together the committee reviews of these materials during the Christmas and New Year’s holidays, and that’s going to be part of your 30 days.

MS. CAUGHLAN: What’s happening in March?

THE CHAIRMAN: Yeah, what’s happening in March, guys? Let’s look. Okay. I hope the new guy does a lot better in scheduling these meetings. The second week in March.

MS. BURTON: I have an audit. I can’t do that.

THE CHAIRMAN: That whole week?

MS. COOPER: That whole week.

MS. CAUGHLAN: What is the date of Expo?
THE CHAIRMAN: Probably the 5th, 6th, 4, 5, 6. 
The 15th. The 15th is getting too late?
MR. KING: I can do the week of the 8th.
THE CHAIRMAN: Yeah, but Kim can’t. The 15th, 
16th, and 17th.
MS. CAUGHLAN: Are we planning to do the May 
meeting in conjunction with...
MR. SIEMON: I got written down the 29th of 
April, 30 and 31.
MS. CAUGHLAN: Just keeping in mind that’s 
going to leave us another short...
MS. KOENIG: What are the materials coming up, 
what is on the work plan?
MR. KING: Can we set a date to the side?
MR. SIEMON: For what, March?
MR. KING: Is that possible? Because we 
clearly...
THE CHAIRMAN: Well, okay, first of all let me 
just take the week of March 1 by a show of hands, 
realizing what Kevin said about companies and conflicts, 
but for around the table is Expo going to be -- are you 
going to be tied up getting stuff ready for Expo that 
week?
MR. SIEMON: If it’s the 1st, 2nd, 3rd, Monday, 
Tuesday, Wednesday.
THE CHAIRMAN: Monday, Tuesday, Wednesday of that week. Second week of March, any time during that second week. You got the audit all week, right, Kim?

MS. BURTON: Yeah.

THE CHAIRMAN: Okay. The third week of March, 15, 16, and 17. What was the problem? I know the Sunday travel thing and all that.

MR. ENGLE: I think I’m the only one that’s got a problem there or maybe Nancy too.

MS. OSTIGUY: No, I don’t. I’m fine.

MS. CAUGHLAN: I think that’s it.

THE CHAIRMAN: Okay.

MS. CAUGHLAN: 15, 16, 17, so we travel on the 14th.

THE CHAIRMAN: Okay. So we tentatively have the 15th, 16th, and 17th. The good thing about that is the Dubliner has quite a thing going on on St. Patrick’s Day. Okay. Let’s ruminate, and with that then the 15th, 16th, and 17th, March.

MR. MESH: Where?

THE CHAIRMAN: Where? Well, right now we’re talking here but we’re subject, yeah -- it can go...

MR. RIDDLE: What about Chicago then at the end of April, is that still...

MR. KING: That’s six weeks away.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. RIDDLE: I know. I know.

MR. SIEMON: The 29th, 30th, and the 1st is what we had previously said.

THE CHAIRMAN: Well, let’s hold this, and I’ll tell you what, you know, maybe some hops and yeast tonight will help us think this thing through, and if there’s something that comes forward we can bring this back up tomorrow, but let’s put those on the calendar for right now.

MS. CAUGHLAN: I think we need to do a bake sale to take the Board out to the hinder lands.

THE CHAIRMAN: Yeah. Okay. With that, we will stand in recess until 8:00 a.m. tomorrow morning.

***

[End of Proceedings]
CERTIFICATE OF REPORTER, TRANSCRIBER AND PROOFREADER

IN RE: NATIONAL ORGANIC STANDARDS BOARD

HELD AT: WASHINGTON, D.C.

DATE: OCTOBER 23, 2003

We, the undersigned, do hereby certify that the foregoing pages, numbered 1 through 309, inclusive, are the true, accurate and complete transcript prepared from the reporting by the reporter in attendance at the above identified hearing, in accordance with applicable provisions of the current USDA contract, and have verified the accuracy of the transcript by (1) comparing the typewritten transcript against the reporting or recording accomplished at the hearings, and (2) comparing the final proofed typewritten transcript against the reporting or recording accomplished at the hearing.

The National Organic Standards Board (NOSB) meeting of April 28–30, 2004, was attended by 13 members:

**NOSB Members Present:**

- Mark King, Chair
- Jim Riddle, Vice Chair
- Rebecca Goldburg
- Michael Lacy
- Goldie Caughlan
- Kevin O'Rell
- Nancy Ostiguy
- Kim Dietz
- David Carter
- George Siemon
- Andrea Caroe
- Rosalie Koenig
- Ann Cooper

**Absent Members:** Owusu Bandele

Dennis Holbrook (resigned)

**National Organic Program (NOP) Staff:**

Barbara C. Robinson, Agricultural Marketing Service Deputy Administrator, Richard H. Mathews, NOP Program Manager, Katherine Benham, Arthur Neal, Keith Jones, Toni Strother, Bob Pooler, Darcie Priester, and Anita Okrend, USDA Scientist and Technology Programs

Mark King thanked and welcomed everyone to the meeting and had each member introduce him/herself. Mr. King stated that the Board will have some interesting topics to discuss and deliberate over the next few days and appreciated everyone positive focus and input.

**Approval of the Meeting Agenda:** – [OPEN SESSION – 8:00 a.m.] See Discussion Document

Mr. King asked if everyone had a chance to review the agenda for approval, and moved for approval, and Mr. Carter seconded. The agenda was unanimously approved.

**Approval of Meeting Minutes:** See Discussion Document

Mr. King directed the Board members to the October 2003 meeting minutes located in the meeting book at the first tab, and asked if there were any proposed changes or amendments – no response. Mr. Riddle moved for approval, and Mr. Siemon seconded. The October 2003 minutes was unanimously approved.

Mr. King stated that the executive committee meetings were listed in the meeting book and posted on the website for review and informational purposes.

**Announcements:**

Mr. King announced that Mr. Bandele could not attend the meeting for medical reasons, and our thoughts are with him for a quick recovery.

Mr. Riddle announced that a letter went out to the Board on last week informing them of the formation of an Accredited Certifiers Association, and wanted to mention that for the record. He stated that there is a need for a network, and a professional association for accredited certifiers. He also informed everyone that this is not an inspectors association, we’ve had that for years, but now there’s a similar organization for the certifiers that are USDA–accredited; and it’s housed at an interim address at the Vermont Organic Farmers, NOFA–Vermont office.

Mr. Riddle brought to everyone’s attention a scientific study that was published in the Renewable Agriculture and Food Systems, entitled, “Profitability of Organic Cropping Systems in Southwestern Minnesota.” He said
that a 10 year study of organic four–year crop rotation versus 2–year conventional systems was conducted; and quoted a statement from the abstract, “with premiums, the 4–year organic strategy had net returns significantly higher than conventional systems. Without premiums, the net returns were statistically equal”, and they were looking at yields and profitability in this study and finding that even without organic price premiums it was equivalent profitability. For more information review the Renewable Agriculture and Food Systems, Volume 119, pages 135–146.

Mr. King also announced that Dennis Holbrook resigned from the Board because of challenging family situations – he’s not only managing his own farm but some of his father’s business. It appears to be a wise decision based on the work and professional demands; he will be missed. Nancy Ostiguy agreed to step in and take over where Mr. Holbrook left off with crops; Mr. King wanted that to be reflected in the minutes.

PUBLIC COMMENTS – April 28, 2004

The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record; and some individuals also presented written comments. Transcribed comments, and where applicable written comments can be found at DESIGNATED ATTACHMENTS.

REGISTRATION SHEET [ATTACHMENT A]
SIGN–IN SHEET [ATTACHMENT B]

John Clark, Roseland Organic Farms [Pg. 8, Attach. 1]
Merrill Clark, Roseland Organic Farms [Pg. 14, Attach. 2]
Kathy Seus, Farm Program Manager, Food Animal Concerns Trust, [Pg. 23, Attach. 3]
Steve Ham and Dr. Girish Ganjyal, MGP Ingredients, [Pg. 30, Attach. 4]
Thomas Harding, AgriSystems International, [Pg.43, Attach. 5]
Jim Pierce, Organic Valley, [Pg. 50, Attach. 6]
Haim Gunner, EcoOrganics, [Pg. 54, Attach. 7]
Maury Johnson, NC+ Organic Seed, [Pg. 69, Attach. 8]
Ray Boughton, Lakeland Organics, [Pg. 80]
Nenad Filajdic, Product Development Manager, Valent BioSciences, [Pg. 90]
Zea Sonnabend, CCOF, [Pg. 96]
David Engel, Dairy Farmer & Executive Director, MOSA, [Pg. 108]
Leslie Zuck, Director PCO, [Pg. 112]
Urvashi Rangan, Environmental Health Scientist, Consumers Union, [Pg. 119]
James Wedel, President, Texas Organic Cotton Marketing – Marty Mesh Proxy, [Pg. 123, Attach. 9]
Marty Mesh, Quality Certification Services, [Pg. 138]
Steve Harper, Small Planet Foods, [Pg. 142]

PUBLIC COMMENT CLOSED FOR A LUNCH BREAK – 11:45 a.m. to 1:17 p.m.

THE NOSB MEETING RECONVENED AT 1:30 P.M.

NOP UPDATE – Richard H. Mathews, Program Manager, NOP (For more information, see Discussion Documents and Slide Presentation as indicated below)

Mr. Mathews introduced himself, as the Program Manager of the National Organic Program, and stated that he had 40 Power Point slide presentation and will try to answer a lot of questions that have been coming up.
Cost Share Programs [Pgs. 144–146, Slides 2–7]: There are two different cost–share programs, Agricultural Marketing Assistance (AMA) program, and then National Organics Program, and the purpose of these two cost–share programs is to assist with costs of the NOP Certification.

NOP’s Budget [Pgs. 147–148, Slide 8]: The total budget of the NOP is $1,443,000. USDA and AMS take overhead from that; and the overhead that is expended is $180,756; salaries and benefits – $741,846 which is actually an increase over previous years; NOSB is budgeted this year at $90,000, other non–paid category – $430,400, and ATTRA – $40,000.

Compliance Cases [Pgs. 148–15, Slides 9–12]: There was a discussion regarding the current status of compliance cases that are still open and closed for FY 03 and FY 04; most of these cases have labeling issues, and the most common violation issue is not being certified.

NOSB Nomination Process [Pgs. 151–153, Slides 13–15]: Effective January 24, 2005; the following positions will be open for a 5 year office term: 2 producers, 1 handler, 1 environmentalist, and 1 retailer position, and the due date for all resumes is June 14, 2004. To ensure everyone the opportunity to seek nomination to the Board an AMS News Release was published on March 8, 2004, Federal Register Notice was published on March 16, 2004; 8,646 postcards were mailed to certifying organic producers and handlers; postcards were e–mailed to 41 Land Grant Universities and 3 USDA Outreach Programs, and NOP is in the process of notifying organic retailers and environmentalist groups encouraging them to apply.

Accreditation [Pgs. 153–155, Slides 16–17]: To date NOP received 137 applications for accreditation. According to the preamble to the Final Rule, we estimated that we might get 50 of these, and the interest in the program from certifying agents was underestimated. 53 of those 137 are private domestic certifying bodies; 4 have withdrawn since they submitted their applications; 20 applicants are states; Connecticut has withdrawn its application; 64 foreign certifying agents have applied, 2 have subsequently withdrawn their application. Out of 137, 92 have been accredited; 38 are private organizations operating in the U.S.; 15 are states, and 39 are certifying agents operating in foreign countries. Auditors are performing site visits for the foreign, and we got one team in South America right now.

For those who have not been accredited, they have neither been turned down nor approved; 12 are with the auditors; 5 are private domestic; 3 are states, and 4 are foreign. There are 26 still waiting for information, and haven’t made it to the auditors. The information that they sent in is woefully deficient, the auditors can’t do anything with it, and they go back to the applicant and request additional information. So right now, there are 6 privates and domestics that are in that boat; 1 state and 19 foreign in that boat.

Export Arrangements [Pg. 155, Slide 18]: We still only have 1 export agreement with Japan, and 5 recognitions with: British Columbia, Denmark, New Zealand, Quebec and the United Kingdom. There is a difference with arrangement and recognition: an arrangement in the case of Japan, they have agreed that our standards are equivalent to theirs and they recognize product produced to the NOP for export to Japan. Recognition is where we have recognized that foreign government’s accrediting process is equivalent to NOP, and it allows the governments in those five countries to accredit certified operations to the NOP.

Equivalency Agreement [Pgs. 155–158, Slide 19]: As of today, we still do not have an equivalency agreement with any foreign country. The closest we are with negotiations is the EU, and we’re not there yet, but still working on it. Mr. Jones stated that there is a joint E.U.-U.S. summit that will be held in Dublin, Ireland in late June that will provide some impetus on both sides for the conclusion of an agreement. There is significant kind of process questions that we still have to address, both externally
through the EU process and internally within the U.S. government, as to how best to conclude the recognition agreement. We have made significant steady progress towards the -- essentially the dilution of any technical issues that are outstanding.

**Directives: [Pgs. 159–195, Slide 20]**

Mr. Mathews stated that he wanted to provide some clarifications on some words that have been used in the organic community, such as “guidance” and “directive”, and when NOP issued the program scope, the antibiotics, and the fishmeal guidance statement were issued, it was sent to the Board and to OTA the day before it was published, and what should have been done was to say that that was a directive, and not guidance.

He said that the Directives basically tell you what you have to do to comply with the Act and the regulations; guidance would tell you here is our best thinking of one way for you to be within compliance of the Act and the regulations, however you might find a better way and still be within compliance. With guidance, you don’t necessarily have to follow the guidance as long as you still maintain compliance, and directives tell you this is the only way to do it. Therefore, the title for the first three will change from “guidance” to “directive”, and if there’s a better term that is less inflammatory, please let the NOP know.

Dave Carter stated that they recognize that it’s NOP’s job to issue the Directives, however, in their role to advise the Secretary on implementation of the Rule, he has continually asked about works in progress and directives that are developed, and what is the opportunity for the Board to participate in some discussion as a work in progress. He also said that the directives came down in short notice and felt that the public had been shortchanged as far as being prepared to give public comment after the fact.

Mr. Mathews stated that the following documents were not out for public comment; however, they have been vetted with the USDA attorneys, who vetted with management, and they’re based on the regulations and the statute. What has been done with these documents is that there are excerpt portions of the Act, and the regulations were based on the directives.

Barbara Robinson also stated that the reason we don’t ask for public comment and a better way to think of these directives is that they are the law and the regulations. All we did was try to figure out a way to make it easier to understand as they’re written. Before you get to what NOP is saying, first you’ll see all the citations from the preamble, from the regulations, and the statements from the law. Finally, we strongly believe that if we are about to issue anything, if it can’t be anchored directly to the law or the regulations, we shouldn’t say anything.

For more information regarding discussions on the Directives see Pgs. 159–265, and the slide presentation [Slides 20–40].

**BREAK AT 4:00 P.M. AND RECONVENED AT 4:15 P.M.**

**PRESENTATION OF COMMITTEE DISCUSSION ITEMS**

**MATERIALS** – Rose Koenig, Committee Chair

**Review of Materials Process: [Pgs. 266–276]**

Ms. Koenig gave a slide presentation on the Materials Process Update. The text of this presentation can be found with the meeting transcripts. [See Slide Presentation and Discussion Document]
Sunset Provision: [Pgs. 276–291] [See Discussion Document]

Ms. Koenig presented a report on the “Sunset Provision Report”, and stated that the document was posted one month in advance of the meeting and hoped everyone had a chance to review. She said that according to OFPA, the Board had the responsibility to come up with a policy for the provision, and that if you look at all the sections within the N.L. going from 205.601 to 205.606 there are approximately 154 substances currently on the N.L. That number was not the same that NOP came up with, because she went through – one material was in multiple categories, and counted it as one rather than three. Assuming that if a review was to be done on chlorine materials that are listed, that review would cover all uses; and that’s how she came up with 154. Also according to OFPA, the N.L. will become fully implemented within 5 years, and the committee proposed as an internal policy and procedure for the review of substances in accordance with 7 USC 6517(e), that basically the NOSB and the NOP shall compile and manage a materials database for exemptions and prohibitions, including an official Sunset date for each substance on the N.L.

NOP stated that they are in the process of developing and working on a database; and NOSB have their own database. All materials appearing on the N.L. as published in the Federal Register Final Rule dated October 21, 2002, must be reviewed by October 21, 2007. There are materials that were amended after that date in other dockets, and those would have to be reviewed 5 years from their final Federal Register Notice.

Based on the number of materials in any given 5 year period, the NOSB would select approximately one–fifth of the N.L. for review to comply with that section of Sunset Provision. The Board will not vote for approval on the Sunset Provision document at this meeting because it was not into the NOP 30 days prior to the meeting, so this is just for discussion only. The NOP will publish the entire list of materials, 605–601 to .606 inclusive, which shall be reviewed by October 21, 2007, in the Federal Register and request public comments on the prioritization of materials for review.

Jim Riddle stated that the Board will need to vote to accept the committee’s report so that it’ll officially go on record as accepting the report. Ms. Koenig spoke to Richard via phone, and he indicated that he didn’t have a problem with the Board voting on it as a working document and then officially voting on it during the next meeting and we should consider that. Ms. Koenig also received an email from Mr. Neal indicating NOP’s position on the Sunset Provision which is very different from the committee.

Mr. Neal commented that the e–mail that was sent was a well–vetted document with approval from senior management at USDA. NOP built upon the NOSB committee recommendation to take into consideration the federal process that has to take place to reestablish these materials that have exemptions under the NOP. He stated that NOP did reject their recommendation; however, NOP actually accepted the majority of it, but had to tailor it to fit the federal process, because as noted, it takes about three years to finish the process, and he continued to explain the process.

Ms. Dietz wanted to know the status of the working draft document for the Sunset, and stated that because of the timeline the Board couldn’t vote, but take it as a committee recommendation and give it formally to the NOP. Mr. King stated that the Board should acknowledge it as a work in progress, it’s not perfect and there will be ongoing dialogue with the Department. He also asked if NOSB could work with NOP on the document, knowing that there is a sense of urgency to get the process started and move forward with the agenda today. Mr. Neal stated that he didn’t know about the document portion, and didn’t see any changes to it, because it acknowledges the fact that the Board may want additional information on materials.
Ms. Koenig stated that she'll convene a meeting of the materials committee to discuss the document and before the end of the meeting provide at least a position on it that can be resolved, and after discussion, make a recommendation on how they can proceed.

Mr. Neal commented that the process should be driven by the comments, because they should take into consideration that that particular process helps the process to be unarbitrary and uncapricious, non–capricious and it’s fully transparent to the entire public and it should fit within the federal process.

ACCREDITATION, CERTIFICATION, AND COMPLIANCE – Andrea Caroe, Committee Chair

Compliance Procedures for Non–Compliances Recommendation: [Pgs. 291–293] [See Discussion Document]

Ms. Caroe stated that version 7 or draft 7 in the meeting book was obsolete and that there was a new version 8 with minor changes that was left in track mode so they could see the changes. The changes were based on comments, and the back section of the document discusses each of the comments that were received. She received comments from one commenter only and addressed every portion of those comments; and it was sent to the committee and Jim made some additional changes and there was none further. This has been voted on by the committee; the document has been around for a long time and hope to have a vote on it by the next day. One commenter asked for the word “major” to be used, and there is an opportunity for a hybrid, where they could put “major” in parentheses to keep the integrity of the language that’s used in the Rule, and more clarification to the users of this document.

Mr. Riddle stated that most of the changes are on page 7, which is the addendum section, and that’s where the definitions and the use of the word “major” non–compliance in parentheses to clarify the difference between minor non–compliances and major non–compliances. There are also some changes to the headings of the tables that have been recommended by the commenter.

CROPS – Nancy Ostiguy, Committee Chair

Ms. Ostiguy stated that the committee didn’t have anything at that time but will address the issue on Compost Tea on Friday.

HANDLING – Kevin O’Rell, Committee Chair

Update on Materials Used as Food Contact Substances Report: [Pgs. 294–297] [See Discussion Document]

Mr. O’Rell provided an update on materials used as food contact substances that was submitted on April 15, it wasn’t published for 30 days. He stated that it was there intent to acknowledge food contact substances and give a quick update and then move on in our work plan. NOP did acknowledge that food contact substances were outside of the scope of the NOP or the NOSB for materials review.

The Board recommended the materials from past meetings to be added to the N.L. and there were six materials: activated carbon and periacetic acid, and four boiler water additives: ammonium hydroxide, cyclohexlamine, diethylaminoethanol, and octadecylamine, the materials should be considered as food contact substances. The Handling Committee recommended that since the materials were previously petitioned and approved, that the Board should include them on the N.L. Mr. O’Rell stated that he understands that there’s confusion in the industry regarding food contact substances, however, the Handling Committee will prioritize their work plan to clarify the qualification of materials for the food contact substance list.
Ms. Dietz also commented that the confusion out there was two–fold: confusion on the materials that they did make a recommendation for, and those were the only materials that never appeared on a docket. She said as a handler representative, she kept receiving calls regarding periacetic acid, saying that “my certifier said that I can’t use it, well, it’s a food contact substance and people don’t know how to read the List. Therefore, until they understand how to read the List, and the public understands that this recommendation to acknowledge those materials that was recommended at one point and that they are placed back on the N.L. It’s an acknowledgment and then the committee will go forward and try to hash out exactly how to interpret food contact substance list for handlers. Mr. Riddle wanted to know if they would vote to accept as a committee report. Ms. Dietz stated that it was not sent to the NOP for a vote to accept this as a committee report. Mr. O’Rell stated that it was their intention to vote on it as a committee recommendation.

Mr. Riddle stated he appreciated the confusion that this attempts to clarify as far as the status of those six materials, but the whole food contact substance list doesn’t fit our needs, and they’ve reviewed those materials on the food contact substance list and they have different names or they’re combined with other ingredients, and is a more formulated product for specific use – this is a generic substance that fits the rest of our format for the N.L. Therefore, he supports moving that part of it forward.

Mr. O’Rell stated that he wanted the Board to a vote on that, and maybe have a discussion with the NOP. The committee was in favor to put this up for a vote with the NOSB full committee, and our recommendation for these materials, which we all voted on and approved at previous meetings, and should be placed on the N.L. It also recognizes that fact that these could also be considered as food contact substances, but there needs to be a lot of clarification on food contact substances as far as the pre–market notification with the FDA on food contact substances, the definition of it.

LIVESTOCK – George Siemon, Committee Chair

No committee reports.

POLICY DEVELOPMENT – Dave Carter, Committee Chair

Board Policy Manual Revisions/Action Item for a Vote: [Pg. 298] [See Discussion Document]

Mr. Carter stated that the committee only had two items: (1) the Board Policy Manual which is a living document that gets addressed as new policies come forth, and they had two changes for proposed incorporation that deals with confidentiality procedures – particularly with non–public information, confidential business information and how the Board handles that; and (2) the incorporation or the substitution now of the new materials review forms based upon the forms that NOP developed that was utilized at their last meeting. The committee will bring that forth for consideration.

Compatibility Recommendation: [Pg. 299]

Mr. Carter circulated a draft of the statement on compatibility with organic production and handling. The process on that is that NOP requested a recommendation on the following question: What are the factors (reasons, issues, parameters, structures, limitations) and constraints that the NOSB should use to determine a substance’s compatibility with a system of sustainable agriculture and its consistency with organic farming and handling?

He stated that at the last meeting, the committee developed 13 criteria which was listed in the book and posted for public comment. They received six public comments, and the comments suggested that they drop the 13th item which was Item M: does the substance facilitate the development of new organic products? There was a lot of discussion saying that was a good criterion and could use that as a
justification to approve a lot of items just because they would spur the development of other organic things. There were 13 and one was dropped, and now they have a 12-step program for organic compatibility.

Mr. Riddle also added that on the draft it explains on Page 2 and 3 how the comments were dealt with and summarized what comments were received and then how they were addressed.

PRESENTATION OF MATERIALS RECOMMENDATION

CROPS COMMITTEE – Nancy Ostiguy

**Soy Protein Isolate** [Pgs. 306–309]

The material was petitioned for use as a fertilizer, and the committee recommendation was to reject the TAP because it did not address the use of the material as a soil amendment, it was focused on food. The committee recommended deferral, and the voted 3 Yes, 0 Nos, and 0 Abstained

**6–Benzyladenine** [Pgs. 310–314]

The material was petitioned for use as an apple fruit thinner, and what it does is cause you to lose a certain portion of the fruit on the apple trees, eventually enhancing production. The committee's conclusions on the material was that it was agricultural, synthetic, and voted to reject the material because hand pruning is an alternative practice that is available and currently used. One of the quotes from the TAP that they used was: “Switching to chemical solutions as an alternative to farmers working in the field is not an example of sustainability, regardless of economic profitability.” The committee voted 4 Yes, 0Nos, and 0 Abstained, and the committee recommended rejection based upon of failure on Criteria 2 and 3.

**Urea** [Pgs. 314–316]

The material was petitioned for use as an insect fruit fly attractant, and contrary to what it says on the agenda, the committee actually had finished its work. They were told after the TAP was completed that the material is not approved for the petitioned use, so they couldn’t approve or not approve it because it didn’t meet EPA's criteria. Ms. Ostiguy stated that as far as she can tell, nothing should be done on this one, and wanted to know if anybody had an alternative view. Mr. King asked if the Board should officially reject a material that the petitioned use does not have a legal label claim.

Ms. Dietz stated that in the past something similar to this happened and they withdrew the petition versus reject the material – if there’s no EPA allowance for it, it’s up to the petitioner to do that. Mr. Mathews commented that if there’s no EPA allowance, we don’t take action. **No Action Taken**

**Hydrogen Chloride** [Pgs. 317–320]

The material was petitioned for use in cotton seed de-linting process, and the committee voted that the material was agricultural, synthetic, and to reject it, indicated that the criteria – Criteria 1, 2, and 3 caused the failure of this chemical because of its extreme corrosivity, very reactive, if released, very damaging to soil and plant life; and, as they had heard this morning, which is not true, that alternative organic acids may be use. The committee vote: 4 Yes to reject, 0 Nos, 0 Abstained, and the committee will continue to review the material.
HANDLING COMMITTEE – Kevin O’Rell

**Nitrous Oxide** [Pgs. 321–326]

The material was petitioned for use as a whipping propellant for food-grade aerosols, and most of the concern was around the environmental aspects of nitrous oxide and the fact that it is a potent greenhouse gas and has a half-life of 120 years. They answered Question #1, adverse effects, yes, but they also considered a magazine article which said that it was an infinitesimal amount, 2 parts per million for total production, but we still felt that was answered yes on most of the environmental questions. This is a GRAS item, and harmful effects on human health, mostly resulting from the misuse of the product, so we answered yes, but from inhalation of laughing gas. “Is there a natural source?” Not that’s practical for commercial availability. It naturally occurs -- nitrous oxide naturally occurs due to the action of soil bacteria.

On question number 3, we put yes and no; and that is the substance essential for organic -- for handling of organically-produced agricultural products. In the petition there were stated uses -- alternatives using already-approved materials but there was some dispute from the petitioner on the effectiveness of these substances to yield a product that's acceptable for the consumer, so we tried to recognize both aspects of it since there was conflicting information. However, the petitioner did say he was unaware of any tests that have been done on a gas mixture of nitrogen and CO2. On alternative substances, again we answered yes/no, and under the same conflict: that the TAP had indicated there were but the petitioner said that they were not acceptable to produce a product for consumer quality. The committee voted on synthetic and non-agricultural: 5 Yes, 0 Nos, 0 Abstained, and 1 Absent. And then there was a motion to allow nitrous oxide for addition to 205.6, Vote 0 Yes, 5 Nos, 0 Abstained, and 1 Absence. Material was voted not to be allowed.

**Tetrasodium Pyrophosphate (TSPP)** [Pgs. 326–342]

Petitioned a specific use as a pH buffer and dough conditioner for use in organic meat-alternative products, and this is a substance that we had reviewed and voted on at our last meeting and had voted to approve as a committee. The NOSB Board voted to approve TSPP, and it came back from the NOP with the request that we re-review this not only with the new forms that were given to us but addressing a specific issue.

The specific issues which were alternative substances, which we have gotten additional information and determined that there may be alternative substances but we had indicated that these would produce, from information we got from the petitioner, an undesirable product in terms of quality, functionality, unwanted discoloration, undesirably odor, and foul taste. The other issue primarily centered around this -- the product used to recreate texture, and after consulting with the petitioner and understanding, as we heard today in public comments, the intended use of this as a pH buffer and dough conditioner, that it actually is working too as a processing aid to condition the dough through the extrusion process. The actual texture is being formed by a thermo mechanical process, as opposed to the sole use of tetra sodium phosphate. The committee reviewed it again, and recommended a motion to allow under 205.605(b). The committee vote on synthetic and non-agricultural: 4 Yes, 0 Nos, 0 Abstained, and 2 Absent.

LIVESTOCK COMMITTEE – Nancy Ostiguy

**Moxidectin** [Pgs. 343–345]
Petitioned for use as a topically applied broad–spectrum parasiticide effective against both internal and external parasites; the committee recommended that it was agricultural, synthetic, and that it be allowed with an annotation for control of internal parasites only.

It was the committee’s opinion, that it failed on Criteria 1, and that was the reason for the proposed annotation because of concern about the half–life of the material and impact on soil organisms. The committee recognized that it is also less problematic than a material that’s currently on the List, Ivermectin, but the annotation was to respond to the issue of its half–life and soil–organism impact. It was much less a chance of any kind of contamination if it was for internal parasites versus external.
Proteinated Chelated [Pgs. 346–end]

Petitioned for use as a supplement in livestock, and the committee voted that it was synthetic, allowed, non–agricultural. The committee vote: 4 Yes, 0 Nos, and 0 Abstained. Approved.

There was some concern about copper and zinc, on the effect in soil and on soil organisms, but the committee didn’t feel that an annotation was reasonable. Mr. Riddle suggested an annotation that protein source must not be of animal origin.

The meeting was recessed at 6:30 P.M.

Reconvened on April 29, 2004 at 8:00 a.m.

COMMITTEE RECOMMENDATIONS:

CFR205.606 TASK FORCE REPORT – Jim Riddle and Kim Dietz

Mr. Riddle stated that he had passed out the current draft from the task force that is for commercial availability, and recommended rule changes. He said that it came to the Executive Committee’s attention early this year – January, that there remain issues on commercial availability and the need for consistency and how it’s being interpreted in the field, and this was actually when the Final Rule was published in 2000. There was a request for comments at that time and recognition of the need for further rulemaking on commercial availability and so it remained an open issue.

Comments were submitted, including comments from the Board, and then further recommendations from the Board as it relates to the agricultural ingredients on the list, 205.606. That was really the basis of the work and the starting point of this task force and the objective was to establish acceptable practices to be followed by certification applicants, certified operators, and certifiers, for consistent, transparent, and predictable determinations of commercial availability applies to two different sections of the Rule. The one being seeds, where a producer can use non–organic seeds if it’s documented that organic seeds are not commercial available in the equivalent variety and form, quality, and quantity needed by the operation; and then it also applies to minor agricultural ingredients used in processed products, where a handler must attempt to source organic ingredients if the product is to be labeled as organic. They must attempt to source organic ingredients for everything agricultural in that product, and if it’s documented that an ingredient is not available in an organic form, is not commercial available, then the certifier can allow a non–organic form of the ingredient, but there’s been no further guidance to provide consistency in how those determinations are being made or to spell out the requirements for the operators to meet in order to state their case.

The recommendation from the Task force is a lengthy introduction section, and then the background section, which has the definition of “commercial availability,” some citations from the regulation and from the preamble, have all been posted on the web.

BREAKOUT SESSION

NOP ECERT Program – Keith Jones [396–428]

Mr. Jones gave a slide presentation on the ECERT Program, and the text of this presentation can be found with the meeting transcripts.
He stated that the project vision is to supplement a secure, integrated web–based system for electronic collection, use, and dissemination of information that is required to be submitted under the NOP regulations. Multiple users will be able to enter data into a common database that would capture both regulatory information and compliance information for use on a real–time basis – access worldwide through a web–based interface, and utilizing data that we’re required to collect.

The system was designed with our first–line interface folks in mind – the accredited certifying agents and AMS compliance; and that are the two primary user interfaces that the system is designed for. Part of this will be proprietary, only USDA and accredited certifying agents will have access to certain information related in the primary interface.

LUNCH BREAK – 11:45 a.m.

The meeting was reconvened at 1:11 p.m.

COMPOST TEA TASK FORCE REPORT – Rose Koenig [Pgs. 430–465] (For more information, see discussion document)

Ms. Koenig presented a slide presentation and stated that the task force went through many changes of authority over time, and Eric Sideman, who was a past NOSB member, co–chaired the committee with Dennis Holbrook, Rose Koenig and Owusu were the individuals that from the Board were actually on the committee. Because Owusu could not attend, Ms. Koenig asked Zea Sonnabend, who was a member of the compost tea task force, to assist with the presentation. She provided the Board with a summary document and encouraged everyone to review for the finer details because she will be talking about the implications of the literature, and the citations are there. The document is posted on the web site.

She said that one of the things that was recognized that there was a wide usage of compost tea by organic growers but there is a lack of uniformity in the regulation of compost tea by certifying agents and the Board felt there was a need to clarify regulations regarding the use of compost tea, and when the original compost tea task force looked at a number of issues involved around compost, including making recommendations of alternative methodologies for making compost, almost vermicomposting, there was a section on compost tea that could not really be resolved. The compost tea task force was initiated to really do further investigation of compost tea, and that’s why the task force was extended to really look more specifically at the implications of compost tea. There was a need to investigate scientific data regarding human pathogen issues, and many certifiers and organic farmers expressed concern about the restrictive natures of the NOP’s ruling of treating compost tea as raw manure.

She said that 11 of the 12 members supported the compost tea task force report; there was one member who did not vote in favor of the task force report, and that member agreed with the recommendations but did not agree with some of the scientific data and analysis that was expressed in the report. That individual has been encouraged to do public comment to the Board on that minority opinion. The member requested that the information be forwarded to NOP prior to the meeting, however she felt it was not her role to do that. She stated that the committee was not voting on this report at this meeting, and encouraged that member to put it in a format that they’re comfortable with and take more time to detail that information, and they looked forward to seeing that minority opinion.

The recommendation from the committee is that potable water must be used to make compost tea and for any dilution before application. In other words, a clean source of water to start with; equipment used to prepare compost teas must be sanitized before use with a sanitizing agent as defined by CFR 178.1010. For compost tea, this applies to 100% plant feedstock materials in addition to manure.
feedstock, which may harbor high levels of fecal bacteria because of non–manure compost. The Task Force unanimously urged USDA and its agencies to strongly support additional research on the potential for crop contamination and plant disease, pest control by compost tea. There is an urgent national need to address critical data gaps, uncertainties, and variability in existing data that limited the evaluation of potential crop contamination by the current Task Force.

Mr. Riddle moved that the Board accept the Compost Tea Task Report, and Ms. Cooper seconded. The Board unanimously approved the report. The report will be posted and taking public comment on the recommendations to be vote on at the next meeting.

**COMMITTEE RECOMMENDATIONS**

Materials – Rose Koenig [Pgs. 465–500] *For more information, see Discussion Document*

**Sunset Proposal:** Ms. Koenig stated that the document was posted, and was not submitted in time to make a formal vote. The NOP sent the committee some documentation last week, with what they believe is a better version. NOP took the committee version of the Sunset Provision, and reviewed and considered things such as the whole federal rulemaking process. Ms. Koenig said that she had been thinking about the process and asked that Arthur would come and fully explain the proposal that they’ve worked with, and what modifications have been made.

**NOP Statement:** Ms. Robinson came forth and thanked the Board for their recommendation on Sunset; and told them that she appreciated and understood the amount of time and thought that went into it. She stated that the NOP also did research on our end, regarding “what is a Sunset,” because we had the same questions and looked at legislation. Sunset is not unique to this program, it does happen with many laws or many regulations, and Sunset is typically an expiration that would occur – it’s a call for a review of the conditions that warranted the law or the regulation in the first place. In the case of this program, Sunset is a call to review the conditions that warranted putting a material on the National List in the first place, and we are asking the public and the Board to review the conditions, not the material.

Since this program has been implemented, only two petitions have been submitted to the Department to remove a material from N.L.; one for cornstarch, on the basis that there was apparently an organic supply of cornstarch available – the Board considered that and rejected that and left cornstarch on the List; the second was sodium nitrate, and the Board again took public comments on that and decided to leave sodium nitrate on the List.

She said that from NOP perspective, Sunset is a public process; it’s facilitated by rulemaking through the NOSB’s mechanisms, and you’re part of the integral process. Rulemaking must be done with the public fully engaged, because this will ensure -- not altogether, but pretty much -- we ensure that neither the Department -- and it's important that you understand this, neither we nor you would appear to be arbitrary, or capricious. Those words are used all the time, and may have a very negative connotation, it appears like thing are pick out of the air and decide what to do and, you know, reward your friends and punish your enemies, and that's not what those words mean. It just means, unintentionally or not, because we all come to the table with biases, doing it in an open rulemaking process is a way to minimize that from occurring.

So the important thing to remember about this, and this is important for the people who are sitting in this room today, two points: if the public does not weigh in -- explicitly, everybody, you can't just think it, you must communicate, in writing, however that is -- to the Board through the Department -- whether
you believe there is still a continued need for these materials on the National List, if you do not do that, if we receive no comment on material X, on October 21, 2007, regardless of what the Board thinks, the material goes away. It will not be available for use. If it is a prohibited material, it will be available for use.

She wanted people to understand that Sunset is not an event, from now on it’s an annual activity that will take place. Every year that you add materials, 5 years later someone is reviewing the need for those materials to continue; and this is the first Board that will initiate a Sunset process – sunset will occur in 2012. The one that became active October 21, 2002, the clump of materials has to go through it again, plus any materials added by the Board through rulemaking in 2007. Sunset is a growing activity, and it will become bigger job every year, assuming Boards continue to add materials to the List. That is why the process has been laid out for rulemaking; it must withstand this annual action by the Board and participation by the public. We could not write procedures for a sunset as if it was a one–time event; we have to put something in place, because what you’re doing is, as we talked about before, creating the process again for future Boards. Ms. Robinson and Mr. Neal further explained the Advanced Notice of Public Rulemaking (ANPR) steps and process to the Board and the public, and continued to address and answer questions regarding the Sunset Provision.

MATERIALS RECOMMENDATIONS

Handling Committee – Kevin O’Rell

TETRASODIUM PYROPHOSPHATE (TSSP) (Pgs. 501–515)

Mr. O’Rell stated that TSSP was petitioned for the use as a pH adjuster and dough conditioner, and following the committee’s recommendation, they had a discussion with the Board. They incorporated some of the comments from the Board and also considered public comment that was made yesterday. There was further discussion regarding the changes made to the public comment documents that the committee reviewed.

The committee recommendation based on new information or public comment and information from the Board, and they took a second vote, the motion was to allow TSPP under 205.605(b), with annotation, “for use in meat–analog products.” He stated that this will go back to the original annotation that was voted on at the last Board meeting and striking the word, “texture.” The committee voted: 6 Yes, 0 Nos, and 0 Abstained, 0 Absent. Ms. Dietz made a motion to add TSSP on 205.605(b) as a synthetic, with the annotation for use in meat–analog products, and Ms. Caroe seconded. **Final Board vote: 3 Nos, 10 Yes 0 Abstained, 1 Absent**

NITROUS OXIDE (Pgs. 516–519)

Mr. O’Rell stated that the Nitrous Oxide was petitioned for use as a propellant, and the committee talked about some of the environmental concerns and the greenhouse effect. The committee recommendation is that there was no change, there was no public comment given, and there was no Board discussion. The committee voted to allow nitrous oxide for addition to 205.6 Failed, 0 Yes, 5 Nos, 0 Abstained, and 1 Absent. Ms. Caughlan made a motion to allow nitrous oxide for addition to 205.6, synthetic non–agricultural product, and Ms. Ostiguy seconded. **Final Board vote: 13 Nos., 0 Yes, 0 Abstained, and 1 Absent.**
FOOD CONTACT SUBSTANCES:

Mr. O'Rell announced that the Handling Committed submitted a written report which was an update on materials used as food contact substances. He stated that the report did not get the 30–day publication, and will not officially be voted on at that meeting. He suggested that the Board vote to accept the document and it will be posted again on the website and then take future action. The Handling Committee will be doing more work on food contact substances and would like to recognize six materials that were formally approved for addition to the N.L. Ms. Dietz made a motion to accept the report, and Ms. Caughlan seconded. **Final Board Vote: Unanimous – motion carries.**

Crops Committee – Nancy Ostiguy

**Soy Protein Isolate** (Pgs. 520–534)

Ms. Ostiguy stated that the committee met and discussed the comments that was received and public testimony, and the motion was to reject the TAP and request information that does address the material used as a soil amendment. The committee vote to reject the TAP: 4 Yes, 0 Nos, 0 Abstained, and 0 Absent. Mr. Riddle made a motion to defer the material because of inadequate TAP report – additional information needed, and details to be provided by the committee, and Mr. Siemon seconded. **Final Board Vote:12 Yes, 0 Nos, 1 Abstained, 1 Absent. Board vote was unanimous – motion carries.**

**6–Benzyladenine** (Pgs. 534–536)

Ms. Ostiguy stated that the committee discussed the public testimony and voted that the material was synthetic and rejected its addition to the N.L. because hand pruning is an alternative practice that is currently available and currently used. The committee vote to add was 0 Yes, 4 Nos, 0 Abstained, and 1 Absent. Mr. Riddle moved that it be added to the List, and Ms. Caughlan seconded. **Final Board vote was 13 Nos, 0 Yes, 1 Abstained, and 1 Absent.**

**Urea** (Pgs. 536–540)

There was no additional information that was presented, and Urea was petitioned for a use that doesn’t exist with EPA. Ms. Koenig made a motion to deferred and archive the petition and TAP report on Urea, and accept the committee’s findings that it is not EPA–approved (it’s not a legal EPA label claim), and Ms. Dietz seconded. **Final Board vote was 13 Yes, 0 Nos, 0 Abstained, and 1 Absent.**

**Hydrogen Chloride** (Pgs. 540–542)

The committee considered the information that was provided during public comment, and also the public comments that was received on hydrogen chloride's use for de–linting cotton seed. A motion was made by Ms. Koenig to add hydrogen chloride to the N.L. with the annotation “for de–linting cotton seed for planting.” The committee vote was 4 Yes, 0 Nos, 0 Abstained. Mr. Riddle made a motion, with the annotation for de–linting cotton seed for planting, and Ms. Koenig seconded. **Final Board Vote: 13 Yes, 0 Nos, 0 Abstained, and 1 Absent.**
Livestock Committee – George Siemon/Nancy Ostiguy

Moxidectin (Pgs. 544–547)

Ms. Ostiguy stated that because of errors she had a couple of changes on the evaluation criteria; on Category 1, Number 3, the documentation has that the half-life of moxidectin is up to 6 months; actually the citation in the TAP, on Pages 5 and 6 is 2 months; in Question 8, Category 1, and Question 9, Category 1. The committee voted, synthetic, 5 Yes, 0 Nos, 0 Abstained, to add to the N.L. with the following annotation, “control of internal parasites only.” Ms. Caughlan moved to approve and Ms. Cooper seconded, with the annotation, “control of internal parasites only.” Final Board Vote: 11 Yes, 1 Abstained, 1 No, and 1 Absent.

Proteinated Chelates (Pgs. 547–562)

The committee recommended that Chelated Minerals be added to the Lit, as synthetic, with the annotation: “protein sources must not be of mammalian or poultry origin.” 5 Yes, 0 Nos, and 0 Abstained. Mr. Riddle moved that proteinated chelates be placed on the List with the annotation: “protein sources must not be of mammalian or poultry origin”, and Mr. Carter seconded. The Board vote: 7 Yes, 5 Nos, 1 Abstained, 1 Absent. The motion failed. Mr. Koenig made a motion to defer the material and Mr. Carter第二ed. Ms. Dietz based the deferral on gathering information on the commercial availability of plant – non-mammalian sources of the protein chelates. She also urged the community and the livestock industry to comment and find out whether or not you have commercial availability sources based on that original annotation, and be specific in the document from the livestock committee. Final Board Vote to Defer the material: 13 Yes, 0 Nos, 1 Abstained, 1 Absent.

Livestock Committee Antibiotic Directives – George Siemon (Pgs. 562–574)

Mr. Siemon stated that the committee put forth a resolution, a simple paragraph that read, “The National Organic Standards Board respectfully requests that USDA NOP withdraw the 41304 Antibiotic Guidance Statement and work collaboratively with the NOSB to develop policy guidance which is consistent with the Livestock Healthcare Practice standard, statements made by the NOP in their preamble, “NOSB Recommendations, Consumer Expectations, and the Principles of Organic Livestock Production.” Ms. Dietz commented that she did not see the document and therefore can support it. Ms. Koenig moved to defer the issues at this meeting and allow the Executive Committee to process all the policy statements and come up with a format to address the issues. Ms. Dietz seconded. There was a discussion on what type of document Mr. Siemon put forth, and then the second was withdrawn.

The motion was reinstated, “for the Executive Committee to respond to the directives from the NOP and formulated a process and response based on information.” No second, motion failed. Mr. Carter made a motion that we direct the Policy Committee to bring forward to the Executive Committee for consideration a resolution concerning the sense of the NOSB regarding the NOP policy directives. Ms. Koenig seconded. Final Board Vote: Unanimously – Motion carries

Policy Development Committee – Dave Carter

Board Policy Manual (Pgs. 574–577)

Mr. Carter stated that the committee and reviewed two issues: (1) the amendments to the Board Policy manual; changes were made and posted for comment, specifically, the confidentiality requirements in the manual, and (2) to address the change in the materials approvals forms that the Board used to incorporate those and substitute them for the ones that they previously had in the policy manual. Therefore Mr. Carter moved to amend the policy manual as recommended by the committee, and Mr.
Riddle seconded. Mr. Riddle stated that there are more than one changes to the manual such as deleting the whole peer–review section, changing the name of the processing committee to “handling”, and there were things pending because they didn’t deal with any non–material issues in October. Mr. King stated that the manual is posted on the web site. **Final Board vote: Unanimously – Motion Carries**

Mr. Riddle will follow–up and send a clean copy to the NOP that actually deletes those green things and add the yellow comments.

**Compatibility with Organic Production and Handling (Pgs. 577–580)**

Mr. Carter recognized and thanked Mr. Riddle for the incredible amount of work that was done, and stated that he carried 95 percent of the workload, including developing 22–23 page drafts of material with background. He said that this was posted and there were six public comments received; all of the comments recommended that we drop from there Section M, which read “does the substance facilitate the development of new organic products?” The committee has recommended that we move forward the statement of “compatibility with organic production and handling,” with the deletion of Section M, and Mr. Carter made a motion to accept the Draft 5 recommendation; Mr. Siemon seconded. **Final Board Vote: Unanimously – Motion Carries.**

**Accreditation, Certification, and Compliance Committee – Andrea Caroe**

**Compliance Procedures for Non–Compliances Recommendation (Pgs. 581–582)**

Ms. Caroe stated that Draft 8 was handed out and was voted to accept as guidance because this is educational information for certifiers. There were no changes from that version, and that version had very few changes from draft 7 which is posted on the web. They received one public comment and changes were made based on the comment. Mr. Riddle moved for approval of draft 8, and Mr. Siemon seconded. **Final Board Vote: Unanimously – Motion Carries.**

**606 Task Force Report – Jim Riddle, (Pgs. 583–592)**

Mr. Riddle stated that there had been some Board and public comments, and there was a need for the Task Force to meet and redraft and print out all 22 pages and he highlighted all the changes that was made to the document. Mr. Riddle discussed all the changes that were made and moved for adoption of the document, and Ms. Caroe seconded.

Ms. Ostiguy stated that she didn’t understand Recommendation 2a, Number 5, at the top of the next page, “as applicable” and asked for explanation.

Ms. Caroe stated that this is to accommodate situations where the ingredient is very specific and two -- three reasonable sources are available, so it is a guideline that three is a reasonable or a typical number but there may be situations that require more or less than that.

Ms. Dietz agreed, however, where are the certifiers able to determine if it's applicable for three potential suppliers, and -- and that would be after the fact, so -- Ms. Caroe stated that in the negotiation between an applicant and certifier, that is a discussion that they would have, as far as the applicant coming to them and explaining the challenge.

Ms. Dietz stated that as a handler, if she have "as applicable" in my handling plan, she can always make justification as to why she only chose one and try to get that through. She also understand that if there's not three suppliers, at least she can try for three, you know; and felt that the industry has
somewhat supported a minimum of three sources, and it’s too weak and wasn’t sure if she would support that. Mr. King asked if there was a motion? Ms. Dietz confirmed, and Mr. Riddle said to amend to delete. Mr. Carter moved to strike; Ms. Dietz made a motion to strike “as applicable” and put in “minimum of three” and at least you can document where you’ve tried three different sources and you’ve only got one. Mr. O’Rell seconded. **Board Vote as amended:** 11 Yes, 2 Nos, 1 Abstained, 1 Absent, Mr. King stated that they were back at the original recommendation, and made a motion to accept the recommendation as amended – Vote: Unanimously approved – motion carries.

The meeting was recessed at 5:05 p.m.

**Reconvened on April 30, 2004 at 8:05 a.m.**

Mr. King opened the meeting and stated that the first thing on the agenda was public input, however said that Mr. Carter had a quick announcement.

Mr. Carter felt that it was important for him make some sort of statement before they left Chicago in regard to some of the policy directives, and wanted to offer up a very short resolution and give the Board members something to think about that would express the disappointment and concern of the Board over the lack of advance notice or consultation by NOP in the issuance of certain policy directives.

Mr. King stated that for public input they have 35 signed up and allotted approximately 2 hours and 15 minutes on the agenda; and several Board members expressed to him how important public input and requested extension of the public input session.

**PUBLIC COMMENTS – April 29, 2004:**

The following individuals presented public comments. Each person’s comments were recorded and transcribed for the record; and some individuals also presented written comments. Transcribed comments, and where applicable written comments can be found at **DESIGNATED ATTACHMENTS**.

**SIGN–IN SHEET [ATTACHMENT C]**

Mark Kastel, Organic Farmer Representative, Cornucopia Institute, [Pg. 596, Attach. 1]
Kelly Kasper, proxy for Alice Rolls, Executive Director, Georgia Organics, [Pg. 602, Attach. 2]
Marty Mesh, Executive Director, Florida Organic Growers and Quality Certification Program, [Pg. 607]
Urvashi Rangan, Environmental Health Scientist, Consumers Union, [Pg. 611]
Brian Condon, proxy for Bart Reid, Organic Shrimp Producer, Permian Sea Shrimp Company, [624]
Brian Leahy, President, California Certified Organic Farmers, [Pg. 628, Attach. 3]
Liana Hoodes, Organic Policy Coordinator, National Campaign for Sustainable Ag, [Pg. 635, Attach. 4]
Harriet Behar, Organic Inspector, [Pg. 641]
John Clark, Certified Organic Farmer, [Pg. 646]
Jonathan Landeck, Organic Farming Research Foundation, [Pg. 651]
Richard Wood, Executive Director, Food Animal Concern Trust (FACT), [Pg. 652, Attach. 5]
Merrill Clark, Roseland Organic Farms, [Pg. 656]
Tom Harding, [Pg. 667]
John Cleary, Accredited Certifier, NOFA–VT, proxy for Erich Bremer, NOFA–NJ, [Pg. 675]

**Break at 10:00 a.m., and reconvened at 10:17 a.m.**

Mr. King made a couple of announcements that there was an ACA training that afternoon and the room needed to be vacated no later than 12 noon. He mentioned that the Board responded with an official letter concerning the materials review process and he literally forced as Chair to distribute the letter asking Board
members to review and support the letter in 24 hours or less, and asked Ms. Dietz to provide a brief acknowledgement.

**Statement from Kim Dietz, NOSB Secretary, [Pg. 682]**

Ms. Dietz informed the Board that for the record to formally acknowledge the letter and the dedication and hard work of the Board. She said that as representative of the industry, it was very important that they work together to protect the word, “organic.” The Board drafted a letter to the NOP regarding the materials review process and she didn’t sign the letter prior to its submission because of the short time frame that they were asked to review it. Therefore, she wanted to go on record in saying that she supports the letter’s directive on the materials review process. And finally, that it’s essential that the Board have a full understanding of the process and their roles in the process; and she pleaded with the NOP and the Board to respect the fact that each person deserves to have adequate time period to review documents.

**Public Comment continues**

Ed Daniel, Vice President, Bushinboy Farms, [Pg. 683]
Ray Green, California Certifier, [Pg. 687, Attach. 6]
Cissy Bowman, President/Owner, Indiana Certified Organic, proxy for Jay Feldman, National Coalition Against the Misuse of Pesticides, [Pg. 689]
Lynn Coody, Organic Ag System Consulting, [Pg. 703]
Weenonah Brattset, Organic Farmer, proxy for James Christianson [Pg. 706, Attach. 7]
Richard Kanak, Organic Consumer, proxy for Rufus Yoder and Tony Ends The Churches’ Center for Land & People [Pg. 712]

**Statement from Kevin O’Rell, Handling Committee Chairperson, [Pg. 718]**

Mr. O’Rell said that he wanted to go on record as saying that he was disappointed to hear that people were coming to use the public comment period for making public and personal attacks to companies, and felt that is not what public comment was for in that forum. It’s for commenting about organic standards, commenting about the NOSB and NOP, and in his opinion, it is not a place for public and personal attacks on companies and individuals. He urged the public not to use this tact.

**Public Comment continues**

Kevin Chernis, Organic Farmer, [Pg. 718]
Michelle Wander, Professor Soil Scientist, University of Illinois, [Pg. 725, Attach. 8]
Rachel Azzarello, proxy for Nathan Hetrick [Pg. 731, Attach. 9]
Jane Brandley, Organic Consumer, and proxy for John Bobbi, Executive Director, Organic Farmers Agency for Relationship Marketing [Pg. 736, Attachs. 10 & 11]
David Engel, Executive Director, MOSA, [Pg. 743]
Leslie Zuck, Pennyslyvania Certified Organic (PCO), [Pg. 744]
Jean Zazadil, Organic Consumer, proxy for Jim Koon, AllMar Orchard, [Pg. 748]
Steve LaFayette, and proxy for Jeff Webster, Sierra Club National Ag Committee, and Larry Gilbertson, [Pg. 752, Attach. 12]
Kelly Shea, Horizon Organic Dairy, [Pg. 757]

**Public Comment Period Officially Closed**

**Statement by David Carter, Policy Development Chairperson, [Pg. 759]** For more information, see Discussion Document]
Mr. Carter offered for the Board’s consideration the following resolution, “The NOSB expresses its strong opposition to and concern with the NOP’s issuance of significant policy directives without consultation with or advance notice to the NOSB.  Mr. Carter moved that the resolution be accepted by the Board, and Mr. Riddle Seconded.  **Final Board Vote: 12 Approved, 1 Abstained, 1 Absent**

Mr. King suggested to the Board members to submit their work plans to Katherine by next Friday, May 7, 2004.

Mr. Riddle requested the status of the update on the livestock materials that the Board’s recommended, they wanted to move it forward because they heard from FDA in October, and several public commenters.  Mr. Jones stated that the document was in the Office of General Counsel, and they’ve raised a number of questions, and they have significant concerns about the level of documentation associated with the materials.  NOP will be going back in consultation with OGC and attempt to answer their concerns, that’s where they are and they won’t move forward until those concerns are answered.  He also stated that the docket contains everything through May 2003; and we have gone through the consultation process with FDA on all of those materials.  Some of the materials that were mentioned during public testimony are off–label use and will not be included in the docket.  Propylene Glycol for the use of treatment of milk fever is an off–label use for that material and will be included in the docket.

**Next meeting: October 12, 13, 14, 2004**

**Meeting adjourned at 12:08 p.m.**
P R O C E E D I N G S

CHAIRMAN KING: Good morning. I'd like to officially call to order the meeting of the National Organic Standards Board.

Welcome to Chicago. Thanks for being here. Thanks for your interest. I look around the room and I see a lot of familiar faces, I see a lot of years of dedication and experience to the industry.

As usual, we have some interesting topics to discuss and deliberate over the next few days, and we'll appreciate your input and your positive focus on that.

Would like to essentially start the meeting with board introductions, so Ann, if you'd like to start.

MS. COOPER: Ann Cooper, I'm a chef from New York, and I'm a consumer.

MS. KOENIG: I'm Rose Koenig, producer, from Gainesville, Florida.

MS. CAROE: Andrea Caroe. I'm the certification director for Protected Harvest and an environmental representative.

MR. SIEMON: George Siemon, from Wisconsin, and I'm the producer rep.

MR. CARTER: Dave Carter, from Colorado, a
consumer rep, but in real life an itinerate farm organizer.

MR. RIDDLE:  Jim Riddle, certifier rep,
University of Minnesota.

CHAIRMAN KING:  Mark King, a retail rep,
Indianapolis, Indiana.

MS. DIETZ:  Kim (Burton) Dietz, and I'm from
California, and I'm a handler representative.

MS. OSTIGUY:  Nancy Ostiguy, environmental
representative.

MR. O'RELL:  Kevin O'Rell, Boulder, Colorado, and
I'm a handler representative.

MS. CAUGHLAN:  Goldie Caughlan, Seattle,
Washington, consumer rep.

MR. LACY:  Mike Lacy, Atkins, Georgia, science
rep.

MS. GOLDBURG:  I'm Becky Goldburg, from New York.
I'm an environmental representative.

CHAIRMAN KING:  Okay, thank you. At this time
has everyone had a chance to approve the agenda? -- I hope.
I'd like to officially approve the agenda.

MR. CARTER:  You need a motion for the -- second.
CHAIRMAN KING:  It's been moved and seconded.
All those in favor say aye.

BOARD MEMBERS:  Aye.
CHAIRMAN KING: Opposed, same sign.

(No response.)

CHAIRMAN KING: Motion carries.

At this time, in the first tab of your book, you'll see the minutes from the October meeting, 2003. Are there any proposed changes or amendments or edits at this time?

(No response.)

CHAIRMAN KING: I would entertain a motion.

MR. RIDDLE: Yeah, I'd move that we approve the --

MR. SIEMON: I'd second that.

MR. RIDDLE: -- October minutes.

CHAIRMAN KING: Moved by Jim Riddle that we approve the October 2003 minutes, seconded by George Siemon. All those in favor say aye.

BOARD MEMBERS: Aye.

CHAIRMAN KING: Opposed, same sign.

(No response.)

CHAIRMAN KING: Motion carries.

Quick note here, the executive committee meetings are actually listed here, those are on the website for your review, so those who are interested in what the executive committee has talked about over the past few months,
they're there for information purposes.

And one quick announcement I forgot to make:
Please, if you would, those of you who have cell phones,
turn them off, turn them to vibrate. If you do get a call
or something of that nature, we'd greatly appreciate your
stepping in the hall to take the call, that sort of thing.
So thank you for that.

Are there -- and I do have one quick
announcement. Owusu Bandele was not able to make the
meeting for medical reasons, so our thoughts are with him
and hope that he gets well soon, so we regret that he can't
be here.

Are there other announcements? Jim?

MR. RIDDLE: Yeah, Mark, I have a couple of
announcements. One went out to the Board -- I believe it
was last week, a letter informing the Board of the
formation of an accredited certifiers association, and I
have a copy of that, if you haven't seen it or didn't make
note of it, and I just wanted to mention that for the
record.

I see this as a very positive development. There
is a need for a network, a professional association, of the
accredited certifiers. So I just wanted to call that to
everyone's attention.
This is not an inspectors association, we've had that for years, but now there's a similar organization for the certifiers themselves, that are USDA-accredited. And it's currently at an interim address, it's housed at the Vermont Organic Farmers, Nova [phonetic], Vermont, office.

And then also I wanted to bring to people's attention a scientific study that has just been published in Renewable Agriculture & Food Systems, entitled "Profitability of Organic Cropping Systems in Southwestern Minnesota," and that was a 10-year comparative study of organic four-year crop rotation versus 2-year conventional systems, and just to quote one thing from the abstract: with premiums, the 4-year organic strategy had net returns significantly higher than conventional systems. Without premiums, the net returns were statistically equal. So they were looking at yields and profitability in this study and finding that even without organic price premiums it was equivalent profitability.

So that's in Renewable Agriculture & Food Systems, Volume 119, 135 through -46, page numbers. That's it.

CHAIRMAN KING: Are there other announcements?
(No response.)

CHAIRMAN KING: Okay, I have one other

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
announcement concerning a board member. Many of you are aware that Dennis Holbrook has resigned from the Board. Dennis called me several months ago, and he's had some challenging situations in the family; consequently, he's not only managing his own farm but some of his father's businesses, and so he regretfully resigned, but it appeared to be a wise choice based on the work demands, professional demands before him. So he will be sorely missed, and fortunately we have people, like Nancy, who have stepped up and taken over some of where Dennis left off with crops and that sort of thing, so we're very grateful for that. I did want that to be reflected in the record.

If there are no additional announcements at this time, we're actually a bit ahead of schedule, we're ready for public comment.

And just a quick reminder, and I think Katherine had indicated there are two sheets for the sign-up of public comment, one for today, and of course one for the second session, which is on Friday. So it's important, I think, to sign up in advance, especially for Friday, it appears there may be some additional people coming in for the conferences and the like, so it would be, I think, a good idea to reserve a spot early, if you will.

And I think we're ready for the first -- I don't
know if we have a sheet up here. Oh, an official
announcement. Jim Riddle, who has so graciously served as
our timekeeper for the last many years --

MR. RIDDLE: I've lost track of time.
(Laughter.)
CHAIRMAN KING: -- has officially handed over his
-- well, his sign --
MR. RIDDLE: Yeah, the one-minute sign.
CHAIRMAN KING: -- the one-minute sign, as well
as the official timekeeping duties, to Kim Burton today.
So you have five minutes to make comment, and you'll get a
one-minute warning.

We have two names on the first -- we have John
and Merrill Clark.
MS. CLARK: Well, we're not joined at the hip, so
we would -- we're two different people.
CHAIRMAN KING: Yes, I'm aware --
MS. DIETZ: So you each want five minutes?
CHAIRMAN KING: So do you each want five minutes,
or you're doing this together --
DR. CLARK: Yes.
CHAIRMAN KING: All right. Thank you.
MS. DIETZ: I have my baking timer here, so when
you're baked, then it's going to go off.
(Laughter.)

DR. CLARK: Okay, good morning. My name is Dr. John Clark. I am a biochemist who turned organic farmer in 1968, after a long career as a biologist, research chemist, and professor.

My wife, Merrill, was a charter member of the NOSB from '92 to '96. I became a student of the OFPA statute during this period and wrote a number of published analyses of the OFPA, including a complete analysis of the Act in the University of Toledo Law Review in 1995.

This document was based on this statute and was heavily reviewed by student editors, faculty editorial staff, as well as editors at the University of Law Review -- University of Toledo Law Review and University of Toledo Law School itself.

Unfortunately, this review has been roundly ignored by USDA's National Organic Program personnel, the NOSB and the USDA Office of General Counsel, who were all provided with multiple reprints of that review in 1995.

I have furnished copies of that review for everyone, including a copy of my statement.

I'm here to tell you that the Final Rule is rife with multiple violations of the statute. Furthermore, elicitations of those violations can be found in 26 pages
of single-spaced line-by-line, word-by-word comments
submitted by me in April 1998 in response to the first
proposed Organic Rule.

I spent the entire month of March 1998 grinding
out these comments, with recommended deletions, additions,
and extensive references to the OFPA. If these comments
had been taken seriously, they might have enabled the NOP
to quickly publish a final rule and regulation consistent
with the OFPA statute. Instead we got a Final Rule 5 years
later, ignoring comments by me and others, which persisted
in previous inconsistencies and further violations of the
OFPA statute.

I ask now that NOSB request a reproduction of
these comments for each present NOSB member, as well as
obtaining copies of the Law Review. I have done the second
thing for you.

I find it shocking that 14 years after OFPA's
passage NOSB and NOP persist in the pretense that Congress
did not make clear the legislative letter and intent of
this law and that members are still trying to substitute
their own agenda, their own agendas, on many aspects of the
statute, particularly when it comes to the List of
synthetic ingredients in processed foods labeled "organic."

The National List procedures for technical
advisory panel reviews have been mishandled, misdirected, and illegitimately done, in many instances, for many substances. They have now ended up with an unbelievable array of questionable materials allowed for organic use, with more being jockeyed up for approval today.

On the second page, Line 3, it's 6518(m), not 6519(m), if you could correct that. TAP reviewers are generally misinformed about three criteria -- about the three criteria, 6517(c)(1)(a) for review qualifications, and the category qualifications, 6517(c)(1)(b), and the applications of the seven criteria under 6518(m).

If, and only if, the criteria in 6517(a) and (b), (c)(1), (a) and (b), are met, NOSB should reject any review not demonstrating this procedure to qualify a material for review under 6518(m). That's what Congress intended, very clearly and concisely, in the law.

Furthermore, all materials must include specific use and application annotations. They rarely do. The Organic Materials Review Institute and Virginia Tech are not necessarily legitimate TAP reviewers because of incompetence, conflicts of interest, or lack of transparency.

USDA must find qualified reviewers, compensate them fairly, and keep permanent files on each petitioned
material, in addition to using a proper tolling period for
renewed reviews under the required 5-year Sunset Provision
referred to in the statute. This Sunset period does not
run from October '02, it runs from the date of the NOSB
review to each substance.

Then I call on the National Organic Program
director and staff to conduct NOSB information assessments
on the content of -- I'll start skipping these things,
conduct NOSB information sessions on what is commonly
called a precautionary principle as it applies to organic
standards. The staff as well as NOSB should avoid the
pursuit of risk assessment and take up the more important
task of risk avoidance.

MS. DIETZ: Time.

DR. CLARK: The rest of it is fairly clear, I
won't insult you by going over my time and reading the rest
of it, but the last paragraph, "Violations of the OFPA in
USDA's rule are unconstitutional because the administrative
branch of the federal government has only the authority to
enforce the law and not to make it. Even if there is a
precedent for this, nothing can justify making rules which
mislead organic food consumers. OFPA is a law which is
about making claims to consumers, a generally foreign
concept at USDA, where producer and processor groups have
been the focus for decades.

CHAIRMAN KING: Thank you.

DR. CLARK: Thank you.

CHAIRMAN KING: Merrill Clark. Hold on, we have a question. Dr. Clark, Rose has a question for you, if we can get you back up here, that'd be great.

MS. KOENIG: Is this working now?

THE WITNESS: Since you last heard from me, I'm deaf in one year --

CHAIRMAN KING: It's just that the speaker's pointed toward the audience, you can't hear it.

MS. KOENIG: Oh.

Did you have a chance -- we have a Sunset Provision that the materials committee has proposed as far as the process that we're trying to come up with to go through this 5-year Sunset. Did you have the opportunity to take a look at that?

DR. CLARK: I looked at something briefly yesterday and I was kind of surprised that everything dates from '02, and there are materials on the List that have been reviewed 11 years ago.

MS. KOENIG: Yeah, part of that's because the (inaudible) start with when the rules -- it starts on the day of implementation, that's why that '02 date is there.
DR. CLARK: That's not the way I read the statute.

MS. KOENIG: Well, my -- I guess my -- my question was -- I guess my comment now, if you looked at it, would be: it would be helpful -- you seem to be concerned and interested about materials process, if you could perhaps submit, after you take a look at that Sunset Provision, comments on that, that would be very helpful for the materials committee.

DR. CLARK: Okay. I've offered to do -- not only review -- I did some in '94 and '95, and I've never been asked since to do anymore, but I've been, I thought, visibly available to do more and comment on the process as well.

CHAIRMAN KING: Are there other questions?

MR. RIDDLE: I just have a comment.

CHAIRMAN KING: Jim has a quick comment.

MR. RIDDLE: John, I appreciate your concerns. I just want also you and other people in the audience to be aware that, you know, one of the criteria in OFPA, as I'm sure you know, is consistent with a system of sustainable agricultural, and then in the Rule it mentions compatibility with organic farming and handling, and at the Board meeting last October we spent a lot of time working
on a draft to further define and explain what that means, and that has been posted for several -- for two rounds of public comment, and we'll be considering the final draft on that, and I just want to point out that it does embed the spirit of precaution. So I appreciate you bringing that up in your comments, and the Board is trying to address that with the compatibility draft.

DR. CLARK: And I would appreciate having the latest draft of that. I'm not sure I have that.

MR. RIDDLE: Yeah. It's posted on the website leading up to this meeting. There's slight amendment of deleting one line from it, that we'll be considering as we vote, but it's not substantially different than what's been posted for 60 days.

CHAIRMAN KING: Thank you, Dr. Clark. Merrill, now we're really ready for you this time, so --

MS. CLARK: Well, thank you. Merrill Clark, growth on organic farms, and one of the charter members for NOSB back in '92 to '96 and chaired the livestock committee.

I'm here today to embellish about a portion of a letter that I wrote to Jim Riddle back in March, 18, of this year, which I am told he copied you all. One of the issues of that paper -- which I'll talk about the most, but
I have a couple of things to add to that -- is the organic inspection and certification of already USDA FSIS-inspected livestock processing facilities. We feel the addition of another inspector, another work beyond the work of competent FSIS inspectors already at the site at smaller processing plants normally used by most of the small- or medium-size organic livestock producers is redundant, unnecessarily expensive, and actually a major stumbling block to getting any significant quantity of certified organic meat products into the marketplace.

An example of the problem: within the Dallas, Texas, State Burger website, which I looked at recently, is the question: "Is State Burger beef organic?" This is the name of a product. His answer was: "Well, from our research, it appears the federal government now regulates it, so it can be called certified organic, so we have to be careful how we use the term." Then he says, "First of all, I don't believe there is any such thing as a certified organic processing plant, livestock processing plant."

We at Roseland Farms are beginning to agree with them. After having gone through the hassle of searching out now three USDA-inspected processing plants over the course of 20 years, the new rule is forcing additional certification of the same plants, not because the ones we
have been working with through the USDA FSIS inspection are inadequately, with inspectors incapable of ensuring all organic processing standards are met, but because animal
slaughter and meat cutting and wrapping seem to be falling into the same handling/processing category as complicated multi-ingredient processed-food products and other categories.

These products do probably require extra oversight because of their additive uses, cooking, mixing, and all the other things that go on with making a processed product, but cutting up a side of beef into T-bone and other cuts and wrapping them is not -- it's not that complicated.

I'm here to say that the continual inspection that is presently at work in these smaller processing plants across the country can easily be expanded to cover the extras required by organic meat slaughter and handling.

Denny Proctor of Great Lakes Processing, the only finally certified organic meat processor in all of Michigan and maybe in a three-, four-, five-state area, in the Great Lakes, told us last February that he was required to make no changes at all in his processing protocol in order to comply with the protocol organic standards that were already in place. In other words, he was doing everything
required already that was being asked by USDA inspection protocols.

I believe that is undoubtedly the case in the plant we are using, that is, USDA FSIS-compliant, in Shipshewana, Indiana, and 400 miles closer to us than the Great Lakes plant that's certified in Sheboygan, Michigan, and our concern is about continuing to ship animals, which we haven't had to do in the past, 400 miles one way.

USDA inspectors are at both of these plants regularly when animals are slaughtered. FSIS inspectors can and do become quickly versed in the other things to look for with respect to organic processing requirements. We have set up a protocol with this processing plant that reflects what we require, animals first in line before any slaughter takes place, preceded by complete segregation of our animals from any others, no conventional feed fed while they're there, Roseland beef sides tagged and hung in separate quarters, all equipment first used for the cutting of our halves, 180-degree water for sterilizing and washing down facilities, et cetera.

FSIS inspectors can and have been carrying out these checks. FSIS and AMS are a part of the same agency. Certainly they can work together on bringing this about.

What are the other options? Well, we could build
our own 500,000 -- or I mean a million-dollar inspected
processing plant and then pay the cost for certification we
are already using or try to find another processor who
wants to be -- who might want to do our work but not
terribly concerned about being certified and having another
inspector on top of the first inspector come in again.

    Organic Valley is probably, I suspect, the
biggest operation that can afford to have their own
processing plants. I was told, actually, by Pam Saunders
that Organic Valley had a phone call not too long ago that
this point is well-taken, that I'm bringing up, and should
be brought up for a possible rule change.

    When I contacted OTA, for instance, for
information about certified organic processing facilities,
they were able to lead me to no one, period.

    Certainly the Rule with respect to requiring
additional organic certification and inspection at USDA
FSIS-complaint processing plants needs to be reviewed,
looked at, or something.

    I wanted to add a couple other related issues.

    MS. DIETZ:  Time.

    MS. CLARK:  Do we have large animal, otherwise
called kayfall [phonetic] processing facilities or
livestock facilities in the organic tradition, there seems
to be a concern that there are large dairy operations and
the continued need for other antibiotics and parasiticides
maybe to accommodate larger dairy, factory, farm, whatever
you want to call them, and as far as we can get away from
anything relating to a K-fall, the sooner we better do
that, because it is not anyplace at all in the Rule on
organic animal production.

CHAIRMAN KING: Are there questions for Merrill?
Yeah, Dave.

MR. CARTER: Merrill, so you're recommending that
we would allow slaughter to be handled in a non-certified
facility, organic certified --

MS. CLARK: Well, in an FSIS-inspected and
therefore certified -- if there were some way where the
certification could take place through FSIS -- I don't
understand the reason for having this inspection and then
another inspection, because there isn't that much more --

MR. CARTER: Okay. How would you handle it,
because even some of the smaller plants now, as a part of
their slaughter process, are doing things like rinse and
chill, when they run a super-chilled saline solution
through the carcass after they stiff the animal or -- or
those type of things. I mean, there are some processes, in
actually slaughtering the animal and cutting the carcass,
in which some chemicals and some things are utilized. How would we -- how would we --

MS. CLARK: Well, we're -- we're just talking about sterilization of hot-water rinse, first of all, or our particular animals or some other's organic animals would just have a different process, which they would put into their protocol and set it up. It wouldn't have to be: well, here's what we do with all the conventional animals, we have to do it with yours as well. If there's something that's allowed through organic, that FSIS can certify to -- it's -- it's terribly -- I mean, how many people know where these certified livestock processing plants are, and -- otherwise, you know, if we keep it that way, we're -- we're stuck with no certified organic livestock.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, just a quick comment. I promise not to comment on everything that everyone says.

(Laughter.)

CHAIRMAN KING: We're going to hold you to do that.

MS. CLARK: Too (inaudible) so far.

CHAIRMAN KING: Yeah.

MR. RIDDLE: On the record (inaudible). Yeah, in the past few months I did a survey of organic livestock
research needs, and one theme that kept coming up was exactly what you're saying: the lack of local, regional processing capabilities for organic livestock.

So it certainly is a need, I think it's a need just in general, not for organic livestock, but we've lost a lot of the --

MS. CLARK: Yeah.

MR. RIDDLE: -- infrastructure out there for slaughtering. But also, I worked for years as an inspector and inspected a number of USDA facilities, slaughter facilities, and found, you know, numerous things happening which didn't meet organic standards, you know, use of pesticides in the kill room, lack of audit control, lack of cleanup procedures that would be necessary. So there's -- you know, I -- I wouldn't support anything to weaken the organic certification of those facilities, but, you know, possibly training FSIS inspectors to understand the organic regulations I think would be a major step forward.

But I did just want to point out that there is at the present time the organic certification cost share, that will reimburse handling facilities as well as farmers up to 75 percent of the certification inspection costs, up to $500 a year. So that would be an incentive for some smaller regional processors, you know, to go that route,
but I think it -- you know, the studies I've done certainly
show that this is a valid concern that you bring up.

    MS. CLARK: Well, yeah, because the processor
we're using now has an inspector coming, FSIS inspector
there, and they're there all the time. A certifier
inspector, what does he come, once a year? He, she,
whoever. I mean, they're always there, and if they know
the protocol for organic, why -- that's far better than
saying, "Here comes my once-a-year certifier inspector."
It's sort of crazy.

    And talking about diminishing, I'm very worried
that I see antibiotics and parasiticides coming up on all
this for animal production. I don't get it.

    CHAIRMAN KING: Are there other questions?
(No response.)

    CHAIRMAN KING: Thank you, Jim. Thank you,
Merrill.

    Next we have Mark Kastel.

    UNIDENTIFIED MALE VOICE: (Inaudible) Friday.

    CHAIRMAN KING: Okay. I think I'm probably going
to butcher this next name. Kathy Seus.

    MR. RIDDLE: Mr. Chairman, could you say who's on
deck, please.

    CHAIRMAN KING: Yes. Thank you, Jim. Dr. Bossy

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
[phonetic] is on deck.

MS. SEUS: Last name is spelled S as in Sam, -e-u-s, as in Sam, like Dr. Seuss, less one S.

UNIDENTIFIED FEMALE VOICE: I'm having real difficulty hearing, whether it's a combination of this -- and the microphone does not seem to be fully functional.

CHAIRMAN KING: Yeah. I don't see our technical soundperson. When he gets in -- okay, sorry for the interruption.

MS. SEUS: That's okay. You all know my name now, right?

CHAIRMAN KING: Yes.

MS. SEUS: Good morning. My name is Kathleen Seus, as you all know. I'm from -- I'm the farm program manager from Food Animal Concerns Trust, which is a non-profit organization founded in 1982 that advocates humane and sustainable farming practices, and I'm pleased to have this opportunity to provide comments on behalf of FACT to the NOSB.

FACT welcomes the animal husbandry standards included in the National Organic Program, specifically Sections 205.236 through 205.239. These standards provide a basis for which elevation by which eligibility for organic certification can be established.
However, while we acknowledge NOSB's effort to create minimum standards for humane animal husbandry, we are concerned that the current standards are very vague and lack clear definition. This lack of clearly-defined standards has left the issue of organic animal husbandry open to interpretation by NOP and producers that undermines the integrity of the organic program and erodes consumer confidence in the USDA Organic label.

FACT is concerned about this lack of clarity for several reasons. First seems to be the inclination of NOP to overstep its authority to override or reinterpret established animal husbandry standards. To illustrate this concern I reference two examples.

The first is the court case Massachusetts Independent Certification v. Ann Veneman, Secretary, U.S. Department of Agriculture, and A.J. Yates, Administrator, Agricultural Marketing Service, regarding country hen.

The second example is the April 13th, 2004, guidance document regarding the origin of livestock and dairy animals.

The relevance of the examples are more completely detailed in my written comments, I don't have time to go through everything. However, the fact is that NOP does not have the authority to override or reinterpret or rewrite...
standards as established by the NOSB.

Secondly, FACT is concerned about the impact NOP interpretations may have on animal health and well-being. Here I refer specifically to the guidance document beforementioned. FACT is concerned that the need for any organic dairy operation who's already been 100-percent certified to go outside the organic system for replacement heifers may be indicative of possible animal health problem on the farm, resulting in higher-than-normal mortality.

I quote: "The primary goal of organic agricultural is to optimize the health and productivity of interdependent communities of soil life, plants, animals, and people. Compromised animal health has no place within an organic production system."

FACT is also concerned about the survival of smaller family farms. Organic food production is one of the few remaining niche markets available to smaller farmers. Smaller farmers need these niche markets in order to survive the mass consolidation of the agricultural industry as a whole.

Every time NOP overrides or reinterprets the established standards, particularly in favor of larger factory-style organic farming operations, they un-level the playing field. This places the smaller independent family
farms at a competitive disadvantage and threatens their economic sustainability, which violates the very principle on which organic agricultural is founded.

Finally, FACT believes that clearly-defined standards are crucial to consumer confidence in the Organic label. FACT managed Nest Eggs, a brand of Kaytree [phonetic] eggs, for 18 years. I personally managed that for 2 years. FACT established clearly-defined standards for the production of nest eggs, such as stocking density and the prohibition of force molting. Consumers who purchased nest eggs knew exactly what the production standards were and can count on the enforcement of those standards.

However, because concise animal production standards had not been established by the NOSB, consumers cannot be certain which production practices were used to produce the organic food they see in the stores.

All organic eggs, beef, poultry, pork, or dairy, for that matter, are not the same when it comes to animal production practices. FACT believes this lack of consistent production practice erodes consumer confidence.

Without clearly-defined animal husbandry standards, the current standards will continue to be abused. FACT believes that NOP will continue to interpret
standards as they see fit. This undermines the integrity of the organic program, erodes consumer confidence in the Organic label, and contributes to the disappearance of family farms in rural communities.

FACT would like to call on the NOSB to clarify animal husbandry standards. We'd like to see this done for every animal species covered under the National Organic Program. For example, we'd like to see minimum stocking densities, we'd like to see concise definition of "outdoor access." We welcome the opportunity to work with NOSB to help establish --

MS. DIETZ: Time.

MS. SEUS: -- these standards. Thank you for your time.

MR. SIEMON: So just to your last part there, you would actually like to see us get very specific about stocking densities, the whole nine yards, and do you see issues of doing that nationally? That's one of the authority things we've had.

MS. SEUS: You know, I understand it's -- it is thorny, because, for example, we just completed an investigation of about 70 different egg brands that advocate -- or that indicate they're humane, including...
organic brands, and what we found is, stocking densities
and whether or not they allow force molting and whether or
not they beak trim, et cetera, they really vary from
production -- from producer to producer.

The issue is, is that the USDA Organic label is
like an eco-label and there needs to be some substantial
definition behind it, and I don't think we see that. I
mentioned the case of the country hen, you know, outdoor
access is not defined.

Some -- we -- I know there are some producers,
I've met them at organic trade shows, that let their hens
out on pasture, and then there are other ones I talked to
on the phone, when I was doing my investigation, that admit
the hens rarely, if ever, go outside.

I think that's a problem, and when consumers are
looking at different organic eggs, they have no idea what
the standards are, they don't know whether those hens got
outside or not. To some consumers, that's an issue.

And so it would be nice if there were some -- you
know, even if the stocking densities were low, lower than
you would normally consider, it would be nice to have some
standardized production practices out there so consumers
know at a minimum what they're getting when they see the
Organic label.
MR. SIEMON: Does your organization have quantitative standards?

MS. SEUS: We don't have quantitative standards. We are working on basically what I would consider guidance documents for standards for different animals. We obviously do for laying hens because we have the nest egg program. Our standards were probably a little higher as far as stocking density, we had two square feet per bird, it was a cage-free operation, it was not organic, so they did not go outside, although they did have access to natural sunlight, they're Amish farms, so there was no -- it was impossible to do lighting systems, so they have to use sunlight.

But I know there are also other organizations out there, Free-Farmed is one example, Humane Farm Animal Care, where they do have, you know, quantitative standards in place, and I know other organizations are doing that as well.

So I think it's something that's very possible. I'm not saying it's not time-consuming, and I'm not saying it's not going to take a lot of effort, but I certainly think it's something that's possible and might -- might -- you know. And I also think that as the organic industry gets bigger and bigger and more big business, and I'm
talking M & M, Mars, and Con-Agra, and they're already in the organic industry, I think -- I think as the industry gets bigger and it's more dominated by these large industries, I think we're going to see animal husbandry standards decrease and decrease unless we do something to establish standards now. It may not happen for 10 years, but the organic industry is not going to grow at 20 percent forever and at some point people are going to start looking to do some cost-cutting to -- you know, to keep their margins, and it's certainly not going to be to give the animals more pasture.

So it'd be nice to have standards in place so those kind of things don't happen in the future.

CHAIRMAN KING: Other comments or questions?

(No response.)

CHAIRMAN KING: Thank you very much for your input.

MS. SEUS: Thank you.

CHAIRMAN KING: Dr. Bossy is next. Thomas Harding is on deck.

MR. HAM: Dr. Bossy was not able to attend, so I am Steve Ham, and Dr. Girish [phonetic] Ganjyal from MGP Ingredients.

We wanted to thank you for -- I think the
National Standard --

CHAIRMAN KING: Steve, just for the record, how do you spell your name?

MR. HAM: Oh, I'm sorry. Steve Ham, H-a-m.

CHAIRMAN KING: Okay. Thank you.

DR. GANJYAL: And I'm Dr. Girish Ganjyal, G-i-r---

CHAIRMAN KING: We may need a spelling on that.

MR. HAM: It's on the sheet.

DR. GANJYAL: It's on the sheet.

CHAIRMAN KING: Oh, you are on here?

DR. GANJYAL: Yes.

CHAIRMAN KING: Okay, great. Thank you.

MR. HAM: It's much faster.

UNIDENTIFIED MALE VOICE: And please speak into the microphone.

MR. HAM: Okay. We want to thank the National Organic Standards Board for allowing us to present this testimony on behalf of MGP Ingredients, hereinafter MGPI, to support the petition for inclusion of tetra sodium pyrophosphate, hereinafter TSPP, to the National List.

TSPP is an analog of sodium phosphate and is used for buffering and conditioning during the extrusion of wheat gluten. This textured wheat protein is then used as
an ingredient for making organic meat-alternative products. TSPP is listed on the FDA's Generally Regarded as Safe List and is an ideal processing material for organic products. It is presently being used in dairy-substitute products, cheeses, spreads, meats, poultry, and cereals. TSPP is used in small quantities at levels of .5 percent to 3.5 percent in MGPI's proprietary process to produce this textured wheat protein, which in turn is typically used at about 10 to 12 percent in finished consumable products. Thus the level of TSPP in finished consumer products is even smaller.

Currently no alternatives exist for the functional properties displayed by TSPP when used in small amounts in this proprietary process. Extrusion processing is used in this process and involves high temperature and high-pressure cooking for a short duration. TSPP is unique because it has a high melting temperature and thus withstands the extrusion processing conditions while maintaining its functionality.

Saytan [phonetic] is a product made by mixing gluten with water and spices. It does not generate any fibers, like a textured wheat protein, and has poor sensory characteristics. Other materials have been used at three to four times the amounts of TSPP, which gives distortions.
to color and taste.

Furthermore, commonly-used and accepted alternative materials have been tried and offer no serious processing advantages, and none are approved for organic processing.

The following ingredients were tested and their processing effects were as follows. I'm just going to list these, since you have copies. Sodium hydroxide, sodium bicarbonate, sulfur bisulfate, sulfite, metabisulfite, sodium phosphate, disodium phosphate, tetra sodium polyphosphate, sodium polyphosphate, and the last one listing the TSPP.

As mentioned earlier, excluding the TSPP, these materials reduce product quality, functionality, affordability, and cause unwanted product discoloration and undesirable odor and taste to these organic products so cannot be produced from a natural source and has no organic ingredients as substitutes.

TSPP not only aids in the processing of this product, it also retains the digestibility characteristics. Textured wheat protein has an excellent digestibility of 96 percent.

To obtain good textured wheat protein product, the wheat gluten needs to be conditioned to the correct pH
and should flow uniformly and easily in the extruder. TSPP helps to condition and helps the full ability of the wheat gluten in the extruder and thus does not directly texturize the wheat gluten but, rather, creates ideal conditions for the wheat gluten to be textured in the extruder.

Textured wheat proteins provide organic food processors diversity to their product line in the vegetarian, meat analog, and health foods categories.

Finally, in light of the above unique functional properties of tetra sodium pyrophosphate, MGPI is requesting in this petition to expand the sodium phosphate category, which is already approved on the NOSB list for dairy use only, to include milled and processed grains, especially wheat gluten, and TSPP to be added to the sodium phosphate (inaudible) that is already approved. Thank you.

CHAIRMAN KING: Now, does he have an additional--

MR. HAM: No.

CHAIRMAN KING: You're just along, okay.

MR. HAM: To help with questions.

MS. KOENIG: The sentence you wrote -- I guess I need some -- I need some clarity. You say it doesn't directly texturize the wheat gluten but, rather, creates ideal conditions for wheat gluten to be textured in the
extruder, and what does that mean?

DR. GANJYAL: What that means is -- like -- like extrusion is basically a high-temperature, high-pressure cooking system in which basically you know, (indiscernible) which will, you know, knead the dough and everything, like cook it nicely, and by the time it comes to us, then the texture -- it forms texture, like when the fibers are formed.

But actually what happens is the cooking system -- the cooking time is very, very short, and that's why we need some agent to actually make it flow easily, otherwise it will -- you know, the wheat gluten is a dough, it sticks to the system, and so that's why we want something which will make it flow easily in the extruder, and that's the main reason why we want to use TSPP. I mean, that basically helps it, to texture it.

CHAIRMAN KING: Sir, just for the record, could you please read your name into the microphone again for the court recorder.

DR. GANJYAL: Yes. My name is Girish Ganjyal.

CHAIRMAN KING: Thank you.

MS. KOENIG: How do you discern between -- I guess that wording -- again, I'm reading your words, I'm just trying to understand what the difference between --
you're saying functionally it's textured so that it can be processed, but does that -- but that texturizing does result in a texturized wheat gluten, doesn't it? I mean, you say it doesn't, but -- so you're saying -- I mean, it doesn't get removed once it's gone through that process, I mean it's still there and it still functions, correct, or no?

DR. GANJYAL: Basically, that's the reason -- it actually processes, and also like -- probably like some of it is gone because -- I mean, at the high temperature, and there's a lot of water in there, okay, so it solidifizes [phonetic], and when it comes out of the extruder, as the pressure is released, the steam evaporates. So probably some of the TSPP is operated, along with the moisture in there. That maybe -- does that answer your --

MS. KOENIG: Not really, sorry.

CHAIRMAN KING: Okay, Kim and then Kevin.

MS. DIETZ: Are you generally going to be here when we actually review this material, are you here for the few days, if we have questions about the process?

MR. HAM: We were going to leave this evening.

CHAIRMAN KING: Kevin.

MR. O'RELL: I would like to try to bring some --

MR. HAM: I'm sorry, can I add a comment.
Dr. Tom -- or Thomas Harding -- Thomas Harding is our consultants. I believe he will be attending the full --

CHAIRMAN KING: Okay. Go ahead.

MR. O'RELL: It might help to have the technical people here at that time as well, though.

Rosie, just to try to bring some clarification to this and maybe simplify some of the conversation that was going back to satisfy Rosie's question: it's my understanding, and maybe it's incorrect, that TSPP is functioning more as a flow agent through the system but the texture's being created by the pressure in the extrusion process, and the heat.

DR. GANJYAL: Exactly.

MR. O'RELL: Is that --

DR. GANJYAL: Yeah. The --

MR. O'RELL: Can you elaborate, just -- I mean, I wanted -- that's my understanding of how the texture is formed.

MR. HAM: The TSPP is added to help the wheat gluten flow through the -- through the extruder. It's helping with pH and flow. The texturization is actually occurring because of the pressures and temperatures of the extruder, it's a cooking --

MR. O'RELL: The texturization is a mechanical
process.

MR. HAM: Right, through -- through pressure and temperature.

CHAIRMAN KING: Andrea and then Jim.

MS. CAROE: On the first page of the document you provided, you go through the alternatives, and for the sodium phosphate, disodium phosphate, tetra sodium phosphate, and sodium polyphosphate, you have a comment in the process effect that the higher levels of use, 9 to 10 percent or more. Could you explain what that means.

MR. HAM: Sure. We were going through an evaluation of different potential alternatives, and in the evaluation of these -- the ones you mentioned, we were finding that we were needing to use significantly higher amounts to achieve similar effects.

MS. CAROE: Higher amounts of the tetra sodium phosphate?

UNIDENTIFIED MALE VOICE: No.

MR. HAM: No, higher amounts of the sodium phosphate, disodium phosphate, tetra sodium polyphosphate, and sodium polyphosphate.

MS. CAROE: Right.

UNIDENTIFIED MALE VOICE: So 10 percent --

MS. CAROE: (Inaudible) 10 percent higher than
what you would have used for the (inaudible) --

MR. HAM: My understanding -- I'm sorry. My understanding -- go ahead, Girish.

DR. GANJYAL: Yes. If you -- what does that mean is, like when we tried using these different materials, actually we had to use a lot more than -- I mean like 10 percent more than what you would use -- the tetra sodium pyrophosphate.

MS. CAROE: Okay. That's what I just wanted to clarify.

MR. HAM: Thank you.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah, I had a question about that too. With these other materials, some of which are allowed, were you getting the same texture response, that you find desirable for your product?

DR. GANJYAL: No [phonetic]. The reason -- I mean, especially tetra sodium pyrophosphate, it helps -- I mean, with that you get the desired product more easily, and also the texture is more better when we use that.

MR. RIDDLE: Okay. So it's not -- it's a combination of using this material with the pressure and temperature that creates the texture or improves the texture; correct?
MR. HAM: Correct. The textured wheat protein that we are producing is different than like a saytan-type product, where it's a solid mass, it's more of extruding to have meat-like appearance, although this is not a meat alternative on its own, it's used as an ingredient in those types of products. So to achieve that type of texture, using the higher levels, we -- we're not getting identical texture, but more importantly, we're getting off color, odor, sensory properties by using these higher levels.

MR. RIDDLE: Okay. And those higher levels, 9 to 10 percent, that's in the wheat gluten itself, not in the finished consumer product; correct?

MR. HAM: Correct. We are using -- this finished product would then be hydrated in water and used as a percentage in a finished product formula, probably 10 to 12 percent, in a finished product.

MR. RIDDLE: Okay. Thanks.

CHAIRMAN KING: I have Nancy, then Kevin.

MS. OSTIGUY: Am I correct that any changes in the flow properties will change the texture?

DR. GANJYAL: Do -- say that very briefly -- what again, say -- like when we texturize (inaudible), like you work the dough, you knead the dough very nicely, and you've put a lot of mechanical energy into the dough, and this
extruder -- I mean, say, for example, in a broad sense, what I can say is (indiscernible) then we may have to extend the extruder far, far bigger, okay, because the time which is available to cook in the system is very, very less, so you want to make sure that it flows very nicely and mixes very nicely when the dough is going into the screws [phonetic]. So that's -- I mean, we found that TSPP is basically helping us in that flow, so that it gets a good amount of time to cook properly and uniformly.

CHAIRMAN KING: Kevin.

MR. O'ReLL: Yes. The use of orthophosphates was discussed before, and I'm just a little confused, I'd like to get some clarity from you. The use of orthophosphates, we were told before, didn't provide the same functionality in terms of a finished product, but now you're saying here that the orthophosphates require just a higher usage level of 10 percent more. If -- if something that's already approved works at a 10-percent higher level, does it give you the same texture --

DR. GANJYAL: Well, in that case what happens is we don't get like enough of the wheat actually in the final product, like say for example you have like 100%, you add like 12 percent or -- the other products, then the actual level of the wheat in the final product is very, very less...
when you compare it with using TSPP. And also it gives
like off flavors and, you know, odor and all that sort of
stuff.

MR. O'RELL: Well, I guess what I'm asking is:
if you can use an already-approved product at 10-percent
higher level, do you get the same results or are you saying
you get different results that are unacceptable?

DR. GANJYAL: Well, I mean, it gets -- I mean, it
gets like other off flavors and, you know, like different
other stuff along with that.

MR. HAM: I think, on the sensory properties, it
doesn't make as acceptable a finished product, or an
acceptable ingredient in our -- to our customers to use in
organic products.

CHAIRMAN KING: Rose had a quick question.

MS. KOENIG: I understand it's your -- so you're
looking for the substance for your proprietary process,
which involves a certain mechanical setup, with pressure
and temperature. Is there other wheat proteins available
on the market that is commercially being used in products
that are currently being labeled as organic or that are
doing just different processes and not using the TSPP?

MR. HAM: I think, as far as functionality, I am
aware -- well, I've got -- no, I'm not aware that there are
any organic products out there. We do offer a diverse product range. What we are seeking with this is for a few specific products within -- within our diverse product line. To achieve the fibrous texture, it is important to do this. To just simply run product through the extruder and grind it to a powder, for example, may be not necessary.

MS. KOENIG: But -- I mean, I'm a producer too, I mean I pretty much know what my competitors are doing, you know, I'm -- I'm relying on you guys, I guess, you know, as far as -- because my -- I guess my concern, when -- you were talking about specific parameters of a proprietary process, so is it -- what I'm -- my question: is it just unique to your process and because of the parameters, temperature and pressure and mechanical --

MR. SIEMON: You're really asking about the extrusion, aren't you?

MS. KOENIG: Yeah. Well, that's what --

MR. SIEMON: Extrusion --

MS. KOENIG: So I'm just saying: is it specific to your particular proprietary process or is this an industry-wide --

DR. GANJYAL: Well, yeah, I mean, the extrusion process is used industry-wide, sure, but they produce like
different -- like probably some of -- I don't know whether
they use that in the organic products, but they use like
soy texture and soy products, but the -- the -- you know,
they use like rancidity and like different other -- off --
I mean side effects when you actually process soy. So
that's -- I mean, this -- I mean, our customers like this
product more, better than.

CHAIRMAN KING: Okay. Are there additional
questions, comments?

(No response.)

CHAIRMAN KING: If not, I think we'll move on
now. Thank you very much for your input.

DR. GANJYAL: Thank you.

CHAIRMAN KING: Next up Thomas Harding; on deck,
Jim Pierce.

MR. HARDING: Good morning. It's a pleasure to
be here. To be quite honest, I didn't think I was going to
be back here talking about tetra sodium pyrophosphate.

As you know, the reason we're here is because of
the reconsideration which was handed down through the
rulemaking process, where there was a 3-to-3 split and
there was some question about the annotations, so I'm told,
and that it needed some more review.

But in any case, I'm not going to repeat most of
what's already been said and just jump into some of the
critical areas that are important. So with that history,
we had to first of all find out what reconsideration was,
and we eventually found out, and what I've done is I just
prepared a couple notes, and I also have a letter
circulating that is from one of the end users who is in
support of the use of this material in their made-with-
organic product.

So I'm going to pay attention only to the
additional page comments [phonetic] so that we can shut
this pretty short.

TSPP needs to be permitted in organic ingredients
and products, not only in made-with-organic, because
there's been a lot of discussion about that at the previous
meeting. There is no advantage to the consumer and it
causes the manufacturer and end user unnecessary
formulation difficulties and unnecessary added cost, and we
get to the additional materials that are used, and the
other types of materials, it raises the cost and of course
it reduces the organic ability. In other words, instead of
95/5, we're now 75/25. And so that's a very important
factor.

Plus, allowing TSPP in organic product
ingredients raises the bar for manufacturers to use more
organic raw materials and ingredients. The "made with
safe" has the opposite effect. In other words, we lower
the amount of organic product, as was said before, and we
increase the amount of chemical going into it.

The prepared value-added organic food products,
including meat analogs, are experiencing significant
growth, representing major consumer interest in
consumption. TSPP adds to the quantitative values -- the
qualitative values of these new products. We must provide
the consumer with safe product choice, not decide for them
what organic products they can eat. End users support the
use of TSPP -- please reference the letter that I'm
circulating -- and recognize they have been -- and they
have been at other NOSB meetings, supporting this process,
and I want to be very clear that our intent was not to have
TSPP singled out as a new ingredient but to make it part of
the sodium phosphate analog, which is now restricted under
annotation to dairy.

So we're not trying to restrict it for, quote,
our proprietary, because there's nothing proprietary about
this very important question you raise. Our formulation is
very simple, it's .5 percent for one product, and 3.5
percent for another, and the rest is wheat gluten and
organic flour. In both cases those organic ingredients are
the principal products.

In the end use of this product, we're talking about, in one case, seven percent, in another case somewhere between 10 and 12 percent, in -- as an ingredient in the actual finished organic product. So we're talking about rather low levels of use.

The other thing was that in this process, in all the research I did -- and I'm certainly not the technical person that these gentlemen are, but: This a thermal mechanical process. That's actually what ends up forming the texture, the flow legency [phonetic], which is so important, where TSPP, because of its high melting point, it's very essential to be able to do that. Otherwise you'd have an extruder about a quarter of a mile long. So it's really important to get that through the system, to cook it only for a period of time, without destroying the overall qualitative values of it, and then at the same time get it through the system and into the finished product.

So those are very important points there. MGP ingredients, the organic ingredient manufacturers here, and you've heard from them and gave compelling testimony about TSPP and its functionality, quality values, safeness-in-low-use rate, and clearly stated their research has found no alternative to TSPP.
There was some concern that TSPP does not show up in the final product ingredient panel. That is true. However, it is not required by FDA. I must point out that TSPP is listed on the ingredients we manufacture at MGP, it simply says, "organic wheat flour, organic gluten, and TSPP." It's not our fault that the labeling system does not require it on the labeling of the finished product, somewhere between seven and ten percent.

Thank you very much. Any questions?

MR. RIDDLE: Yeah, Tom. The statement you handed out to the Board from Kevin Scott, President, (inaudible) Foods Company, has a line that I find curious. It says, "Our current line of certified made-with-organic meatless burgers and breakfast products currently contain certified-organic ingredients with TSPP."

MR. HARDING: That's correct.

MR. RIDDLE: Well, TSPP is not on the National List.

MR. HARDING: TSPP was being used prior to the implementation of the National List, we petitioned that, and, as was said at this board two previous times, it was approved for our use pending the final rulemaking and being placed in the National List, and that's the way it was
MR. RIDDLE: Well, I understand what you're saying, but everything that didn't make it on the National List is prohibited, and recommendation of the Board doesn't allow the use of a substance until it's gone through the rulemaking process. So I guess I'd like a little more background on this, who's certifying this, how many companies, certifiers, are allowing this.

MR. HARDING: Well, I think you'll have to go back into your own history a little bit. The way the material was handled, as I understand, anyway, that, first of all, it was being certified as a product before the final implementation. When the petition was place forward, that's one of the issues we raised. That same document was submitted before, and we addressed that, that the certifier had given us a continuance pending the final review of the petition and at such time would then make a decision whether we would continue to use it or not if in fact it was approved by the NOSB and was then placed on the List eventually. That's the history.

MS. DIETZ: I have a comment.

CHAIRMAN KING: Kim has a quick concern.

MS. DIETZ: That was brought up, and I don't think that's a place for this board -- that's a compliance
issue with USDA, and we -- that -- we can go back to our
minutes, and we discussed this in detail --

    UNIDENTIFIED MALE VOICE: Exactly. I agree with
you.

    MS. DIETZ: -- so I don't think we need to bring
it up.

    MR. RIDDLE: It's very clear that a substance is
not allowed for use --
    MS. DIETZ: Right.
    MR. RIDDLE: -- until it's on the National List,
and that was made clear previously when this was discussed,
and it hasn't changed.
    MS. DIETZ: Well, we don't need to know who
certified it.
    MR. RIDDLE: Well, I think it is public knowledge
and public information who certified it.
    MR. HARDING: What we've done, this -- being very
open and honest about what's happened, over the period of
the implementation of the Rule, what transacted and what
you think or what somebody else thinks, so I'm not going to
get into an argument here about that, Jim.
    MR. SIEMON: And that's an industry-wide issue
about a whole --
    MR. HARDING: Exactly.
MR. SIEMON: -- host of materials and not just this one alone.

MR. HARDING: And I would bet there are a whole host of them. But anyway, thank you all very much, I appreciate it.

CHAIRMAN KING: Other comments or questions for Tom?

MS. DIETZ: And I just have one -- in fact this board did recommend that materials could be used until on the National List, and that was a formal recommendation, even though it's not being -- taken place, so --

MR. HARDING: Right. And the vote was clear that it was an approved material to go on the List, and I have to be honest with you, I was totally shocked that we had it sent back to reconsideration, because we advised them that the annotation could be problematic.

MS. DIETZ: That's the process, and that's okay.

MR. HARDING: Exactly. Thank you very much.

CHAIRMAN KING: Thank you, Tom. Next up is Jim Pierce, on deck is Haim Gunner, with Eco Organics.

MR. PIERCE: Good morning, Mr. Chairman, NOSB, NOP staff, ladies and gentlemen of the gallery. I'm Jim Pierce, self-appointed certification czar at Organic Valley.
In the interests of total transparency, I would like to point out and state for the record that I work with and for NOSB member George Siemon at Organic Valley. George, like the rest of you, struggles to put aside professional affiliations in this forum in order to stay true to your appointed constituency, in George's case farmer producer.

I will do no such thing. I stand before you, devoted on behalf of my constituency, the 650 family farmers who together, with over 250 employees and 65 processing plants, make up the largest and most successful organic dairy farming co-op on the planet, and we're upset. (Laughter.)

MR. PIERCE: Since we're in the Windy City in the midst of baseball and Billy Goat fever, let me summarize our concern in baseball paraphrase by saying: there is no joy in organic mudville.

I would respectfully direct your attention now to the diagram on the back of this testament. Some of you might be familiar with the heighth curve. The heighth curve is a visual tool to track — used to track progress of many things, including business start-ups, technology, and personal relationships.

Today I would like to use it to describe the
National Organic Program and your role in its future. The classic height curve is comprised of five distinct parts: the trigger event, the peak of inflated expectations, the trough of despair, the slope of enlightenment, and the plateau of success.

The trigger event in this height curve starts on October 21, 2001, at a Whole Foods store in Washington, D.C. When Deputy Secretary of Agriculture A.J. Yates announced the implementation of the National Organic Program, we all had a big collective hug. The ensuing peak of inflated expectations contained enough momentum to establish the USDA Organic seal as the single most successful eco-label in the food industry.

Now cue the piano into minor key as we slip into the evitable but always disturbing trough of despair. Bake [phonetic], the bottom of the trough, April 14, 2004, the date that three so-called guidance documents were issued by NOP, representing what the organic dairy farmers in my co-op feel is the most serious threat to organic integrity to date, a greater threat even than any previous assault by far, in fact, because in contrast to previous assaults by unscrupulous operators and corrupt politicians, these maladies are from the inside, from the National Organic Program staff, from the very guardians and managers.
responsible for the ultimate oversight of our livelihood.

The scope document which guides fraudulent
salesmen of organic sewage sludge and organic kitty litter
to go ahead and use the word "organic" and leave the USDA
out of it and let the buyer beware is short-sighted and
shallow.

The livestock feed document, which guides immoral
feed manufacturers to use fishmeal regardless of
sustainability, contamination, and prohibited materials, in
direct contract to the hardworking good advice that you,
the NOSB, provided them, is an insult.

But the document titled Dairy Replacement, that
erroneously guides organic dairy producers to use
antibiotics anytime, on any organic farm, on any calf or
cow, is a travesty, setting the organic standards back by a
decade and threatening to destroy the reputation of organic
much faster than wild-caught salmon or imprisoned poultry.

So we're pissed, but we're far from giving up,
and despite rumblings that we hear from you all of burnout
and brick wall head-banging, we're not going to let you
give up either. We're counting on every member of the
National Organic Standards board, present and future, to
lead our national organic program out of the trough of
despair and up the slope of enlightenment. That's your

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
job, clean, pure, and simple.

In the coming hours and days you'll hear a myriad of suggested solutions, many of which you're already familiar with. Weigh the proposals, make the wise decisions we know you're capable of, and get organic back in the limelight.

Thank you, as usual, but no less sincerely, for your attention, for this opportunity to address the Board directly. I look forward to watching you work through the material decisions that are before you. By posting committee recommendations on your website, your transparency has improved tremendously. After reading all the petitions, TAPs, and committee recommendations, I would so much like to assure you that you are faultless in your decisions, but alas, you are not.

Particularly, the crop committee has, in my opinion, arrived at the wrong decision in two cases. Hopefully there's people here today from the cotton industry to address the hydrogen chloride issues and from the apple growers to address the 6-benzyladenine -- I knew I'd do that wrong.

If my comments have moved anybody beyond motivation to enrage, I apologize. God bless you, and thank you.
CHAIRMAN KING: Jim, as always, thank you for your animated comments, it's very encouraging to get your input, and I think that we're all aware there's some ongoing challenges and you, you know, have the support, certainly, of the Board to work together with the program. I know later today that the program has a few minutes and perhaps they can address some of the issues at that time in their presentation.

Do people have questions or comments for Jim?

(No response.)

CHAIRMAN KING: Thank you, Jim.

MR. PIERCE: Thank you.

CHAIRMAN KING: Mr. Gunner is up next, and Lori Johnson is on deck.

DR. GUNNER: As the Board knows, the reason I'm here is because the TAP committee recommendations were directed to the use of soy protein isolate as a food, and in fact our submission is for soy protein isolate as a soil amendment, and in the hope of avoiding a deferral of a decision for soy protein isolate, I asked to come here to supplement the recommendations and the questions which the NOSB asked, in the hope that this would fulfill what you want to know and so that we could get a decision early, rather than late, particularly in view of the fact that
we've been hunting for a decision for some 4 years.

I should start by saying that I'm a microbial ecologist by training, and my interest in soy protein isolate was sparked by the fact that -- applied an experiment having to do with microbial treatments, the soy protein isolate stimulated an extraordinary explosion of microbial growth. Then considering the isolate, because of its very high nitrogen content, anywhere up to 15.5 percent, and a very, very low C/N ratio, at the level of about 2, it turns out that this could be an extraordinarily effective fertilizer as well as overall stimulus to the soil ecosystem.

Very briefly, since I've already submitted the responses to the questions that you felt the TAP group had not provided you with, let me simply review the questions that you asked and our responses to them.

One, use of the material as a soy -- soil amendment. Well, I've already indicated that we get an explosion, sometimes a 6- to 800-percent increase in microbial populations. This has both the effect of stimulating further organic matter decomposition so that in addition to the nutritional value provided directly by the soy protein isolate, you get a second (indiscernible) of fertilizer.
The explosion of microbial communities is also turns out to be effective in suppressing microbial pathogenic attack on crops simply by competitive exclusion. We've submitted data to show the effects on turf grass growth, on clippings, on root expansion, and I won't take up the committee's time by reviewing this.

In short, what we have is not only an extraordinarily effective fertilizer effect but a very large ecosystem series of beneficial effects.

The question for the committee, of course: is the material synthetic or non-synthetic? Well, it's very difficult to synthesize protein. This, of course, is synthesized in the -- in the soybean and the issue is really the manner in which the protein is released from the bean.

Our contention is that this is compatible with Regulation 205.605(j)(1), in which the plant extracts which use sodium hydroxide as a neutralizing agent, as well as humates, are available for registration and we feel that under this regulation, that soy protein isolate also qualifies.

Other questions which the committee asked is in terms of genetic modification. The high rate of microbial decomposition and the virtual disappearance of the soy
fertilizer makes this a moot point. In addition, whatever nucleic acids carry the genetic information is simply not part of the protein isolates.

The basic manufacturing process leaves a very, very trivial amount of sodium hydroxide. Essentially the sodium is what we're concerned with, and at the rate of application, it is truly a meaningless residue.

Are there adverse effects in the environment from manufacture, use, and disposal? None that we have been able to determine, and none has ever been described.

No toxic or adverse effects. Undesirable persistence, no, I've already indicated that the material is very, very rapidly decomposed by microbial communities.

And finally the question "Are there other natural organic fertilizers?", and indeed there are. Natural manures with a nitrogen content of about 4 percent, municipal waste, 6.5 percent, crop residues, about 7.5, fishmeal, higher, 12 percent, fish emulsions, 5 percent, kelp or seaweed.

The problem with these, of course, is that fishmeal, fish emulsions, and others are highly undesirable because of their odor, and most undesirable, of course, is their extraordinarily carbon-to-nitrogen ratio, which means that they are very long-term residues in the soil.
In short, I feel we have an exceptional soil amendment, certainly natural in its derivation and certainly equivalent to other treatments which are registered, such as the humates and the kelp extracts. Thank you.

CHAIRMAN KING: Thank you, sir. We have questions. I have Nancy first, Kim second.

MS. OSTIGUY: Did I understand you correctly when you said that the question of GMOs was irrelevant because the protein doesn't contain the product in GMOs and it's your source --

DR. GUNNER: No. I said it's irrelevant because the amount of residue is negligible, and we get such a high rate of decomposition, the cell [phonetic] is -- virtual total disappearance because of microbial activity.

MS. OSTIGUY: But the source of the soy could be soy that --

DR. GUNNER: Oh, yes, it could be, yes.

MS. OSTIGUY: -- has been genetically modified.

DR. GUNNER: Yes.

MS. OSTIGUY: Okay. That's what I wanted to know.

CHAIRMAN KING: Okay, I have Kim, and then Becky.

MS. DIETZ: Hello, Haim.

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
DR. GUNNER: Kim.

MS. DIETZ: I have to just go on record that this gentleman has probably the long-lasting record of the materials review process, he started with this in 2001, so I just need to officially say that. Whether it's a positive thing or a negative thing, I think you've certainly (inaudible) --

DR. GUNNER: It's a tribute to my endurance and commitment to this product.

(Laughter.)

MS. DIETZ: Yeah. I think that, you know, it is a very difficult product, and I'm going to have a long lengthy discussion when we actually review this material, so, one, are you going to be staying through the meeting, that's my question for you, when we actually review the material?

DR. GUNNER: To my great regret, I have a plane to catch --

MS. DIETZ: Okay.

DR. GUNNER: -- but I -- I would like -- perhaps during the break we could meet. I have to leave at 12:10.

MS. DIETZ: Okay. That's really all my comment. But he has been in this process for 5 years, between OMRI and the petition process and having confusion, so I hope we
can at least get something done --

DR. GUNNER: Did you all get copies of the

material I submitted?

MS. DIETZ: Yes. There are public comments in

the book, I believe.

UNIDENTIFIED MALE VOICE: Yeah, and a flow chart.

CHAIRMAN KING: Becky, then Rose.

MS. GOLDBURG: I want to thank you for supplying

us with so much information. I wanted to follow up on the

question that Nancy asked about the residues, and you argue

that they're trivial. Are you speaking of the nucleic acid

residues or of the --

DR. GUNNER: Well, there's total decomposition

MS. GOLDBURG: Total --

DR. GUNNER: Yeah. We've done this -- you know, my basic training is in microbiology, and we find that you have virtually -- not virtually, you have total decomposition and you get microbial cessation of growth until you add another dose of material, then you get a typical dose response.

So that -- because it is so available, you have, you know, short-chain amino acids, peptides there, there's virtually no residue in the soil, that we've been able to detect.
MS. GOLDBURG: So -- I'm still not sure. Are you arguing there's no residue of the GM protein itself or the --

DR. GUNNER: There's just no residue on the material, it is --

MS. GOLDBURG: On the material itself.

DR. GUNNER: Yeah.

MS. GOLDBURG: Okay.

DR. GUNNER: It is either -- because the carbon-to-nitrogen ratio is so narrow, it's so immediately available, and, as I said, the turnover in native organic matter, just a -- really an extraordinary array of beneficial effects, and to include this material I think is -- from organic registration, and we've had a lot of people who are very interested in using it in organic growth, I feel is doing an injustice to potential growers. It's simply extraordinary, very high -- the highest nitrogen level of -- unless you're going to bridge [phonetic] products, with urea and the like, of an organic material eminently available, and certainly comparable, in its manufacture, to kelps or humates.

CHAIRMAN KING: Okay, Rose, and then George.

MS. KOENIG: A couple questions. What was the nitrogen level of the protein, what are you saying the
percentage was?

DR. GUNNER: It goes anywhere -- the ultimate product has anywhere from 13.5 to 15.5 percent.

MS. KOENIG: Okay. If there is feather meal, which is a protein, which is pretty readily available, that's about 12 percent nitrogen --

DR. GUNNER: Right.

MS. KOENIG: -- other than the ones you listed which would be comparable. Additionally, did you see the committee's recommendation? I mean, there is -- on the website the committee has proposed a recommendation --

DR. GUNNER: Yes. But the recommendations were based on a misapprehension, they treated it as a food ingredient.

MS. KOENIG: No, what I was going to say was that the process that went through is -- you know, it did go and -- was technically reviewed as a crop and a soil amendment. What the -- and you can access the web to see that report. And if you have web access and you haven't viewed that --

DR. GUNNER: Of course I haven't, but the reports we --

MS. KOENIG: -- it might make sense --

DR. GUNNER: -- got demonstrated that the ultimate response was to turn it down, they simply were not
-- was not adequate presentation by the TAP

recommendations. Is there anything beyond that?

MS. KOENIG: I think that the TAP kind of went
through some of those --

DR. GUNNER: I saw that it did [phonetic] --

MS. KOENIG: -- the issues that you had, and

maybe -- through -- because it was a long process, that in

2001 it may have been, I wasn't aware of that, but I can

assure you that the TAP that we looked at did look at it

based on the OFPA criteria and as a crop soil amendment, so

just to clarify that.

DR. GUNNER: Certainly the latest staff

recommendations which were turned down by NOSB --

UNIDENTIFIED FEMALE VOICE: It was deferred.

DR. GUNNER: -- seemed to be inadequate.

UNIDENTIFIED FEMALE VOICE: The recommendation

was deferred, and he has read that, and his response is in

the public comments, I think he's (inaudible) asking.

MS. KOENIG: Okay. And then I guess, finally,

back to Becky's question on the GMO issue, because it was

something that was discussed by the crops committee, do you

have any sign [phonetic] -- the question is not whether the

protein -- the soy protein gets degraded, it's the fact

that I guess the source of soy -- there's so much GMO soy
now, the -- it's really the BT toxin, what the effects
would be not on the microbial population within the soil
but other, you know, insect populations that might exist in
the soil that would be affected by that toxin, and do you
know of any -- because we did not have that information
provided in the TAP, and I think that's what --

DR. GUNNER: I have not seen any data on use --
since this is a novel application of soy protein, as a
fertilizer, virtually no data exists. But again, the rapid
uptake and decomposition suggests that the danger to any
insect population is minimal. We're talking about the
disappearance of this material applied to soil and
fertilizer amounts within -- you get activity within the
first 24 hours. So the notion that this would be a danger
to any incidental population is -- is very remote, in our
-- and by the way, as an ecologist, I'm not unconcerned
with this.

And also, as one of the (indiscernible)
environmentalists here, of the -- one of the first
departments of environmental science, I can claim some
credibility in my concern for the environment.

CHAIRMAN KING: I have George, then Jim.

MR. SIEMON: I just needed to understand the
commercial use here. You said it's 13 to 15 and a half
percent nitrogen, and what is the recommended use per acre, like pounds --

DR. GUNNER: We use it -- you have to appreciate that this is not inexpensive, it about .5 pounds per thousand square feet, we speak in terms of applications of turf and the like, on golf courses, so it's not designed for broad agronomic use, it's --

MR. SIEMON: So you said 25 pounds per thousand --

DR. GUNNER: .5 pounds.

MR. SIEMON: Point --

DR. GUNNER: .5. It's a very minimal amount.

MR. SIEMON: And what's the cost, does any -- what would a farmer --

DR. GUNNER: Oh --

MR. SIEMON: Just so I understand.

DR. GUNNER: It costs about -- you have to say -- it would be at the level of about --

(Pause.)

MR. SIEMON: That's okay, if you can't answer it.

DR. GUNNER: It would be -- it depends on volumes, of course, but it's roughly about a buck and a half a pound, not inexpensive.

MR. RIDDLE: Yeah. Well, I agree with your comment that the TAP review addressed who would use this soy protein isolate and I found it wholly inadequate and I think that was part of the basis of the crops committee recommending deferral, but you provided much more detailed information, and I thank you for that, and one of the questions I had, that the TAP didn't address, it discussed various manufacturing processes but said that the petitioner had not supplied the information. Well, now I see that you have, and it's clear in your flow chart that this is a hexane-extracted --

DR. GUNNER: No hexane residue.

MR. RIDDLE: Yeah. We're not talking residues, we're talking processing methods and inputs. But it's hexane-extracted, made from non-segregated soybeans; correct?

DR. GUNNER: Right.

MR. RIDDLE: Okay. And then in -- your information you provided and the TAP provided looked at the, you know, nitrogen on an input substitution type of basis rather than looking at the whole-systems approach, which --

DR. GUNNER: Right.

MR. RIDDLE: -- under the regulation, soil-
Building crop rotations are mandatory. So your nitrogen needs to be coming from the natural nitrogen cycle to begin with, and that aspect is not addressed in either your information or in the TAP.

The question I have is, can your company or another company produce this material from segregated non-GMO soybeans? -- because we're not talking about or debating the effects of the residues, it's a fact that the regulation prohibits the use of excluded methods, so can you produce this substance from --

DR. GUNNER: Yes. I mean, the question is not the nature of the soy, the question is the process itself, and whether or not it's genetically modified does not determine ultimately the protein concentration in which we are interested.

MR. RIDDLE: Yeah.

DR. GUNNER: Now, the --

MR. RIDDLE: So that's a possibility.

DR. GUNNER: Yes. But non-GMO, of course --

MR. RIDDLE: Because --

DR. GUNNER: -- would add to the expense enormously and (inaudible) --

MR. RIDDLE: Yeah, but that's not our worry. And then the other is just whether -- you know,
the committee's recommended to defer, and would you rather that we take action one way or another?

DR. GUNNER: Yes, we would, because I'm assuming there is an appeals process and after all of these years, the committee has been as steeped in this problem as we are, so that I would -- yes, we would prefer a decision, hopefully on the basis of adequate information available to you.

MR. RIDDLE: Thank you.

CHAIRMAN KING: Okay. Other questions? Kim?

DIETZ: Just -- I was going to save this comment, but I'm going to -- while you're here I'm just going to state this. In 2001 Mr. Gunner petitioned to OMRI for the material because it truly is a brand-name material, so I'm going to go on the record and say that it's a brand-name material.

The reason that it was in the system so long was because it's a brand-name material, and now it's before the Board as a material to be placed on the National List. So we have a lot of confusion on this board because we shouldn't be reviewing the soy protein isolate, in my opinion, we should be reviewing the two materials, the -- I think it's the hydroxide, the sodium hydroxide, the two materials, and I have my notes, when we actually review
this material I'll go through it.

So I'm not sure what we're going to do with this, in my opinion, as a board. I would like to sit down and talk to the crops chair and the NOP because I'm confused over it, and I've been just as involved in it as you have for the last 4 years, intimately.

So I'd like to get it settled, and yes, I would like to come to some resolution for this meeting [phonetic] Mr. Gunner and figure out what exactly it is and where's the problem. But again, I believe it's a brand name and it should be handled differently.

DR. GUNNER: Well, thanks to the Board and its patience.

UNIDENTIFIED MALE VOICE: And your patience.

CHAIRMAN KING: And yours as well. Thank you.

DR. GUNNER: Thank you.

CHAIRMAN KING: Let's see who we have next.

Maury Johnson, and Ray Boughton is on deck.

MR. JOHNSON: Good morning. My name is Maury Johnson. I'm with NC Plus Organic Seed, in Lincoln, Nebraska. I'm also a member of the American Seed Trade Association committee on organic seed, and I just wanted to share with you this morning a little bit of our view of organic seed.
I think one of the things that has been a little bit frustrating to us and perhaps to some other people is that the concept of organic seed and why it is a good concept has in many cases been lost to the organic grower. In many cases he sees this as just another rule or just another burden for him to carry, and what we're trying to do at NC Plus and what I've encouraged the American Seed Trade Association to do is to focus, instead of on the negative side, what are the positive aspects of organic seed and how can organic seed contribute to the organic effort.

And in the little brochure that I passed out to you, I would like to talk a little bit about some of the benefits as we see them and we think should be emphasized, as well as some of the specific issues relating to not just organic seed but seed in general.

At NC Plus and, I believe, other seed companies attempting to do organic seed we're trying to provide seed products that meet the unique demands agronomically of organic farmers, as well as the markets that they're trying to serve.

One of our main crops, of course, is corn, and raising corn organically, in the organic environment, is quite different than on conventional. The products, the
hybrids, need to be different. But the organic farmer's also looking to market his products to a different set of consumers, and in the case of soybeans, for instance, there is much greater interest among organic farmers for food-type soybeans as opposed in the conventional, where the emphasis is on a commodity.

So organic seed producers and organic seed companies and public entities can concentrate on the kinds of products that the organic consumers are asking for.

A second advantage of organic seed that is sometimes lost is that purchase of organic seed by organic farmers helps to support other organic farmers rather than a multi-national corporation that doesn't really care one way or the other about the organic farmer.

At NC Plus, we have organic seed production on about 3500 acres involving corn, soybeans, red clover, alfalfa, two or three grass species, and organic -- and sorghum, Sudan grass, we have production from Michigan to Texas to Wyoming to Minnesota, and we are working with farmers in all of those states, who now have another opportunity, if they want to pursue it, for a crop to raise.

The third advantage, I think, is that organic seed has the potential to be less in GMO content than
conventional seed, non-GMO content will be a very high priority, and I'm not here to debate, you know, whether -- the GMO levels and all that, but if the organic seed grower tests his seed stock, if he's very thorough and dedicated to cleaning the equipment, if you have a facility where the seed is being conditioned and bagged, that is non-GMO, and if you have the final testing of the organic seed product before it goes out to a customer, those are all things which we have found in our experience have greatly limited GMO content.

But those are all things that the conventional seed producer is not likely to pay as much attention to as an organic seed producer.

CHAIRMAN KING: One minute.

MR. JOHNSON: Just briefly on some other issues: Will organic seed be as good as conventional seed? It certainly can be, but seed quality is often determined by the environment and by experience, and those are things that organic seed producers are going to have to gain very quickly.

How about cost, and I know cost is not supposed to be part of the equation, but cost is merely a --

CHAIRMAN KING: Time.

MR. JOHNSON: Okay.

MR. SIEMON: Are you satisfied with the present rule on organic seed?

MR. JOHNSON: We would like to see greater consistency of the implementation of the Rule. As a for instance, we estimate on field corn that probably no more than 40 percent of the organic corn acres in the United States are being planted to -- with organic seed. The problem is not the shortage, the problem is implementation.

MR. SIEMON: Do you think there's adequate organic seed corn available and that it's not -- you said it's not shortage. You feel it's available?

MR. JOHNSON: It's kind of hard to say for sure how many acres are out there, but using USDA statistics, NC Plus by itself, just knowing what we can supply, we could -- by ourselves we could probably supply 80 percent of the market, and there's five or six other organic seed providers for corn. So in the case of corn, I think the supply is there. I think in the case of soybeans the supply is there.

In the case of alfalfa and some other crops, it's going to take a little time to build those supplies, but a lot of seed producers are kind of sitting on the sidelines,
wondering what kind of a market is there going to be. We have taken kind of an aggressive approach, but many other folks are kind of waiting to see.

   The supply will come pretty quickly, because it's -- again, it's a relatively small market, but in the field crops that I'm familiar with, I'm convinced the supply can be filled pretty quickly.

   MR. SIEMON: Of course, some of the problem is the availability, you've got to order months ahead of time and often you run out of corn right that moment, so it's that infrastructure development too, is a another other part of it.

   MR. JOHNSON: Well -- and again, I'll just speak for our company, but we have maturities that can go from Texas to North Dakota, you can call us now and get -- maybe not every one of our hybrids in any particular seed size, but you can get any hybrid maturity we have available.

   And one of the discouraging things to us is that last year, and even this year, we will be obsolescing a fair amount of seed, organic seed, because we couldn't get it sold, and that's kind of discouraging.

   CHAIRMAN KING: Jim, and then Andrea and Dave.

   MR. RIDDLE: Yeah. Maury, thanks for your comments. Besides the need for better consistency in how
it's being implemented and enforced, a question -- if you see any deficiencies or problems with the Rule itself as it applies to organic seed, that's one question; and then also, the Board has a recommendation, that we'll be discussing tomorrow morning, on the whole commercial availability issue, to help clarify and bring consistency to that. But that recommendation was written in the context of minor ingredients for processed foods, but it would also impact the organic seed, and so I will appreciate -- will you still be here tomorrow?

MR. JOHNSON: No. I have seed stock to deliver (chuckles).

MR. RIDDLE: Okay. Well, if you have any comments on that, it would be very helpful, but also just -- as the Rule is written, are there some things that you would like to see changed, that maybe the Board should, you know, form a task force or cost committee, do some work on?

MR. JOHNSON: Well, in the Rule there is reference to equivalent varieties, is a variety from company A equivalent to a variety of company B, and that's a pretty tricky question, because, you know, we're dealing with a living entity here, a seed, and the crop that it produces, and what is equivalent, so that the whole notion of equivalency is a little bit hard to get a grasp on.
We have always felt, at NC Plus, and I think other companies as well, that our goal is to make our seed good enough that you, as an organic grower, would buy it even if the Rule wasn't in place. We don't want the coercion there.

But by the same token, farmers and growers are creatures of habit, and if they're used to going to a particular seed provider and now all of a sudden you're asking them to change, there's some resistance, but all we're saying is: give organic seed a chance, recognizing that there are some long-term benefits out there, and so give it a chance, and I guess again concentrating on the long-term payoff and potential for use of organic seed.

I guess the other thing -- the other comment that I would make is -- and I have suggested this to our ASTA group as well, I think this has to go on a crop-by-crop basis. I mentioned corn. There's adequate supplies of field corn out there. Grain sorghum acres are very small and rain sorghum production requirements are such that you have to have fairly large fields to grow the crop. It is unlikely that in the near future there would be sufficient demand to produce organically grain sorghum seed. I mention ed alfalfa. Alfalfa takes some time to get going. So I think you have to kind of look at it on a crop-by-
crop basis.

But I guess what I would like to see is that the use of organic seed be kind of like using treated seed on certain crops. In other words, people who use treated seed can lose certification, but if there is supplies of organic seed of a given crop, then maybe we need to get to the point where they lose certification on that. I hate to be suggesting something that strong, but maybe that's what it's going to take.

CHAIRMAN KING: So if I'm hearing you correctly, and then I have several people that want to speak, you're saying if we could get more specific and look at it literally on a crop-by-crop basis, that may help define --

MR. JOHNSON: Right.

CHAIRMAN KING: -- commercial availability.

MR. JOHNSON: Because there's some crops where the number of acres are so small and the production requirements are so -- are such a nature, it's going to be difficult, from a business point of view, to justify producing that seed organically.

CHAIRMAN KING: Andrea, then Dave.

MS. CAROE: Well, as Jim mentioned, we will be discussing a recommendation on commercial availability for minor ingredients. One of the controllers [phonetic] that

R & S TYPING SERVICE - (903) 725-3343
5485 S. LIVE OAK, GILMER, TX 75644
we looked at and had included in that is a requirement that both the user of that ingredient and the certifier that is certifying use of a non-organic ingredient maintain a certain effort to look for the particular ingredient in organic, and by doing that, they need to use tools which are clearinghouses of availability.

To your knowledge, and you mentioned that you're involved in a C group, is there a list of availability of organic seed, is there a list of different vendors that are selling different types of seeds?

MR. JOHNSON: On, I believe it was, March 25th, our American Seed Trade committee group -- and we've met three or four times over the last year, and we have been working on a proposal for a database of organic seed suppliers, that first of all you'd have to be certified organic to be on the List, and it would be on kind of a crop-by-crop-type basis, and that was brought up and it was discussed in a meeting between our American Seed Trade committee group and some folks from the USDA, Kevin and Rick Matthews, for their -- it was just something that was discussed, it's something that our American Seed Trade group has to look more carefully at. We're meeting in Philadelphia at the end of June and I think we're going to try to finalize a recommendation as far as a national
database that would list organic seed suppliers.

MS. KOENIG: I have a question.

CHAIRMAN KING: Rose.

MS. KOENIG: Two things. There are databases out there, because I did a presentation on organic seed. I mean, it doesn't give you the quantities and varieties, but there's certainly sources, if you type in -- so there's -- there's some efforts out there by various organizations that at least list the manufacturers.

I wanted to go in a different direction, because we're -- the cost committee was looking at a material that was used for de-linting cotton, hydrochloric acid, and I just wanted to know, as I started looking -- you know, part of the issue was treatment versus a process, and I didn't -- I still haven't, I guess, got the answer, as far as how much chemical processing goes on, in terms of, you know, taking the raw seed and making it a marketable product for either -- precision planting, is there other crops, other than cotton, where the physical structure -- you know, the properties of the seed have to be removed for planting, and do you view that kind of removal as a process or a treatment, or association?

MR. JOHNSON: First of all I have to tell you that the crops that we work with, there is no treatment or
processing going on of those -- of those particular crops.

MS. KOENIG: But you still have to clean it, correctly [sic.] -- or --

MR. JOHNSON: Right. We clean it with mechanical means. Our group, though, has discussed other seed crops, primarily in the area of vegetables, and certain coating materials that are -- have been used there on the seed itself, and at NC Plus we are looking at some of these materials to use on the seed, because one of the things about untreated seed is that it -- in some ways it does kind of add to the cost to the farmer at some point because, you know, he may have stem loss [phonetic] or -- or whatever. As a seed producer, the fact that we never use seed treatment or coatings of any kind puts us at greater risk as well.

But this issue that you talked about is primarily with the smaller seeds, especially the vegetable seeds, where they're made -- need to be some sort of coating just to be able to plant those, and I'll have to tell you, I'm not very knowledgeable on those kinds of crops.

I guess one other comment, if I could make it here: at NC Plus, we have done a lot of testing for GMOs in the seed stock and in the seed that we sell, and we think that that has been an important service to the
customers that we sell to and the customers -- and the
people they're trying to sell to, and we've invested a lot
of money in that over the years, and I guess one of the
things that we would like to see is maybe some
identification by the seed seller of what he has done, in
terms of GMO content, not that there maybe necessarily
needs to be a standard, but just identify if the seed has
been tested or not tested or whatever.

CHAIRMAN KING: Thank you very much.

MR. JOHNSON: Thank you.

CHAIRMAN KING: At this time I think we'll take a
quick break, 15-minute break, and have -- who do we have
next here. Ray. Ray, you're up when we come back, and
what's the official time, 9:58, so we'll reconvene at about
10:12, 10:15.

(Off the record at 9:58 a.m. and reconvened at 10:20 a.m.)

(Tape change.)

CHAIRMAN KING: All right, let's officially get
started here. The next member for public comment is Ray
Boughton.

MR. BOUGHTON: Thank you, board. I'm Ray
Boughton, I'm from Colfax, Wisconsin, up about 60 miles
straight east of St. Paul, Minneapolis, and up northwest of
Eau Claire.
I'm here today because I'm concerned, like Maury is, on production of organic hybrids. Lake Organics is located in Colfax, Wisconsin, which is 25 miles northwest of Eau Claire or 60 miles east of St. Paul, Minnesota. Lakeland Farm was established in 1929 by my grandfather, and it's a third-generation farming operation. We are farmers.

We currently farm 900 acres of organic certified corn, soybeans, food-grade soybeans, and hybrid seed corn. Our organic hybrid seed corn is marketed in five states by another family-owned business, Bruner [phonetic] Seed Farm in Durand, Wisconsin. I believe in Wisconsin there's only about three or four family-owned seed companies left; everything else has been bought up.

I am president of the Wisconsin Organic Crop Improvement Association Number 1 and a member of the International Standards Committee for OCIA International in Lincoln, Nebraska.

A problem has developed where untreated foundation seed cannot be purchased. Nearly all the seed purchased for seed production has been treated with Capitan [phonetic] or Apron, which is a prohibited material by the NOP. This material is used to protect the seed from seed diseases, including seed rot, which Maury just mentioned.
just a few minutes ago.

The hybrid being produced from these foundation seeds are not only specific to the Wisconsin area but are the product of decades of seed breeding. In the past Bruner's has bought the foundation seed variety, only licensed seed company that can purchase this seed, that we cross-breed to produce various hybrids, which are harvested and processed for resale the following year. We've got a full one year in between. This process is one full generation from the actual sale to the organic farmer who plants a seed which is untreated.

Monsanto is buying up many of the foundation seed stock companies. Last year the seed company where we purchased the majority of our seed stock from, Holden Seed (indiscernible) was purchased by Monsanto, which will most likely limit the availability of untreated seed. It was -- just as a little after-thing: it was purchased at an enormous price, I don't know how many millions more than the actual company was worth, if that kind of relates what they're looking at.

Our concern is that as long as organic seed producers can only use untreated seed and foundation seed continues to be treated, organic seed developers and seed producers will be very limited in their hybrid selections.
Large corporate seed stock companies, like Pioneer International, Northrup King, and Garst will continue to sell untreated seed to the organic farmers, that had been grown from treated seed stock, using chemicals, commercial fertilizer, and all conventional farming methods, while the organic producer, on the other hand, using all organic farming practices, is prohibited from producing the seed stock from the treated foundation stock.

Because of this disadvantage, organic seed producers will probably meet their demise in the future.

Thank you very much. I'll take questions.

MR. SIEMON: I'm a little confused. You say that the problems that developed were untreated -- I guess I -- I just answered my own question; no wonder I was confused. (No response.)

MR. BOUGHTON: (Chuckles.) As I put, two -- there's two other letters, and one shows our attempt last year to buy untreated seed foundation stock, you'll see Holden Seed, at the bottom you'll see a little clip there called a -- Monsanto Company.

MR. SIEMON: So basically your certifier is telling you -- you're saying there's no commercially-
available alternative and they're still telling you no because it's treated.

MR. BOUGHTON: It's treated, yes. And where we have to compete, as he mentioned before, you can call up your local Pioneer dealer, he will have untreated seed if you order it far enough ahead for him, but that same seed that you're allowing Pioneer's person to sell, we can't sell, and they have treated theirs with chemicals and everything else, but us, using all organic -- and the only thing different that we use is the foundation stock, which is one whole generation away from the actual end user, probably two, actually, two generations.

MR. SIEMON: And this is -- your certifiers determine that.

MR. BOUGHTON: Yes. It's NOP's standard.

CHAIRMAN KING: Just a point of clarity.

MR. BOUGHTON: Yes.

CHAIRMAN KING: It sounds like, in the foundation seed production, you're talking about two different --

MR. BOUGHTON: Right.

CHAIRMAN KING: -- production systems, one clearly conventional, but in your example, it's your intent to use this foundation seed on land that's managed organically?
MR. BOUGHTON: All organic, completely organic.

MR. SIEMON: And then the land will qualify.

CHAIRMAN KING: Yeah.

MR. BOUGHTON: It's all qualified, certified.

CHAIRMAN KING: So it would be a prohibited --

MR. BOUGHTON: Jim, you could probably clarify that a little bit, what happened when the standards were written.

MR. RIDDLE: Well -- right.

(Laughter.)

UNIDENTIFIED MALE VOICE: Thanks, Jim.

(Laughter.)

MR. RIDDLE: You know, historically, the requirement was for organic farmers to use untreated seed, and if you couldn't get untreated, then you could use treated; and then it went up a notch, you know, to the organic; and then total prohibition on the treatment; and then, simultaneous, having the organic seed requirement has implications for the production of organic seed, so you can't use a treated foundation stock to produce an organic hybrid that would then be planted by an organic farmer, and, you know, I just want to be clear on what you're requesting, and that is, as I understand it, and you
correct me if I'm wrong --

    MR. BOUGHTON: Yes.

    MR. RIDDLE: -- that there would be a change in
the Rule or a clarification of the Rule as it applies to
organic seed production, that there be an allowance for
treated seeds or certain treatments to be used for
production of organic seed, not the production of an
organic crop.

    MR. BOUGHTON: Right. Strictly for foundation
seed stock only.

    MR. RIDDLE: Right now, the way, instead of a
rule change, that that could be accomplished would be: to
petition the use of the treatments for that specific use,
for the preservation of foundation seed, or however the use
would be annotated.

    MR. BOUGHTON: Yes.

    MR. RIDDLE: So that the door is open for that
approach without a rule change right now.

    MR. BOUGHTON: Right. That's what we are
requesting, to go -- go that route.

    CHAIRMAN KING: Okay, Rose.

    MS. KOENIG: I guess the -- so the foundation
stock is controlled by you? The foundation seed.

    MR. BOUGHTON: Very few companies. One of them
here is, as you have in front of you, Holden Seed out of Iowa. What is happening now is Monsanto is buying up the seed stock companies. You can see where that's going to be heading down the road.

MS. KOENIG: But -- so -- I mean, have you requested just non-treated --

MR. BOUGHTON: Yes. Yes, we have.

MS. KOENIG: -- and they --

MR. BOUGHTON: We have requested seed stock. There are certain numbers, when you're plant breeding --

MS. KOENIG: Right, I know.

MR. BOUGHTON: -- when you start breeding different numbers, we have to have like a certain male or a certain --

MS. KOENIG: Right, I know.

MR. BOUGHTON: -- female to create a hybrid, and that's where -- we're running into our major, major problem on that.

MS. KOENIG: But there's no -- I mean, the treatment for your parental lines -- just like an organic grower has to purchase a hybrid, I mean we have to go through, say, the same commercial -- you know, like Opito [phonetic] Seed or some of the -- the larger companies. Again, like George said, it may take six months in advance
to request non-treatment, but that's something that, when
asked, they have been able to accommodate, but it does take
a lot of planning. There's -- why won't they do that with
the parental stock?

MR. BOUGHTON: We raise 168 acres of seed corn.
When I go to Holden's, which is a multi-million-dollar
company, and walk in the door and ask for five bags of
seed, you can see where I'm coming from.

MS. KOENIG: But it's a post -- the thing is, is
-- same thing, I mean, I'm buying a pound of onion seed, so
it's even less than 150 pounds, from Opito. The thing is,
is that is a post -- I mean they have the untreated seed,
and then at a certain point it's treated --

MR. BOUGHTON: Much of it --

MS. KOENIG: -- because it doesn't come off of.
So -- so I guess --

MR. BOUGHTON: No, all of it -- no.

MS. KOENIG: I guess what I would say is that we
need to make sure there's due diligence that that in fact
is the case, because I know as a producer requesting a
pound of seed, it is obtainable. It does take extra
effort. And what the seed companies have told me is that
"that's no problem, we just need to know because we don't"
-- you know, again, it comes -- it doesn't come off the
plant treated, there's a process where they do take those lots and do it at a certain time, but you can perhaps request those before that time.

MR. BOUGHTON: We do not have the ability, as a small company, to go a year in advance and ask for five bags of seed. It would be -- you'd -- when you're talking about Monsanto, you're not talking like -- I don't know where you buy -- where you purchase your seed, what type of seed you're planting, but corn seed is a completely different -- we're -- we're talking corn, that's all I'm talking is corn, and that's a completely different product. As you mentioned, it's specific to this one -- one product.

CHAIRMAN KING: First of all, thank you for attaching these letters, and I think Rose is on the right track here. We understand, I think, your challenge, as you've communicated it. As with everything we do these days, documentation is key --

MR. BOUGHTON: Right.

CHAIRMAN KING: -- and being able to forward that to perhaps further define the issues so we can somehow resolve it.

Are there other questions or comments?

(No response.)
CHAIRMAN KING: Just a quick housekeeping note.

Please --

MR. BOUGHTON: Thank you.

CHAIRMAN KING: -- try to refrain from talking while we're doing public input, we'd like to concentrate on the conversation at hand.

I simply have a company name for the next, it's Valent BioSciences, so if there's a representative from Valent BioSciences, please give your name for the record, for the court reporter, please.

MR. FILAJDIC: Hello, my name is Nenad Filajdic. I'm a product development manager of Valent BioSciences. First of all I'd like to thank you for an opportunity to be here and say a few words about 6-benzyladenine, which is used in apple thinning.

What was available before were commercial products such as Promalin and Accel, and they also, in addition to 6-benzyladenine, contain giberellic acid. This new product that we have, Accel, is only based on 6BA, so basically what it's used for is thinning and sizing, also fruit quality, mostly used in apples.

What is important about this product is that it's basically naturally-occurring in plants, it's cytokinin, and we synthesize it basically just because it's a big
savings. It would be fairly impossible to produce it straight from the plants because of the quantities, but we do synthesize it, and it's naturally-occurring cytokinin. It's non-toxic, it doesn't harm any beneficials, it's very low toxicity and very low persistence in the environment.

In addition to that, there's no other chemical thinners or any -- I should say effective thinners available in organic production, even though some are tried, with limited success. What non-apple growers have as an alternative is NAA, basically, and 7-carbaryl, which are not very environmentally-friendly compounds, so this is basically the only -- the only other alternative that organic growers could use, in case that this is approved.

Right now we don't have a formulation that is organic because our commercial products have other ingredients that are -- two ingredients that are actually category 3, but if this -- if 6BA is included in the List, we would be ready to produce organic formulation, because the research has been performed on it.

This would enable organic growers to save -- to save on its production, because the (inaudible) thinning would be pretty much avoided, and as most of you know, that is the single most -- single biggest cost for apple producer, is thinning.
So I need to apologize because I don't know if my document got to you in time, I e-mailed it, but if not, we also submitted this document before, it was just not updated for 6BA alone product, it was mostly based on 6BA plus gibberellic, so I updated that and I sent it. It has a lot of information in addition to what I just said, but if you have any other questions, I would be glad to answer those. Thank you very much, again, for your time.

CHAIRMAN KING: People have questions? Rose, did I see your hand go up?

MS. KOENIG: I did. If anybody has one, I just want to check before I answer the question -- ask the question, but I guess one of the questions I had, and I'm not sure if we have it, was public comment from apple growers as far as the need for the product.

I mean, one of the things that the committee discussed was the -- you know, the optional -- the labor-intensive -- I mean not -- again, I'm a producer, and, you know, weeding and hoeing is -- is labor-intensive, but that's what we do.

So can you just speak to -- to those -- to the hand-thinning option.

MR. FILAJDIC: Sure. There are some numbers also in the report that came out and it basically states on

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
average the cost for hand-thinning to be $1680 for a 20-acre farm, and that's four or five times higher than what non-organic producers can spend, because basically these other compounds, like NAA and 7, are fairly cheap. So that is basically, in a nutshell, what -- where it would come out economically. As I mentioned, I'm fairly certain that's the biggest single cost in apple production.

If we talk about sustainability, I see this product as being sustainable because one of the -- one of the important objectives in production is to stay in business, and this will allow a lot more flexibility. So that's how we see this, we see this as a help to organic growers.

There is a lot of interest for this product in Europe also, we're working -- that's basically why we started working on this formulation that is going to be organic.

CHAIRMAN KING: Jim.

MR. RIDDLE: Yeah. You mentioned Europe. Is this substance allowed in Europe at the present time?

MR. FILAJDIC: We submitted for registration in key countries a couple of months ago, so what we're looking at is sales in a few major countries in 2005, most of the
countries 2006. This is not organic. So --

MR. RIDDLE: Oh, that's just for conventional use.

MR. FILAJDIC: Yes.

MR. RIDDLE: Okay. So it's not approved for organic use --

MR. FILAJDIC: Not yet --

MR. RIDDLE: -- in Europe yet.

MR. FILAJDIC: -- no. No.

CHAIRMAN KING: Dave.

MR. CARTER: Yeah. Just a question on the handling of it during application, because the TAP noted that, you know, it's not harmful as long as you have the proper protection, which you can say about just about anything, so, you know, as far as in your intent or something like that, but --

MR. FILAJDIC: Nothing unusual. I'm not sure of the numbers, but there's (indiscernible) four hours, which I believe is pretty much the minimum. I'm not aware of any -- any additional requirements that we have other than --

MR. CARTER: What are the main problems with exposure to it, I mean what would you run into?

MR. FILAJDIC: I'm not really aware of anything.
Our toxicity is fairly low. There is a little bit of an
eye irritation, but other than that, toxicity -- I have
numbers in a document that I submitted. It's very low.
And persistency in the environment is also very short.

MR. SIEMON: Did we get the document he's
referring to?

CHAIRMAN KING: I don't know, I can't seem to
find it, unless someone else --

UNIDENTIFIED MALE VOICE: No, I didn't either
(inaudible) --

CHAIRMAN KING: -- so I don't know if that's
something that Katherine had received --

UNIDENTIFIED MALE VOICE: Can we make copies?
CHAIRMAN KING: Do you have copies with you?

UNIDENTIFIED FEMALE VOICE: I have some copies.

I downloaded one, it was on the website, so I'll get
copies.

CHAIRMAN KING: All right. Rose had another
quick comment.

MS. KOENIG: I have just one more question. Are
you familiar -- I know the Organic Materials Review
Institute has a brand name of a natural source of cytokinin
on there. Are you familiar with that product, and do
you --
MR. FILAJDIC: No, I'm not. As far as I know, this is -- as far as I know, Valent BioSciences is the only company actually doing extensive research on this. There are other companies that use generic products. There is actually a 6BA that is already registered in the United States for non-organic production by Fine Agrichemicals [phonetic] but only at a -- at a low rate, so --

MS. KOENIG: This would be a naturally-derived form. I think it's from --

MR. FILAJDIC: No, I'm not.

MS. KOENIG: -- fish or --

MR. FILAJDIC: Oh. No, I'm not.

CHAIRMAN KING: Additional questions?

(No response.)

CHAIRMAN KING: Thank you.

MR. FILAJDIC: Thank you very much.

CHAIRMAN KING: Next is Zea Sonnabend, CCOF; on deck, David Engel.

MS. SONNABEND: Hello. I'm Zea Sonnabend, from California Certified Organic Farmers. Most of you have seen me up here many times. Of course I would like to comment on pretty much every subject brought up today, but I'm going to confine myself to a few subjects that have been brought up yet, that I think are important.
First of all, the petition that you'll be dealing with concerning urea in pheromone traps for olive fruit fly. I understand that the urea was petitioned as an active ingredient, which in use in the field, at least in California for olives, it is not, it is the -- and the TAP review is really inadequate to explain the situation in which it is used, and so I feel like I need to fill this in, because we have a lot of olive growers that would probably like to use the material as an inert in a pheromone trap.

These traps are for a fly, not a moth, and the traps need to have urea in liquid form to be able to work effectively, and therefore it's like a little bottle that is hung in the trees, and the sticky part with the pheromone is at the top of the bottle and then a solution of ammonium carbonate and perhaps urea is used in the bottom of the bottle to provide the smell like rotting meat that attracts the flies to the traps.

So far my personal interpretation of the exemption that you gave to list three inerts for pheromones would apply to urea for this use because it is on List 3, it's registered for -- as an active pesticide not for this use, but it is also on EPA List 3 as an inert, and it is serving the function of the -- the equivalent function of
the other List 3 inerts in the other types of twist-tie
traps.

Anyway, I understand that you don't want to allow
it as an active, perhaps, but I do urge you to word your --
whatever vote you take on it so it does not prevent its
use, perhaps, as -- under the pheromone exemption for
List 3 inerts in traps.

So far as actually haven't let our growers use it
because it was under petition and I didn't understand
exactly the finer points of the petition, but the ammonium
carbonate by itself is not working that well, we have a
really bad olive fruit fly problem that's evolved in the
last couple of years. And I will be here when you discuss
it, if you need more background information.

Secondly, as sort of the historical voice of the
past materials reviews for the NOSB, I was quite concerned
that the letter that the department issued concerning
phosphoric acid in aquatic plant products.

The original NOSB, when they put things on the
National List, had no intention for other synthetic things
that were not mentioned in the annotation to be allowed in
those products. Not -- and I don't want to say that I'm
opposed to the phosphoric acid, possibly, in aquatic plant
products, I think it might be a very appropriate thing,
because they do need something to preserve and stabilize it, but it should be reviewed by a TAP review, because there are other alternatives calcium propionate and -- or sodium propionate and sorbates and things like that, that could also serve the same functions, and not just blankly allowed without a TAP review for that purpose.

It, you know, leaves the door open potentially to elemental sulfur with emulsifiers, fish products with urea in them, all kinds of additives that could be used with things on the National List.

I urge you to put a statement at the beginning of 205.601 which says that things on the National List may only be used in the -- with the restrictions in the section to say that they should only be used with the annotations as presented, not with additional products in them.

Okay, I also wanted to comment on the Sunset document for the National List. I read this very quickly. I think it is really important to set up a procedure for -- you know, to review the -- re-review the materials.

I do really hope that you don't base it entirely just on technical information, because the technical information from the original reviews is not equivalent to the technical information you get today and you'll be creating a lot of work.
I do think it's a good -- the part about going for public comment to suggest priorities for review is a good idea. Review the controversial ones and -- but make a streamlined procedure for the ones that aren't going to have a lot of controversy or else you're going to really be in for an amount of work you're not going to be able to complete.

And last of all, I was on the Compost Tea Task Force, we made a very thoughtful document and recommendation, and I will be here to help with background information on that and to provide anything you might need from that task force. Thank you.

MS. DIETZ: Zea, on the phosphoric acid, I'm a -- as a historian, I'm going to ask your opinion, and also Steve Harper here is a past NOSB member so I might ask Steve --

MS. SONNABEND: And Merrill. Actually, Merrill was on the NOSB at that time.

MS. DIETZ: Since we've been reviewing materials at this board, we asked to see the whole manufacturing process, and it's been part of our discussions that if we approve a material, then we're approving everything that it takes to make that material function on the National List,
so that would be anything that's used in that manufacturing process of that material, unless we specifically annotate against or restrict.

So what you said is contradictory to what I believe we've (inaudible) --

MS. SONNABEND: No, they did -- well, they did look at the things that were used in aquatic plant products --

MS. DIETZ: Okay --

MS. SONNABEND: -- and decided to only allow --

MS. DIETZ: Okay. Right.

MS. SONNABEND: -- hydroxide stabilization, potassium hydroxide stabilization. Or extraction, excuse me.

MS. DIETZ: Okay.

MS. SONNABEND: However, not as much information was available at the time they did that review about other additives, about the need for preservatives in the products.

MS. DIETZ: Right. But from a board standpoint, we can't go back until the re-review of the material and look at an entire process, but our function of this board and the material on the National List is it's allowed unless it has a specific annotation that --
MS. SONNABEND: This does have a specific annotation and --

MS. DIETZ: Right. I'm talking in general, I'm not --

MS. SONNABEND: Right.

MS. DIETZ: -- specifically talking about the phosphoric acid issue --

MS. SONNABEND: Okay. But --

MS. DIETZ: -- but just as a blanket so that --

MS. SONNABEND: Yeah. It's just that that annotation was expanded upon by the NOP, and I don't believe that was the intention when it was voted into the --

MS. DIETZ: Okay, and I'm not commenting on that, other than as a historian and as how we have to look at a material on a National List --

MS. SONNABEND: Uh-huh.

MS. DIETZ: -- and there's many, many, many that are on there. I mean, natural flavors is a typical example that --

MS. SONNABEND: Uh-huh.

MS. DIETZ: -- and there's many, that if it's on there, then we have to assume that the process to make it is allowed unless it's restricted by the annotation.
MS. SONNABEND: Right.

MS. DIETZ: Okay. Okay.

CHAIRMAN KING: Jim, then Rose.

MR. RIDDLE: No, Rose was first.

CHAIRMAN KING: Okay, Rose, then Jim.

MS. KOENIG: Which gets me back, I guess, to sort of Kim's point and what you brought up in terms of the Sunset Provision. The Sunset Provision that was proposed by the committee allows for that -- the calling of more technical information on issues that have kind of surfaced, such as perhaps the fish in aquatic plants, and also allows, I guess, the NOSB to re-look at some of those earlier materials that were put on in the early years, that as I understand it -- and again, I wasn't on the board -- were in page formats and very abridged versions, not really a technical review at all but sort of just a compilation of information that people could gather.

Could you comment --

MS. SONNABEND: Okay --

MS. KOENIG: -- to those reviews, because --

MS. SONNABEND: Uh-huh.

MS. KOENIG: -- you know, there is a suggestion that those -- that technical information was adequate, and that's what --
MS. SONNABEND: Right.

MS. KOENIG: -- I'm trying to understand, is the adequacy of that technical --

MS. SONNABEND: They varied a lot. There were 160 -- or -54 products reviewed in three NOSB meetings, or four. I mean, we had days where 40 were done in a day. But the background information varied from some that I have huge volumes in my files on just one material, to the one-page format.

They did receive technical review in the sense that each material got sent to three experts in the field, who did offer their opinions, just like today, but the source documentation that those three experts had to deal with was skimpier than it is today, and what they -- some of those three experts did actually write papers about it, and others just checked the box, "okay, synthetic," or "not okay, synthetic." So it varies.

That source document does exist still. You can go back over it. But, you know, my concern with your -- the version that you showed me, that -- the way it's written, is that -- and I apologize for saying this, but some of the clarity of it is mired in proposing future guidance documents (chuckles), and it doesn't make clear that there could be things that won't need supplemental
review to just be able to go through. So it would be good
if it could just elaborate a little bit more on that,
maybe.

CHAIRMAN KING: Okay. I have Jim, then Nancy,
then Ann.

MR. RIDDLE: One comment, not a question. I
appreciate your historical perspective on the aquatic plant
extracts and that the only substances which can't be used
are those which are allowed under the annotation, and I'd
just like to read something from the preamble, that Rose
had brought to my attention, Page 80612, where the NOP said
that synthetic ingredients in any formulated products used
as organic production inputs, including pesticides,
fertilizers, animal drugs and feeds, must be included on
the National List. As sanctioned by OFPA, synthetic
substances can be used in organic production and handling
as long as they appear on the National List.

So, you know, that really is the precedent that
we're working under.

MS. SONNABEND: And that's why aquatic plant
products is on there in the first place, because most
people think: oh, that's a natural, but the extraction
process renders it to be a synthetic, and that was decided
by the original NOSB.
MR. RIDDLE: And my question is about the urea in the traps, and I -- I heard this interpretation, that it could fall under the EPA List 3 allowance that's already become part of the amended rule, and the question I have is about the removal of those traps as standard practice. Are these something which actually can be recovered and removed or are we looking at --

MS. SONNABEND: Yes.

MR. RIDDLE: -- soil application here?

MS. SONNABEND: No, no. It's a little bottle.

MR. RIDDLE: Yeah.

MS. SONNABEND: It does not leave the bottle. The bottles are pulled down at the end of the year. The material gradually evaporates over time.

MR. RIDDLE: But the bottles themselves and any residues or remaining materials are removed.

MS. SONNABEND: (Nods head.)

MR. RIDDLE: Okay.

MS. SONNABEND: I do want to make it clear that, you know, so far, that is my interpretation, but I have not advised these UF growers that they could use this yet --

MR. RIDDLE: Yeah.

MS. SONNABEND: -- until the petition got clarified.
MR. RIDDLE: Right.

CHAIRMAN KING: Okay, Nancy, and then Rose has an additional comment.

MS. OSTIGUY: Zea, my question is on urea still. Explain to me your reasoning for looking at urea as a pheromone rather than an attractant. It is not a standard pheromone for an insect.

MS. SONNABEND: Okay. A pheromone twist-tie, for instance, or a pheromone wing trap contains the pheromone, and then it contains additional substances that help the pheromone disperse, that keep it from breaking down too fast, that maybe -- you know, additional attractant-type things. We don't know what all the List 3s are. We looked at a couple of them, but we don't know what they all are, in all the different pheromone traps, and the problem with reviewing them all is what led to there being an overall exemption. This -- it all comes in one package that you buy from the company.

In the olive fruit fly traps, mostly the growers put them together themselves. There is -- University of California has been providing pre-made traps to some -- in some counties, but mostly the grower has to get the pheromone, get the bottle, get the ammonium carbonate, and put it together themselves.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
I see it as being an equivalent thing, although the grower made it themselves, but they do have to get the urea and the ammonium carbonate component from -- you know, it's a different thing, when they buy it, and they put it together themselves.

MS. OSTIGUY: Well, the logic --

MS. SONNABEND: So maybe you do -- I mean, it is your prerogative, but I'm just saying if you're going to reject the petition as it stands, word it carefully with whether you want to allow that, its use as an inert, or not, because otherwise it's still in limbo, the way it's actually used.

MS. OSTIGUY: But what I would -- what I'm trying to understand from what you're describing is the difference between inert and active when the material is an attraction. That is an active ingredient, in my understanding of the definition, of active versus inert.

MS. SONNABEND: I think the pheromone companies don't see it that way necessarily. You know, I -- it's your determination to make.

MS. KOENIG: I think the problems you get with this, what you're describing -- and again, I have to think a little bit more about it, but my gut is, is that if there's a commercial product, okay, that contains urea, it
would be under the inerts, it wouldn't be listed on that
product, then based on what we voted on as far as the
List 3s for those types of traps, it would be okay.

But what you're saying to me: with these
homemade jobs it's a totally different story because it's
not a commercial product, so in fact we can't -- you know,
our hands are tied on this one, we can't approve it as an
-- you know, an item, we can't approve it if it's not
registered with the EPA. I mean, for the first step is --
if it is -- so I'm saying if you can find a commercially
available product that has it as an inert --

MS. SONNABEND: How -- I mean, I just have
trouble understanding how farm advisors are recommending it
if it's not approved by the EPA.

MS. KOENIG: But farm advisors are not
recommending it to the NOP --

MS. SONNABEND: Right, I understand that.

MS. KOENIG: -- you know, that's not our -- you
know. So anyway, that's -- that's I think --

MS. SONNABEND: You know, it's another example
of: the commercial companies get to sell the product but
the farmer doesn't get to make it themselves.

CHAIRMAN KING: Other questions for Zea?

(No response.)
CHAIRMAN KING: Zea, thank you. David Engel is next, and Leslie Zuck is on deck.

MR. ENGEL: Good morning. My name is David Engel. I'm a dairy farmer from Wisconsin, still.
(Laughter.)

MR. ENGEL: I'm also the executive director of the Midwest Organic Services Association, and recently I am what would be called an interim board member, interim steering committee member, of the recently-formed Accredited Certifiers Association.

So my comments today, as they have been in the past, I tend to like to kind of step back and look at the larger picture and get a sense of what we're doing with the pieces that we have.

You know, like when we were growing up, our mother said, "Well, you pick them up and put them away." Well, as mature adults now, we have a lot of pieces out there that we're working with, and sometimes they get kind of messy, they're not really where they should be, they're not working properly, and, as several people have expressed today, when we come to a meeting like this, it's a mess, it seems like, to some of us, but I -- I don't take that view.

I think the pieces are very positive. Obviously they are what we have to work with. They are pieces like
the NOSB, the national rule, the federal rule, the National Organic Program and their staff, the different certifiers, companies that are petitioning products, the petition process itself, all of these pieces go together, and we are working with them now.

So to repeat, then: process is everything to me, and we need to make sure that these pieces are working together. For example, one thing that has been mentioned before that we think would be very, very positive would be an executive director for the National Organic Standards Board, because that would help you people coordinate within yourselves and provide a go-between between the NOSB and the NOP. We think that would be very positive.

Another issue that has come up in the past, that I'm not sure where it's at, at a certain point -- I believe it was last year, I can't remember, the peer review panel was brought to the table by the National Organic Program and a certain kind of process was put in place. It didn't appear to me that it was what the Organic Food Production Act required in terms of a peer-review panel, but nevertheless, there was something started, and I'd be interested to see where that comes from -- or how it ends up.

Another issue that has come up in terms of process has been timely publication of the ingredients that
the Board recommends in the federal docket so that they can be brought into production, into use, by producers.

Generally speaking, the community has felt -- and this was brought up today earlier -- that a recommendation and an approval by the National Organic Standards Board then would result in a timely publication in a federal docket and it could be used in a reasonable manner. That has not happened, and it's caused a lot of problems.

Another issue that has been brought up today and that I feel that some of these, you know, issues could be addressed by looking at the process we have, is: whose authority is it to provide guidelines, and what kind of relationship are there in answering these questions, that we all have, to what they mean on the ground, and an example of that has to do with the treated seed, for example.

The dairy interpretations that have been made by the National Organic Program, that seem to fly in the face of what everybody's been doing, and yet now there's an interpretation, so -- it's a guideline, it's an interpretation.

What does this mean to a certifier and how they apply it? One good example of process that has occurred, I think -- and I've talked with several of you about this,
and that's the feedback that I've gotten -- is last -- the
last NOSB meeting, you all went through a -- you stepped
back, you went within and you addressed the compatibility
issue, and this was based on a need, perceived by
everybody, to put together better --

CHAIRMAN KING: Finish that sentence and then
we'll have some questions.

MR. ENGEL: To provide better review of
materials. Thank you.

CHAIRMAN KING: Questions for David about any of
the items he brought up?

(No response.)

MR. ENGEL: Thank you.

CHAIRMAN KING: Thank you. Leslie Zuck, and
Urvashi is on deck.

MS. ZUCK: My name is Leslie Zuck. I'm the
Director of Pennsylvania Certified Organic. We certify
about 300 operations in Pennsylvania, a lot of chickens and
cows. I'm also on the interim steering committee with Dave
Engel for the Accredited -- the newly-formed Accredited
Certifiers Association, and I would like to make a couple
quick comments, at the beginning of my comment, about two
of your draft recommendations, since you're going to be
talking about those in the next couple days.

On the accredited certifying agents' procedure for determining minor non-compliances, I would really -- I know that you originally were asked to take out the term "major" as it applied to non-compliances, but I really would like to have you reconsider using the designations "major" and "minor" non-compliances because -- we've even just tried to discuss this document, and the issue -- it just becomes a semantic nightmare, and it could become a legal nightmare as well when we're dealing with clients, because having the word "non-compliance" refer only to major non-compliances makes things unnecessarily difficult, because when you say "non-compliance," the word usually would refer to both of those types of compliance -- non-compliances.

So it should -- the plain "non-compliance" should refer to either and we need to bring back the "major" and "minor" so that we can be clear what we're talking about. I mean, it's hard enough for certifiers to really understand, we're having a discussion in the staff -- you know, with the staff, and we have to convey that information to our -- our clients and our farmers.

On the commercial availability draft recommendation, Number 2-B, 3 and 6, these -- actually,
these two first comments were also on behalf of the Northeast Certifiers Association, or group. B-3 is asking -- or requiring certifiers to verify the non-availability of a material by checking current lists of some sort, and we believe this burden should be placed on the producer to produce to us the Lists that were checked and, you know, bring that as part of their Organic System Plan. The burden is on the producer to verify that.

And Number 6, submitting a list to the NOP of all materials that we approve, and we would just like to know why -- what would that information be used for and why would that additional burden be placed on certifiers.

Okay, my main comment is about the guidance statements -- the guidance statement on the use of fishmeal as a protein supplement in the feeding of organic livestock.

After reading the document, it occurred to me that it would be extremely important to have a definition, a better definition, of what a protein supplement is. Since it doesn't have to be organic and it can be fed in any amount, I fear that without more specific information defining it, that it would open the door to a lot of things. What one producer or certifying agent would call a supplement another producer or certifying agent could just
as easily call a feed ingredient, which would then have to be organic.

So we need a little help here. In fact, the current definition does -- it says -- it defines a feed supplement as a combination of feed nutrients, some even saying fishmeal as a stretch, to get under that definition, if it's not a combination of feed nutrients. So I think we just need some help with that there.

I would also like to ask for clarification from either the NOSB or NOP regarding Section 205.237 and as to whether the non-synthetics referred to there cover both agricultural and non-agricultural materials. The fishmeal guidance statement doesn't clarify whether the fishmeal is allowed because it's non-synthetic or because it's non-agricultural, or doesn't it matter.

As an accredited certifying agent, it's important for us to have this clarification. It affects things like the use of maybe molasses, kelp, alfalfa meal, or, depending on the definition, even soybean meal as a protein supplement. So we need a little help with that too.

It's important for us to know whether we must prohibit these non-synthetic materials and supplements that are allowed under .237 if they also contain a synthetic ingredient that is not on the National List. PCO has
allowed the use of fishmeal as a non-synthetic under .237
as long as it did not contain a synthetic ingredient not on
the National List, such as a synthetic preservative,
ethoxyquin, but fishmeal preserved with the natural
preservative Nature would be allowed. Did I say we did
allow -- we did not allow the use of fishmeal with
ethoxyquin but we do allow the use of fishmeal with the
natural preservative Naturox.

So since the statement -- as long as it does not
contain synthetic ingredients is missing from that guidance
statement, I'm just wondering why that issue wasn't
mentioned and whether, as a certifying agent, I should be
allowing or prohibiting these materials.

CHAIRMAN KING: Thank you. Questions? Andrea,
Ann.

MS. CAROE: Do you have your comments written,
Leslie?

MS. ZUCK: I do not. I could write them.

MS. CAROE: I mean, you've got a lot of good
comments in there about a lot of recommendations.

MS. ZUCK: Yeah.

MS. CAROE: We're going to be discussing that,
and I tried to take as good notes as possible, but --

MS. ZUCK: Well, I'll tell you what, my next
sentence was going to be a recap of those three things, the	hree basic -- the three basic questions I have, which are:
a need for a better definition of supplement, especially
protein supplement, which there is no definition for; and
can the non-synthetics allowed under 205.237 be
agricultural or non-agricultural; and three, is fishmeal
allowed even if it contains a prohibited material, and if
so, are other non-synthetic supplements also allowed if
they contain prohibited materials.

So that's kind of a summary of my questions.

CHAIRMAN KING: Well, and I think it would be
important if we could get copies of those questions
somehow, even if --

MS. ZUCK: I'll do that. I have it on my
computer, but I couldn't print out.

CHAIRMAN KING: Oh, yeah. But they're very well
thought out, so I think it's important to go ahead --

MS. CAROE: And also your comments on the minor
non-compliance and commercial availability.

MS. ZUCK: Okay.

MS. CAROE: Well, I guess this was under the
commercial --

MS. ZUCK: Yeah, that was --

MS. CAROE: Yeah, the commercial availability as
well.

MS. ZUCK: The commercial --

MS. CAROE: Those comments that you made as well, I'd like to see those written down, if I could.

MS. ZUCK: Sure, I'd be happy to.

CHAIRMAN KING: You're passing --

MS. ZUCK: I wrote these on the train, so you don't want a copy of this.

CHAIRMAN: We're going to get to you eventually, okay?

MS. ZUCK: I can hardly read it.

CHAIRMAN KING: Third time's a charm, right?

Jim, you --

MR. RIDDLE: Yeah. On the commercial availability, we did receive some other comments that were posted on the website, similar to yours, and I don't have the draft open in front of me right now, but I do believe that we've made some changes --

MS. ZUCK: Good.

MR. RIDDLE: -- but we will -- I'll be presenting that tomorrow morning. So you'll be here?

MS. ZUCK: I will be.

MR. RIDDLE: Great. Yeah. So if they're not being addressed, then speak up, you know, at that time, if
they haven't, but it would sure be helpful to get them in writing.

    MS. ZUCK: Will do.

    MR. RIDDLE: As far as answering those other questions about the implication of the feed -- fishmeal, I think we have the same, similar questions.

    CHAIRMAN KING: Other questions for Leslie?

    (No response.)

    CHAIRMAN KING: Okay. Thank you.

    MS. ZUCK: Thank you.

    CHAIRMAN KING: Urvashi, you're up, and James Wettle is on deck.

    MS. RANGAN: Good morning. My name is Urvashi Rangan. I'm an environmental health scientist for Consumers Union. We're the publisher of Consumer Reports magazine. I also direct the eco-labels project at Consumers Union, where we rate environmental labels on lots of products, and organic is definitely one of them. So one of the main missions of that is to educate consumers as to what organic means, which is why I come here to every National Organic Standards Board meeting.

    We want to thank you again for your tireless efforts to guard the standard and guard this label for consumers. Without you, without these open public forums,
it would be very difficult for us to express our concerns on a regular basis about these things. It also gives us an opportunity to regroup, to learn what new things have been issued.

We also want to commend the NOP for prohibiting the use of the USDA label or any NOP approval implications on personal-care products, on dietary supplements, and on aquaculture. We think that consumers are better served by that, and for those -- for all of those for a variety of different reasons, but we commend them for their actions on that.

However, these guidance statements that have been issued in the last week, of which I think there were four new ones, I'm not sure what this is. Some of these come with significant changes to the regulations and to the law. This is a public program. That process that needs to be in place is that these things need to be proposed in regulations for public comment. It's really difficult when we have clarification statements that are also subject to change at any time without public comment. This is not what guidance needs to be, this isn't how this program needs to be run.

There's one of these directives that's of particular concern to Consumers Union, and I think I'm
going to probably spend most of my time today talking about that, but there are other issues that I'm going to be bringing up on Friday concerning labeling inconsistencies, concerning the fishmeal, concerning the antibiotics in livestock.

But this one I'm going to talk about today is of most concern to Consumers Union. I don't think there's been an issue as important to maintaining consumer confidence in the label, and that has to do with this compliance and enforcement directive for pesticide use in organic production.

We don't see this as a compliance and enforcement strengthening; we see it as a loosening of compliance and enforcement. Consumers expect -- and this is what the regs and the law say -- that there are no synthetic pesticides reviewed unless otherwise reviewed by the National Organic Standards Board and approved for use on the National List.

We get this question all the time from consumers: what is on organic produce, are there pesticides being used, are there synthetic pesticides being used. To be honest with you, I get it internally at Consumers Union. People don't quite understand. And it's already convoluted enough to explain that well, it's not that there aren't any synthetic pesticides, but those that are used are approved
by this board. That is the very essence of the law and the regulations, and it is before they are used they are reviewed and approved.

This entire document disregards that fact, that these compounds and these agents need to be reviewed before they are used. Many of you may recall the Consumers Union has tested organic produce for pesticide residue, we did that before the National Organic Program. Because there have been assurances now that there is a process in place for reviewing these materials, the question has not been opened again, as to whether or not these things need to be tested. This document opens that question. These prohibited pesticide residues could be found now on organic products that include ingredients on EPA's List 2 and 3 that are prohibited for use in organic production.

Consumers rely on this board to make sure that that doesn't happen. It cannot happen. It is serious erosion of what the organic label means to consumers. And this guidance document makes significant changes to that and makes a serious shift of the standards.

It's based in secrecy, these ingredients are not required to be listed, it is under confidential business information. Based on a conversation I had with EPA yesterday: only the manufacturer really has access to what
ingredients are in those formulations. EPA is the only one that can crack that code. That's why EPA proposed a pesticide registration guidance for manufacturers of pesticides who want to get extra labeling that their pesticide is okay for the National Organic Program. We would like to see this board mandate that pesticide manufacturers have to go get that NOP label from NOP -- from EPA. EPA has offered to do it. We need to take them up on that opportunity.

CHAIRMAN KING: Questions or comments for Urvashi?

(No response.)

CHAIRMAN KING: Thank you very much.

MS. RANGAN: Okay. You're welcome.

CHAIRMAN KING: I have James Wettle up next, and then Marty Mesh is on deck.

(Pause.)

CHAIRMAN KING: This is your official proxy, I see. So we'll have the opportunity to see Marty for ten minutes.

UNIDENTIFIED MALE VOICE: I think he needs a handicap for doing this to me.

(Laughter.)

MR. MESH: They asked me to. As the primary --
my name's Marty Mesh, reading comments on behalf of the Texas Organic Cotton Marketing Cooperative.

As the primary marketer of organic cotton grown in Texas, the Texas Organic Cotton Marketing Cooperative is against the NOSB's crops committee's proposal that hydrogen chloride not be added to the List of allowed or regulated substances. Our reasons and comments on recommendations and the TAP reviews are detailed below.

As stated in the co-op petition, we are requesting that the NOSB allow the restricted use of hydrogen chloride in the process of de-linting organic cotton seed because we have no alternatives.

First of all, there is no commercially-available organic cotton seed; second, there is not any commercially-available non-organic cotton seed that is not acid-delimited; third, planting un-de-linted or fuzzy seed is not an option with mechanized planting; and fourth, there are no commercially-available alternative processes for de-linting the seed or otherwise making the fuzzy seed suitable for planting.

The crops committee and TAP reviewers suggest the use of lactic or acetic acid as alternatives but acknowledge that these may not be effective. All of the de-linters and others with expertise in dealing -- in the
de-linting process, that we have talked to, agree that
these acids would not work satisfactorily.

One of the persons we discussed this with was Dr. Gay Jevedin [phonetic], retired senior director of research for Cotton, Inc., who is the co-developer of the dilute acid-de-linting process using sulfuric acid. Dr. Jevedin stated in a phone conversation April 14th, '04, quote, "Acetic acid and lactic acid would not be suitable alternatives for commercial de-linting of cotton seed. These acids are too weak to remove the lint in a short enough time to prevent damage to the seed," unquote.

As far as alternative processes of de-linting, we have pursued and are continuing to pursue any possibilities that we find. We're working with Tom Wiedengardner [phonetic], director of cotton seed research and marketing for Cotton, Inc., on starch coating the fuzzy cotton seed to make it usable in mechanical planters. Wiedengardner, who has been involved with Cotton, Inc., in the development of easy-flow cotton seed for the feed industry is now trying to improve the process for planting seed. We have sent him 250 pounds of fuzzy cotton seed for trial in his pilot plant, if he is able to get it going.

However, Wiedengardner indicates that at best commercial availability of planting seed using this process
is several years away.

Also another company, LT Kinzer Company, is working on an enzyme de-linting process, but here again, it is in developmental stage and is a few years away from commercial availability.

We've also looked into the mechanical de-linting options but because of the various problems have not found anything that's a viable solution. One of the best hindrances to finding an alternative to de-linting with hydrogen chloride, whether it would be trying organic acids or special mechanical de-linting, is that no commercial de-linting company is willing to do anything out of the ordinary for the small quantity of planting seed needed by organic producers. We have difficulty even obtaining acid-de-linted seed that is not treated with various chemical seed treatments.

The large seed companies will not provide untreated seed at all. We are fortunate that one small seed company has been very good to provide us with untreated planting seed, and a few local de-linters will de-lint producer cotton seed and leave it black, with no chemical seed treatments. However, even these who have provided us black seed are not at all interested when approached about alternatives to hydrogen chloride because
our volume is so small.

The TAP review mentions that, quote, "organic cotton production is more than a hundred-million-dollar-a-year business," unquote. However, the current annual farm value of cotton sold in the organic market is approximately 2 million -- that's a 98-percent error -- for production in the United States and 15 million worldwide.

The TAP review also touches on the issue of whether the use of hydrogen chloride as a de-linter means HCI is being used as a processing aid or a seed treatment.

It is our position that it is a processing aid, not a seed treatment, because of, among other reasons, the fact that EPA does not require that it be registered as a seed treatment.

The criticalness of the issue of organic cotton producers' ability to plant seed that has been de-linted using hydrogen chloride cannot be overemphasized.

The members of our cooperative produce a large majority of the organic cotton grown in the U.S. --

MS. DIETZ: Time.

CHAIRMAN KING: Finish your summary, please.

MS. DIETZ: Your time on your first five minutes up, so you can finish it up --

MR. MESH: Well, let me finish the sentence.

R & S TYPING SERVICE - (903) 725-3343

5485 S. LIVE OAK, GILMER, TX 75644
MS. DIETZ: That's fine.

MR. MESH: All of our numbers you see that has been de-linted with HCI, as far as we know, all other producers in the country do also, and I'll give part of my five minutes to the Texas Organic Cotton Cooperative, to finish their letter.

MR. RIDDLE: Okay. Go ahead and then finish and then we'll see if there are any questions on this.

MR. MESH: As has been previously stated, we have no alternatives at this time. If organic producers were to be decertified for the use of this seed, it would eliminate organic cotton production in the U.S. If that happens, 4,000 or more acres would return to conventional cotton production because there are no other economically viable crops in this arid region, west Texas.

It would be especially regrettable for this to happen at this time because the demand for organic cotton appears to be finally taking off, our cooperative and others have worked very hard for many years to develop the organic cotton industry. It would be a tragedy if just at the point that there's potential for converting significant acres of cotton to organic with the accompanying reduction in pesticide use. I don't know if you're aware of how much pesticides are used in conventional cotton. It's...
substantial. In fact, there's none -- no other crop more.

The seed issue is allowed to eliminate domestic organic cotton production. We urge you to recommend that hydrogen chloride used for de-linting cotton seed be considered a processing aid and to allow hydrogen chloride for use in organic production for de-linting cotton seed.

The Texas Organic Cotton Marketing Cooperative will continue to pursue both mechanical and organic solutions for the process and will inform you as soon as we have found one.

MR. RIDDLE: And Marty, my clock shows you used just a little over a minute of your own time, so why don't you start --

MR. MESH: I think Kim was the timekeeper, I thought we were going to make improvements in the ability for timekeeping.

(Laughter.)

MR. RIDDLE: It's hard to let go of that (inaudible). But you'll have about four minutes on your own is what --

MR. MESH: "About" is the critical --

UNIDENTIFIED MALE VOICE: Your reputation precedes you.

MR. MESH: You know, if there's questions on the
de-linting -- I mean, I would also add that your TAP review is suspect, you have a Ph.D. of -- associate professor of chemistry in the middle of the U.S., you have a masters with biochemistry in forensic drug testing in the eastern U.S., and you have the U.S. --

CHAIRMAN KING: Marty, let me just interrupt. Are there questions for Marty concerning the de-linting process?

MR. MESH: Or the TAP reviews, I would take either one.

MS. KOENIG: No, and -- you know, Marty and I had talked as I know he had -- we had concerns with the TAP report, I mean, and that's what I wanted to make clear to individuals sitting in the room, is that when we vote and when we submit a recommendation for either crops or -- you know, any of the committees, I mean, it's based on the information at hand, and that's why it's really important, now that we're following that process and having it on the website in advance, that hopefully we'll get more of this public input and -- which means, you know, back to Jim's comment, that: yeah, there's some decisions in there that the committees made, but again, those decisions were made based on the information at hand, and we worked to try to let people know about that so that if there was other
information that we didn't have within the TAP, that we could consider that. So I thank you and I thank the Texas cotton growers for coming forth with that information, because one of the big things was the -- that gray area of alternatives, and the fact that they have brought forth an expert really helps the process, as far as being able to reconsider and think about this thing before the final vote.

The question I had was -- and what wasn't clear was whether the co-op -- and I think you made it clear. When you say organic seed production, were they -- are they in fact producing organic seed that they're trying to use themselves or is this an issue in both the non-commercial-ly-available -- you know, that organic seed is noncommer-cially-available and therefore it's just a process similar to the foundation seed that's occurring and therefore cotton is not even being able to be grown?

I mean, I assume that they're using seed that is already being processed, or de-linted. I don't know. What's the current situation?

MR. MESH: Right. The petition is so that organic cotton producers can use organic cotton seed in planting. It has to be processed as a processing aid with hydrogen chloride, so that they can continue to do that.
If you deny the petition, then the only thing they have left to do is find -- there is no alternative. You know, I was going to say find treated -- I mean find conventional seed, but that's going to be treated with HCI as well. There is no alternative.

MS. KOENIG: Thank you, because that wasn't clear.

MR. MESH: So their goal is to use organic cotton seed.

CHAIRMAN KING: Nancy has a question, then Dave.

MS. OSTIGUY: One of the points that you read in the letter, that I have a question about: since cost is not an issue that we can consider, one of the items is that planting of the linted version of the seed is impossible with the mechanical planting process.

MR. MESH: It's not possible. I mean, you plant cotton on thousands of acres --

MS. OSTIGUY: Right. Well, that's what I said, is it's not possible, right. But is mechanical processing -- is that a cost issue? What's the reason for mechanical planting?

MR. SIEMON: Compared to doing it by hand?

UNIDENTIFIED FEMALE VOICE: You mean mechanical -- any mechanical de-linting?
MS. OSTIGUY: Well, yeah, I'm supposing.

MR. SIEMON: Mechanical de-linting?

MS. OSTIGUY: No, I'm talking about planting, because it says that you can't plant linted cotton. One of the ideas is -- linted cotton seed because it messes up the planter. I'm not a farmer, okay, I --

MR. SIEMON: So you mean as compared to planting by hand?

MS. OSTIGUY: I know honey bees really well, you ask anything about honey bees, I can do that, but farming I don't know. And so the question is: is there any other way to plant?

MR. MESH: No, there's not any other way to plant --

UNIDENTIFIED FEMALE VOICE: Not commercially.

MR. MESH: -- cotton on -- I mean, you know, you can't grow cotton planting by hand. And, you know, Keith was a cotton farmer, or your dad was a cotton farmer, and maybe he could add some expertise, you know. I mean, I can tell you all about watermelons but not --

UNIDENTIFIED MALE VOICE: We don't hold that against the cotton industry.

(Laughter.)

MR. MESH: But as far as I know, there is no
other way to plant cotton except mechanically planted.

    MS. OSTIGUY: Which is what the question was: is there another alternative to planting.

    UNIDENTIFIED FEMALE VOICE: To the best of his knowledge.

    CHAIRMAN KING: Okay. All right, Dave, you had a question.

    MR. CARTER: Well, mine was almost along the same line of Nancy in that I need, you know, cotton 101. Coming from Colorado, it's not a big crop up there.

    MS. OSTIGUY: Yeah.

    MR. CARTER: But in planting it, I mean, is the de-linting -- the planting is the only issue that the de-linting is relevant? I mean, are there other -- other reasons that you need to de-lint the cotton seed before planting it or is it just because of the -- the mechanically planting?

    MR. MESH: Mechanically planting.

    MR. CARTER: Okay. There -- I mean, is there any other ways of -- is it drilled, like you drill wheat, is it --

    CHAIRMAN KING: Keith, please, come forward. You'll have to come to the mic, otherwise I'll be in trouble with the court recorder.
MR. MESH: Just for the record state your name.

(Laughter.)

MR. JONES: I'm Keith Jones, with the National Organic Program, and unfortunately, I have been a cotton farmer, so --

The last fuzzy cotton that was planted in the cotton belt was probably in the 1950s. My dad switched over from fuzzy planting to acid-de-linting planting in the mid to early '50s. You can't even find planters today that will plant fuzzy seed. If you look at planting systems today, it's primarily vacuum planters, and even when you were using plate-type planters, that technology was really not available even up until the mid '50s, was really the last fuzzy plate-type planters that were -- that were available.

So you're -- so because you're using vacuum planters today, de-linting is even a -- more of an issue than it was, say, even, you know, 30 years ago, because what you're trying to do is move that seed through essentially a tube, a plastic tube, about three-quarters of an inch, and you're trying to move that seed through vacuum from the seed hopper into the ground. So it's a planting issue, pure and simple. And when these folks say the technology is not available to plant fuzzy seed, that's a
CHAIRMAN KING: Quick question, someone who spends a fair amount of time among collectors of antique and old equipment and that sort of thing. What you begin to see over time is sort of the "what comes around goes around" adage and that, you know, technology does sort of reappear, and in your opinion, with this experience, Keith, would there ever be a point in the future where a planter would be remanufactured to plant fuzzy seed; if so, why; if not, why?

MR. JONES: Now, in my opinion, Mark, that's not going to happen, for two reasons. One, all the fuzzy planters of that era essentially went to Mexico and got junk, that's where all our planters went, okay. You might find a 4-O planter somewhere, stuck in a tree row, that could still plant fuzzy seed, but farmers out on the high plains of Texas use 12-, 16-, 24-row equipment, okay, it's very sophisticated. And so to go back -- to go back to that 4-O operation is just out of the question.

There's actually no demand even to do so, for an equipment manufacturer to do that, because nobody plants fuzzy seed anymore. The chosen path beginning in the 1950s for seed production was acid de-linting, and the reason for that is it's primarily a fungal issue. You take -- I mean,
you get a better distribution in the stand [phonetic]
because it's easier to plant, but it's also a fungus issue,
because what you've got in fuzzy seed is you've got the
ability to create disease and fungus problems. If you
eliminate that seed, particularly in areas that's got high
ambient temperatures, if you eliminate that fuzz around the
seed, you eliminate any place for that fungus to grow, okay.

And so we were able to move from -- and this is
off the top of my head, but we were able to move from
planting about 20 to 24 pounds per acre fuzzy to, at the
time of our latest technology, which was in the early '80s,
anywhere from 6 to 10 pounds per acre de-linted, okay.

CHAIRMAN KING: Nancy.

MS. OSTIGUY: Keith, the -- so -- but did the
de-linting decrease application of fungicides or any of
that sort of -- or did it just increase your ability to --
increase the density?

MR. JONES: Yeah, the issue, Nancy, is that --
one of the things that these guys are wrestling with is
that when you -- when you de-lint seed, you routinely apply
some sort of fungicide too. Okay, that's just -- that's
just the process. If you go to the de-linter, they're
applying -- they're not only de-linting but they're
applying a fungicide.

MS. OSTIGUY: With conventional seed.

MR. JONES: With conventional seed. So the challenge for the folks in Texas is to -- is to essentially get the seed de-linted, pull that seed out of the line so that the fungicide doesn't get attached to it, and it's my understanding that the -- the cotton industry, because these guys are not using GMO materials, it's still a save-your-seed kind of industry.

I mean, we saved all our seed when I was growing up, you would catch your planting seed from the gin, you would take it to the de-linter, have it de-linted, and that was -- that was what you would use. We used foundation seed that we saved for about 4 years and then we bought foundation seed about every 4th year.

And it's my understanding that JIMI [phonetic] is adopting a similar practice, and that is, they are harvesting organic cotton grown in -- according with the regulations, they are catching the seed at the gin, they're then taking that seed to the de-linter, and because they have to have it de-linted in order to plant the next crop, they have to have the HCI applied to it, and then the HCI essentially kicks it out from being organic again.

So they're caught in this kind of catch-22 that
they're never going to be able to get out of the cycle,

so --

MS. OSTIGUY: Okay.

CHAIRMAN KING: Are there additional questions or

comments for Keith?

(No response.)

CHAIRMAN KING: Thank you very much, Keith.

MR. MESH: So moving into my four and a half

minutes or so, the --

(Laughter.)

UNIDENTIFIED FEMALE VOICE: We'll see

(inaudible) --

CHAIRMAN KING: Yeah. It may be less at this

point.

(Laughter.)

MR. MESH: You know, again, my question is about

the TAP reviewers having no -- no history with cotton

production and relying on them for expertise. I view this

petition similar to methionine, I mean here's an industry

trying and looking at doing -- you know, creating

alternatives, trying to be in search of alternatives,

thinking that there is an alternative in the future, doing

some research, but clearly it's a few years away, and this

board approved methionine, you know, for a limited amount
of time, saying, "Let's do the research and try to find something that's more compatible with organic."

I will also bring up the issue that organic cotton seed is a huge feed source not treated with HCl, that seed is captured before the de-linting process and then it goes into being a component of livestock feed, and if you -- you're going to do away with a huge potential source of livestock feed, and Jim Pierce could probably give you some figures on how many producers are using organic cotton seed as a livestock feed source.

So, now moving on to Quality Certification Services, that's who I'm here to represent, a USDA-accredited certifier. We sent a letter to the USDA and the past secretary of the NOSB by mistake, but I hope that he forwarded to the rest of the members of the Board our letter, requesting a revision -- you know, re-looking at the scope document.

We're specifically concerned about aquaculture, which has been certified to the national rule prior. It was an excellently-written letter, and I'll make sure you get a copy eventually from Jim.

(Laughter.)

MR. MESH: And fabric, we think -- we're a little confused on that. It's not the worst thing to make a
mistake or issue a guidance document or a direction that
should be reexamined; it is much worse to not be willing to
admit a mistake and remain adamant that driving down the
wrong way -- driving down the wrong way of a one-way road
is okay because it's only going one way.

We request the NOSB to pass a resolution
requesting the USDA to take the steps we outlined in our
letter, which your past secretary has, to protect the
organic farmer and confidence of the organic consumer, and
I could go into it, but because the clock is ticking, I
wouldn't get very far, I reckon, but, you know --

MS. DIETZ: Now you've got a minute.

MR. MESH: But basically, you know, there was a
May '02 policy statement, and there's been public
statements made by the program, saying if you can certify
something to the Rule, it can be by an accredited
certifier, you can label it as organic and put a USDA seal
on it. People have invested hundreds of thousands of
dollars in organic production practices, meeting that,
based upon information -- in legal terms they call it
detrimental reliance, when you clarify something with an
authority and then act upon that, and those people are
being put out of business immediately based upon that scope
document, or scope change, without any public process.
So just know that I've finished early, I think this is a first.

(Laughter.)

CHAIRMAN KING: Okay. Kim has a question.

MS. DIETZ: While you were commenting on people -- reviewers of the TAPs, I just had one comment I was going to make, but since it's kind of brought out --.

One of the reviewers for a number of TAPS on the crops committees was an accredited certifier, and I --

MR. MESH: Can they certify cotton?

MS. DIETZ: -- I had a problem with that. There was a number of materials. So I just questioned having accredited certifiers actually conduct TAP reviews, I see somewhat of a conflict of interest there, and so we just probably need to address that.

MR. MESH: And did that certifier have experience in cotton?

MS. DIETZ: It was on three or four materials that we're going to be reviewing (inaudible) --

MR. MESH: Right, but my guess is they've never certified a cotton farm.

MS. DIETZ: Probably not, but it was -- it was an accredited certifier that -- I think it's a potential conflict.
MR. MESH: I think that's a comment to a process, you know, but --.

CHAIRMAN KING: Additional questions for Marty? Jim?

MR. RIDDLE: Yeah. Not a question, but I did receive your letter, and it was excellent and very well-written.

MR. MESH: I couldn't hear you, what? It was what?

(Laughter.)

MR. RIDDLE: And I will forward it to the rest of the Board. I thought you'd sent it to all the Board members, so I'm sorry for that. But, you know, the concern you raise is major and a change in the rules of the game after companies have made investments when the previous scope document said: if you can certify, if you can produce to the Rule as written, you're eligible for certification, and companies in a number of sectors have done that, and I -- you know, I think it's something that we probably need to hear a response from the NOP on how they came to that conclusion and also what their response is to the companies that are suffering economic harm because of this reversal in scope.

CHAIRMAN KING: Other questions?
(No response.)

CHAIRMAN KING: Thank you, Marty.

MR. MESH: Finished early.

CHAIRMAN KING: Indeed, nice. I don't know if Steve Harper's in the room, I have him down for public comment.

UNIDENTIFIED MALE VOICE: He is.

CHAIRMAN KING: He is?

UNIDENTIFIED FEMALE VOICE: We at least can acknowledge that he's here.

CHAIRMAN KING: He's saying no -- okay.

MR. HARPER: I'm Steven Harper, from Small Planet Foods. I guess I just want to acknowledge all the hard work that the NOSB continues to put forth. I'm sorry. I just wanted to acknowledge the incredible work that the NOSB continues to put forth. And I have a lot of concerns, but I did not have time to put some comments together, but I do want to make some positive comments on the 606 Task Force and the direction of the commercial availability and the clarification of the national -- the National List as it regards processing, and I think that is a very good direction for the Board as far as a recommendation, and I guess I'm going to leave my comments there. So I think that's a really good direction to help clarify that whole...
situation.

CHAIRMAN KING: Well, it's very good to see you and very nice to have you here, and we appreciate any comments you have.

I think now -- it's 11:45. What we'll do is break for lunch and come back, unless there are additional -- anyone who has not signed up, that wishes to give public comment, okay, and after lunch we'll begin with the NOP comments. We're scheduled to start at 1:15. I would literally like to start at 1:15, so please be back before that. Thank you.

(Off the record at 11:45 a.m. and reconvened at 1:17 p.m.)

CHAIRMAN KING: I'll reconvene the meeting of the National Organic Standards Board. First up is our comments form the National Organic Program, Rick Matthews. Rick has indicated that he has a number of slides, and I would entertain questions from the Board as he goes through his presentation; however, he may at some point say, for example, "the next slide may answer this question." So we'd like to get this through this efficiently, knowing that we have limited time. So if you do have a question, please feel free to make note and we'll recognize it. It's all yours, Rick.

MR. MATTHEWS: Okay. I would stand up, but we do
need to be able to work the microphones. Katherine, take it to full screen.

Okay, I'm Richard Matthews, I'm program manager of the National Organics Program, and I've got about 40 slides here that we're going to try and answer a lot of the questions that have been coming up, and the first one is we're going to talk about the cost-share program.

There currently are two different cost-share programs, there's what we refer to as the AMA, which stands for Agricultural Marketing Assistance program, and then there's the National Organics Program.

The purpose of these two cost-share programs is to assist with costs of the NOP certification. Under this program, the -- under both programs, actually, the AMA and the National,

Certified operations are entitled up to 75 percent reimbursement of their cost of being certified. The maximum amount that they can receive is $500. This is actually per year, so somebody who is renewing their certification is also entitled to receive cost-share funding.

Both programs are administered cooperatively between the USDA and the participating states. USDA allocates the funds to the states and the states process
the applications and distribute the funds to the people who apply for cost-share.

The AMA cost-share program is a $1 million program. It's currently funded yearly. It's for producers only. There are 15 states that are eligible to participate in this program. 13 of them are found in the Northeast. The two exceptions to that are Utah and Wyoming.

We currently have 14 states participating. The state that is not participating is Rhode Island. Rhode Island has historically not participated because Rhode Island has historically not charged for certification. They are going to, however, begin participating in this program with the next fiscal year.

For our purposes, a fiscal year runs from October 1st through September 30th, so beginning fiscal year 2005, which begins October 1 of this year, Rhode Island will join the group.

The national cost-share program is a $5 million program. It's a one-time funding. To date we have allocated -- or obligated 3.6 million of that $5 million, which means that there is 1.4 million that remains, that can be obligated to the states that are participating in the program.

The national program is for both producers and
handlers, but because of the AMA program, those 15 states that are under the AMA program, it's only handlers that apply under the national program in those 15 states.

We currently have --

CHAIRMAN KING: Rick, you've got a quick question, I think, about cost-share.

MR. RIDDLE: Yeah. You say there's 1.4 million left that hasn't been allocated, so at the current rate of allocation, by the end of this year or next year, would you anticipate --

MR. MATTHEWS: We have no idea when it'll run out. As states need additional funding, we provide that additional funding based on the history of the use of the funds within the state.

MR. RIDDLE: Would it be safe to say by the end of 2005 it could be short of funds?

(Laughter.)

MR. MATTHEWS: I --

MR. RIDDLE: Well, I'll say that. You don't need to. Okay, thanks.

MR. MATTHEWS: All right. We have 45 states participating in the national program. The two that would be eligible for both producers and handlers that are not participating are Arizona and Louisiana. Delaware, Nevada,
and Rhode Island are those states that are in the AMA program, their handlers are not being served under the national program.

The next one is a category that we seem to have had a lot of interest in lately, and that's the NOP budget. The total budget of the National Organics Program is $1,443,000. The Department, meaning USDA, and the Agricultural Marketing Service take overhead from that. The overhead that is expended is $180,756. That leaves, for salaries and benefits, 741,846, which is actually an increase over previous years. The NOSB is budgeted this year at $90,000. Now, what comes out of that budget is the cost of travel for board members, the printing of all of the documents for the board members' meetings, renting this room, paying for the airline tickets, things like that.

Then also included in there, for example, this year is the nominations process for new board members. Other non-paid category is $430,400. This includes travel, staff travel, parcel post, rent, communications, utilities, contracts, printing, supplies, equipment. Under contracts you will find TAP reviews, you will find our contract for doing compliance work, contract on copier maintenance. So that's where the contracts come in, mainly copier, compliance, TAP reviews, and some other miscellaneous
things that we've done in the past, you know, 40,000 here for -- for example, I believe it was with ATRA we did a $40,000 contract. So that's the kind of thing that goes into that.

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. MATTHEWS: Yeah. And in the non-pay area, contracts takes up the lion's share of that, there's very little that goes into these other areas.

Okay, now moving on to compliance cases, for fiscal year 2003 we had 114 cases that were opened by the compliance staff. 16 of those 2003 compliance cases remain open, seven of them are still in NOP compliance, nine of them have been referred to the NOP staff for follow-up work, and out of the nine that have been referred back to us, we have gone to the attorneys and requested the filing of a complaint for revocation of certification, so we have one now that has gone to the hearing clerks, to be assigned to a judicial officer. Three cases have been combined into one of the seven open cases in the NOP compliance.

That means that 96 of the cases that were open -- three cases have been combined into one of the seven open cases in the NOP compliance. That means that 96 of the cases that were opened in 2003 have been closed. 32 of those were closed because there was no NOP violation. Six
of them were also closed because there was a lack of
evidence in order to pursue the case. 58 of the cases
resulted in corrective action.

You'll note that from the Listing below, most of
these deal with labeling issues. The second most common
violation is: not being certified. So out of the 58
corrective actions taken, 26 have corrected the labeling,
12 have removed organic labeling from their products, seven
chose to become certified, and that was basically the
violation, they weren't certified, and 13 other corrective
actions.

Now, I can't sit right here and tell you what
each one was, but they're single occurrences of a violation
that were not of a labeling or a certification nature.

In fiscal year 2004, so far we've opened 18 new
cases. Seven have --

UNIDENTIFIED FEMALE VOICE: (Inaudible.)

MR. MATTHEWS: I'm reading from the wrong slide.

43 cases were opened. 25 remain open. Of the 25 that
remain open, 21 are still with NOP compliance, they're all
under investigation. Four of them have been referred back
to the NOP, and we'll be taking additional action.

Now we go to the closed cases. 18 of those cases
that were open so far this year have been closed. Seven of
them, again, no NOP violation. In fact, one of those seven involved an exempt operation. Eleven others have taken corrective action: three corrected labeling, three removed organic labeling, and then five other corrective actions.

Again, you can see that the primary reason for the cases that we're receiving have to do with either the person is not certified, which is the second most common, and then the most common is the labeling issue.

Okay, new members for the --

CHAIRMAN KING: We've got a quick question from Andrea.

MR. MATTHEWS: Andrea.

MS. CAROE: These cases where there is a representation of organic that is not certified, what surveillance is picking these folks up, is it complaints that you're receiving from the public or is this some other type of surveillance that's --

MR. MATTHEWS: Well, the compliance staff also does surveillance by going into supermarkets and buying product.

MS. CAROE: Is that primarily where you're seeing -- because I mean there was always a question, we knew that --

MR. MATTHEWS: Some of them are a result of an
NOC compliance staff buying products and then following up with the sellers of those products. The other way is through people who are filing complaints, and I don't have a breakout of how many of them were the result of complaints versus how many of them were the result of the compliance staff going into supermarkets and buying product.

For the Board, as I'm sure that many of you are aware, there is going to be five openings effective January 24th of 2005. Two of those are producers, one is a handler position, one is an environmentalist position, and one is the retailer position. These are 5-year terms of office. We have gone out with an announcement, and the resumes -- for those people who are interested in being board members, the resumes are due June 14th of 2004.

To date, we have published the news release that was published on March 8th of 2004. We've also issued a Federal Register notice, which was published on March 16th of 2004. That is what we have done in the past, a news release and a Federal Register notice. This year, for the first time, we are able to do something entirely different, and what that is, is that using the client lists that are supplied by certifying agents, we have been able to compile a list of 8,646 producers and handlers operating within the
United States. Every one of them has been mailed a postcard with the information that was found in the news release and the Federal Register notice. So every certified operation has been mailed a postcard, inviting them to submit their own names for nomination to this board.

We've also e-mailed postcards to 41 land-grant universities and three USDA outreach programs. We have not finished. We are still trying to do more. We are trying to contact environmental organizations as well as retailers. So we're doing quite a bit of outreach, trying to get a good slate of nominees for this board.

So far, as of April 23rd, we've received ten resumes; two producers, one handler, two retailers, and five environmentalists have submitted the resume needed for us to process their nomination. We've also got four nominations where we think these are really people who are serious and we're just waiting for the resumes; three of those are producers, one of those producers also qualifies as a handler, and the other one is a retailer. We've also received 25 inquiries, these are people that we really don't know, in some cases, who they are, but we do know that we have 11 producers who have inquired, we have one retailer who has inquired, and then 13, we don't have
enough information, but they have contacted us about board membership. Jim?

MR. RIDDLE: Yeah. Does a person need to state which seat they're seeking or you make that determination?

MR. MATTHEWS: We would prefer they tell us what they're seeking.

MR. RIDDLE: Okay.

MR. MATTHEWS: It helps in screening them. And you can apply for more than one position. A producer who is also a handler could say that "I want to run for a producer or a handler position."

Okay, we're going to move on now to accreditation. To date we've received 137 applications for accreditation. For those of you who looked at the preamble to the Final Rule, we were estimating that we might get about 50 of these, so we kind of underestimated the interest in the program from certifying agents.

53 of those 137 are private domestic certifying bodies. Now, four of them have withdrawn since they submitted their application. 20 of these applicants are states. One of those states has withdrawn its application; the state that withdrew is Connecticut. 64 foreign certifying agents have applied, and two of them have subsequently withdrawn their application.
Out of the 137, we have to date accredited 92. 38 of them are private organizations operating in the United States, 15 of them are states, and 39 of them are certifying agents operating in foreign countries. George?

MR. SIEMON: Are there physical visits for the foreign people yet, or what's the status of that?

MR. MATTHEWS: The auditors are performing site visits for the foreign, yeah. We've got one team in South America right now, don't we?

UNIDENTIFIED MALE VOICE: They'll start in June.

MR. MATTHEWS: In June.

UNIDENTIFIED MALE VOICE: Starting in June.

MR. SIEMON: Okay.

MR. MATTHEWS: Okay. For those that have not been yet accredited, and we don't -- we don't turn anybody down, we just don't approve them, okay, we just -- so for those that have not been neither -- they have neither been turned down nor approved, 12 of those are with the auditors, five of those are private domestic, three are states, and four are foreign.

26 are still waiting for information. Now, what that means is they haven't made it to an auditor, they have sent in information, the information is woefully deficient, and the auditors can't do anything with it, so what they do
is they go back to the applicant and request additional
information. So right now you have six privates, domestic,
that are in that boat, you have one state in that boat, and
you have 19 foreign.

Okay, now we'll move on to the arrangements for
export. We still only have one export agreement, and that
is with Japan. We have five recognitions; those are with
British Columbia, Denmark, New Zealand, Quebec, and the
United Kingdom.

The difference between arrangement and
recognition: An arrangement, in the case of Japan, is
where Japan has agreed that our standards are equivalent to
theirs and they recognize product produced to the National
Organics Program for export to Japan.

A recognition is where we have recognized that
foreign government's accrediting process as equivalent to
ours, and it allows the governments in those five countries
to accredit certified operations to certify to the National
Organic Program. Okay.

The final of the three categories for how people
get in is that of equivalency. As of today, we still do
not have an equivalency agreement with any foreign country.
The closest we are is with the negotiations with the EU,
and we're not there yet, but we're still working on it.
MR. O'RELL: A question.

MR. MATTHEWS: Yes.

MR. O'RELL: Is there any foreseeable time frame for the EU equivalency agreement?

MR. MATTHEWS: You want to answer that one, Keith? Keith's our chief negotiator. You know I couldn't let that one go by, Keith, after all the discussions we've had.

MR. JONES: No, I understand. I'm --

CHAIRMAN KING: The question was: is there a time line for the EU negotiations?

MR. JONES: The question is, is there a time line for the EU negotiations. There is a joint E.U.-U.S. summit that will be held in Dublin, Ireland, in June, late June, that is providing some impetus on both sides for the conclusion of an agreement. There is significant kind of process questions that we still have to address, both externally through the EU process and internally within the U.S. government, as to how best to conclude the recognition agreement.

We have made significant steady progress towards the -- essentially the dilution, if you would, of any technical issues that are outstanding. There are some, obviously, but we have, over the last 18 months, really
whittled those down just to the absolute essence.

You know, Kevin, you're asking me to gaze into a crystal ball, and I think my best guess is: There is certainly a strong desire on both sides to conclude an agreement. There's strong trade interests on both sides that would like to see the agreement concluded. If it's going to happen, it will happen this summer, I'm convinced of that, okay, because I think the timing and the momentum and everything is coming together, that if this is really going to happen, it will happen this summer.

MR. O'RELL: Keith, would this be a blanket equivalency for the full regulations, or will there be sections carved out where differences do occur --?

MR. JONES: Well, when we speak in terms of equivalence, at least from the perspective of AMS, we never assume that there will be 100-percent equivalency. When we talk and use the phrase "equivalence," we are assuming a combination of equivalence and compliance on both sides, okay. So that's the way we -- that's the way we view it.

At the current time we have carved off no sector, we have carved off -- there's not been any products carved off, with the exception of honey. It appears that the Europeans are not going to accept any U.S. honey at this point. Okay. And keep in mind those -- those -- the
issues that I'm talking about are still in negotiation, so
that might, again, work itself out, but at this time,
that'd be the only product area that's not under
consideration.

MS. CAROE: Keith, one more question. Just
educate me a little bit on government process. When this
gets signed by both countries of origin if an agreement is
reached, is that effective immediately or is there some
other government process that happens? I mean, if this
were to happen this summer, would it be effective this
summer or --

MR. JONES: No, that's -- that's a good question.
Usually, Andrea, the way the process works is that when
it's -- when it's signed off by the representatives of the
respective government, U.S. government, the European
Commission, it would be effective at a date certain.

There might be a lag time between the signing of
the documents and the effective date just because there may
need to be some things, you know, put in place to make
certain things happen, but it would be a very short time
frame that we've been looking at, after -- after signature.

So I think you can take some comfort in the fact
that if we're going to do this, it can happen relatively
quickly.
MS. CAROE: Thank you.

MR. MATTHEWS: Any other questions?

(No response.)

MR. MATTHEWS: Okay, the next area is the area of the directives, and let me explain something about directives first. We probably use some words that are a little bit foreign to the organic community as a whole, we use terms like "guidance" and "directive," and when we issued the program scope, the antibiotics, and the fishmeal guidance statement, when we sent that to the Board and to OTA the day before it was published, what we should have done was to say that that was a directive and not a guidance, and the reason for that is that directives basically tell you what you have to do to comply with the Act and the regulations; guidance, on the other hand, would tell you: here is our best thinking of one way for you to be within compliance of the Act and the regulations; you might find a better way yourself and still be within compliance. So the guidance is -- you don't necessarily have to follow the guidance as long as you still maintain compliance; a directive, however, tells you: this is the only way to do it.

So we will be changing the title on the first three from "guidance" to "directive." If there's a better
term that is less inflammatory, please let us know, but we are rather limited by government-speak as to what we can call these, so we hope that we're not inflaming situations simply because of a word that we have to use to describe what it is that we have to do.

MR. MESH: What about "proposed" (inaudible)?

UNIDENTIFIED FEMALE VOICE: Yeah.

MR. MATTHEWS: But they're not proposed, they're not proposed, Marty. Okay, let's move on to the next --

CHAIRMAN KING: Hold on, Rick, Dave just had a quick question.

MR. CARTER: I do want to extend on that, I mean as far as directives, and I think one of the things that at least some of the Board is a little bit concerned about is, on these things -- and we recognize that it's NOP's job to issue the directives, but in our role, statutory role, to advise the Secretary on implementation of the Rule, you know, I continually ask about works in progress, and when directives are developed, what is the opportunity for the Board to have some participation in some discussion as a work in progress, rather than -- and particularly when directives come down on very short notice before the Board meeting, and so then the public, you know, feels like they've been shortchanged, as well as being prepared to
even come in and give public comment after the fact.

MR. MATTHEWS: Well, those really aren't out for public comment. Those are actually documents that are vetted with the USDA attorneys, that are vetted with management, and they're based on the regulations and the statute. You'll notice that what we've done with these documents is we excerpt portions of the Act and the regulations, and that's where we're basing the directive.

CHAIRMAN KING: Barbara had a quick comment.

MS. ROBINSON: Barbara Robinson, Deputy Administrator, Transportation Marketing Programs.

The reason we don't ask you for public comment -- a better way to think of these directives is: they are the law and the regulations. All we did was try to figure out a way to make it easier to understand, they're written, and that's why you see in every directive, before you get to what NOP is saying, first you see all the citations from the preamble, from the regulations, and the statements from the law, and so -- and we do that because we strongly believe that if we are about to issue anything, if it can't be anchored directly to the law or the regulations, we shouldn't be saying it.

But you should think of it, certifying agents should think of it, as just: this is the law and these are...
the regs; we're simply saying it in a different way.

CHAIRMAN KING: Rose.

MS. KOENIG: I had a question. I guess I saw the three -- well, I guess they came last week. The pesticide use lists three inerts. Somebody just notified me, I guess on Monday, at a meeting, that there was some directive there. But, you know, in terms of the reg, I don't understand how that would fit. And, again, I -- you know, I apologize for not having time to process that, but according to my knowledge -- and again, I'm not a lawyer, but it's pretty specific in terms of the National List, that only List 4s are allowed, and we've been systematically putting on List 3 as they've been petitioned, and I -- as I read it: it allows for a use if somebody is not knowledgeable. But I don't see where that can be justified except in the sense of a regulatory -- I guess that's your regulatory discretion.

MR. MATTHEWS: We -- and the next few slides are going to tell you what these documents do and that they do not do. We have always taken the position: if we tell you that you can do something at a certain point, the flip of that is that you can't do something at a different point; or if we say it's okay to use this, then it's the opposite, you know?
