the typed list, which accounts for just about everybody there; all should be allowed the opportunity to speak. They were all pre-registered and the fact that we have been unable to manage the four hours time because of -- and I'm not criticizing, I'm saying that, you know, this thing was packed together five minutes per person and you've held them to the five minutes, but all of the questions have lengthened this out and I, too, echo the sentiments of the individual that we've got people who have come, who were pre-registered; but more importantly to me is the fact that all too often people show up to speak on behalf of farmers and it's very rare that we actually hear from farmers and the significance about this is that we're dealing with farmers who have a 24/7 job. The ladies back on the farm who are providing the milk, they still have to be milked, and so I applaud them for coming and I don't want to see them cut off.

CHAIRPERSON RIDDLE: Well, I think, then, that we'll break for lunch, we'll come back to comments and when we do, Tom Miller and then Tony Azevedo will be up. And let's try and be back at 1:00; that's 55 minutes for lunch. Okay?

[Off the record]

[On the record]

CHAIRPERSON RIDDLE: If people could take York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
their seats, please, and if you have a conversation, you can take it out in the hall, if you -- yeah. Okay. And I forgot to give this reminder this morning, but it didn't happen yet and that is if you have a cell phone, you please turn it to vibrate or silent or just off. Our next commenter is Tom Miller and then after Tom, Tony Azevedo.

***

MR. MILLER: Good afternoon. I'd like to thank you for the opportunity to speak here today. My name is Tom Miller. I'm a certified organic dairy farmer from south central Wisconsin. I'm affiliated with CROP [ph]. They market all of our milk under the Organic Valley label. Our farm consists of about 370 dairy cows and 1400 acres of land, 500 of which is rented. There are seven family members who are actively involved in the farm operation along with three full-time hired employees, so we may be a large organic farm by the standards in our area, but we are truly a family farm.

Our farm today consists of 250 acres of pasture. Four years ago we had a little over 20 acres, but as soon as we realized that the NOP was going to require that we pasture our entire herd, we got busy and started planning on a way to comply with the new
regulations. We called our county extension agent and our NRCS representative. They helped us develop a pasture plan that would -- for us to reach our goals. The NRCS representative also helped us sign up for an equip program that paid us for transferring row cropped acres to pasture. That money helped pay for seed, fencing, lanes and level [ph] lines to the pastures so that we could do management-intensive grazing.

We presented our plan to a certifying agency. They approved it with the understanding that we would make necessary progress each year that would be verified by the organic inspector in our annual inspections. We started implementing our plan and had a minor setback the second year. We had a lot of winter kill in one of our -- some of our pastures, in fact. It set us back almost a year because we had to reseed those pastures. After explaining it to our certifying agency, they understood and agreed to extend our plan for another year.

My two brothers, who are the herdsmen, also starting learning all they could about grazing because we were conventional many years before that and but just started reading everything they could, went on pasture walks, attended grazing seminars and conferences.

We really like what pasturing has done for the York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
health of our cows and the quality of the milk we produce. We see very little production loss from pasturing and what loss we do see is mostly in mid-summer when the pastures start getting a little dry. I believe pasture's an important part of the organic way of farming. I also believe that every organic farm, no matter what size it is, must follow the same rules for pasturing. That's why we must make the rules clear enough so that they aren't open for different interpretations of the same rule.

I also believe that every farm should be able to develop their own plan to comply with these rules in a reasonable amount of time and that time should both be agreed upon by the farmer and the certifying agency. I believe this is very important in order to preserve the quality and integrity of organic products and to maintain the trust of the organic consumer. To me, organic is more than just a word that means more money for products. Organic is also a sustainable way of farming and a way of life and a philosophy that includes all aspects of farming from the soil and wildlife, all the way to the products we produce and the food we eat.

This is important and worth the extra effort it takes to do things right and everyone must interpret the rules the same way to keep it fair and equitable for...
everyone. That's why I do support some sort of a minimum requirement for pasture. I'm not sure if 30 percent is the right number because it's so variable in different parts of the country. I do believe we need a minimum and perhaps give the certifying agencies the opportunity to raise those minimums depending upon what part of the country they're in. At the same time, we probably need to give them a mechanism to be able to police themselves so that certain certifying agencies can't abuse those privileges. And that's pretty much all I have to say. Any questions?

CHAIRPERSON RIDDLE: George.

MR. SIEMON: I'm quite interested in seeing how -- we considered the NRCS as a resource here in determining what's appropriate pasture and you said it was a valuable part of your planning process and the guidelines and what would you think about using that resource as part of our setting the minimum standards or part of the pasture document?

MR. MILLER: Well, the NRCS was very helpful for us. It gave us some guidelines on pasturing, what our stocking rate was; they have certain guidelines for that. They were helpful because we do have some water ways that run through some of our pastures and they were -- they had certain limitations on when we could graze
that in order to preserve soil quality, so yeah, we got a lot of information from them as far as pasture, for our particular area.

CHAIRPERSON RIDDLE: Thanks, Tom. Okay, Tony Azevedo and then Martin Samson.

***

MR. AZEVEDO: My name is Tony Azevedo, that's T-O-N-Y A-Z-E-V-E-D-O. And I had a lot to say at the beginning of the day, but it's pretty much been said and -- if you didn't get it by now, folks, you're never going to get it. I mean, there's not a lot I could say. I'd like to tell you a little bit about myself. I'm from California from the middle of the San Joaquin Valley, a very productive valley, also very polluted and some of our biggest polluters came from our fellow dairymen, factory farms. So we've learned a great deal over the last 40, 50 years of what confinement dairies do.

Some of you might remember me. I was -- I spoke last October and the two issues was if you have a hard decision to make, do what's right for the organic consumer and it will be the right thing for the farmer. And the other thing was zero pasture for a lactating cow does not constitute organic, so I think you got that message.
I think we should focus on things that we possibly can agree on. And it is, it's about the consumer. If the consumer didn't support us, we wouldn't really be here. And it doesn't have anything to do with size, as far as -- I'm from the valley of the big. We have some big farms there and these are my friends and a lot them family members and there's a place for that, that's what conventional is for. And they want to do that thing and I don't have a problem with that. So to me, it's a lot to do with money and if you want to know what this is all about, it's about money. And don't get me wrong, I love money. I have a very expensive lifestyle and organics has been able to afford me that lifestyle.

What's happening in the West is very unique. I'm on the cutting edge as far as seeing things happening and one of the unique things, that as more farmers come into this, there's a fork in the road. And I really wouldn't have complained to this point, because we always had confinement dairies, until the cancer started to grow. And one of the things I'd like to show you is I brought you a carton of -- this milk is processed in California, and I covered the label to protect the innocent, and what's neat about this carton -- usually everybody thinks that pasturing is like the
fourth or fifth thing on the consumer's mind. This
carton has the -- the first thing is our cows are
pastured. That's the first thing and everything else is
secondary, the no antibiotics, no -- and it literally
has the cows on the front dancing and singing like, you
know, you can see that here.

    What's unusual about this carton is not one
drop of this milk came from an organic farm. It all
came from a confinement operation. Every drop. Now,
how can they say this on the back? Hey, it's
California. We can tell you anything. I mean, I have
no problem with that. We do a lot of things, that's --
we even have talking cows out there. So the fact that
they print that and it's not really organic milk, I
don't have a problem with that.

    Where I have a problem is this same outfit
produces so much of this stuff, that now they sell
tanker loads of organic milk. So now I have this
product in California coming all the way to Wisconsin
and Minnesota by tanker load and is putting into cartons
that are trying to do it the right way, because if
you're short of organic milk, you call on an organic
broker or another processor and say hey, I need some
organic, sure we'll send you a tanker load; as long as
it's certified, there's no reason to question it.
So about 80 percent of organic milk right now is being produced this way. Now, no matter what happens here today -- I'll tell you one thing right now, farmers like myself are not going to be used as poster boys. It's just not going to happen. I do have some control over the -- of my milk and it's not going to be commingled with this type of fooling the public. The other carton I brought you --

CHAIRPERSON RIDDLE: All right, finish up that carton.

MR. AZEVEDO: Okay. This carton's going to be a quick one. Covered the label to protect the innocent. It has a great story on the back and it's about me and --

CHAIRPERSON RIDDLE: It is true, I'm sure.

MR. AZEVEDO: And it's all true. You'll actually get diabetes if you read this story. This is a great story. But the fact is I don't want that -- I don't want this in here and we need to find a way to stop that; not tomorrow or the day after, immediately. Any questions, please?

MR. SIEMON: I think they're confused. You're saying it's not organic milk. It's certified organic milk, but you don't consider --

MR. AZEVEDO: Oh, you bet it's certified.
MR. SIEMON: Okay.

MR. AZEVEDO: It has USDA here by the laughing cow and all kinds of labels all the way around it, but I know where this milk is produced. This is not organic milk and this fooling of the public has to stop or else it's going to ruin all of us. Question?

UNIDENTIFIED SPEAKER: We got it by now.

CHAIRPERSON RIDDLE: Thanks.

MR. AZEVEDO: Thank you very much for listening to us.

CHAIRPERSON RIDDLE: Congratulations on the first use of duct tape at an NOSB meeting. I have never figured out how we could fit in duct tape. Okay, Martin Samson is up and next is Vanessa Bogenholm and while Martin's making his way up here, I do want to mention that Lisa Englebert was signed up and just has decided to submit written comments here essentially supporting the NODPA position and those comments are on behalf of the NOFA, Northeast Organic Farming Associations of Connecticut, Massachusetts, New Jersey, New York, Rhode Island and Vermont, so we do have those in the record. Okay, Martin. Thanks.

***

MR. SAMSON: Mr. Chairman, members of the NOSB. My name is Martin Samson. I am an organic York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
consumer from Vermont and I want to thank you for
allowing me to share my concerns about the relationship
between organic pasture and organic milk and I heard,
too, when Mr. Chairman asked for speeding this process
off and see if I can skip those arguments which already
have been made and there are many. There are a few
things I would like to say because some of the arguments
presented here are, in my view, not strong enough.

The grazing of the organic dairy cow is very
essential and it's historically the picture of the
natural behavior, which is asked for in 205.3 to 239(a)
and I think it's very important that the connection
between grazing -- and that has been said before -- be
linked to natural behavior. You have been asking for
specific suggestions and my suggestion would be because
your recommendation of 2001 of the NOSB Livestock
Committee deals with pasture. If you would be willing
to consider to go from pasture specifically to dairy by
adding every time there is words about pasture, between
brandishes say grazing, for grazing of, especially
during lactation, because I think that's very important
that we make that connection that the milk is derived
from, as much as possible, grazing.

I have under economic criteria a comment where
I say if -- it's very hard to explain what I feel is

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
wrong about having a mega-dairy in New Mexico or in Colorado and I didn't know exactly how to explain that, but the dairy -- a Vermont dairy farmer friend said Vermonters did not go to Colorado to tap maple syrup because there are no sugar maple trees to speak of in Colorado, and likewise, Vermont organic dairy farmers did not go to Colorado to produce organic milk because there are no natural green pastures in Colorado that could accommodate mega-dairies.

I know that there is some grass in Colorado lands, but that grass, without irrigation, cannot support 12,000 or so pounds of milk that current organic dairies need to yield per cow per year to maintain organic vitality. I have seen the growth of conventional mega-dairies in New Mexico in the '90s and they create fabulous low-cost priced milk, but they can only do that by taking away the dairy cows' natural behavior. The organic rule specifically doesn't allow that.

I want to make a little comment about farming is more than science. I have read some of the comments of the Aurora Dairy and I'm very impressed with the desire to look at almost everything being proven by science, but it makes me feel that there is a try there to redefine what the natural behavior for a cow is with
allowing them less pasture, less grazing and more other
stuff and I got a little bit shocked by reading through
the comments when there is the request for more science
containing the insinuation that there might be a chance
that my organic milk from grazing cows might be
contaminated with *E. coli* and I think that that is
taking science and turning this thing completely upside
down.

The last comment -- issue is the demise of the
organic label. I am very concerned that if the NOSB and
after them to use the -- not able to really create a
situation in which the pasture requirement is solidified
that I, as an organic consumer, have to walk away from
the label and say hey, I don't trust this label anymore.
I have already heard people and I will support them who
say we will go to another label, another label which
really promises that the connection is taken care of
between the organic milk and the organic pasture. And
I'm not looking for that to happen, but the chances are
that will happen and I really encourage you to take that
in your consideration that there is no need for it, but
it might happen if the regulation doesn't become strong.

CHAIRPERSON RIDDLE: Thanks, Martin.

MR. SAMSON: Thank you for your -- very much
appreciate your work. I don't know if you have any

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
questions. Thank you.

CHAIRPERSON RIDDLE: Thanks. Okay, Vanessa Bogenholm and then Diana Kay [ph].

***

MS. BOGENHOLM: Good afternoon, everyone. I am Vanessa Bogenholm. I am a organic strawberry and raspberry grower. I represent VB Farms. I own it all by myself. There's no 25 kids at home working for me, I'm happy to say. All my employees get to do it and call me on the phone every 20 minutes. I'm also very honored to sit as chairman of the board of California Certified Organic Farmers and I speak on the ferric phosphate issue representing CCOF and my own farming operation.

I do not agree with the two TAP reviewers who do not think that ferric phosphate should be allowed for organic production. I believe these two reviewers have no idea how farming occurs in a field and have never actually seen a commercial organic operation. Their comments were more appropriate to a small garden, not a farm run as a business. The reasons I believe ferric phosphate should be allowed and the TAP reviewers were wrong, (1) no viable control exists for organic production if snails or slugs exist. Slugs and snails are ever present in our fields because of constant

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
irrigation. There are no ways to exclude snails and slugs because they are already in the fields when the fields are planted. Heavy infestation occurs in the spring after the rains when the markets are the highest and the crops are just establishing. In the spring we can lose up to 20 percent of the first berries from slug damage.

Slugs and snails can crawl out of the produce when it gets to market causing a quarantine issue when the produce is shipped. Organic strawberries have the same marketing characteristics by PACA as conventional strawberries when they arrive, which means they must be free of pests. A slug crawling out of a single box can stop an entire pallet, which is 120 boxes of berries in Florida, especially, or England which we got stopped three times in England last year for a slug.

Copper bands are unusable around a field because they are very expensive if used. Used copper right now is $1.25 a pound and I use them large scale. Now, one of the questions was what is a large scale grower? I will consider anything over a quarter of an acre too large to use a copper band. Tractor work is impossible with a copper band around your field and just feet traffic would cause damage. You don't know, for strawberries we actually go in and harvest twice a week.
One reviewer said that spraying household ammonia can be used as a control for slug damage in strawberries. This isn't even legal for organic production and the reviewer used this as a reason for not allowing ferric phosphate for organic production. It is ridiculous. The National Organic Standards Board should not be paying for technical reviews that are this unprofessional. Beer traps in my field? It is not legal for me, as an employer, to have beer in my field around my employees. Can you imagine what my Workmen's Compensation plan would be?

Let alone, what if a teenager came to my farm, drank the beer out of my slug traps and then left and got into a car accident? To even suggest this in a TAP report, I feel is incredibly unprofessional, especially for a paid person. One year we really did try to trap the slugs out of the field. We put out hundreds of wood boards, wet them down every night, put them on the dirt; in the morning the employee went out, scraped off the slugs and killed them. We did this to just a half acre block. It took an employee three hours a day. After a little over $500 in labor, we just abandoned the project and abandoned that part of the field.

With the quantities I grow there are no other trap crops we could do. The trap crops are just -- the
strawberries are preferred hosts, so is head lettuce, of course. And I really feel that, you know, it's not a process of an environmental problem with ferric phosphate. I understand the process the Crop Committee has of where to put it. I understand that's a difficulty. I hope the NOSB understands my reasoning why ferric phosphate is needed for control for snails and slugs in organic production and consider adding it to the National List of Allowed Materials.

I also hope the NOSB works out its issues and get products reviewed in a more timely fashion. Ferric phosphate's waited for two years for its review and we, as growers, had only two weeks to respond before the NOSB meeting -- with the material. I feel this waiting of two years was too long and to expect me to get a bunch of growers active in two weeks was very difficult.

TAP reviewers need to be professionals in the business and understand what farming is and not be quoting farm magazines as viable alternatives. Thank you.

CHAIRPERSON RIDDLE: Thanks, Vanessa. Any comments? Okay. Diana Kay and then James Hahn [ph]. Are you going together?

MR. HAHN: Yes.

CHAIRPERSON RIDDLE: Okay, so then the next
person up will be Craig Weakley.

***

MS. KAY: Hi, I'm Diana and this is Jim, my partner. And we do have a small, very small farm. We raise herbs for our own personal use. We are organic, although not certified in Maryland, Frederick County. We also happen to make personal care products and that's what we're actually here today to talk about, so maybe this will be a little diversion from all the talk about livestock. And by the way, I wasn't kidding. I hope you did all save room for dessert because I brought dessert here today, which happens to be our completely organic single ingredient organic, certified organic cocoa butter.

This is USDA cocoa butter. We happen to pour it into this container and I'm going to take a bite of this right now. I'd pass it around first, but I can give you one. This product is an edible product. It also happens to be a fantastic moisturizer. It's recommended by obstetricians for women for pregnancy, stretch marks. It's been used for decades. By the way, it's delicious.

MR. HAHN: Let's talk about the problem.

MS. KAY: The problem that we're having right now is that we are struggling and we have been for a
long time because we cannot get our products into stores. The problem? There are -- the word organic for body care products has no regulation. It isn't -- it's not into the rule where -- and that's why we're here today. We want to ask you, request that you will beseech the powers that be to bring body care products into the rule. We'd like to see some rule making. And to drive home our point, we also wanted to present you with this bouquet of organic flowers for your inspection.

CHAIRPERSON RIDDLE: Well, they're plastic, so they don't come under the regulations.

MS. KAY: Well, that's what we're up against. There are products in the marketplace right now that have zero organic ingredients in them, zero, and the word organic is emblazoned on all of the packages, in the advertising and I'll tell you what, we are seeing dozens of new companies every week, every week. The consumers are not protected at all. And we also, by the way, have a retail store, a very tiny little shop at our farm and we have a lot of consumers who drive up from D.C. on the weekend, so we're hearing from them face to face.

We also hear from consumers around the world and what we're telling you here today is they're...
horrified when they find out that the word organic has no meaning when they walk into a store and they walk --
they turn to the right and they buy organic carrots and they walk 50 feet and they turn to the left -- it has no meaning at all on the other side of the store.

MR. HAHN: They don't know that.

MS. KAY: No, they don't know that. These are trusting consumers. The word -- what we're hearing is frustration from these people and also distrust. They're saying well, then why should I trust anything? This has no meaning. We have to do something about this. So that's why we're here today.

MS. JAMES: Jim.

CHAIRPERSON RIDDLE: Yeah.

MS. JAMES: First of all, thank you for the visual aid. I will always remember that body care needs to be addressed and I actually look forward to the day when you will be up here telling the Board, which probably won't be in my life time --

MS. KAY: Oh, don't say that.

MS. JAMES: -- what needs to be fixed on the organic definition in body care.

MR. HAHN: We're running out of time. Thanks.

CHAIRPERSON RIDDLE: Thanks. Okay, Craig Weakley and then Ed Zimba [ph].
MR. WEAKLEY: Good afternoon, Board members.

It's a pleasure to be here. I'm Craig Weakley. I'm Director of Organic Agriculture and Sourcing for Small Planet Foods and also from 1992 to 1996, I served on the National Organic Standards Board. The comments I make today are my personal opinions. I'm going to start out by providing a historical perspective. In 1992 the NOSB recognized that there was a conflict in the language of the Organic Foods Production Act with respect to the use of synthetic ingredients in organic processed foods. So we took the issue to the USDA and said look, what do we do here? We don't want to waste our time on something if the law prohibits it.

USDA took the matter to the Office of General Counsel, their attorneys, and the OGC came back and said look, there's a conflict in the law. We need the NOSB to make a recommendation as to what will be best for the industry. So of course, we all know that the NOSB received much public input on the issue of synthetic ingredients in processed organic foods, conducted TAP reviews and ultimately recommended to USDA that a few synthetic processing materials be included on the National List of Allowed Materials.

What many people may not know is that the NOSB
also consulted with Kathleen Merrigan who actually wrote
the Act when she was on Senator Leahy's staff. Kathleen
told us that it was not Senator Leahy's intent or the
intent of Congress to prohibit all synthetic processing
materials. The intent was to prohibit chemical
preservatives, artificial flavors and artificial colors.

Kathleen told us that the intent of the Act
was to have the NOSB recommend which synthetic
processing materials, if any, are compatible with
organic principles. And of course, over the last 12
years that's exactly how the NOSB has proceeded. During
the 12 years prior to the implementation of the National
Organic Standards, the NOSB did an amazing job of
listening to all the stakeholders and conducting TAP
reviews of scores and scores of synthetic processing
materials. I think the current National List very well
represents the intent of the Organic Foods Production
Act with respect to synthetic processing materials.

The materials meet the seven criteria in the
act. At the time that the materials were approved,
there were no natural alternatives and they've been
historically used by organic processors for a number of
years. Unfortunately, as we know, a member of the
organic industry has decided that the NOSB process that
we all worked on so hard for many years was wrong. As a
result of a lawsuit and a very narrow legalistic decision by the appeals court, we find ourselves in a position where all synthetic materials for organic processing will soon be prohibited, materials such as baking power, vitamins, minerals and pectin will be banned from organic processed foods.

The court ruling is based on a technical flaw in the words of the Organic Foods Production Act. The court ruling does not mean that synthetics are incompatible with organic principles, of course not. We all know that some synthetics are compatible with organic principles and we've been working with them, using them on farms and processing plants for years.

The court ruling is inconsistent with the intent of the OFPA and is inconsistent with the common practices of organic processors over the past two decades. For example, Cascadian Farm has made organic jam since 1980. That jam contains pectin. Pectin is a naturally dry but technically synthetic material. So after 25 years of selling a certified organic jam, under the new court ruling, we'll have to take this product off the market.

The concern is, is that a recent USDA opinion, which we hope is wrong, but now has to, you know, has to be considered their opinion. They believe that the
court ruling will also apply to "made with organic ingredients" products. In other words, we can't use synthetics even in products made with organic ingredients. So we'll have a product that's been on the market for 25 years as certified organic that will have to be discontinued because we can't even label it jam made with organic fruit. This is crazy.

The impact of the court ruling could cripple the organic processing industry. I do recognize that there is little that the NOSB can do to counter the court ruling, but I would ask that the NOSB continue to uphold the basic concept that some synthetic materials are compatible with organic food production. Farmers have scores of synthetics that they use on the farm. Handlers and processors also need a few synthetics in order to produce high quality products that consumers want.

Consistence with its recommendations, the NOSB should formally recommend that USDA try to appeal this court ruling. My goal, as a former member of the NOSB and as an active participant in this industry since 1989, is to transform agriculture, to provide incentives and opportunities for conventional farmers to convert their land to organic production. This goal is shared by many in this room today. Our ability to continue to
transform agriculture is dependent on increasing consumer demand so that more acres are needed, more acres can be converted.

The elimination of the synthetic processing materials on the National List will decrease the number of organic products available to consumers. It will decrease the demand for organic crops and ultimately reduce our ability to transform agriculture.

CHAIRPERSON RIDDLE: Thank you.

MR. WEAKLEY: This was not the intent of the Organic Foods Production Association and consumers are not protected by limiting baking powder, vitamins and minerals and pectin from organic foods. So I ask you, as a Board, to support the efforts of organic processors to move toward a resolution to this problem.

CHAIRPERSON RIDDLE: Okay. Your time is up. Thanks. Are there any questions?

MR. WEAKLEY: Does anyone want to ask me if I had a conclusion?

MS. CAUGHLAN: Craig, do you have a conclusion?

MR. WEAKLEY: Thank you, Goldie.

CHAIRPERSON RIDDLE: I thought it was, but --

MR. WEAKLEY: Yes, I do have a conclusion. We need balanced and reasonable National Organic Standards.
that allow all types of organic food producers to
operate within the recognized principles of organic food
production. The National Organic Standards were not
broken, but unfortunately, someone decided to fix them
and was able to convince three judges that the standards
needed fixing. Now the standards are broken. As we've
done on many occasions, it's time for all organic
stakeholders to rise to the occasions and work together
to reverse the impact of this appeals court ruling. Our
ability to transform agriculture to organic farming
methods depends on it. Thank you.

CHAIRPERSON RIDDLE: Thanks, Craig. Thanks
for your contributions. Ed Zimba and then
Lyle Edwards, Jr.

***

MR. ZIMBA: Are you ready? My name is Ed
Zimba and I'm an organic dairy and crop farmer that
consists of 300 milk cows and 2500 acres of crop land --
together. I would first like to express my appreciation
to the Board members for all their volunteer time and
effort that they sacrifice to maintain high the
integrity level of this organic industry. I'd also like
to say thank you to the NOP.

I'm also thankful to have the opportunity to
be here to represent myself as well as the rest of the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
organic dairy farmers in Michigan and we sell our milk
to Horizon Organic Dairy and H.P. Hood. I have 25 years
of experience in applied research, which is better than
any other government, college or scientific research.
My school -- I come from the school of common sense and
hard knocks. The first half of these years I was a
chemical farmer, without grazing and the cows were in
total confinement in dirt lots. We turned and burned
cows in a very high production. I was just at a
three-state conventional dairy meeting in Michigan, Ohio
and New York last week and the average culling rates
were 30 plus percent.

In the early '90s I was introduced to organic
farming and learned the importance of building soil
health, which improves the health of the crops, the
animals and ultimately us, the human beings. As I
researched out what would be necessary requirements to
farm organically, I was -- the rules stated we have to
graze all our lactating dairy cows, so I began to invest
and do whatever is necessary to do that. It was pretty
common sense what the rules said.

We spent over $300,000 on 303 acres of prime
crop land for grazing around my present dairy as it is.
We went to the expense to seed the pasture with top
quality grasses, clovers to help meet the needs of the
health of the cattle. We fenced off 250 acres for
grazing. We built walking lanes, water lines and spent
over $30,000 -- the benefits of grazing that I've seen
over the years now is that the grass is so much higher
in availability of protein, energy, minerals and
vitamins and fermented [ph] feeds. But we have less
feet and leg problems because they are off the wet
concrete. We have better immune systems now. We have
increased a cow's life. We have less cattle problems.
Our vet expenses have let down -- went down. We lowered
our mastitis problems. We have better conception rates
now with breeding. We have better body scores. We show
better heat. We have better muscle tone to the cattle.

Milk quality has also improved. We have
tested our milk and found higher CL results compared to
our conventional farmers in our area. We lowered
sematic cell counts. Our soil keeps improving, the
health -- the more earth worms that we have in our soil
is now -- we keep getting more and more tons per acre in
our grass as we keep building the soil. There's
controversies out there saying that there's problems
with parasites. We check them every year and throughout
the year. We are not having problems with parasites
because we keep building and mineralizing our soil and
getting good grass uptake, good mineralized grass. We
have no problem with deer diseases -- we have them running out through our pastures, Michigan is noted for high deer eggs [ph]. We have no problem with balancing pasture with TMR [ph] feed rations. We have no problem milking high production cows and grazing them. We have no problem keeping body scores good on high-producing cows, either.

In summary, this is all applied research, better than any government, science or college research. Good grazing management, high intensive rotation grazing is good for the health of the cows. You need to apply organic fertilizer, calcium, minerals and trace minerals to the soil to achieve good production grass and quality milk. Our pasture is the most profitable land out of the 2500 acres that we farm. We look forward to grazing every spring and wish we could graze year-round if the climate would allow.

Consumers deserve to get the milk they're being told that they are getting, milk that is from grass-fed cattle, just as is stated on every organic carton. As stated by the NODPA rules and other people that talking across the United States, I support the rules of three cows per acre including lactating cows, at least 30 percent of dry matter intake, 120 days of minimal grazing per year. Pasture -- as connected to
the roots. These rules have been discussed nationwide
and no matter where the -- each area will be able to
comply. This is not the size of the farm that is
important, but that everyone needs to comply to the
rules. The NOP and certified agencies also need to
better enforce them, that we do not find ourselves here
again under similar circumstances. We need to raise our
tag [ph] level, we need to stay on top and keep on it.
The organic rules were set to farm organically. If
farms cannot comply, they should not farm organically.

We, the people, have spoken. Please listen.

Don't let someone else set the grazing rules for us.
The organic was built on common sense and high integrity
to the health of the cows by the grass roots people.
The grass roots people knew what grazing meant. Let's
get back on it. Please listen to what the majority of
the people are saying here and I thank you very much.

Do you have any questions?

CHAIRPERSON RIDDLE: Thanks, Ed. Okay, and
Lyle Edwards, Jr. and then Jack Lazor, but for the
record, I wanted to note that there were 31 signatures
to the Methionine Renewal Petition that Jim Pierce had
presented earlier today, so I just wanted to mention
that for the record. Okay, Lyle.

MR. EDWARDS: My name is Lyle Edwards. I, with my wife, Kitty, own an organic dairy in Westfield, Vermont. I'm here to support the pasture standards for organic farms. I'm surprised I'm even here asking to support pasture requirement in organic dairying. Even with the NODPA's proposed three cows per acre, I have a hard time thinking that they would certify my farm if I did have three cows per acre. Pasture and organic dairying are synonymous with each other. If you were to look at the history -- if one was to look at the history of organic dairying, pasture has always been an essential part of it.

Another part of the picture is what consumers of organic dairy products expect. If organic rules were to allow feedlot operations to operate as organic, that, in my view, would be a gross violation of what organic dairying is. Organic dairying is an alternative to the industrialized conventional model. The conventional confined model -- excuse me. Organic dairying is an alternative to the industrialized conventional model. The -- excuse me. The -- I can't read my own writing here. I'm sorry. Okay.

If one was to convert the conventional confinement model to organic, we would -- it would severely weaken the organic label. On the subject of...
everything has to based on science, I would just like to say science doesn't explain everything. Science doesn't explain dowsing, but it works. Science doesn't explain God, either, but people believe in Him, so -- anything else?

CHAIRPERSON RIDDLE: Thanks, Lyle.

MR. SIEMON: Thanks, Lyle.

CHAIRPERSON RIDDLE: Jack Lazor and then Richard Siegel.

***

MR. LAZOR: My name is Jack Lazor. I live in northern Vermont, Westfield, right next door to Lyle there and first, I wanted to -- I have a little brief here from the National Family Farm Coalition that they're signing on to the NODPA pasture standards, so I'd like to give that to you. I didn't come to dairy farming from the conventional side.

I started dairy farming in the '70s as a, sort of a back-to-the-land homesteader and there really wasn't even organic back then, but we had a couple family cows and we knew that we really didn't like doing it the way all our neighbors did, so we -- you know, we -- they were just bewildered when we wouldn't use an antibiotic and we -- but every decision I made was sort of anti-industrial. We really wanted to promote life at
all levels.

I think that was our logic of going into, you know, the type of farming that we pursued and we grazed our cows in the '70s and we didn't really -- we knew they needed -- we knew that pasture was a whole lot easier than hauling and feeding them in the barn and we only had a few of them then. And then as the '80s began, we started our own little yogurt business and we've had a yogurt on the market since 1984, which is Butterworks Farm and it's a little bigger than it was today, but we're still a really small outfit.

But I think we've always been serious grazers and the grazing movement started in the '80s. We really didn't have organic certification in Vermont until, I would say '85 or '86. We were with OCIA for one year and then we formed our own certification group after that, Vermont Organic Farmers. And at that time there were only two organic dairies in Vermont. There was really no marketplace for it, but at the same time, the grazing movement was really growing and you had books like Andre Voisin's Grass Productivity and Newman Turner's Fertility Pastures and a lot of conventional farmers were being saved by grazing.

And so what happened is as all of a sudden the demand for organic milk grew in the late '80s, early
90's and crops started and the Organic Cow of Vermont started and the first dairy farmers to go to the organic side were the people who were grazing their cows. It was a natural fit. So I think organics and organic dairying and grazing your cows has -- they've always gone hand in hand.

And for me, I'm -- I feel like I was kind of one of the pioneers to start and in the very beginning, I was a little bit undone by -- all the conventional guys were kind of getting into it and only getting into it for the money, but what happened is organic dairying and grazing grew on everybody. They loved it and it became part of them. The movement started and it's been a great thing. And we have 85 organic, certified organic dairies in Vermont, you know, it's a segment of the economy that's growing 10 or 15 percent a year and it's a really good thing. And I want to see it continue.

I want to see farms continue to switch to organic methods, be they large or be they small, but I think grass is the sort of the be-all and end-all of the cow and if you are feeding cows forage, grass has to grow nearby. And whether you're going to get that grass from stored hay or stored forage or pasture, you have to grow it there. So if you're in a dry environment,
you've got to irrigate hay, I think you can irrigate pasture.

There's one other thing I'd like to say about cows and cows have the potential to either pollute the earth or heal the earth and they have the ability to sort of eat forages and then turn them into milk, manure and urine, and if you want to -- if you don't want to have your cows be a polluter, I think you really -- you need to either trap their waste in carbon-base, like straw, sawdust or some kind of bedding and compost it, or have that go directly onto the earth, onto grass, onto a living soil.

And if your animals are on a feedlot, even if they are on dirt and all that urine from those cows is filtering down into that dirt, it's not a very healthy situation and you're not making this earth a better place and I came to organics because I want to save the earth and I don't think confinement conventional agriculture has any place in saving the earth, so -- thank you for listening to me.

CHAIRPERSON RIDDLE: Thanks, Jack.

MR. SIEMON: Thanks, Jack.

MS. CAUGHLAN: Thank you.

CHAIRPERSON RIDDLE: Dick Siegel and then Joe Smillie.
MR. SIEGEL: Good afternoon, members of the Board. My name is Richard Siegel. I'm a practicing lawyer in Washington, D.C. and I'm here to talk about the organic seed recommendation that the Crops Committee will present tomorrow. And I appreciate the privilege of appearing before the Board and also to have heard many of the presentations on dairy farming and pasture because organic seed is another issue within the regulations that raises a question of the chain of organic integrity.

I'm here on behalf of seven companies that have developed a business for supplying organic seed to organic growers. Organic seed, as you know, is required, but there is also a liberal allowance policy. You may use a conventional untreated seed when no organic seed is commercially available in an equivalent variety. Now, the process for giving these allowances has varied from certifier to certifier. It has not been consistent, predictable or transparent.

The Crops Committee has put together a very comprehensive proposal which addresses a number of the issues. It calls for a national organic seed data base, it tightens the procedures that growers and certifiers would need to follow before an allowance to use non-
organic seed as granted. Certifiers and growers would become more accountable. Certifiers would have to report to the NOP on allowances that they granted and this would be public information, so that the -- everyone would have a picture of which organic varieties were needed, which seed was being in demand for organic growers, but was not available commercially, so that the seed industry could respond and provide those varieties.

Now, another provision that the Crops Committee has presented is -- involves those who not only grow with organic seed, but those who buy the products that the growers grow. The problem here is that the growers are supposed to comply with the organic seed requirement, but their customers are not specifying that they use organic seed. So we're asking the grower to maybe, in some cases, take on an additional financial cost to buy organic seed without giving him a way of recouping that cost when he sells the product into the market.

So we want the people who buy the products from the growers to be aware of the organic seed requirement and to comply with it by, if possible, specifying when they tell the grower what sort of seed they want the grower to use -- and this if very common. Tell him, as well -- tell the grower we want you to use

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
organic seed. So the grower should not be left alone to comply with the organic seed requirement. The organic seed requirement should become part of the fabric of organic food production through all the levels of the food production system.

Now, in the prepared statement, we have some minor changes in the text that we would propose. And we hope to work together with the Crops Committee and we're very appreciative of Nancy Ostiguy's work, Rose Koenig's interest and the interest that Jim Riddle has shown when he went to the Eco-Farm Conference last month in California and met with a number of the people that are part of our organic seed industry group. This is a -- so we think the Crops Committee has given us a good start.

Once these procedures are in place, we'll be able to consider a vigorous enforcement policy, but we're discussing some other issues, as well, because organic seed has presented us with a lot of challenges to get it to work smoothly. One challenging issue that we're working on is to put some prudent limits on allowances and we would do this be looking to what Europe has done. In Europe, different member states are having committees meet and decide which organic varieties of seed are out there and if there are enough

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
organic seed in a particular crop, make that a
determination that there's a critical mass and cut off
allowances from then on. This would --

CHAIRPERSON RIDDLE: Okay, time. Thanks.

MR. SIEGEL: -- be a good incentive for --
that would produce quantity and quality of organic seed.
I'll be happy to take questions. Yes.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: Companies -- I know you listed a
number of companies, some who are conventional, a few
companies and some which are more agronomic crops, where
does the company, in terms of this collaborative group,
where do they see the most supply in -- I mean, are
there -- where are the issues? Are they greater in
conventional crop production and not in the agronomic --
are they both in their infancy?

MR. SIEGEL: They're both -- in both cases,
both in the agronomic crops, corn, soybeans and grains,
and in the horticultural crops. There are issues --
there's a great deal of concern about the allowances and
how easy it seems to be for a grower to get an allowance
from a certifier. And someone making an investment in
good genetics and breeding and production into the
organic seed market wonders if the demand will justify
this kind of investment. And so going at the process,
making the process more transparent is one way to do it
and looking overall at where you could get to a point
where you could cut off allowances for a particular crop
because there was enough seed available and enough
variety; not every variety, but enough varieties.

CHAIRPERSON RIDDLE: Yeah.

MS. KOENIG: Just one more -- have the
companies talked about -- you know, one of the issues is
they're selling seeds, they have to sell usually the
year's seeds. I mean, is there any kind of a pre-order
or -- I mean, it's great to have a database, but what's
more important, I think, for seed companies is
understanding the pre-market demand so that they can
meet the demand because they are usually a year behind
in some ways and how -- are they thinking about ways to
rectify that, not just in kind of today, what's
available today. A lot of farmers kind of know what
they want --

MR. SIEGEL: Well, there is an organic seed
business growing and many certifiers who are represented
in the room, such as Oregon Tilth and CCOF and
Pennsylvania Certified Organic are doing excellent work
in educating their clients about organic seed and where
to find it. But it's not a uniform national effort and
yes, there are farmers that are adopting organic seed,
but there are a lot of gaps and one of the gaps is that in the more commercial, the larger commercial-size growing operations, the customers will come and say we want you to use a certain highly desired hybrid and the answer is where do you get that hybrid organically. Well, you can't get it because it's still controlled by the seed company that owns it and they won't release it organically. The virtue of what the Crops Committee has presented to us is to take the decision for requiring organic seed one step away from the grower and saying the same customer who is saying grow this hybrid for me should say grow this hybrid and get it organically.

And if that started to take hold in the market, the demand would come back to the seed company that owns the hybrid and the seed company would release the hybrid to have it grown organically so that there'd be an organic seed supply of the very best and the most highly desired marketable seed. And this is what we want to break open and so I commend the Crops Committee for taking on this issue.

CHAIRPERSON RIDDLE: Gerry.

MR. DAVIS: Richard, looking at your list of the seed companies that you represent, I see at least one, it looks like they're just a -- not just a, but a...
distributor rather than a producer of seed. How many of this seven that you identify here are actual producers for seed --

MR. SIEGEL: Well --

MR. DAVIS: -- versus just distributors trying to access seed on the market and sell to their customers?

MR. SIEGEL: Well, I think some of the companies have their own growing operations, but they also deal with seed grown by others.

MR. DAVIS: Right.

MR. SIEGEL: Snow Seed is a distributor in Salinas.

MR. DAVIS: Right.

MR. SIEGEL: Maybe you're familiar with them from California.

MR. DAVIS: Exactly. That's the one I'm referring to --

MR. SIEGEL: Yeah. Yeah, well they're a distributor but they are very interested in developing the organic sector.

MR. DAVIS: So all the rest of that list -- I'm ignorant on this -- represent companies that produce some of their own seed as well as access --

MR. SIEGEL: That's right.
MR. DAVIS: Okay.

MR. SIEGEL: That's right.

CHAIRPERSON RIDDLE: I just want to thank you for your precise comments and I would ask the Crops Committee and the full Board to take them into consideration as we move our draft forward.

MR. SIEGEL: Thank you.

CHAIRPERSON RIDDLE: Thanks.

MR. SIEGEL: And thank you, Jim, for your leadership on this.

CHAIRPERSON RIDDLE: Joe Smillie and then Leslie Zook.

***

MR. SMILLIE: Well, thanks again for meeting. Thanks again for the opportunity to speak and thanks again for all your work. I know how much it is. My name is Joe Smillie, that's S-M-I-L-L-I-E, the original Northumberland spelling, and I'd like to especially address my comments to Bea. I will tell you exactly what I'm here to get from the NOSB. My main subject is the document called the Listing of Certifying Agents Name on Packaged Product, the recommendation of the Handling Committee. When I saw it, I was aghast. What I'd like to see is to have the Handling Committee table this document, not go to take any action on it and
actually rethink and rework it because I think there's some misunderstanding here.

Number one, I'm referring to, again, the NOSB Handling Committee Recommendation Listing of Certifications Agents Name on Packaged Product, February 7. And I'll just keep referring to the document. Number one, it seems to me that the first mistake is when they're referring to retail establishments being voluntarily certified and hence, not able to put their certifications agent's name on a product in retail, that's accurate. If they're voluntary certification is for retailer certification -- in other words, their actions as a retailer, this would be all correct interpretation; however, a retailing establishment can also act as a handler and actually does in many, many instances.

A retailing establishment can get very much involved in the sourcing of ingredients, the manufacturing process and other specifications involved in the production of a product with their name on it. In that case, they act clearly as a handler. Like everyone else in the industry, I used to give a lot of seminars on organic manufacturing, used to ask the crowd what do organic manufacturers manufacture and we'd get all sorts of answers; well, it's soy and all sort of...
various things and the answer is labels. Most organic
manufacturers, as do most manufacturers, come up with
the idea and then commission it to a toll processor or a
repacker or someone else to actually make the product.
They're very much involved in the product and they
create the label.

And that's, in fact, the case -- let's say
Robert Redford wanted to start a line of organic foods.
They would not buy a manufacturing facility. They would
go to a toll processor or a custom processor, give them
the specifications for the product, create the label in
their office and then basically have that -- put that
product on the marketplace. In that sense, they're
clearly acting as a handler under all those citations
that are mentioned in this recommendation. In fact,
that's the way it works.

We also certify distributors and traders as
handlers, so therefore a retail establishment that
engages in having a manufactured product made for them
under their label, has every right -- in fact, must be
certified and then has every right to use that
certification's agent name on their final product. This
document has a minority opinion which is pretty close to
being correct. I would even go farther then the
minority opinion. In fact, I would say that if you
pursued this line of reasoning, that a retailer, because
they are a retailer, are not allowed to be a handler, I
think you would be acting in a very discriminatory
manner. They have every right to engage in the process
of manufacturing, even though they don't necessarily own
the facility, as most manufacturer's don't.

I'd be glad to take questions on that. We can
cite all the numbers; they're all in here. It's just
the conclusions that are wrong. I think the mistake was
made in referring to them as a retailer and thinking
about them as excluded or voluntarily certified. They
can seek certification. So I would ask the Handling
Committee to re-look at this, whatever the format is,
table it, don't bring it to action, et cetera.

I'd also like to just echo the comments,
keeping it short. I think Craig Weakley gave you a very
good presentation of the history and the intent,
Kathleen Merrigan's intent, Leahy's intent on the law
and I would respectfully submit that the NOSB has a very
large role to play in encouraging and respectfully
recommending the Secretary of Agriculture to do
everything in this case he can to make sure that we try
and ameliorate the draconian measures that may be
enforced upon us. I think leaving it to the Development
Committee is not quite appropriate; I think the Handling
Committee, since this is clearly a handling issue, also needs to drive that recommendation and let's get USDA behind this industry and supporting the recommendations that all of us took 12 years to create.

And I think Tom also gave you some very specific action items that can be done. I think there's a lot that can be done to ameliorate, if not totally correct, I think, what is an over-swing of the pendulum in this area. Thank you very much. Do you have any specific questions on the --

CHAIRPERSON RIDDLE: Kevin.

MR. SMILLIE: Okay.

MR. O'RELL: Joe, appreciate your comments. In terms of tabling this issue, what -- tomorrow it will come up as an action item which -- hear me out -- which we will have discussion on. It will be entered in in the form of a motion and during the discussion period, we'll be tackling these issues and you can see how we got to the position that we did. And there is a minority report that will go with it. One of the actions of the motion could be to table the motion for -- so it doesn't mean that it's just open for a motion for discussion and then certainly one of the options would be to table it if that's the way the Board felt. Are you going to be around when we have our discussion
on this?

    MR. SMILLIE: Absolutely.

    MR. O'Rell: Okay.

    Chairperson Riddle: And my question for you is have you written the correct answers out?

    MR. SMILLIE: Sure.

    Chairperson Riddle: All right, that would be helpful if you could provide your version of how you think that the answer should read for the committee to consider.

    MR. O'Rell: That would be excellent.

    MR. SMILLIE: Okay, will do.

    Chairperson Riddle: Yeah, that would be very helpful. And last time you appeared before us, you had a different issue and that was the use of organic and non-organic ingredients in the "made with."

    MR. SMILLIE: I should commend --

    Chairperson Riddle: And have you read that draft --

    MR. SMILLIE: Yes, and I --

    Chairperson Riddle: -- in a --

    MR. SMILLIE: No, if -- I really commend your work on that draft and I think that that gets the intent of the law clear, so --

    Chairperson Riddle: Okay.
MR. SMILLIE: -- I had that in my notes to thank you for that work and I'm glad you did it.

CHAIRPERSON RIDDLE: You'd have run out of time, I'm sure, that's all.

MR. SMILLIE: Yeah. Well, thank you so much.

CHAIRPERSON RIDDLE: Okay, Leslie Zook and then Emily Brown-Rosen.

***

MS. ZOOK: Hello. I was going to say good morning, but I guess it's afternoon now. I'm Leslie Zook, I'm the Executive Director of Pennsylvania Certified Organic and we represent, certify 300 organic crops, livestock and handling operations, mostly in Pennsylvania, but also throughout the Mid-Atlantic. Some are large operations, some are small. About a third, over a third, actually, over a hundred of our operations are organic dairy farms including Dave Johnson's dancing and singing cows. We certify them.

I also represent the Accredited Certifiers Association here today and I think I'll start with that. The ACA does support the Livestock Committee's recommendations on pasture and especially, particularly the clarification on stage of production. We're really happy that you included that. We thought it was clear
and we thank you for that specific guidance.

We also urge the NOP to continue to hold its strong position on pasture for ruminants. We believe that this is very important, as many of us here do, to promote and in some cases, actually restore consumer confidence in the organic label on dairy products which, in turn, really does benefit all producers, whether large or small and we want to make that clear that we support that position.

It's been just great hearing from all the dairy farmers. I mean, I think this is one of the first meetings I've been to where there are actually more farmers than certifiers here. And you know -- and I know you guys don't listen to us. I keep saying well, I'm representing these farmers and well, here they all are. Isn't this great? So you know, it's just really great, because they're, you know, really busy, as you all know and I'm just thrilled.

As a certifier, we are not opposed to having the idea of the percent dry matter or animal units per acre. We would appreciate some guidance as long as we can maintain the flexibility we need to accommodate the really diverse management systems that we deal with, especially, you know in PA -- in Pennsylvania, for example, we have -- might have a farm that they graze...
half their herd during the day, half their herd at
night, you know, that makes it somewhat difficult to put
into an equation. I'm not really sure how I would
figure that out.

People often -- farmers often rotate their
cows through their cropping systems. You heard
Jim Gardner talk about grazing his hay fields after he
takes off that medicinal, gourmet dandelion hay, right,
so -- I mean, that's really common. They're going to be
grazing their corn stubble, they're going to be putting
their cows out, you know, so it isn't the situation --
the norm is not this big square pasture with so many
acres that we can divide by how many cows there are, so
as a certifier, I want to make sure that I have that
flexibility to be able to, you know, do our job without
having to make everything fit into some kind of a
formula or mathematical equation.

And you know, the other issue is the age of
the animal continues to change throughout the year, so
you know, you might have these, okay, calves; there's
this particular requirement for heifers it's something
else and for the milking cows it's something else, but
every month those things change because the calves
become heifers, the heifers become cows and you know,
I'm trying to think this all through; I'm wondering how
we really would figure all that out and unfortunately, it's really going to come down to more forms and more paperwork for these guys, you know, for the farmer, so -- but they're the ones here who are asking for it, so I'm not saying we're opposed to it. I just -- and we can do it. It's just going to be, you know, a little bit more difficult and a lot of it's going to fall on our inspectors to be able to calculate that, so I'm -- you know, that's where we are with that.

And on a completely different subject, tea. Nobody spoke about tea today, have they? PCO does support the Board's recommendation on the calculation for percent organic ingredients for manufacture of organic tea and that is, the way I understand it, using the weight of the dry leaves prior to brewing. It was a little confusing with all the different formulations in there and that's what we would support.

On certificates, if anybody wants to know, we do recognize that certificates are a problem with the different ways people are putting issuance and -- well, not expiration date, excuse me. But we would all like to see uniform language on certificates, not just certifiers; I think everyone in the industry would really benefit from that. Of course, a data base will help. We don't know when that's going to occur, but we
do really have to make sure that whatever fix we come up with, you know, is clear, practical and doesn't confound the situation more. You know, issuance of the certification document, I'm not really clear what that means. At PCO, we issue a certificate for life, it's good for life. One certificate, that's all you get. Then every year we have an organic product verification that does specify, you know, the specific products that are currently certified and if anybody wants to know my position on seed, I can tell you that in one sentence.

CHAIRPERSON RIDDLE: Okay.

MS. ZOOK: Well, actually my position is that we -- the PCO really doesn't give allowances for non-organic seed when there's -- but it comes down to what do you mean by -- variety? I mean, that's what it really is. I mean, we don't really want our growers to have to grow -- if they're growing Brandywine tomatoes, we're not going to tell them well, you know, German Johnson or -- they're really similar, so you should get those because I know that growers' customers want those Brandywine tomatoes. Well, we happen to know that Brandywine tomatoes are available organically and they're using those seeds.

I would like to support Emily Brown-Rosen's comments on the revised language for your recommendation.
on seeds; since she comes after me, I thought I better get that in. Any questions?

CHAIRPERSON RIDDLE: Okay.

MS. CAUGHLAN: Thank you.

CHAIRPERSON RIDDLE: Thanks, Leslie.

Emily Brown-Rosen and then George Kuepper.

***

MS. BROWN-ROSEN: Hi, I'm Emily Brown-Rosen and I am now a consultant with the Organic Research Associates, a private company in New Jersey. But my experience is in certification and in materials review for the last 15 years. I have specific comments on some of your recommendations and creating some language suggestions, which I'm passing around. I will go through them all, the highlights, then if you have any questions, you can ask me now or later, whatever.

So the topics I want to touch on here are the information on certificates, commercial availability of seed recommendation, ammonia and bicarbonate TAP review and the Sunset provision, which I think I lost my first page of and also, I have, at the back of this comment on Sunset provisions -- I mean Sunset priorities, I should say. There is also a short comment on the made with organic ingredients policy from the Policy Development Committee. So they should all be circulating.
Okay, first I think I'll go on the certificate policy from -- I guess that was the Accreditation Committee. I'm supportive of this recommendation. I think this information is really important, especially calling for the certified as compliant with USDA National Organic Program. That's certainly a problem with especially international companies. We're certifying to multiple standards and you get one certificate fits all. It doesn't really tell you if it's NOP compliant. So that's very good.

I think that the challenge in writing this as just guidance is that this is very specifically written in the rule as a narrow short list of requirements on the certificate, so I really think you should phrase this as a regulation change, otherwise it will not be binding on the certifiers and you likely will not get, you know, enough uniform compliance on that, so I've suggested breaking it into rule change and guidance into all your recommendations and I wrote that up for you.

An initial requirement that's missing here, which we've identified before as certifiers, have identified is that for process products, on the certificate there needs to be identification of the label category for which the product is certified. Products that are certified as organic, meaning 95
percent ingredients are often used as ingredients in other process products. So if there's no means of identifying these products, they likely can and will be used in a product that's later labeled a hundred percent organic. So we need to know 95 percent or 100 percent or else it gets confusing the further you go down the line, so I suggested some language for that.

On the date issue, I agree there's all kinds of dates or terminology about dates, but when I read your proposal, I wasn't clear what you were suggesting as a solution. You mentioned that all certificates should say a date of issuance, but it wasn't clear to me that that was -- is that the same as same as effective date, the initial certificate or not? I would support -- I thought you meant maybe the update date on the certificate, that I would support. I also like Harriet's idea that you have a date of annual inspection, something to indicate the timeliness or the last time it was issued.

Okay, so I think that's that on that one and I've given you the language on that. Next on the commercial -- feed recommendation. I like your suggestions about the farm records and how the farmers are supposed to, you know, have written evidence of their efforts. I suggest reordering them in a slightly
different order so that your idea of not placing as much
of a burden on -- oh, dear. One minute. Okay. Not as
much of a burden on the farmer would be -- they do
on-farm trials, so I just reordered that so it made more
sense. They'd still have to document three different
sources.

On the certifier requirements, I disagree with
Mr. Siegel. I think it's way too much to expect the
certifiers to submit every single seed variety that's
non-organic that's under review. One individual
vegetable grower could be having 200 different varieties
on his farm. I think that's a nice voluntary option
once we get this data base going that people can post
wants and needs on it, but let's start out focusing on
what is available organically, get that data base going
before we try and identify what's not available. It's
too big of a universe.

And last, I think enforcement techniques are
appropriate for that kind of guidance, which -- so I
struck that out, too. I guess that's my time.

CHAIRPERSON RIDDLE: And you can conclude and
wrap --

MS. BROWN-ROSEN: Any further questions on --
oh, on the "made for organic," for instance? Policy
suggestion change?
CHAIRPERSON RIDDLE: Well, you handed out another handout on Sunset priorities --

MS. BROWN-ROSEN: Yes.

CHAIRPERSON RIDDLE: Can you just tell us what we have here --

MS. BROWN-ROSEN: Okay.

CHAIRPERSON RIDDLE: -- very, very briefly?

MS. BROWN-ROSEN: What we have there is just my comments from my experience with things that are hard to understand or I think there's new information about that should be considered as priorities. A number of them have been mentioned by the Crops and Livestock Committee. I've gone ahead and identified a few more, chlorine -- you know, you can go through and look at them and ask me. But the streptomycin, terracycline, I think would be a big issue for crops. I think there's a lot of concern about antibiotics being in the crop and there are some new products out there.

CHAIRPERSON RIDDLE: So these are some suggestions for priority reviews --

MS. BROWN-ROSEN: Yes.

CHAIRPERSON RIDDLE: -- just on crop and livestock materials.

MS. BROWN-ROSEN: Right. That -- further on processing, didn't go there yet because of the whole
scenario --

CHAIRPERSON RIDDLE: Yeah, okay. Well, I would just ask each of those committees to take them into consideration. Andrea.

MS. CAROE: Thank you for your comments on the information on certificates. Regarding the regulatory rule change, we do recognize that some of these requirements may require a rule change. We really didn't go into the logistics of how these things would happen yet, but we wanted to get the concepts down there, but I appreciate your addition there. Also, I think it's very good and I do think this is something we need to consider and amend as far as tying the label claim to the products, that is critical and I appreciate you pointing that out.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: Emily, just a question on -- you have some strike-outs here on the Sunset materials for the livestock materials. What --

MS. BROWN-ROSEN: Yeah, those are --

MR. KARREMAN: Underline like including vaccines or whatever.

MS. BROWN-ROSEN: Right.

MR. KARREMAN: I mean, are you saying that these should just be -- I guess what you're saying --

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
strike out everything after parasiticides [ph] --

MS. BROWN-ROSEN: Well, I indicated by strike-outs which ones need re-review, okay, and then I -- some of this is wish list. I think it might be, you know, when you're talking about changing annotations to make it more understandable, but -- so I suggest your wording --

MR. KARREMAN: So -- but these -- these things you listed are the things you would like to have a priority review?

MS. BROWN-ROSEN: Right.

MR. KARREMAN: Okay.

CHAIRPERSON RIDDLE: Dave.

MR. CARTER: Okay, you've piqued my interest.

One quick sentence on --

MS. BROWN-ROSEN: Okay. That is that -- the sentence that you recommended for change, "Non-organic ingredients may be produced without regards to Paragraph 4, 5, 6 and 7." That's the "made with" section at 301(c). There's been a ton of confusion about this section ever since day one and it was a subject of the first frequently asked question, which was asked by me back in 2001, which is do the other 30 percent of ingredients have to be on the National List. NOP clarified that at the time. It's in the frequently
asked questions that no, that sentence really only means non-organic agricultural ingredients do not have to meet paragraphs 4, 5, 6 and 7. So if you're proposing a change, stick that in because there's still mass confusion. I find all the time people think that made with organic, you know, can have any synthetic ingredient because -- just because of the way they read the rule.

CHAIRPERSON RIDDLE: Okay, thanks. Next is George Kuepper and then John Kepner.

***

MR. KUEPPER: Thanks for the opportunity to address you today. I'm George Kuepper, that's K-U-E-P-P-E-R. I'm with the National Center for Appropriate Technology and we're the folks that are responsible for the ATTRA project that was mentioned earlier and really appreciate your extending the comment period a little bit today. To show my gratefulness, I've shortened my presentation a bit.

As mentioned earlier, when Jo Ann Baumgartner was speaking, about the organic system plan and everything. I'm here to sort of fill you in on a project that is ongoing. We got some funding late last year from the National Organic Program for a project that we're calling the OSP Organic System Plan Project
and among the deliverables of that project is a livestock system plan. About, oh -- I guess that was in 2002, Jim, that you all vetted the crop system plan that we make available through ATTRA and what we're planning to do with the livestock system plan is essentially produce something that's consistent with this.

In the process of doing that, we're also going to do some slight updates to the crop plan. Most of it's real fine language stuff. There's items in here that tend to make the plan sound like it's a documentation form and we'd like to make it all consistent so that producers aren't confused, that they actually see it as a planning document. So that's minor stuff. And where this is really relevant to what you're going to be doing here is the proposal that came from Wild Farm Alliance that's on your plan for Wednesday afternoon.

We consider it part of our task to implement and put whatever you approve as an action, we're in the position of working that into these documents so, you know, basically that can move off your plate. That's, you know -- we consider ourselves responsible for doing the wordsmithing and making that all fit together so, you know, that's what we feel we're involved in and we certainly encourage you to support what the Wild Farm Alliance has proposed.
Alliance has proposed.

And also on that project, I would just mention that we're also going to be producing a compliance check list for handlers that is comparable to the check list for producers that we did back in 2003 for the NOP. So that'll be another product that comes out of this project. And at that, I'll cut myself off. Do you have any questions or comments? I'm out of here.

CHAIRPERSON RIDDLE: Thanks, George, and thanks for your good work there at ATTRA. John Kepner and then Charles Flood. No John Kepner? How about Charles Flood? And then Marty Mesh and that'll be it.

***

MR. FLOOD: Good afternoon. I had a -- my name is Charles Flood, commonly called Chuck. I'm a certified organic dairy and beef grower in central New York and I also have a lot of consumption, as we buy all the products you people are talking about. I had a prepared statement, but everybody's hammered all those points home, so I'd like to address some of the comments that we've heard today.

I'd like to go back to the organic seed first. One of the things you have to look at in the organic seed when you start making it a positive requirement, is who makes the money? We talk about greed, available --
and I'll use the example red clover is available organically. It's 2.75 a pound. Untreated is available for .75 a pound. Now, who's being labeled as organic when you, as a Board, are charged with making that delineation?

We're still looking for more organic milk in the dairy industry. Every day we're -- there's people out soliciting it and they're still looking for grazing farms. This goes back to the point where we need those guidelines. We graze 365 days a year. I'm in central New York, 1642 feet. Now you would say how do I graze? Okay, I harvest what I feed my cows today, but they're out in pasture today. They're out in a pasture today and it's not impossible. We do graze 214 days. Our elevation is very similar to Dave Johnson's. A lot of people here know where my farm is. The thing is every individual dictates his own management style and that determines the criteria.

We graze 214 days a year average for the last 22 years. Of that time, our 150 animals that we're raising get 99 percent of their dry matter intake from pasture. It is very easy to meet 30 percent. Those are very lax guidelines. As a dairy producer, I think it's a good point to start at. I figure in a year, maybe two years, we'll be back here asking you to change that to
50 percent. That would be my goal. And extend the
grazing season to six months. I think these are things
that we have to look at.

We've heard a lot about research. You can
find a study that's for practice and you can find a
study that's against the same practice. If you want to
find the study or dictate more research, I think you
have to go back to Ed Zimba's comment. He's got 10 or
15 years, I think he said, on his own farm. I have 22
years on my current farm. I have over 35 years of
grazing experience, myself. So as applied research, you
can't beat it.

I think all of the rules that were commented
on today are good. We've been certifiable since 1983.
Our soils and our animal health continues to improve the
more we listen to what nature tells us, not what
politics dictate or party politics, as I view it. And a
comment that George made, NRCS requirements are very
lax. They are a benchmark to start people and that
might be a tool to use in a regional concept.

I've been all over the United States and I've
never found a farm that couldn't graze if you could take
the manager away for three days and teach the cows to
graze again. With that, I'll cut mine short, entertain
any questions.
CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I guess -- well, one of your comments was concerting to me and that was coming back to re-change -- I will not vote on a recommendation with the content that you're going to come back in a couple years and go through the same process because that indicates to me that it hasn't been well thought out.

MR. FLOOD: It has been well thought out and we've made a consensus to go with 30 percent, 120 days, grazing being a living forage that the animal harvests from its roots.

MS. KOENIG: And is there any reason to think that consensus wouldn't be there a few years from now because that --

MR. FLOOD: I think that --

MS. KOENIG: And that's my concern and that's what I've spoke to other folks about.

MR. FLOOD: I think --

MS. KOENIG: If you're going to be specific and then a year later you're not going to be happy with that specificity, then it needs to be thought out a lot better and that's why I was trying to find out where this 30 percent is coming from, have you evaluated really what you're -- what the goals are and what it really means on the national level?
MR. FLOOD: I think what we have is national consensus on these guidelines, the 30 percent, the 120 days. That's what we have at this point. If that consensus changes, then you would be in a situation where you would come back. At this point, I don't think you're going to find processors willing to push the envelope any further than that. They need product to meet the consumers' demand. I hope that answered your question.

CHAIRPERSON RIDDLE: Bea. Bea first, then --

MS. JAMES: I have a question for you. Would it satisfy you if, say, hypothetically there was the ability for milk farmers to actually label their cartons how much percentage pasture-fed that their cows are in the milk that consumers are buying?

MR. FLOOD: Most farmers don't package their own product.

MS. JAMES: Right, but what I'm saying is if there were the ability for a farmer -- for a manufacturer to actually make claim of what percentage of the milk has come from cows that are -- the reason I'm saying that is that, say two or three years from now you come back and say well, I'm actually doing 70 percent pasture-fed and boy, I want credit for that. So that --
MR. FLOOD: I don't think that's an issue for
the NOSB Board. I think that's an issue for the milk
processors and the producers.

CHAIRPERSON RIDDLE: And if it were truthful
labeling, there's nothing preventing that right now.

MR. FLOOD: Correct.

CHAIRPERSON RIDDLE: Gerry.

MR. DAVIS: This would've been interesting to
ask each of these dairymen as they came up that -- did
-- the consensus that I hear about settling for 30
percent of the dry matter intake, I'm gathering from you
that is 50 percent not viewed as doable for the broad
spectrum of dairy farmers that have discussed this, that
you know of, at least.

MR. FLOOD: I think if all the farmers that I
know -- and I know a large group of them. There is a
lot of discussion and consensus and talk of it and to
get to a figure that everyone could agree to, we had to
bring it down to 30 percent because there are too many
of those variables, you know, there's that -- the farmer
that's making the transition, he's organic and he
started grazing and he hasn't learned how to ration off
in the barn and he hasn't learned that his cows will
learn to graze. It's just like we've heard about 29,000
pound herd averages and 26,000 -- Jim Gardner told you
about 26,000 pounds. I found the only time I made any money was when I didn't look at the pounds per cow sold, but the pounds per lifetime.

In my herd right now I have 15 cows with over 150,000 pounds in their lifetime. Now, you can go look at any DHI record and that's rare, and I only milk 50 cows. The average age of my cows -- and I have a grazing herd, I have a rainbow herd; I got the expression from Hugh. If it's got four legs and gives milk, it's been in my barn at some time. I'll milk it.

CHAIRPERSON RIDDLE: Andrea, did you have --

MS. CAROE: I want to explore a little bit this national consensus on the 30 percent and could you kind of describe for me how this information, how this is consensus is kind of organized. Are there groups that have been working on this together, formal groups, or is this kind of --

MR. FLOOD: NODPA has been kind of the spearhead group and through various contacts -- I mean, most of the organic producers are internet capable; I'll use that term -- and we have contacts. I have friends in Colorado and California and Canada, even, and you know, we contact through e-mail and that was one of the consensus things that kind of came up from our producer meetings and that's what I'll call them, because it's a
group of organic dairy people getting together and discussing this.

MS. CAROE: So is there any statistics or any information written down from NODPA on this issue?

MR. FLOOD: There is and I think you already have in your comments stacked the number of petitions that were signed and submitted.

CHAIRPERSON RIDDLE: Um-hum, yeah.

MS. CAROE: But I mean as far as the 50 percent.

MR. FLOOD: Yeah. That figure's in there. They all signed it. It was over -- I think there's like 2400 signatures.

CHAIRPERSON RIDDLE: There are several different --

MR. FLOOD: Right.

CHAIRPERSON RIDDLE: -- petitions, letters --

MR. FLOOD: I know I saw it in the information that was handed to me prior to this.

CHAIRPERSON RIDDLE: Goldie, did you --

MS. CAUGHLAN: Well, my notes -- I don't remember who it was a while back was saying that 30 percent dry matter and 120 days represents only 10 percent --

MR. FLOOD: Of the total dry matter for the
animals. For the year.

   MS. CAUGHLAN: And it does mean -- and then
   you, also, are telling us that your experience and
   several of the other long-term --

   MR. FLOOD: You can graze -- you can stockpile
   grass, you can stockpile small greens to get started
   earlier in the season. There's a lot of things you can
   do to change your harvest window and that increases the
   number of days on pasture, which would increase the
   amount of dry matter.

   MS. CAUGHLAN: The 30 percent strikes me as a
   really low figure and it's --

   MR. FLOOD: It is a low figure.

   MS. CAUGHLAN: -- troubling to me and I'm
   wondering where's the incentive going to be year two? I
   understand the concept. I mean, certainly that's the
   history of our rule making process has been to
   constantly move up, but where's the incentive here --

   MR. FLOOD: Historically, the --

   MS. CAUGHLAN: -- if you're saying it's driven
   by --

   MR. FLOOD: -- National Organic Program has
   set minimums, not maximums. And you can't certify above
   the rule. If we at least put a benchmark in that you
   have to have 30 percent for 120 days, that indicates
that these animals are going to have access to pasture
and they're going to get 30 percent of their dry matter
during that time.

MS. CAUGHLAN: And yet we're hearing a great
deal today that the farmers here want to be sure that
consumers are getting truly grazed milk.

MR. FLOOD: In that respect -- and I'd like to
answer it a different way -- we're seeing a movement in
the milk industry to commingle our milk, you know.

MS. CAUGHLAN: Pool. We're back to pool,
right.

MR. FLOOD: I -- yes. For efficiency for the
processor. I am against it, as a farmer, because my
milk is very high in CLAs because it's a grass-based
dairy.

MS. CAUGHLAN: Exactly. So it doesn't tell
you if you have what type of milk?

MR. FLOOD: Yes, it does, but you still have
to start somewhere and education is the carrot. If they
start with 30 percent and they see an improvement in
their animal health and they see an improvement, they
will go to 40 percent, they will go to 50 percent
automatically. It's happened time and time again.

MS. CAUGHLAN: Do you see if the rules were to
be promulgated in such a way that a percent, not
mandated, but --

MR. FLOOD: Suggested?

MS. CAUGHLAN: That you could put a percent on label?

MR. FLOOD: Yes. It would be very beneficial.

MS. CAUGHLAN: It would be beneficial to see that that would be an added incentive?

MR. FLOOD: Yes.

CHAIRPERSON RIDDLE: And Bea.

MS. JAMES: I know we're trying not to ask a lot of questions, but I feel this is a very important issue on the percentage and I just want to know if you personally compromised in the 30 percent?

MR. FLOOD: Most definitely.

MS. JAMES: How many farmers that you know do you think compromised?

MR. FLOOD: Twenty percent.

MS. JAMES: Okay.

CHAIRPERSON RIDDLE: George.

MR. SIEMON: Well, just so we make sure. We're talking about dry matter versus total feed, because you're talking about "as is." You would see they're pastured during the season, so you get a much bigger percentage, but grain is very dry and pasture is very wet, so when you wash it all down -- so I don't
I wish I had the ration right in front of me to
tell you what you're grazing 15 pounds of --

MR. FLOOD: 240 pounds as fed, of grass, four
pounds of grain is the average grazing dairy.

MR. SIEMON: Well, it can be higher than that.

I don't see --

[Simultaneous comments]

CHAIRPERSON RIDDLE: Let's not debate dairy
rations right now.

MR. FLOOD: Statistically, a cow will consume
in access of 240 pounds of pasture as fed. That's on a
93 percent water base and then four pounds of 99
percent, or 92 percent dry grain.

CHAIRPERSON RIDDLE: Julie, you haven't said
much so you will be recognized.

MS. WEISMAN: Thank you. I actually would
like to work my way back to Bea's question because I am
wondering if there is a way to get at knowing the
percentage of dairy farmers who can actually achieve
above that 30 percent and maybe even like how many can
get to 40 percent, how many can get to 50 percent, how
many can go above that, and then as a separate question,
I would be -- and it's not just a question -- I don't
expect you to answer this, but it's an appeal for
someone to be able to organize the information. I'd
also like to know not just the percentage of dairy
farmers, but also a percentage of the national organic
herd, could I call it that, that is able to be --
achieve those levels of dry matter from pasture.

MR. FLOOD: One of the disadvantages to
obtaining a higher level of dry matter intake on pasture
is the fact that most processors want year-round milk,
while seasonality -- you heard Dave Johnson say he milks
seasonal, his cows are dry now or -- in that process,
he's milking very few. Well, that works great in
Pennsylvania and New York if your milk company will take
you that way because the interpretation in this goes
back -- and George could probably explain it better --
when they're trying to balance milk, they don't want to
be bringing milk from Tennessee to New York because New
York's all dry because they've all gone seasonal and
vice versa.

So it becomes a balancing act to get it year-
round. It becomes a management decision where your
level of production's going to maintain. As far as the
first part of your question, I think you have a vehicle
in the NOP web site to collect that data if we had a
question forum for producers to submit those figures.

MS. WEISMAN: See, it pays to go last.

CHAIRPERSON RIDDLE: Oh, no. Hugh.
MR. KARREMAN: Just that -- I think the USDA this year is going to be doing some kind of census on organic farms, so that should help with that question of the national herd. No?

CHAIRPERSON RIDDLE: Yeah, there are going to be a couple of questions on the national ag census, but I don't know that it'll be gathering this level of detail about grazing. I haven't seen the questions yet, but that's something to consider. Should be there.

MR. FLOOD: Any other questions? Thank you.

CHAIRPERSON RIDDLE: Thank you, Charles.

Marty Mesh.

MR. SIEMON: Last but not least.

***

MR. MESH: Okay. Here's my proxy.

MS. CAUGHLAN: So how many are you -- Marty, how many are you going to use?

MR. MESH: Seven minutes and 15 seconds.

CHAIRPERSON RIDDLE: We don't have a policy for partial proxies, I'm sorry.

MR. MESH: Okay, then just add the whole thing. My name's Mary Mesh. I'm the Executive Director of Florida Organic Growers and Quality Certification Services. I started farming organically in 1976. I want to welcome the new members of the Board for the
start of your five-year stint, which I'm sure will be
two years of active memories. My hope is that my newly
committed goal of keeping not one but both feet out of
my mouth will be successful during your entire term on
the Board, however, I will continue to state my own
beliefs and represent organic growers who may not be
able to come to industry meetings, themselves, as well
as the greater industry and organic community
perspective.

   The Board's just -- on your last speaker --
the Board's waiting until the last dairy farmer to ask
questions that more rightfully should've been addressed
to all the dairy farmers that proceeded is one example
of targeting your input on the non-appropriate
population, I would think. I do serve on the board of
the Organic Trade Association, however, I do have to say
that my views are not the official position and at times
they're not the same position as the Trade Association.

   The -- it was mentioned that the real time
system for certificates was presented at the May '04
Board meeting in the past and if -- when Keith Jones did
a presentation on the certificates, if it is to be held
up because of either technology, administrative or any
other reason, then the critical point of having some
dates on certificates should be considered or figuring
out a way for somebody else to do the data base because quite frankly, dates on certificates would do more to help the industry grow, not hold it back and as well as help the verification process, which has been a part of it.

The NOSB terms need to be rotated to avoid such a massive shift as 11 new folks over a 14-month period and the rapid loss of the institutional memory. I have to say, as a person whose formal academic education was in psychology, I was most intrigued by your recommendations for addressing FDA regulations affecting NOSB recommendations concerning livestock mediations and --

CHAIRPERSON RIDDLE: Medications, not mediations.

MR. MESH: I'm sorry. M-E-D-I-A-T-I-O-N-S, mediations. And so I am interested to see the -- I don't want my time -- hold the time. I am interested to see the mediation process for livestock, but since most of the thing dealt with livestock medications, I think the take-home point is that USDA and the National Organic Standards Board need to get a system quickly implemented to allow safe, non-toxic, over-the-counter materials to be used in organic livestock health management as opposed to more toxic, costly medications.
I think I've said that before. There's materials that are on the list that probably should come off the list; there's materials that aren't on the list that have been reviewed that need to be on the list and currently, there's no materials for pain and suffering of animals which doesn't seem to me to be very organic.

While I appreciate the support of methionine -- I'll leave that to try to save time. I would urge whatever the outcome of your pasture discussion is, is that the National Organic Program and their lawyers, whoever -- anybody, somebody confirm that it is indeed an enforceable, verifiable standard that certifiers can actually take to the ground or take to the farm and do the certification process. It doesn't help anybody if it's not a verifiable and enforceable standard.

I'm concerned that the ever-increasing cost of accreditation needed to make sure that our clients have access to both the US and global markets keeps increasing. The USDA accreditation costs to maintain our NOP I-65 [ph] accreditations has gone from a couple thousand dollars to over $6,000 without taking into account staff time needed for compliance. USDA hourly rates have risen from what I think was $28 an hour to what was proposed at least to be $98 an hour. It may be at $64 an hour, clearly outpacing the wages of organic

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
water mill [ph] and workers and certification program
staff.

We're also concerned about covering the cost
of USDA compliance investigations and feel like it's
either reasonable reimbursement or some other method
needs to be developed so that non-profit certification
programs that are absorbing all the costs that the USDA
general budget gets all the potential compliance fines
from up to $10,000 per violation. I'm curious to hear
all the stories and benefits of organic -- from the
organic dairy producers and wonder how long it'll take
USDA to actually recognize and promote organic
agriculture practices.

How many organic dairy producers show up at
biotech advisory board meetings to claim that by
switching from organic dairy operation to more
chemically-intensive agriculture practices using RGBH
has resulted in increased animal health and
environmental benefits? In Florida, this type of
intensive dairy production has resulted in a net loss of
dairy farmers, almost making them extinct, while at the
same time increasing profits for Monsanto.

I urge the USDA to engage in a meeting with
Arthur Harvey to reach an adequate summary judgment
which would avoid the negative consequences to the
organic industry marketplace and disruption to the dairy
producers that are already in the process of
transitioning to becoming a certified organic dairy. I
wanted to comment on the time frame. Harriet said
something about an inspection date. That doesn't work
because of the 18-month language in the regulation and
my concern about your organic seed requirement would
mean that the USDA NOP -- I thought he was gaveling me.

I got scared because you used to have -- that
the USDA National Organic Program is contributing to the
loss of biodiversity because growers all over the world
will have to comply with the National Organic Program
requirements if they want to access the USDA -- US
market in that the organic seed requirements will have
effects for growers all over the world and really result
in the loss of biodiversity. With that -- it's not a
personal attack, but this is my last sentence. I'm glad
to see -- I was glad to see that we have a kinder,
gentler timekeeper and although that should not be
targeted as a personal attack on the old timekeeper at
all.

MR. MESH: Are you going to ask me about my
next paragraph? Okay.

MS. CAROE: Marty, you said something about
the dates on certificates didn't work for 18 months?

    MR. MESH:  Well, Harriet had mentioned, you know, at least put in the date of the inspection, although because an inspection can take place in the regulation that an inspection has to take place at 18 -- up to 18 months from the last date of the inspection, so it's not like the annual, you know, yearly certificate. It would be a little bit harder for the industry to know that okay, this a current certificate.

    MS. CAROE:  So it's what we recognized when Harriet spoke on these questions.

    CHAIRPERSON RIDDLE:  Anything else?  Dave.

    MR. CARTER:  Just a quick question.  So do you prefer binding arbitration for livestock or mediation?

    MR. MESH:  We're still at the investigative stages of --

    CHAIRPERSON RIDDLE:  Binding medication.

    Okay.  Well, I would just like to thank all of the commentors and really thoughtful comments that were offered today and in a very respectful manner.  So I want to applaud you on that.  I especially -- thank you. And I especially want to thank all of the farmers who have taken the time and the money out of your own pockets to come here and I hope you can stay and you know, keep track of our own debate, but also just to
walk away knowing that this is your program and we do
listen to you and we certainly try to represent your
interests to the USDA as best that we can. And for
those of you who haven't said enough, you still can sign
up for Thursday comments and that'll be -- Francine will
have that. So you've certainly given us a lot to
ruminate over. We're going to -- did you want to --
yeah, Richard want to say a few words and then we're
going to take a break.

MR. MATHEWS: Yeah, I also want again to thank
all the farmers for coming in today. I know that it's a
real challenge for you to be able to get away from the
farm and I must say that I'm six weeks short of seven
years working on this program and I think it's a fair
thing to say that there are more farmers in this room
today then in all of the seven years that I've worked on
this program. And you are truly to be commended for
coming and it's been a pleasure to hear from you. You
have given us more than all of the so-called experts who
speak on your behalf have ever given us, in my
estimation, and again, thank you for coming.

MS. ROBINSON: No offence to the experts.

MR. MATHEWS: Yeah, no offense to the experts.

CHAIRPERSON RIDDLE: Okay.

UNIDENTIFIED SPEAKER: Richard, I'm going to
take that as a compliment since I am a farmer.

CHAIRPERSON RIDDLE: We will take a 15-minute break which puts us a little after 3:15. Let's say 3:17, please.

[Off the record]

[On the record]

CHAIRPERSON RIDDLE: Please take your seats.

Okay, yeah, we have a quorum of the Board here and before we get started again, I would just like to introduce Nancy Ostiguy, Board member. She finally made it in from mid-state Pennsylvania, so if you could just tell a little bit about yourself, Nancy.

MS. OSTIGUY: Okay. I work in the Department of Entomology at Penn State. I'm one of the environmental representatives on the Board. I do work on honeybees and I'm working on non-pesticidal control for my -- it kills the honeybees, so helping, hopefully, some organic beekeepers in -- to meet the standards. There's no question we don't have anything on the list right now for them to be able to function very well.

CHAIRPERSON RIDDLE: Thanks, Nancy. And Nancy chairs Crops Committee and also serves on Livestock and Materials. And I had overlooked one name for public comment and so I apologize for that, and Diane Goodman said she'll be brief and has a few words to wrap things.
up.

***

MS. GOODMAN: Thank you, Mr. Chairman. Thank you very much. And welcome to the new NOSB members. It's a pleasure to have met you all and welcome to our world. I hope you find it as enjoyable as I have for all the years that I have been involved in it and thank you also to the Board and it's impartment for today's meeting. I have a brief comment. I have it written out here very scribbled, so I'm going to read it to you. I think that'll be the easiest way to do it.

I'm speaking in support today to two issues. The first of these issues is in support of the Livestock Committee's recommendation for the re-petition of the allowance for methionine, to encourage -- also to encourage the National Organic Program's consideration of a methionine alternatives task force including member of the industry to develop the alternatives for sources of methionine in the future. In light of the work of the OTA livestock committees, a methionine alternatives task force, I think that a formal oversight process under the formal nominating process of a task force of NOP would be well-deserved and appropriate at this time and perhaps accelerate the work that we accomplish in the next three years. And I would like to specify that
those standards, those alternatives for methionine be
developed for all levels of production, supporting the
scale neutral intention of the regulations of the
department.

I'd also like to speak to support the current
flexible interpretation of pasture requirements as they
are written into the regulations now, to allow a
diversity of production systems that will serve the
diversity of the growing market for organic products.
Specifically is my concern for the Board's vulnerability
and deserved sensitivity to the acquisitions of factory
farming and abuse by some of our larger dairy producers,
to the lack of organic integrity as it equates to market
success, that the size of an operation somehow
determines organic integrity.

In this organic arena our original goal was to
change the way we produce food, to transition as many
acres as we could to organic agriculture, to change the
way we grow food, to bring as many acres as possible
into the highest form of sustainable production, which
is organic farming. By allowing diversity in the
systems, we will achieve our goals of changing
agriculture. By limiting our systems in dairy, in
poultry or in retailing, by narrow implementation of the
-- by -- excuse me -- by implementing narrow
interpretation of our regulation, we limit our ability to grow, to thrive both as an agricultural movement and an industry and our ability to provide food filled with organic integrity for everybody.

I'm a city girl. I'm from New York City, but I spent five years farming in California's Central Valley, so I know both lifestyles and both cultures. And I'm now back home and what home is to me, and that is the city. And I can tell you, as involved as I am in the rural/urban relationships that go on in the cities, that city dwellers are, in fact, the largest market for organic food simply by our sheer numbers. In 2005, this is the first year in history where more people in the world will live in cities than they do outside cities -- this is the United Nations statistic for this year. It was wonderful and personally wonderful for me, because I love farmers, I love farming, but it was wonderful to have heard from so many farmers as we did today, and as a long-time organic advocate, I love hearing farmers speak up.

But farm life happens in rural areas and farmers are not urban consumers. So what's important to urban consumers, yes, a perception of organic. One that means environmentally safe, healthier -- a healthier choice, less toxic chemicals and available where they
shop. Well, that takes quantity and it takes consistency. Without the flexibility to allow the regulations to be site-specific, region-specific and scale neutral, the largest markets in this country for organic food will not continue to support the demand that up until now and into the future will fuel and continue organic growth on the farm. Thank you very much. Any questions?

CHAIRPERSON RIDDLE: Thanks, Diane.

MS. GOODMAN: Thank you. Okay, next item on our agenda is NOP update and discussion, so Richard, are you going to start it off or --

MR. MATHEWS: We'll let Neil start it off.

CHAIRPERSON RIDDLE: Okay. Neil, would you please introduce yourself and welcome to the meeting here.

MR. BLEVINS: Thank you. If you don't mind, I'm going to take this off there so I'm not -- I'm a moving target, at least.

CHAIRPERSON RIDDLE: Yeah. You're going to have your back to somebody.

***

MR. BLEVINS: I'm Neil Blevins. For those of you who are compulsive note takers, that's N-E-I-L B-L-E-V-I-N-S and here's where it gets more
challenging. My title is Associate Deputy Administrator for Compliance, Safety and Security. For those of who are slow note takers, I'll repeat that again. I'm the Deputy Administrator for Compliance, Safety and Security. I'm responsible for quite a few programs in the Agency. I bet you can guess that Compliance is one of them, Safety is one of them and Security, that's bio-security, physical security, employment security, food security, any kind of security you can think of other than my own job security.

In Compliance, we have a very, very small staff and it will remain so. I have about a half a dozen to a dozen at any time investigators who are badge carriers and in addition to that, I have an auditor who does audits of federal and state programs, audits of some handlers that have to pay assessments to the marketing order and research -- assessments. And I've a got a very small team of people who are devoted almost entirely to various issues in the National Organic Program.

I have two people in Fresno, California, the Central Valley we've heard so much endearing talk about today who primarily do the complaints. Almost all complaints are handled out of California, not because California needs more work than any place else, but it
just became convenient for me to house them there and they can work in any direction. Those two people -- there used to be one, now there's two -- some of you have met or probably one or both of those gentlemen. And I have one other person on staff who handles primarily working with the agents. They're in enforcement actions and in doing preliminary work on appeals.

A number of the investigators have some of the NOP compliance pieces finally and I don't say finally because it's taken a long time, but because the time is finally right to move some of the complaints, some of the problems we've had into formal investigations to see if we can't get them in front of one court or another.

All right, that sort of is a basic introduction. I've heard a lot of malarkey about there not being a lot of compliance in this program. This program has more compliance than any other program we have in the Agency. You have hundreds of people who are working on compliance now. You have tens of thousands of dollars being spent on compliance. The federal government has the fewest number of people in that process and the smallest amount of money, but we have agents, inspectors -- that's by law the front line of compliance in this industry. And I -- what I've seen of
the inspectors, in particular, I am delighted at the work they've been doing and their knowledge. We need to keep bucking up the agents a little more -- and some of you who are agents, I apologize that you are for limited purposes a federal agent and as so, you have certain responsibilities to ensure compliance by those who you certify. And that's up to now, has been primarily the focus of the Compliance program is to -- for certified people, give the agents to do what they're supposed to do.

We get a complaint about a certified person with a bad, a questionable label or something that's been -- that's questionable about whether or not they should have been certified; I'm not running out to do that. There is a person in the law that is responsible for investigating that and dealing with it before I do. My job, Richard's job, our job is to then assess whether the agent did their job initially and did their job in following up. If they don't, then we've got two people to deal with, the operation and the agent.

But until that time, every agent deserves a chance to straighten it out themselves. That's what the law says and -- state of this program, if any of you think that there's an agent out there -- and I welcome your suggestions -- that's got it a hundred percent.
right, that thinks along the same lines as Richard, heaven help you, then I -- I have yet to see that. I've seen some agents struggling mightily to do it right, to understand what is, why all admissions, an incredibly set of regulations to figure out.

You know, we've heard here time and time again today we're dealing about the problem that's caused by this pasturing and grazing business, but until that occurred, how many different interpretations of that particular regulation you think there was in this country? And then you take that and apply it overseas where it also applies and I ask you how many interpretations of that regulation you think existed. If you think that's the only part of that regulation where we don't all see eye-to-eye, then I think you need to stay later in the program and have some more indoctrination. And what that goes to say is that nothing is easy.

You complain to the Department of Agriculture that somebody isn't allowing sufficient pasteurization [ph], we have to look and see well what the heck does that mean? What did the agent tell them? We agree with the agent. Oh, no. Now we've got to get attorneys involved, we've got to get the program involved. We probably even have to get the Board involved before it's
all over on a simple question where we all know the facts. We all know that the cows in the pasture for X number of days, but we don't necessarily know if that's a violation of the law.

Five years from now when we all come back, a decade when we all come back, we better know all those answers. But you've got to realize no matter how much you want this program to stand up and run, it's like asking your baby kid to start talking when he comes out of the womb. It can't happen. It can't happen without millions and millions of dollars to use in the program and all kinds of heartache because each of you probably has a different idea of what needs to be done, where the problem is, what the interpretation of the regulations ought to be, so it's not an easy solution. All right, there's my apologies for the moment.

Some of you may be interested well, what are you doing? How many complaints have we had? We processed about 250 complaints in a little over two years and those largely have been resolved in way or another. In the first year of the program, a lot of those were aimed at getting people certified. This is -- everybody that's going to label their organic to be certified. So we give them an option; get out of the market or get certified.
I don't need to spend thousands and thousands of dollars to get somebody who wants to be certified in court and fined. I need them certified. Most of the complaints that we've dealt with have been people getting out of the marketplace. We haven't found them again. Or we've gotten them certified through an agent. So there's about roughly 250. How many people are suspended or revoked right now would you expect? I can tell you that as of right now there are at least 250 people that are revoked and over 250 people are suspended, still suspended and at least 50 people are -- and I say that is because one of the problems I'm having is some of the agents telling us what they're doing.

There are 97 agents. Right now there's about 15 of them who are reporting in with suspensions and revocations. Huh? There's about 15 of them. We're just now taking those -- Shannon -- I don't know if you've met Shannon in the back -- is putting it all in a data base and we started working on them a few at a time. I can't get all 97 working yet because I can only improve a few at a time. Those who are the most willing to get better, those are the most anxious to be good agents for working with.

We're adding a few at a time, going back and say hey, we haven't heard from you. Have you been doing
any compliance work, have you taken an adverse action?
Have you told anybody that they are not in compliance?
Have you taken a suspension or a revocation? What the heck does that mean? Most of you don't know what suspension or revocation means. We have people who are shocked. When we get a revocation letter now, we say okay, I need to know what kind of an organization this person was. Are they a sole proprietorship, are they a corporation? I don't know because you've just made them ineligible for certification and I need to know who all the responsible people are.

And most agents say huh? All I did was revoke part of their operation. No, no, no, you didn't. You revoked, you took an action by law that affected not only the operation, but the people in it. So there's -- people are backtracking and trying to make suspensions, revocations on the suspensions, all kinds of things trying to figure this out. It's to be expected. It's frustrating for us all. It's frustrating for everybody here. This is the top portion of the program. Hopefully there won't be a -- they'll figure it out in the next couple of years or they won't be agents. But we've got to give them a chance to figure it out with us, with us, and get it going.

What are the questions? I'll take them first.
from the Board, if you have any questions about where we're going with compliance and enforcement, what we're doing, what we're not doing, what we're pretending to do or -- Rose?

MS. KOENIG: I mean, you were here the first time for the discussion. In terms of compliance, are numerical values for issuing guidance one of the things that you, in charge of compliance, is like as far as --

MR. BLEVINS: I'm not sure I understood the question. Try it again.

MS. KOENIG: Well, let's give the pasture as an example. At the compliance level, we've heard some suggestions today with a numerical value rather than an adjective saying significant. From a compliance perspective, what is the most clear-cut way of developing guidance on something like pasture?

MR. BLEVINS: Your problem is you go forward for anybody that's interested in enforcement, is creating an understanding for everybody in the system and that is if you say that you have to have significant pasturing and the agent tells the operator you need to significant pasturing and the agent then goes out a year later, an inspector goes out and says significant pasturing, they let the hens [ph] out and not the rest of them or whatever they find, if the operator comes
back and says well, I thought that's what you meant by significant pasturing.

At the very least, all you can do is send them a notice of non-compliance, give them a chance to improve and eventually if they fail to comply with you or as the agent's interpretation of this, at that point, you've got -- you can start earlier if you didn't give them a more quantitative approach to it and say here's what I expect. I expect you get the whole cow out of the barn and I expect them to be out of the barn for at least five hours a day, 120 days a year and they -- all of a sudden there's stuff that I can't begin to understand but feed.

The more specific you are in the guidance, the more easier you are to say to I don't understand what you didn't know. You knew, you did it deliberately and not only can I skip a step in the enforcement process -- because if -- anybody that knowingly does something, you can go and say you don't get another chance to comply, I'm going to propose your suspension and not only that, I'm telling USDA and they're probably going to try and get some money for your violation.

But that's an answer to -- the more you can make the regulation understandable rather than

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
of -- like I say, you've got to get in charge of
Richard's mind, because if it's an interpretation of the
regulation, he is God. You may all have five different
interpretations of the regulation, but by law, by law
there is one person who is the master of it and that's
the person who administers it for the federal
government. So it doesn't necessarily matter. That's
what you've got in some of these other parts about well,
is it clear or not clear within the law that you can do
it, is it clear within the regulation. If there's room,
he's the arbiter. Other questions? Yes, sir.

UNIDENTIFIED SPEAKER: Yeah, where I live in
-- national brands of bananas with USDA stickers all
over them. One of them says organic, it doesn't mention
any certifier. The other one says certified organic, it
doesn't mention any certifier. So who's supposed to do
and what can possibly be done about that? One of them,
like I say, doesn't even claim to be certified, but the
USDA stickers are on every bunch.

MR. BLEVINS: I wouldn't begin to understand
all of that stuff. We are having some problems with
some imported product, as you would guess and getting
some foreign product, foreign certifiers to understand
technical things on what kind of labels should be on
there or things again that I'm not the best person to
answer. I take facts and turn them over.

CHAIRPERSON RIDDLE: Neil, Neil, there's some Board members that still have some questions, if you would, please, and then actually we are going to need to keep moving.

MR. BLEVINS: You bet.

MR. SIEMON: At the level you work, you know, there's the law, there's the rules, the regulations, so these guidance documents, we're being told that they are non-enforceable. Are they used as a guidance for you in your --

MR. BLEVINS: No, actually not.

MR. SIEMON: They're of no value then?

MR. BLEVINS: I'm not saying there isn't value. To the extent that they are policy or an expression of an interpretation, they are useful, but you cannot violate anything under the law and the regulation. Those are the only two things you can violate.

MR. SIEMON: But these guidance are interpretative of the rules, so -- still, the wording in the rules, all of it really counts.

MR. BLEVINS: Well, it is. They help interpret that. They tell the agent what the Board and the NOP believe this regulation to mean and what they
expect the agent to do and as long as that's within a common sense interpretation of that regulation, then it's practically as good as the regulation because it is our interpretation of that particular regulation, not be too redundant.

CHAIRPERSON RIDDLE: Bea.

MS. JAMES: I have a couple of -- one is kind of a comment/question in regard to Arthur's question on bananas. And this is just from my experience as a retailer. There is difficulty with getting some of the suppliers from the smaller third world countries to have the stickers that actually say certified with them for cost reasons. The PLU sticker that is on the bananas always starts with the prefix 9, which indicates that it is organic and at this point, that is one of the ways, at a retail level, if you can actually determine whether or not it's organic.

Now, the retailers are putting these other stickers that they can find -- there is a problem with having enough stickers -- and one of the places where they can actually get stickers to put on individual produce items such as bananas and apples, because that's a lot of stickering to have to do to individual products, is the USDA ones. So I -- you know, I don't know if that really answers your question. I think that
there are some clarifications that need to happen in
order for stickering of the individual produce items to
be more clear for the consumer and so I just wanted to
comment on that.

And then secondly, in response to Rose's
question with how we, as a Board, are to try to be the
so-called voice of the organic standards and try to
represent the people, when we do that, when it gets to a
certain level is there a preference for science-based
facts versus experience facts and what would you
recommend that we do when we -- you know, when we try to
give these recommendations? Do we always want to
incorporate both? Does one have preference over the
other?

MR. BLEVINS: You're talking about rule making
and guidance?

MS. JAMES: I'm talking about -- well,
anything. When we present our recommendations for
different guidelines, is it -- are they taken more
seriously if they are science-based recommendations or
is experience-based recommendations --

MR. BLEVINS: Not necessarily. These are the
best people to answer that. Truly, this is a marketing
program and not a science program.

MR. MATHEWS: The -- what we're really looking
for is some form of justification for whatever change it is that you want to make. And this goes back to some old stuff that I've said long before you came on, that we need to know what is the problem, why is it a problem, who's the problem for, what are the different solutions to the problem, what options did you look at and what were the pros and cons of each option, so we're looking for that kind of information, so to say that a science-based versus something else is necessarily going to -- one or the other is going to overrule the other, is not a good statement. It's really going to be on an individual-by-individual basis and so the best thing to do is to provide us the kind of information that we've asked for.

CHAIRPERSON RIDDLE: I've got a couple of questions, Neil. You mentioned some approximate numbers on the suspensions and revocations, but what about the enforcement by your division that could lead to the $10,000 fine. Are there any gone to that level?

MR. BLEVINS: Not yet, and that's what I say, there's a couple that could. We recently finished an appeal in which the administrator denied the appeals and it would likely have gone forward. It may not go forward now simply because there's been some additional settlement between the operator and -- which makes it
really tough to adjudicate. What happens with cases that we have to have, you know, intentionally, knowingly, whatever the language in the -- willful violation before we can go after even the first inning [ph] and we always have to start from scratch. A lot of what the agents give us is not terribly useful. It's -- with the exception of the inspection reports, the correspondence back and forth and the evidence the agent has about the violation, the knowingness of it and everything else requires a split back in the hands of investigators rather than take it forward. We have about four of them now that are in the hands of formal investigators.

CHAIRPERSON RIDDLE: Okay.

MR. BLEVINS: And those are just within the last couple of months.

CHAIRPERSON RIDDLE: I have one more question and your division's now handing the appeals, correct? It's not --

MR. BLEVINS: Yes.

CHAIRPERSON RIDDLE: -- NOP taking the lead, but you're taking the lead.

MR. BLEVINS: No, I do not work with the NOP and I handle all the appeals.

CHAIRPERSON RIDDLE: Uh-huh. And kind of York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
where's that at or how's that gone now that you took it over?

MR. BLEVINS: Well, since we took it over in June, we received nine appeals. Two of those have been dismissed. The administrator, in his wisdom, has decided that if you don't follow the regulations, you can't have an appeal. So the regulations dictate what's required in an appeal. It has to be received within 30 days or whenever the time period. It has to have a copy of the proposed action attached to it. It has to be sent to the right address. It has to give the reasons for the appeal.

If it doesn't have all those things that are required by the regulations, we dismiss them. We've dismissed two so far. We finished one appeal. The administrator signed one appeal, denying it and there is at least one more that's in clearance. So out of the nine, that's three that have been finished, there's really two in clearance now, so those are moving fairly rapidly, but every one of those has some fairly interesting and unique issues that lawyers had to sign on to.

We look at two things. We're judging appeals first of all, not on whether or not the person should be suspended, but whether or not the agent has sufficient
evidence to suspend them. That's a different test.
That's a different test. If the agent comes forward
with no documentation, they don't get suspended. So we
have to look at that. Then we have to look at, because
the regulations required this, the administrator denies
an appeal. You don't get suspended, you don't get
revoked, you don't get denied.

We then have to file a complaint before the
Department, have a hearing and try it, which means we
have to go to the attorneys and say will you try this?
Is the language of the regulation sufficient that you
can try it? Is the evidence going to be sufficient if
we can develop it for you to try it? So there's just
sort of a two-part test to every appeal. Goldie, do you
have a question?

MS. CAUGHLAN: Well, I was -- it's probably
not something that you can respond to but --

MR. BLEVINS: I can take it.

MS. CAUGHLAN: -- I hear a great deal of
concern from consumers who worry that there is less
verifiability of organic products coming from outside of
the United States. I just -- do you -- are you involved
in any of the foreign actions?

MR. BLEVINS: Well, I can tell you -- every
agent, foreign or domestic --

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAUGHLAN: Are USDA.

MR. BLEVINS: -- have to be accredited, go through the same process and we do have -- we have one appeal from an international operator who has been suspended. We have a number of complaints that have been examined by them. I don't have a particular feel that there's greater noncompliance. I think there have -- it's more difficult for them to understand some of the labeling and things like that sometimes. By the time they translate us and put it into a translator or something, it comes out a little whacky sometimes. Was there another question? Jim, do you want to move on?

CHAIRPERSON RIDDLE: I do. Thank you very much for coming. I think it's really important to hear an update from your division, hear what you're covering, so -- Rick, you have some NOP update items for us.

***

MR. MATHEWS: Richard Mathews, Associate Deputy Administrator, National Organics Program. I'm going to do like Neil so I can turn around and face the audience. The only thing that I really want to talk about is accreditation and I'll leave any other issues to Barbara, but we did cover them yesterday. Some of the issues have already been covered today.

The interesting thing is that over the last
two, three weeks we've been getting some media inquiries
and they're saying that so-and-so says that you guys
don't audit certifying agents. Is that true and why
not? Plus other questions with regard to auditing
certifying agents. I'm here to tell you that we have 97
certifying agents and indeed, we do audit them. Now,
let me set the stage a little bit.

Under the regulations, people coming into this
program can be accredited before they get an on-site
audit. And the number one reason for that is no one can
certify anyone to our standards until they are
accredited. So a certifying agent that is not
accredited won't get any clients. So you've got to be
accredited before you can get your first clients. Also
under 205.504(d), we have a requirement that certifying
agents send us at least three packets related to clients
that they have certified. Okay. So you've got to be
able to certify someone before you can -- you have to be
able to be -- you have to be accredited before you're
able to certify anyone.

When we did the original rounds of
accreditations, if you go back and look at our list with
the dates, you'll find that almost all of them are
domestic. So the domestic people have been audited
first. Then we started giving some accreditations of
foreign. Now why did it take it longer to do accreditations of foreign? Because as Neil said, they have trouble understanding our regulations. I think it has a lot to do with language barriers.

Okay, so first out of the blocks were the domestic guys. Then some of the foreign got into it. Now you have to get clients. I can give you an example of a certifying agent that has not yet received an on-site review of the National Organic Program's auditors. And why is that? Well, because this Chilean certifying agent, even though they are accredited, still has no clients, okay. So you can't audit someone who has no clients. So our policy is the first ones into the hopper and those with the most clients are the ones who get audited.

Okay, now I've set that stage. Now let me give you the numbers. We have 97 accredited certifying agents of which 62 have gone through on-site audits. All right. Out of the 56, 39 have been audited that are domestic, okay. So 49 of the 56 domestics have received their audits. Again, continue to remember that those who came in last are going to be the last ones audited. We've got three of the remaining seven that are scheduled this calendar year. The other four are scheduled for 2006. Now, out of the 97, 41 are foreign.
Again, remember they were the last ones accredited. So far we have audited 13. I can tell you that most of those are the two certifying agents in Australia, those in Canada. There are a number in South America. We also have scheduled for the rest of this year 14 that will be -- during the rest of this year. Okay?

Then the remaining 14 are scheduled for 2006. Now, if the Chileans still don't have anybody by 2006, we won't be auditing them. So just as a recap, we have 56 domestic, 49 have been audited. Three are scheduled for the remainder of this year. Four are scheduled for next year. We got 41 foreign. Thirteen have been audited, 14 are scheduled for 2005 and 14 are scheduled for 2006. Any questions about that?

UNIDENTIFIED SPEAKER 1: You said 13 have been audited first and now you say 14?

MR. MATHEWS: Thirteen have been audited to date.

UNIDENTIFIED SPEAKER 1: Okay.

MR. MATHEWS: Fourteen more will be done this year and then 14 will be done next year.

UNIDENTIFIED SPEAKER 1: Are there any in Europe that have been done?

MR. MATHEWS: The ones in Europe are the ones that are still scheduled for this year.
UNIDENTIFIED SPEAKER 1: Okay.

MR. MATHEWS: I know that we've got a couple of them scheduled for April. One of them is planning to go out of business and so they've had some discussions with that one.

UNIDENTIFIED SPEAKER 2: I'm almost afraid to ask this question but this will be our fourth site visit this year and --

MR. MATHEWS: Your fourth site visit this year?

UNIDENTIFIED SPEAKER 2: Not fourth -- our fourth year after our site visit.

MR. MATHEWS: Uh-huh.

UNIDENTIFIED SPEAKER 2: So have you guys gone about when you would start the five year -- start all over again? Aren't we supposed to have a site visit again in five years?

MR. MATHEWS: Yes.

UNIDENTIFIED SPEAKER 2: And would that be next year? I mean, that's sort of scary to think about already, but I wondered if that was on your radar screen.

MR. MATHEWS: We are starting to work on the issue of that. We've got to start getting out and renewing all of the people who are already in --
UNIDENTIFIED SPEAKER 2: Next year will be our fifth year.

MR. MATHEWS: Right. So we will need to be working with you to get out there and do that and those audits do have to be done before the renewal. Yeah. We're as nervous about it as you are.

UNIDENTIFIED SPEAKER 2: Well, that's my -- thank you.

MR. MATHEWS: But the bottom line is yeah, we are doing the audits and we will be working with you, don't worry about it.

UNIDENTIFIED SPEAKER 3: How many of the audits have resulted in the denial of accreditation?

MR. MATHEWS: We have not denied accreditation to anyone, okay. We still have over -- I think it's somewhere in the neighborhood of 40 applicants who have not received accreditation because they can't meet the requirements for accreditation. We have made it a practice not to deny, we just keep working with them and if they can't come up to the level, then they just don't get accredited. It's not a matter of denying them, it's -- if they work to find out if they can get it. It's just like with, I would think with somebody who applies for certification. In your case, you do deny it. But in our case, we just keep the file open. Now, I can
tell you that we are discussing that very issue that
some of them have been on the list for so long that
probably just for our own recordkeeping, it would be a
good idea to just notify them that you know, it's been X
period of time since you applied. You haven't been on
time compliance, so we're closing the file and you're
welcome to try again on another date. Any more
questions? Board?

UNIDENTIFIED SPEAKER 4: When they're on that
list -- when they haven't been -- they haven't received
accreditation, do they have to be denied? Can they
certify for that period?

MR. MATHEWS: Not to the NOP. If you're on
the list of applicants -- because we have more than one
on the list. We have a list of applicants and on the
list of applicants we indicate whether they got
accredited and what dates their accreditation was
effective. Those that don't have that date on there,
those are people who have not been accredited and they
may not certify to the NOP.

CHAIRPERSON RIDDLE: And we need -- this will
be the last question on this, please. Thanks.

UNIDENTIFIED SPEAKER 5: I'm a little
confused, but when you were talking about the foreign
certifiers and 13 have been audited and you had three
scheduled for 2005 and 14 --

UNIDENTIFIED SPEAKER 5: What happens to the other people? Do they just wait? They can't do business until --

MR. MATHEWS: Oh, they're all doing business. They're all doing business and we look at when were they accredited, how many clients do they have, then we also, in order to try and keep costs down, we also try to pair the -- take the trip and do two at the same time, so we're trying to be reasonably friendly so that we can split the cost between the agents who are trying to beat the cost of it.

CHAIRPERSON RIDDLE: Thanks. So Barbara, are you going --

MS. ROBINSON: I think that --

CHAIRPERSON RIDDLE: I know we need --

MS. ROBINSON: -- you guys are so far behind schedule. You guys are so far behind schedule, it seems that you probably should get back -- try to get back on schedule. We don't really have anything to add to what we said yesterday and we're not going to get into any kind what if questions related to the law suit anyway, so if it's okay with you, we would just as soon see you proceed.
CHAIRPERSON RIDDLE: Okay. Well, I'll ask the
other Board members are there any particular questions
that you'd have for Barbara, just to give a chance here.
Okay, hearing none, seeing none, we will move on. All
right, the next item and the first action item to
consider is Accreditation Committee. Andrea,
information on certificates is -- take the lead here.

***

MS. CAROE: Okay. Posted on the list, I was
-- the posting that this committee worked out for
updating the information that is required on the
certificates to facilitate commerce and to facilitate
compliance during the inspection process. We have
received -- I can go through the summary of what this
committee has done, but I want to note that we have
received comments from Harriet Behar, Leslie Zook, Emily
Brown-Rosen and Marty Mesh regarding this particular
issue. But I would like to go through the
recommendations of this document which is in Tab 4 of
the meeting book for anybody on the Board.

Instead of going through the entire document,
I'd like to go straight to the recommendations. There
are eight recommendations made by this committee. The
first two are to require that the certificates clearly
state that this product is compliant with the National
Organic Program standard for the accredited standards -- 
I'm sorry, accredited certifiers. The first one has 
some stock language that we would like used. Certified 
as compliant with the National Organic Program. The 
second point is for recognized certifiers. Certifiers 
that have been accredited to programs that are 
recognized to be consistent with the National Organic 
Program's accreditation program. 
These are certifiers that are not accredited 
directly by the National Organic Program, but their 
accreditation is recognized. We would, as well, like to 
see language -- indicating that the standard that that 
product was measured against was the standard of the 
National Organic Program. 
The third point is a standard language for 
date of issuance and this was to get to the point that 
many commenters made in having an up-to-date certificate 
that clearly shows that the client or the applicant or 
the certified entity is current with their 
certification. Again, as it's been pointed out, it's 
not a perfect fix because there is an 18 month -- since 
the last certificate that that particular certificate 
would still be good -- another inspection. So this 
would get us closer. It's not a perfect fix, but that 
was why that point was put in there.
The fourth one is to expand the categories. Right now the categories in the rule are required to include crops, wild crops, livestock or processed product. The committee recognized that there are a wealth of other categories that are out there, so we would like to expand those.

The fifth item is date of identification of crops and products so that it's clear from one certificate to another what the product is that's being certified. We recognize that this is going to take some work to come out where that standard list comes from and how to expand that, so this is just -- the fifth, that was the fifth item.

The sixth item is to establish the data base, E-Cert. We promote that idea. That's going to bring us to a real time -- okay. That will bring us to a real time compliance or recognition of the compliance of that particular operation.

The fourth [sic] one is to allow that data base to link with existing certifiers' data bases to facilitate that transfer of information without undue burden on the certifiers. I will comment at this time that the certifiers already have a requirement to annually report what products are being certified by what entities. This would give them an opportunity to
do that continually instead of once a year -- so we're trying to ease the extra burden as much as possible.

And the last item that we recommend is some training on that data base, E-cert, so that the certifiers can effectively use that without too much frustration as possible. That is the summary of the recommendation at this time. I welcome any questions from the Board.

CHAIRPERSON RIDDLE: Well --

MS. CAUGHLAN: I though E-Cert was on hold.

CHAIRPERSON RIDDLE: Okay, so there's a question, first from Kevin, just if that needed to be entered as a formal motion and it's my understanding, Andrea, that due to some of the comments you received that there's going to be a little redrafting before introducing it as a motion, is that correct?

MS. CAROE: Yes. I think based on the comments that we have received and the most substantive comment, I believe, is Emily's in regarding to linking label claims to the products, which I personally believe is a very component of this. I would like to take this back to committee for some additional language and represent this tomorrow, potentially, for a vote. So at this time I would suggest that we don't make a motion. It is on the table. If the committee wants to, you
know, that's -- you know, a motion can be made, but I
would suggest we don't at this time.

CHAIRPERSON RIDDLE: Um-hum. I did want to
also mention someone from the Washington State
Department of Agriculture gave me some written comments
and there is one comment also on this draft supporting
-- "We are pleased that this issue is being addressed by
the NOSB and support the recommendation of the
committee, essentially without requiring that organic
certificates list specific varieties of crops produced
and/or handled. Issuing NOP compliant certificates is
like issuing a driver's license without a name." They
indicate without question, that someone is able to
drive, they don't however, specify who. So that's
another comment in support of our draft. But so the
committee try and meet this evening once we recess
and --

MS. CAROE: Yeah, I believe that's the best --
we could wordsmith, but I think it would take up
valuable time --

CHAIRPERSON RIDDLE: No.

MS. CAROE: -- for this Board.

CHAIRPERSON RIDDLE: None.

MS. CAROE: So I would prefer to bring it back
with the language already worked out.
CHAIRPERSON RIDDLE: Okay. So we'll put that in the queue. All right. Thanks, Andrea. Okay, and that's -- we have some new committee members, as well, to be -- pay attention there. All right, next on the agenda, I believe is Livestock Committee. Let me make sure I'm on -- yeah. So George --

***

MR. SIEMON: All right. We get to have all the fun. We had four different subjects. I'll do the two that were more -- the clarifying guidance documents first. And so the first one is the chelates and that's in Tab 5 in your book. This has been an item that's been hung up, a little bit of confusion while we've been waiting for more information from the TAPs. It's argued about because it's FDA-recognized material, but we thought that we should look into it more and now we've chosen to go for a Q and A-type approach to get it off our work plans, so that's what we have here and Jim, do we need a motion to --

CHAIRPERSON RIDDLE: Well, first -- yeah, before we even start that, I'm trying to discipline myself to ask if anyone has any interests to declare concerning the chelates issue. Okay, seeing none, proceed. So yes, then the appropriate thing would be to -- the appropriate thing, George, would be for you, as
committee chair, to move this and see if there's a
second.

MR. SIEMON: I would like to move that we
adopt a recommendation on the chelated mineral
compounds.

MS. OSTIGUY: Second it.

CHAIRPERSON RIDDLE: Okay, it's moved by
George, seconded by Nancy. Is there discussion? Yeah,
Hugh.

MR. KARREMAN: I think part of the confusion
is on or has been on the proteinated aspect of the
chelates.

MR. SIEMON: No, the source of them is the
biggest issue, whether they're GMO or animal by-products
was some of the concern and so we've just gone through a
question and answer so that a person comes and asks can
they be used, they're clearly reminded that they are
allowed, but not the excluded sources or animal by-
products.

MR. KARREMAN: Would they be -- would a
private review agency like OMRI be good to have to say
what products are actually okay, you know, is it more of
a private --

CHAIRPERSON RIDDLE: Well, it -- you know, the
first line is the producer to, always a burden of proof,
but then it's the certifier in reviewing their plan, but
they may contract with OMRI or another material review
service, that part of it, so yeah, that would -- but
that would be acting on behalf of the certifier in
review of the products that farmers wanting to use.

MR. KARREMAN: Yeah, there's different forms
of chelates. There's polysacrite [ph] chelates, there's
-- okay.

MR. SIEMON: It's always difficult to know
what's in them, where they come from. Okay, is there
any more discussion about this item? Okay.

CHAIRPERSON RIDDLE: Just -- yeah, George, you
question -- the motion that we have includes question
one and question two as a package.

MR. SIEMON: Okay.

CHAIRPERSON RIDDLE: So any further debate,
discussion, questions about it? Seeing none, we'll move
to a vote and we will take a roll call vote and I'll
start to my left with Nancy and then we'll just go
around this way and then we'll rotate who starts next as
we move down the line with other items.

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave.

MR. CARTER: Aye.

CHAIRPERSON RIDDLE: Bea.
MS. JAMES: I'm going to abstain.

CHAIRPERSON RIDDLE: Abstain, okay.

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: George, yes. And I'll call your name just so it's in the record. Rose.

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Yes. Goldie.

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Yes. Does the chair wait until the end?

MR. O'RELL: Yeah.

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Everyone says yes, yeah.

All right, Kevin.

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Kevin, yes. Andrea.

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Yes. Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Yes. Hugh.

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Julie.

MS. WEISMAN: I'm going to abstain.

CHAIRPERSON RIDDLE: Abstain. Gerald.

MR. DAVIS: Yes.
CHAIRPERSON RIDDLE: Yes. And Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Yes. And the chair votes yes, so it is 12, yes; 0, no with two abstentions.

MS. CAUGHLAN: Which becomes --

CHAIRPERSON RIDDLE: Pardon? Which passes.

MS. CAUGHLAN: Right.

CHAIRPERSON RIDDLE: With a majority, right.

Um-hum. So -- okay.

MR. SIEMON: Okay, the second issue was the NOP received a question about calcium carbonate in livestock feed; they referred that to us and again, we've chosen just to answer that in question and answer format, something that can be posted on their web site as a guidance document. So I'd like to make a recommendation that we adopt this recommendation from the Livestock Committee.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay, so there's a motion to accept the calcium carbonate recommendation by George, seconded by Nancy. Discussion? George.

MR. SIEMON: Well, I don't know if people want to go through the questions and the logic behind it or I'm just -- with the shortage of time. You know, this is a fairly simple -- I'm sorry, I just lost my --
CHAIRPERSON RIDDLE: Okay. Well, the question that was presented to the Livestock Committee, question one, does the NOP regulation permit livestock producers to use calcium carbonate as a feed supplement for livestock intended to be sold, labeled or represented as organically produced? Please provide your rationale. And our recommended response is yes, mined calcium carbonate is a nonsynthetic substance allowed for use as a feed supplement or a feed additive and then "from that section of the Regulation 205.237(a)."

Question two -- any comments on that part? Seeing none, question two was can a mineral product such as calcium carbonate carry the term organic on its label? Please provide your rationale. Our recommended response, no. Section 205.2 defines organic as a labeling term that refers to an agricultural product produced in accordance with the Act and regulations. Calcium carbonate is not an agricultural product and therefore is not qualified to carry the term organic under the NOP regulation and then quotes from the Regulation 205.301(e)(1) on livestock feed and (e)(2), further on livestock feed.

And then one more paragraph. "Since mined calcium carbonate is allowed as a nonsynthetic feed supplement or feed additive under 205.237, a blended..."
feed ration containing calcium carbonate, other approved ingredients and 100 percent organic raw or processed agricultural products can be labeled 'organic livestock feed'". So any further discussion, questions? Seeing none, we'll move to the votes. So Dave Carter.

    MR. CARTER: Aye.

    CHAIRPERSON RIDDLE: Bea.

    MS. JAMES: Yes.

    CHAIRPERSON RIDDLE: Dave votes yes, Bea has yes. George.

    MR. SIEMON: Yes.

    CHAIRPERSON RIDDLE: Yes. Rose.

    MS. KOENIG: Yes.

    CHAIRPERSON RIDDLE: Yes. Goldie.

    MS. CAUGHLAN: Yes.

    CHAIRPERSON RIDDLE: Yes. Kevin.

    MR. O'ReLL: Yes.

    CHAIRPERSON RIDDLE: Yes. Andrea.

    MS. CAROE: Yes.

    CHAIRPERSON RIDDLE: Yes. Rigo.

    MR. DELGADO: Yes.

    CHAIRPERSON RIDDLE: Yes. Hugh.

    MR. KARREMAN: Yes.

    CHAIRPERSON RIDDLE: Yes. Julie.

    MS. WEISMAN: Yes.
CHAIRPERSON RIDDLE: Yes. Gerald.

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Yes. And the chair votes yes so that's unanimous 14 --

MS. CAUGHLAN: Wait, you forgot Nancy.

MR. O'RELL: You've got to come back around.

CHAIRPERSON RIDDLE: Yes, I've got to start at the top. I'm learning.

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Yes. It is unanimous.

So that's 14, yes; 0, no; no abstentions. Okay, George.

MR. SIEMON: The next one is the methionine issue and since my co-op is one of the ones with a petition on it, I'm going to excuse myself from voting and leading the conversation, so I've asked Mike Lacy to do that, so --

CHAIRPERSON RIDDLE: Okay. And I forgot to ask if there were any recusal -- I mean, any conflicts on the calcium carbonate.

UNIDENTIFIED SPEAKER: Rookie mistake.

CHAIRPERSON RIDDLE: Yeah, I -- it's just full of them today. Okay. But thanks, thanks for clarifying that, George. Mike.
MR. LACY: Thank you, Jim. The Livestock Committee received a petition from the task force that was put together to study the issue and in the interest of time, I will just go straight to the Livestock recommendation and then if there are any questions or clarification, we'll be glad to try to answer those, but the recommendation is in two parts.

After careful consideration and discussion of the merits of the petition, the Livestock Committee recommends the use of synthetic methionine in organic poultry production to be extended to October 1, 2008 to provide time for thorough research on organic alternatives to be completed. This recommendation follows inclusion allowances provided in 205.603, synthetic substances allowed for use in organic livestock production, (d) as feed additives.

In addition, a temporary variance petition for the allowance of the use of nonorganic feed ingredients for organic poultry production for research purposes was also submitted by the petitioners. The requested variance would allow the feeding of nonorganic feed ingredients for research purposes. The variance would require approval by NOP, be limited to trials of a thousand birds or less, and require immediate and full disclosure of research findings and expire
October 1, 2008. The Livestock Committee recommends that this request be rejected. The Livestock Committee cannot support or request to feed nonorganic feed to birds that would be labeled and sold as organic.

CHAIRPERSON RIDDLE: Okay, do you move that?
MR. LACY: I would move that both of those recommendations be accepted by the Board.
CHAIRPERSON RIDDLE: Okay, is there a second?
MS. JAMES: Second.
CHAIRPERSON RIDDLE: Bea seconds. Discussion.

Andrea.

MS. CAROE: Well, I would offer an amendment. I'd like to see these as two separate votes, two separate issues.
CHAIRPERSON RIDDLE: Okay, well there's a request for two separate votes.
MR. LACY: That's okay with me. I forgot who seconded it. Bea, I think -- is that --
CHAIRPERSON RIDDLE: Okay, so -- all right. Well, let's have two separate discussions then. So we'll consider the first one now and then we'll take a separate motion to consider the other one. Rose.

MS. KOENIG: Actually, some of the questions are directed -- I had -- I lot of the issues that I have is more of a process issue at this point with the
petition. I tried to access the web site prior to the meeting to pull up the old TAP. I could not find it on the web site. And I don't know if that was just my computer, but it wasn't there, so what's concerning to me is that I knew, at the last meeting we voted on this, there were a lot of public comment and did we get public comment this round on this petition?

MR. NEAL: All public comment -- Arthur Neal for the record. All public comment on this issue -- and I think there was some, I'm not sure how much. It's in the book. You've got a set of public comment and the meeting book and then you've got a second book full of public comment, so you may have to thumb through those and separate it into livestock and crops.

MS. KOENIG: Did the committee analyze that to see if there was any comment this round on methionine? And then, Arthur, was that -- was it just my experience that I couldn't pull out the 2001 -- TAP?

MR. NEAL: The 2001 or 2000 TAP on methionine is on the web site. The problem is it is on the archive portion. So if you would click on archive, it's under P for petitioned substances. So it's not with the most recent petitions that we've received because we've got to merge the old stuff with all the new petitioned substances.
MS. KOENIG: Okay. So it wasn't -- the issue I have, you know, again -- well, I'd be interested for the committee to report on the number of public comments, but this was a contingence issue back in 2003 and we heard a lot on pasture today. No one mentioned methionine --

CHAIRPERSON RIDDLE: Oh, yeah.

MS. CAUGHLAN: Two people.

CHAIRPERSON RIDDLE: Yeah.

MS. KOENIG: Two people, oh. There were so many. But --

UNIDENTIFIED SPEAKER: Three.

MS. KOENIG: Was it three? Okay. It just doesn't make a whole lot of sense to me, but I'm very concerned that the original TAP report wasn't there. It was in our book, so I was able to go back and reference. And then additionally, when I looked at the petition on the web site, there were missing items there as far as things that were promised and I know that was mentioned that they couldn't get compiled, but it seems like there's a lack of information and I know there is a pressing -- I know the industry feels that, you know, under a lot pressure. I'm just very concerned about the process.

MR. LACY: I'll try to answer the question as
best I can. I think the task force did make a very good faith effort to study the issue thoroughly and most of the input that we received was in communication with the task force and I expect that that's probably the reason that there wasn't a great deal of public input is that everybody knew that the task force was working very, very hard to come up with alternatives and a plan to address the situation. That would be my best guess as to why the passion that you saw in the pasture may not have been present in the methionine issue, is that it was in good hands as far as the task force was concerned.

CHAIRPERSON RIDDLE: Arthur.

MR. NEAL: As a suggestion, just to make sure that particularly, the decisions that that are going to be coming with respect to petitioned substances, there's also a decision sheet that was filled out by the committee and I think that you also need to go through.

CHAIRPERSON RIDDLE: Yeah, Arthur makes a good point and that is that the decision sheets are filled out and accompany the recommendation and have a lot of further background material and draw from the original TAP, as well as the Livestock Committee. I sent out a number of e-mail appeals, I guess, for input on this from pasture, poultry list serve and inspectors list.
serve and then also to certifiers looking for data, anecdotal, even, of poultry operations that are -- you know, that have rations without synthetic methionine and frankly, didn't get any. Right now, I think it is -- I mean, I don't support it. I didn't last time.

However, I think that given the circumstances and given the fact that there have been a couple of new of the CSREES research grants have been directed to this topic, to development of both alternative feeds that could be grown organically and there are a number of promising substances or feeds out there and addressing the potential of slower growing breeds that could have, you know, real promise and excel with lower methionine requirements.

Those projects have been funded, but of course, they were just funded last year. They're just now under way and so I think it does warrant renewing the allowance, but not for a full five years and so I can support this three-year, what I call, extension, but as you pointed out earlier, it's really a renewal of its listing. First, the Board members -- well -- yeah, but I also got the aye over here, too, and so Dave and then Kim.

MR. CARTER: Excuse me. I was one of the folks that supported the compressed time on this
originally because we did want to kind of send a shot across the bow to say this is important to really try and find an alternative to methionine because we felt uncomfortable with it and yeah, I sort of reluctantly support the extension, although I feel good that I think we have sent the message and there is a lot of work now out there developed, just nothing has emerged and I don't think we want to disrupt, you know, the industry right now to the extent that it would, if they were not, so --

MS. DIETZ: Kim Dietz, past NOSB member. I just wanted to bring up the fact that I made the recommendation at the last meeting, so it is in the minutes, requesting and appealing to someone to petition that that would be the proper way to deal with this material, so I do believe that the process was handled correctly and that we did get a petition to look at the annotation to methionine, so I just would urge you to keep moving forward with it.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: Okay, so the other question I have as far as a recommendation -- although I didn't vote -- I can't remember how I voted. I don't think I voted in favor the last time. With this three year --
and I know that was sort of a compromise, let's do a three-year Sunset. It didn't seem to work, so the way that this registered process -- I don't know if we really -- I mean, I know that, you know, the Sunset would come up on this and I know a lot of things that we weren't comfortable with, we've done a shortened Sunset. But what we're finding is if we do the shortened Sunset, then it automatically drops off. It has to be re-petitioned. So -- and they added -- the thinking behind the committee in terms of going to this three-year -- what was the basis of deciding on that.

When was the discussion or was that just kind of a --

CHAIRPERSON RIDDLE: No, there was --

MR. LACY: There was significant discussion and I was not on the Board when you all voted on it the first time. If I had been, as your science rep, I hope I would've smart enough to tell you that three years was unrealistic, that research could not be started up, completed, reported on in that period of time, so the Livestock Committee decided this time that five years was not enough. Three years should be enough to allow the research that's been started in the past year to be completed, to be reported, to be proven in the field and by 2008 we should have some answers to this question.

MS. KOENIG: Just a follow-up to --
CHAIRPERSON RIDDLE: Okay, follow up.

MS. KOENIG: If -- but if some of the research is checking on breeds -- I buy the idea that within three years if you found alternative feedstuffs, although there would still be a need to plant those things and the supply still has to come into the marketplace, so it's not simply how long it takes for research, but then that stream of commerce on the other end. And still -- the breeds, you know, if you find a breed. Have you checked with hatcheries and you feel that there would be adequate time if the research came out in a year, two and half, that in six months the industry could adopt those practices? Because there's one thing about -- you and I know, I mean, there's research and then there's extension and adoption and those are very different animals.

MR. LACY: It's a good question. You're asking hypothetical questions and we can't be sure of. Fortunately, poultry regenerate at a tremendously fast rate, so biology is in our favor in that regard.

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: Well, extending past that a little bit and I don't know what type of research goes into looking for alternatives to this material, but if it's identified that another material would be a reasonable
replacement, that material would have to potentially go through the petition process and get listed, as well, so that would kind tack on some more time, as well, to the fix. So I would -- I don't know if that's a good possibility of the outcomes of this research or not.

MR. LACY: You're talking about an alternative to synthetic methionine rather than an agricultural product that would have higher levels of methionine?

MS. CAROE: Yes, another synthetic.

CHAIRPERSON RIDDLE: Yeah, but the alternatives that are being explored are agricultural and could be organic, so they wouldn't have to go through the petition and listing process. Any further discussion?

MS. KOENIG: I just --

CHAIRPERSON RIDDLE: Yeah, Rose.

MS. KOENIG: One of the -- you have feed additives -- the category you're actually proposing for and OFPA -- is sulphur what you're -- and the justification for that is because sulphur's part of the content?

MR. LACY: Sulphur amino acid, correct.

MS. KOENIG: Are there other -- is that consistent with what -- I didn't really look at the livestock list to see what was listed under sulphur on
there. Is there any compounds in sulphur listed on the livestock --

    MR. LACY: I don't remember that there's specifics on there. Arthur and I were looking at it yesterday and --

    MR. NEAL: On what?

    CHAIRPERSON RIDDLE: It's listed as a feed additive on the National List, but it's eligible for consideration under OFPA criteria as a sulphur amino acid.

    MR. NEAL: Right. You've got to look at OFPA criteria first. That's what governs what can make it onto the National List and whether or not there's a sulphur compound on the National List right now under livestock, I think is irrelevant considering the fact that there are inconsistencies.

    CHAIRPERSON RIDDLE: Any further discussion, comments, questions? Yeah, Bea.

    MS. JAMES: Maybe you can answer this, Mike, or maybe you can't. Do you know the closest sources that are being developed as alternative for the finding? Are they mostly animal-based or vegetable?

    MR. LACY: I think -- they couldn't be animal-based. We listed those in the background material. The ones that we listed include soybeans, peas, white corn
gluten, potato protein, seed meal such as sunflower,
flax and hemp, cornella [ph], alfalfa meal, fresh
pasture and casein. Insects and earth worms are also
rich in methionine.

MS. JAMES: Okay, I just wanted to make sure
that we were clear about that because the TAP report
lists predominantly animal-based alternatives for
methionine. And I know there's a lot of consumer
concern about vegetarian animals and --

MR. LACY: Right.

MS. JAMES: -- animal-based products.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I talked a little bit to Mike
about this. Are there -- I know that you -- there was,
I guess, a rebuttal in the petition on -- I mean, not on
the petition, on the TAP regarding the -- they said it
was kind of a misnomer that methionine is used to
increase growth or faster growth and -- but that -- that
is our tactic that we have to look at, so how did the
committee -- was there discussion on that? Was there a
discussion on maybe coming up with some numerical level
so that -- you know, we talked a little bit and I just
wanted you to -- I know you had some time to think about
perhaps putting in a level for feed, whether that would
be practical or not.
MR. LACY: The task force, again, did a very good job of addressing the fact that methionine is not a growth promoter and we included that in our background material. It's a necessary dietary requirement that's essential to maintain health in poultry. The Livestock Committee did address again, after your question yesterday -- we met last night -- and 205.237(b)(2) says producers must not provide feed supplements or additions in amounts above those needed for adequate nutrition and health maintenance for the species at a specific stage of life. So we thought that putting in specific numbers would be redundant.

On top of that, if you put -- it's a self-correcting feed additive. If you put in too much methionine then your growth and efficiency are actually going to be decreased because your amino acid balance would be out of whack again. So no one that is knowledgeable is going to use more methionine than what's necessary to balance the diet.

CHAIRPERSON RIDDLE: Julie.

MS. WEISMAN: Yeah, I wanted to go back to -- get some clarification on this -- the issue of the time frame and the three-year as opposed to five-year and Kim came up to make a point that this is -- for us, to remind us this is being re-petitioned. So correct me if
I'm wrong; the way I see it is that three-year window is just to give time for the re-petition to take its course. That three years is not necessarily required as the total time that research can be completed. Is that understanding not correct?

CHAIRPERSON RIDDLE: Arthur has a comment.

MR. NEAL: If I'm not mistaken, the petition was actually for the annotation to be extended. It wasn't necessarily the re-petitioning of the substance, but it was -- actually, the petition was for the annotation, because you can petition to modify a substance that's currently listed and that's what was happening.

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: Okay, for procedure-wise, is the petition is being removed, does that material Sunset in five years from the original date it was put on the list?

MR. NEAL: What was the question again?

MS. CAROE: When methionine was put on the list, did it start its five year clock on the Sunset or has it started at the date that the petition, the annotations are removed, because if the annotations are removed, it's the original listing.

MR. NEAL: When methionine was placed on the York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
National List, it was not placed on the list for five years, it was --

MS. CAROE: I understand that. I understand that. Methionine was listed with an annotation. There's a petition to remove the annotation. Methionine was listed for three years now?

MR. NEAL: The clock restarts.

CHAIRPERSON RIDDLE: Yeah.

MS. CAROE: The clock started when?

MR. NEAL: If methionine -- if the annotation on methionine is modified as the Livestock Committee has recommended, the clock will start as soon as the annotation is changed. Restart.

MS. CAROE: So it's a new listing.

MR. NEAL: Right.

MS. CAROE: It's not the old listing changed, it's a new listing.

MR. NEAL: Yes.

CHAIRPERSON RIDDLE: And it's a three-year -- from that time that it gets published in the Federal Register's Final Rule is what the committee's recommending. That's what we're considering.

MR. MATHEWS: It depends on what you do. Richard Mathews. It depends on what you do. If you remove the annotation so there is no annotation, it's an
automatic five years and the clock starts on the
effective date of the Final Rule removing the
annotation. If you put a new annotation in, the clock
starts on the date of publication of the Final Rule
changing the annotation. Now, if you put an earlier
than five year Sunset into the new annotation, then the
annotation will determine when that five -- when that
period of time expires. But it begins anew with the
publication of the Final Rule.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I think this needs some
clarification because -- and I -- I'm not -- I
understand the theory, because I know we say that it's
being removed, that it would -- we'd have to go through
the Federal Register process to put it back on, correct,
so in other words, we would end up with an 18 month or
so delay if we do it the way -- removing it and then
adding it back on. Is that the issue because as --

MR. MATHEWS: With this particular material we
have said that we would do our best to expedite whatever
your ruling is, whatever the Board recommends to us, we
will immediately start working on it, knowing full well
that if you make a recommendation that would have this
material on the list beyond October 21, 2005, that that
Final Rule has to be out before October 21, 2005. The
approach that we would take is that it still has to go
proposed rule and Final Rule. We would have just that
one material in the docket and so that would be the sole
ting that people would comment on, that would hopefully
facilitate getting it through the clearance process and
also it would be only one thing that we would be taking
public comment on, so that we only have to analyze one
set of comments on, you know, on one issue. So
hopefully, we could get it done in less than 18 months.

CHAIRPERSON RIDDLE: Kim.

MS. DIETZ: My materials -- Kim Dietz. And I
understand the confusion. I think -- whether it's
methionine or any other issue, any time you're going to
get a petition to amend an annotation, you're going to
have to consider it as kind of like a new material
starting all over again and that time line of the new
Federal Register notification and placement on the
National List is going to trigger that new five year, so
it's up to you to determine what's the best remedy for
the situation, whether you make that a five year
automatic, you know, date or whether you put a new
annotation on this material, again limiting it by that
date.

CHAIRPERSON RIDDLE: Mike.

MR. LACY: And just to be clear, we have

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
suggested another -- a new annotation for October 1, 2008, a three-year --

CHAIRPERSON RIDDLE: All right. So our debate is concluded. Everyone's clear on what we're voting on in this motion, which to essentially replace the current annotation with a new date of October 1, 2008 and so --
pardon? Yeah, Rigo.

MR. DELGADO: I'd like let the Board know that I will be abstaining or excusing myself from this vote. I do have some --

CHAIRPERSON RIDDLE: You can't be heard, so get a little closer to the mike, sorry.

MR. DELGADO: I'm abstaining or excusing myself from voting on the basis that I do have some trial poultry going on in the operation --

CHAIRPERSON RIDDLE: Well, I appreciate you informing us of that and my understanding is you're saying that you are setting up some poultry operations and then logically would be using feed that contains methionine. Kevin.

MR. O'ReLL: Jim, just -- Rigo wouldn't necessarily have to recuse himself, he just would need, according to our Board policy manual, you would just need to declare that you have a conflict of interest --

MS. CAUGHLAN: Potential.
CHAIRPERSON RIDDLE: A potential.

MR. O'RELL: Thank you, potential. And then it could be up to the Board to decide if they wanted you to recuse yourself.

CHAIRPERSON RIDDLE: Right.

MR. DELGADO: I'm declaring I have a potential conflict of interest.

CHAIRPERSON RIDDLE: Thanks. And from George's opening statement, he was specifically recusing himself because his company was the petitioner. He also has a poultry operation, so has that as two levels of conflict or interest, I guess, but it's specifically clear that as petitioner, he would recuse himself. As a farmer who uses a substance -- you know, it's a bit of a gray area.

You would not have any unique advantage because you're on this Board over any other poultry farmer or profit any more -- you're not a manufacturer of methionine. You might say that some other farmer who grows crops that might be rich in methionine might have an interest in defeating it because they could grow something to replace it. I mean, we can really get too far afield in this, so I guess, you know, I would like a sense of the rest of the Board in reaction to Rigo's situation. Dave.
MR. CARTER: Yeah, I think you've analyzed it well. I mean, you know, all of us come with conflicts of interest, but there are certain areas where we would stand to personally profit if something went through, one or the other, as opposed to somebody else that's out there and so, you know, even though you have a conflict of interest and you're using material, I don't see that as a basis for recusing, so --

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: Well, likewise, I believe that you do not have a conflict that would prevent you from voting on this particular -- I think consideration on the second vote in regards to research, since you've disclosed that you will be doing research and if it is research on methionine alternatives may be an area where recusing may be warranted, but on this vote I don't see the need.

CHAIRPERSON RIDDLE: Okay, I'm seeing general agreement with that, no one jumping up screaming. Okay, so thanks for bringing that up and once again, I apologize for not asking others after George made his statement at the very beginning. I'll try and do that at the beginning, but -- okay, back to we're ready to vote and so Bea leads it off this time.

MS. JAMES: Absent.
CHAIRPERSON RIDDLE: Abstain?

MS. JAMES: Abstain.

CHAIRPERSON RIDDLE: And George has recused so he is essentially absent. He's not counted in the total one way or the other. Rose.

MS. KOENIG: I'm going to abstain.

MS. CAUGHLAN: I support the motion.

CHAIRPERSON RIDDLE: That's a yes. Kevin.

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Yes. That's Kevin's -- yes. Andrea.

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Andrea, yes. Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Yes. Hugh.

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Julie.

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Gerald.

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Yes. Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Back to the top. Nancy.

MS. OSTIGUY: Yes.
CHAIRPERSON RIDDLE: And Dave.

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: And the chair votes yes, so 11, yes; two abstentions and one recusal; zero no's, I'm sorry, in the middle there. So 11, zero, two, one. Okay, so that motion carries. Thank you. George, I think it's back to you, isn't it?

[Simultaneous comments]

CHAIRPERSON RIDDLE: Oh, I'm sorry. I'm glad you guys are on top of this. Where did you get this chair? Okay, so it's the research part of the -- so you need to actually propose it as a motion.

MR. LACY: I think we did that. I think we split them into two, but I'll move again.

CHAIRPERSON RIDDLE: Yeah, right. We'd appreciate that just for clarity.

MR. LACY: The temporary variance for allowance of the use of nonorganic feed for research purposes be denied.

MS. OSTIGUY: I second it.

CHAIRPERSON RIDDLE: Okay, so it's moved by Mike and seconded by Nancy that the request in the petition for a research variance be denied. Is there discussion? Andrea.

MS. CAROE: Mike, can you give us a little bit
more information about what actual -- what is the
framework around what the petitioner is requesting?

MR. LACY: The petitioner's requesting
permission to run research trials with nonorganic feed,
small trials of a thousand birds or less and prior
permission from NOP, but our concern was that nonorganic
feed would be used in organic poultry production, that
those birds could be sold as organic and we just didn't
think that was in the spirit of the rule.

MS. CAROE: I guess I agree. I understand
what you're saying, but I'm trying to figure out how
this research proceeds without organic producers
involved in this way. I mean, are they -- is the
research happening on a conventional operation or how
exactly is this -- I mean, this is a strictly -- but how
are they going to find alternatives if the alternatives
are feed --

MR. LACY: The research that looks to be most
promising at the moment is going on at the University of
Arkansas, West Virginia University, University of
Minnesota, other research institutions. So that's where
we think that the answers to this issue will come from.
Now, those will have to be proven in the field,
obviously. That's part of good research, is taking what
you have proven in the laboratory and see if it works in
the real world, but we don't think that those birds
should be sold as organic. This is something that
organic poultry producers are going to have to do as
their contribution to the cause.

CHAIRPERSON RIDDLE: So yeah, that really was
the bottom line for the committee, was saying no to the
sale of the birds as organic. Otherwise, you know, we
certainly support the research as it was proposed and
clearly, it's just don't sell the birds as organic.
After what we went through with Field Dale [ph] and all
that, there's no way that we wanted to see nonorganic
feed being sold, you know, fed to birds that are sold as
organic then. It seemed a bit hypocritical. Any other
comments on this?

MS. CAUGHLAN: Call the vote.

CHAIRPERSON RIDDLE: Okay.

MS. OSTIGUY: Jim.

CHAIRPERSON RIDDLE: And -- yes, Nancy.

MS. OSTIGUY: Could we just clarify the
direction of the vote so that if you are in favor of the
variance, you vote no on the recommendation. If it's
against the variance, you can vote yes on the
recommendation.

CHAIRPERSON RIDDLE: Right, um-hum. The
motion is to reject the variance, reject the request.
And Rigo, can you tell us a little bit more about your research, you know, does this rise to the level of a potential financial gain-type of conflict?

MR. DELGADO: Essentially, I'm going to be doing the opposite --

CHAIRPERSON RIDDLE: Yeah, speak up. You've got to get closer. Yank that cord. I don't know. Can't it come further?

MR. DELGADO: Different feed mixtures. Our intent was never from the start to actually sell them as organic and run several trials, see how it works. Separate from what we're calling the organic traditional approach and nothing else.

CHAIRPERSON RIDDLE: To feed them organic feed?

MR. DELGADO: Absolutely.

CHAIRPERSON RIDDLE: Okay, uh-huh. So I don't see --

MR. DELGADO: Organic feed that meets all the requirements --

CHAIRPERSON RIDDLE: Uh-huh. Does anyone see a conflict, direct financial gain? I don't either. Okay, so we will move on with the vote then and we start with Rose.

MS. KOENIG: Yes.
CHAIRPERSON RIDDLE: Yes, Rose. Goldie.

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Yes. Kevin.

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Kevin's yes. Andrea.

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Yes. Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Yes. Hugh.

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Julie.

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Gerald.

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Yes. Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Yes. And Nancy.

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Yes for Nancy. Dave.

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Yes. Bea.

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: Yes. And George refuses again and the chair votes yes. So we have 13, yes; zero, no; zero abstentions and one refusal. Okay, thank you.
you. Now back to George, right?

    MR. SIEMON: Right. The subject of the day, pasture. And --

    CHAIRPERSON RIDDLE: Oh, yes. And before we start on pasture, now that I know what the subject of the day is, are there people who have a direct interest, potential conflict on the pasture issue? Okay, Kevin.

    MR. O'RELL: I just wanted to say in accordance with our Board policy manual, I just wanted to disclose to the Board and to the public that I work for a company that owns dairy farms and has over 300 producer partners that we work with. I'm putting it out as potential -- I'm not necessarily recusing myself.

    CHAIRPERSON RIDDLE: Um-hum.

    MR. O'RELL: Unless the Board feels differently.

    CHAIRPERSON RIDDLE: Okay, appreciate that. Let's deal with Kevin first. Is there anyone who feels that because he works for a company that is in the dairy business and he would need recuse. I'm not seeing that, but thanks for revealing that. George.

    MR. SIEMON: I'm in the same position, but -- so I'm in case one there and case two, since -- being supporting this, it was asked that I have Hugh lead the conversation. That's a little different thing than
reclusing, but as far as the cooperative, I'm just
saying -- we don't own any farms, the cooperative I work
for.

CHAIRPERSON RIDDLE: Okay, so my understanding
is that similar situation, but your company has been
very active in soliciting comments on this issue and
because of that you've asked someone else to take the
lead in presentation of the recommendation. Is there
anyone that feels that it should go further than that?
Seeing none -- okay, so we'll turn --

MR. KARREMAN: Let me hand this -- these are
some papers I want to hand out to fellow Board members.
I've got to keep my copy. Take one with the staple,
single sheet with the staple. Jim Pierce has them for
the audience.

[Simultaneous comments]

MS. CAUGHLAN: We don't have --

CHAIRPERSON RIDDLE: Not yet, that's the
original up there, so far.

MR. KARREMAN: Okay, should we start?

CHAIRPERSON RIDDLE: I think hold on until
Dave is --

[Simultaneous comments]

CHAIRPERSON RIDDLE: I think it would be best
if it gets up on the screen and give people a chance to
settle down here. Which one are you going to do first?
Single sheet first, okay. We all have it in paper, so
sometimes we can rely on paper and ink.

MS. CAUGHLAN: Can he just go through it?
CHAIRPERSON RIDDLE: Yeah, he will. Okay,
Hugh. And you're starting with the single sheet,
correct?

MR. KARREMAN: I'm starting with the single
sheet. Basically, the Livestock Committee is proposing
three rule changes and because of that, we're -- I'm
going to go over them now, but we're not going to vote
on them today, we're going to sleep on it overnight and
come back tomorrow and vote on them, okay? But because
of a lot of public comment and some of these changes
that we made fairly recently, we're going to wait until
tomorrow to vote, but here they are.

On the single sheet the background for this
particular rule change, Language Within the National
Organic Program Final Rule 7 C.F.R., Part 205 creates an
ambiguity regarding the applicability of specific
provisions of the regulation in the life stage of
livestock. Sections 205.239(a)(1) and 205.239(b)(2)
reference "stage of production" in regard to access to
outdoors and temporary confinement. Section
205.237(b)(2) utilizes the terminology "stage of life"
to describe the allowance for specific levels of feed supplements or additives.

Development of enforceable standards for stage of production is problematic, particularly in regard to dairy animals. The Board's original intent was to refer to practices within the specific stages of an animal's total life. While life encompasses a total span of an animal's life, production may be interpreted to refer only to that portion of life in which the animals are producing milk, so we recommend a -- the Livestock Committee recommends a rule change to make the language in 205.239(a)(1) and 205.239(b)(2) consistent with the language in 205.237(b)(2).

The language, therefore, in 205.239(a)(1) would read: "Access to outdoors, shade, shelter, exercise areas, fresh air and direct sunlight suitable to the species, its stage of life, the climate and the environment." Therefore, 205.239(b)(2) would be amended to read, "animal's stage of life." And we voted in the Livestock Committee six in favor of that, none opposed, one was absent.

CHAIRPERSON RIDDLE: Okay. Is there --

UNIDENTIFIED SPEAKER: Second.

CHAIRPERSON RIDDLE: Well, we're not going to move it right now. Good try, though. We're just
presenting it to give people a chance to react, but is
there any preliminary discussion, reaction, just kind of
questions you don't understand about this, I guess.
We're not going to debate it, but just so people
understand. A little more background, Hugh.

MR. KARREMAN: I guess from when I read the
rule, just as a veterinarian out there in the field, I
never understood the term "stage of production" too
well. It's always been kind of confusing to me and
probably to other farmers, I would imagine. And so when
you're looking at when you can confine an animal, you
know, why should you, perhaps, confine an animal, it
seemed relevant that illness would be, you know, a good
reason as well as early life. And so -- and that's not
really stages of production, that's a stage of life.
And then lo and behold, it's in 205.237, so we're making
it more consistent with what's already in the
regulation.

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: You had mentioned that the
original intent when this language was crafted it was
for a stage of life, even though it says stage of
production and I was wondering if you had actually went
back and looked at the minutes or you know, was there --
is that just based on, you know, talking to other past
Board members or how did you come about -- because I struggle with what the intent of some of these things are that we're putting --

MR. LACY: May I defer to a more senior member is you're asking about previous minutes? I really don't know.

CHAIRPERSON RIDDLE: George.

MR. SIEMON: I'm trying to remember, myself.

CHAIRPERSON RIDDLE: Oops, your light went back on.

MR. SIEMON: I was in on it and I think it was because at the time we were trying to deal like with the stage of what your fattened [ph] cow, so -- but I think stage of life truly is a reflection of what was -- because we were talking about young calves -- we were talking about all the different parts of a life. I think it is a better word, especially once we found that the stage of life -- it just makes all good sense to get it uniform throughout the rule and since stage production brought on the confusion, stage of life -- so I think it's a great motion.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I'm sorry. Sometimes we have a copy of the regulation in our meeting book and I thought I gave that, so -- well, maybe you can just answer to me.
quickly. This section of the book, does it only deal with -- does it deal with poultry, also, though and maybe analyze it for poultry or other types of animals -- have a change of wording or -- we seem to focusing a lot on dairy, but you know, there is grazing cattle and when you change something for dairy and we got a lot of feedback on --

MR. SIEMON: Yes, the first one, 239(a)(1) is the general access to outdoors, it covers all livestock. Yes, they're both general. They're not at all specific.

MS. KOENIG: So did you do that analysis -- yeah, I have to go back and read all this and understand it better, since we're just seeing it now. Did the committee do that kind of analysis to see how it might implement other species other than dairy?

CHAIRPERSON RIDDLE: Mike.

MR. LACY: I'll take a stab at that. We -- since we thought the original intent of stage of production was actually stage of life -- stage of life was more inclusive, included stage of production so we thought that it was applicable to all species.

CHAIRPERSON RIDDLE: Yeah. And we did talk about poultry and hogs and it does, you know, relate to that temporary confinement, but once again, I find that it is more accurate a word, life instead of production.
I mean, it applies to the entire life cycle of an animal, not just when a chicken is laying an egg. That's when it's in production, is when it's laying an egg. So to me, it's just a much more accurate -- and I was really happy to see that it was used elsewhere in the rule. We weren't proposing a new term. Okay, so -- yeah, Bea. And then we'll --

MS. JAMES: I just, you know, for the record -- I'm sure this would've been picked up, but just grammatically, the one that's written here needs to have a comma after suitable to the species, comma, it's stage of life. So -- I mean, you wouldn't -- yeah.

CHAIRPERSON RIDDLE: Yeah. That would be Dave, I believe.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Good point and maybe we'll change that before we vote. All right, move on to the next one, please.

MR. KARREMAN: Okay. Do I need to read the whole introduction? Now we're going to look at the stapled sheet of paper.

CHAIRPERSON RIDDLE: Yeah, and there's no change to the introduction from what was posted and is in your book already.

MR. KARREMAN: Okay, so then the
recommendation the Livestock Committee is putting forth is somewhat different than what was posted on the web site and therefore we're going to wait until tomorrow to vote on this, okay. And the -- we recommend a -- the second rule changed from 205.239(a)(2) that talks about access to pasture for ruminants and we would like to amend that to read not "access to pasture for ruminants except" -- we would like it to say "ruminant animals grazing pasture during the growing season." Andrea has a question.

CHAIRPERSON RIDDLE: Okay. Andrea.

MS. CAROE: Are we going to have any problems with the words growing season? I mean, is that obvious what the growing season is or is that going to provide a legal loophole of some kind?

MR. KARREMAN: I believe that -- actually, it's obvious that it's backed up by the -- what we will bring in the next rule change would be NRCS. We're going to bring that into it and that would be specific to each region in the US, okay?

CHAIRPERSON RIDDLE: Right, there are legally defined growing seasons in every area.

MS. CAUGHLAN: The types of forage, the types of plants.

CHAIRPERSON RIDDLE: Okay.
MS. KOENIG: Well, that's what's a little confusing to me like in -- I have a big problem unless you can get me a copy of that, practice proscribes the Code 528. I'll tell you right not, I can't -- but as far as the growing season in an area like Florida, for example, or the South where you have maybe -- the temperature fluctuates, so in theory, annual or different grasses can grow and then they might die back and then they may grow.

How is that defined in terms of a growing season? I mean, our growing season for vegetables, I can tell you right now, is November to July. We could grow all year, but the conditions get such in organic systems -- and the NRCS doesn't really specialize, you know, in necessarily organic systems -- so if you go to some kind of text, you know, it's possible to grow 12 months of the year, but that's not appropriate for a minor organic farming system.

MR. KARREMAN: Well, we're talking about livestock and grazing and I believe there is someone from northwestern California that said they can graze 50 our of 52 weeks a year, so if you can, you should. And the NRCS, yeah, it's not custom tailored to organics, but I think the organic industry can look to them in each county where there are field office technical

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
guides and look to that and you'll find, as far as
grazing and something called prescribed grazing,
Document 528. It'll say when animals should be out in
pasture and when they should be taken off and at what
the height the minimum height the grass or whatever --
to start grazing and what the minimum height should be
to take them off again. And therefore, I think it is
valid to look at NRCS-type information and I was going
to get into that next. Should I just go right into it?

CHAIRPERSON RIDDLE: Yeah, please.

MR. KARREMAN: Okay. Because actually, I
mean, we heard a lot today about 30 percent for 120 days
and you know, it seems to be some very good information
behind that from Cornell and some other universities
discussed a lot, but the one thing is that if we were to
arbitrarily say they must have X amount of feed for X
amount of days, that's all it's saying is the feed and I
think we, as the National Organic Standards Board, have
to also look at the agro-ecology involved with the whole
farm and the Wild Farm Alliance also brought up very
valid points regarding biodiversity. And the Natural
Resource Conservation Service, in their Document 528,
which is called Prescribed Grazing takes into account --
there's about six goals in that, okay. May I read the
goals? Okay, so we'll all know about them.
First -- well, not first, but -- promote economic stability for grazing land sustainability by "developing a grazing system that provides forage for as much of the year as possible to minimize supplemental feed cost." Two, to improve or maintain quantity and quality of forage for livestock health and productivity. Three, to improve or maintain the health and vigor of plant communities. Four, improve or maintain water quality and quantity. Five, reduce soil erosion and maintain soil condition. And six, improve or maintain food and cover for wildlife species.

So I -- what's really nice about it is each county has an NRCS office and they can -- that Document 528 and many things with the NRCS are tailored for each county in this country and therefore, we aren't putting this blanket rule of X amount of dry matter for X amount of days on everybody from Maine to California, Florida to Alaska, but each -- they have -- what we would like to see is in the organic system plan that they are actively working within -- they don't have to get signed up with the NRCS, but it has to be evident that they are working towards those goals.

MS. KOENIG: So -- I don't -- again, I don't work with the NRCS. Does the NRCS come in and say okay, you can have three cows per acre. Is that the kind of
specificity -- and then if that is the case, you know, from a regulator perspective, are we then giving our authority to the NRCS and we're going to say okay, if you determine it's three cows per acre, that's okay in organic?

MR. KARREMAN: Actually, there was a farmer who was here from Wisconsin, Tom Miller, I think his name was, who talked about actually when he started to graze, he actually went to the soil conservation people in his county and they helped him set up exactly this, this kind of plan. Is he here still? Okay.

MS. KOENIG: But don't forget, you know, county-to-county, there's --

UNIDENTIFIED SPEAKER: But every county, they have --

MR. KARREMAN: But what's nice is that we're giving flexibility across the country and he did say there was a stocking rate calculation and I asked him what percent dry matter is he getting from it and he said 40 percent. But, you know, I think just that they're following that plan, that we have a good basis to go on with the recommendation. I would think there's some sound data in science behind it, if it's the NRCS. I'm hoping so and assuming that. And you know, there are a number of USDA agencies, so we're working with
Mr. Carter: And I've done some work with NRCS in the past on the local -- there's a tremendous amount of variation, but that reflects the fact that there's a tremendous amount of variation --

Ms. Caulfield: All across the country.

Mr. Carter: -- in moisture, in geology and climate across the country. I mean, one of the commenters this morning was talking about Colorado and you know, it cannot sustain, you know, a certain amount of animals. Well, in Colorado you go from areas where there are 45 inches of moisture per year to areas where there are less than seven inches of moisture per year and you go from areas where there's -- the elevation's at 4500 feet to areas where it's 14,400 feet and the NRCS, the regional, the local specs account for that and provide, I think, a good, reliable, quantifiable benchmark for what is the carrying capacity of that land and if it's able to support more animals, then it supports more animals.

Chairperson Riddle: And they also have practice standards for irrigated pasture, as well. The thing I like about it is it does reference another federal standard within USDA that is adapted to
site-specific conditions, which is part of the
definition of organic production. So I think it gives
producers the guidance that they need, but also gives
inspectors and certifiers access to the tools to assess
compliance. So it makes the standard much more
enforceable. Gerry.

MR. DAVIS: I wanted to pose a question about
what about southern areas of the country, arid areas
where little rainfall in a 12-month growing season, for
example; would under those guidelines NRCS, would they
say you have to irrigate 12 months out of the year and
keep your animals on that pasture all year long?

MR. KARREMAN: I don't think so, but I'd be
happy to look it up; some country in Arizona. I'll look
it up for you, but I can't do it right now, but I know
that if you irrigate your crops, I would think that you
could irrigate your pasture, as well.

MR. DAVIS: Is that -- I'm just trying to
clarify is that what that means for the grower in that
area, that to be an organic dairy farmer --

MR. SIEMON: No, they if they were to come
back and say 40 acres per cow. You've got a dry land
desert --

CHAIRPERSON RIDDLE: Yeah, that's the other
option.
MR. SIEMON: -- they'd come back and say in this county, we recommend --

MR. DAVIS: Right, right. Dry land. But if you want to do a dairy in that area and you have water --

MR. SIEMON: Then they would say for irrigated acres is three cows per acre.

[Simultaneous comments]

MR. DAVIS: Well, I understand that.

MR. SIEMON: -- dry and irrigated, the dry land area. They differentiate between the two.

MR. DAVIS: Exactly. That's what NRCS would say, but would that be construed to mean that the farmer in that area, organic dairy farmer would have to have his animals on pasture, which means for him irrigated, because he can't have one animal per 40 acres.

MR. SIEMON: So many more months is your question.

MR. DAVIS: Yeah. He would have to keep his animals on grazing all year long, compared to the farmers in New York or Wisconsin that their growing season's only 150 days.

MR. KARREMAN: I think it's a valid point we should look at.

CHAIRPERSON RIDDLE: Well, there would still
be the other allowances for temporary confinement, so if it's just too hot for the animals, they could be kept in to protect their own health and well-being, or if there is inclement weather for temporary confinement -- we wouldn't be removing that temporary confinement allowance. Rose.

MS. KOENIG: Again, I don't have the NRCS plan in front of me and I'm talking about -- I don't understand how the data base is set up, but I can say that for example, in Florida, they've got best management practices for growing crops and those best management practices are not based on organic systems, so the levels of nitrogen would be consistent on carrots, but because we're using different forms, there's no best management practices for manure, for example.

So you know, it's -- I think that the best management practices in a lot of states form a foundation that you can maybe draft a recommendation for, but they -- a lot of times they don't -- they're not drafting things for organic farming systems, so I don't know if the NRCS does that same thing, but the concept, as I understand it, and again, in that organic farm system plan and such, sometimes these management practices try to accommodate the worst-case scenarios.
And I don't know if that's how NRS [sic] --
you know, same thing with when you're trying to get crop
-- you know, that's the same thing when you go through
the USDA standards, they'll use the lowest conventional
-- I'm just cautioning the -- utilization of that
without doing that kind of analysis.

CHAIRPERSON RIDDLE: Well -- and I just
respond because these standards are set up for farmers
who choose to apply for either equip or CREP funding for
prescribed grazing, so these are a higher level of
eligibility in order to qualify. So it's not just like
some BMP that they put out for carrot production, which
is just a guidance for if you want to grow carrots. So
-- and Hugh, what else? And just finish explaining the
draft and then we'll ruminate.

MR. KARREMAN: Let's see. So we've talked
about -- we kind of got ahead of ourselves just a
little, but I guess the third rule change we'd like to
make, Livestock Committee has -- come out of Livestock
Committee is on 205.238(a)(3) -- we'd like to have under
rule change for 205.238(a)(3), the term "appropriate
pasture condition" and then, you know, the appropriate
number of animals shall be determined in accordance with
the regional Natural Resources Conservation Service
conservation practice standards per Code 528. Therefore
205.238(a)(3) would read, "The establishment of
appropriate housing, pasture conditions and accordance
with the regional Natural Resources Conservation Service
conservation practice standards for prescribed grazing
and sanitation practices to minimize the occurrence and
spread of diseases and parasites." Yes, George.

MR. SIEMON: So we're not asking for a new
definition, we're just asking for these words to be
inserted in there. Right?

MR. KARREMAN: Yes.

MR. SIEMON: But it's in effect a new
definition.

MR. KARREMAN: Yes. And it refers back to the
NRCS as a standard to -- for certifiers to make sure
that there's appropriate pasture.

CHAIRPERSON RIDDLE: Goldie.

MS. CAUGHLAN: Well, when you first -- you
talked about it, you specified Code 528. I noticed you
left it out in your actual verbiage here.

MR. KARREMAN: Okay. We can put it in.

CHAIRPERSON RIDDLE: Yeah. That was our
editor. Dave.

MR. CARTER: Yeah and just because -- I left
it out because before when we've typed some things like
to FDA and said, you know, it's this; if the other

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
agency would change their numbering on some codes, you know, then we're out of conformance, so I kind of hated to put that in there. I want to refer to the standard, that if they change and we don't, all of a sudden, you know, they're talking about how to build a road or something.

MS. CAUGHLAN: Right.

CHAIRPERSON RIDDLE: Um-hum.

MR. KARREMAN: Okay. Should I read No. 3?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Well, 3 hasn't changed, has it?

MR. KARREMAN: 3 has not changed. That was posted on the web site. That has not changed. No. 3, it's on the second page.

CHAIRPERSON RIDDLE: Bea has a question.

MS. JAMES: I just want to make sure that I understand this. I know Rose asked about it, but I just want to make sure I'm clear that the National Resources Conservation Service conservation practice standards, that that -- that is taken into consideration with different climate changes by region.

MR. KARREMAN: Yes, absolutely. And each county has an office.

MS. JAMES: By county.
MR. KARREMAN: In nearly each county.

MS. JAMES: Okay.

CHAIRPERSON RIDDLE: Rural county. I hope so.

MS. CAROE: I have a question --

CHAIRPERSON RIDDLE: Well, let Hugh present it. Well, actually, No. 3, there were no changes proposed, so if you have a question on it, now would be the time just for clarification. Andrea.

MS. CAROE: I have a question about the words significant portions, the term significant portions. We don't define it. Are we just perpetuating the same confusion?

MR. KARREMAN: The question was on the term the grazed feed pasture lot is a significant portion of the total feed requirements and in this guidance document that we had been working on that came out of committee in late January, that was -- I'm sorry.

CHAIRPERSON RIDDLE: Just hold on. If there's quite a bit of conversations going on in the audience. If you can -- have to talk, please take it in the hall. Thanks. Go ahead, Hugh.

MR. KARREMAN: We also realize that the word significant is a very, you know, descriptive-type word instead of quantitative, but this is a guidance document and therefore, you know, it's to be looked at well, what
do they mean by how much, you know, pasture? Well, significant portion -- but by referencing the NRCS Code 528, we take care of that. I think we take care of that.

CHAIRPERSON RIDDLE: And we maybe should have a heading above 3 and 4 to clarify that those are recommendation for guidance, they're not recommendation for rule change.

MR. KARREMAN: See, what was up on the web site was just the guidance document and as we went through it and thought about ambiguity possibly being taken advantage of, like in significant portion or maximized pasture and all that, we started to think more and it seemed that we needed a rule change and that's why that's being added in now, so I apologize for that confusion.

MS. CAROE: Well, the only thing that has got me concerned or I think we should address is that predominantly the comments today, the number on this significant portion and even though you're going with the NRCS recommendations for the length of time of pasture without the temporary confinement restrictions, I don't know that it addresses it -- I don't know that -- maybe it's just a matter of wording in here to indicate that, you know, that this committee feels that
if the NRCS recommendations for the length of time is
covered but that the portion should be considered
significant. I mean, otherwise, it's meaningless to
have significant portion in there. It's completely
immeasurable and unverifiable.

   CHAIRPERSON RIDDLE: Um-hum.

   MR. KARREMAN: True. And I think I gave Rose
-- there is a livestock per stocking rate calculation
that the NRCS does go through, so -- and it is for CREP
and equip programs. We're not going to force any
farmers to be in that, but we're going to refer to their
numbers and hopefully that is above and beyond their
basic best management practices, so as far as the 30
percent that was talked about quite a bit today, like I
mentioned, one of the farmers who did specifically this
program for his grazing, he's grazing 40 percent dry
matter, so -- and I think it'll be different for every
area, but it'll make sure that those cows are walking on
the grass eating the green grass planted at its roots in
whatever's best for the agro-ecology of that local area.

   MS. CAROE: Again, I just suggest some
language that states that if NRCS recommendations are
followed, the length of time of pasturing that this
committee considers that a significant portion and then
don't name the number, but you've already addressed the
problem.

MR. KARREMAN: I think that's what --

MR. SIEMON: So do you want to add that it
where it says significant portion as match as meeting
the requirement of the NRCS, is what you want to add in
here.

MS. CAROE: What I suggest it says that if --
in meeting NRCS requirements for the length of time in
which an animal can be pastured, this committee
considers that portion of pasture to be significant and
it addresses the problem, addresses the issue that there
should be significant pasture.

CHAIRPERSON RIDDLE: Nancy is --

MS. OSTIGUY: I have some suggestion wording.

On that second sentence that currently reads, "The
grazed feed must provide a significant portion of the
total feed requirements." Excuse me. Insert right
after -- or right before the period, "based upon a
Natural Resource Conservation Service conservation
practice standards for prescribed grazing Code 528." So
based upon those practices. So significant would be
based upon the NRCS's conservation practice guidelines.

MS. CAROE: I would suggest instead of "based
upon", "as defined by."

MR. FLOOD: I'd like to clarify a point to the
Board. NRCS --

CHAIRPERSON RIDDLE: Well --

MR. SIEMON: You have to be recognized.

CHAIRPERSON RIDDLE: This is just for discussion. We're going to be getting lots of feedback as we break and so if you could hold that --

[Simultaneous comments]

CHAIRPERSON RIDDLE: Okay, all right. Please approach the mike and identify yourself.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Well, I'm -- you said recognize him and I did.

MR. FLOOD: We're talking about NRCS. First off, my name is Chuck Flood again. NRCS, when they go to an individual farm, prescribe grazing as Hugh referred to, is done as BMP for that individual farm. If that farmer chooses --

MS. CAUGHLAN: What's BMP?

BOARD MEMBERS: Best Management Practices.

MR. FLOOD: Best Management Practice. If that farmer chooses to only graze his cows two hours a day, that becomes his BMP. So --

MS. CAUGHLAN: So that's what she's referring
to when she says --

MR. FLOOD: So the NRCS is only going to do what is in that farmer's interest, not what we're trying to determine today.

MS. CAUGHLAN: Thank you.

MS. CAROE: That's what I -- we've got to be careful on these things.

UNIDENTIFIED SPEAKER: He was very critical of --

MR. SIEMON: You know, first off, I didn't hear this until last night, but it's my understanding from reading the documents, they establish the stocking rate, that they recommend -- they establish when you should have the animals on the pasture and when you should take them off and I got quite a -- I went through the -- I got quite a prescriptive of what they would recommend to you, you know, so I'm a little concerned about this, too. They were giving away the whole thing here, but what I read seemed to be quite prescriptive, so I don't know. I mean, I'm concerned, too, but --

CHAIRPERSON RIDDLE: Rose. Was that a hand or --

MS. KOENIG: Yeah, it is. And again, I'm not that familiar with NRCS, but as I understand the thing on the size of farms, some farms are required, if they
have large impact in an area, which is vegetables, that
they have to have a plan. For smaller farmers, at least
with vegetables, they don't necessarily have to. It's a
volunteer kind of basis, but I don't think NRCS is a
regulatory body, it's really as an incentive for growers
to do the right thing, so I think the gentleman in the
back -- I mean, they're moving towards, but they don't
go on a farm and if a -- you know, if a farmer wants to
do something, they're going to try to help them do it
better, but they may not -- you know, and they may use
best management practices, then rainfall data, but
there's a lot of discretionary determination, I think,
between the NRCS agent and the farmer, but I can -- may
be wrong.

CHAIRPERSON RIDDLE: Julie.

MS. WEISMAN: Yeah, I mean, I have a little
different read on how we're trying to bring NRCS into
this. It seems to me that we are not asking them to be
the enforcing agent, we are asking them to establish a
guideline and USDA will -- NOP will be, you know, will
be the enforcement. I see a difference, unless, you
know, maybe --

CHAIRPERSON RIDDLE: Well -- and I think
you're on the right track. This is in accordance with
an NRCS prescribed grazing plan. It's not saying that
they have to file a plan with NRCS, but they have to be in accordance with whatever the regional specific requirements are for a prescribed grazing plan.

MR. KARREMAN: Can I also add that, you know, to answer your question back there, Chuck, and I mean for most of my farmers in southeastern Pennsylvania and a lot of the grazing farmers that were here today, would quite easily be above and beyond this NRCS-type basis, okay. This would be a minimum. This sets -- at least there's a bar that says you have to be doing this and that to be grazing your animals in an agro-economically sound fashion if you're an organic farm. It's a minimum, not a maximum.

MS. JAMES: But that --

CHAIRPERSON RIDDLE: Bea.

MS. JAMES: Sorry. That opens up personal accountability and that -- from what I gather that we heard from a lot of the farmers today is they're saying that they want us to look at being more specific because they are taking personal accountability and there's a lot of people out there that aren't but that are making the claims that they are.

CHAIRPERSON RIDDLE: Andrea and then Dave.

MS. CAROE: I think we need to look back at the NRCS requirements and come a little bit closer -- I
hear what you're saying, Rosie, about BMPs, but NRCS also distributes equip money and I can't imagine that they just do that to anybody that meets their own requirements, you know. I think there is probably some more stringent quality to the requirements than just going on a farm and looking at their plan and making sure they make payments.

CHAIRPERSON RIDDLE: Then Dave.

MR. CARTER: Well, I think -- yeah, and I want to get back to what Julie was referring to because I think, you know, when we're talking about this is in trying to figure out what works best for a pasture-based system, we also have to recognize that pastures differ extremely from Vermont to Colorado to California and you know, again, going back to one of the folks that made some public testimony this morning, yes, you know, you don't do maple sugar in Colorado because you don't grow maple trees, but you do graze cattle, you do, you know, you do have things.

You can't have a regional food basis or you know, a dairy system that is organic if it's appropriate to the environment and to the ecosystem of that particular area and the NRCS is the best agency within USDA that has developed the data base and the base line for what is appropriate to each region, use that as your
base line. NOP then, you know, enforces to that.

MR. KARREMAN: That's exactly what we're trying to do.

CHAIRPERSON RIDDLE: So anyway, let's finish this up. This is just a presentation and something for us to think on and talk about. I think we're going to get to No. 4.

MR. KARREMAN: Okay, No. 4, temporary confinement. Was it just the D part?

CHAIRPERSON RIDDLE: That's the only change.

MR. KARREMAN: Okay. Should I read No. 4, the whole thing?

CHAIRPERSON RIDDLE: No, just read the change and see what questions come up.

MR. KARREMAN: "Temporary confinement is allowed only in the following situations" -- there's A, B, C and here D -- "during a stage of life" -- the new term that we would like to have a rule change for, would then affect this guidance document. "During a stage of life. For ruminants, a stage of life that warrants temporary confinement from pasture includes (A) birthing, (B) dairy animals up to six months of age, and (C) beef animals during the final finishing stage, not exceed 120 days. 2. Lactation -- lactating dairy animals" -- should be -- "Lactating dairy animals is not
a stage of life under which animals may be denied  
pasture for grazing."  "Lactation in animals is not a  
stage of life under which animals may be denied pasture  
for grazing."

CHAIRPERSON RIDDLE: Okay. Andrea.

MS. CAROE: Format change. You have both a  
positive and a negative list going. I would suggest you  
eliminate number -- (ii) and include that language as a  
note under (i) just because -- otherwise, if somebody  
comes in with something different, then it's listed here  
in (i) or (ii), it's not clear prohibited or allowed.

CHAIRPERSON RIDDLE: Yeah, it's another  
editorial change that we can do. That's very important.  
It's one of the most important things we've talked about  
today.

UNIDENTIFIED SPEAKER: Pasture is the only  
thing we've talked about today.

CHAIRPERSON RIDDLE: So make that note.

MR. KARREMAN: So then there'd be three stages  
of life and four stages of life that ruminants -- oh,  
forget it. Forget it.

CHAIRPERSON RIDDLE: You just eliminate the  
little double i's and put "Note: lactation is not" --  
blah, blah, blah. Okay, so that's been presented,  
preliminary discussion. And it is 10 until 6:00. Is
that it for Livestock Committee for today, George, or --

MR. SIEMON: I just wonder if we shouldn't confer for a minute after the break-up, if we could, the Livestock group.

CHAIRPERSON RIDDLE: Um-hum.

MR. SIEMON: But I also would like to know when do you think that we'll be able to present and vote on this, if we could fit in the schedule so we know --

CHAIRPERSON RIDDLE: Well, when do you think you'll be ready to present? I -- you know, it's very important -- some of these items of the other committees will go fast.

MR. SIEMON: I'd rather do it tomorrow because the people over here --

CHAIRPERSON RIDDLE: Yeah, tomorrow. But should we try and set a target, like after lunch? We'll shoot for that.

MS. CAUGHLAN: We also have to --

CHAIRPERSON RIDDLE: Yeah, I understand and hopefully we can do that first off.

MS. KOENIG: Jim, I just have a procedural thing.

CHAIRPERSON RIDDLE: Yeah, Rose.

MS. KOENIG: Okay. It's more of a question directed towards Richard. Now, these -- like, when I
read -- because you haven't asked us specifically for
guidance for 4, you know, in a formal process like you
have this time -- this was a request for guidance,
correct, to the Livestock Committee?

MR. MATHEWS: Initially, that's what it was,
but I also realized shortly after sending that, that you
probably wouldn't be able to do it without some
rulemaking in addition to guidance.

MS. KOENIG: So this will go through a --
whatever comes out of it is going to go up for public
comment? Just to get that straight in my mind.

MR. MATHEWS: Whatever rule changes you come
up with would have to go through rulemaking, which would
have a comment period for the public, yes.

MS. KOENIG: Okay, but the -- if say an NRCS
plan is put in place or 30 percent, is that a rule
change or is that just a guidance statement?

MR. MATHEWS: The language that the Livestock
Committee is recommending be inserted into the
regulations is a rule change and we would do a proposed
rule to change the sections that they've identified in
uses of wording that they've identified. We would allow
a period for the public to comment on that and then we
would go to Final Rule. Because the proposal includes
both guidance and rulemaking. For example, Rose,
they're talking about changing the words "access to pasture" and they're either scratching "access to pasture" --

MS. KOENIG: Right.

MR. MATHEWS: -- and putting in several new words, that is a rulemaking change.

MS. KOENIG: Right. That I'm not as concerned about as like the -- if we insert an NRCS document or --

MR. MATHEWS: But that's the same thing. That is a rule change, yes.

MS. KOENIG: Okay, thank you.

CHAIRPERSON RIDDLE: Well -- okay, and there's really only one more item on today's agenda. Yeah, well the policy has, too, but there is -- we anticipated on the collaboration document that we would have something from NOP. We don't, and so we don't have anything for action there, but we do have a draft that's in the meeting book on the livestock medications or mediation, either one, and Dave is willing to move that forward if the rest of the Board is willing to hang on here for one more item related to livestock. So --

***

MR. CARTER: Okay, yeah. So we can move this and while Arthur's getting his machine tooled back up there, let me just explain the two items as the chairman...
just mentioned. We don't have anything on the collaboration. The Policy Development Committee has forwarded to NOP the recommendation; the NOP has taken that to OGC and is awaiting a response back from OGC. Barbara has mentioned that she calls them up quite frequently to see when that's coming. She does not anticipate that it will look much different than what we presented, but we're still awaiting that.

Now, when it comes to the livestock medications correction, just as a background, there were 10 issues, 10 items that were recommended for approval by NOSB that got hung up primarily because of issues relating to FDA and --

CHAIRPERSON RIDDLE: Dave, I just want to point out that's after Tab 6 and then you see Livestock Meds, so just --

MR. CARTER: Yeah, under Livestock Meds.

CHAIRPERSON RIDDLE: -- so everybody gets on the same page.

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Thanks.

MR. CARTER: So essentially, the NOSB was informed by the NOP that the livestock medications which were not formally approved by FDA could not be put on the National List, so consequently, then, the directive
that we had coming out of the October meeting was to
take a look at the options, the potential options that
we might have for addressing this issue and the Policy
Development Committee, in cooperation with the Livestock
Committee looked at six specific areas.

If you look through those on the second page,
option number one was to create a category of
"alternative medicines" on the National List. The pros
on this was that the creation of a new category for
alternative medicines would make the National List were
user-friendly for producers, consumers and certifying
agents; approved alternative medicines would be clearly
listed in their own section. The con on this was that
-- this is at the top of page three, Arthur -- a
creation of an alternatives medicines category on the
National List does not resolve the issues concerning the
use of medications not formally approved by FDA.

The second area that we looked at was creating
a negative over-the-counter list and recognizing that
there's a provision for a review of over-the-counter
drugs through FDA's Center for Drug Evaluation. There
was discussion about allowing all over-the-counter
medications for use of organic livestock production,
however a number of antibiotics are now allowed as over-
the-counter medications for livestock, so that led,
then, to the discussion about creating some type of a negative list.

The pros on that -- that it would allow numerous medications to be used by organic livestock producers. The cons were that FDA does not have an OTC program for livestock medications, so there is no context to create a negative list of prohibited medications and in addition, the evaluation criteria procedures -- create and manage such a list.

So the third area was to create a National List category of "production aids" with reference to specific use. When we looked at this, we decided that the advantages would be the creation of a production aid category for alternative livestock materials as consistent with OFPA and would satisfy FDA's concerns about unapproved animal drugs appearing on USDA list as medical treatments. The drawback would be while creation of a production aid category may be part of the solution, it would require a new rule change in addition to the rule change necessary for adding the recommended substances to the list, would not likely resolve all of the FDA's concerns since unapproved medications would appear on USDA's National List.

Fourth area was to included organic as a minor species/minor use category by FDA. That was taking a
look at the legislation that was passed recently by Congress. The advantage of this is that the option may provide a long-term opportunity to facilitate the FDA approval or in some cases indexing the medications used by organic livestock producers, however the drawback is the conditional approval process still requires considerable data development and the indexing process is not applicable to major species which includes most organic livestock, particularly cattle, swine and the like.

Fifth area was review all recommended materials to more correctly place them in categories consistent with FDA regulations. The advantage here was that this would address a few of the problematic substances without an additional rule change and without formally listing the substances not approved by FDA. The drawback is that this does not allow the use of all substances recommended by the NOSB and does not address the structural problem of allowing organic livestock producers to officially use the same substances currently used by conventional producers.

And then finally, number six was to pursue further clarification at higher levels of USDA and FDA to facilitate coexistence of NOP and FDA regulatory process for these substances. Again, getting back to
some of the things that we've recommended previously in terms of Memorandum of Understanding or the like. The advantage here, the option allows for the current list of substances recommended by NOSB to be added to the National List, but also addresses the structural issues that future substances can be added to the National List with full approval and cooperation of USDA and FDA. Drawback is while the NOSB can lay the groundwork and urge cooperation between USDA and FDA, communication and effective action must occur between officials within the two agencies. So with all of that in mind, we really came forward then with the fourfold recommendation. The -- and what that is, is to place NOSB-recommended substances on Section 205.603 of the National List and the NOSB Policy Development and Livestock Committees recommend: (1) USDA and FDA should pursue further clarification at higher levels of USDA and FDA to facilitate coexistence of NOP and FDA regulatory process for the listing of unapproved medications and other substances recommended by NOSB, essentially, No. 6.

The second thing was we recommended NOP should pursue rulemaking to create a National List category in Section 205.603 of production aids with reference to specific use. On the third, USDA should investigate FDA

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
recognition of organic livestock production as a minor use/minor species category, and fourth, NOP should review all recommended materials to work -- correctly place them in categories consistent with FDA regulations.

Bottom line is out of all of the things we looked at, there wasn't a single silver bullet in there, so it's really taking a look, starting at the top levels of the communication between USDA and FDA to try and coordinate that, but going down and then trying to carve out some of these specific things that might help us address these individually, these 10 issues that we had formally approved or recommended.

CHAIRPERSON RIDDLE: So would you care to make that as a motion, the recommendation section?

MR. CARTER: I would formally make that as a motion, recommendation section -- to recommend that.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Nancy seconds. Dave moves, Nancy seconds. Discussion.

MS. CAUGHLAN: I'd just like to comment. I think this is really a thorough consideration and it might even also -- the pattern in which this is presented and the deliberative effort that you've gone through is a good layout for future sticky wickets here.
Thank you.

MR. CARTER: There were lots of folks that weighed in on this one, so it was very helpful.

CHAIRPERSON RIDDLE: Yeah, Becky did a lot of work to help.

MR. CARTER: Yeah, Becky did a lot of work on this.

MR. MATHEWS: Jim.

CHAIRPERSON RIDDLE: Yeah.

MR. MATHEWS: I'd like to echo Goldie's comments on that. This is a really good thorough job on this issue and I commend the group for the work they did.

CHAIRPERSON RIDDLE: Any further discussion?

No further compliments, though.

MR. KARREMAN: I have one question.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: So then what happens with the products that were, you know, voted on by NOSB two years ago that are still kind of in a murky black hole? Does this help them or not? Are they kind of coming out of that black hole, starting to see the light?

MR. MATHEWS: You mean will this get us out of the black hole?

MR. KARREMAN: Well, yeah. With this --
MS. CAUGHLAN: You have a laser light?

MR. CARTER: And I would -- you know, I would just say Hugh, no it doesn't -- you know -- it's like I say, it's not the silver bullet that cures everything. It is sort of the road map about how we work our way out of the black hole.

MR. MATHEWS: I can assure you that Arthur has tried all kinds of things and this is just one more tool in his arsenal of attempts to get these materials blessed so that we can put them on the list.

MR. NEAL: Also, just as an update. We had conversations with FDA last month and what they've agreed to do is work with their legal counsel to see how they can get those materials that are not approved for use in animal drugs but are on the low end of the radar screen, the benign substances, see how they can craft some language that can help us get those listed on our National List. And in terms of the docket, the docket is still being finalized.

CHAIRPERSON RIDDLE: So essentially, this reinforces undergoing efforts, anyway. Yeah. Okay, any further discussion? Seeing none, Rose starts off this round.

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Rose, yes. Goldie.
MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Yes. Kevin.

MR. O’RELL: Yes.

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Yes. Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Yes. Hugh.

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Julie.

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Gerald.

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy.

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave.

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea.

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George.

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Okay. Unanimous.

Fourteen --

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAUGHLAN: Did you vote?

CHAIRPERSON RIDDLE: Oh, the chair votes yes.

Geez. I think -- good work. It's good to finish on a unanimous vote and a sense of accomplishment. So we have two items to hold over from today's agenda and that is coming back to accreditation and I would like to try and insert that after the Policy Development Committee, before Handling, if possible. Yeah, after Policy Development. Policy Development starts over again in the morning after the AAPFCO guest speaker. Yeah, Dave.

MR. CARTER: But please credit this last piece of work to our account to make up for anything we really screwed up.

CHAIRPERSON RIDDLE: Yeah. And then we'll try to insert the Livestock right after lunch between whatever committees are happening then.

MR. SIEMON: And if we could have a little Livestock session here right now?

CHAIRPERSON RIDDLE: A Livestock session right now and Andrea?

MS. CAROE: Accreditation, as well.

CHAIRPERSON RIDDLE: As well now. Okay, before dinner. Okay. I just -- I'm on ball, but -- okay, Crops before dinner. How about Livestock for dinner? Okay. Well, we will recess until 8:00 a.m.
tomorrow morning. Thank you. Thank you all today.

NATIONAL ORGANIC STANDARDS BOARD MEETING

Meeting held on the 2nd day of March, 2005
at 9:00 a.m.

The Washington Terrace Hotel
1515 Rhode Island Avenue, NW
Washington, D.C.

TRANSCRIPT OF PROCEEDINGS

3-2-05 NOSB Meeting Participants

Chair: James A. Riddle
Vice Chair: Kevin O'Rell
Secretary: Goldie Caughlan

NOSB Members:

Andrea Caroe
David Carter
Gerald Davis
Rigoberto Delgado
Bea James
Hubert Karreman
Rosalie L. Koenig
Michael P. Lacy
Nancy Ostiguy
George Siemon
Julie Weisman

NOP Members:

Richard Mathews
Arthur Neal, Jr.
Barbara Robinson
Other Appearances:

Kim Dietz
Mark King
Michael Norman, AAPFCO

Public Comment:

Leslie Zuck, Pennsylvania Certified Organic

Tony Acevedo
INDEX

Agenda Item:          Page:

Guest Speaker:
  Michael Norman  3

Presentation and Consideration of Committee Action Items:

  David Carter, Policy Development  18
  Andrea Caroe, Accreditation  49
  Kevin O'Rell, Handling  54
  George Siemon, Livestock  151
  Rosalie Koenig, Materials  219
  Nancy Ostiguy, Crops  281

Action Items:

  Policy manual cover sheet amendment  35
  Changes to policy manual, as amended  37
  Amendment to retain and (7)  44
  Change to 205.301, as amended  46
  Accreditation draft document changes  53
  Status of albumen, as amended  66
  Organic percentage of tea calculation  99
  Exclusion of water from tea calculation  102
  Status of bitter orange  110
  Retail Certification Question 1 - send back to committee  128
  Questions 2 and 3 - send back to committee  130
  Rule change to 250.239(a)(1) and (b)(2)  153
  Rule change to 205.239(a)(2)  173
  Livestock guidance document - post for public comment  215
  Materials review procedures amendment  226
  NOSB internal procedures for Sunset review  252
  Chemistry 101 moved into Board manual  269
  Move ferric phosphate to 205.601(h) as approved substance  286
  Enhanced natural resource component  299
  Status of waxed boxes, as amended  307
PROCEEDINGS
March 2, 2005

CHAIRPERSON RIDDLE: Okay, if you didn't hear me the first time, would you please take your seats. If you still have conversations, please take them out in the hallway, unless you're a Board member. We need you.

MS. CAUGHLAN: So just be quiet.

CHAIRPERSON RIDDLE: Yeah, then just be quiet. Right. Okay, thanks for being here again, and welcome to day three of our NOSB meeting, and we'll begin this morning with a guest speaker. And so I'd like to introduce Mike Norman. Mike's with the Washington State Department of Agriculture, a fertilizer control official, and Mike will be giving us a report on the recent mid-year meeting of the Association of -- the American Association -- which is it?

MR. NORMAN: Association of American.

CHAIRPERSON RIDDLE: Yeah, the Association of American Plant Food Control Officials -- and the use of the word organic on fertilizer labels.

MR. NORMAN: Thank you for the introduction, Chairman Riddle, and it's a pleasure to be here this morning. I'm here to discuss some issues relating to organic fertilizer labeling. That came from the midyear meeting AAPFCO, February 19 through 23. That was last
week. I am an employee of the Washington State Department of Agriculture, and through that role I'm also a member of AAPFCO, which stands for the Association of American Plant Food Control Officials, and I'm the liaison from AAPFCO to NOSB.

The next slide, please. At the meeting last week, the labeling and definitions committee of AAPFCO took motions that were approved the labeling and definitions committee and board of directors to first raise the term organic input and the policy, SUIP -- that stands for statement of uniform interpretation policy 28 -- from tentative to official, and to table some requested changes that came from the Organic Trade Association. Those requested changes from the Organic Trade Association to move four terms -- four officials terms, currently official, to modify those. Those requested changes were tabled. And those four terms were -- the next slide -- organic fertilizer, natural organic fertilizer, natural fertilizer, and organic-based fertilizer. So the requested changes to those official four terms were tabled to the next meeting of AAPFCO, which is the first week of August in St. Petersburg, Florida.

Okay. These -- the term organic input was recommended by the committee and approved by the board.
to move from a tentative term to an official term. And
organic input reads as follows: "Organic input is a
fertilizer whose ingredients comply with the
requirements of the National Organic Program Final Rule,
as specified in 7 C.F.R. Part 205.

The next slide. Okay, this slide -- this
policy, SUIP 28, takes three slides, so just bear with
me on this. Okay. SUIP 28, labeling of organic input
products: Products intended for use as organic inputs
may make statements on the product's label that affirm
that the product is in accord with the National Organic
Program. For example, suitable for organic farming;
acceptable for use in organic production; meets National
Organic Program requirements for organic production, or
meets USDA standards for organic production; and they
use the logos issued by recognized agencies, such as
OMRI, the USDA, certifying agencies, state programs or
other recognized organic input listing services. Such
statements about organic inputs are exempt from the
requirements pertaining to organic labeling under
federal law [ph]. I guess my only real observation from
the meeting of AAPFCO by a steering committee was that
the term organic can mean different things to different
people.

The next slide. So organic input and SUIP 28
York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
don't become official official until the entire
association of AAPFCO votes on it in Clearwater-St. Pete
-- Clearwater-St. Pete in the first week of August. And
the current wording of organic input and SUIP 28 will be
open for discussion at the next meeting, and all the
terms and definitions and policies are always -- the
manual is a living document, it comes out annually, and
things change all the time. So you can always modify
these things with time. You just have to submit
comments, which, for the next meeting, would be --
submit your comments to me by April 21 and I'll make
sure they get to the right place. And the continued
participation of NOSB with AAPFCO is encouraged.

The next and final slide -- if you have any
comments, it should be in e-mail, give me a call or a
fax, and I have some cards if -- I might just leave them
out there for awhile. If you want my contact
information, of course, e-mail's probably the best. But
that concludes my presentation. I will be happy to
answer any questions.

CHAIRPERSON RIDDLE: Yeah, thanks for coming,
Mike. Any questions from the Board?

***

[No response]

***

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
CHAIRPERSON RIDDLE: Well, I have one just for clarification. You put up those other four terms, and I know that Organic Trade Association had proposed some changes to those and that's -- those changes are part of the Policy Committee's draft that's in our meeting book, so if people want to see what was proposed for change -- well, just two things. With the new term, once it becomes official, the organic input term, that doesn't change the allowance of something being called an organic fertilizer that would be not allowed. So, you know, it's something that contains Uria or sewage sludge could still make the claim organic fertilizer. That -- the kind of inconsistency there or contradiction or opportunity for confusion has not be eliminated. There's been an additional claim of organic input being added to the allowed claims, is that correct?

MR. NORMAN: Well, the current definition for organic input in SUIP 28 doesn't mean complying with NOP at all times. So in the case of Uria, that's kind of an interesting issue. According AAPFCO, Uria meets the definition of organic, but it fails the definition of organic nitrogen. So there's -- that's an important distinction. And in the case of sewage sludge or biosolids --

CHAIRPERSON RIDDLE: Yeah, biosolids, yeah.
MR. NORMAN: -- you know, I haven't -- I read the letter last night again, and I wish I had had the foresight to talk a little bit with the AAPFCO board of directors on that. I'm not sure that biosolids would be allowed to be a label. It'll be allowed to say organic on them. But it sounds like it would. I mean, there's still going to be some difficulties, I think.

CHAIRPERSON RIDDLE: But the new organic input --

MR. NORMAN: No.

CHAIRPERSON RIDDLE: Yeah.

MR. NORMAN: No.

CHAIRPERSON RIDDLE: But the -- there currently are products that are manufactured from biosolids that carry an organic fertilizer claim, and that's one of the concerns, I think, that still remains, I guess.

MR. NORMAN: I think that this probably don't. And --

CHAIRPERSON RIDDLE: Uh-huh.

MR. NORMAN: -- also, AAPFCO has no enforcement authority at all. It's a collection of plant food control officials. Well, because fertilizers are not regulated by the federal government, we have come together cooperatively to try to work by consensus.
to assist the fertilizer community by trying to promote
uniformity in the development of policies and terms and
definitions and that type of thing. So AAPFCO itself
doesn't really have any legal authority at any level,
but states look to it as an important guide to -- as
they develop a law or rule, or implement a current law
or rule, to try and maintain uniformity.

CHAIRPERSON RIDDLE: And you mentioned that
comments can be submitted up until April 21 on the
organic input and the SUPI --

MR. NORMAN: SUPI.

CHAIRPERSON RIDDLE: -- SUPI. So if this
Board would like to have some input on, you know, that
long policy statement, the SUPI, we could do that,
direct it to you by April 21, is that correct? But
that's still fluid, as I understand --

MR. NORMAN: Yes.

CHAIRPERSON RIDDLE: -- that if there's some
modifications to just help improve the language --

MR. NORMAN: Well, the opportunity will be
available at the annual meeting, the first week of
August, to change organic input in SUPI 28 before it
goes to the entire association. That's my understanding
right now. I've really only been with AAPFCO two and a
half years; the Washington State Department of

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Agriculture, just over four. But I looked at last year's agenda and typically what happens, the entire association comes together and they vote on labeling. Like, the labeling and terms committee will meet, and then they all come together at the very end as an entire association and the committees report and the entire association takes action.

CHAIRPERSON RIDDLE: Uh-huh. So would just -- it would be best to get them to you by April 21, but that's not drop dead, it's so long as the input comes in prior to the early August meeting or --

MR. NORMAN: Yeah, you'll definitely be heard --

CHAIRPERSON RIDDLE: Uh-huh.

MR. NORMAN: -- your comments. Basically, we need a three-month advance to get items on the agenda, in this case, for the labeling and definitions committee. It's three months in advance for the annual meeting, and it's two months in advance for the midyear meeting. So the first week of August would put you in the first week of May, so if you get it to me the third week of April, I'll make sure --

CHAIRPERSON RIDDLE: Okay.

MR. NORMAN: -- that -- Maryam Khosravifard is the chair, and I can provide -- she would be the person
that all of these go to, and if you want her
information, I'll be glad to give it to you, her
e-mail --

CHAIRPERSON RIDDLE: Okay. Gerry?

MR. DAVIS: Jim, I had a question and maybe
you could answer it later in our discussion, but I
thought maybe I'd better ask it while he's up there.

CHAIRPERSON RIDDLE: Yeah.

MR. DAVIS: The confusion that I heard about
the organic input designation versus just someone making
a fertilizer claim of organic, like it contained
biosolids or Uria, is there steps being taken within
your labeling committees, a step to address that and
eliminate the usage of organic, unless it's -- you're
going to say organic input and discontinue any other
reference to organic in the labeling?

MR. NORMAN: Well, I think that's what we're
talking about right now. Right now there's a definition
for organic and organic input. The definition for
organic is official, and the definition for organic
input will become official in its current or in a
modified state at the annual meeting in St. Petersburg.
So it's an issue, you know. That's a problem, from your
perspective.

MR. DAVIS: So they recognize that that is a
problem and it's not just -- the intention is not just
to allow it to continue as is, organic meaning, in your
designations, Uria, biosolids, so on and so forth?

MR. NORMAN: Well, that's the issue that we're
talking about. That really -- that answer to that
question just has to work through AAPFCO. And if you
want to call, you can, to address that question. But
it's -- right now, organic doesn't mean complying with
animal feed, which, I think, is where you want to go.
Or you tell me.

CHAIRPERSON RIDDLE: Yeah, ideally, yes.

MR. NORMAN: Right. You're not there yet.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yeah. Well, I was just kind of
looking at the Policy Committee's document. It was
related to that issue. I just had a couple question.
So T-12 and the headline, like organic fertilizer T-13,
are those your terms?

MR. NORMAN: Those are AAPFCO terms.

MS. KOENIG: Yeah. So those are the
terminology that you all use. And those terms, do they
-- how does it look on the -- is that a term that then
appears on the bag or the lot or the -- for bulk? I
mean, how does that term become part of the -- you know,
call it the information panel or whatever -- to a
farmer?

MR. NORMAN: Well, AAPFCO doesn't enforce any laws or rules, so the answer to that question then is, the labeling on a fertilizer bag is up to the company and the state control officials that review labels in our registration process.

MS. KOENIG: So even if you have a definition, that still may not even end up on a bag, it's just -- this is sort of your -- you know, your general wish list of how you would like things to be ordered or conform to, because you don't have any regulatory authority on it, do you? Or how does --

MR. NORMAN: No, it's an effort by plant food control officials in the states that come together. And since the fertilizer labeling contents and things like that is not regulated by EPA, for instance, say, in the case of pesticides, it's up to the states. So all 50 states could operate in a void -- and Puerto Rico and Canada could operate. So it's actually for the whole North American continent. But we all could operate independently, but this an effort for all to come together and wherever possible identify consensus and put that in the manual, which is a very important reference. People look to it in the industry and government agencies when developing laws. But to answer
to your question, it basically comes down to whatever
the laws and rules are on the books at the time at the
state level and during the registration process and what
the fertilizer company submits as a label.

MS. KOENIG: Can there be additional -- I
mean, you have this T-12 organic and you know, if that
mentioned in there is your definition -- I mean, I don't
see why -- you know, I want to change it because I'm
friendly to organics, but -- I mean, that's pretty much
a chemistry book definition and we can argue that it's,
you know, a carbonaceous kind of a label. So is there
-- do you foresee kind of -- you know, when you need is
there -- the general consensus, is there -- what's the
general consensus of the group, or does it make sense
for us to try identify another word or a -- not
necessarily for us to change organic, but -- because
we're right here. We're trying to change a definition,
which to me sometimes might be harder than actually
proposing a new word or a new schematic. I know if I
wasn't sympathetic to an industry, I want them to
propose a new word rather than changing my working
definition as I understand it. So I don't know. That's
my question.

MR. NORMAN: Well -- yeah. That just has to
work through. I don't know how that board will respond

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
to this entire issue in the future, but you're on track.  
I wouldn't propose another definition of organic. If 
you really have a problem with organic, focus on 
organic, because the more variations there are of 
organic -- you tell me -- right now we have organic and 
organic input and I don't think you want to add another. 
Maybe you do, I don't know.  

CHAIRPERSON RIDDLE: Okay. Anything else, 
because we need to wrap up? Yeah, Mike. 

MR. LACY: Jim, I'm sorry. I just wanted to 
make sure.  

CHAIRPERSON RIDDLE: Yeah, no problem.  

MR. LACY: The people that are part of your 
organization do have regulatory authority, though. 

MR. NORMAN: Oh, yeah.  

MR. LACY: You have state -- you have state 
officials that have regulatory --  

MR. NORMAN: Yeah.  

MR. LACY: -- authority.  

CHAIRPERSON RIDDLE: Um-hum. 

MR. NORMAN: Basically the plant food and 
AAPFCO -- well, it doesn't always -- basically, it's the 
Association of American Plant Food Control Officials. 
So it is -- the people who vote are solely those state 
employees who enforce state laws and rules regarding
plant food and fertilizers.

CHAIRPERSON RIDDLE: It's a little early for beer. Yeah. And just to follow up on that -- and yeah, the state officials themselves do have the enforcement, regulatory authority, but the association does not. But the association sets uniform definitions that then are used by the state -- most of the state --

MR. NORMAN: Voluntarily.

CHAIRPERSON RIDDLE: Yeah, voluntarily. They aren't bound by those, but it's a way to bring consistency to the terms that the states then approve and regulate. And this -- these broad changes to all four of those definitions were first introduced this time, so it really stimulated a lively debate. And you know, the debate on this -- you know, addressing the larger issues will continue, as Mike has said.

MR. NORMAN: Yes.

CHAIRPERSON RIDDLE: But right now the allowance of a new additional claim is on track to be approved, that would then allow those more detailed claims like, fertilizer that complies with NOP regulations could become a legal claim on a fertilizer product, if states still have to act on that after AAPFCO has taken final action as an association, right?

MR. NORMAN: Correct.
CHAIRPERSON RIDDLE: Yeah. Okay. All right, well, thanks a lot and thanks --

MR. NORMAN: Thank you.

CHAIRPERSON RIDDLE: -- for being a liaison to the Board here.

MR. NORMAN: My pleasure. Thank you. Have a good day.

CHAIRPERSON RIDDLE: Thanks, Mike. Okay, well, now to Board actions. So we left off yesterday with the Policy Development Committee still having some items to deal with. So, Dave, I'll turn it over to you.

MR. CARTER: Okay, thank you, Mr. Chairman. The -- I think what we'll do is we'll switch up here in the order some things, because we do have at the bottom of the list there of our remaining items the request for NOP support for changes to the use of the work organic in the AAPFCO-approved fertilizer labels. And we did meet the other night to discuss this issue and the items that were just presented by our speaker that came out of the meeting. And accordingly, then, in our committee, the committee voted to take the current draft of this recommendation off the table, with the understanding that we will develop a new proposal before consideration by the Executive Committee prior to the next meeting of AAPFCO. So we want to retool our recommendations in...
light of the discussion that they had at the meeting.
So this particular draft we're taking off the table.
We'll have something to bring forward.

CHAIRPERSON RIDDLE: Okay. And now we just heard that they'll be meeting in early August, but Mike would like input by April 21, in order to influence the discussion specifically on the organic input --

MR. CARTER: Right.

CHAIRPERSON RIDDLE: -- and the SUIP.
MR. CARTER: Right.

CHAIRPERSON RIDDLE: What would you propose, then, as far as Policy Development, to get something to Executive?

MR. CARTER: Well, we already have another item on there for the input on the good guidance for consideration by the Executive Committee by April 4, so I think we'll just run this parallel with that.

CHAIRPERSON RIDDLE: Okay. So do we need a motion to authorize the Executive to act on behalf of the Board on providing input here, just to make it clear?

MR. CARTER: I don't think we need a motion, because the -- yeah, the Executive Committee has that by default.

CHAIRPERSON RIDDLE: Okay, I just wanted to
make that -- make it clear that we wouldn't be somehow vulnerable and accused of acting without the authority of the Board.

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: But so long as everyone understands that Policy Development will be drafting something and you'll be circulating it to all Board members, so people not on the Executive should get any input to members of the committee or the Executive Committee so that we can take everyone's opinions into consideration.

MR. CARTER: I would never think of doing it any other way.

CHAIRPERSON RIDDLE: I don't know why it crossed my mind. Okay, so that wraps up --

MR. CARTER: Okay.

CHAIRPERSON RIDDLE: -- that item for now.

MR. CARTER: So then, we'll go back to the top of the list, and if you will go to the Board policy manual that is in the handbook there. Well, it's under the -- it's under five -- under six. Excuse me. And this represents, primarily, as we talked about in the October meeting, was to get the feedback from NOP on some issues and make sure that what we have in our policy and procedures manual actually complies and helps
us to work with NOP. Barbara did an extensively thorough job in going through and getting us feedback on that. It was extremely helpful. And so we've gone through and made some revisions on that, and we've left this in the -- the document here is in revision mode, so you can kind of go through it and see the changes that are made in the manual.

The first sections, again, just going through the duties and responsibilities of the Board members, really nothing significant changed there. The -- when we get back to the principles of organic production and handling, mostly that is just some formatting changes. But when we get into -- yeah.

CHAIRPERSON RIDDLE: You jumped back to principles already?

MR. CARTER: Oh. Oh, excuse me. Wait a second. The document here -- I'm going to have to pull it up on my computer because my document goes from page 11 to page 14.

CHAIRPERSON RIDDLE: Oh.

MS. ROBINSON: Dave, I have the whole thing. Do you want it?

MR. CARTER: Do you have the whole thing?

Yeah.
thing in mine.

MR. CARTER: Okay. Let me just grab yours, Barbara. I've got the cliff notes version.

UNIDENTIFIED SPEAKER: There's no changes on 12 and 13, is there?

CHAIRPERSON RIDDLE: No, no changes, it's just --

MR. CARTER: Okay. Okay. Yeah, on page -- you know, under the officers' responsibilities on page 11, again, no major changes on that. The -- just a second. Okay. The duties of the committee chairs, no major changes. The miscellaneous policies, going down through the policies for surveys, we got the feedback on that, so we're squared away on that. That was something that we'd been working on to -- and was a source of some conflict previously, and so the survey policy now, just so everyone understands, that if we proceed to do anything, the manual clearly states that before they are submitted for approval to the USDA, they have to go through OMB and the whole procedure, which had hung us up in the past.

Now going back to section seven, the principles of organic production and handling, primarily just some editing -- formatting changes in that section.

MS. ROBINSON: What page are you on, Dave?
MR. CARTER: 19.

CHAIRPERSON RIDDLE: Okay. And the version in our book must be in the revision mode --

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: -- because it shows there's formatting. So --

MR. CARTER: Yeah, that's --

CHAIRPERSON RIDDLE: So once the final is approved and you resubmit --

MR. CARTER: Yeah, this will be taken out.

CHAIRPERSON RIDDLE: Yeah.

MR. CARTER: We just -- yeah. We just left this in here so everyone could see what were the revisions being made. The -- going back to page 22, the procedures of the NOSB, I see that we have a change there. We're referencing Rose there, so we need to make another change, an editing change on the materials review process to make sure that that's completely up to date. And Rose had e-mailed back that that was the current one, but I just didn't take that back. So can you double-check on that, Rose?

MS. KOENIG: Yeah, because -- I mean, we -- at this meeting we have -- we're going to have to make an abridged form of it, but --

MR. CARTER: Okay.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. KOENIG: -- we've got it and now and more recent, but we think it's correct, so --

MR. CARTER: Yeah. Okay. Going back to page 24, we have the TAP contract procedures now in the book to talk about what is the procedure, when do we bring on the TAP contractors. The -- page 25 and 26, again, those are mostly formatting changes going down through there. Talking about the time line now for completion of the TAP procedures. This is new information that we now have in here to provide. And that continues on, then, through page 33. We have the evaluation criteria as a part of the procedures manual now. The -- on page 41, the procedures for the material reviews process is now included. On 43, an appendix for the decision making procedures for NOP. And then finally on 44, just a brief summary of the FACA facts for citizen advisory committees, the duties, and a cliff notes version on page 46 of parliamentary procedures.

So the manual is getting more comprehensive as we go, and I think we're getting it pretty well set with all of the things that come under, you know, our operational procedures. So we need to have -- or I will make a motion at this point to adopt the updated Board policies and procedures manual as presented.

MS. CAUGHLAN: Second.
CHAIRPERSON RIDDLE: Is there a second?
Goldie seconds. Dave moves and Goldie seconds.
Discussion? Andrea?

MS. CAROE: I would offer a friendly amendment based on the information that Rose is going to confirm, that --

CHAIRPERSON RIDDLE: Speak into your mike.

MS. CAROE: Okay. I'd offer a friendly amendment, that the -- the approval be contingent on Rose's verification that the TAP procedure is accurate.

MR. CARTER: Okay, I'll accept that --

MS. CAUGHLAN: Yes.

MR. CARTER: -- as a part of the original motion, if that's okay.

CHAIRPERSON RIDDLE: And Rigo.

MR. DELGADO: I would also like some time to review it. So if Rose is having some time, can you just give me the opportunity to review it?

MR. CARTER: Well, I -- what this is referring about is that what will finally be put into the manual --

MR. DELGADO: Um-hum.

MR. CARTER: -- is updated information that she will be -- and that will just be the part under --

MS. CAUGHLAN: Materials.
MS. KOENIG: The TAP.

UNIDENTIFIED SPEAKER: The TAP --

MR. CARTER: -- the TAP.

UNIDENTIFIED SPEAKER: -- procedure.

MR. CARTER: Yeah, the TAP procedure. So what we really have here, Rigo, this is -- this is more just a -- this isn't a policy document that we're putting out, this is more just sort of the rules of the road that we operate under. So --

MR. DELGADO: Thank you.

CHAIRPERSON RIDDLE: Okay. And I would just also ask that -- that the -- and you're already aware of this, that the formatting notes be removed, it be taken out of revision mode, but also on the very cover sheet, that the words policy and procedures manual be --

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: -- enlarged in bold, and then the date of our vote be inserted as well. So just all that. You don't need to make that as part of the motion, but just --

MR. CARTER: No, no, that's just --

CHAIRPERSON RIDDLE: -- a reminder. And also to check on that statement of work to make sure it is the correct and current version, and remove those little bracketed internal notes between committee members.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAUGHLAN: I think what you're saying is you'd like to put it in Jim mode.

MR. CARTER: No, it is in Jim mode. Yeah, a lot of it's in --

CHAIRPERSON RIDDLE: But I want it in a final --

MR. CARTER: -- Jim and Dave mode right now.

So it'll be --

CHAIRPERSON RIDDLE: Okay. Barbara?

MS. ROBINSON: If you recall, Jim -- and I think I did send this to all of the Board. Remember when I sent you an e-mail and made up -- Jim, you got sort of a form, whereby the Board would submit formal recommendations to us?

MS. CAUGHLAN: No.

CHAIRPERSON RIDDLE: No.

MS. KOENIG: I did.

MS. ROBINSON: You do, too.

MS. KOENIG: I recall something like that.

MR. CARTER: Yeah.

MS. ROBINSON: Yes, you do, because you sent it back to me and said --

CHAIRPERSON RIDDLE: Oh, yeah. Yeah, yeah.

The one I didn't like, though.

MS. ROBINSON: Yes. Well, but I -- all I can
do here is offer a suggestion that you consider -- as long as you want to have things here like how are you going to present your materials recommendations and those sorts of things, I think it -- you know, it wouldn't be a bad idea if you considered some kind of format, something -- you can take what I sent you and mess with it, you know, edit it, whatever. But that might also be something that we could -- because it does help us put down, you know, the history. You have something formal, a document --

UNIDENTIFIED SPEAKER: Jim?

CHAIRPERSON RIDDLE: Yeah. And just -- yeah. If I can just respond to that and just explain. Right at the very tail end of our orientation session on Monday, Arthur handed these out, which are -- which is the same that you'd sent around, or maybe a slightly modified, improved, updated version. But the new members haven't seen any of this at all. But essentially, this would be a cover sheet that would go with any final recommendation. Once we've amended it, taken final action, the committee chair polishes it up, resubmits it with this cover sheet that just summarizes, you know, the topic and exactly what the recommendation is and what category it fits under. So this is really a cover sheet. It doesn't replace the recommendations.
that we -- that are much -- that are more detailed as far as background and -- yeah, it's a cover sheet to help track and -- yeah. Bea?

MS. JAMES: I wanted to make a recommendation that we look at the outline of the presentation that Dave did yesterday, that was very thorough and complete, and see if there's opportunities for using that in how to present recommendations.

MR. CARTER: You mean, the thing with the options and then --

MS. JAMES: Um-hum.

MR. CARTER: -- the pros and cons and then the --

MS. JAMES: Right.

MR. CARTER: Okay.

MS. JAMES: And you have the introduction and --

MR. CARTER: Yeah, okay.

CHAIRPERSON RIDDLE: Oh, uh-huh. Yeah, currently in the Board manual there is an outline for recommendations.

MS. CAROE: Yeah. I'm not so sure that that was what the outline was on Dave's presentation, though, yesterday. So then --

CHAIRPERSON RIDDLE: Right, it was a -- it
went beyond that.

MS. CAROE: It was more -- yeah.

MR. CARTER: It was -- yeah.

MS. CAROE: It was very thorough and --

CHAIRPERSON RIDDLE: Yeah, uh-huh.

MR. CARTER: Okay.

MS. CAROE: Yeah.

CHAIRPERSON RIDDLE: Right. Are you proposing that as amendment, or is that something for the Policy Committee to put on the work plan to develop?

MS. CAROE: Put on the work plan to --

CHAIRPERSON RIDDLE: Okay.

MS. CAROE: -- develop.

CHAIRPERSON RIDDLE: Yeah. All right. So right now this sheet has been circulated, and Barbara is suggesting that we consider inserting this --

MS. CAROE: If we have a motion on the floor, can we amend the motion?

CHAIRPERSON RIDDLE: You can amend the motion by adding this. So, yes, it is germane. Yes?

MS. CAROE: Okay, I offer another motion -- an amendment to the motion to include the format for making -- for formal recommendations.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. Is there
discussion?

  MS. CAROE: Doesn't it have to be --
  CHAIRPERSON RIDDLE: No, this is not --
  MS. CAROE: Is there a second motion or is this --
  CHAIRPERSON RIDDLE: No, your original earlier about Rose, that was a friendly amendment that was accepted by the maker.

  MR. CARTER: Yeah, I just incorporated that into my original motion, so --
  CHAIRPERSON RIDDLE: Right. This is new business.

  MR. CARTER: Yeah.
  MS. CAROE: Okay.
  MS. CAUGHLAN: Yeah.
  CHAIRPERSON RIDDLE: So I'd rather have a separate vote just on this as an amendment.

  MS. CAROE: Okay.
  CHAIRPERSON RIDDLE: So this was just passed out. Some of the Board members had seen an earlier version. Is there any discussion, reaction? Mike?

  MR. LACY: We're voting on this as a new motion rather than an amendment?
  CHAIRPERSON RIDDLE: Well, it is an amendment to Dave's motion, but it's a stand alone, so we focus
just on the content of this cover sheet.

MR. LACY: Then I'd suggest we make it a
motion.

CHAIRPERSON RIDDLE: It's already been made a
motion and seconded. Andrea made the motion and --

MR. LACY: That's was my question.

CHAIRPERSON RIDDLE: Nancy -- yeah.

MR. LACY: I'm sorry, but I misunderstood your
answer.

CHAIRPERSON RIDDLE: Well, sorry. Probably
the first time. Any other discussion just on this cover
sheet, to add that to our Board policy manual that's
being considered? Yeah, Rigo.

MR. DELGADO: Just a question. Can you give a
background on how old this document is and -- that we're
still working on it and developing it?

MR. CARTER: Well, yes. The document itself
was created in 2002. I mean, we -- or formally adopted.
We worked on it, you know, through the year in 2002 and
began to adopt. And then, since then, as issues have
come up, we've added things to it, such as the TAP
contracts and the forms. So the idea behind this is
that, you know, as long as the Board is following the
procedures here in our manual, then we're not going to
get in hot water with NOP or USDA or, you know, anybody

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
else. So, yeah. Well, sort of. At least over procedural issues, yeah. Over philosophy, we'll get into lots of hot water.

    CHAIRPERSON RIDDLE: Yeah, it's it minimize risk.

    MR. CARTER: Yeah.

    CHAIRPERSON RIDDLE: Yeah, Rose. And just on the cover sheet.

    MS. KOENIG: Yeah, the cover sheet.

    CHAIRPERSON RIDDLE: Yeah, good.

    MS. KOENIG: The thing that doesn't make sense to me is the response by the NOP, because if we're going to hand this -- our work really is up to that. You know, the NOP's response is not our -- I mean, we don't know, so -- I mean, in essence, it would be blank when we would hand it to you, so --

    CHAIRPERSON RIDDLE: Um-hum.

    MS. KOENIG: -- it doesn't seem like something -- unless you meant response at the meeting. Barbara smiled. I think it's going to be okay.

    MR. LACY: Or maybe desired response.

    CHAIRPERSON RIDDLE: Well, I think that's --

    MS. KOENIG: I'm not sure what --

    CHAIRPERSON RIDDLE: It's a good question, and could you explain how that would be handled?
MR. MATHEWS: The intent is that you would submit a recommendation, and we would take your cover sheet and put our answer on it.

MS. ROBINSON: It's not intended to be --

MR. MATHEWS: And it would be posted on the website.

CHAIRPERSON RIDDLE: Okay.

MR. MATHEWS: That's what you want answered, right?

MS. KOENIG: Right.

CHAIRPERSON RIDDLE: Yeah.

MS. ROBINSON: It's just a cover sheet. You may have a whole series of technical or you may have a whole lot of paper behind that. That would just simply be a way the we would trap officially --

CHAIRPERSON RIDDLE: Um-hum.

MS. ROBINSON: -- Board recommendations submitted to us, separate from materials recommendations. Like for example, you make a recommendation to us to write to AAPFCO, right? So you just -- and it would just provide a better way for us to start systematically building the paper trail, the history, that's all.

MS. KOENIG: I guess one thing is, with that -- as far as posting. Okay, so we hand it to you. I
would just hate to see things not posted because there's a delay in the response. So would that be -- if we hand it to you, it's not going to be posted, even though that section might be blank for awhile? I mean, how do you --

MS. ROBINSON: We can always start of with saying, you know, accepted by NOP. I mean, the first response can be, you know, the NOP recognizes that the recommendation was forwarded to us, and you know, it's being worked on by NOP. No, it shouldn't -- I agree with you, Rose, there's no -- there's no intent to get it and then, you know, not do anything with it, not post it.

CHAIRPERSON RIDDLE: Um-hum.

MS. ROBINSON: It's more a recordkeeping mechanism.

CHAIRPERSON RIDDLE: Okay. Any other discussion just on the cover sheet amendment here?

***

[No response]

***

CHAIRPERSON RIDDLE: Seeing none, all in favor of adding this to the Board policy manual that then will be voted on next, say aye.

BOARD MEMBERS: Aye.
CHAIRPERSON RIDDLE: That's a voice vote. All opposed?

***

[No response]

***

CHAIRPERSON RIDDLE: Okay. So now this is insert in a proper section and Dave will take care of that as the editor. I'm sure there's debate, then, on the original motion as amended?

***

[No response]

***

CHAIRPERSON RIDDLE: Okay, seeing none, and now we will go with the roll call vote.

MS. JAMES: Jim?

CHAIRPERSON RIDDLE: Yes.

MS. JAMES: Do I have to make it a motion to put the working policy into effect for making a better outline for presenting the recommendation?

MS. CAUGHLAN: Uh-uh, no.

CHAIRPERSON RIDDLE: No, but if you would've wanted to stay on the Policy Development Committee --

MR. CARTER: Oh, that's cruel, that's cruel.

CHAIRPERSON RIDDLE: No, I think the committee hears you and recognizes the need to improve the format,
and just make sure, then, tomorrow, when Dave presents
the work plan, that it is on the committee's work plans.
So yeah, we don't have to vote on that.

MS. JAMES: Okay.

CHAIRPERSON RIDDLE: All right. Okay, back to
the roll call on adopting the Board policy and
procedures manual as amended, and we start with Goldie.

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Yes. Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Yes. Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Yes. Rigo?

MR. DELGADO: Yes.

That would be -- okay, Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Yes. Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.
CHAIRPERSON RIDDLE: Bea?
MS. JAMES: Yes.
CHAIRPERSON RIDDLE: George, absent. Rose?
MS. KOENIG: Yes.
MS. CAUGHLAN: Twelve, zero, zero, two.
CHAIRPERSON RIDDLE: And I vote yes, so we have 12 yes -- pardon?
MS. CAUGHLAN: Twelve, zero, zero, two?
CHAIRPERSON RIDDLE: Yeah, 12 yes, 0 no, 2 absent, and no abstentions. Okay. So, Dave, I think you have one more item, is that right?
MR. CARTER: Yes, Mr. Chairman, the last item, if you will turn again under tab six, there is the "made with" tab, and this is our recommendation for a change in 205.301. And it is -- refers to a contradiction that is in place currently on the "made with" category, specifically that Section 205.301 indicates that products containing at least 70 percent organically produced ingredients may contain non-organic ingredients produced without regard to the fact that the product may contain organic and non-organic versions of the same ingredient. And what that comes about is because 205.301(c) is in conflict essentially with 205.301(f). So the contradictory language in those two areas is creating some problems for certifiers. And as one of
the items, then, we had on our work plan was to recommend a change, and what we are recommending is on the second page there, and that would be strike and (7), and to add some new language so that the statement that the -- 301(c) would now read, products sold, labeled, or represented as "made with organic (specified ingredients or food groups)." Multi-ingredient agricultural products sold, labeled or represented as "made with organic (specified ingredients or food group)" must contain (by weight or fluid volume, excluding water and salt) at least 70 percent organically produced ingredients which are produced and handled pursuant to requirements in subpart C of this part. No ingredients may be produced using prohibited practices, specified in paragraphs (1), (2), and (3) of 205.301(f). No product labeled as made with organic may include organic and non-organic forms of the ingredient. Non-organic ingredients may be produced without regard to paragraphs (4), (5), and (6) of Section 205.301(f). If labeled as containing organically produced ingredients or food groups, such products must be labeled pursuant to 205.304.

This passed on a committee vote of four yes, zero no. There were two members absent. So, Mr. Chairman, I would make a motion that we approve this.
recommendation.

CHAIRPERSON RIDDLE: Okay. Is there a second?

MS. JAMES: Second.

MS. CAROE: Dave, when we did this work, I don't remember us deleting and (7), because that section specifically refers to the non-organic ingredients and how they are produced.

MR. CARTER: Um-hum.

MS. CAROE: I thought we were leaving and (7) in, but including the language that -- the language that was added. I don't remember us taking out (7) in that one sentence.

MR. CARTER: Yeah, that was the original.

MS. CAROE: The reason I object to that is because, then, the non-organic ingredients have to be produced without the use of an organic and a non-organic form, and I didn't think we were going to that level. So a manufacturer who is using a minor non-organic ingredient would have to track how that minor non-organic ingredient was produced, not how their product is being produced and their minor -- it tracks back one level if you mention this statement.

MR. CARTER: Well, let me -- okay, run that by
again.

MS. CAROE: This sentence refers to how the non-organic ingredient is produced --

MR. CARTER: Right.

MS. CAROE: -- not what the non-organic ingredient is, but how it is produced. So it tracks back one extra level. It's not saying that your non-organic ingredients have to be strictly organic or strictly non-organic, it's saying that the non-organic ingredient had to be produced using ingredients that were non-organic or organic-only. It tracks back one level.

MR. CARTER: Okay.

MS. CAROE: I wanted to make it very clear that the non-organic ingredients could not be both --

MR. CARTER: Right.

MS. CAROE: -- so you couldn't have a label that has both organic cinnamon and non-organic cinnamon in it --

MR. CARTER: Right.

MS. CAROE: -- for a "made with" product. But this is saying, if you use non-organic cinnamon, that you have to actually track that to make sure there was no organic used in the production of that cinnamon. Do you see what I'm saying? It tracks back --
CHAIRPERSON RIDDLE: I do.

MS. CAROE: -- one level.

MR. CARTER: Okay.

MS. CAROE: So and (7) is appropriate in this sentence. The sentence added is clarifying, and we know that there's been confusion in this --

MR. CARTER: Okay. So if we leave in -- (7) in there, though, are we --

CHAIRPERSON RIDDLE: It allows the use of organic ingredients in the manufacture of the non-organic --

MR. CARTER: Non-organic.

CHAIRPERSON RIDDLE: -- portion, the 30 percent.

MR. CARTER: Okay.

MS. CAROE: That is correct.

CHAIRPERSON RIDDLE: Yeah.

MS. CAROE: And those --

MR. CARTER: Okay.

CHAIRPERSON RIDDLE: Uh-huh.

MS. CAROE: And those minor ingredients that are deemed non-organic, you can still have some organic components.

MR. CARTER: Yeah.

MS. CAROE: You're still designating them --
MR. CARTER: Okay.

MS. CAROE: -- as non-organic.

MR. CARTER: Yeah. Okay. And I'm just saying the procedure -- I mean, that's a substantive change to what the committee voted on, so I would -- let's put that on as an amendment.

CHAIRPERSON RIDDLE: Right, we'll have to --

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: -- vote on it separately.

MR. CARTER: Let's vote on that separately.

MS. CAROE: Okay, I offer the amendment to --

MS. CAUGHLAN: Put and (7) back in.

MS. CAROE: -- include --

MR. CARTER: And (7).

MS. CAROE: -- the and (7).

MR. CARTER: Okay.

CHAIRPERSON RIDDLE: Yeah, to remove the strike-out.

MR. CARTER: Okay.

MS. CAROE: To remove the strike-out of and (7).

MR. CARTER: We'll just do the new -- put the language in and remove --

MS. CAROE: That's correct.

MR. CARTER: -- the strike-out, okay.
MS. CAROE: That is correct.

MR. CARTER: Okay.

CHAIRPERSON RIDDLE: Okay. So there's a motion. Is there a second to removing the strike-out from the and (7) from the --

MR. O'RELL: Second.

CHAIRPERSON RIDDLE: -- committee's draft?

Kevin seconds. Further discussion?

***

[No response]

***

CHAIRPERSON RIDDLE: Okay, seeing none, I will try a voice vote on just this amendment. All in favor say aye?

BOARD MEMBERS: Aye.

CHAIRPERSON RIDDLE: Those opposed?

***

[No response]

***

CHAIRPERSON RIDDLE: Okay, thanks, Andrea. I have a comment as well. Dave, yesterday we did receive a comment from Emily, and I just had it here and now I don't know where I put it. There it is -- that -- to insert the word agricultural in that, after non-organic. Then it would read, non-organic agricultural ingredients.
in that underlined sentence --

    MR. CARTER: Right.

CHAIRPERSON RIDDLE: -- in the committee's
draft.

    MR. CARTER: Right.

CHAIRPERSON RIDDLE: Because that's to remove
confusion that these restrictions only apply to the
agricultural --

    MR. CARTER: Agricultural ingredients.

CHAIRPERSON RIDDLE: -- ingredients.

    MR. CARTER: No. And that's a good -- and I
think that's compatible with the committee, you know,
was intending. So --

CHAIRPERSON RIDDLE: So if someone offered
that as a friendly amendment, you would accept it?

    MR. CARTER: I don't -- yeah. I don't think
that's -- I think that's in line with what the committee
looked at. So --

CHAIRPERSON RIDDLE: And I can't do that.

    MR. CARTER: Yeah, so if, like, somebody like
Andrea would offer that as a friendly amendment --

MS. CAROE: Well, it's a friendly amendment to
add the word agricultural.

    MR. CARTER: Okay, the maker of the motion
would accept that as a friendly amendment, yes, and
would add that to the --

CHAIRPERSON RIDDLE: And who was the original seconder of the original motion?

MS. CAROE: I think it's Bea.

CHAIRPERSON RIDDLE: It was Bea, yeah.

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: Would you accept that?

MS. JAMES: Um-hum.

CHAIRPERSON RIDDLE: Okay. So that is accepted and consistent with the committee's intent.

Okay, so everybody caught there's been a further change. So now, any other discussion on the motion as amended?

***

[No response]

***

CHAIRPERSON RIDDLE: All right, seeing none, we will proceed with the roll call vote and Kevin first.

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Kevin, yes. Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?
MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so we have a full slate, unanimous vote, 14 yes, 0 no, 0 abstentions. Okay.

MR. SIEMON: We're on a roll.

MR. CARTER: That's it.

CHAIRPERSON RIDDLE: Thanks, Dave. Andrea, are you ready, then, for the Accreditation?

MS. CAROE: If we can take five minutes so I
can get it on the projector?

CHAIRPERSON RIDDLE: Yeah.

MS. CAROE: Because I --

CHAIRPERSON RIDDLE: Okay. All right. Well, I hate to take a break and let people escape.

MS. CAROE: I just have to transfer it over.

CHAIRPERSON RIDDLE: Yeah. No, no, that's fine.

MS. CAROE: It's just going to take a minute.

CHAIRPERSON RIDDLE: Okay.

MS. CAROE: Unless you want to postpone it?

CHAIRPERSON RIDDLE: Well, or do we want to go to one of your items or -- I think you're next, right?

MR. SIEMON: Andrea's next.

UNIDENTIFIED SPEAKER: What do you want to do, just five minutes?

MS. CAROE: I just have to get it off of my computer --

CHAIRPERSON RIDDLE: Yeah.

MS. CAROE: -- and onto the other computer.

CHAIRPERSON RIDDLE: Yeah, yeah. Okay. We'll take a five-minute recess for Andrea to regroup and -- I know, but please be disciplined here so we can stay on track. Yeah, the Board members be disciplined.

[On the Record]

***

CHAIRPERSON RIDDLE: I have a quorum, and so let's go ahead and resume business. And so it's Accreditation Committee. Andrea has some changes to the draft.

MS. CAROE: Yes, there were changes made to the draft last night, based on comments received, and the first is at the bottom of page five. I mean -- I'm sorry, the bottom of page one.

CHAIRPERSON RIDDLE: Okay, yeah. What tab is this again? And let's get on the --

MS. CAROE: It's tab four.

CHAIRPERSON RIDDLE: Tab four.

MS. CAROE: Richard, can I ask you to tab -- to bring us down to the bottom of page one --

MR. MATHEWS: Okay.

MS. CAROE: -- so that the --

MR. MATHEWS: Is this the right document?

MS. CAROE: This is the right document.

MR. MATHEWS: Okay.

MS. CAROE: It just needs to be brought down.

CHAIRPERSON RIDDLE: Oh, and then --

MR. MATHEWS: Bring it down.
CHAIRPERSON RIDDLE: Just scroll down.

MS. CAROE: Right.

CHAIRPERSON RIDDLE: All right.

MS. CAROE: Thank you. A little bit further.

It's red. It's in track mode. There. Oh, blue.

MR. MATHEWS: Blue.

MS. CAROE: Red on my screen. To address the commenter who suggested that it is important to understand the label claim associated with the particular product that is being certified, we've added the language, in addition, where a processed product is used as an ingredient by an organic end-user, it is imperative that the label claim of the organic ingredient is clearly indicated on the product's certificate. In this way the end-user can demonstrate compliance with the organic content requirements for the product that they are producing. So this again is an allowance for manufacturers who are purchasing processed ingredients to understand at what level those products have been certified so that they can comply with their product requirements.

CHAIRPERSON RIDDLE: Excuse me. And that is to explain that a change in the recommendation that'll come up later on.

MS. CAROE: That's right. That's background
information.

CHAIRPERSON RIDDLE: Yeah.

MS. CAROE: And if we go down to the recommendation on page four -- if we go down to the --

CHAIRPERSON RIDDLE: Mark?

MS. CAROE: -- recommendation on page four --

CHAIRPERSON RIDDLE: Mark, if you could scroll -- yeah.

MS. CAROE: Continue down to page four.

There, right. So we've made the change to the third recommendation. It requires ACAs to use the standard term -- oh, this is a separate issue. There is a change to use "most recent annual update." This, again, was based on comments received during testimony, that the inspectors and the certifiers would benefit from understanding that the operation has been in compliance. It's not a perfect fix. There's an 18-month period that an operation can be in compliance from their last annual visit. But this will prevent a three-year-old certification that's not been renewed from being representing -- representing the company as organic. So that change was made.

CHAIRPERSON RIDDLE: And if I could just add to that, that that is a phrase that's used in the rule in Section 204.406(b), is where the reference to the

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
inspection and then the scheduled date of annual update. 
So it's a phrase taken from the language of the rule.

MS. CAROE: Right. And then section four --
recommendation four, we added the language that requires
the label claim, or the labeling category under which
products are approved, to be also disclosed on the
certificate. Those are the only changes that were made
to this recommendation.

CHAIRPERSON RIDDLE: Okay. So would you like
to move the draft as presented?

MS. CAROE: Yes. Can I make the motion?

CHAIRPERSON RIDDLE: Yes, yes.

MS. CAROE: Okay, I make the motion --

CHAIRPERSON RIDDLE: I can't. I'm about the
only one who can't.

MS. CAROE: Okay, I make the motion, then,
that this recommendation be approved as amended.

MS. CAUGHLAN: Second.

CHAIRPERSON RIDDLE: Okay, moved by Andrea,
seconded by Goldie. Any further -- any discussion? Not
further, but any discussion?

***

[No response]

***

CHAIRPERSON RIDDLE: Yeah? Well, seeing no
discussion, we'll go to a vote. So -- and this once
again will be a roll call vote. And let me make -- get
my notes here. Just a second. And we start with
Andrea. Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Yes. Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: I abstain.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy? Absent. Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Abstained.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes.

So we have 11 yes, 0 no, 2 abstentions, and 1 absent.

MR. SIEMON: I think we can set a record for most votes without a no vote here.

CHAIRPERSON RIDDLE: Well, let's keep working on it.

MR. CARTER: I was about to vote no on the policy manual just to break the --

MR. SIEMON: Well, I'm getting worried here.

CHAIRPERSON RIDDLE: Okay, thanks, Andrea, and thanks to the committee for dealing with those comments in a timely manner. Okay, now we go to the Handling Committee. So, Kevin, take it away and I'll scoot the mike over the best I can.

MR. O'RELL: The first item on the agenda for the Handling Committee is a Q and A regarding the status of albumen. Albumen is used in the process of winemaking. It's a clarifying agent. The NOP was asked for the status of albumen in regard to the winemaking process and under the current NOP regulations. Albumen is derived from egg whites. It's a common binding agent or clarifying agent in winemaking. And what we have done is taken this as a specific that was passed to the
Handling Committee. The question was, is albumen allowed for use in the clarification process during organic winemaking under the current regulation? The NOS -- or the Handling Committee recommendation was that this ingredient, albumen, needs to be petitioned. Our rationale was that without a petition and technical review, there was not enough information that was provided to us to determine if albumen was agricultural or nonagricultural with the process in extraction. And if was agricultural, if there would be a commercially available organic form. Section 205.105(c) prohibits the use of nonagricultural substances used in or on products, except as otherwise provided in 205.605. And 205.105 -- Section 205.105(b) prohibits the use of non-organic agricultural products used in or on the processed products, except as otherwise provided for in 205.606. And because albumen does not appear on the National List, it was our feeling it needed to be petitioned. So I'm going to enter this in as a motion for our recommendation. I would move that the NOS -- move that this ingredient, albumen, needs to be petitioned.

MS. CAROE: I'll second.

CHAIRPERSON RIDDLE: Okay. Before we start discussion, are there any Board members that have any
interest to declare on either albumen or winemaking?

MR. SIEMON: I'm an egg farmer.

CHAIRPERSON RIDDLE: You're an egg farmer.

MR. O'RELL: Or you like wine.

CHAIRPERSON RIDDLE: Or you like wine.

MR. CARTER: I drink a lot of wine.

MS. JAMES: Yeah, I like wine.

CHAIRPERSON RIDDLE: Yeah. Well, I don't think the egg farmer would rise to the level of a conflict. Okay, discussion?

MR. O'RELL: Mike?

MR. LACY: I'm assuming that it's just because the albumen is dried that it's not considered an agricultural product.

MR. O'RELL: Well, we don't have -- we don't have a petition. A TAP hasn't been filed on albumen or a petition hasn't been filed, so we don't know the manufacturing process, if there would be any other inputs that would need to be considered in the process of extracting the albumen.

MR. LACY: But albumen itself would be agricultural, it's just the process that you're concerned about?

MR. O'RELL: Yes. All right. George?

MR. SIEMON: But, Mike, is albumen just egg...
whites?

MR. O'RELL: Yeah.

MR. SIEMON: Well then, it seems to me that if it's just egg whites and someone dries it, that it should be almost that we're allowing it, unless it was produced by a natural substance for drying. But we're not just looking at it as an agricultural product and we're not going to allow it be used.

MS. CAUGHLAN: Because we don't.

MR. O'RELL: What --

MR. SIEMON: But we don't know about every natural agricultural --

MR. O'RELL: George, what we're just saying is, if a person wants to know an answer to the question of albumen, just file a petition stating what it is, what the process is, what form it's in, and an easy determination could be made by -- by the NOP or the NOSB that it's an agricultural product. But without that information -- we're not given that information. That was the concern of the Handling Committee, we were not given any information.

MR. SIEMON: I guess my question would be for NOP, in general, how they would handle this. I guess I understand your position.

MR. O'RELL: Right.
MR. SIEMON: And the other thing I wanted to say is it's also used in -- for clarifying maple syrup. So that's another use.

MR. O'RELL: And those are other uses that the petition needs to identify. We don't have those. Hugh?

MR. KARREMAN: What he questioned, albumen, at least in my thoughts of it, is natural. If it's natural, why would it have to be petitioned or reviewed and all that? What he questioned.

MR. O'RELL: Well, if it's organic -- if it's an agricultural product, then it would need to be organic. So we need to determine and make sure that the process involved in the form of albumen that's being asked to be used meets the requirements for agricultural. Then it would have to be a organic. If it's a natural substance and not agricultural, it would have to be on the list at 205.605(a).

CHAIRPERSON RIDDLE: Just to clarify, there's two different structures for the list. For crops and livestock, if it's natural it can be used without being on the list. For processed products, it must be on the list to be used, unless it's organic.

MS. JAMES: Michael, I have a question. Albumen, is that another -- isn't that the protein of the egg white or is that just the white? Is it just the
white?

MR. O'RELL: The -- do you want to answer, Michael?

MR. LACY: Well, from a poultry science perspective, the albumen is considered the egg white.

MR. O'RELL: And just for additional information, the egg white is comprised of about 85 percent water and 10 percent protein. It has some lipids, some fats, some trace minerals. So albumen is a portion --

MS. JAMES: They're removing the water, correct, except for the wine production?

MR. DAVIS: In the concentrated form.

MR. O'RELL: Well, that's --

MS. JAMES: Yet to be determined.

MR. O'RELL: -- yet to be determined.

MS. JAMES: Okay. So we just need more information.

CHAIRPERSON RIDDLE: Kim.

MR. O'RELL: Kim.

MS. DIETZ: Just a point of clarification for new Board members. The Q and A coming back to the committee is a new process. This is something that's out of the collaboration and giving you more information on materials to work with. The real issue came to the
Handling Committee of whether or not this material needs to be petitioned, and that's the question they answered.
So if you guys don't debate it, really, you can't do anything without a petition, and you have to go through that process.

MR. SIEMON: I'm still confused. People are selling organic egg whites right today in cartons. So if there's an organic egg white that's dried -- I can't say the word -- and that's still -- I don't know why you have to petition that. It's nonfat dried milk when I sell nonfat dried milk.

MR. O'ReLL: If there -- if it's organic, there's no problem, there's no problem. What we're being asked, again, George, as Kim had said, this is a question that's coming to us from the NOP. We're just saying that we don't have enough information. It's albumen. We don't know the form, we don't know the process.

MR. SIEMON: But if there was dried -- this albumen, today, if somebody could use it --

CHAIRPERSON RIDDLE: Organic.
MR. SIEMON: Organic.
CHAIRPERSON RIDDLE: Organic.
MR. O'RELL: Organic, yes.
MR. SIEMON: -- somebody could use it?
MR. O'RELL: Yes, definitely. Yes.

MR. SIEMON: So I'm a little -- why wouldn't we just say, at that point -- it's available today, commercial available?

[Simultaneous comments]

MR. O'RELL: I wonder if the binding agent that's being used is extracted from egg white, albumen protein? It's a portion of those albumen proteins that make up 10 percent of the egg white and it's solvent extracted.

MR. SIEMON: Okay, all right.

MR. O'RELL: That was a point of the Handling Committee, we don't know, we don't understand, and if somebody just asked me for clarification of albumen, if it's not organic and it's not clearly agricultural, they need to file a petition so that we understand, and that's all that we're -- this is a new format for us on these Q and A's. No further discussion? Rose?

MS. KOENIG: I guess the only thing -- I guess what I'm understanding the Board is you could make a sentence just as you stated, that there may -- there are or may be -- there could be acceptable forms of albumen and they would be, but we don't know whether that is -- we don't have the clarification. So it's just acknowledging that -- that it could be, you know,
organic. Yeah, in one case, would it be okay? But in this case, you feel we may need a petition.

MR. : Are you adding a motion or are you --

MS. KOENIG: It's just a discussion. I mean, I could motion. It sounds like that's the thing that George is --

CHAIRPERSON RIDDLE: You could offer to amend the motion with a sentence saying organic albumen would not need to be petitioned. Organic albumen would be allowed by definition.

MR. SIEMON: That satisfies all the other conditions.

MR. O'RELL: That would -- as a friendly amendment?

MS. CAUGHLAN: Yeah.

MR. O'RELL: That's the intent. So we wouldn't have a problem with that. A seconder?

MR. KARREMAN: I'll second.

MS. CAROE: No problem.

CHAIRPERSON RIDDLE: Okay. So Rose made that motion and Andrea seconded.

MS. CAROE: No --

MR. O'RELL: No.

MS. CAROE: -- I accepted.

CHAIRPERSON RIDDLE: Oh, then you will be --
yeah, yeah, it didn't need to be seconded from her. She offered it as a friendly amendment.

MR. O'Rell: A friendly amendment.

Ms. Caroe: And I --

MR. O'Rell: It's accepted.

Ms. Caroe: And I accepted.

Chairperson Riddle: Right.

MR. O'Rell: And the seconder --

Chairperson Riddle: Right, yeah.

MR. O'Rell: -- accepted it.

Chairperson Riddle: Thank you.

MR. O'Rell: So, Rose, once again, if there's a source of organic albumen --

Ms. Koenig: I mean, that's not the wording. I just wasn't clear. If you could just identify that the committee has a term that --

MR. O'Rell: Right.

Ms. Koenig: -- you know, what is acceptable as organic.

MR. O'Rell: We could just organic albumen --

Ms. Caroe: Should be allowed, but it's not --

Chairperson Riddle: Would be allowed by definition.

MR. O'Rell: Would be allowed by definition.

Chairperson Riddle: Uh-huh. You don't need
to speculate --

MR. O'RELL: No, no, let's not go further.

CHAIRPERSON RIDDLE: -- on the -- it's just -- it would be allowed.

MR. O'RELL: It would be allowed. Yes, we would accept that. Okay. Julie.

MS. WEISMAN: I hate to mucky up the waters here.

CHAIRPERSON RIDDLE: It's your turn.

MR. SIEMON: Welcome aboard.

MS. WEISMAN: There's an issue proceeding this as to whether it is ag or nonag? Did I hear that correctly? That was part of the question in --

MR. O'RELL: Well --

MS. CAUGHLAN: It's part of our procedure.

MS. WEISMAN: -- and the same thing was discussed yesterday in terms of yeast. How can we say that it's organic? We haven't yet determined whether it is agricultural or nonagricultural.

MS. CAROE: That's a issue.

MS. WEISMAN: Okay, all right.

MR. O'RELL: That's --

MS. WEISMAN: A working question.

MR. O'RELL: That's a work in progress, but a good point.
CHAIRPERSON RIDDLE: And clearly, this is a derivative of an agricultural --

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: -- product.

MR. O'RELL: Nobody --

CHAIRPERSON RIDDLE: It comes from eggs.

MR. O'RELL: There's no question that it's agricultural roots. The only concern was, we don't have information in front of us as for the manufacturing process to -- and in what form the albumen is, is a particular -- there are several albumen proteins. Are these specific proteins? Lysozyne, which we've also voted on, is a component of albumen proteins, and there's about four or five, Michael, I believe, albumen proteins that compromise albumen. And so we just don't know.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Yeah, we'll talk about compromising proteins.

MR. O'RELL: So --

CHAIRPERSON RIDDLE: Okay. So it's been -- it's been amended, friendly amended, has been accepted. Is there any further discussion?

***

[No response]
CHAIRPERSON RIDDLE: Does anyone need me to read back over the friendly amendment?

[No response]

CHAIRPERSON RIDDLE: Everybody understands that. Okay, then we will move on to the vote, and we start with Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Yes. Hugh?

MR. KARREMAN: Yeah.

CHAIRPERSON RIDDLE: Yes?

MR. KARREMAN: Yeah.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Yes. Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Yes. Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Yes. Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Yes. Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Yes. Bea?
MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so we have another unanimous vote, 14, 0, 0, 0. All right. Kevin?

MR. O'RELL: The second action item from the Handling Committee is regarding a tea calculation Q and A. Again, I've asked Julie if she would present this proposal, or motion -- recommendation.

MR. MATHEWS: Hey, Jim, since we're the ones that got to enforce this, I'd like to ask a question. The saying that it has to be organic works for organic wine. It doesn't work for "made with," because the agricultural product does not have to be organic if it's used in a "made with" product.

CHAIRPERSON RIDDLE: Andrea, would you like to...
MS. CAROE: The motion did not say that it has to be organic, all it said is, if it is organic, it is allowed. It didn't say that it has to be organic.

MR. MATHEWS: But what about "made with" wine that could be making it with a non-organic version?

MS. CAROE: Well, in that situation is where we want more information on the technique for manufacturing that product. It possibly could be allowed as well -- probably is allowed as well. But until we have more information, we cannot make that statement. The only statement we can make definitively is, if it is organic for sure, it's allowed by definition.

MR. MATHEWS: Okay. But my concern is that we have certifying agents worldwide who are certifying wines right now as either organic or "made with," that my guess is, if they're a white wine, they're using albumen. How are we supposed to be enforcing this?

CHAIRPERSON RIDDLE: Well, my answer would be the same as the committee, that it's a processing aid that would need to be petitioned.

MR. MATHEWS: Okay. But you realize that you are now asking me to issue a directive to all certifying agents telling them that everyone has to stop using
albumen until such time as this Board makes a decision
on this product? All white wines will come off the
market if they're using albumen, and they are.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Well, I mean, a certifying agent
can do this investigation and determine that it's
agricultural and that there is no prohibited materials
involved, and then it's an allowed --

MR. MATHEWS: Now you're delegating --

MS. CAROE: -- non-organic ingredient. Well,
hold on one second. This is a Q and A response, and the
Q and A response is, if I were a certifying agent in
that situation, I could get the information. Asking
this Board without the information, we cannot come to a
determination.

MR. MATHEWS: But you're now delegating your
responsibility for the determinations on materials to a
certifying agent with that answer.

MS. CAROE: That's not correct. I don't agree
with that. We're not saying that this material
necessarily has to be listed. We are saying that the
petition should be submitted for us to make an
evaluation on whether that has to be listed or not. If
it indeed does not have to be listed, a certifying agent
has the authority to allow their certified entities to
use that material. The certified entity, if they receive that information and determine that it was a synthetic or a nonagricultural material, would deny it until it was listed.

MS. DIETZ: Do you need to clarify that on your statement for Richard's concern?

CHAIRPERSON RIDDLE: Yeah, I don't think so. I mean, it would've been nice to have had more background from the Program for the committee to consider in advance.

MR. O'RELL: Well, and all of this -- the discussion of the Handling Committee getting to this recommendation, the NOP was involved in that discussion and on the call. Again, we weren't asking for information, but saying we don't have all the information you're asking us to answer a question that we don't have the information to respond properly.

MR. MATHEWS: But this gets me down to the point -- this is the same issue that we work with in the office all the time, and that's why -- and we've been criticized for answering questions. And so we have been pushing the questions to the Board, and I don't know how we answer this person's question, based on what you just voted on, because you voted on saying that it has to be organic, but there's too many if buts.
MR. O'RELL: No, no --

MS. CAROE: No, that's not we said.

MR. O'RELL: -- that's not what the motion --

it indicated. The motion had indicated that the albumen

needs to be petitioned. If there's an organic form of

albumen, it's acceptable.

MR. MATHEWS: Okay. But that means that all

non-organic forms are unacceptable until you guys review

the materials.

MS. CAROE: No, that's not true.

CHAIRPERSON RIDDLE: And after the summary

judgment, that may be the case. But right now --

MR. MATHEWS: Not if it's agricultural. If

it's agricultural and it's used in a "made with"

product, it doesn't have to be on the list. If it's

agricultural and is used in an organic product, it has

to be on 606. If it's nonagricultural and is synthetic,

then you're right, the Harvey case is going to have an

influence.

MR. O'RELL: But -- okay, go ahead.

MS. CAROE: No, go ahead.

MR. O'RELL: How can we determine if it's an

agricultural product when we don't have any information

about the manufacture or the process of the material in

question? Kim, would you like to --
MS. DIETZ: This has come up in the past, Richard, and when anybody asks this Board to determine whether something is agricultural or nonagricultural, synthetic or nonsynthetic, we at least have more information, such as a petition, to help the committee decide. And in this case, because -- again, we'll just reiterate. Because we didn't have the information, we had to give you the answer that we did. If they want this Board to answer that question, and not their certifying agent, then you got the answer that you got because we don't have the information in front of us. So -- and Andrea said, if it -- the certifiers do have the ability to determine if something's agricultural --

MR. MATHEWS: Yes.

MS. DIETZ: -- and non-organic.

MR. MATHEWS: But they would have to do the same research that this Board would have to do --

MS. DIETZ: Absolutely.

MR. MATHEWS: -- to answer the same question. And oftentimes certifying agents will just tell their clients to task us.

MS. DIETZ: Um-hum. So in this case --

MR. MATHEWS: And this -- and we've been asked.
MS. DIETZ: So they need to provide this Board more information if they want the right answer.

CHAIRPERSON RIDDLE: And Rose?

MS. KOENIG: I mean, what I -- I mean, I think what Richard is asking is that clearly, in our motion, we made a statement, but that doesn't provide enough detail as to the guidance. So I suggest that the Handling Committee -- I mean, that motion has been accepted, but if we could provide maybe a fuller statement of clarification, just so that it's -- so that our position is understood, maybe in a document which is not in the -- in the recommendation.

MR. O'RELL: Well, I think we could certainly reconsider, but the issue is that we had a motion, we voted, it's passed the Board. We're saying we need -- we don't have the information here today for us to provide guidance, speculation, or anything on material that we don't know anything about that specifically wasn't addressed in a petition, I think is not wise.

MS. KOENIG: No. And I'm not suggesting that. But Andrea gave some suggestions as far as the scenarios or the implications of that, and I think that that might just be a useful thing to write down to really make it clear, because I'm not sure if Richard had clarity. I don't know. I mean -- I mean, you're asking us
something -- I mean, I think that we should give you -- if you don't think our motion was clear to provide you with the information, did you feel what Andrea said was clear? I mean, do you want us to write that down? I'm trying to make it --

MR. O'RELL: Richard, could I ask --

MR. MATHEWS: We can do this another time. I just -- at this point I don't know how to advise certifying agents and winemakers, okay?

MR. O'RELL: Bea and then Andrea. Oh, Mark.

MS. JAMES: I guess I just have a -- I have a question. Are you -- are we assuming, are we actually -- is it read in between the lines that by saying that organic albumen is acceptable, that that means that non-organic is not acceptable? I think that there's an assumption there, and that that's what I'm hearing from you, is that you think that it's going to be interpreted that non-organic is unacceptable and I don't think that's what we're saying here.

MR. MATHEWS: Well, that's the way I was interpreting it.

MS. JAMES: I think that we're saying is that there needs to be kind of this grace period before that decision is made, because we need more information before we can make that decision.
MR. O'RELL: I'd like to call on Mark, who was also on the Handling Committee during the time we had this discussion and voted on this item, and then Andrea has a point of clarification, and then let's --

CHAIRPERSON RIDDLE: And Julie, also.

MR. O'RELL: And then Julie.

MS. WEISMAN: Maybe, depending on what --

CHAIRPERSON RIDDLE: Maybe.

MR. O'RELL: Okay.

MR. KING: I'll be brief. Mark King, for the record. Rick, I have a question. To me this is about process as much as anything, and when I looked at some of the Q and A's, not just this one, the lack of information makes it difficult for the Board to make, you know, a reasonable determination. And this stems, I think, from our ongoing collaborative process. So I thank you for, you know, involving the Board, and I think that's a good thing. But in terms of what emaciates [ph] the question to you, is there some way that we can get additional information as a Board so that -- because these answers are very black and white, but as you've suggested, they don't cover the material in a thorough fashion, and their -- or your hands are tied and you can't necessarily enforce.

MR. MATHEWS: You had the exact same
information we did. It was just a question and that's all we had.

    MR. KING: I guess what I'm --
    MR. MATHEWS: So we gave you a hundred percent of what we had.
    MR. KING: I understand. But I guess what I'm suggesting is, is there way to seek additional information before it comes to the Board?
    MR. MATHEWS: Well, yeah, we could do the research on the Internet for you. I mean, that's -- I mean, that's --
    MR. O'RELL: The person asking the question should -- we should be able to go back to the person asking the question and get specific information to be able to respond to this question.
    MR. MATHEWS: Yeah.
    MR. O'RELL: Andrea and then Julie.
    MS. CAROE: To just put this in perspective, I mean, we're all looking at albumen. Albumen comes from eggs. We know it's agricultural. They think that -- I mean, redo the question and say an inquirer asked, can I use canola oil? Well, we know that canola oil can be organic, and a certifier will verify that the techniques to create that canola oil were appropriate. But we also know that canola oil can have the same extraction and it
can be inappropriate, right? Not allowed for organic use. In this case, we know albumen comes from an agricultural root. We don't know how it gets there. We don't know anything about the technique. We do know that if they went through the certification process, that that process is consistent with organic, and by definition it would be allowed. We cannot make a blanket statement that says that this product, because it came from agricultural roots, is appropriate. There may be techniques that are inappropriate as well as ones that would take it to an organic end. The statement we made is that if they did go through a certifier and became certified, for sure, by definition it would be accepted. That said, canola oil that's non-organic and used, a certifier can make the determination that it was an appropriate non-organic ingredient, agricultural, based on receiving more information. Again, we don't have that information. Just like a certifier would ask for more information on the topic, so are we before we say yes or no. Does that make sense?

MR. MATHEWS: Okay. Then what you really -- let me see if I understand this. What you would really like me to do is to go back to the questioner and say, you need to talk to your certifying agent and make a determination of whether this is a synthetic or a
natural. And if it's synthetic, it has to be on the National List. If it's natural, you can continue to use it.

CHAIRPERSON RIDDLE: No.

MR. O'RELL: No, because --

MR. MATHEWS: Okay. Well, I'm just trying to get clarified as to how I answer this question and how I enforce it and what I tell --

MR. O'RELL: Kim.

MR. MATHEWS: -- certifying agents.

MR. O'RELL: Okay.

MS. DIETZ: I can't make the motion, but I can give advice, I guess. What it sounds to me like is that the committee needs to take this back and ask for more information from the person who asked the question so that the answer isn't detrimental to the industry. So I suggest you just table this and tack it back and then have the committee request more information. And if this is the process that this committee has to go through after every Q and A, I would seriously look at what you're doing. So but in this case, since it is going to affect a lot of potential products, you should probably table it and seek more -- seek more information, or tell the person who asked the Q and A to go to their certifying agent and they, too, can still
CHAIRPERSON RIDDLE: Yeah. And the Board has voted, so actually tabling is not germane, but we can continue the discussion with NOP on the implications of this. But my understanding right now is that if the albumen was organic, certified by an accredited certifier, it can be used in any product category. If it's agricultural and the certifier determines that it clearly could be used in the "made with" category in that 30 percent, it's status otherwise would need further petition and further review. But those two things I think are solid answers that could be given, and otherwise, more information is needed.

MR. MATHEWS: Yeah, okay. We can give that answer, but that's almost like a non-answer. I mean, from the standpoint -- and I'm perfectly willing to do that. We would say, you know, if it is organic, you're good to go. If it's agricultural, you're good to go. If it's synthetic, it has to be on the National List.

MS. WEISMAN: If it's agricultural, you're good to go if you're certifier has made you do your due diligence and has reviewed that it's not -- extracted, it doesn't contain GMOs, et cetera.

CHAIRPERSON RIDDLE: Yeah. All right. But it meets the other criteria, yeah.
MR. MATHEWS: Okay.

CHAIRPERSON RIDDLE: Uh-huh. Thanks, Kevin.

MR. O'RELL: Next. And we're probably going to have more of these, because it's unfortunately in this process and it's something that I think that we need to review as a Board. I'll just make a comment that the process that we're going through with this collaboration effort is leading to a situation like this, where we're coming here and taking time up, valuable time during a board, on discussion of something that, to me, I think could be answered relatively -- well, more quickly and more easily than what we've gone through here in the last 30 minutes. So it's something to consider going forward.

CHAIRPERSON RIDDLE: Rose, I guess.

MS. KOENIG: Well, I just want to -- I think that the process may be difficult for a committee. It's something that we're not used to and it may be the format or the structure upon which we need more information to answer these things. But a number of our issues with NOP in the past has been interpretation of materials and such, that we were not satisfied with their interpretation. So if that's -- if we feel strongly about that, and I think we do, materials is our area, and not just putting things on a list, but making
sure that there is a consistency with what we believe
and what they are stating to the certifiers, I think it
is Board work.

MR. O'RELL: Just one comment on that. Rose, I agree, but I think that maybe there is a better way to
approach this in terms of the NOP looking at the
specific issues, and with the guidance of the OTC
answering these responses and running by the Board for
-- for our input prior to going public with the answer.
And I think, at least at that point, we don't run into
these type of issues here today, where we're getting
into these technicalities, where if we came from an
answer that the NOP said, this is how I would answer
this question, and then it would come to the Board for
confirmation and input.

CHAIRPERSON RIDDLE: Yeah. And I would just
like to comment. We don't have the collaboration
framework back yet, and I think once we do, it does
separate out different levels of concerns and issues.
And I think that there should be a mechanism where NOP
can present a question like this to the relevant
committee, the relevant committee presents a proposed
answer to the Executive, we meet monthly, and then if
the Executive can just approve it, we provide our input
in a timely manner. If the Executive says, no, this
needs full-Board consideration, then we'd hold it over, depending on the significance of the issue. So I agree, there needs to be streamline, but it all relates to that framework for collaborative, right?

MR. MATHEWS: Just one quick comment on that, Jim. The Board can take no action in the absence of a full-Board meeting before the public.

CHAIRPERSON RIDDLE: The Executive -- do you mean --

MR. MATHEWS: No one. This Board can have no action absent a public meeting, no final action from the Board absent a public meeting.

CHAIRPERSON RIDDLE: Well, okay. Well, we need to know what the limits of action -- when inaction becomes action, because the Executive does act on certain things and those are, you know, required in the minutes. So we just need to --

MR. MATHEWS: But the Executive Committee meetings are not public meetings. All formal actions of this Board have to be at a public meeting.

CHAIRPERSON RIDDLE: Well, when we get the framework, I think we'll see what can be addressed between meetings that aren't really actions versus actions that have to come up at a Board meeting, because we need to be able to provide ongoing input as well that

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
aren't actions. Okay, Kevin, are we ready to resume?

MR. O'RELL: Yes, I'm ready to resume. We're going to move forward and Julie is going to present the next Q and A, which was regarding tea calculation.

MS. WEISMAN: Yeah. A Q and A came in from a manufacturer of an organic tea beverage who wanted clarification on how to calculate the percentage of organic ingredients for her tea product, which is made in the following way. The tea leaves are brewed in water and then the leaves are removed. And then added to the brew are organic sugar, a natural flavor, citric acid, and that is the -- those are the ingredients in the final product. This is -- some background is that, in the situation where there's a product that has a standard of identity, a multi-ingredient product, the NOP will not override that standard of identity that's been set out by some other federal agency. But that is not the case in this product. It does not currently have a standard of identity, therefore the committee referred to Section 205.302. Is it okay -- excuse me. Is it okay to -- just to the decision now, after giving the background?

MR. O'RELL: Certainly.

MS. WEISMAN: Okay. We support -- well, I'll read the rule. The rule states that the percentage of
all organically produced ingredients in an agricultural product sold, labeled, or presented as 100 percent organic, or "made with" organic, or that include organic ingredients, must be calculated by dividing the total net weight, excluding water and salt, of the combined organic ingredients at formulation by the total weight, excluding water and salt, of the finished product. So therefore we feel that the -- that this manufacturer needs to go to the dry weight of the tea leaves at formulation in calculating the product. Now there was a minority opinion, and I don't -- I'm not sure at this point who wrote the minority opinion, so I actually -- if someone could let me know.

UNIDENTIFIED SPEAKER: Mark's raising his hand.

MR. O'ReLL: Mark?

MR. KING: Yeah, I wrote it.

MS. WEISMAN: It was you.

MR. O'RELL: You wrote it.

MS. : Okay.

MR. KING: It's not my opinion, but I wrote it.

MS. WEISMAN: Oh, okay, okay. All right. All right. So --

CHAIRPERSON RIDDLE: It's such a minority, no
one knows.

MS. WEISMAN: No. Okay, so I would like, then, to point out that there was a minority opinion, that some members felt that an operation could implement testing procedures, such that a percent of tea batches produced could be tested regarding the weight difference between the dry leaves pre-infusion versus the tea leaves dried to a standard moisture post-infusion. These sample tests as percent of the total batches of the tea produced could document and verify the accuracy of the calculation of the percent of organic ingredients per formulation. And a formula was proposed for this, that the manufacturer use the net weight of the flavor infused from the tea leaves in the calculation, which would be determined by establishing the standardized weight of the tea leaves before infusion, which could be referred to as tea one; the tea leaves could be dried on low heat to a standardized moisture content prior to weighing to remove atmospheric moisture; after infusion, the tea leaves are dried to the same moisture content as prior to infusion and then weighed. That would --

UNIDENTIFIED SPEAKER: It would be zero.

MS. WEISMAN: That would be tea two. Tea one minus tea two equals tea three, the net weight of the tea used as the ingredient in the final product. I
include this because it was a minority opinion and I
felt obligated --

MR. O'RELL: Yes.

MS. WEISMAN: -- to report that.

MR. O'RELL: Apparently, an anonymous minority
opinion. Any discussion?

***

[No response]

***

MR. O'RELL: No -- we -- did you make -- did
you --

MS. CAUGHLAN: Is there a motion?

MR. O'RELL: -- put in a motion? We need to
enter a motion in terms of the recommendation, which I
think --

MS. WEISMAN: Oh.

MR. O'RELL: -- would be --

MS. WEISMAN: Should I include the committee
-- what the committee's vote --

MS. CAUGHLAN: No.

MS. WEISMAN: -- was into the record? Okay.

So I make a motion to accept the recommendation of the
committee.

MS. CAROE: I'll second.

CHAIRPERSON RIDDLE: Okay, Julie moves and
Andrea seconds. So discussion? Andrea?

MS. CAROE: In looking at 205.302(a)(1), there's a conflict in the rule, and the conflict is they use both the words ingredient and formulation. Ingredient, by definition in the regulation, is any substance used in the preparation of an agricultural product that is still present in the final product as consumed. But formulation is not as consumed. So that's -- you know, I think -- I can understand the minority opinion on this one. I don't agree that that is to the intent of what we're trying to do, but the rule has conflict, and I would suggest that at some point we may want to resolve that conflict with some language change to the rule.

CHAIRPERSON RIDDLE: Yeah. And this actually was suggested and voted on by the Board as a technical correction to the rule back in -- after the rule came out, because what the rule says is you establish this percent organic ingredients by dividing the total of ingredients, minus water and salt, by the total weight or volume of the finished product. And as you know, there's processing loss, there's conversion factors. You would end up with products which contain more than 100 percent organic ingredients following that calculation. And one thing Julie didn't mention is the
audit. A compliance checklist has actually corrected this in the instructions they give to auditors when they look at how certifiers are calculating it, and that's inserted here. And there they say, for solids you divide the total net weight of the combined organic ingredients at formulation by the total weight of all ingredients, not the total weight of the finished product. And then they follow that same logic for liquids. You divide the ingredients by the -- the organic ingredients by the total ingredients, and then the same for combined products. So that -- that really is the way to come up with a correct calculation of percent organic ingredients, is comparing ingredients to ingredients, not comparing them to finished products. So we do have a contradiction with what the rule says versus what the auditors are looking at, and many certifiers are following the calculations as instructed by the auditors.

MR. O'RELL: Andrea?

MS. CAROE: Again, Jim, my concern is the definition of ingredients, which says that is the product as it exists in the final product consumed. So the ingredients, by definition, is what's the end product, not what's used in the formulation. So I believe that that technical -- or that correction needs...
to be made to the rule. Ingredients needs to be
designated as what's used in the formulation, not what's
existing in the final product.

MR. O'RELL: Mike.

MR. LACY: I don't understand this question.

What would keep somebody from -- you know, let's say you
could brew tea -- brew an ounce of tea for 10 minutes
and get a product, or brew 10 ounces of tea for 10
seconds and get the same product. What would keep
people from -- from manipulating their formulation in
order to meet a requirement? Does that make sense?

MR. O'RELL: Only the fact that they have to
deliver a product that the consumer is going to -- going
to want. The mike's not on? Only based -- I think --

MR. SIEMON: It was on before.

MR. O'RELL: Yeah.

CHAIRPERSON RIDDLE: You just weren't close

enough.

MR. O'RELL: Only based on what the consumer
reception could be for that product. But if you want to
manipulate the regulations, I guess we can all work
within the regulations when you're developing or
formulating products.

CHAIRPERSON RIDDLE: So long as it meets 95

percent organic content to be labeled organic,
essentially. Bea?

MS. JAMES: How is this formula determining -- determining that? Because you're diluting it in -- the final product is diluted in water, correct? Right?

CHAIRPERSON RIDDLE: That's outside the calculation.

MS. JAMES: Okay. So the question seems like they're asking how to calculate, but it's not asking how to make sure that there's the correct ratio, right, that there is a standard ratio, because you could have more or you could have less if a manufacturer wanted to, according to this ratio that you have in here in this formula. If a manufacturer wanted to make something that was less diluted, there's nothing in this ratio or in this calculation formula that's telling them that they can't do that, right?

CHAIRPERSON RIDDLE: Right.

MR. O'RELL: But --

MS. JAMES: So maybe somebody could explain that, because I'm confused by the question, too, a little bit. I'm confused -- is the question asking, does there need to be a standard formulation so that a final tea product actually has a certain amount of organic dry tea, or is it just asking how to calculate that?
MR. O'RELL: It's just asking how to calculate that by the rule that we have today. Arthur?

MR. NEAL: This question came from Japanese, and the issue is that if they're using a natural ingredient and they have, let's say, organic sugar, a natural flavor, and they've got tea -- tea leaves, if you looked at the way that the regulations are written and it says that, excluding water and salt, if you actually take what's in the final product, you don't have tea leaves in the final product, you've got the tea flavor. And what happens, by not taking the weight of the tea leaves, their product is at jeopardy of not being able to be labeled as organic, because the tea leaves weigh a lot more than flavor -- tea flavor. So they want to know, how do we do it, you know, consistent with what the regulations say?

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yeah. I'd like to hear -- I think -- is there -- unless they understand that you certify tea companies, I'd like to hear someone from the field that's doing this, what you think of this. I don't know if there's any other certifiers, but I'd like to hear some input.

MS. ZUCK: Leslie Zuck, Pennsylvania Certified Organic.
CHAIRPERSON RIDDLE: You need to speak closer.

MS. ZUCK: Really?

CHAIRPERSON RIDDLE: Yeah.

MS. ZUCK: We weigh the -- use the weight of the tea leaves, and the reason we felt -- similar to what Arthur's saying, if you did the calculation of the difference -- if you'd keep -- if you dry out all the moisture, you're going to get zero, pretty much. You know, if you standardized it each time and you try to find the difference to find out what the tea flavor was, you're going to get zero, and that product, even if they used organic tea to brew it, would not be able to be labeled as organic tea, because -- I mean, it's going to be really close to zero. I think it would be negligible once you standardized it down. I mean, that's not the reason we do it. We thought it made sense to weigh the -- do the weight of the tea leaves because it was an ingredient.

MR. SIEMON: So from your experience, is this recommendation going to be workable?

MS. ZUCK: I believe so. I think the other way around would be extremely burdensome and my clients would say, are you out of your mind?

MR. O'RELL: Yes, absolutely.

CHAIRPERSON RIDDLE: Well, you'd only need to
do it once to establish how much --

MR. O'RELL: No.

MS. WEISMAN: No, no, no.

CHAIRPERSON RIDDLE: Well --

MS. ZUCK: I don't -- no. Well, I don't know, I don't know.

MS. CAUGHLAN: No.

UNIDENTIFIED SPEAKER: Guess who's the minority?

MS. ZUCK: You're an inspector. I mean, you want to try to figure all that out? I don't know.

CHAIRPERSON RIDDLE: No, the burden is --

MS. ZUCK: Right, I know, I know. But I think it would be a problem of being able to get any tea in it to label it, because the natural flavoring wouldn't have to be organic. So there wouldn't be anything organic except the sugar, so you have to label it organic sugar water, you know?

CHAIRPERSON RIDDLE: We have that on the market.

MR. O'RELL: Andrea and then Nancy.

MS. CAROE: Also something to understand is, if you take that brewed tea and dry it, you're not just losing water, you're losing that volatile flavor component, so you're not even getting a real number.
The flavor that's you've infused is leaving with the water. It's got a boiling point less than 212, so they go away. So you're not even getting an accurate number, you're just getting the residues and they're not even the desirable component of the flavor.

MR. O'RELL: Arthur?

MR. NEAL: The other issue that's in the back of our minds, too -- because what we're seeking, we're seeking to try to be as consistent as possible in these calculations, especially with the type of products that are produced without a standard of identity. Remember when we had the soy issue and we didn't use soybeans as the original ingredient. We said the -- what is it, the concentrate that they --

UNIDENTIFIED SPEAKER 1: Isolate.

MR. NEAL: Right.

UNIDENTIFIED SPEAKER 2: The soy protein isolate.

MR. NEAL: The isolate, that's what we allowed for the use. And so I guess we have to be kind of consistent in how we instruct people what you start with. So that's another reason why the question is on the table.

MR. O'RELL: Julie.

MS. WEISMAN: But I think that this is
consistent with your example, because I would say that
the dry tea leaves are equivalent with the soy protein
isolate, whereas the green tea leaves, you know, before
they're dried would be more -- would be more comparable
to soybeans. So I think that -- I think that it is
consistent.

CHAIRPERSON RIDDLE: I'm understanding now
that I am the minority opinion on this.

UNIDENTIFIED SPEAKER: But that's your
opinion.

MR. O'RELL: I wondered when that was going to
register.

CHAIRPERSON RIDDLE: But I do disagree,
because with the -- when you're making soy milk, through
most processes you're removing the fiber, and that fiber
is not counted in the calculation, it's not the whole
bean, it's the amount of the bean actually becomes the
ingredient. And scientifically, to be consistent, in
the tea you would not count the dry tea and all its
fiber, you'd only count the part of the tea that
actually goes into the product as the ingredient. I
don't care about this one way or another, but to be
consistent and to really come up with the honest
calculation of what percent of that product is indeed
organic, it should be just the amount of the flavor from
those dried tea leaves that entered the product. And there is a way to determine it with low heat, where it wouldn't volatilize. It is scientifically possible.

MR. O'RELL: Kim.

MS. DIETZ: I think, Jim, then what you're getting into is inconsistencies and how people manufacture and the amount of time they heat it and all that kind of thing. It's kind of a crazy situation, unless you have a standard or unless you can actually measure and unless there's consistency amongst the whole industry, you pretty much have to go with the -- well, you don't have to go with it, but the recommendation before the Board is probably the best that we can do with the information we have and with the -- how to calculate percent organic based on how the rule is read.

CHAIRPERSON RIDDLE: Well, yeah. And I just realize that, in my comments on this draft and maybe -- and in the committee's draft, it didn't go back to that policy statement which has various categories for calculation, and you know, maybe we should look at that for consistency as well, because this takes it to another step, but it should be consistent with that, which is on the website somewhere.

MR. MATHEWS: Your favorite collaborative effort.
CHAIRPERSON RIDDLE: Yeah, right. Yeah, that was a good one, but we weren't addressing tea at that time, so this is another mindbender along that line.

MR. O'RELL: Jim, are you suggesting additional information in the rationale, or do you disagree with the motion of the answer to the question of the way tea is calculated, which we're saying yes to?

CHAIRPERSON RIDDLE: Well, actually both. I mean, I disagree with the answer, and I do think that that other policy statement should've been, you know, taken into consideration or excerpted or something, referenced here. You know, I go along with the will of the Board, though. I mean, it's fun to actually be debating and not just chairing.

MR. O'RELL: Andrea, and then I want to pose a question to the NOP.

MS. CAROE: I think we need to look at this in the big picture and not into the gnat's ass leather up the goolie. Because -- I mean, ultimately, no tea manufacturer is going to buy a tremendous amount of tea leaves and not infuse them to a quality product. And a quality product doesn't mean that there's going to be fiber in that product. I don't believe that's the intent. The intent of the rule is to ensure that there -- that the final product was produced using organic

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
ingredients, and I believe that those organic ingredients are there. Because of this processing technique, the weight is removed, but the tea leaves are used, and I think that it would be -- I think it would be doing a disservice to this industry to eliminate -- because the citric acid alone is a non-organic ingredient. It's enough to take these guys out of the label claim.

MR. O'RELL: And I think that this is consistent with the way the calculations are being done today with other companies for infusing tea. And I would ask the NOP before we get into another bind of preventing -- presenting emotion and voting on it and then have an objection from NOP as to how they can interpret it, if we follow our guidelines here of answering your question of a yes and a no, in accordance with what the motion will be made, is that sufficient for you, Richard, in terms of your needs?

MR. MATHEWS: For tea only, yes.

MR. O'RELL: That's what we're being asked, is for tea only. Okay, can we -- Julie, I guess we -- did you make a motion or did you just --

MS. WEISMAN: I think I did. I'm not ignoring the process, but I think that's what I did.

CHAIRPERSON RIDDLE: Yeah.
MR. O'RELL: Okay. Well, I just want to clarify that for --

CHAIRPERSON RIDDLE: Andrea seconded it.

MR. O'RELL: Andrea seconded it. The motion is in answer to the Q and A. To calculate the percentage of organic ingredients, does the manufacturer use the dry weight of the tea leaves as the amount of tea in the final product, and the recommendation is yes. There's a second part to that. Or does the manufacturer use the flavor infused from the tea leaves or some other measurement as the amount of tea in the final product. The answer is no, and we've provided a rationale. That's the motion that is up for voting. So, Jim, do you want to do the roll --

CHAIRPERSON RIDDLE: Yeah, yeah, we'll proceed, then. So let's see, we started with Rigo, and so it's Hugh. Hugh?

MR. KARREMAN: Yeah.

CHAIRPERSON RIDDLE: That was a yes. Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Dave?
MR. CARTER: Yes.
CHAIRPERSON RIDDLE: Bea?
MS. JAMES: Yes.
CHAIRPERSON RIDDLE: George?
MR. SIEMON: Yes.
CHAIRPERSON RIDDLE: Rose?
MS. KOENIG: I'm going to abstain.
CHAIRPERSON RIDDLE: Abstained.
MS. CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Goldie, yes. Kevin?
MR. O'RELL: Yes.
CHAIRPERSON RIDDLE: Andrea?
MS. CAROE: Yes.
CHAIRPERSON RIDDLE: Rigo?
MR. DELGADO: Abstain.
CHAIRPERSON RIDDLE: And the Chair votes no.
MS. CAROE: The first no vote.
CHAIRPERSON RIDDLE: The first no vote. Thank you. My privilege. Okay, so that passes with --
MS. WEISMAN: There's a second part -- there was --
CHAIRPERSON RIDDLE: Okay. But --
MS. WEISMAN: -- a second question.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
CHAIRPERSON RIDDLE: -- can I just give the numbers here? That would be 11 yes, 1 no, and 2 abstentions.

MR. CARTER: Not only did the Chair no, he got weird.

CHAIRPERSON RIDDLE: Or maybe I got the math wrong, too.

MS. CAROE: No, you got it.

CHAIRPERSON RIDDLE: Is it 12?

MS. CAROE: It's 11, 1, 2, 0.

CHAIRPERSON RIDDLE: That's only 13. Are we missing --

MS. CAROE: Fourteen. Eleven, one, two.

CHAIRPERSON RIDDLE: Oh, yeah. Okay. I knew I could get the math wrong if I kept trying. All right, Julie.

MS. WEISMAN: Okay, question two under the subject of calculation for tea was, to calculate the percentage of organic ingredients, does the manufacturer include or exclude the amount of water used to formulate the final product? This was kind of a no-brainer, I think. Exclude -- that's according to -- 205.302(a) states very clearly that a handler excludes the added water and salt from the weight and/or food volume of organic ingredients at formulation, and to exclude salt
and water from the total net weight of the finished product when calculating the percentage of organically produced ingredients in the product. So there is consistency in this part. Between formulation and finished product, it's the same.

MR. O'RELL: So there's a motion to -- in response?

MS. CAROE: There's no motion.

MR. O'RELL: Would you make a motion?

MS. WEISMAN: Okay. Then I move that for Board vote on the committee's determination that water be excluded in the -- calculating the percentage of organic ingredients to formulate the final product.

CHAIRPERSON RIDDLE: Is there a second?

MS. CAROE: I'll second.

CHAIRPERSON RIDDLE: Okay, moved by Julie, seconded by Andrea. Kevin?

MR. O'RELL: Discussion?

***

[No response]

***

MR. O'RELL: I think we're ready to vote.

CHAIRPERSON RIDDLE: Yeah, all right. So we start with Julie.

MS. WEISMAN: Yes.
CHAIRPERSON RIDDLE: A definitive yes.

Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'ReLL: Yes.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yeah.
CHAIRPERSON RIDDLE: The Chair votes yes.

We're back to harmony, 14, 0, 0, 0. Okay. Yes, and I did say we'd take a break, so come back at a quarter until 11:00. So just a little over a 15-minute break. A bonus.

***

[Off the Record]

[On the Record]

***

CHAIRPERSON RIDDLE: We'll get started again, and it's still the Handling Committee and it's the bitter orange Q and A. So, Kevin?

MR. O'RELL: Okay.

CHAIRPERSON RIDDLE: I think we -- yeah, it went off there. Okay.

MR. O'RELL: Well, let's see if this is a bitter pill or bitter orange. We'll try again at another Q and A. The bitter orange came as a question to the National Organic Program from a manufacturer of a formulated product that was asked whether his product had to be petitioned for inclusion on the National List in order to be used in organic processing. His product comprised of bitter orange, which is a flower and peel water-extracted solvent-free. That's all we know about the bitter orange material. And citric acid, which is...
listed at 205.605(a), malic acid, 20 -- which is in the
in final rulemaking process. I guess it's on the docket
that's coming -- that's being held up, is that correct?

CHAIRPERSON RIDDLE: Yeah. And the Board
recommended it for 605(a) as well.

MR. O'RELL: (a), yes. Ascorbic acid, which
is 205.605(b), which, at the time of this discussion,
was prior to the lawsuit. So that wasn't considered.
And again, glycerin, under 205.605(b), and water, which
is excluded under 205.302(a). The specific question
that was asked is, considering that the product in
question is formulated with a number of ingredients,
some that are allowed on the National List, others that
are not, but all of them are addressed in the
regulations, the NOP requests the NOSB to provide input
on which of the following substances must be petitioned
under NOP regulations. The recommendation from the
Handling Committee was that the bitter orange would need
to be petitioned. Again, there was a concern that we
didn't have enough information. We understand that it
comes from an agricultural source. We did have some
information in terms of it being solvent-free, but felt
-- at that time, the committee felt that they needed
additional information to determine exactly what this --
how this material was derived, is there an organic

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
source of material, and the vote was, from the
committee, five yes, one absent. So in the form of a
motion, in response to the question that was asked from
the NOP regarding the bitter orange, the recommendation
from the Handling Committee is that this ingredient
needs to be petitioned.

CHAIRPERSON RIDDLE: Okay. So we have a
motion. Is there a second?

MS. CAROE: I'll second.

CHAIRPERSON RIDDLE: Kevin moves, Andrea
seconds. Discussion?

MR. O'ReLL: Discussion?

MR. SIEMON: Yeah. And of course, this sounds
a lot like the --

MR. O'RELL: Yes.

MR. SIEMON: -- albumen. How close does this
all relate to ag or nonag -- I mean, agriculture and
nonagriculture? Is that part of the heart of this
question?

MR. O'RELL: Well, it certainly is part of the
question in terms of the process that the material goes
through. We know that the source is agricultural, we
just wanted to make sure of the other inputs into -- the
extraction processes are compliant with the regulations.

Julie?
MS. WEISMAN: Yeah. Mike, this also benefits from a clarification added, just like we did with the albumen, that if the bitter orange is a certified organic bitter orange, then we already know the answer to those questions. That would be all right.

MR. O'RELL: I guess I would ask the NOP, before we go through and vote on a motion again, as to how -- are on track to answer your question to --

MR. NEAL: The answer is yes, and Julie raises an interesting point, that if that bitter orange would be certified as organic, it would clearly then not have to be petitioned. However -- yeah, it would not have to be petitioned. But if it's not organic, then it would have to be identified on a list.

MR. O'RELL: On the list. Bea.

MS. JAMES: Do we have enough information to know if bitter orange is --

MR. O'RELL: Your microphone.

MS. JAMES: Do we have enough information to know whether or not if bitter orange is a potential synthetic or not?

MR. O'RELL: It's --

MS. JAMES: Do we understand the extraction process and do we -- I mean, have we --

MS. WEISMAN: That's why we're asking for a

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
petition. A petition doesn't necessarily mean that the
aim is to get it on the list, it's just to have enough
information to even determine whether it needs to be
considered --

MS. JAMES: So --

MS. WEISMAN: -- for the list or not.

MS. JAMES: -- really, this is --

MR. O'RELL: Again, this comes -- this --

MS. JAMES: Like George mentioned, it's like
the albumen.

MR. O'RELL: In our mind in the Handling
Committee, this comes back to the same -- the same thing
as the albumen, we don't have enough information about
this particular ingredient to make the determination.
Is it agricultural? We know it's from an agricultural
source, but we don't know the inputs and the method of
extraction in the process, and that needs to be
determined in order to make a question. So again, we're
just taking it back and saying, we need more information
to determine where it would be at if it needs to be on
the list of allowed synthetic or agricultural product
that's not organically available.

CHAIRPERSON RIDDLE: Arthur.

MR. NEAL: Also, to comment on the extraction
method, based on what was provided to the Program, it's
states that it was water-extracted and solvent-free, about the extraction process.

MR. O'RELL: I guess one of the things -- I guess one of the things that was questioned as well or brought up for discussion is even if this would qualify under a natural flavor. And we just -- Julie?

MS. WEISMAN: It very well may --

MR. O'RELL: Yeah.

MS. WEISMAN: -- looking at these ingredients, in which case it is already on the list.

MR. O'RELL: Yes, exactly. So I mean, that is our concern, that we don't have enough information. If we had the information in terms of -- in terms of the process, the extraction of this product, it could be determined that this is a natural flavor and already allowed on the natural list.

CHAIRPERSON RIDDLE: Okay, any further discussion? Right, Rigo.

MR. DELGADO: Just for clarification purposes, what's the next step? Assuming we approve this motion, are you going to go out and request a TAP or what --

MR. O'RELL: Arthur?

MR. NEAL: I guess it's going to depend, because, one, the whole natural flavor issue came up in the conference call and you may to explore before you
make your final decision, because it could impact on what happens with the recommendation. Once we receive your recommendation, what we're probably going to do is try to get back to the inquirer so that we can advise the inquirer what his next step should be. That's what's going to happen with the recommendation.

MR. O'RELL: Any further discussion?

***

[No response]

***

MR. O'RELL: Hearing none --

CHAIRPERSON RIDDLE: Hearing none, I'll take his mike away. So we'll move to the vote, and we start Gerald.

MR. DAVIS: Abstain.

CHAIRPERSON RIDDLE: Gerald abstains. Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Yes. Nancy?

MS. OSTIGUY: Abstain.

CHAIRPERSON RIDDLE: Nancy abstains. Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Abstain.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.
CHAIRPERSON RIDDLE: Rose?

UNIDENTIFIED SPEAKER: She's absent.

CHAIRPERSON RIDDLE: Absent, okay. Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: I abstain.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so -- so we have nine yes, zero no, four abstentions and one absent. Well, I have Nancy, Bea, Hugh, and Gerald abstaining, and Rose was absent. Okay, so it does pass.

MR. O'RELL: Okay. Now we're going to move on to one that's going to be a lot of fun.

MR. SIEMON: We were really having fun before.

MR. O'RELL: Well, if you thought you were having fun before, George, just wait for this one. This in response to another Q and A that -- this is in response to another Q and A that came from the NOS --
from the NOP to the NOSB, and this one involves a very
specific scenario that was given to us, to the Board, in
terms of a question. That question is, a retail
establishment has been voluntarily certified by a USDA
accredited certifying agent, certifier X, to sell
organic products. The certified retail establishment
contracts with a certified organic handling operation,
certified by Y, to manufacture organic products for
distribution by the retail establishment. The organic
products that are produced by the contracted handling
operation are also packaged and labeled by the handling
operation. However, the labels used to label the
product package -- the packaged products are supplied to
the contracted handling operation by the certified
retail establishment. The certified retail
establishment does not perform any processing function
-- and that's in the question -- that it does not
perform any processing function for this product during
its manufacture. The first question that was asked, and
it might be best to take these individually, is based on
the scenario presented and the requirements contained in
the NOP regulation, which ACA is "required" to be
identified on the label of the packaged product.
Certifier X or certifier Y, please provide your
rationale. Certifier X being the voluntarily certified

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
retail establishment, or certifier Y being the handler that produced the products in the scenario.

And the response for our recommendation, we had indicated certifier Y is required to be on the labeled product. According to Sections 205.303(b)(2) and 205.304(b)(2), the ACA that certified the "handler" that processed and packaged the product must be identified on the ingredient statement. And this example scenario, the certified retail establishment does not perform any processing function for this product during its manufacture. Now, there's nothing in the regulation that would prevent certifier X from also being identified as the certifier of the retail operation. So in response to question number one, based on this scenario, our answer is certifier Y. So we would entertain a motion that -- so it'll be moved that, in response to the NOP question number one, the Handling Committee states certifier Y is required to be listed on the labels.

MR. SIEMON: I move that.

CHAIRPERSON RIDDLE: Well, Kevin moved the motion. Is there a second?

MR. SIEMON: I'll second.

CHAIRPERSON RIDDLE: Okay, George seconds.

All right, discussion? Andrea.
MS. CAROE: I am the minority on this question and I'll disclose that right from the beginning. My concern is that the question is flawed. The question states that this retailer does not participate in any manufacturing, yet it also states that they are providing the labels and contracting the manufacturing and that's -- that is a contradiction. And so I can't see that this question is being answered correctly in stating that the retail establishment that is contracting this product and providing a label under a labeling recognition -- regulation, is not responsible to be the final handler. So I vehemently disagree with the answer to this question.

Also, I would like to, at this time, state that we have received some strong public comment on this and I've also received written comment that will be presented tomorrow during public testimony from the major retailer about this issue. So I would suggest we entertain tabling this.

MR. O'RELL: Was that a motion, too?

CHAIRPERSON RIDDLE: Well, it's not.

MS. CAROE: It's not yet, but I just --

CHAIRPERSON RIDDLE: It's a suggestion to entertain. I like those. But Nancy and then Bea.

MS. OSTIGUY: I guess that I'm winding up with York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Andrea's comment. I'm trying to figure out how the fact that this is a retail establishment is actually important at all, because what they're doing in some ways is what a lot of labels do, you contract with folks to grow whatever you want, you contract with somebody to do the processing, you provide the labels. So you're physically not turning any screws anyplace, or picking up agricultural products, but you're responsible for all the decisions that are made all along. So my reaction is that it should be certifier X, the retail establishment, since they're the one making the decision. I will fully admit, this is not an area I'm an expert in.

CHAIRPERSON RIDDLE: Bea.

MS. JAMES: The question clearly states that the retail establishment does not perform any processing function and that they're contracting that out and they're not actually manufacturing any product on the facility, then, you know, certifier Y would be the only -- would be the only seal that should be on the product, because a retail establishment does not have the authority for certification. They are contracting -- they're contracting that out and they are trusting that the manufacturer that they hired to make their -- to do their product is the one that has the certification and
that is responsible for the seal.

MR. O'RELL: Let me respond. I'd like to respond to Bea and just give some additional background from the Handling Committee, and then I'll recognize, I think, Julie and --

CHAIRPERSON RIDDLE: Well, George was also in line, too.

MR. O'RELL: -- George. Sorry, George.

CHAIRPERSON RIDDLE: Yeah.

MR. O'RELL: You can go next, George. But a lot of this came down to the question, and I agree with Andrea, the question is misleading the way it is worded. It says the retail establishment does not -- is not involved in the process. When we go back to the definition of a handler, any person engaged in the business handling agricultural products, including producers who handle crops or livestock of their own production, except such terms shall not include final retailers of agricultural products that do not process agricultural products.

And then if you go to the processing section and read the definition for processing, which I think we all know, there is the one question mark in there, it's otherwise manufacturing, and that's where the otherwise manufacturing can go back to a retailer who contracts.
for processing the product at a manufacturer. But in
the specific scenario we were given in the question, it
states that this retailer does not process.

Just a point of discussion, then we'll go
around. But I would not have a problem if somebody made
a motion to table this and take it back to the
Certification Committee for retooling, because we've had
some public comment, we've had some public input. I
know we're going to have more tomorrow as well on this
issue, and I think that might be a good direction. But,
George?

MR. SIEMON: Well, of course, this is a very
complex issue and -- but certifier Y is the one who can
certify for the integrity of that product becoming a
finished retail product, correct? They're the one that
is responsible for that.

CHAIRPERSON RIDDLE: They certified the
handler, the contract and handler.

MR. SIEMON: So when it's a finished retail
product, that certificate's the one who covered that
aspect of it?

MR. O'RELL: Sure.

CHAIRPERSON RIDDLE: Um-hum.

MR. SIEMON: And the only other complication
throughout it is often the manufacturer -- the co-packer

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
has a certificate, and the person who sold the labeled
product has a different certificate as well as the
retailer has a different certificate. So organic -- who
sells it to a retailer with a different certificate. So
you could actually have three different certificates
involved if organic -- didn't control the certificate of
the handler. So I don't want to confuse the issue, but
I think that's more important, who's in charge of the
integrity. It's got to be the one identified, and in
this case it's Y. It doesn't matter if there's an M,
too, Y is the one that's got to be held accountable. So
I think this makes sense to me.

MR. O'RELL: Mark and then Julie.
CHAIRPERSON RIDDLE: And then Andrea.
MR. O'RELL: And then Andrea. I'm sorry.
Mark, Julie, Andrea.

MR. KING: Yeah, Mark King. I agree that the
answer is correct. I also agree that the question is
flawed. So if we're going to go back and look at this
in some way, or fashion a different answer here, then I
would recommend that we also amend the question.
Because we're going to end up confusing a whole lot of
people out there if we don't look at the phrase, the
certified retail establishment does not perform any
processing function, without elaborating on what a

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
processing function is in terms of manufacturing. So I think we need to look at that.

MR. O'RELL: I agree. I think that the way we have answered this as a committee is technically correct, however, it is very confusing because of the question that was stated and it's probably going to cause more confusion if we go forward with this today. Julie.

MS. WEISMAN: I am going back to the way Bea posed the question before, and I want to say that that retailer has no less of a right to be considered the manufacturer, than a celebrity-brand product who doesn't -- who does the same thing, who buys the ingredients, has them contracted. There are many, many products that are -- you know, that are on the market that are a brand that is -- has its own certification, but the owner of that brand does not actually physically turn any of the screws or anything.

MR. O'RELL: Andrea.

MS. CAROE: In a lot of cases, what these retailers are doing when they're doing their private labels -- and it needs to be considered -- is they are producing a label and they may have several regional co-packers with different certifications producing the product for them. Now, when they get certified, they...
are being certified to verify that the products that
they're selling and representing as organic do comply
with their label and are compliant. So in other words,
they are the final handler. They take it a step above
the manufacturing process of that individual can. So
this is a very complicated issue. This is more than the
question has indicated. I am making a motion right now
that we table this. We get further public comment
tomorrow. And I would like to make a second motion,
that this be redirected to the Certification,
Accreditation, and Compliance Committee.

MR. O'RELL: Can we take one motion?

MS. CAROE: Sure.

CHAIRPERSON RIDDLE: Well, it just -- it'd be
in one. It'd be --

MR. O'RELL: If you want to do one motion with
both, that'd be fine.

MS. CAROE: I would be fine to do one motion.

MR. O'RELL: Yeah, that would be --

MS. OSTIGUY: Second.

MR. O'RELL: Okay.

MS. WEISMAN: Before we do that, could -- I
mean --

[Simultaneous comments]

CHAIRPERSON RIDDLE: Well, we can discuss.
MR. O'RELL: We can discuss, but there's been a motion --

CHAIRPERSON RIDDLE: To table.

MR. O'RELL: -- to table and take it back for discussion with the NOP to clarify the question --

MR. CARTER: The motion shouldn't --

MR. O'RELL: -- and direct --

MR. CARTER: -- really be to table, the motion should be just to send it back.

UNIDENTIFIED SPEAKER: Send it back.

MR. O'RELL: Yeah.

MR. CARTER: Because --

UNIDENTIFIED SPEAKER: Because to table, you pull it back off again.

MR. CARTER: -- tabling means you take it off and you can't discuss it until it's removed from the table.

MR. O'RELL: Thank you. A point of information.

CHAIRPERSON RIDDLE: Okay, so -- so I'll step back in as Chair now. So we have a motion to redirect back to committee, and also to engage the Accreditation Committee, correct, you wanted both of those to part --

MS. CAROE: That's correct.

CHAIRPERSON RIDDLE: Yeah. Okay. And, Nancy,
did you second that? So Andrea moved, Nancy seconded.
Okay, discussion on that? Okay. Arthur, you have a comment?

MR. NEAL: The comment was that the question is flawed. I don't believe that the question is flawed, I think that there's an interpretation of a definition that has been extended beyond, and that's the use of the term otherwise manufacture. And if you look up the term manufacture, it normally implies a physical involvement in the production of something. Now, I think that's another element to the question. The question itself I think is proper. Now, if you want to look at the question differently, that's another issue, that, you know, if you want to expand the definition or define otherwise manufacture to include contracting, as contracting means processing, because that's what we're stating. Because the question says, but does not process. So if you want to say contracting is processing, that's a totally different issue.

CHAIRPERSON RIDDLE: Yeah. And the motion now is to redirect back to committee and to engage the Accreditation Committee in that discussion.

MS. CAROE: Can I respond to that?

CHAIRPERSON RIDDLE: Well, it's not -- it's a additional information that's not really germane to the
motion. That would happen once it's been redirected as you continue development of the answer. So anything about whether it should be redirected back to committee or not? That's the motion on the floor.

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: Okay, Bea.

MS. JAMES: I just --

CHAIRPERSON RIDDLE: Microphone.

MS. JAMES: I just want to make sure that when we do redirect it back to -- for review, that we -- that we are very clear that we actually answer the question as it is stated, and the question is very clear that the retailer is not a processor. That is the question that needs to be answered. And then I think, in addition to that, we need to look at some of the other points that were brought up about potential scenarios where the retailer could potentially be more involved than what this question is posing.

CHAIRPERSON RIDDLE: Um-hum. And the second question gets more at that, I would say, that we haven't even considered yet. Okay, Andrea would like to respond.

MS. CAROE: Well, I don't accept that, and I don't accept that because, in the scenario, the -- the retailer is physically creating a label. They are...
physically putting language on a label. So if we want
to go back to manufacture is a physical thing, somebody
in that organization is providing the content of that
label.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: And I clearly understand that. But
even if I look at the definition of process, labeling is
not included. It says physically packing or enclosing
in a box.

MR. O'ReLL: Yeah.

CHAIRPERSON RIDDLE: Kevin --

MS. CAROE: Get manufacturing.

CHAIRPERSON RIDDLE: And I think we're all in
agreement that, in the question, what's happening is
we're stating that the processor does not manufacture.
But in looking behind the question, I think -- and what
Andrea is looking at is that they provide a label and
that's part of it. Even though labeling is not part of
the definition for processing, we have this otherwise
manufacturing in there that needs to be defined. So I
think when we go back to the question, that that's --
the root of it is going to be an explanation about an
answer to the question and then an explanation about
otherwise manufacture. So we got Bea and then George.

MS. JAMES: I think there's -- I think there
needs to be more information about how a retailer creates their label, and I think that's one of the things that we need to get more information on, because the scenario that I'm understanding and that I'm accustomed to is that a retailer does the artwork for a label, submits that to the manufacturer, the manufacturer creates the ingredient standards and information, nutritional information that is on that label. So perhaps -- perhaps before, you know, we get into a discussion about -- about whether the retailer is actually creating a label with the ingredients, maybe we need to do a little bit more research on that and figure out some scenarios that are going on.

CHAIRPERSON RIDDLE: Okay. And I said George next, and I know Andrea wants to respond.

MR. SIEMON: Yeah, I just didn't understand, so -- and I hate to bring up another scenario, but if the retailer is not certifier -- certified, but by law you're allowed to -- if they're going to have a private label, they would have to become a certified identify. Because they're putting the label on it.

MR. NEAL: They would have to be certified. They would be required for certification.

MR. SIEMON: No. If they're buying from a manufacturer that is certified, has a certified plant --
I'll sell you a private label. All you do is provide
the label. Why would the retailer have to be certified?
I heard you say, because he provides the label, they
have to be certified? All that's certified all the way
through is identified on there. Why would the retailer
have to be certified at that level?

CHAIRPERSON RIDDLE: Andrea?

MR. SIEMON: No, I'm following your logic --

MS. CAROE: No, I understand what you're
saying, and in some cases, George, you're absolutely
right. In some cases -- I mean, let me go back to Bea's
question. There isn't one path to this. The retailers
are across the board. Some retailers are simply
providing a specification that a contractor is creating
a product and selling them that meet that specification.
That's different than a retailer that's out there
creating a formula, even sourcing ingredients in a lot
of cases. There are -- you know, there's -- it's across
the board. I mean, it's not one path. You're not going
to be able to get that answer as one situation, it's not
happening.

Now, George, to answer what you just said, in
some cases -- in most cases -- in most cases, those
private labels do -- in the creation of those products,
do constitute manufacturing.
CHAIRPERSON RIDDLE: Arthur has --

MR. SIEMON: Say that again?

MS. CAROE: There are private labels in which
a retailer or other entity -- it doesn't even have to be
retailer, somebody that's creating a product and
contracting out the physical labor to create that
product, they may be considered to be handler because,
in the overall scheme of things, they are manufacturing
a product. They are marketing it and manufacturing a
product.

MR. SIEMON: Even though the handler -- the
manufacturer is certified, they're the ones responsible
to buy certified products, they're the ones responsible
for the certified processes, they're the ones with the
right application label, the one who orders the product
and helps do all the arranging, you're saying should be
the master certifier. I think the one accountable for
the job is the one that should be the one that's held
accountable, and that's the manufacturer.

MS. CAROE: Yeah, that's -- we'll disagree.

MR. NEAL: Just to kind of keep it back in
context --

CHAIRPERSON RIDDLE: Arthur.

MR. NEAL: -- to keep it in context, the
question said, who's required to be on the label? Now,
if we say that if I contract, that's processing, then we're saying that retailers are required to be certified and their certifying agent must be listed on the label. The question -- I mean, yes, they may be listed, their certifying agent. They may be certified and their certifying agent may be listed on the label, but the question says, who's required? Under the regulations, who's required? I just want to keep this in context here.

CHAIRPERSON RIDDLE: Kevin?
MR. O'RELL: I think that our discussion is getting off of the track from what the motion is on the floor. We have a motion on the floor now to take this back to committee for further discussion, and I would call the question.

CHAIRPERSON RIDDLE: All right. And I think that's a good reminder, and we'll proceed to vote on the motion to send it back to committee and to engage the Accreditation Committee in the development of the answer along with the Handling Committee. So that's what we're voting on, to send it back to committee, and the first up is Mike.

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Mike votes yes. Nancy?
MS. OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Yes. Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: No.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Kevin votes yes, for the record. Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so we have 13 yes, 1 no, and that's it.
MR. SIEMON: Just one no.

CHAIRPERSON RIDDLE: I only heard one.

UNIDENTIFIED SPEAKER: I said there was only one vote.

CHAIRPERSON RIDDLE: Yeah. Okay, so that will be sent back to the committee for Handling Committee to work with Accreditation Committee. And the next question, Kevin? That was just question one. That's the way it was presented. Would you like to just --

MR. O'RELL: Unfortunately, yes, now that you've called that to my attention. Questions two and three, I would move that we also follow the recommendation to take this back to committee.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. So Kevin moves and Nancy seconds to send questions two and three back to the committee and also to engage the Accreditation Committee in the development of the answers. Any discussion on that motion?

***

[No response]

***

CHAIRPERSON RIDDLE: Seeing none, we will start with Nancy.

MS. OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Dave?
MR. CARTER: Yes.
CHAIRPERSON RIDDLE: Bea?
MS. JAMES: Yes.
CHAIRPERSON RIDDLE: George?
MR. SIEMON: Yes.
CHAIRPERSON RIDDLE: Rose?
MS. KOENIG: Yes.
CHAIRPERSON RIDDLE: Goldie?
MS. CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
MR. O'RELL: Yes.
CHAIRPERSON RIDDLE: Andrea?
MS. CAROE: Yes.
CHAIRPERSON RIDDLE: Rigo?
MR. DELGADO: Yes.
CHAIRPERSON RIDDLE: Hugh?
MR. KARREMAN: Yes.
CHAIRPERSON RIDDLE: Julie?
MS. WEISMAN: Yes.
CHAIRPERSON RIDDLE: Gerald?
MR. DAVIS: Yes.
CHAIRPERSON RIDDLE: Mike?
MR. LACY: Yes.
CHAIRPERSON RIDDLE: The Chair votes yes.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Back to harmony, 14 yes.

MR. O'RELL: And with harmony, that would conclude the Handling Committee report and action items.

CHAIRPERSON RIDDLE: Okay, we're actually -- we have the appearance of being ahead of schedule, and we have the Livestock Committee with the change to pasture, but we said that would be after lunch. And Handling -- I mean --

MR. SIEMON: And I hope this lights up.

CHAIRPERSON RIDDLE: If you could turn on your mike to an announcement.

MR. SIEMON: I would request the Livestock Committee have lunch together again, because we've got yet some more changes, so it'll be another fine meal.

CHAIRPERSON RIDDLE: Okay. All right, Livestock Committee to eat lunch together. Rose, are you prepared to start the Materials Committee here before lunch?

MS. KOENIG: Why don't I do the --

CHAIRPERSON RIDDLE: The mike.

MS. KOENIG: Okay. Well, Arthur and I have had to work on downloading. I have -- I'd like to use this time to maybe -- not really particularly on the -- we went over it last time.

CHAIRPERSON RIDDLE: Uh-huh.
MS. KOENIG: So I didn't know whether I would go through this or not, but after speaking at dinner with several of the new Board members, I would like this opportunity to maybe just talk about the whole materials process for them, maybe with the aid of a little bit of slides, but also for the other Board members to help or even to ask questions, because, as you know, a lot of your responsibility on the Board is to make decisions about materials.

CHAIRPERSON RIDDLE: Okay. So --

MS. KOENIG: So maybe we can start with just a little bit of a slide show.

CHAIRPERSON RIDDLE: Go ahead.

MS. KOENIG: Some of it will be -- it's going to be reinforced in some of the documents.

MR. NEAL: Do I have it?

MS. KOENIG: No, I have it -- documents that are on the -- on the -- in the next section of the materials.

CHAIRPERSON RIDDLE: Okay.

MS. KOENIG: I'll give it to Arthur first.

CHAIRPERSON RIDDLE: Okay. So as I understand it, you -- well, let's take just five minutes to get you set back up and then you'll have a half hour for presentation.
MS. KOENIG: Yeah. I mean --

CHAIRPERSON RIDDLE: But it won't be anything to vote on now before lunch, it's just --

MS. KOENIG: No, it's going to be an -- just an overview kind of thing.

CHAIRPERSON RIDDLE: Yeah, the materials review process and the status report. So we'll do that.

MR. O'RELL: Five minutes.

CHAIRPERSON RIDDLE: Five minutes while they get set up here.

***

[Off the Record]

[On the Record]

***

MS. KOENIG: And again, if -- it's mostly for new members. The older members are bored to death with this slide show. And also for members in the audience who don't really understand how the process works. It's not that detailed, so if you have any questions, go ahead and ask. And then I'm just going to give you guys a quick overview. Some of this stuff is going to be repeated as discussion items, too, that the Board will vote on. But --

CHAIRPERSON RIDDLE: And you make sure and stay close to that mike. It's not very --
MS. KOENIG: Okay, all right. So, Arthur, if you can go ahead.

MS. CAUGHLAN: You can remove it and walk around the room.

MS. KOENIG: Walk around and sing. It's karaoke. Okay, the materials process update. So I'm just going to talk about the more defined procedures for the materials review process. We'll go over a little bit the Sunset review process. We'll talk a little bit about some of the substances that have been petitioned to the NOP, some of which we're reviewing today, and some which are, you know, in the process. And then, you know, we're going to go over during the Crops and time of the meeting, and we've already went over Methionine, the things that are under review for this meeting. Go ahead, Arthur.

So for the new members -- and we've talked about this, the Organic Foods Production Act, which you all have a copy of in your meeting book. It provided for a list of approved and prohibited substances, and that's in the regulation or the -- you know, when we start adding to these sections -- I think it's 205.600 -- and different ones for livestock and crops and handling, that's where we're adding to in the regulation. And there's also lists of naturals that can
be prohibited. So as you look through those material
sheets that the committees have provided, there's
different categories as to what things are being
petitioned for. But it was the Organic Foods Production
Act of 1990 that established the guidelines for
substances on the list, and it also outlined the role of
you guys, the NOSB, in the process of establishing and
amending the National List. So this really is, you
know, a statutory requirement of the Board.

Next. And I just want to point out that if
you -- you know, what you really need to read are those
sections of the Organic Foods Production Act and the
regulation that talks about materials, and there are
evaluation criteria that was set forth in the act for
livestock and crops, and those are the criteria that we
will go through as we fill our materials sheets, and
you're going -- you've seen the sheet for Methionine
already, and you'll see them through Crops. And it's
really important for you to look at it. These sheets
are relatively new in the process. I think we've been
using them for about two years now. The Board has found
that they're very useful, and the NOP has found that
they're very useful in helping us really document how or
if different materials that are petitioned meet the
criteria.
So if you can't justify what you're doing in a committee, there's -- that indicates something. Either you need more information, perhaps from a contractor, because you should be able to fill in all of those areas. Now, it may be controversial, but you still should be able to have remarks. So again, if you're going through the review process and you find out you can't answer a criteria, you're probably lacking information. One way to get the information is perhaps to go back to the contractor, and I'll tell you at what stage you can do that. And if you don't do that at that stage, then you as a committee may have to do some research on your own to try to obtain that information.

Okay, next. So substances are petitioned for -- usually for a specific use in the organic farming system. And typically -- well, they are petitioned. They have to have a specific use. Now, sometimes when you -- when we ask the contractors to do a review, they may go over other uses in the system, and there has been instances where the Board has brought in a use -- realize that -- even though they petitioned it for this, we feel that maybe we should put it on for -- you know, give it an additional kind of use. In some cases, I think I recollect. But a lot of times what happens is that, because it's petitioned for a specific use, many
things on the list have annotations that limit it to
that specific use. And if you go through the list
you'll see that things -- an annotation is something
that follows the substance on the list. So something
might say for a disinfecting irrigation lines, and that
needs to be interpreted as that's the only use for that
particular substance.

And like I said, things -- there are natural
substances that can be prohibited, and there's a listing
for that. So there's not a large number of them, but
that is a possibility that you'll be coming forth and
again using that same criteria. And then the key thing
-- you guys, the new people, may not know that all
materials remain on the list for five years. And again,
this within the Organic Foods Production Act. And they
must be re-reviewed through a Sunset process. And the
interesting thing for you new folks is that you will be
engaged, heavily engaged in the reviewing for the Sunset
process, because this work has to be done for substances
that came on the list in 2002; it has to be completed by
2007. And I think what's really important to note, and
it was really hard for a lot of the Board members
initially, is that the -- you know, most of us work in
businesses, we make decisions and they're implemented
the next day, for good and for bad. You can fire
somebody, you can hire somebody. One of the difficulties that I had as a new Board member -- and it's so frustrating after so and so years. It takes the federal government a lot longer than you might think before you make an action, and that can actually be -- you know, it's gone through the Federal Register process and actually placed on the list. So not only -- until the -- you may vote on it today. It can't be used, usually, in organic production until about 18 months after that. So it's a long process.

Next. So what I'm going to do, I'll go through this fast, because -- well, hopefully fast. And it actually will serve as an initial discussion of some of the things that are in -- on the materials document today, and I think it's important to go through, because I won't be able to go into much detail when we have to vote on it. We've had the process upon how we do our business as a materials -- in materials as a Board is constantly evolving, you know, partly because we have to do things like Sunset. That's a new activity of the Board. And partly because, as we go through and experience these petitions, we find out some -- you know, the good and the bad and the ugly, and what works and what doesn't work, and what works for other contractors, and how do we provide sufficient
information so that we can get our job done. So this is
kind of the -- what we're proposing that happens, you
know, in 2005. Basically, NOP receives a petition --
and again, a petition can be written by a manufacturer,
it could be written by a farmer that needs the product,
and then the petitioner is noticed that they've received
it.

Next. And then the second phase is really --
the National Organic Program reviews for the
completeness and the eligibility of that petition. They
ask, you know, is it eligible under the Organic Foods
Production Act and the regulation? And they have a
checklist that they make sure they go through to
determine whether there's an OFPA criteria for this
particular material and you know, where in the
regulation it fits. And the second step, which is
really important, is it approved and consistent with
other applicable regulatory authorities? Because some
pesticides that are used in crops and in livestock may
have EPA registrations and we have to make sure that
things that are being petitioned for a particular use
are actually labeled for that use. Similarly with drugs
and the FDA. And then is there confidential business
information designated by the petitioner? And if yes,
they have to notify the petitioner, acknowledging that
they've received that designation. And we talked a little bit about -- that first day, of how the Board has to deal with those -- that type of information.

Next. The petition is posted on the website. And unfortunately, I found out from talking to a number of you folks that, for some reason, not everybody was informed that that's how, now, as new members or as old members, that we are accessing the information about what's coming in the meeting. So it's really important to keep -- you know, keep on that website to see if there's new things we had posted, and then prior to meetings, finding out all the documents that you're going to need to answer in the meeting should be posted on the website. And you can always go to the petition database and that's an important thing to do, just to see where things are and there may be petitions available. Hopefully, if you're in a committee, you're going to know those things because you'll get other copies of that.

The Materials chair is -- tells the designated committee chair of the petition, that a petition is there by the National Organic Program, and the committees have 21 days to review the petition that has come in, and you know, after it's gone through NOP review. And you can submit questions to the
National Organic Program. So in other words, if there's things after you've read the petition that, you know, you really want some more details on, that is the time to try to write those questions down to make sure that these contractors that do the technical review are going to provide you with that information. And then the National Organic Program will notify the contractor responsible for the technical review that the petition is complete and eligible for evaluation. And our committee -- our questions, along with that petition, get submitted to the contractor.

Next. If that petition, again, in phase two it was found out that it was incomplete, a notification to the petitioner of this determination is given, and then they have the opportunity to provide the information to make it complete. Sometimes it's incomplete and it stays incomplete for whatever reason. So if everything is complete, it goes to, then, phase three, which is a technical evaluation. And contractors evaluate substances based on the statement of work which is in the policy -- Board policy manual. You can take a look at that. And they will also answer questions provided by the committees. So committees, again, it's really important that you look at those petitions and try to frontload the information that you may need in
the evaluation process. And contractors will prepare
technical evaluation using a template provided and
distribute -- by the NOP, and distribute the draft to
the National Organic Program. But basically -- that you
will consistent -- hopefully, consistent TAP information
coming back that follows those criteria. Now, there are
two contractors, and people do have different styles in
writing, but they will have the same format. And so --
and again, that doesn't ensure that, again, the quality
of the work is the same, but certainly the way it comes
back to us will be the same.

And then phase four, a sufficiency
determination. And this is really important and it's
very different, I think, than we've done in the past,
and it's supposed to be kind of a quality control in
this process, because this has been identified as a
problem by the National Organic Standards Board. A copy
of the draft evaluation report is distributed to the
Materials chair -- Materials Committee chairperson and
the chair of the designated committee that that petition
is from. So if it's a crop petition, it would go the
chair of the Crops Committee. And then the draft
evaluation report is reviewed by that appropriate
committee and the National Organic Program for quality
and adherence to the statement of work. And then you

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
have basically 21 days, each committee. So you'll get a conference call together. The chair will be responsible for that. You're responsible to make sure that -- that you inform them whether you're available or not and then also be on that call. But you'll have 21 days to determine whether that draft is sufficient or not to be able to make a decision. If it's insufficient, that's the time when those things go back to the petitioner. You know, and if you don't do your job within those 20 working days, it's assumed that you don't have a problem with the quality of work. So it's really important to do it. Now, if you get to this Board meeting and it's determined that the work isn't sufficient, I think NOP is going to say, well, that's too bad, because the committee was supposed to determine that. Now you figure it out. I assume that's the position that the NOP's going to take. And then phase five is analysis and recommendation. If the draft evaluation is sufficient, then you initiate a review and make a recommendation on the action of that substance.

Now, this is an additional part of this and I think, again, as we evolved -- after we met, I guess, with the NOP, Jim and I, and talked about things, and we discussed this a little bit in committee and I think this is something that we're going to see if it works or
it doesn't work. But as -- if you look through the
Organic Foods Production Act, the Board still has the
ability to -- to convene a technical advisory panel and
to provide additional scientific evaluation on the
petitioned substance. And we're -- one of the things
that we're discussing or trying to figure out is if or
how committees could seek, perhaps, additional technical
advisory information from scientists to help them in
their determination. Because with the new process, the
contractors, if you look at the statement of work, they
no longer will be providing outside reviewers to
evaluate their work. You will get a TAP report solely.
So it's a technical report. Now, what we're thinking,
we -- Jim and I -- and we talked to the NOP about this,
there may be cases where that is sufficient, and there
may be cases where there's not enough expertise on the
National Organic Standards Board, your particular
committee, to really make you comfortable in making that
decision. So we want to develop some kind of formal
process so that we could utilize some form of a
technical advisory panel to provide maybe some
additional information or review of that technical
findings of the contractor. So again, it's not worked
out and this is part of that evolution of the process.
The committee must recommend an action of the substance
no later than 30 days before a scheduled meeting, and
then the NOP posts that recommendation on the website
and requests and receives public comment.

Next. Phase six, the substance is added to
the agenda item and discussed and voted on by the full
Board, and you're seeing phase six now for Methionine
and the materials that are in the materials -- in the
book, you know, at this meeting today and yesterday.

Next. So that really is -- you know, and then
we make our vote, and if we vote yea and it goes through
that federal process -- and again, it may take 18 months
until it's actually listed on our National List and
allowed for use by growers. So that kind of completes
that process. So do you guys have any questions on
that? I think --

CHAIRPERSON RIDDLE: Mike had one and then Kim
has a point.

MS. KOENIG: Okay. Who -- oh, Mike. Okay.

MR. LACY: A quick question.

MS. CAUGHLAN: Mike, your mike.

CHAIRPERSON RIDDLE: Yeah.

MR. LACY: Just a quick question. You may
have said this, Rose, already and I apologize, but where
is this located? Is this located for new members to --

MS. KOENIG: It's the document -- it should be
in our meeting book.

MR. LACY: Is it in the meeting book?

MR. NEAL: Yeah, it is --

MS. KOENIG: Yeah, it's --

MR. NEAL: It should say petition process, I think. Let me see here.

MR. LACY: Okay, thanks.

CHAIRPERSON RIDDLE: And ultimately, it really should be in the Board policy manual.

MS. KOENIG: Yeah, we are --

CHAIRPERSON RIDDLE: But --

UNIDENTIFIED SPEAKER: Materials review.

MR. NEAL: Materials review?

MS. KOENIG: Yeah, it's -- it's actually the NOP's document.

MR. NEAL: Tab eight.

MS. KOENIG: Tab eight, yeah.

MR. LACY: Yeah, thank you, Arthur.

MS. KOENIG: So we'll be discussing. I just wanted to -- like I said, knowing that some folks weren't able to access that information, they didn't know that they were supposed to get that information from the materials -- from the website, for new members just to kind of go over that in more detail. Kim?

MS. DIETZ: Just a form of process. This
document has -- the Materials Committee hasn't seen this
document yet. So we never reviewed it in the last --
we've never voted on this or looked at it. So --

MS. KOENIG: That was actually -- it was a
draft that was sent around by NOP that they asked for
comments on.

MS. DIETZ: Okay.

MS. KOENIG: And then I took the comments --
Jim had made comments and I made comments on it, because
it was their draft, so --

MS. DIETZ: Okay. Well, just for the process,
that it should go back to the Materials Committee and
get a recommendation. And then I -- you know, the TAP
reviewers, I a hundred percent agree with that, but I
think that you need to be -- and again, I've said this a
thousand times, you need to make sure you have that
process down so that it doesn't seem like you just have
a selected pool of people reviewing it. But it should
be a Federal Register notice seeking people. And then
are you going to pay these people and how you're going
to go through that? So before you actually initiate
this, somehow we need to figure that part of it.

CHAIRPERSON RIDDLE: Right.

MS. KOENIG: That document -- you know, part
of the reason why the Materials Committee hasn't voted
on it is because it was a -- it was embedded within the statement of work document that went to contractors, and it was also a document that NOP used to train the contractors, and they did send it around prior. So it was sort of a --

MS. DIETZ: So it's not a committee document.

MS. KOENIG: It's not really a committee document. There was feedback from the committee, but it's basically -- and we made suggestions and that's why it's in the meeting, that members have the ability to make suggestions. Those that did -- now, we can add more suggestions during this meeting and give it back to them and that's why there's a draft there. I took the comments that Jim made and comments that I made, and we can add comments to the meeting book. But this is basically how NOP has taken our original process -- and we've been asking for this. You know, how are we doing business? So this is their response, this is how they see we're doing business. Okay. So that's why I think there's a little state of confusion.

And then again, that TAP concept, it's coming out of OFPA. That really is the area where we want to discuss and refine. But we -- you know, for those who have discussed, we feel that it could be a valuable way of seeking out additional information, because we are --
that review process is not in the statement of work and
there are no longer outside reviewers coming in with the
petitions. Okay. I don't -- I think --

CHAIRPERSON RIDDLE: And it is -- it's getting
near --

MS. KOENIG: Yeah.

CHAIRPERSON RIDDLE: Well, it is noon.

MS. KOENIG: I don't think I'm going to go on.
I think that I'm going to stop there because it is noon,
and I just hope that it's helped some of the new members
at least clarify a little bit.

CHAIRPERSON RIDDLE: Thanks, Rose. Okay, it
is lunchtime, and so the Livestock Committee will be
meeting and eating. I don't know if any other
committees need to meet, but we'll come back to the
pasture recommendation right after lunch, and then pick
back up with the Materials Committee.

MR. SIEMON: Oh, right after lunch.

CHAIRPERSON RIDDLE: Well, if you're not ready
to move it, just report back after lunch. Okay, great.
So we'll start again at 1:00 p.m.

***

[Off the Record]

[On the Record]

***

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
CHAIRPERSON RIDDLE: -- the Board members to take your seat. We're ready to resume, and we're going to go back to the Livestock Committee and the pasture language. So, Hugh, you've got a few things that were presented yesterday and there's been some updates based on comment. We've had a couple more Livestock Committee meetings, so please update us on where we're at.

MR. KARREMAN: Okay. Due to the lots of public input we've had, we have taken a lot of that into consideration, and as Jim just said, we have had two Livestock Committee meetings since just yesterday. And so the first thing that -- well, we brought up yesterday the stage of life, a change to the rule for the term stage of productivity or production. We want to make it stage of life, so I'm not going to go over the background, but -- should I just read the recommendation?

MR. SIEMON: Make the recommendation.

CHAIRPERSON RIDDLE: Yeah, yeah.

MR. KARREMAN: Well --

CHAIRPERSON RIDDLE: Yeah, you can --

MR. KARREMAN: Do I need to move to make it?

CHAIRPERSON RIDDLE: Sure.

MR. KARREMAN: I move that we make this recommendation as a full Board.
CHAIRPERSON RIDDLE: Okay. And then go ahead and read it and then we'll ask for a second.

MR. KARREMAN: Okay, the recommendation. The Livestock Committee recommends a rule change to make the language in 205.239(a)(1) and 205.239(b)(2) consistent with the language in 205.237(a)(2). The language therefore in 205.239(a)(1) would read, access to outdoors, shade, shelter, exercise areas, fresh air, and direct sunlight suitable to the species at stage of life, the climate and the environment. So therefore I move that we change 205.239(b)(2) to be amended to read animal stage of life.

MR. CARTER: Second.

CHAIRPERSON RIDDLE: Hugh moves -- Hugh moves and Dave seconds. And that would affect two places in the rule, correct, two different sections would be changed. Okay, is there a discussion on this motion?

CHAIRPERSON RIDDLE: It was presented in detail yesterday. I want to make sure everyone's clear on what we'll be voting on here.

MR. SIEMON: This was a handout --

CHAIRPERSON RIDDLE: Okay, George.

MR. SIEMON: This was a handout from yesterday and it's not in your book.

CHAIRPERSON RIDDLE: Right. A single page.
Yeah. And it's on the screen under recommendation as well. If you can't find your sheet and for everyone in the audience, it's up on the screen.

***

[No response]

***

CHAIRPERSON RIDDLE: Okay, seeing no further discussion, we'll move to vote, and we start at the top again with Nancy.

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Okay. Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?
MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald? Absent.

MS. CAUGHLAN: He's absent.

CHAIRPERSON RIDDLE: And Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so we have 13 yes, 0 no, 1 absent. Thank you. Okay, please continue.

MR. KARREMAN: Okay. I would like to move that we make another rule change, and the recommendation would be --

CHAIRPERSON RIDDLE: Yeah, you can go ahead --

MR. KARREMAN: Okay.

CHAIRPERSON RIDDLE: -- and read it, and Arthur's getting it up on the screen.

MR. SIEMON: Also handed out yesterday. No, that's right, we changed it.

CHAIRPERSON RIDDLE: It's been --

MR. KARREMAN: No, this is from the two meetings we've had since with the public input.

CHAIRPERSON RIDDLE: Right.
MR. KARREMAN: So I move that this recommendation be considered by the whole Board.

MS. CAUGHLAN: Do we have paper copies?

MR. SIEMON: No.

CHAIRPERSON RIDDLE: No.

MR. KARREMAN: It's going to be up on the screen here.

MR. SIEMON: Let me explain it. You have your copy in your book.

MR. KARREMAN: Yes.

MR. SIEMON: We can explain what we did.

CHAIRPERSON RIDDLE: Well, it's better to --

MR. SIEMON: Okay.

MR. KARREMAN: It's up on the screen, folks. Okay. So the rule change for 205.239(a)(2), the committee -- the Livestock Committee recommends that it be amended to read, ruminant animals' grazing pasture during the growing season. (i): this includes all stages of life except, A, birthing, B, dairy animals up to six months of age, and C, beef animals during the final finishing stage, not to exceed 120 days. (ii): lactation of dairy -- lactation of dairy animals is not a stage of life under which animals may be denied pasture for grazing. I move that we accept this.

MS. OSTIGUY: Second.
CHAIRPERSON RIDDLE: Was that Nancy? Okay.

Hugh -- Hugh makes the motion and Nancy seconds adoption of this proposed rule change. Bea?

MS. JAMES: I thought there was -- I thought we were going to change the lactation comment so that it was more -- it was more positive? Am I wrong on that? I think, Andrea, you made that recommendation.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: And we had talked about making it a note in the comment before, so I'm sure -- this -- the reformatting doesn't reflect the suggestion that I made yesterday.

MR. KARREMAN: I do believe that if this passes it would go the NOP to be worded grammatically correctly. Is that -- I mean --

MS. CAROE: No.

MR. MATHEWS: It's best --

CHAIRPERSON RIDDLE: Richard or Arthur, whichever.

MR. MATHEWS: It's best that your full intent is conveyed as accurately as humanly possible before it comes to us.

MS. CAUGHLAN: Yeah.

MR. KARREMAN: Andrea, what would --

CHAIRPERSON RIDDLE: Okay.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAROE: Did you say something about that --

MR. SIEMON: I thought this was --

MS. CAROE: -- commented on the number two?

MS. OSTIGUY: Can I -- Hugh, didn't --

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Well, during the meeting -- the Livestock Committee meeting that we just had, didn't you say something about the (ii), the lactation portion, and that Richard had said something about it?

MR. KARREMAN: I believe, but please correct me if I'm wrong. This morning we had talked and you had mentioned that -- the statement would be --

MR. MATHEWS: But where you're putting it is fine.

MR. KARREMAN: Yeah, okay, that's what he was --

MR. MATHEWS: Maybe what Andrea is bringing up is how it's worded.

MS. CAROE: No, the placement.

MR. MATHEWS: She's not saying you can't use it, she's saying she wants to clarify --

MS. CAUGHLAN: No, she didn't want the (ii).

MS. CAROE: Can I say what I'm saying?

MR. KARREMAN: How would you like it to --
MS. CAUGHLAN: You wanted to eliminate --

MS. CAROE: Let me explain what I'm saying.

CHAIRPERSON RIDDLE: Andrea, please, please, please say what you say. Uh-huh.

MS. CAROE: I'll say what I say. My concern yesterday was, the way it was listed as (i) and (ii), you had a positive list of what those stages of life were that would be considered, and (ii) was a stage of life that wasn't considered. And the gap that you leave with a positive and negative list is anything that is outside of that and where does it fall. My suggestion was to take the information that lactation is not a stage of life to be considered and use that as a note in the previous positive list. So you -- in other words, what you would be saying is, these are things that are stage of life and then a note for clarification that lactation is not considered a stage of life.

MR. KARREMAN: How does NOP feel about that?

MR. MATHEWS: It works fine.

MR. KARREMAN: Okay. Well then, I move to amend this.

CHAIRPERSON RIDDLE: Well --

MS. CAROE: Well, I'd like to motion for amending this, and I can't see it. My contacts won't let me see this. So -- but -- do you want to try the
words with it?

MR. KARREMAN: I don't want to mess it up and I --

MR. MATHEWS: What she said earlier --

MS. CAUGHLAN: You just move it up and eliminate --

CHAIRPERSON RIDDLE: Richard?

MR. KARREMAN: Right.

MR. MATHEWS: She said note lactation for dairy animals is not. So all you have to do is take out the (ii) and write a note --

CHAIRPERSON RIDDLE: A colon. Okay.

MR. KARREMAN: I don't want to see this as a footnote, I want to see it right in there.

CHAIRPERSON RIDDLE: You want to see it in parentheses. Remove the parentheses, but just have note colon.

MR. KARREMAN: No, just have it as a new sentence right there after 120-days period and then say the next word is lactation of dairy animals is not a stage.

MS. CAUGHLAN: Leave the word note out.

MR. KARREMAN: Take note colon out of there, please.

UNIDENTIFIED SPEAKER: No, no, no. No, no,
no, it has to --

MR. KARREMAN: What?

MS. CAUGHLAN: See, this is what happens when your words snap in.

CHAIRPERSON RIDDLE: As a committee.

MR. KARREMAN: And I'm not a wordsmith, so whoever --

CHAIRPERSON RIDDLE: Is that a hand, Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: And it's a question for Richard.

If when we -- I still have a problem with the word growing season. That can be misinterpreted. If there's -- if it's droughty and plants don't grow, then the temperatures are conducive to grow if you were irrigating. And if there's no irrigation in an area and plants are in dormancy because of the lack of moisture, not a lack of temperature, would that be constituted as a growing season? How do you define growing season? Is it a temperate -- if the temperature is conducive, is that fine? I don't -- that's what I don't understand about growing season. Because like I said, for me, even though I can produce crops all year, my growing season isn't all year.

MR. KARREMAN: I think the question was --
MR. MATHEWS: That's really better directed to the Board than us.

MR. LACY: The question is for us.

MR. MATHEWS: The next question that the committee should be --

CHAIRPERSON RIDDLE: Mike.

MR. LACY: Jim, I think that the Livestock Committee's intent on this is a growing season is from sometime in the spring to sometime in the fall.

MS. KOENIG: It doesn't work in the southern region. So if you say when -- and I don't -- you know, is it annual crops --

MR. LACY: I think --

MS. KOENIG: -- is it perennial crops?

MR. LACY: I'm sorry, Rose. I think for pasture it does work in the southern regions. I think it works in any region. There is a -- there is a defined growing season for pasture, based on the type of pasture it is, whether it's a cool weather pasture, cool weather grass, or a warm weather grass or whatever. So I think that is defined, or definable, I guess is what I'm saying.

CHAIRPERSON RIDDLE: And I would just add to that, in looking through some of the more detailed NRCS standards for prescribed grazing, they do define the
growing season where they have made those more specific standards. So it certainly is definable. It doesn't mean that it has been defined in every particular county, but it is quantifiable.

MR. KARREMAN: And we will reference the NRCS in the guidance document.

CHAIRPERSON RIDDLE: Yeah, later on.

MS. KOENIG: I'm just -- again, I guess I'm not clear, because you're changing something to make something more clear. I don't really understand why it can't be access to pasture, anyway. I still don't understand why that wording -- how significant that change is. I haven't been convinced that there's a difference. And I haven't been involved in the committee's discussion, but if you're trying to improve the understanding, what I'm saying is that I think Rose even brings a different set of perhaps misinterpretation of things, and --

CHAIRPERSON RIDDLE: Mike? I'm sorry. Were you done? Mike?

MR. LACY: I think what we're trying to do, Rose, is make sure that the intent is not missed here and that animals are not put out on pasture when there is not -- during a non-growing season, and that counts as pasture. Does that make sense? So we are trying to
clarify what constitutes grazing -- appropriate grazing.

MS. KOENIG: So you're saying you don't want it to be misinterpreted that just putting an animal outside versus actually outside and eating?

MR. DAVIS: Grazing means eating. If you look at the pure --

CHAIRPERSON RIDDLE: Gerald, your mike, please.

MR. DAVIS: Grazing, you know, technically, if you want to analyze the term, would mean chomping off at the roots and chewing it. I mean, at root level or whatever --

CHAIRPERSON RIDDLE: Um-hum.

MR. DAVIS: -- that the animal is grabbing it and they're not being fed it. Like it's been said that some people are doing -- dumping bales of hay out in an open lot or something like that. That is not --

MR. KARREMAN: That's not grazing.

MR. DAVIS: That's not grazing.

CHAIRPERSON RIDDLE: Right.

MR. KARREMAN: No.

CHAIRPERSON RIDDLE: And I think, you know, as a member of the Livestock Committee, you know, we're trying to respond to the numerous, you know, thousands, actually, of comments that we've heard here, that

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
ruminants must graze when there is pasture available

during the growing season, and that's when there is

pasture. So we're trying to make an enforceable

standard that's predictable so people know what the

rules of the game are. I think this captures it

compared to access. Access is very fuzzy. This makes

it clear that ruminants must graze when there's

something out there to eat. We'll go to George and then

Kevin and then back to Gerald.

MR. SIEMON: Well -- and after this

recommendation here, we have a guidance document

recommendation that we'll further --

CHAIRPERSON RIDDLE: Um-hum.

MR. SIEMON: -- to meet what the growing

season and what our interpretation of this is. This is

the rule and next comes the guidance document. So we

put the two together, which, even though we're told

guidance doesn't have enforcement, at least it's about

interpreting this statement. So the two might help if

we look at them together. But that's the document you

were given yesterday with some changes we'll show you.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Actually, George just answered my

question.

CHAIRPERSON RIDDLE: Okay. Gerald?
MR. DAVIS: The growing season stipulation there, in arid regions of the country, is there going to be any gray area on -- when there's no moisture and nothing's growing, is that to be construed as that's not the growing season, which is per a lot of the months of the year in Arizona, for example.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: I -- I don't know if we need to put it in or not, but I would think that if you're irrigating your farm in Arizona for crops for during the growing season, then you shall be irrigating your pasture for grazing during that same growing season.

MR. DAVIS: Exactly. But in the example of the non-irrigated confinement farm who is trucking in outside forages from -- purchasing them on the market and not growing them themselves, does this give a loophole, is my question, to say there's no growing season here?

UNIDENTIFIED SPEAKER: Not with the guidance.

MR. KARREMAN: We believe, with the guidance, that that is answered and we'll go over that.

CHAIRPERSON RIDDLE: Okay.

MR. SIEMON: I agree.

CHAIRPERSON RIDDLE: George.

MR. SIEMON: I agree it's a whole, but right
next to that farm, does the irrigated acre get nine
crops or six, seven crops of alfalfa right next door,
what is the growing season? You know --

MR. DAVIS: Well, here.

MS. KOENIG: Yeah, but --

CHAIRPERSON RIDDLE: Rose and then Kevin.

MS. KOENIG: That's -- if you want to use that
terminology, I don't have a problem with it if it's
defined, in my mind. Either do it via temperate and say
that, if the temperatures are conducive to the species'
growth, that's constituted as -- individual farms may
choose practices that do not allow something to grow.
So on farm A it's not in the growing season because I
don't irrigate and my grass is dormant. But next door
it is their growing season because they irrigate and
therefore the grass is growing. You could -- you know,
different -- it's like in the south, if I -- you know, I
just think that you're -- I don't know -- that that's --
to me the point is that unless you define growing
season --

CHAIRPERSON RIDDLE: Kevin, and then we'll go
to NOP comment.

MR. O'ReLL: If there is guidance to determine
what is the growing season, shouldn't we share that now
so we understand? If we're discussing and voting on

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
something that uses the term of growing season, it would be very helpful to understand that guidance and not have it come later after we vote on this motion.

    MR. KARREMAN: Yeah. Actually, I think we could actually talk about the guidance document and maybe leave this aside for now. I don't know how you do that procedurally --

    CHAIRPERSON RIDDLE: Well --

    MR. KARREMAN: -- if it helps define --

    MS. KOENIG: Well, but most terms that are not clear in the regulation under the definition section and are not in guidance documents that I can think of, at least, where you would have some ambiguity and --

    MR. KARREMAN: Yeah.

    CHAIRPERSON RIDDLE: Okay, Rick?

    MR. MATHEWS: I'm not offering a solution to the problem, I'm just posing another question, okay, just this is something for you to ruminate over.

    CHAIRPERSON RIDDLE: Um-hum, yeah.

    MR. MATHEWS: It might be possible to say ruminant animals' grazing pasture, full stop. But then that doesn't address the 120-day issue that others had been bringing up. I know that you're talking about doing something like that in guidance. The one thing that I have to caution on is guidance isn't enforceable.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
So as much I hate just quantifying numbers that don't work very well, this might be a spot where you have to consider something like that in order to get around the issue that Rose is bringing up. In other words, do you say ruminant animals' grazing pasture, full stop, or do you say ruminants' grazing pasture at least X number of days during the course of the year? And maybe that gets around your problem of this growing season. However, whatever that date is, that number of days you set, it's got to be doable even in a year of drought, because if you don't, then your cows aren't organic anymore, okay?

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: I believe that's why we have --

MR. MATHEWS: Or at least you've got a violation.

MR. KARREMAN: I believe that's why we have those numbers that have been talked about in the guidance document. That's all.

CHAIRPERSON RIDDLE: Right. Andrea?

MS. CAROE: Richard, I guess -- there's still a possibility of a variance for inclement weather and -- well, I mean, we don't have a definition for inclement weather, but in an extreme drought, would that be a situation where somebody could claim that it's inclement weather?
MR. MATHEWS: Well, we could explore that.

MS. CAROE: I'm not --

MR. MATHEWS: It's --

MS. CAROE: I'm not saying one way or another.

MR. MATHEWS: It would -- you would --

MS. CAROE: I'm just exploring --

MR. MATHEWS: Yeah.

MS. CAROE: -- the flexibility at this point.

MR. MATHEWS: Yeah. The thing about variances are that you're supposed to request them ahead of time. Obviously, if you had a variance because of you couldn't meet the grazing time, a lot of that's going to be dependent on how -- how you'd been grazing previous to that time. So I mean, it might work fine in an area where you have snow all winter, but it may not work so well in Florida, where somebody had just not been grazing and then suddenly decided to at the time that the drought was coming along. So I don't know.

CHAIRPERSON RIDDLE: Well, I'll speak as an individual Board member again and -- to me, I think this as recommended here makes all the sense in the world. It makes it clear that ruminant animals shall graze, and then when they graze is during the growing season. That is a quantifiable, regionally specific term. It doesn't say that they have to graze every single day of the
growing season. The guidance sets some, you know, minimums that they have to be out, you know, 120 days and a certain amount of their diet in guidance. But to me this does set an enforceable standard compared to what we have now, in combination with the guidance. And I'd rather keep the numbers and guidance rather than lock them into the regulation, personally.

MR. MATHEWS: Yeah. And one of the things is that the growing season should be included in the organic systems plan that is approved by the certifying agent. So that should take care of the growing season problem. I have a little concern about what you just said, though, Jim, that you're not expecting the cows to be out every day. And my reading is this is, the cows are expected to be out there every day, with the exception of the provisions that are provided elsewhere in the regulations that would allow you to do it when the weather conditions are such that the animals shouldn't be out.

CHAIRPERSON RIDDLE: Exactly. And that's what I meant by -- I didn't delineate those --

MR. MATHEWS: Okay. Well, I just --

CHAIRPERSON RIDDLE: -- but yes, inclement weather, health and safety, risk to water and soil quality, it just means that still the growing season is
going on during some of those factors.

MR. MATHEWS: That's okay. Now it's on the record --

CHAIRPERSON RIDDLE: Yeah, okay.

MR. MATHEWS: -- what we really mean, so you don't have somebody coming along later saying, well, Jim Riddle said.

CHAIRPERSON RIDDLE: Thanks, you're projecting. You're looking after me. I appreciate that. Looking out for me. I think we've had a good discussion of this. I mean, unless there's something new to bring up, I'd like to move ahead to a vote on this item. George, anything to add?

MR. SIEMON: I hate to be duplicative, but we're being told that the word note has the same influence as any other part of this clause. To me a note is a footnote. So I hate to go back, but note has the same power as any other word in this rule, on the record, I might add.

CHAIRPERSON RIDDLE: Well, we'll see if they'll respond. Okay. Andrea, go ahead.

MS. CAROE: The reason I suggest note is because that sentence is not inclusive of all things that could not be stage of life.

UNIDENTIFIED SPEAKER: Right.
MS. CAROE: So it's not inclusive. If you put it there without note, it looks inclusive and it adds to confusion to it. That's why this is an example given. It could be an e.g. if you prefer, but it is not inclusive, so it should not be put in there as a statement standalone.

CHAIRPERSON RIDDLE: Richard?

MR. MATHEWS: Okay, I think we're getting into a stage where we can bail you out. This -- I think that the language as it's presented and the discussion that's going to be in the transcript makes it real clear that you're saying that lactating cows can not be withhold from pasture for any reason other than an urgent issue, such as they're sick or there's a hurricane coming through or a tornado or something, so you would have that. The -- we can work with the attorneys on the wordsmithing that needs to be done. No matter what you come up with and no matter what we then come up with, the attorneys will surely tinker with it.

CHAIRPERSON RIDDLE: Um-hum, um-hum.

MR. MATHEWS: Okay? So I think, at this point, the message is clear, unless somebody thinks otherwise.

CHAIRPERSON RIDDLE: Okay. Dave has another point.
MR. CARTER: Well, this is just a -- note. Since we eliminated (ii), we no longer need the (i) up there --

CHAIRPERSON RIDDLE: Yeah, good.

MR. CARTER: -- so just to clean it up.

CHAIRPERSON RIDDLE: All right. Okay, now I think we've polished it all we can and -- Rigo, you haven't said anything yet.

MR. DELGADO: I just have a question about the procedure. If you're going to have the lawyers tinker with our language, are we going to be able to look at that language and make sure that it meant what we meant it?

CHAIRPERSON RIDDLE: Well, just -- my response is, it would be posted as proposed rule, so we along with everyone else will have a change to tinker with the lawyers' language. They are to respond and comment on that lawyers' language, anyway. We won't be able to tinker with it, but I wish we could. But we will be able to comment on it and -- yeah, so -- all right. So now we will move to the vote on this as it's been amended, and we start with Dave.

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.
CHAIRPERSON RIDDLE: Bea is yes. George?
MR. SIEMON: Yes.
CHAIRPERSON RIDDLE: Rose?
MS. KOENIG: No.
CHAIRPERSON RIDDLE: Goldie?
MS. CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
MR. O'RELL: Yes.
CHAIRPERSON RIDDLE: Andrea?
MS. CAROE: Yes.
CHAIRPERSON RIDDLE: Rigo?
MR. DELGADO: Yes.
CHAIRPERSON RIDDLE: Hugh?
MR. KARREMAN: Yes.
CHAIRPERSON RIDDLE: Julie?
MS. WEISMAN: Yes.
CHAIRPERSON RIDDLE: Gerald?
MR. DAVIS: Yes.
CHAIRPERSON RIDDLE: Mike?
MR. LACY: Yes.
CHAIRPERSON RIDDLE: The Chair votes yes. We have 13 yes --
MS. OSTIGUY: Jim?
UNIDENTIFIED SPEAKER: Nancy, Nancy.
CHAIRPERSON RIDDLE: Oh, gees. Sorry --
MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: -- Nancy. And then the Chair votes yes after Nancy.

MS. OSTIGUY: Am I so unmemorable?

CHAIRPERSON RIDDLE: Well, I'm just looking -- I'm so narrow-minded. So we have 13 yes, 1 no, and no abstentions. Okay, Hugh, I think you have --

MR. KARREMAN: Okay. Now we're going to move on to the guidance document that previously the Livestock Committee had put out on January 26, but we have changed it and changed it again and yet again, taking into account -- really taking into account the public comment. And so I guess I probably should go through --

CHAIRPERSON RIDDLE: And get a little closer to that mike.

MR. KARREMAN: I should go through the whole thing, I think, except maybe B. But anyway, I would move that the Board accepts this guidance document for pasturing -- for pasture ruminants.

MS. OSTIGUY: Second.

MR. KARREMAN: Okay. So I think I should read it. Guidance for interpretation of 205.239(a)(2), organic system plan. Ruminant livestock shall graze pasture during the months of the year when pasture can

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
provide edible forage. The organic system plan shall have the goal of providing grazed feed greater than 30 percent dry-matter intake on a daily basis during the growing season, but not less than 120 days. The organic system plan shall include a time line showing how the producer will satisfy the goal to maximize the pasture component of total feed used in the farm system.

For livestock operations with ruminant animals, the operations organic system plan shall describe, one, the amount of pasture provided per animal, two, the average amount of time that animals are grazed on a daily basis, three, the portion of the total feed requirement that will be provided from pasture, four, circumstances under which animals will be temporarily confined, and five, the records that are maintained to demonstrate compliance with the pasture requirements. Okay. So the latest changes are in the italics up there on the screen.

MR. SIEMON: We replaced --
CHAIRPERSON RIDDLE: Well --
MR. KARREMAN: George?
MR. SIEMON: We replaced the existing second line and made it give a whole new line. I'm sorry I didn't mark the replacement.

CHAIRPERSON RIDDLE: Okay. Well, let's just
stay focused on this paragraph. Any comments or just clarification questions? Andrea?

MS. CAROE: So none of this language was posted at all and we have no public comment on this?

MR. KARREMAN: Part of the language was posted.

CHAIRPERSON RIDDLE:

MS. CAROE: On this new language --

MR. KARREMAN: No.

MS. CAROE: -- in this new concept.

MR. KARREMAN: That's correct. And I would -- I would recommend, if I may at this time, or later do I --

CHAIRPERSON RIDDLE: Well --

MR. KARREMAN: Well, okay.

CHAIRPERSON RIDDLE: -- most of this was posted, but the rest is responding to the massive public comments which are incorporated into this draft.

MR. KARREMAN: This guidance document that we're going to be reading through here is -- I feel should have -- should be moved upon by us and put out for public comment.

CHAIRPERSON RIDDLE: Yeah, so --

MS. CAROE: So the recommendation -- the motion changes.
CHAIRPERSON RIDDLE: Well, it could or it could not. We can vote to adopt, with the understanding that it will be posted for a round of public comment, and then if there needs to be reconsider, next time we will. But, Rick, would you help us here and then --

MR. MATHEWS: Arthur reminds me that he looked at the guidance document out now on how we're going to do guidance documents. So if you're sending us something for guidance, we'll offer guidance with that procedure, most likely --

CHAIRPERSON RIDDLE: Uh-huh, uh-huh.

MR. MATHEWS: -- which, then, there will be public comment on the guidance document.

CHAIRPERSON RIDDLE: Good point --

MR. KARREMAN: Because -- Andrea?

MS. CAROE: Well, I just want to know --

CHAIRPERSON RIDDLE: -- automatically.

MS. CAROE: -- the procedure is after that -- you know, I mean, obviously, from the testimony that we've received here, the dairy producers are very engaged in this process and do want a voice in this process. This is substantive input that's been included in this and I want -- I think that the final document should really reflect the broader comments, not just those producers that have been here. Although we put a
lot comments, it doesn't represent the universe of dairy -- organic dairy farmers. So my question, though, related to after those comments get -- come back in, the responsibility of the committee and the Board to address those in the guidance.

CHAIRPERSON RIDDLE: Um-hum.

MR. KARREMAN: I agree with that.

CHAIRPERSON RIDDLE: Yeah.

MR. MATHEWS: Jim?

CHAIRPERSON RIDDLE: Okay, Rick and then Kevin.

MR. MATHEWS: There seems to be -- there seems to be avenues. One, you can go ahead and do your thing on this guidance document, with the understanding that we'll do nothing with the guidance document other than to post it so that you can receive comment on it. And then you can act on it again in the fall. The other option is for you to send it to us to do a guidance document through the public comment process. It's up to you.

CHAIRPERSON RIDDLE: And my understanding of the way it's been presented now would be for the Board to send it to NOP. That's the motion that's on the table. Kevin, I've been saying -- you want to get recognized. You're too close to be recognized.
MR. O'RELL: I understand. Well, I guess what I was going to put out for a point of discussion is the fact that, I think, since we had some information -- new information, following up with Andrea said, that it should be a recommendation from this Board to be posted for additional public comment, to be acted on -- upon at the next meeting.

MS. Koenig: Instead of going to the NOP first, is that what you're saying?

MR. O'RELL: That's what I'm saying.

MS. KOENIG: Yeah, I agree with that.

CHAIRPERSON RIDDLE: Well, that --

MR. KARREMAN: Yeah. Yeah, I can agree with that --

MR. CARTER: Well --

MR. KARREMAN: -- because there are things in there.

MR. CARTER: Okay, procedure.

CHAIRPERSON RIDDLE: Yeah, Dave?

MR. CARTER: I would recommend -- as long as we understand what the -- what the options are in doing this. Now we have the motion on the table. We let the maker of the motion finish reviewing the document, and then if you want to amend that to specify, you know, which way it will be handled, would be probably the...
clearest way to do it.

CHAIRPERSON RIDDLE: A good suggestion. So please proceed.

MR. KARREMAN: I apologize. I don't know all this procedural maneuvering, so --

CHAIRPERSON RIDDLE: Oh, obviously we do.

MR. KARREMAN: -- I'm learning it on the spot. I'm learning it as we go. All right, should I read B?

CHAIRPERSON RIDDLE: And stay close to the mike.

MR. KARREMAN: Should I read B, temporary confinement?

CHAIRPERSON RIDDLE: Yes. Yeah, let's --

MR. KARREMAN: Okay.

CHAIRPERSON RIDDLE: -- let's go through the draft.

MR. KARREMAN: Okay, temporary confinement. Temporary confinement means the period of time when ruminant livestock are denied pasture. The length of temporary confinement will vary according to the conditions on which it is based, such as the duration of inclement weather; and instances of temporary confinement shall be the minimum time necessary. In no case shall temporary confinement be allowed as a continuous production system. All instances of
temporary confinement shall be documented in the organic
system plan and in records maintained by the operation.
Temporary confinement is allowed only in the following
situations: one, during periods of inclement, such as
severe weather occurring over a period of a few days
during the grazing season; two, conditions under which
the health, safety, or wellbeing of an individual animal
could be jeopardized, including to restore the health of
individual animal or to prevent the spread of disease
from an infected animal to other animals; three, to
protect soil or water quality. That has stayed the
same. Is there any discussion on that?

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: You're tired of hearing from me.
I just want -- this is very vague guidance and it has
been, and there's no definition of what is inclement
weather. There's no definition to what constitutes a
problem for health, wellbeing or the other one. I don't
remember the other --

MR. SIEMON: Soil and water quality.

CHAIRPERSON RIDDLE: Soil and water.

MS. CAROE: Soil. You know, there's no
definition of what the constraints are of those. If
it's raining, is it inclement weather? Can I make a
case for it in my organic system plan? I mean, I just
want this committee to recognize, you're offering
guidance to provide some definition, yet there's still a
whole lot of areas that need definition.

CHAIRPERSON RIDDLE: Hugh and then George.

MR. KARREMAN: I think, as far as the
inclement weather goes, when we do say over a period of
a few days, meaning, you know, like a hurricane, a
tornado, some act of god.

MS. CAROE: What's a few? I mean, I'm just
saying that these are words that --

MR. KARREMAN: Yeah. No, that's fair, that's
fair.

MS. CAROE: -- have a whole lot of --

MR. KARREMAN: Yeah.

MS. CAROE: You know, I can say that 30 days
is a few days in the bigger picture of life. But, you
know, I'm looking at this from a certifier's view, and
it is -- you're leaving it up to the certifier to make
some judgment decisions, which is fine. I'm just asking
that you recognize that there are judgments being made
here.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: I just want to make sure we
understand this within the context of are you delivering
an organic system plan that's going to deliver some very
specifics. You have to show that. Now, inside of that
there may be reasons to do it, but you can't -- you have
to first satisfy the top one. And yes, they are vague,
but they're very specific goals that you are shooting
for, that you delivered a plan that you can deliver on.
Those are very specific.

CHAIRPERSON RIDDLE: Yeah, I want to comment,
also, that hopefully you know that those -- the
temporary confinement is already allowed in the rule and
just with the words inclement weather, and this does
provide further guidance to producers and certifiers on
the limits of inclement weather. And the same thing to
the health and safety of the animals, it gives further
guidance. And yes, it is a bit, number one, a
discretion of the operator, of the farmer, and then the
discretion of the certifier in assessing how their plan
and their performance has complied with the rule. But
this does provide further guidance than currently
exists, and it's not changing the rule. Dave?

MR. CARTER: Well, I want to agree. You know,
Andrea, I agree with you, but I think, also, it's
difficult to make something for us that's going to be
over -- I mean, you talk about, you know, three days or
thirty days, or you know, are we going to get into
defining a level three hurricane as opposed to a level
five hurricane? And so you know, that's when we get down to some of these other areas and start tying it into NRCS, and I think it provides some guidance to those certifiers. But a lot of times, I mean, there still is going to be -- you know, there's going to be some calls, so we can't be overly prescriptive.

CHAIRPERSON RIDDLE: Okay, we've had a discussion of that --

MS. CAROE: And I just want to say that --

CHAIRPERSON RIDDLE: -- and is there something new?

MS. CAROE: I just want that to be recognized.

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: Okay.

MS. KOENIG: That's what I'd ask.

MR. CARTER: Yeah.

CHAIRPERSON RIDDLE: All right. Rose?

MS. KOENIG: I just -- again, with the severe
-- I just want to make people aware that, you know, in the south in the summer, if you went on any weather computer station, almost every day it's going to say severe weather -- you know, severe thunderstorms. So for four months you're likely to have severe weather. Is that consider a severe weather event that would be -- I mean, because it would end up being temporary
confinement for a couple -- the summer season, and
somebody could verify that almost every day, if you look
up the National Weather Service site, that they'll say
severe thunderstorms.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: If that's the case, I would --
I don't live in Florida, but perhaps March through June
it's nice, then June through August or whenever having
that weather, or after the hurricanes, in September and
October through November it's nice again and that's 120
days, two months in the beginning and two in the end. I
don't know, I don't live in Florida.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Hugh, I just -- I want to
understand what the motion is that's on the floor. Is
it the motion for this issue to be a guidance document
that we're voting on to post on the website for public
comments?

CHAIRPERSON RIDDLE: Let's come back to
that --

MR. O'RELL: Okay.

CHAIRPERSON RIDDLE: -- once he's done
presenting it. We will get clear on that.

MR. O'RELL: Okay, so long as we get clarity.

CHAIRPERSON RIDDLE: Yeah, okay, let's go to
number C, I guess.

MR. KARREMAN: Okay, C.

CHAIRPERSON RIDDLE: Uh-oh, Bea had one on B.

MS. JAMES: Hugh, you're doing really good.

I'm impressed.

MR. KARREMAN: We'll see by the end.

CHAIRPERSON RIDDLE: Do you want the turkey?

MS. JAMES: I guess, as long as we're really trying to analyze language in this -- in this section, that the one thing that I have a question on more than anything is the term temporary confinement, and that, you know, we all know in our minds what that means, that we're assuming that anybody who is handling their livestock is going to consider that as, you know, only a few days out of a season. But I think that there's the potential for misuse with those who don't necessarily follow the rules and try to read between the lines, and I think we just need to really be clear in our definition about -- about what we mean by temporary confinement, just for those who really -- you know, I'm just taking into consideration, yesterday, that we heard from so many people who felt that -- that that is currently being -- that that particular aspect is currently being abused. And so we need -- I think we need to really look at that.
CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: I think that's what we're trying to do in this whole process, because I think part -- stage of production was under temporary confinement previously, and we're making, you know, for the lactating cows that are being held in, let's say, when people think they shouldn't be. That is now becoming a rule change so that that can not be a temporary confinement, and that is where a lot of people had problems with the temporary confinement, that milk cows were being kept in away from grass -- grazing.

MS. JAMES: Right. But I just think that with a lot of the -- the wording in here, when you talk about inclement weather, severe weather, a few days, that there are people out there, unfortunately, that may not be real -- that they might try to interpret that and be able to reinterpret that as a justification, if they were to be inspected and be called on, not following that.

CHAIRPERSON RIDDLE: And, yeah, a comment and then Nancy. Temporary confinement is allowed in the rule and is not defined, and I think the first paragraph, in combination with the items in that second section, gives a lot more guidance, restrictions, definition to temporary. Temporary means temporary, and
I think -- well, I would assume that at least most of
the producers who spoke yesterday utilized temporary
confinement at one time or another during the growing
season. So you know, it's something that certainly
needs to exist with certain boundaries.

MS. JAMES: Yeah, I guess I would just like it
to go on the record that I don't think it's defined well
enough here.

CHAIRPERSON RIDDLE: Well, tell us what you
want.

MS. JAMES: I want it to be better defined.

CHAIRPERSON RIDDLE: Well --

MS. JAMES: And -- and I think that --

CHAIRPERSON RIDDLE: Yeah, but how?

MR. O'RELL: Well, yes.

MS. JAMES: -- if we do -- if we go with what
Kevin was proposing --

CHAIRPERSON RIDDLE: Okay.

MS. JAMES: -- and we get more people to
comment --

CHAIRPERSON RIDDLE: We can keep working on
it.

MS. JAMES: Yeah.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: We actually, I believe, have a
choice when we do the -- any of these things. We can be incredibly proscriptive and try and go after the individuals who are not following the spirit of OPFA, or we can do what is clear for hopefully most everybody, so that folks understand the parameters under which they need to function, and when there are problems, fix them. So I would really prefer to leave things as they are, assuming we don't get tons of public comment telling us that they want numbers, because we need flexibility for our geographic differences around the country.

CHAIRPERSON RIDDLE: Now, Dave and then Bea.

MR. CARTER: Well, yeah. And I think, you know -- and, Bea, not be flippant, that's what we're continually -- that's what we've been wrestling with in the Livestock Committee, is how do we start drawing some definition around it, you know, without getting overly proscriptive, even when it comes to, you know, terms of illness. I mean, we -- you know, critters are critters and you don't have -- you don't have the ability to know how long one is going to stay sick and have to be in the barn as opposed to another. And so we can't, you know, do that. Now, if you look at the document and the guidance that's being provided here, it does start to do -- I mean, the inclement weather then talks about severe weather occurring over period of a few days, which is in
more detail than is in the rule. Health, safety, and wellbeing of an individual animal could be jeopardized, and it goes into more detail there. And so we're trying to do that, you know, at this point. And I think as it goes on, you know, there'll be some additional comment.

CHAIRPERSON RIDDLE: Bea, yeah.

MS. JAMES: Okay. Yes, I agree, critters are critters, but people are people, too, and that as this industry grows and more and more people become interested in capitalizing on this industry, there are certain segments of what we are responsible for, making sure -- hold the integrity of those people, and I think that there are going to be situations where we do have to get more proscriptive in our language, because there is the potential for misuse.

MS. OSTIGUY: I have a question.

CHAIRPERSON RIDDLE: Yeah. Well, we still have one more section to present, and then -- and then be clear on what the question is. So, Hugh, would you -- oh, yeah, sorry.

MR. MATHEWS: I've found all of this discussion to be absolutely fascinating.

CHAIRPERSON RIDDLE: Well, I'm glad we're keeping you entertained.

MR. MATHEWS: Temporary confinement definitely
is still a problem. You do have people out there who undoubtedly are taking advantage of the wording as it is. For example, you could have broiler chickens who never see the light of day, and I know you don't want that to happen, but it is happening. And so at some point down the road, you do need -- and today is not the time to do it, but you do need to go back to this issue and look at it from all angles and try to come up with something that lends a little more concreteness to the issue, so that -- so that we can eliminate what people are using as loopholes. Unfortunately, it's just like -- Kim can tell you. For personnel actions, you always write the personnel rules for the bad guy, and all the rest of them suffer because of it. But I see that as being the same kind of situation here, where you have to write your regulations to prevent the bad guys from taking advantage of it. And it's -- and I'm not talking in terms of dairy, I'm talking in terms of all animals that are supposed to be provided with access to the outdoors. There's 101 reasons, and probably even more, of why I can't put my animal out today.

CHAIRPERSON RIDDLE: Okay, well, it's been an informative and entertaining discussion so far. Hugh, would you like to present the last point?

MR. KARREMAN: May I just add one thing right
before that, that I believe what we're doing here right
now is tightening up a lot of those loopholes that
presently exist. It might not be perfect, but it's
certainly going that way.

CHAIRPERSON RIDDLE: But we're doing it in the
context of guidance --

MR. KARREMAN: Right.

CHAIRPERSON RIDDLE: -- and we may need to --
as we post this, get more input, take it to a rule
change on this particular item is what I'm hearing.
Please proceed.

MR. KARREMAN: Okay. So appropriate pasture
conditions. Appropriate pasture conditions --
appropriate pasture conditions shall be determined in
accordance with the regional Natural Resources
Conservation Service conservation practice standards for
prescribed grazing, Code 528, for the number of animals
in the organic systems plan. And therefore I think that
might answer a little bit to Rose's concerns in your
specific region, because the NRCS would -- is specific
to regions, about growing season and pasture and
whatnot. And I think that speaks to that, maybe not
perfectly well, but it does. And since there's been a
lot of discussion on this, and before we call the
question, is it -- it's up to the Chairman, of course.
Would it be possible to maybe have just any kind of informative interjection from the farmers that are specific to changes that we've discussed in the last two meetings in the last 24 hours?

CHAIRPERSON RIDDLE: Well, yeah, I understand that one person will present some comments or is prepared to present some comments in reaction to the changes we're proposing, and I think it would be informative to all of us to take the time to hear that, so long as they are as concise as possible. So if we can ask Tony to approach the podium and give us some reaction on what we have on the table right now. It looks like --

MR. a: Thank you very much. And I --

CHAIRPERSON RIDDLE: You can bend that up so you don't have to bend over. There you go.

MR. ACEVEDO: My name is Tony Acevedo from California, the San Joaquin Valley, and I'm a dairy farmer, 350 acres, 600 head, irrigated -- irrigated ground. I'd like to say that I'm very impressed with the accomplishments here. You're making my job very easy. There is -- on the rule change, we would like to see just a couple of words added -- if you look on that paper in front of you -- and the words are maximum; growing suitable grasses and other forages from which
animals graze; plant life material still connected to the roots. But we don't feel that these are major changes, but just it helps to define so that there is not any confusion. And I've noticed a great deal of consideration to trying to define these and I'm very impressed with that.

CHAIRPERSON RIDDLE: And just on that point, I'll just respond that the definition of pasture is not part of our recommendation right now. That would be a relevant comment to submit and for the Livestock to consider if that pasture definition should be further refined. But that would be a different rule change. So I appreciate that comment, but it's not exactly germane to what we're --

MR. ACEVEDO: It does not apply here?

CHAIRPERSON RIDDLE: Yeah.

MR. ACEVEDO: I apologize for that.

CHAIRPERSON RIDDLE: Okay.

MR. ACEVEDO: The only thing that I still hope that you would take into consideration, because it would solve a lot of problems, on the guidance document, not as a rule change, not as a rule, but the guidance document. I come from an area that 25 years ago we had a per cow -- so many cows per acre and it was set by the county, and it was a standard figure so that
overstocking wasn't allowed, and they decided for
 economical reasons to erase that. Because they erased
 that, I am now in one of the worse counties in
 California as far as water quality and air pollution.
 So by adding a three-cow per acre, it is -- it does not
 keep anyone out of organics, but just for water quality
 or the health of the soil. And I feel this is just very
 important to have at least in the guidance document and
 I'm hoping that you will consider that. Is there any
 questions?

 CHAIRPERSON RIDDLE: I think you're real clear
 on that, and I guess I would ask if any of the Board
 members would care to offer an amendment to insert a,
 you know, maximum stocking rate of three cows per acre
 into the draft, and if not, then we'll just take it, you
 know, as comments, but resubmit it once this gets close
 -- Nancy?

 MS. OSTIGUY: I would actually like to the
 committee to look at this, because my interest -- I have
 no problem with three cows per acre. What I'm curious
 about is what the geographic differences are. There are
 some places where three cows per acre is way too many,
 which that's fine, but there are some places where it
 might be okay, and I don't want to constrain things if
 we don't have to, but it may work. So I'd like for the
committee to look at it is what I'm saying. Not that we disagree.

MR. ACEVEDO: Well, I felt -- or the reasoning behind these numbers -- and I need to -- this is numbers that were taken from across the United States. It wasn't just a segment from the east or the west or the north. It is better to set a bar that everyone can go under, and that's why the number three came up. Now, the other reason number three came up, because as you well know, a thousand-pound cow puts out 80 pounds of feces a day. So you times that by three and then you times that by 365 days, because even when she's in confinement, that farm has to handle that waste. That's -- you know, that's about all you can do, you know, you're right there. But as far as pasturing, it's just a -- it's just a maximum.

MS. OSTIGUY: Yeah. Well, my only concern is putting the number there, when we haven't looked at it all. I was very comfortable -- am very comfortable with the 30 percent and 120 days because we discussed those kinds of things. It's just to make sure that we're more informed than to put a number to something.

CHAIRPERSON RIDDLE: Hugh and then Andrea.

MR. ACEVEDO: Do you want me to sit down?

CHAIRPERSON RIDDLE: I think so. If we have
another question, we'll call you.

MR. ACEVEDO: He said yes, you said no.

CHAIRPERSON RIDDLE: Oh. Well, maybe he has a
question for you.

MR. ACEVEDO: Okay.

MR. KARREMAN: No, it's just to -- I personally don't have a problem with the three cows per acre max. But I think it's a lot better basis for making decisions in the agro-ecology of organic dairy farms, in whatever region, if we are to look at the NRCS stocking rights, and that will be different per county in the United States. So maybe you'll only have two cows per acre in certain areas, maybe you'll have four. I don't know, but it's all site-specific. That's why I'm a little hesitant with just -- I can agree with it, but I'd rather rely on the Conservation Service for that. That's just my opinion.

CHAIRPERSON RIDDLE: Andrea and then Gerald.

MS. CAROE: Based on what we're hearing here today as the concept as it's being presented and the fact that it's new, I strongly urge this Board to present this for comment only and not enter it as a recommendation to the NOP, and get that bigger picture view from these organic dairy farmers. I don't know if three cows, whether it's viable or not. I shouldn't be
making that decision. That information needs to be coming from the industry.

CHAIRPERSON RIDDLE: Thank you. Gerald?

MR. DAVIS: My comment's similar. In the comment period, I would hope all the people would weigh in in the comments of what -- they would point out deficiencies in the NRCS date across the country. It'd be interesting to see how many comments we get, well, in my area, it's no good or they've deleted the -- there's no funding or all that kind of stuff, or there's nothing that exists that -- maybe it's more well-developed in New York or Lancaster, Pennsylvania, where Hugh is from and relies on them heavily.

MR. ACEVEDO: So it would be put in for public comment, is that what I'm understanding?

MS. CAUGHLAN: Yes.

MR. ACEVEDO: Oh.

CHAIRPERSON RIDDLE: The draft, but not -- the three cows per acre, no one's offered an amendment, so it currently stands as it's been presented by Hugh. But the --

MS. JAMES: I would like to offer an amendment.

CHAIRPERSON RIDDLE: Well, I recognize Richard first. He was waving his hand, so hold your amendment.
Richard?

MR. MATHEWS: Okay. I'll try to keep it brief so Bea can offer her amendment. The thing that I want to remind everyone of is that you've got some numbers in this guidance document. I have no problem with that. I mean, if you want to use 30 percent, 120 days, three animals per pasture, I have no problem with that. But I have to say that all three of those figures in a guidance document are unenforceable. So if somebody came up with 25 percent, we can't suspend or revoke. If somebody only did 119 days, we can't suspend or revoke. If somebody put five cows on that pasture instead of three, I can't suspend or revoked based on the fact that they exceeded the number in the guidance document.

Now, if they are guilty of polluting the environment because they are overgrazing, that's another matter. I can't go after people for overgrazing, I mean, because there's nothing there that defines quality of pasture in a quantifiable way that we can determine whether or not somebody's overgrazing. So it becomes very difficult for certifying agents to know when something is an offense that is enforceable. So it's -- the numbers are nice, but as a guidance document, they don't have any teeth, okay? So I just want to remind you of that.
The problem with putting numbers in, as I see them, and I had the great fortune of talking to about 200 dairy farmers in the past month, and I find that, very interesting, they all have some good ideas. The one thing that I caution everyone at when I talk to them is, are you creating a standard in which you can't meet? And the reason -- the things that concern me is that -- and I'm not saying that the three is a wrong number. It may very well be the right number. I heard an extension agent say three is the right number. I heard a dairy farmer argue that the quality of his pasture is so good that he can do four. I've heard others say, well, I know Joe over there, he couldn't do one on 10 acres, okay? And part of that problem, as I see it, for setting stocking rights is that you also have to have a pasture quality statement, and I don't know where we are at this point with quality of pasture. And I do know that he was trying to address some of that through these amendments that he's offering, and that's why the NRCS is in there, it's trying to get to the quality of pasture up. So I mean, I'm not passing judgment on anything, I'm just tossing out some what ifs, some things to think about.

CHAIRPERSON RIDDLE: Okay. Bea and then Dave.

MS. JAMES: Well, I don't know now. It's
CHAIRPERSON RIDDLE: Okay.

MS. JAMES: I've got to think about it now.

CHAIRPERSON RIDDLE: Well, we can't accept that as a motion.

MS. JAMES: No. You know --

CHAIRPERSON RIDDLE: That's okay.

MS. JAMES: -- I'm just like -- you know, I'm confused.

CHAIRPERSON RIDDLE: All right. Well -- all right. Dave?

MR. CARTER: Yeah, that's not a motion, that's --

CHAIRPERSON RIDDLE: Dave, and then I have a comment, and then Rose.

MR. CARTER: It's not a motion, that's an emotion, and I'll second that. But the --

MR. MATHEWS: Jim?

MR. CARTER: No, wait. I will -- let me, if I can -- the other thing, let's remember, is that when we're talking about setting rules for organic system plans and access to pasture and everything, that not every animal out there is a dairy cow, and not every ruminant is a diary cow. And so we're trying to carve -- we're trying to frame some things in terms of the
excrement that comes out of the backend of a dairy cow, you know, et cetera and so on. And that's why I prefer to go with the regional and NRCS, where it talks about regions, it talks about animal units, those type of things. And I think that if we say no more than three here and then, you know, the NRCS down there, it creates more confusion than it does clarification.

CHAIRPERSON RIDDLE: Okay. I have a comment and it's in response to Rick's comment about not being able -- a certifier and USDA not being able to take action against overgrazing, and I certainly hope that that's not the case, because the definition of pasture is very clear, that the -- well, that it's managed to provide feed value and maintain or improve soil, water, and vegetative resources. So if someone is degrading vegetative resources through their overgrazing, that could be a cause for action.

MR. MATHEWS: But -- yeah --
CHAIRPERSON RIDDLE: So --
MR. MATHEWS: -- it could be, but -- I mean, it could also get into a situation of splitting hairs --
CHAIRPERSON RIDDLE: Sure.
MR. MATHEWS: -- and he said, she said type of thing.
CHAIRPERSON RIDDLE: Sure, yeah.
MR. MATHEWS: Which would be more difficult.

CHAIRPERSON RIDDLE: But in the extreme.

MR. MATHEWS: Yeah.

CHAIRPERSON RIDDLE: Okay.

MR. MATHEWS: Well, in the extreme, it's going to be pretty obvious --

CHAIRPERSON RIDDLE: Yeah.

MR. MATHEWS: -- if they're overgrazing.

CHAIRPERSON RIDDLE: Yeah. But there could be action. Rose? And then I saw one over here.

MS. KOENIG: Well, I mean, I have nothing wrong with the guidance document per se, but what I'm hearing and what I stated yesterday is that I believe -- and I don't think it can be accomplished at this meeting, you know, which I don't have a problem with that. But I think, in fact, that you want an enforceable regulation, you want to quantify it in the regulation, and if you're not prepared to do it today, I think the guidance document couldn't go forth as far as a draft, because that's what it is, it's guidance. But I still believe that you want to see a quantifiable measure within a rule in this case and I don't think you're ready to do -- I am certainly not ready to vote on it today and I don't think that your committee -- you know, I think the farmers -- and I'm thinking as a
farmer. I'm not a dairy farmer, but I know, I think, what farmers feel and they would rather see this Board and this Program do it right, because six or nine months really is a very -- even though said 18 months was a lot, in terms of the impact, it's huge for growers, and we're willing to learn -- I am. I honestly will, but I am a grower. I think we're willing to wait for the right change rather than to not do something that will not achieve what ultimately all these folks want.

CHAIRPERSON RIDDLE: Okay. I was going to hit you, but that's your broken arm. Kevin?

MR. O'RELL: Well, I just want to echo Rose's sentiments that, you know, we've gone through a process here and we have passed a motion for a rule change, too, which is -- which is significant, it's significant progress, and that rule change will take 18 to 24 months to be effective. Why are we rushing with a guidance statement that supports that rule change? I think we really need to publish the guidance statement. This has come out of the Livestock Committee, several different drafts, and now we're getting input from the audience and trying to change it to numbers, I think we need to stick to the recommendation that came out of the Livestock Committee and decide whether we want to have a posting for public comment and input.
CHAIRPERSON RIDDLE: Um-hum. Well said, and I think we've had a lively debate.

MR. ACEVEDO: Thank you.

CHAIRPERSON RIDDLE: Thank you, Tony --

MR. KARREMAN: Thank you very much.

CHAIRPERSON RIDDLE: -- for your input. I've heard no amendments proposed to the draft coming out of the committee. The thing I've heard repeatedly stated from Board members is the need for this to be posted for a round of public comment. So would you restate your motion and make sure that the seconder is on board with that?

MR. KARREMAN: Okay. I would move, then, that this guidance document on livestock pasture requirements go out for public comment and we take a vote on it the next time we meet in the fall.

CHAIRPERSON RIDDLE: But did we --

MR. KARREMAN: And it comes out of the NOSB for pasture -- for comment and we can reevaluate things based on public comment at that time. I agree. The only thing -- that's the only obvious clear thing to me is that there's a lot of discussion, but I think we're all on the same page, so to speak, but it needs to be fleshed out a little better and I think we can do that.

MR. CARTER: At some point did you stop making
the motion?

CHAIRPERSON RIDDLE: Yeah.

MR. KARREMAN: Was that right? I'm not used
to that. I'm sorry. Okay. All right, I'll make a
motion that we send this out for public comment.

CHAIRPERSON RIDDLE: Okay.

MS. OSTIGUY: And I believe I was the
seconder. That's fine with me.

CHAIRPERSON RIDDLE: Okay, so Hugh moves and
Nancy seconds that this draft, as presented by
committee, be posted for public comment. All right.
George, a closing comment here?

MR. SIEMON: No, it's open --

CHAIRPERSON RIDDLE: Well --

MR. SIEMON: Okay. I just opened up the NOP
guidance document and they've got level one, level two,
that their all available for public comment. So are we
saying it's not going to enter into the NOP and then
they look for guidance? It's pre-NOP guidance input
versus then we'll give it to them and we'll have post-
NOP guidance input?

CHAIRPERSON RIDDLE: That's --

MS. OSTIGUY: Yes.

MR. SIEMON: I sat through this meeting -- we
always -- and vote. We always change here because
that's what the input's for. And to go and get more input, then we'll change it again, and then someone will say, let's send it out again. This is a guidance document. We've got 5,000 comments. You know, I need to understand how it relates to NOP guidance -- my question -- that we got a proposal from NOP.

CHAIRPERSON RIDDLE: Okay. And I saw Nancy first, then Kevin, then Hugh.

MS. OSTIGUY: That's -- George, your comments are applicable to almost anything that we do, but we could go on forever with getting public comment and you know, there is a point where we have to make a decision and move forward. I think, because of the volume of comments and the volume of comments during the meeting, this is a situation where we should go back to committee to take into account that the additional comments that might come from our on-the-fly changes, all of this, no matter when we make a decision, it can come back up for public comment again.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes. And, Nancy, just following up on your comment, I mean, we have made some significant changes, and the fact that now we're starting the NRCS, that was never published for public comment in the Livestock recommendation that went out.
And I think that it would be warranted to get public
input on the NRCS.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: I think, when we came out with
the original guidance on January 26 and we voted in the
Livestock Committee, it was then posted two weeks later
by NOP, and I'm not sure what the procedures are, but I
have in my mind that there's a 30-day public comment
time in general for things. And --

CHAIRPERSON RIDDLE: Well, that's just a
guideline, yeah.

MR. KARREMAN: Right. So --

CHAIRPERSON RIDDLE: Normally, it would --

yeah.

MR. KARREMAN: I mean, we got like five or
seven thousand comments, basically, unanimously
supporting that document, okay? We have changed that
document now, I think, by adding NRCS stuff and whatnot,
and I think we really need to have fresh input. And
maybe we have five or seven thousand comments again
saying that's great, or we'll get even more farmers
adding into the conversation. But I think we've really
improved things, too, right now.

CHAIRPERSON RIDDLE: Again? That's okay.

MR. O'RELL: Well, yeah. And, Hugh, I agree
with that, because the NRCS is something new to this and I really think we need to get out there and get the public input.

UNIDENTIFIED SPEAKER: I can't hear you.

CHAIRPERSON RIDDLE: Try again

MR. O'RELL: Try again? I don't remember what I said.

MR. SIEMON: You agree with --

MR. O'RELL: Ditto. But there was another point I was going to make. This is guidance -- a guidance document. It doesn't have the force of law. We did a rule change that we're putting through the system that does have the force of law. So for a guidance document that doesn't have the force of law, and we've made significant changes to the recommendation that was posted, I don't see why we don't go the route of posting it for additional public comment.

MS. OSTIGUY: Um-hum.

CHAIRPERSON RIDDLE: Okay.

MS. OSTIGUY: Can we call the question?

CHAIRPERSON RIDDLE: We can, but I was going to make a comment, so we won't.

MS. OSTIGUY: No, no, Rose is first, Rose is first.

CHAIRPERSON RIDDLE: And Rose, too. So I
haven't recognized Rose, so Rose first, and then I will, too.

MS. KOENIG: Can I ask the Livestock Committee -- I've heard it twice saying that we proposed two significant rule changes. Will there be a proposal from the Livestock Committee to make any additional rule changes that add specificity to the number -- it's either 30 percent, as the public comment said, or are you saying that that is only going to be embedded into this guidance document?

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: It depends on public comment.

If what we're hearing, including from the Board, is that it ought to be a rule change, then that would be what comes back as a recommendation to the Board, is a rule change. If the general gist is we're okay with the guidance document, we'll stay with that. I have no preconceived decision at all.

MS. KOENIG: But when we send these two definitive rule changes to NOP, so long as they are willing and makes sense to their lawyers to have two separate documents with rule changes that impact the same area of the regulation, I mean, is that the effective way of doing it, or does it not matter to you how many -- I mean, I may have misunderstood. I mean,
I've been here for five years and it's very rare that you've ever even agreed to do a rule change and I want to get it right, because I'd love to see it in the term I've been on the Board. So I mean, the fact that you said you do it once, the idea of doing it twice, because it takes time and I know it takes a long time, so --

MR. MATHEWS: It takes a long time, it takes a lot of work, and it's hard to get things accomplished, especially when staff is busy doing other things. But I don't care how many rule changes we have to do. We can do them one docket at a time. So we can move forward with what you've already proposed, and then if you come back later and want to change this guidance document into some more rulemaking, we can do that as well. So it's -- you just make your recommendations and we'll do our best to get something done. If you look at us historically, we may still be working on the first proposal by the time you come out with something at the next Board meeting.

CHAIRPERSON RIDDLE: Dave, and then I'd like to move to a vote.

MR. CARTER: No. I was just going to say -- I mean, we do pass materials at various -- you know, each meeting and they got -- you know, they get rolled into one, you know, thing. And I think that the more we can
get stuff to them now, and if we come up with something at a different meeting, they will still have this, I'm sure, under drafting at that point. So let's go ahead and vote on it.

CHAIRPERSON RIDDLE: Okay, well --

MR. SIEMON: I just think it's important to remember, we were asked by the NOP to come up with a guidance document on pasture. That's what we set out to do. I think we've got a good document here. That's what they asked -- in the midst of that, we decided to go for a rule change. We didn't feel it was fair to go all the way to the rule change at the last minute. The ones we put forward help a lot, but to go all the way and you get all of this down was where we didn't feel we could do that so quick. We feel very good about our guidance document. I feel like we need to send direction to the Department of what our intent is, and I think this document represents that.

CHAIRPERSON RIDDLE: Right. And I agree with you, George. I think we've put a tremendous amount of work, and we've had five Livestock Committee meetings since we've been here, and we've received massive amounts of comment, and yeah. So I -- I will be voting no on this motion, because then we can reconsider it as guidance to NOP. Either way, it will be posted. And
so, Hugh, if you agree with George, you would vote now and then it can come back for a second vote.

    MR. MATHEWS: Jim?

    CHAIRPERSON RIDDLE: Yeah.

    MR. MATHEWS: To just lighten it up a little bit --

    CHAIRPERSON RIDDLE: Sorry.

    MR. MATHEWS: -- just because you vote no doesn't mean it has to be a new motion. There might be --

    CHAIRPERSON RIDDLE: Well, it doesn't mean it's dead. If it's defeated, it doesn't mean it's dead, is what I'm saying.

    UNIDENTIFIED SPEAKER: You're supposed to vote last, not first.

    CHAIRPERSON RIDDLE: Well, yeah. I'm just --

    UNIDENTIFIED SPEAKER: You just voted.

    CHAIRPERSON RIDDLE: -- that -- no, I haven't voted. I said, no, I'm going to -- just to let you know that it doesn't mean it's dead if this motion is defeated.

    MS. OSTIGUY: I call the question.

    CHAIRPERSON RIDDLE: So yeah, Hugh is gone and we start with Bea.

    MR. SIEMON: Okay.
CHAIRPERSON RIDDLE: So the motion is to post for comment only, it would not be to provide guidance to NOP, this motion as it's presented.

MS. JAMES: So it would absolutely be considered yes?

CHAIRPERSON RIDDLE: A yes?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Is this on just to post for comment, right? No.

CHAIRPERSON RIDDLE: As opposed to --

MR. SIEMON: No.

CHAIRPERSON RIDDLE: -- guidance to NOP.

That'd be no. Rose?

MS. KOENIG: Can you restate the motion? I don't quite understand what it is.

CHAIRPERSON RIDDLE: Well, the -- do you have it there? The motion is to post as guidance document for public comment.

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAROE: Yes.
CHAIRPERSON RIDDLE: Rigo?
MR. DELGADO: Yes.
CHAIRPERSON RIDDLE: Hugh?
MR. KARREMAN: Yes.
CHAIRPERSON RIDDLE: Julie?
MS. WEISMAN: Yes.
CHAIRPERSON RIDDLE: Gerald?
MR. DAVIS: Yes.
CHAIRPERSON RIDDLE: Mike?
MR. LACY: No.
CHAIRPERSON RIDDLE: Nancy?
MS. OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Dave?
MR. CARTER: Yes.
CHAIRPERSON RIDDLE: And the Chair votes no.
We have -- that'd be 11 yes and 3 no, 0 abstentions, so
it passes and will be posted for public comment, and we
don't have to vote again. All right, good work.
MR. SIEMON: That's it for the Livestock report.
CHAIRPERSON RIDDLE: Okay. It's 2:30. Oh,
gosh. Are you ready? Do you have a half-hour type item
that we can deal with before a break? I mean, we got --
MS. KOENIG: Yeah, I think so.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
CHAIRPERSON RIDDLE: Well, I hate to let people out -- don't exist. If you --

MS. KOENIG: Yeah, I think what we could do is pick out one of things that we had already gone over.

CHAIRPERSON RIDDLE: Yeah, yeah, yeah. So if you -- and if there's something that we aren't going to take action, let's just make our reports pretty brief, if possible.

MS. KOENIG: So do you want --

CHAIRPERSON RIDDLE: Well, you have everything that's in the meeting book. So, Rose --

MS. KOENIG: Arthur, what I'm going to do is -- Jim wanted a short -- one of our short items, and I think the last one, the materials review procedures would be the item that we kind of discussed that prior to lunch.

MR. NEAL: The materials review procedure?

MS. KOENIG: Yeah.

MR. NEAL: This last --

CHAIRPERSON RIDDLE: Okay. So that's in tab eight, materials review, right?

MS. KOENIG: Yeah.

CHAIRPERSON RIDDLE: Nancy.
MS. OSTIGUY: I wanted to thank the NOP for copying a whole bunch of stuff for us on the prescribed grazing and stuff from the NRCS. It's very useful. Thank you.

CHAIRPERSON RIDDLE: Yeah. And I'll just point, there are some extra copies up here. There is a copy of the National 528, the prescribed grazing standard, and then some other background information. So when we take a break, if you'd like one of those, there are extra copies, so don't let them go to waste. So members of the public. Everyone on the Board got them already. So okay. Rose, are you ready?

MS. KOENIG: Okay, it's over here. Let's go to that. And the reason I brought this one over is because I thought it would be fast. It's actually the information I went over prior to lunch, with the different phases. And Kim had asked, had the Materials Committee seen this -- this one? The recommendation that NOP -- well, this is what -- NOP had given us a draft and asked for comments on the procedures.

MS. CAUGHLAN: Which one? Is this --

MS. KOENIG: Under tab eight, the materials review.

MS. CAUGHLAN: Oh, okay.

[Simultaneous comments]
CHAIRPERSON RIDDLE: Yeah, yeah.

MS. KOENIG: And Jim and myself had made some changes to the document, and this is what was presented. It is the working -- the working procedure and it would be recommended to add to the Board policy manual to update what exists in terms of the procedures. One of the questions was, we had 14 or 21 -- that one sheet that said ask Rose. Well, that is based kind of on our last process. So we would incorporate a sheet, timing a little bit more accurately, based on this document. And then, again, to me the only substantial -- it's a change in the sense that it's in OFPA, but one area that I said I think that needs some, perhaps, discussion -- I'm not sure if we can decide upon it today, but if we could agree to embody the concept, I guess, because the concept is in this document without the details, and I think the Materials Committee would have to work on the details. It's on page -- it's on the third page, under phase five.

And again, this is when -- after we sent the petitions out to the -- to the TAP contractor. Well, I always say the technical contractor, the person who gives us our information back. And we get that information back and it comes to committee. If you go down to the bottom of the page it says convene a
mutually convenient time to review, and then the committee may convene a technical advisory panel, by electronic mail or a conference call, to provide scientific evaluation of the petitioned substance, as provided by OFPA 6518(k)(3).

So that to me is -- again, it's something that is -- it was in the Organic Foods Production Act, under what our mandate is in terms of the review of materials. The only thing that isn't specific and won't get anymore specific in this document, I think is a working -- the next working plan document for the Materials Committee, as to how we would procedural go about organizing.

MS. OSTIGUY: I have a point of order. Are we supposed to have motion first?

CHAIRPERSON RIDDLE: That's what I was just going to ask, if you would like to --

MS. KOENIG: Oh, I'm sorry.

CHAIRPERSON RIDDLE: -- move this as an amendment to the Board policy manual. Is that how -- is that the --

MS. KOENIG: Yes.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Thanks, Nancy.

MS. KOENIG: Sorry about that.

CHAIRPERSON RIDDLE: No, that's fine.
MS. KOENIG: I'm trying to get through in 30 minutes.

CHAIRPERSON RIDDLE: Um-hum. Okay.

Discussion? We're all like --

MS. OSTIGUY: Everybody's exhausted. Call the question. There's no discussion.

MR. DELGADO: Can you restate the --

CHAIRPERSON RIDDLE: Well, the -- yeah, the motion is to adopt the materials review process as an amendment to the Board policy manual to update that section of the Board policy manual. Yeah, and Kim has a point here.

MS. DIETZ: Just following up on that again. If we could just ensure that that's in the Materials Committee work plan to develop that guidance document, that way before you review materials again, I know that you have something.

CHAIRPERSON RIDDLE: I'm sorry. Can you be clear exactly which --

MS. DIETZ: Under the technical reviewers, if you could have some guidance document before you actually start using this policy, so that we understand what that process is. And put it on the committee's work plan.

CHAIRPERSON RIDDLE: Yeah. And that was a
point I think is critical that you had brought earlier, that -- I mean, these procedures already are being followed, but the missing link is this new responsibility to the Board, because it used to be the contractor convening the panels, but now that's not part of their statement of work and we don't have procedures yet for the selection of those potential panel members, how they would function. So the Materials Committee, we'll put that on your work plan for the future.

MS. CAROE: Jim?

CHAIRPERSON RIDDLE: Yeah, Andrea.

MS. CAROE: Can I ask which section this is going to replace and where this is going to placed in the policy manual? It's on page 22?

UNIDENTIFIED SPEAKER: You should go to the policy manual.

MS. CAROE: I think it's page 22, but I just want to make sure.

CHAIRPERSON RIDDLE: That's -- on page 22, Rose, is where the current materials review process is, where it's day one through fourteen, blah, blah, blah.

MS. KOENIG: Yeah, it would -- the petition information is renewed, update petition -- it would go in where -- we still may have an abbreviated format on 22, you know, that maybe kind of takes all that.
information and summarizes it, but pretty much there.

So it would be --

MS. OSTIGUY: In addition to --

MS. KOENIG: No, it would -- this is old.

This was based on the old materials review process, because we didn't have a -- kind of a formal, written procedural document between NOP and the National Organic Standards Board. So this was presented and this would replace that document.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Rose, just a question in terms of the time line, then. On page 22, we have the procedures and we have the time line, and this new document has no time line associated with it. Is that something that's going to be integrated or --

MS. KOENIG: Well, I think it's going to be integrated, but one of the issues in the draft, because of kind of this changeover, it's just taken a lot longer than it ever has with -- Arthur probably could, you know --

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: Right not there's no associated time line, because all of the materials that we're getting have too many questions surrounding them.

That's why the process has slowed down so much, because
we have to take time to look at them a lot closer. And
the materials that we have on the table for this
meeting, it took one whole year for it just to get to
this meeting because there are too many questions. So
for right now there is not time line associated with it,
just because of the whole back and forth going on, and
then we brought on new contractors, where now they're
trying to find out how long it will take them to
actually complete a TAP. So once they've gotten into a
groove and we've got a set of our reports back from them
to you, then we'll be able to hammer out the new time
line.

CHAIRPERSON RIDDLE: And, yeah, I'd just would
like to point out that in this draft from the committee,
put together by NOP, there are some time frames.
There's like 21 days for the Materials Committee and the
relevant, applicable other committees to respond to a
petition that's been circulated, and another place where
there's 21 days, and then there's 30 for drafts to be
posted. So there are some time frames, but not an
overall time line.

MS. JAMES: Jim?

CHAIRPERSON RIDDLE: Yeah, Bea.

MS. JAMES: So if we incorporated the time
line in there, it would be a guideline, but it's not
enforceable, right? Is that -- am I correct in stating that?

CHAIRPERSON RIDDLE: It would be a guideline that theoretically is enforceable, but has not been enforced.

MS. JAMES: Okay.

CHAIRPERSON RIDDLE: Okay, any other comments? Is everyone -- Kim?

MS. DIETZ: Sorry, guys.

CHAIRPERSON RIDDLE: Well, no problem.

MS. DIETZ: As the past Materials chair --

CHAIRPERSON RIDDLE: This is your last hurrah. Make the most of it.

MS. DIETZ: Yeah. I feel it's really important to have some kind of a time line so the public understands the process of -- even if it's a very vague. I'd be happy to volunteer because I'm good at those little flow charts. To at least just take what we have -- you know, once a petition is received, we don't know the time between when the NOP receives it and when the contractor gets it, but we do know a time frame from once you guys receive a petition -- or a TAP back. And I think, at the minimum, the public should have that time line document so they know what they're expecting. I know there was a comment a couple days ago about a
petitioner that didn't get anything until two weeks before this meeting, and I think we need to really be careful with that and make sure the public gets what they want and what they should be expecting. So --

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: And I think that, Kim, it ought to be done. I just -- you know, in the past, I think we've gotten in -- because it says here the minimum flow, and maybe we can have a general statement, the minimum time, and then only in the areas -- once we get the TAP, we can control our time a little bit better.

CHAIRPERSON RIDDLE: Arthur.

MR. NEAL: Also, the time frame that Kim is mentioning, those are covered. See, the idea is to have this document posted on the website for all petitioners, but we didn't put it on the website just yet, until it comes out of the Board as being acceptable. But once all the petitioners have this document, they'll be aware of what to expect once they petition a substance.

CHAIRPERSON RIDDLE: Okay. Seeing no further debate, we will vote on the materials review procedures as an amendment to the Board policy manual. And we begin -- we begin with George.

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. KOENIG:  Yes.

CHAIRPERSON RIDDLE:  Goldie?

MS. CAUGHLAN:  Yes.

CHAIRPERSON RIDDLE:  Kevin?

MR. O'RELL:  Yes.

CHAIRPERSON RIDDLE:  Andrea?

MS. CAROE:  Yes.

CHAIRPERSON RIDDLE:  Rigo?

MR. DELGADO:  Yes.

CHAIRPERSON RIDDLE:  Hugh?

MR. CARTER:  Absent.

CHAIRPERSON RIDDLE:  Absent.  Julie?

MS. WEISMAN:  Yes.

CHAIRPERSON RIDDLE:  Gerald?

MR. DAVIS:  Yes.

CHAIRPERSON RIDDLE:  Mike?

MR. LACY:  Yes.

CHAIRPERSON RIDDLE:  Nancy?

MS. OSTIGUY:  Yes.

CHAIRPERSON RIDDLE:  Dave?

MR. CARTER:  Yes.

CHAIRPERSON RIDDLE:  Bea?

MS. JAMES:  Yes.

CHAIRPERSON RIDDLE:  The Chair votes yes, so we have 13 yes, 0 no, 1 absent.  Okay, it's a quarter
until 3:00. I think it's a good time for a break. We accomplished something else, so that's good, and then we'll come back for more of the Materials Committee, okay?

MS. KOENIG: That's fine.

CHAIRPERSON RIDDLE: All right. So --

MR. DELGADO: How long is the break?

CHAIRPERSON RIDDLE: Yeah, 15 minutes. At 3:00 p.m. is when come back.

***

[Off the Record]

[On the Record]

***

CHAIRPERSON RIDDLE: All right, we -- all right, we've got a quorum of the Board here. We'd like to resume business. We still have both the Materials and Crops Committees yet this afternoon. And we go back to Rose and your next item.

MS. KOENIG: Okay, the next item is -- is actually --

CHAIRPERSON RIDDLE: And could people, you know, close the door and quiet down in the audience? Thanks.

MS. KOENIG: The next item I want to deal with is the NOSB internal working document, draft three, and

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
I would like to make a motion to accept -- to accept this as our internal working document for Sunset review.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay, there's a motion by Rose, second by Nancy, for the Board to accept the Sunset review as the internal working procedures of the Board. Discussion? Rose?

MS. KOENIG: I don't know how in detail people want me to go through on this document. I'll just go briefly over it and then if folks have specifics, then we can get into it. But basically, the document outlines both the NOP's responsibility and our responsibility in terms of the Sunset procedures. And additionally, there's an addendum -- and I think actually there's too many sheets copied, but there's numerous schematics that Kim provided to us, that basically takes the information and kind of puts it in a flow chart with some numerical that I use there in terms of times, so that people kind of understand how it all it would affect -- it starts with a federal notice to the public on the Sunset of the National List, those items that were posted on -- in 2002, October 21, 2002. And once that notice is posted -- it hasn't been posted yet -- then the federal starts the clock. And we will being comment in, and it could be the next day, it could
be any time within -- and even a little after the
comment period.

And we have talked with the staff to indicate,
you know, how they were going to just get those comments
to us. But basically, there will be a database, and
because the comments may be just about a single
substance or it might have multiple -- about multiple
substances in different categories, maybe crops and
livestock, we decided to code the comments, have
columns, C for Crops, L for Livestock, and H for
Handling. And we hope that there's only going to be a
five-day period between the time -- if NOP gets them all
electronically, that they can post them right to the
database. And then it will be the responsibility of the
chair and the committee members to actually go to that
database and look for the C comments, if you're in
Crops, and begin the process of reviewing the comments.

Once there's a large number of comments
received -- and actually, the number is up to the
discretion of the chairs of the committees. They would
then start the beginning of conference calls. And then
the conference calls should be just about -- we always
say an hour and a half long. So just kind of schedule
them -- they'll have to be scheduled probably
periodically in that time period so that we have a

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
chance to review all of the comments as they come in.

And we developed this kind of form that the committees will be fill them out when they start doing that review process in the committee. They would have the name of the substance, number one, the National List section, and annotation, if applicable, and then the comment code number. In other words, we do have a code scheme on -- you know, a comment come in. The first one would be one with the date, just so that you can make sure you're keeping up with the comment. And then the status, what the comment says. Do they want it reviewed or did they want it removed? And then number five, the committees would provide a summary of the comment and again, state the position provided by the commenters and determine the relevancy to OFPA or the 205.600(b) criteria. And then that information that does specifically address the criteria should be noted, and comments -- the committee should determine if the comments provided data, references, or expertise to justify the position expressed, and the committee also must determine if additional information or verification of the information provided is necessary. So that's in the kind of the summary statement.

MR. SIEMON: I got to ask a dumb question.

I'm sorry.
MS. KOENIG: Okay.

MR. SIEMON: Back to kindergarten for me.

MS. KOENIG: Okay.

MR. SIEMON: This is for all the materials that are going to be placed -- given notice that their Sunset's coming up and we're looking for comments on all the materials?

MS. KOENIG: Yes.

MR. SIEMON: Okay, at first I was reading it and it says for one material.

MS. KOENIG: No, this is for the --

MR. SIEMON: So this is for all the materials --

MS. KOENIG: This is for all those that were listed October 21, 2002. Because what NOP will say -- well, they're going to list -- the Federal Register notice will say all -- and I don't know if you specifically list every single one. Do you, in the notice, because I haven't seen the notice? But every single one that's up for Sunset will be on that Register notice.

MR. SIEMON: Thank you. Sorry.

MS. KOENIG: Okay. So then six -- and this is an area -- I think, again, all the areas that are might be worth discussing in six. Six: the committees will
recommend to the full Board a determination on each substance for review, removal, deferral, to seek specific -- or deferral, to seek specific technical information from the TAP contractors. So we are envisioning that there may be some that we may need to go through and get information from TAP contractors. TAP contractors shall be used to verify the information provided by the commenters, research or seek additional information requested by the committee. The request to a TAP contractor for more information needs to be detail-specific and based on the OFPA criteria. If a committee determines that they need additional information from the contractor, their written request will be immediately forwarded to the contractor prior to vote to the full Board. And that's something that I think if there's any discussion item here, that might be one. But that -- the reason why we put that in was because we felt that the committees needed an expedited process because we are in kind of a time crunch. So the committees make that determination. At that point there is ability for the Board to take a full vote and seek additional information, but it does give authority to committees to make that determination at that point, also.

So basically, some -- you know, we do envision
that some will have enough information to make
decisions, some may have to go out for technical, you
know, expertise in gathering more information. And then
basically, the -- the committee would then make the
recommendations at -- we think, two -- a minimum of two
and a maximum of four Board meetings to review all the
materials that will be reviewed by 2007. So when we
come to the final vote, each committee will provide the
recommendations to the Board on each substance 30 days
prior to the full Board meeting. So it will be very
similar to the -- when somebody's done a review of a
petitioned substance. And the recommendation will be
posted on the website and open to public comment.

The comments received at this point from the
public should address the committee's recommendation.
The Board will discuss each substance and recommendation
from the committee and vote on renewal, removal, or
deferral of the substance. Deferral of substances would
be based on insufficient information to make a decision
by the Board and would require a request for additional
information from the TAP contractor. Again, a request
would be written by the appropriate committees and
address OFPA criteria. Substances that are deferred
would be referred back to committee and placed on the
agenda for the next upcoming meeting. And then -- so
that stage is NOP rulemaking.

After each NOSB meeting, the NOP would begin rulemaking on those substances that were voted for renewal. The Materials Committee anticipates at least two dockets of materials for renewal, based on the assumption that deferred materials may take some additional time for review and a full-Board vote.

CHAIRPERSON RIDDLE: You know, first, Rose, I'd just like to thank you and the committee and Kim for providing a really clear draft and with the flow charts. I think it's quite understandable and something we can work from. And I have a couple of questions.

MS. KOENIG: Okay.

CHAIRPERSON RIDDLE: If this is adopted, would it be your intent that this also go in the Board policy manual, because it's not the only time -- you know, and Sunset will continue, so --

MS. KOENIG: Yeah, but -- correct. I think it is very appropriate to put it under -- with all the other materials' information and such. We just want you to realize that it's our internal working document and it's the first stab. You know, we may start working with this procedure and find out that it doesn't work.

CHAIRPERSON RIDDLE: Oh, it's -- yeah.

MS. KOENIG: It's a living and breathing
CHAIRPERSON RIDDLE: Uh-huh. And then the other question is, currently, some of the committees are already identifying substances for early reviews. How does that relate to this?

MS. KOENIG: Well -- and that was a question I know that Andrea had. And you know, we've got some public comment of -- that came in for committees. I don't -- I think we really - to be honest, we just assumed that committees would determine, for various reasons, that certain things might take a priority, based on prior TAPs or information from the public. So I'm not sure if we need a procedure for how you would do that. I think that it could be a loose structure. But if a committee determines that, it would go right to a TAP. They would vote on that, you know, the committee would have to vote that it needs more technical information.

CHAIRPERSON RIDDLE: Um-hum. Andrea?

MS. CAROE: This document really satisfies my concern, and my concern was that the committee had some arbitrary judgment here. But actually, all materials will have a judgment -- a recommendation from that committee. So that does address that question. The one thing that I'd like to ask you, Rose, is, in many cases,
as we're doing -- reviewing materials and recommending them for inclusion on the National List, we have gone back to the petitioner to ask for some more information, and in this case, for a material that's been on the list for five years and may not have been fully petitioned, you know, we have some materials out there --

MS. KOENIG: Right.

MS. CAROE: -- that -- how are we going to get that kind of information? I know we can get certain information from the TAP reviewer, but we have kind of lost a link, perhaps, with some of the petitioners, and do you foresee --

MS. KOENIG: Well --

MS. CAROE: -- that there's any way that we're going to be able to get that information?

MS. KOENIG: Well, the petitioner's information will be provided within their comment, and if you remember, the original Sunset document pretty specifically outlined what information can and has to be submitted. If you remember -- and I don't have -- it was the one we passed last time, that said what needs to be in a Sunset, you know, what kind of information and alternatives and data and stuff that is acceptable, and it's based on the OFPA criteria. And that's why in that the committees really determine if that data has been
provided. Now, there would be a way if their e-mail or
letter -- committees, I guess, if appropriate and if
necessary to perhaps have NOP contact those commenters.
But we really didn't consider that.

CHAIRPERSON RIDDLE: Nancy, then Kim, then
George.

MS. OSTIGUY: Andrea, what -- are you asking
about the original petition?

MS. CAROE: Um-hum.

MS. OSTIGUY: You're right, we do -- that link
is broken. Now, I'm sure we could under, you know,
circumstances, if necessary, see if that petitioner
still exists.

MS. KOENIG: We can access the archives. I
mean --

MS. OSTIGUY: Right.

MS. KOENIG: -- and I'll be honest right now,
the last, you know, six or so years there were good
TAPs, but when start accessing archives from the early
'90s, they're just --

MS. OSTIGUY: We're not talking about TAPs,
we're talking about the original petitioner, and we may
or may not have --

MS. KOENIG: Some of those were just --

MS. OSTIGUY: -- some of that information.
MS. KOENIG: -- early on in the industry that --

CHAIRPERSON RIDDLE: Yeah.

MS. KOENIG: -- came up and said there was no --

MS. OSTIGUY: Right.

MS. KOENIG: -- petition, per se.

CHAIRPERSON RIDDLE: Kim?

MS. DIETZ: The way I envision, probably, this happening is, at least those initial materials that we deemed that you need to review, you can start getting going on those by requesting the original, not the TAP, but the actual decision by the Board. And again, those are all archive materials. And then you're going to get public comment. I mean, even though you're going to start this process, you're really not going to be able to do much until the end of that 60-day public comment period. At that time, you know, you're going to have a lot of shuffling and organizing and looking at -- and perhaps those commenters can help you determine, you know, the questions that you've got or further them.

The other thing is, we keep talking about all the materials on the National List and it's just those that were on the list when the act was first implemented. So --
CHAIRPERSON RIDDLE: Right. Go ahead.

UNIDENTIFIED SPEAKER: What was the count? We have the count.

MS. DIETZ: It's about 200 materials.

CHAIRPERSON RIDDLE: That's all.

MS. DIETZ: Just 200.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Well, I'm a little confused, I'm sorry. I heard that they're going to get comments. I heard that. Then I also heard --

MS. DIETZ: Maybe you should do the flow chart and help explain to people --

MR. SIEMON: Well, I tried to look through that, but I also heard -- these people -- we're going to put the list on the web, people are going to make comments whether they should be reviewed or not, or are they -- they're not going to petition that they should go off or not? The public will just be able to make comments is what I'm reading here.

CHAIRPERSON RIDDLE: Rose, would you respond?

MS. KOENIG: What is envisioned is that people have to comment. If they want the material on, you know, the way that the Sunset provision works, if they say yea, it needs to be kept on, but they still -- you have to have comments to keep something on, okay? If
they say it needs to be kept on, then that -- there's an assumption in that Sunset document that it still is at the same stage it was when it was initially voted.

MR. SIEMON: If someone writes a comment that I still want this material --

MS. KOENIG: You still need -- you know, a vitamin something --

MR. SIEMON: Then -- okay, we consider that as our process.

MS. KOENIG: Yeah. If they say we don't need vitamin something in livestock, they have to provide information showing why it's not needed anymore. What has changed since the last technical review?

MR. SIEMON: So a negative comment is the same thing as taking on a responsibility to be petitioning that product to come off?

MS. KOENIG: To provide the specific information, and that information will be detailed in the Federal Register, but it's going to be based on the document that we voted on at the last meeting.

MR. SIEMON: And I wish I had that with me, because there's been quite a discussion I've heard about this. So -- so I don't have that criteria with me. It's harder to get a material off because you've got to take into effect -- what I'm hearing is the economic
effect of this, there is an additional criteria.

MS. KOENIG: Well then, Arthur, correct me if I'm wrong. The justification that NOP gave us for including economic data was because it's assumed that the industry's operating with that substance, so it goes off. It's considered an action of economic impact and that's why the economic impact data is required. Is that correct?

MR. NEAL: For the record, Arthur Neal. And what we said was industry impact, what would be the industry impact, because the industry has grown accustomed to using this. If someone wants to remove it, what's the eventual impact of removing a substance, now that you've got farmers using it for well over five years?

MR. SIEMON: So -- and I think now this makes sense. But under the front page it says, NOSB's responsibility. It says, once a new substance is posted. First, I thought that should be comment, but now I think it makes sense that it's substance.

MS. CAUGHLAN: And if there is no comment, if nobody speaks --

MS. KOENIG: No. Then it goes away.

MR. SIEMON: I got it.

MR. NEAL: That doesn't take away the Board's
ability to still renew it, because you have to remember, it was approved for inclusion on a list by the Board, and it had gone through the public process to also allow its use in organic production. So say for instance, if you've got 150, 200 substances on it, and if you're expecting somebody to comment on each individual substance -- let's say they miss one. It doesn't mean that they don't want it. Or if they just make broad, sweeping comments that we want all of these substances renewed on the National List, you have to be able to take that into consideration, because the Board still has the authority to renew it, even if somebody not specifically comment to renew it.

MS. KOENIG: Right. I mean, we have to take action. We have to take action. But the way that was explained to us by -- during the first session was that all things have to be commented on, that no comment should be interpreted as no interest, that the industry doesn't use it.

MS. CAUGHLAN: Well, now you're saying something different, Arthur.

MR. NEAL: Repeat that for me again.

MS. KOENIG: When it was first presented, that proposal -- because don't forget, we had a proposal and then you had a proposal and then we tried to mesh kind
of our ideas into the final document that's now there.

But I specifically remember -- and we can go back to the
record, because it was one of those things that I
actually told folks about, make sure you understand
this, that if somebody needed something -- you said
Sunset is Sunset. If there are no comments, the act of
Sunset means it's gone. But you're saying we need
comments that say it needs to stay on and we need
comments if people need -- want it to be looked at for
removal. But no comment means it's gone --

MS. CAUGHLAN: By default it's gone.

MS. KOENIG: -- by default.

MS. CAUGHLAN: That's what we were told.

That's been our --

MR. NEAL: Okay, I am corrected.

CHAIRPERSON RIDDLE: Rigo, hold it. Go ahead.

Andrea's patient.

MS. CAROE: Maybe.

CHAIRPERSON RIDDLE: Isn't she?

MS. KOENIG: I guess she is now.

MR. DELGADO: Let's see. Just to make sure
that I understand, if there is a material X out there
that is -- that has no comments whatsoever, but someone
in the Board does see an importance of keeping that
material on the list, we can still go ahead and keep it
up there, right?

CHIEF: Well, can Board members submit comments if something is still needed?

MR. O'RELL: You have to submit a public --

you have to submit a comment.

CHIEF: As an individual?

MR. O'RELL: As an individual.

MR. NEAL: Well, see, that's what I'm saying.

MS. KOENIG: The thing is, it would be conflict.

CHIEF: Uh-huh.

MS. KOENIG: It may be perceived as a conflict -- I'm sorry.

MR. NEAL: But that's what I'm saying, is that just if the public does not comment on a substance, you as a board, you're still comprised of individuals. That does not mean that you cannot submit a comment, you know, asking for the removal of a substance and still acting on that substance.

CHIEF: Um-hum. The Board, at that time, would need to have procedure understanding that if it was -- you know, the only person requesting renewal was a Board member, if then that person would need to step aside in that discussion.

MR. NEAL: What we'll do is we'll go back and
verify that particular aspect of it --

CHAIRPERSON RIDDLE: Yeah.

MR. NEAL: -- the procedure.

MS. CAUGHLAN: Of Sunset.

MR. NEAL: I don't anticipate that happening.

CHAIRPERSON RIDDLE: No, I don't, either. So let's -- yeah, Andrea.

MS. CAROE: Let me get off the subject just slightly, in that after these materials are recommended for rulemaking to be reposted on the list, it will go through, it's my understanding, the standard rulemaking procedure it went through the first time it was put on the list. So my question is -- first of all, tell me if that's inaccurate, but my question is, in the best of judgment of illustrious NOP staff, is there opportunity for these things to be kicked back for legal issues that were not originally identified?

MR. NEAL: Legal -- legal issues that were not original identified -- clarify that for me.

MS. CAROE: We have a docket -- we have two dockets that are being held up for consistency with other regulations, legal aspects. The original list -- the original dockets didn't seem to have as many issues as the recent documents -- dockets, since we became more sophisticated. My question is, if we -- are they being...
looked at the same way as they make their clearance
through the Program, NOGC, as they were originally when
they were put on five, seven, eight years ago?

MR. NEAL: No, dockets that were putting
through NOGC now are looked at more closely than they
were in the past, because you've got to remember, we
didn't have the rule in the past. Now we've got a rule
that's subject to being challenged. So now, with
respect to Sunset, what NOP would do is try to project
the problem areas and drafting proposals. So we may
even have two rules in the pipeline that take into
consideration some options, you know, the what ifs. We
may be drafting two rules at the same time, the same
proposed rule, but containing different things, just in
case. We don't want to find ourselves in a situation
where we have to go back to the drawing board and start
from scratch and waste more time.

Say for instance, where Rose is talking about
two dockets, and you may not have -- let's say the Board
doesn't complete any of its work before the time line to
renew. Let's say NOP has a docket that has no
substances in it, and it also contains a docket with
substances in it. So that way -- let's say that the
Board doesn't make its time line and we have to say
okay, all of these substances come off the National

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
List, we'll at least have that docket ready to go. If
the Board does complete its work and has select
substances that will not make it, the first publication,
all we have to do is check those out of the docket and
then move it forward. But the dockets would hopefully
be prepared prior to the Board's making a decision --
final decision.

CHAIRPERSON RIDDLE: And Andrea and then, I
think, back to --

MS. CAROE: Yeah. I don't think you
understand the question that I've asked and maybe I
wasn't very clear. My fear or point of anxiety here is
that materials that the industry has been allowed to use
and are on the National List and were put on the list
very early on, before the clearance was so complicated
or so thorough, to be more positive, that these
materials would be commented for keeping on the list,
that we will do our due diligence and recommend that
they are put on the list again, and that in the
clearance process we'll find out that they're
inconsistent with an FDA regulation or an EPA regulation
or the Food, Drug and Cosmetic Act or whatever, and
they're not going to be allowed to be put back on.

MR. NEAL: That I can't -- I can't project
right there. I mean, part of it is going to depend on

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
public comment. A lot of that's going to depend on public comment through the clearance process. For the most part, we don't foresee a lot of problems with those that are already contained on the list. However, as we've already noted, there are some issues going on with OFPA criteria that have to be taken into consideration. That's why the process needs to go ahead and begin in terms of committees identifying substances that need to be reviewed so that we don't get to the rulemaking stage and say, oops, we shouldn't have suggested that'll be added back on. We have to look at these things during the review process at committee.

CHAIRPERSON RIDDLE: Okay. I have one other question that came up the other day, whenever that was, and that is the annotations and what is in play as far as changes to annotations during this Sunset process, and I think we said we'd talk about that. I don't see it reflected in the document here, and maybe it can't be answered right now. But if there are, you know, annotations that are technically incorrect, hopefully those can be corrected in this process, but just would like to know kind of the rules of the game and what can happen with annotations in the review. And, Arthur, do you have --

MR. NEAL: From what I heard yesterday -- I
think that was yesterday.

UNIDENTIFIED SPEAKER: It was two days ago.

MR. NEAL: Two days ago?

CHAIRPERSON RIDDLE: Yeah, I think it was Monday.

MR. NEAL: Yeah. And correct me if I'm wrong, Jim. You stated that, you know, it would be allowed to amend the annotation to reflect the original language that the Board had recommended. If it the language in the Final Rule was wrong technically, based on, you know, a grammatical error, a comma's missing, something like that, I can understand. But if you're talking about the intent, the Board's intent was not adequately captured in the annotation, we have to look at that closely, because a lot of the annotations and issues that were raised are addressed in the Final Rule. I know one of the issues you brought to light was the chlorine issue and that's -- just some discussion in the Final Rule on that annotation. So go back to say let's put the Board's original annotation on it, would be more than a technical correction, that would be a change in intent.

CHAIRPERSON RIDDLE: That's debatable, but --

Kim?

MS. DIETZ: I believe our previous discussions
were that if there was a change to the annotation, that we were recommending people petition to change that annotation before the Sunset period. In other words, if somebody knew an annotation was wrong right now in one of those 200 materials, they should petition now to change that annotation before this Board could make that recommendation.

CHAIRPERSON RIDDLE: But certainly, kind of the laser-pointed approach.

MS. DIETZ: Yeah. I mean, without doing a full-blown TAP again, I'm not sure how you could really justify changing an annotation on a material.

CHAIRPERSON RIDDLE: Um-hum. Rose?

MS. KOENIG: Go ahead.

CHAIRPERSON RIDDLE: Or Richard.

MR. MATHEWS: We concur.

CHAIRPERSON RIDDLE: Oh, thank you. Uh-huh.

MS. KOENIG: There's only one example that I can think of is like aquatic -- I think it's aquatic plant extracts and there's a separate hydrolysis or something, and that has been confusing about what hydrolysis means. So there are notes in the minutes that explain what the intent was, and it's not changing, it's clarifying what that means by adding a word. I think you're saying that one of the intents, if it's for...
clarity, that it may or may not be acceptable, but if it
changes for use, then it's not up for change. Through
Sunset. It can only be changed through petition.

CHAIRPERSON RIDDLE: Um-hum. Okay, we have a
motion. There have been no amendments to it. And the
motion from the Materials Committee is to accept the
Sunset review process as our internal working
procedures, and then also for placement in the Board
policy manual, correct? Is that accurate?

MS. KOENIG: Accurate.

MR. SIEMON: Yeah.

CHAIRPERSON RIDDLE: Okay. And let me get me
my --

MR. SIEMON: Do you have a second?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: There was a second.

MS. OSTIGUY: I did.

CHAIRPERSON RIDDLE: Uh-huh. It was moved by
Rose, seconded by Nancy, and Rose is the first vote.

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: The Chair votes yes. All right, we've got a Sunset policy. Thanks again. So it's 14 yes, 0 no, 0 abstentions.

MS. KOENIG: Okay, the final tab is the syn, that's s-y-n, versus nonsyn, s-y-n, in your book. And this is -- this is a draft. It's a discussion item.
only. We want to get input and discussion, but we're not really even asking you to vote on the draft. We just want you to discuss it, to give us some feedback, so that we as a committee can come back, do some changes, and then present it as, hopefully, a draft that we're going to actually vote on at the next meeting. So this won't have any impact, except we probably will, again, as quickly as we can, make some modifications and get it posted so that we can perhaps have a longer comment period on the document.

CHAIRPERSON RIDDLE: Kim and then Andrea.

MS. DIETZ: I get my exercise. I like sitting out here because I can get up and move every now and then. I just want to thank the Materials Committee for posting this a discussion document. We originally were going to move it as a recommendation, but in light of the Harvey appeal, I was extremely nervous of even talking about synthetics, to be honest with you. My main concern with this document is that, if you look to page one of the draft, it talks about defining what a chemical process is. And in the definition of synthetic, even a heating is considered a chemical process. And the worse thing we need to do right now is not have any pasteurized juices or baked breads or cooked chips or anything like that. So I think we need
to be very, very careful with the definitions of synthetic and nonsynthetic and make sure that we really clarify what you mean by the definition of synthetic. Jim, you looked perplexed.

CHAIRPERSON RIDDLE: Huh?

MS. DIETZ: You looked perplexed.

CHAIRPERSON RIDDLE: Yeah, I'm not finding it.

MR. SIEMON: I did not find it on page one. I didn't see that on page one.

MS. OSTIGUY: It's on the very bottom, chemical --

MS. DIETZ: If you --

MS. CAUGHLAN: The bottom of --

MS. WEISMAN: On the very bottom, chemical reaction.

MS. OSTIGUY: -- chemical reactions shall --

MS. CAUGHLAN: Draft through the materials process --

CHAIRPERSON RIDDLE: Yeah.

MS. CAUGHLAN: -- verification of --

MS. KOENIG: Is it -- Kim, is it the formulation bolded that you're -- that there's an issue with or is it --

MS. CAUGHLAN: The chemical reaction.

MS. KOENIG: -- the chemical reaction?
MS. CAUGHLAN: The chemical reaction.

MS. DIETZ: It's the chemical reaction. If you -- on page one, any -- I'll just go through it, because I have notes on mine. "Any substance, other than those naturally occurring in a plant, animal, or mineral, is considered synthetic if it is formulated or manufactured by a chemical process." And then further down under the extraction definition, you have -- the third paragraph.

CHAIRPERSON RIDDLE: So first you read, actually, the definition of synthetic, right?

MS. DIETZ: Correct, correct.

CHAIRPERSON RIDDLE: Yeah, and it's in the law -- the rule. All right.

MS. DIETZ: Page one of the draft two, I just read the third paragraph under the justification, which is the definition of synthetic in the rule.

MS. KOENIG: Right, that's the one in the rule.

MS. DIETZ: Right.

MS. KOENIG: So that's -- I wanted to state that that's the same that's in rule.

MS. DIETZ: Correct, that is the definition in the rule. And then the purpose of this paper -- the purpose of this draft is to clarify, really, what is
synthetic.

MS. KOENIG: What is chemical change.

MS. DIETZ: What is chemical change.

MS. KOENIG: Not synthetic.

MS. DIETZ: Correct, correct, what is chemical change. Excuse me. And heating is considered a chemical change in this paper.

MS. KOENIG: No, the chemical reaction.

MS. DIETZ: Right.

MS. KOENIG: And that's why I was asking you which --

MR. SIEMON: Under extraction.

MS. DIETZ: If you looked under extractions --

MR. SIEMON: Heating, right there.

MS. DIETZ: -- it says, "Substances removed from naturally occurring plants, animals, or mineral sources can be extracted in any manner and with any substance, material, physical process, i.e. centrifuge, heating, chemical solvents, as long as the extraction process does not chemically change the substance that is being extracted."

MS. KOENIG: Right.

MS. DIETZ: Okay.

CHAIRPERSON RIDDLE: Right. So --

MS. DIETZ: If you turn the page now and we --
I'm trying to find out where we go -- and we look at just the basic chemistry --

MS. KOENIG: Um-hum.

MS. DIETZ: -- then within this document, we talk about how heating actually changes the chemical --

MS. KOENIG: It can or cannot.

MS. DIETZ: It can or cannot, right. So my concern is that if we go down this road with this paper without being very clear on what -- at what point something is turned synthetic, then we may not be able to have a lot of products on the market, because these will now be deemed synthetic.

CHAIRPERSON RIDDLE: Kevin.

MR. O'RELL: Yes, Kim, and I share your concerns. There are a lot of areas in here that point to specific processes, such as denaturization -- denaturing milk for proteins, which is a common practice in manufacturing many dairy products, where you're heating the milk up to denature the proteins to get a specific reaction. So there's a number of points in here, including even talking about from 50 to 60 degrees C. That's under legal pasteurization of milk. So it would say that the legal pasteurization of milk is a chemical change on the effect on the protein. So --

MS. DIETZ: Right.
MS. KOENIG: But can I -- let's go back to --
because --

MS. DIETZ: Okay.

MS. KOENIG: You know, this document, this is
a pre-Harvey case document.

MS. DIETZ: I know it was.

MR. O'RELL: Right.

MS. KOENIG: Okay. So we need to make that
statement, okay?

MS. DIETZ: We -- yeah.

MS. KOENIG: The intent of this was to define
synthetic for adding substances to the National List.

MS. DIETZ: Right.

MS. KOENIG: Okay, it wasn't to look at
synthetic -- you know, what processing of -- it was
simply to be able to use -- to understand what that
definition meant, so that when we got TAP reviews, we
could clearly determine things that we were continually
deferring whether it was synthetic or nonsynthetic --

MS. DIETZ: Right.

MS. KOENIG: -- where committees wanted to
make that distinction. So --

MS. DIETZ: Right. And the reason for my
concern is, if you'll look at the definition of
ingredient in the rule, an ingredient is identified as a
substance, and throughout this document, we talk about substances. So I wholeheartedly agree with where we're trying to take this because that needs to happen and it's a great opportunity for us to separate and really tell this community what we mean by synthetic. But again, let's just be careful that, by presenting a document like this, just for the material review process, we're not setting a precedence to define synthetic that could ruin more products that are out in the market. Nancy.

CHAIRPERSON RIDDLE: Nancy.

MS. OSTIGUY: One thing that -- the juxtaposition may be causing some of the difficulty. The basic chemistry 101 section is not actually an integral part to the previous page and a half. The idea was to put the basic chemistry 101 in the Board manual to provide people who find some of the chemical discussion difficult a place to go for some very basic information so they feel more secure. So -- and this -- correct me if I'm wrong, Rose, but that was almost literally from a chemistry textbook.

MS. KOENIG: Yes. And --

MS. DIETZ: Yeah. So -- yeah.

[Simultaneous comments]

MS. DIETZ: Yeah, it's not meant to be our
definition --

MS. DIETZ: I know, right.

MS. OSTIGUY: -- of chemistry 101.

MS. DIETZ: But we were trying to help and --

MS. OSTIGUY: Right.

MS. DIETZ: -- aid new Board members and aid
the process of material review.

MS. OSTIGUY: Well, one suggestion I would
make, because we're going to be going back to as a
committee, would be for us to separate these two things
so the juxtaposition is not misinterpreted. We can and
we could actually -- if wanted to just take the 101
section and say let's put in the Board manual. Then we
don't even have it anywhere near the rest of the
document. Then look at the rest of the document in
light of the current circumstances.

MS. DIETZ: Right. I just -- I'm just fearful
that in the light of where we're at today, that if we
link heating and pasteurizing and --

MS. OSTIGUY: Right.

MS. DIETZ: -- and denaturing with the term
synthetic, that we're going to get ourselves in further
trouble.

MS. OSTIGUY: No, I understand. I think we
need to take into consideration the points that you've
brought up, the points that Kevin said, because --

MS. DIETZ: Yeah, that's why we're discussing it.

MS. OSTIGUY: -- certain circumstances have changed.

MS. DIETZ: Yes, yeah. So again, I appreciate everybody being cognizant of this.

CHAIRPERSON RIDDLE: And just -- I really support separating out the basic chemistry. And you know, I would like to see the first part, you know, lead to conclusion, lead to recommendation that really provides the guidance, and I am fully confident that it will.

MS. OSTIGUY: I'd like to make a motion.

CHAIRPERSON RIDDLE: Oh.

MS. OSTIGUY: I'd like to move that we put the -- starting on the second part of page two, the basic chemistry 101 for the NOSB, through page seven, into the Board manual, just as reference information only.

MR. CARTER: So do have the original motion?

CHAIRPERSON RIDDLE: There was no original motion, it was just presented for discussion, but it is on the agenda for action, so it is eligible for this. But it would take a second.

MS. OSTIGUY: It does for a lack of second.
CHAIRPERSON RIDDLE: Pardon? Right now we're still waiting on a second. I'm not seeing --

MR. CARTER: Second.

MS. CAUGHLAN: I'll second it.

MR. CARTER: Second.

CHAIRPERSON RIDDLE: I heard a second. I heard Goldie second. Okay, so we have discussion on the motion to move the basic chemistry 101 section of this draft into the Board policy manual, and it was moved by Nancy, seconded by Goldie. Discussion on that motion?

Bea.

MS. JAMES: Not that I want to put you on the spot, Mike, but I would like to propose that, since we have a scientist that's actually on the Board, that he review it and see how -- you know, be able to comment on it and give feedback.

MS. OSTIGUY: Point of information.

MS. JAMES: Well, I mean --

[Simultaneous comments]

MR. O'RELL: We have a lot of scientists.

MS. OSTIGUY: Yeah, including one of the authors and another one of the committee members.

MR. O'RELL: Yeah.

MS. JAMES: All of the scientists.

CHAIRPERSON RIDDLE: Yeah, yeah. So all...
right, any other discussion on the motion of moving that
into the policy manual? Kim?

MS. DIETZ: I know it's important to have it a
policy manual, I'm just not sure if it's the right time
to do that. And please be careful with what you do and
how you act right now with regard to synthetics,
nonsynthetics. And documenting anything from this
Board, I'm very fearful and I don't think it's the right
time to do that.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: My point would be that this was
presented today just as a discussion item --

MS. OSTIGUY: No, it wasn't.

MR. O'RELL: -- and it was agreed that it was
going back to the committee for further work, and I
really think --

MS. OSTIGUY: No, it wasn't, it was an action
item.

MR. O'RELL: It was presented by -- by the
committee and that's where I would think we need to go
back and see what we want to do.

CHAIRPERSON RIDDLE: And yeah, I have to agree
with Kim and Kevin on this. I really appreciate it, the
information. I think it's important, but I would rather
see them on the same track. I mean, it's kind of legal
in our Federal Register notice of our agenda that this
was listed as an action item, so it can be considered
for action, but it was presented for discussion and --
but it has been moved and seconded, so we will vote on
whether it will go to the Board policy manual today or
be held at the committee. Rose?

MS. KOENIG: I just wanted to make an note on
one thing and when that -- and I don't have a problem
with putting it in the policy manual. I mean, the
information here has been posted for members who need to
refer to it, because it'll be in the meeting book as a
draft. So I mean, I think it's functions. But it took
me awhile -- I mean, the thing is -- the interesting
thing is that substances were removed from that, and
that -- in the original document -- and I implore people
to go back to the first document that was in the meeting
book last time, because it went into more details and it
went into the minutes of old meetings to kind of get a
consensus of how the process came about on extractions.

But, you know, it's actually conceding here
that -- anyway, go back to that old document. The big
issue was materials that were extracted from plants and
naturally occurring things. So those are the items that
are really hard for us to make a statement on a lot of
times when go through -- the materials -- so I actually
thought it was a big thing to say that the extraction process, as long as it didn't chemically change the substance, that you could really, you know --

MS. OSTIGUY: Do anything.

MS. KOENIG: -- you could use anything. That always stumped us. And really, the thing that was the impetus was the soy protein isolate TAP. There's a lot of discussion with -- and we said it's synthetic because it's -- that's used in the extraction. Then we started looking at the definition and we realized that no, it's allowed if you look at that definition. So what I'm trying to say is that this should be -- the things about that part actually is a much more liberal -- I think a very liberal understanding of what extraction is. And the things that seem to be disturbing is the idea of a chemical reaction, and just want I to say to the Board is that I think our hands our tied. I mean, you want us to make our recommendation. If we can't use any -- I mean, this is not something that is being invented, these are chemical reactions, and as I said in the committee meetings, you know, we may all as a group decide that -- that, you know -- and I wrote that, but I think the proteins of anything, how you want look at proteins, that's an area of, probably, discussion on the Board. And maybe we could say that, you know,
decomposition reactions aren't synthetic. But, you
know, if you went on to the National List -- that's what
I'm saying, the information for a legal defense is
already in -- on our list. This document only confirms,
most of the stuff that's on our list fits into this
idea, by chemical change.

CHAIRPERSON RIDDLE: The motion is to move the
basic chemistry section to the Board policy manual. I'd
ask all comments to just be pertinent, specific to that
motion. Bea, then Andrea.

MS. OSTIGUY: Well, I wanted to call the
question.

CHAIRPERSON RIDDLE: Well, I called Bea. So
then we'll vote.

MS. JAMES: To be honest, I just really feel
that is premature to vote to put this chemistry section
into -- into that with five new members, and quite
frankly, I can speak for myself, I'm not familiar enough
to be able to vote on this at this time, and I'm asking
for -- and I'll trust -- I mean, I trust that the
information is extremely useful, but I -- trusting isn't
good enough to -- it's not enough fact for me. So I
mean, I just feel like I need more time to be able to
review this and understand before I can vote on it.

CHAIRPERSON RIDDLE: Okay. Nancy?
MS. OSTIGUY: It's clarification. It sounds like it may go back to committee. What is it that people want if this goes back to committee? This is merely an extraction from a chemistry textbook. I am not quite sure what other authority you would like us to use.

CHAIRPERSON RIDDLE: Yeah, I think time to really read it and study it is one thing I'm hearing. Andrea?

MS. CAROE: I don't have any problem with the chemistry that's written here, it's accurate. It's accurate chemistry. I mean, that's what I studied. My problem is, is that it's incomplete in discussion about synthetics, and it's incomplete because, although the OFPA does not allow synthetics, it does allow certain processes, of which cooking is one of them. So I think, to the more complete answer, I would hate to have somebody look at this for the answer on synthetics. This is not the whole piece. And I think --

MS. OSTIGUY: That was never the intent.

MS. CAROE: Okay. But I feel like placing it there gives the perception that that's where it's at. So my concern is it by itself and not a discussion on allowed processes as stated in OFPA.

CHAIRPERSON RIDDLE: Okay, I think we've had a
good discussion of this and I would like us to vote on whether it --

MS. KOENIG: Are we going to be able discuss this -- those comments? We can vote on this. Are we going to go back and --

CHAIRPERSON RIDDLE: No, no, no, this is just the motion to move this into the Board policy manual, that's it.

MR. O'RELL: And that's just the basic chemistry 101 for NOSB?

CHAIRPERSON RIDDLE: Yeah, from that to the end. Uh-huh. So, Kevin, is first.

MR. O'RELL: No.

CHAIRPERSON RIDDLE: No.

MS. CAUGHLAN: I think I --

CHAIRPERSON RIDDLE: Yeah.

MR. O'RELL: No, I'm not first or --

CHAIRPERSON RIDDLE: Yeah, actually, I think Goldie's first, so you're right both ways. Goldie?

MS. CAUGHLAN: Well, I'll vote against my second. I vote no.

CHAIRPERSON RIDDLE: So no. Okay, Kevin?

MR. O'RELL: No.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: No.
CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: No.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEISMAN: No.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: No.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: No.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: No.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: No.

CHAIRPERSON RIDDLE: And the Chair votes no, so four yes, ten no, zero abstentions. We actually defeated something. That's very good. A sign of a strong Board, that we can go either way.

MR. CARTER: We can vacillate with the best of York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
them.

CHAIRPERSON RIDDLE: But thanks for -- and
definitely, keep it alive.

MS. : No.

CHAIRPERSON RIDDLE: It's really useful and it
stays at committee.

MS. OSTIGUY: It doesn't have -- it doesn't
have a point, though.

MS. KOENIG: Well, I want to go back to the
discussion of where you want us to take this.

MS. OSTIGUY: Right, that's what we need to
know.

MS. KOENIG: I don't care --

CHAIRPERSON RIDDLE: Yeah.

MS. KOENIG: -- if it's in the policy manual.

CHAIRPERSON RIDDLE: Well, I think the message
that I'm getting is to move them simultaneously so that
one is not taken out of context. That's --

MR. SIEMON: Can I --

CHAIRPERSON RIDDLE: George, then --

MR. SIEMON: Is it wrong that we would have
for reference only the difference between a heifer and a
cow and that kind of information? What would be wrong
with that is my question? This is just for reference
only for people like me who really failed chemistry. As
long as it's reference only, I just don't see the big deal.

CHAIRPERSON RIDDLE: Rose, then Kevin.

MS. KOENIG: Yeah. I just -- I feel that if people are sensitive about it, you have it as a reference. So I want to change --

MS. OSTIGUY: Don't change it now, right?

MS. KOENIG: -- just use the document. You know, just because it's not in the Board policy manual, it's a very useful document. I wish I could say I came up with the ideas, but a chemistry professor did.

MR. CARTER: We voted on the motion.

MR. O'RELL: Yeah.

CHAIRPERSON RIDDLE: Yeah.

MR. O'RELL: I withdraw.

MS. KOENIG: Okay.

CHAIRPERSON RIDDLE: Okay. You withdraw, too?

Okay. So --

MS. KOENIG: But I did have --

CHAIRPERSON RIDDLE: -- back to the --

MS. KOENIG: -- a comment.

CHAIRPERSON RIDDLE: Right.

MS. KOENIG: Okay, the position I think that Nancy and I both feel that we're in is that there is nothing more I can do with this document --
MS. OSTIGUY: Um-hum.

MS. KOENIG: -- because I fulfilled -- you know, as far as a discussion or a draft, in terms of materials being added to the list only. Now, if the Handling Committee wants to analyze and review it -- and I don't know in what context. I don't understand. If a material comes in -- and let's just -- I don't want to talk about what will happen in the future, but in the case of when materials come in on a petition, we are asked whether it's synthetic or nonsynthetic. What has been the justification of making all of our decisions down the line? Most of them -- that's what I'm saying, if you go and analyze everything that's on the list, they're all going to come into one of these kinds of reactions if they're deemed synthetic. And the only thing that is really a question, there are things, probably, that we didn't put on the list that we said were nonsynthetic -- they wouldn't have fit -- they hopefully would not have fit into this chemical change or any of that. So that's what I don't understand. I don't think we have enough guidance, as a committee, of what more that we can do on it. But do you want us to narrow the definition, take out the composition reactions? What do you want us to do?

CHAIRPERSON RIDDLE: Arthur, do you want
MR. NEAL: From an NOP perspective, one of the reasons why we allowed this matter to stay on the table for the agenda is because we know there's an issue going on with handling substances. We've got three substances on the agenda for Crops, that have to -- that a determination has to be made on if it's synthetic or nonsynthetic. Soy protein isolate's been in the works for three years, and the issue there is, is it synthetic or nonsynthetic. If it gets deferred again because we still don't know, that may be the case. But the main deal is to make sure that the Board actually resolves this issue because, absent knowing when a substance is a synthetic or a nonsynthetic, you really probably shouldn't be approving any materials.

CHAIRPERSON RIDDLE: Kim, and then I have a comment.

MS. DIETZ: My recommendation would be to have the Handling Committee look at this document and make sure that there's -- there's a lot of extraction processes in handling that this definition could affect. So at least let the Handling Committee take a look at it and make sure that somehow you clearly designate the difference between reviewing a substance to be included on the National List and a handling material, or a...
handling ingredient. And that's all, I guess, that I'm asking, is that this Board just doesn't make any decisions today that could affect the whole entire industry. So it's a great document and we've been working on it for quite some time, and I think it could continue go forward and we'll know very shortly which way to take it. But at this time, let the Handling Committee look at it, too, and make sure that you're not offsetting two different areas.

CHAIRPERSON RIDDLE: And I guess -- and my comment follows right up on that and that is, in the middle of the page where it says to ensure consistent application of the definition of synthetic, the NOSB may want to consider the following. I think it should be ultimately, the NOSB recommends the following. I mean, it needs to be in the phrase as a recommendation that this is how we understand each of these items, so that we know at the end of the day what guidance we've adopted. So I'd like it to turn into a voteable [ph] -- you know, actionable item. Rigo?

MR. DELGADO: I would like to recommend something that's somewhat more practical, going back to the question that Nancy had. And I like the table on the evaluation criteria for substances very much, in the sense that it's straight to the point. It has the
specific criteria that one follows to determine, in this
table, what is relevant or should not be considered.
Can we do the same with this information? Can we
actually identify the criteria that will tell me if
I'm --

MS. OSTIGUY: Yeah.

MR. DELGADO: -- of a specific substance, and
come to a conclusion on whether this material is --

MS. OSTIGUY: That's a good idea.

MS. CAUGHLAN: For the matrix.

MR. DELGADO: Yeah, a matrix, yeah.

CHAIRPERSON RIDDLE: Yeah, kind of a matrix.

Uh-huh. A good suggestion.

MR. DELGADO: That's what I'm looking for,
the --

[Simultaneous comments]

CHAIRPERSON RIDDLE: Um-hum. Yeah, Rose?

MS. KOENIG: Well, I mean, the idea is that
you actually -- you mean, functionally for you when you
get to the thing? I mean, if once we have the
definition, the contractor, we can say this is what we
mean by synthetic to the contractor. We should actually
be getting that information straight back. They will
say this is synthetic because it is a -- we want the
specificity, an addition or a combination reaction. And

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
you have said that an addition combination reactions
make your products better. And that's why we need it,
because we've never specifically gotten that and there's
gray -- we don't know -- there's something -- you go to
the minutes and people say it's synthetic because it's
highly processed. That doesn't tell you anything. We
need to know exactly what -- what makes a synthetic
where.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Well, I think if the Handling
Committee looks at it to make sure that we're not
messing something up, we can then put it into the kind
of framework that you're talking about, if nothing else,
for the TAP contractors to use so that they do supply us
with all the information that we need to make that final
determination, in the same way that we're using the
documents now. They have those, too.

MS. KOENIG: But --

CHAIRPERSON RIDDLE: Rick and then Kevin.

MR. MATHEWS: Yeah. You're on the right track
now. I agree totally with Rose and Rigo, that what we
want to see out of this Board, whether it's at this
meeting or the next meeting or the meeting after that,
we need something that is your statement of how you
determine whether something is synthetic or
nonsynthetic. This fits all into this overarching issue of fixing the materials review process, and this is one piece of that. And in order to make our decisions defensible, we have to have a good, definitive statement from this Board as to when is it this and when is not this.

And one thing that I'll remind you of is that, while I've been sitting on this Board -- I was not sitting on the Board. But -- and I don't want to, by the way. As long as I've been working on this Program, there have been times that I've heard the Board say wall, we're not really sure, so we're going to take the safe route out and call it a synthetic, and that's really not where we want to be. And so we need you to give us a definitive answer as to how do you determine what is synthetic versus nonsynthetic. And the sooner the better.

CHAIRPERSON RIDDLE: Andrea, you got bumped up.

MS. CAROE: I got bumped up? My question is a detail question on the document and it's the section, formulation shall be understood to mean. I don't understand formulation to mean what is written there. A formulation could be a spice blend. It doesn't have to be something that was extracted, it doesn't necessarily
have to be a synthetic. So I'm concerned about calling
all formulations -- because there are mixtures. So I
would prefer to distinguish the difference between a
reacted formulation and a mixture, which is later, it's
done later, but --

MS. KOENIG: Yeah. And I didn't -- Nancy kind
of worked on filling out of the recommendation of it,
and I was just thinking that that -- that might be the
area where we could supply -- this may solve it, and
think about it as a process in our Handling Committee,
if we just say that we're talking about clear
substances, compounds, or elements.

CHAIRPERSON RIDDLE: This is reaching the
level of committee work.

MS. OSTIGUY: Okay.

MR. O'RELL: Yeah.

MS. KOENIG: All right. But either way, if
the Handling Committee does that, it has to be high
priority. We need something if our next step is
contingent on you all and we're really at a standstill
until you guys can --

MS. OSTIGUY: We've got lots of time.

MR. O'RELL: The Handling Committee will
definitely participate and take a look at this. My only
concern was, in entering it into our policy Board

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
manual, that we're saying in a sense that this is what
our guideline is for synthetic. Somebody could look at
that --

    MS. OSTIGUY: And misinterpret it.

    MR. O'RELL: -- misinterpret that out of
context and say, you pasteurize milk, that's a
synthetic. You add acids to juices, they disassociate,
that's a synthetic. And I just want to make sure that
we are very clear when we put it in, that we say that it
is for substances material review and not the result of
the processes that we go through, because we clearly are
allowed to process these products, to heat and add acids
together. That's the only concern, and we'll work
together.

    MS. OSTIGUY: Yeah. And I know -- and I'm
pretty sure Rose is in the same position, we don't know
that much about processing or handling. So I'm really
glad you guys are going to deal with that, because I
wouldn't do it adequately.

    MR. O'RELL: We just needed something else to
do.

    MS. OSTIGUY: We try.

CHAIRPERSON RIDDLE: Okay. Well --

MS. CAROE: Give Kevin the stress turkey.

CHAIRPERSON RIDDLE: All right. Well, that

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
was a very good discussion. And now we'll be starting
on Crops. We already had that break, but it says on the
agenda -- but do you need five minutes. Huh?

   UNIDENTIFIED SPEAKER: Let's go.
   CHAIRPERSON RIDDLE: You go on --
   MS. OSTIGUY: Yeah, I can go.
   CHAIRPERSON RIDDLE: And it's Nancy's -- are
you ready to -- ready to roll?
   MS. OSTIGUY: Yes. Some of this -- well, it's
actually very apropos, what we just finished talking
about. So starting with the materials, soy protein
isolate, the committee recommendation that was published
has changed because the time of the -- that vote, there
were only two of us on the committee. We now actually
have a functioning committee, that -- now that Rigo and
Gerry have joined us. Where we are at this point is the
committee is recommending to, would you believe, defer,
because we don't have synthetic and nonsynthetic
defined. We have to be able to do that, and my concern
why I want to defer it is, the last thing we need to do
is not be consistent, and we're having a major problem
with that, so in the sense of, you know, feeling clear
about what we're doing. So defer soy protein isolates
again. Ammonium --

   MR. O'RELL: Was that a motion?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
CHAIRPERSON RIDDLE: It doesn't need to be --

MR. O'RELL: Oh.

CHAIRPERSON RIDDLE: -- if the committee

making a rep[ort.

MS. OSTIGUY: Right, yeah. Ammonium

bicarbonate, again changing the recommendation on what

was published for the same reason as soy protein

isolate. We desperately need to have the definition of

synthetic and nonsynthetic clear. The recommendation

was that it was a nonsynthetic. If we proceed to go

that direction, just to give the Board a sense of one of

the difficulties with this material, the committee is

considering adding ammonium bicarbonate to the

prohibited natural list and then listing this as an

acceptable processing method, because this -- based upon

our sense of what natural synthetic -- synthetic and

nonsynthetic was, without the real firm definition, this

was fitting as a nonsynthetic, but the concern is that

there are other ways in which this material is produced,

and not wanting the misinterpretation. That is being

thought about. If people have comments, other

suggestions, the committee would welcome them, including

from the public. Just how to figure -- how to do this

one right.

Ferric phosphate, moving right along, again, a
change in the committee recommendation. The committee had originally recommended to prohibit this material. We are changing that to a recommendation to allow, to add to the National List with an annotation that it is to be used as a molluscicide [ph] only. And -- in the mineral category, yes. We had to -- we also changed some of the -- the TAPs, so that would end up changing category two, where we had a couple of responses that pushed this material into not meeting the second criteria. Those have been changed to such that that criteria is met, the public comment yesterday and the day before, indicating that the materials -- the alternative methods were not realistic.

CHAIRPERSON RIDDLE: Are you making a motion? MS. OSTIGUY: Yeah, motion -- yes. So it needs to be seconded.

CHAIRPERSON RIDDLE: So -- MS. KOENIG: I'll second it.

CHAIRPERSON RIDDLE: So okay. Nancy moved, Rose seconded to allow ferric phosphate for -- as a molluscicide.

MS. OSTIGUY: Correct. Molluscicide.

CHAIRPERSON RIDDLE: Molluscide. Okay. First, before we start discussion, I'll ask, are there any -- does anyone have any interest to declare? And
snail or slug farmers?

MS. OSTIGUY: I have snails in my yard.

CHAIRPERSON RIDDLE: Okay, seeing none, we'll proceed. Andrea?

MS. CAROE: Nancy, a question. Why do we need the annotation when the list has a section for slug and snail bait? I don't believe it needs an annotation if it's listed in that reserved area of the list. It's Section --

MS. OSTIGUY: That would be accepted as a friendly amendment.

MS. CAROE: -- 205.600 --

MR. MATHEWS: 601(h).

CHAIRPERSON RIDDLE: 601(h).

MS. CAROE: Yes, (h). So I don't believe it needs new annotations.

CHAIRPERSON RIDDLE: So we've changed the motion for placement at --

MS. OSTIGUY: Yes, that -- so --

CHAIRPERSON RIDDLE: -- 205.601(h).

MS. OSTIGUY: To clarify the motion, then, I move that we move ferric phosphate to Section 205.601(h) as an approved material.

CHAIRPERSON RIDDLE: Okay, discussion on the revised motion? George?
MR. SIEMON: Does this cover all the original requested uses?

MS. OSTIGUY: Yes.

MR. SIEMON: As far as I know, it does.

MS. OSTIGUY: Yes.

MR. SIEMON: I just wanted to make sure, because we're not -- from the original question.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: I just wanted for the record, if you remember, during public comment on this substance with the petitioner, you know, one of our areas that I couldn't figure out was where it would be placed. But upon thinking about it, just for the record, if the production aid changes to the middle category so the OFPA criteria is satisfied --

MS. OSTIGUY: Right.

MS. KOENIG: -- for this substance.

CHAIRPERSON RIDDLE: Okay. And the final materials review sheet will reflect that?

MS. OSTIGUY: Correct. So a revised version will be submitted to the NOP.

CHAIRPERSON RIDDLE: Okay. Any further discussion?

***

[No response]
CHAIRPERSON RIDDLE: Seeing none, we'll move to a vote. Now Kevin gets go first.

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Kevin, yes. Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh? Hugh is absent.

Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MS. CAROE: Absent.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Abstain.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.
CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: And the Chair abstains.

I haven't done that yet.

MS. OSTIGUY: Wow.

MR. O'RELL: You're full of surprises.

CHAIRPERSON RIDDLE: Yeah.

MS. OSTIGUY: Ten, zero, two, two.

CHAIRPERSON RIDDLE: Oh, thanks. Ten yes, zero no, two abstentions, and two absent, so the motion passes. Thanks. Okay, moving on.

MS. OSTIGUY: Okay. Compost tea is the next item. It is not an action item; information only. The committee is working to bring to the Board a recommendation that combines the compost tea and the compost task force recommendations. We have not completed that yet. When we complete it, it will be posted prior to the Board meeting, where we consider it.

Commercial availability of seed.

CHAIRPERSON RIDDLE: And there's the other compost Q and A point there.

MS. OSTIGUY: Oh.

CHAIRPERSON RIDDLE: I assume that would also be rolled into that.

MS. OSTIGUY: That's in the same category,
yes.

CHAIRPERSON RIDDLE: Yeah, I just wanted to make sure for the record.

MS. OSTIGUY: Sorry. So the compost Q and A will also come later. Guidance on commercial availability of seed, organic seed. Based upon the public comment, what I would recommend is that we actually defer, it goes back to the committee and we take into account those comments. Does anybody want to go contrary?

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: A point of -- I just need clarification. The recommendations to defer, will the Board vote on those at the end, or are you just moving along as they are?

CHAIRPERSON RIDDLE: If the committee is reporting that they're holding them at committee --

MR. NEAL: Okay.

CHAIRPERSON RIDDLE: -- there's no action to take.

MR. NEAL: Okay.

CHAIRPERSON RIDDLE: If they had, you know, presented something for a vote and we voted to defer it, that would be a different action. But they're just recommending to hold at committee for further work.
MS. OSTIGUY: Right. Based upon the public comment and such. Let's see. Maintaining or improving natural resources.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Isn't there any discussion?

CHAIRPERSON RIDDLE: Maybe not. Do you have another comment? You can --

MR. SIEMON: Well --

CHAIRPERSON RIDDLE: -- ask a question of Nancy.

MR. SIEMON: -- I just feel like people are waiting for us to give input, and just stalling is just another six months. So I hear you. You all met and just thought you needed more time?

MS. KOENIG: Well, there was --

MR. SIEMON: There's some good input here.

CHAIRPERSON RIDDLE: Um-hum.

MS. OSTIGUY: Um-hum.

MS. KOENIG: There was. There was some significant input, and even today we got some input on the biodiversity issue. Again, just because of the structure, now we have a functional committee. I think it just makes sense to have a consensus, and I don't feel comfortable as a committee member -- our recommendation. We have to incorporate things.
MS. OSTIGUY: Yeah. I would very much -- I think that the work that was done, which we should thank Jim for doing, it was very, very good, but we have public comment that I would like to include and I would prefer not to do that on the fly. So -- okay. On the recommendation for maintaining or improving natural resources, we have a motion. I move that the Board accepts the provided enhancement of the natural resource component of the organic system plan, with the understanding that ATTRA would revise the format provided and that ATTRA's revised format will come back to the Board for a final consideration. Any discussion?

CHAIRPERSON RIDDLE: Is there a second?

MR. DAVIS: Second.

CHAIRPERSON RIDDLE: Gerald seconds.

MS. OSTIGUY: The idea here is that -- what we're after is the committee to agree with the ideas that are there, and the particular format might change. There are several of us that are on ATTRA's mailing list and such, to deal with this kind of thing, but ultimately, it would come back to the Board for us to look at to make sure that something hasn't been done that changes our original intent. So this is our -- an intent document.

CHAIRPERSON RIDDLE: Well, if we vote in favor
of this, we're endorsing the language and the concepts, but luckily we have ATTRA lined up to actually do the work of writing the amendment to the organic system plan template. That's not going to fall back to the Crops Committee, but then that revised template will come back and be presented to the Board again. So that's -- MS. CAROE: But this still represents values [ph] right?

CHAIRPERSON RIDDLE: Yeah. George?

MR. SIEMON: What we're talking about -- is this question airtight?

MS. OSTIGUY: Um-hum.

MR. SIEMON: The one that's up on the screen there, right?

MS. OSTIGUY: Um-hum.

CHAIRPERSON RIDDLE: Yeah.

MR. SIEMON: So the intent here -- a bunch of questions does not tell me of the intent, necessarily. So you say we're sending a message of intent to be reformatted. These are a lot of questions. Before we had -- I'm a little confused about what the intent of this is for. And the next question is -- it is in the opening paragraph. I don't know why we have water quality under biodiversity, including irrigation water, that whole part on water, the second -- the last -- not
the last line in that paragraph, but the two lines before that, I don't know quite know how that fits into the biodiversity, myself. Testing water --

CHAIRPERSON RIDDLE: And if I could respond to that. Some of that section is already in the organic system plan, but Section 205.200 requires that an operator will maintain or improve the natural resources of the operation. And then when you read the definition of natural resources of the operation in the rule, it says the physical, hydrological, and biological features of a production operation, including soil, water, wetlands, woodlands, and wildlife. So these are already requirements under the rule. It's just helping producers understand the options, and helping certifiers and inspectors understand how to assess compliance.

MR. SIEMON: But say I test my irrigation water and it has a trace amount of some kind -- material, then what?

MS. OSTIGUY: That's for processing and washing, that's not what I'm talking about.

MR. SIEMON: It's irrigation water. Irrigation water should not contain -- materials. We all know that's a real issue out there.

MS. OSTIGUY: This water is used for washing and processing organic products.
MR. SIEMON: No, the next line. The next line, irrigation water.

MS. OSTIGUY: Well, yeah.

MR. SIEMON: -- the processing. The processing is not about biodiversity, even if we went back to that one. Washing and processing is not biodiversity. It just seems to go --

MS. OSTIGUY: Some of these things are directly lifted from the current document, and right now I couldn't tell you which is which.

MR. SIEMON: Well, he's got 200.203(a) [ph], right? Is that -- do you mean the present rule?

MS. OSTIGUY: The present plan outline document.

CHAIRPERSON RIDDLE: Right.

MS. OSTIGUY: I didn't create any of this.

MR. SIEMON: Okay. So -- okay.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: George, I don't know if Mike's statement has anything to do with what you're saying, but in my mind, the term biodiversity and natural resources don't mean the same thing. And aren't we addressing natural resources? But I hear the biodiversity term throughout the meeting thrown up there connected to this issue. I'm a little confused on what
-- what is it, you know?

CHAIRPERSON RIDDLE: Yeah. Well -- and my response is, yeah, the broader category is natural resources, and that's how it's listed on the agenda, but biodiversity is one of those or --

MS. OSTIGUY: Right.

CHAIRPERSON RIDDLE: -- you know, some of those to be assessed, and then also is a requirement. I mean, the very definition of organic production includes to maintain or improve the biodiversity. So it is addressed in organic production, and this is just helping give better tools to assess compliance. Andrea?

MS. CAROE: Just based on something you just said, this is giving tools to assess compliance. You can't assess compliance by this guidance, you can't. I mean, this is not --

MS. OSTIGUY: Well, he knows.

MS. CAROE: -- this is not a rule. You can't -- this is guidance. This is strictly for information purposes and the certifier cannot use this to assess compliance with the regulation.

CHAIRPERSON RIDDLE: And it's -- it would be an amendment to the model organic system plan to help provide information to show -- you know, like for farmers, to show how they comply with the requirements.
It's not creating any new requirements that aren't there in the regulation at all.

MS. OSTIGUY: The goal was to clarify what already exists, the sum total.

CHAIRPERSON RIDDLE: Any other --

MS. CAROE: Yeah.

CHAIRPERSON RIDDLE: Yeah, Andrea.

MS. CAROE: Again, not to sound like Richard Mathews, but if you don't do these things, you're not going to be decertified. There's no grounds for decertification because of these items, and that's just something to keep in perspective as we work --

MS. OSTIGUY: No, that's not actually correct, because these are required to do by the law and the rule, not these specific items. What matters is whether or not your overall complying. And the question that's been coming is what do I do to comply, and this is to provide a way for farmers to go about the process so they can figure if they're complying. That's --

MS. CAROE: Again, I agree this is wonderful information and I think it was -- I mean, I'm glad to see somebody stating these conservation measures in association with organic, but it is information, it is not compliance. And you know, yes, yes, the rule does have compliance points, but how you meet those.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
compliance points, it's really take it or leave it when it comes to these. And this is very good educational information for the growers that are putting together a conservation plan to meet their requirements.

CHAIRPERSON RIDDLE: And I'll just respond once again by reading from the rule. "Production practices implemented in accordance with this subpart must maintain or improve the natural resources of the operation, including soil and water quality." That sounds like a requirement to me. And then must prevent erosion is another one. I mean, there are a number of natural resources-related components. George?

MR. SIEMON: Okay.

CHAIRPERSON RIDDLE: And then we're winding down.

MR. SIEMON: So I understand we're saying intent and we're going to get back to rewrite it.

CHAIRPERSON RIDDLE: Right.

MR. SIEMON: But they're going to rewrite it, as far as I know, in another form.

CHAIRPERSON RIDDLE: Actually incorporating it into the model farm plan.

MR. SIEMON: The model farm plan.

CHAIRPERSON RIDDLE: Right.

MS. OSTIGUY: Um-hum, um-hum.
MR. SIEMON: My only concern is it just increases paperwork for farmers. It's hard enough to get them fill out the paperwork we have. We're doubling the size of --

CHAIRPERSON RIDDLE: Nancy.

MS. OSTIGUY: What we started with was substantially longer than this. I shortened it considerably. ATTRA's goal is to shorten it, also, basically to clarify it. The idea is not to increase anybody's paperwork, but to make it more understandable what it is that they need to do in order to comply with that particular section of OFPA. So there may be some pieces that are applicable to a particular farm, other pieces that are -- you know, yeah, you're right. Paperwork, people don't like to do, but it's part of the process.

CHAIRPERSON RIDDLE: And another part of this is, throughout the ATTRA documents is checkboxes that give a producer of ideas of how they already are complying and just can check what they are doing already. Yeah, Hugh, and then let's try and wrap it up here.

MR. KARREMAN: I hate to beat a dead horse on the NRCS, but you know, they're the ones that'll just come up with the plan for you, so you're not doing a
whole lot of paperwork. You just say please come in, you know, do this kind of checklist and give me my conservation plan, and a lot of this will be included in that --

MS. OSTIGUY: Um-hum.

MR. KARREMAN: -- and you didn't have to do a thing.

MS. OSTIGUY: Right.

CHAIRPERSON RIDDLE: Well, yeah. But doing your NRCS, there's a bit of paperwork, too.

MR. CARTER: Yeah.

MR. KARREMAN: Yeah, but they will come up with the plan. You don't have to come up with it.

CHAIRPERSON RIDDLE: But sure, that would be another thing to show you're complying with all of these same requirements. Okay, let's go on to a vote now, and Andrea's turn to be first.

MS. CAROE: So can you read the motion you're reading?

CHAIRPERSON RIDDLE: Nancy, could --

MS. CAROE: Can you reread the motion?

MS. OSTIGUY: I move -- oops. I move that the Board accepts the provided enhancement of the natural resource component of the organic system plan, with the understanding that ATTRA will revise the format provided...
and that ATTRA's revised format will come back to the Board for final consideration.

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Okay. Rigo?

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: Hugh?

MR. KARREMAN: Yes.

CHAIRPERSON RIDDLE: Julie?

MS. WEisman: Yes.

CHAIRPERSON RIDDLE: Gerald?

MR. DAVIS: Yes.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yes.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.

CHAIRPERSON RIDDLE: Rose? Rose had to go help someone and she actually said her vote is yes. Goldie, what was Rose's vote? I should've asked you. They don't trust me.
MS. CAUGHLAN: Definitely yes.

CHAIRPERSON RIDDLE: A double yes. Okay, Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes, so we're back to unanimity. It'd be 14, 0, 0, 0. All right, thanks.

MS. OSTIGUY: Okay, last item --

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: -- waxed boxes. This was a Q and A that we got from the NOP. Get me to the right section here. The recommendation starts with the question, does Section 205.272 allow the use of boxes coated with a synthetic wax for transport of agricultural products? The answer: a box may be coated with a petroleum-based or a synthetic wax. Section 205.272(b)(1) prohibits the use of packaging materials that contain synthetic fungicides, preservatives, or fumigants. The allowance of nonsynthetic carnauba and wood resin waxes, in 205.605(a), applies to waxes that are directly applied to produce. It does not apply to waxes used on produce boxes. Certifiers allow the use of waxed produced boxes without concern as to the source.
of wax, so long as the wax does not contain synthetic fungicides, preservatives, such as BHT or BHA, or fumigants. Many boxes used for conventional produce are treated with fungicides, or else the box contains a fungicide-treated liner. These are not allowed for organic produce. If a bag or container contains a prohibited substance, then the use of reuse of that bag or container is prohibited under 205.272(b)(2), unless the bag or container has been thoroughly cleaned and poses no risk of contamination. This provision may be used by a certifier to prohibit the reuse of conventional produce boxes, or to require that packaging materials be removed from a storage area during pesticide treatment.

CHAIRPERSON RIDDLE: Okay. And do you move its --

MS. OSTIGUY: And that's a motion.

CHAIRPERSON RIDDLE: -- adoption?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Is there a second?

MR. LACY: Second.

CHAIRPERSON RIDDLE: A second by Mike, moved by Nancy. All right, discussion. Andrea.

MS. CAROE: I would just offer an amendment to change the word produce to product, just in case there's
an opportunity for a processed food to end up in a waxed box.

MS. OSTIGUY: A friendly amendment.

CHAIRPERSON RIDDLE: Accepted by Mike?

MR. LACY: Yeah, because chicken could end up in a waxed box.

CHAIRPERSON RIDDLE: Uh-huh. Okay, so you'll take care to make that revision before submitting the final, if it passes. All right, other comments on the now amended waxed box Q and A? Hugh?

MR. KARREMAN: Just wondering, when it says if a bag or container contains a prohibited substance, it says it can be thoroughly cleaned. By cleaned, how? Should that be defined, how to be cleaned before it's okay? It just seems kind of vague.

CHAIRPERSON RIDDLE: Yeah. Well, it's a direct quote from the regulation --

MR. KARREMAN: Oh, okay.

CHAIRPERSON RIDDLE: -- and it says, unless has been thoroughly clean and poses no risk.

MR. KARREMAN: Well, I'm just -- I'm still kind of curious how --

CHAIRPERSON RIDDLE: Sure.

MR. KARREMAN: -- would clean that.

CHAIRPERSON RIDDLE: I don't know that that's
our role as a Board, but --

MS. OSTIGUY: It was a similar concern that I had, that basically, that answered the same way.

CHAIRPERSON RIDDLE: Call ATTRA and find out how to thoroughly clean boxes so they don't pose a contamination risk. Maybe there's a fact sheet on that. George?

MR. SIEMON: I'm just concerned about the produce versus product that we've now moved into packaging. Product -- you know, I just -- you know, so I want to be cautious here. We started out with produce -- I'm all for waxed packages, don't get me wrong, but are we clear we're not --

MS. OSTIGUY: Well --

MR. SIEMON: -- jumping to the subject in the Crops Committee --

MS. OSTIGUY: The --

MR. SIEMON: -- into the Handling.

MS. OSTIGUY: The original question was product, so agricultural products. So --

MS. CAUGHLAN: It didn't say produce.

MS. OSTIGUY: It did not say produce. So we can say we're just being consistent with the question.

CHAIRPERSON RIDDLE: And also consistent with the rule, which uses the word product or ingredient
placed in those containers. So it even goes a little further in the rule. Andrea?

MS. CAROE: George, are you wanting to add the word agriculture to it -- agricultural?

MR. SIEMON: I was just asking more to Kevin to make sure we're not jumping into handling packaging-type concerns, to make sure that it's -- it's a big deal, waxed packaging. So if this works, that's fine.

MR. O'RELL: I think it's consistent.

MS. OSTIGUY: Um-hum.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: I have a question that maybe somebody can answer for me. If commingling is not allowed because of crops contamination, why are organic produce items allowed to sit on petroleum-based wax? Is there residue that takes place? Does a residue get onto the produce during transport, from the petroleum?

MS. OSTIGUY: I suppose it would depend on what level you might be interested in. If we were to go to parts per trillion or parts per quadrillion, I would assume something might be there, but I'm not positive. You know, the wax -- the purpose of waxed boxes is not to impart anything to the product --

MS. JAMES: Right. I understand that's a protestant -- to other outside -- it's just confusing a
little bit, because the regulations are so strict about
cross-contamination of products and synthetics, and here
we're saying that a box that does come into contact with
an organic food item, which actually might come directly
into contact -- say, such as apples, that it's okay for
those two things to commingle, but it's not okay for --
it's just a little confusing to me --

MS. OSTIGUY: Yeah.

MS. JAMES: -- why petroleum-based and

synthetic waxes are okay.

MS. CAROE: Jim?

CHAIRPERSON RIDDLE: Yeah, Andrea and then

Arthur.

MS. CAROE: This level of evaluation is done
on the certification level. During the evaluation and
the inspection and the certification review, they will
mitigate -- they will investigate the risk from
contamination, and I don't believe that it's necessary.
I mean, the rule clearly states that the product can't
be contaminated. The certifier will review if there's a
potential risk of contamination at that time. I don't
think that that's appropriate for us to weigh in on that
at this time.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: I agree with Andrea. Packaging is
a totally different area in the regulatory world, and which FDA really handles. And you see, the way that they regulate that has even changed the whole food contact substance issue. But the reason why the commingling is a little bit different is because, in the handling of product, you want to make sure that, as a consumer, when you're purchasing an organic apple, you are buying an organic apple and not a conventional apple, because they both look the same. So in handling the products, you want to make sure that you're not mixing conventional and organic apples together by chance, selling the wrong type of product to the final consumer.

CHAIRPERSON RIDDLE: And I would just add that, you know, the answers here are an attempt to explain what is in the regulation, and the regulation puts certain restrictions on packaging material, but that's it. And then it also puts other restrictions on contact with prohibited substances. So it's not an attempt to kind of define purity, but rather what is allowed under the regulation and not --

MS. JAMES: I understand that, but it is -- it is inconsistent with some of the other things that we are saying, in my opinion. In my opinion, it is. And I'm not -- I just -- I mean, I see -- and I know we're
not supposed to be talking about packaging at this level, but so I'll just leave it at that.

CHAIRPERSON RIDDLE: Any other comments?

***

[No response]

***

CHAIRPERSON RIDDLE: Seeing none, we will move to the vote on the waxed boxes Q and A. And Rigo.

MR. DELGADO: Yes.

CHAIRPERSON RIDDLE: He says yes. Hugh?

MR. KARREMAN: Abstain.

CHAIRPERSON RIDDLE: Abstain. Julie?

MS. WEISMAN: Yes.

CHAIRPERSON RIDDLE: Julie votes yes. Gerald?

MR. DAVIS: Ye.

CHAIRPERSON RIDDLE: Mike?

MR. LACY: Yes.

CHAIRPERSON RIDDLE: Nancy?

MS. OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Dave?

MR. CARTER: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Abstain.

CHAIRPERSON RIDDLE: George?

MR. SIEMON: Yes.
CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: Yes.

CHAIRPERSON RIDDLE: Goldie?

MS. CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

MR. O'RELL: Yes.

CHAIRPERSON RIDDLE: Andrea?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: The Chair votes yes, so we have 12 yes, 0 no, and 2 abstentions. Okay, does that conclude the Crops Committee action items?

MS. OSTIGUY: Yes, it does.

CHAIRPERSON RIDDLE: Okay. Well, believe or not, that concludes our action items and --

MR. O'RELL: Are you going to let us go?

CHAIRPERSON RIDDLE: Yes, but not without just a instruction for tomorrow. The first item on our agenda is committee work plans. And you know, I think what we did in October the last time was very valuable, where it's not just a run-through quickly, but actually a bit of a presentation and to prioritize those and allow a little discussion, just so people understand what the other committees are doing. So I don't know if any of your committees need to meet or if the committee chairs can just present those. I leave that to the
discretion of the chairs to make that. But there's
certainly a number of important items to stay on the
work plans. Any other final words before we recess for
today? Arthur?

MR. NEAL: I just want to commend you for
moving and conducting these last sessions in a very
product fashion, because you had a lot on your agenda
and you stayed the course. You managed to get in about
six hours of public comment and cram in some work, and I
want to commend you on that, because I know it's a
daunting task over the last couple of days.

MR. SIEMON: Does that mean you're buying?

MR. NEAL: No, that means we try to get some
of the -- lessen the agenda items for the next meeting.

CHAIRPERSON RIDDLE: Yeah. And -- and also,
you know, we do have quite a few people signed up for
public comment tomorrow, and it's really important that
we all stay here and, you know, through public comment,
which is scheduled to end at noon. If we close early,
fine, but -- okay.

MR. O'RELL: Are we going to respect the noon
recess for those who have travel plans?

CHAIRPERSON RIDDLE: Yeah. Yeah, yeah.

Right. Well, I think it's 12:15. Okay, anything else
for today, otherwise we begin again at 8:00 a.m.
tomorrow? George? All right, thanks.

[End of proceedings]
CERTIFICATE OF REPORTER, TRANSCRIBER AND PROOFREADER

IN RE: National Organic Standards Board

HELD AT: Washington, D.C.

DATE: March 2, 2005

We, the undersigned, do hereby certify that the foregoing pages, numbered 1 through 310, inclusive, are the true, accurate and complete transcript prepared from the reporting by the reporter in attendance at the above identified meeting, in accordance with applicable provisions of the current USDA contract, and have verified the accuracy of the transcript by (1) comparing the typewritten transcript against the reporting or recording accomplished at the meetings, and (2) comparing the final proofed typewritten transcript against the reporting or recording accomplished at the meeting.

IN RE: NATIONAL ORGANIC STANDARDS BOARD MEETING

Meeting held on the 3rd day of March, 2005
at 8:00 a.m.

The Washington Terrace Hotel
1515 Rhode Island Avenue, NW
Washington, D.C.

TRANSCRIPT OF PROCEEDINGS

03-03-05 NOSB Meeting Participants

Chair: James A. Riddle
Vice Chair: Kevin O'Rell
Secretary: Goldie Caughlan

NOSB Members: Andrea Caroe
David Carter
Gerald Davis
Rigoberto Delgado
Bea James
Hubert Karreman
Rose Koenig
Michael P. Lacy
Nancy Ostiguy
George Siemon
Julie Weisman

NOP Staff: Richard Mathews
Arthur Neal
Barbara Robinson
Public Comment:

1. Julia Sabin, Smucker Quality Beverages 36
2. Wendy Swan, Animal Welfare Institute 39
3. Steven Protanic, National Chicken Council 45
4. Kim Dietz, Past Member, NOSB 53
5. Lynn Coody, Organic Ag Systems Consulting 64
6. Leeanna Hoods, National Campaign for Sustainable Agriculture 69
7. Mark Kastel, Cornucopia Institute 78
8. Arthur Harvey 88
9. David Engel, Midwest Organic Services Assn. 91
10. Brian Baker, OMRI 94
12. Joe Dickson, Whole Food Market 105
14. Cissy Bowman, Indiana Certified Organic 120
15. Michael McGuffin, American Herbal Products Association 124
16. Pete Gonzalez, Oregon Tilth 127
17. Jim Pierce, Organic Valley 128
CHAIRPERSON RIDDLE: If people could take
their seats and wrap up their conversations. I've got a
motivated bunch today, I can tell. Okay, so the first
item on our agenda today, and I'd like to go ahead and
start with that, is discussion of committee work plans
and priorities and time lines. And I haven't made a
list of which committee to go first, so we'll just --
whoever is ready to present first. As soon as Kevin
opens his, he'll be ready. Anyone ready before that?
We only have three committee chairs here. We're missing
Rose, Andrea and Dave. Nancy, Nancy. No, no, no, no.

MS. OSTIGUY: Let's see. The items that the
Crops Committee is going -- has on its work plan include
a number of things from yesterday. Probably the most,
two most important items that we're going to be looking
at will be recommendations for the Board to consider on
the use of compost and compost tea. These are not done
in -- these two are not done in order of priority. And
the second one is commercial availability of seed, to
bring that back to the Board. We have two, at this
point, materials that we need to finish up; soy protein
isolate and ammonium bicarbonate. That will be
dependent on when we make the decisions about what synthetic versus nonsynthetic are, since most of those recommendations -- depend on that particular question. Hydroponics is also on the list. Those are the only items that I have at this time.

CHAIRPERSON RIDDLE: Any discussion, questions for Nancy? Problems here, complaint? Any additional items that people are aware of for Crops Committee to consider that have come out during public comment or -- Kim, did you have a point?

MS. DIETZ: Just your materials for the National List for the Sunset review. I think that if we could -- when you request a tab, identify questions, so I think that will probably --

CHAIRPERSON RIDDLE: Thanks, Kim, yeah. And each of the Crops and Livestock and Handling Committee, I -- they should be continuing prioritizing the early review materials for Sunset, so keep that in mind. Anything else? Okay. Kevin, ready to go for Handling?

MR. O'RELL: The Handling Committee work plan, we have eight items on there now. The first one is the synthetic versus nonsynthetic, to work with Materials Committee regarding the review and recommendation for the clarification of synthetic as it applies to substances, petition for the addition or prohibition to
the National List. That's number one for a reason that it's our priority, Nancy.

    Number two is the ag/non-ag issue, to review and provide guidance for clarification of current 205.2 definitions. Number three is the recommendation for the reclassification of yeast currently listed on 205.605(a). Number four is the Sunset material and review process, to move forward on materials identified as priority and from our meeting, committee meeting and presentations to the Board -- flavors and yeast.

    Number five is to work with the Compliance, Accreditation and Certification Committee to make a recommendation for the retail certification question that came from the NOP. Number six is the Pet Food Task Force and this would be -- participate in the Pet Food Task Force following NOP guidance as things come from the Federal Register notice. The NOP will be getting back in touch, I believe, with the Handling Committee in terms of how we proceed. Number seven would be review of petitioned substances as needed and finally, number eight is as a committee, we're going to review succession plan for future Handling Committee leadership. Any questions, additions? Hugh.

    MR. KARREMAN: Just -- I don't know if it's going to bother me, Pet Food Task Force; obviously, I
wouldn't be on it, but I'd be interested, being a veterinarian in the livestock area, about -- I don't if it's about labeling pet food or if it's actually sourcing organic sources of raw material in pet food, but I'd be interested -- to be involved a little.

MR. O'RELL: Okay. When we get the direction back from the NOP, I'll make sure that the full Board knows what our next step is. If there's any participation that you want to be a part of, you'll have that consideration.

CHAIRPERSON RIDDLE: I don't know why you say obviously. You wouldn't -- you're a Board member and there will be probably two Board members on it. If you're interested, and unless you have a conflict that would prohibit you from being on it, you'd certainly be eligible.

MR. O'RELL: You mean a Board member on the task force? Oh, I --

UNIDENTIFIED SPEAKER: Two Board members.

CHAIRPERSON RIDDLE: Well, we got one. Any others?

MR. O'RELL: Okay, thank you.

CHAIRPERSON RIDDLE: The only other thing, Kevin, is you know, once the summary judgment happens, if there's something where NOP asks for the Board's
input on, you know, as it relates to Handling, just ask you to keep a place open for that.

    MR. O'RELL: Okay, not a problem.

    CHAIRPERSON RIDDLE: Is this the place holder in the work plan on that? Okay, any other questions, comments for Handling? Okay. George, are you ready?

    MR. SIEMON: Sure. Well, a lot of follow-up has been discussed here. Our big priority -- they're all big priorities, of course. We have the Aquatic Task Force; we have an aggressive time line to both appoint those people and work through the issues, so we've been waiting for the register to close and that's happened now, so we're going to work with the NOP to assign that task force. We also put in for aquaculture our older standard to get feedback. We got one response, I think, but now we need to -- two?

    UNIDENTIFIED SPEAKER: Yeah, two detailed, yeah.

    MR. SIEMON: So we now have to work off of it, so that is -- we -- I can't say the word, so -- and then, of course, then we have this pasture thing that we put up for comment. I wonder if we're now heading for a rule change for that rather than the guidance now that we have more time, that we can give to the committee where we're going. We still have this -- trying to
unify the dairy replacement standards still -- now that we're rewriting the dairy part of the rule, maybe that will come to bear. Still we're going to use FDA. We've already -- that's what Dave gets, there's a lot to do on that. We're still watching over that process. We put forth the Sunset material and we're still looking at that. I heard a request for the methionine task force. I haven't talked to any of the committee members or NOP about that request that came out of this meeting. Way back in our work plan, this fiber-bearing standard and of course, just like all the committees, we're supposed to be looking for a new chairperson and then last, but not least, the response to the law suit -- never a dull moment.

CHAIRPERSON RIDDLE: Okay, any questions, comments for George? Nancy?

MS. OSTIGUY: No, but I have an offer of work. I'm willing to be the person to deal with agricultural standards, because I do know something about bees.

CHAIRPERSON RIDDLE: Right.

MR. SIEMON: Yeah, I know, and you are the right person. Anything else? All right.

CHAIRPERSON RIDDLE: And Nancy, do you have a copy of the two detailed comments that were submitted?

MS. OSTIGUY: No, I haven't seen them.
CHAIRPERSON RIDDLE: Okay, we'll try to make sure we get those to Nancy.

MS. OSTIGUY: I also want to make sure that we have broader comments on the standards before we forward because as far as I know, it has now hit the radar of the beekeeper community.

CHAIRPERSON RIDDLE: Yeah, so what I would suggest, taking that task force report and these two -- I mean, two comments that have come in, merging it into a draft recommendation and that'll be the -- you know, solicit comments and spread that as wide as possible, so great.

MS. OSTIGUY: Yes. I do know how to make sure that they will hear about it.

CHAIRPERSON RIDDLE: You've got contacts in the bee community, bee hive buzzing. Okay, any other comments for Livestock? Seeing none, okay, who's next, ready? Dave, okay. And then --

MR. CARTER: I even intended to have a printed copy for everyone and I faxed it to what I thought was the front desk and it went to sales [ph], so -- anyway, first on our list is develop for distribution to the Board -- I didn't forget that, Mr. Chairman -- and for the Executive Committee action a formal response to the good guidance policy Federal Register notice pending.
receipt of the collaboration document.

Secondly is to develop for distribution to the Board and for Executive Committee action, a follow-up to the AAPFCO organic labeling issue. Those are both very time-sensitive because of the short triggers on those. And then to work in cooperation with the Crop and Livestock Committees to develop a draft guidance on temporary variances for research. And as always, coming out of the meeting, there are more Board policy procedures, manual revisions to be handled; specifically, the materials approval and TAP review information for Rose, the Sunset review process and make sure that we get the clean, updated copy around to everyone. And then, just to continue to provide some follow-up on the issues that weren't addressed at this meeting, but elsewhere, such as the executive director, what's the -- you know, what's happening with that; the handling of the livestock medication materials and the follow-up on the "made with" issue, the organic/non-organic.

CHAIRPERSON RIDDLE: Okay, are there any questions, comments? Andrea.

MS. CAROE: Are you also looking for the --

MR. CARTER: Yes.

MS. JAMES: I'd like to recommend that this committee, and I'm volunteering, work on a procedure for handling questions that the NOP submits to us for the policy manual.

CHAIRPERSON RIDDLE: Oh, yes, and I should let everyone else on the Board and the record show that Bea originally had asked to be on the Crops Committee, but has since changed her mind and would -- has requested to be on the Policy Committee instead and that's fine with me and then just to let everyone know that, so the composition is different than I read the other day, slightly.

MS. KOENIG: I'd just --

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: -- like to volunteer, Dave, to work on the temporary variance for research.

MR. CARTER: Okay.

CHAIRPERSON RIDDLE: And I have one other item to consider of the committee and it also relates to Handling Committee and that is the criteria and procedures for commercial availability determinations for substances petitioned for placement on 606. There really are no criteria other than the definition of commercial availability and we really wouldn't know how to instruct the technical review contractors. It's not
currently covered in their statement of work. Those are all scientific review, not economic analysis, so I would ask the Policy Committee, since it is a policy issue, to take the lead, that you work closely with Handling on -- begin drafting some criteria and procedures for the commercial availability determinations.

MR. O'RELL: Jim, a question. Is this in light of the summary judgment coming out of the 606, that we want to have an expedited process, too, because from what I heard yesterday is that commercial availability will not exist unless something is on 606?

CHAIRPERSON RIDDLE: Right.

MR. O'RELL: Okay. So we're looking at procedures for how to go about to get something on the list?

CHAIRPERSON RIDDLE: Right.

MR. O'RELL: We'll have to work, obviously, closely with NOP --

CHAIRPERSON RIDDLE: Oh, for sure.

MR. O'RELL: -- on how to expedite things.

CHAIRPERSON RIDDLE: Right.

MR. O'RELL: Okay.

CHAIRPERSON RIDDLE: Yeah, the Board clearly will have a role, since it's a National List issue.

Okay. Anything else? Okay, seeing none, who's next?
MS. KOENIG: For the Materials Committee, we would hopefully have a committee recommendation on synthetic versus nonsynthetic after we get some information from the Handling Committee at the next meeting with some recommendations on that definition. We want to write a recommendation on how to go -- well, how to develop a technical advisory board, a panel, to -- for the materials process, so it would be more of an internal procedural document for the Board.

As a quick exercise, I'd like to go back to the re-organization of a list for -- based on OFPA criteria and do it for Livestock just so that we may identify materials on the list that don't meet the criteria and just let -- and giving the Materials Committee on those and they can determine if they need to be reviewed or how they want to handle that. And the last thing -- and I'm not sure if the Handling Committee's interested in looking at -- you know, after the judgment, looking at the lists for the materials that maybe could be considered --

CHAIRPERSON RIDDLE: Nonsynthetic.

MS. KOENIG: Yeah, and try to do an analysis, go back to the -- try to get the TAP resources and look at -- in those, if there may have been natural forms at
that time that were -- need to be economically feasible, just so that we can have a better idea of the impact. I know probably the industry is working on that, but I do feel that the Board probably should play a role and at least do an analysis of our present list.

MR. O'RELL: Yes, Rose, I think that's a good idea. We'll certainly take that up.

CHAIRPERSON RIDDLE: And so Handling and --

MR. O'RELL: Handling will work --

CHAIRPERSON RIDDLE: With Materials.

MR. O'RELL: -- with Materials, yes.

CHAIRPERSON RIDDLE: Okay. Any other comments, questions for Rose? Andrea.

MS. CAROE: Rose, your committee is very active and the work that you do is pretty time-consuming and I was really wondering when we would have new leadership for that committee, because I know that your term is coming to an end and this is one area we certainly can't have a lack of --

MS. KOENIG: The proposal, I think, is on the table, so -- just briefly, that would be to set up so that Nancy would take over for her final year on the Board and then really have somebody, one of the new members, in apprentice training, so for two years. So we do have identified somebody now to be -- Nancy
doesn't necessarily have to be the vice on the -- I mean, she knows it, she'll take it over and we want to get somebody in line to take over after her, so that person should be working closely even this year.

CHAIRPERSON RIDDLE: So that, then, goes back to Crops Committee of cultivating a new chair there in that field.

MS. OSTIGUY: And that is planned. In terms of somebody contemplating the Materials Committee as a future item, the -- while the workload is not small, it is much more handleable [ph] that it was before because of the workload of Kim and Rose in getting everything organized, so it's not as overwhelming as the Board has alluded to in the past, I don't believe. And fortunately, I don't think I need a training period.

CHAIRPERSON RIDDLE: Okay, anything else for Rose? All right. Andrea.

MS. CAROE: The Accreditation Committee has two work items. The first one is a steady item that was on the list coming into the meeting and that is to work in collaboration with the program to come up with procedures for the peer review process, so that's the first task at hand. And the new task that was brought about through this meeting is to work in collaboration with the Handling Committee as to those retail...
certification questions.

CHAIRPERSON RIDDLE: And Andrea, I would just ask, on the first item, the peer review, that the committee look at the larger ANSI report and response and see if there are any additional, you know, items to be engaged in beyond just the peer review issue.

MS. CAROE: Absolutely. I mean, that's why this wasn't completed before this meeting, is because we -- the ANSI report and the information that is clear to that process and the response of the program is critical in determining how useful the peer review is going to be and the building of procedures around, again, pursuing improvement on the program and the accreditation process.

CHAIRPERSON RIDDLE: Okay. Any other comments, questions for Andrea?

MR. DAVIS: Quick question.

CHAIRPERSON RIDDLE: Yeah, Gerald.

MR. DAVIS: ANSI. What's that stand for?

CHAIRPERSON RIDDLE: Oh, the American National Standards Institute, and just a tiny background. They were contracted by NOP to do a one-time audit of the accreditation program and they have a very detailed report that's posted on the NOP web site and then there's also an NOP response point-by-point to the
deficiencies that were identified during that audit, so then the committee will look at that and figure out what -- how we can contribute to addressing some of those issues. All right, very good. Next, I think we have -- is NOP, are you ready?

MS. ROBINSON: Yeah. Thanks, Mark. Okay.

CHAIRPERSON RIDDLE: So we have a little announcement or --

MS. ROBINSON: We have a few mementos that we didn't take a chance to give --

CHAIRPERSON RIDDLE: Okay.

MS. ROBINSON: -- to outgoing Board members Monday evening and incoming Board members.

CHAIRPERSON RIDDLE: Do we have that on the record? Please.

MS. ROBINSON: So, Mark --

MR. KING: Yes.

MS. ROBINSON: -- thank you very much. And -- a certificate of appreciation to Mark King for five years of dedicated services as a member of the USDA's National Organics Standard Board, 2001 to 2005.

UNIDENTIFIED SPEAKER: All right, one more here.

[Simultaneous comments]

MS. ROBINSON: Becky, are you ready?
CHAIRPERSON RIDDLE: Is Becky here?

UNIDENTIFIED SPEAKER: She will be down later.

MS. ROBINSON: She keeps doing this to me.

And then, as a new Board member, we have a Certificate of Appointment to Gerald Davis with appreciation for accepting the call to serve the nation and the United States Department of Agriculture as a member of the National Organic Standards Board and it's signed by the Secretary. Thank you very much.

MR. DAVIS: Thank you.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Okay, is that it? Yeah, okay. Yeah, I'd just like to point out that Kim was acknowledged at a reception the other night, but we certainly want to thank you once again and thank you for your contributions during this meeting, too. It's been very helpful, yeah. And the other four new Board members were also presented their plaques of appointment and service to the nation at that reception that Barbara hosted on Monday evening, so it's not that Gerald is extra special, although he is.

UNIDENTIFIED SPEAKER: Don't tell anyone.

CHAIRPERSON RIDDLE: We're all special. Okay.

We still have a half hour before the public comment period begins and that time was posted in the Federal
Register, so it will be -- yes, exactly. That could
take a half hour right there, to talk about the next
meeting date approximate time because my understanding
from Richard and Barbara is there is funding and they
would like us to have a meeting in the -- this fiscal
year, which ends September 30, so sometime before the
end of September, but it does relate to the Sunset
docket which has not been posted yet. So it needs to
mesh with that time line once that kicks in, so we can't
set, you know, firm dates, but we should be looking at
our calendars for like August and September, so if
there's some times that are totally impossible for
people --

    MR. SIEMON: It's all impossible.
    CHAIRPERSON RIDDLE: Okay, George. It's all
impossible.
    MR. SIEMON: Those two months for me are --
but Expo, just for -- is the 14th, 15th, 16th, 17th of
September.
    MS. ROBINSON: Why don't you guys shoot for
August?
    MR. SIEMON: Well --
    CHAIRPERSON RIDDLE: Just point out dates like
that. September -- yeah.
    MR. SIEMON: Well, the 15th, 16th, 17th is
Thursday, Friday, Saturday and then Sunday's the 18th.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: Just a few things. This would be, then, the second meeting of the year, because since I've been following this -- is it two meetings a year or would there be yet another meeting in October?

UNIDENTIFIED SPEAKER: Yeah, there would be a before and after --

MR. MATHEWS: If you have one in August or September, that's the third one for the year.

CHAIRPERSON RIDDLE: Oh, for the fiscal year, for the fiscal year, yes. Yeah.

MR. SIEMON: The fiscal year's October 1.

CHAIRPERSON RIDDLE: Yeah. All right, but it's the second in the calendar year and --

MR. KARREMAN: Yeah, I thought it was two a year. So anyway, my best times of the year with my farmers harvesting and all that would be September, October, so mid-September would be real nice.

CHAIRPERSON RIDDLE: Uh-huh. And George --

MR. SIEMON: Yeah, I -- we normally don't like to do it on the years we have Expo, but that would work best with me, I must admit.

CHAIRPERSON RIDDLE: And that's Expo MDC?

MS. CAUGHLAN: Right.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. SIEMON: So the 12th, 13th, 14th or the 19th, 20th, 21st would be -- I know it's unhandy, but with the rest of my month's gone.

MS. CAUGHLAN: The week before Expo --

CHAIRPERSON RIDDLE: Okay, Rose.

MS. KOENIG: I would propose that we try to find maybe a week in August and a week in September and then depending on when that federal notice comes out, we really have to do it based on Sunset because we have a small window and we may need to do another, and that really depends on getting everything for Sunset. So if we can at least identify a week in August and for me, the first two weeks are better, before school starts. I'm not exactly sure what time school starts, the 17th --

CHAIRPERSON RIDDLE: So what you're saying it's better before or after -- I'm sorry.

MS. KOENIG: The beginning of August --

CHAIRPERSON RIDDLE: The beginning of August.

MS. KOENIG: -- and then whatever in September.

CHAIRPERSON RIDDLE: Okay.

MS. KOENIG: We can try around the first day of school.

CHAIRPERSON RIDDLE: All right. Dave.
MR. CARTER: Well, I was going to mention that the time before Expo's problematic, but I think I can shift that if I needed to, so we've got a lot of input coming back. It seems to work, but the only problem with that, after -- the week before Expo works --

CHAIRPERSON RIDDLE: Okay. George.

MR. SIEMON: Just responding to Rosie. Is the 15th, 16th, 17th of August, is that too close to school? The first two weeks of August don't work for me very well.

MS. KOENIG: I mean, we can do that, whatever. I have no --

MR. SIEMON: It seems like we should come up with two times.

CHAIRPERSON RIDDLE: Yeah. I think that's a good approach.

MR. SIEMON: So how about the 15th, 15th, 17th of August? I've got something planned, but I can rearrange that, so I can make that work --

CHAIRPERSON RIDDLE: Uh-huh.

MR. SIEMON: -- that week.

CHAIRPERSON RIDDLE: You're suggesting 16th through 18th? Okay, so one of the options suggested is around August 16 through 18. So far I'm seeing that that -- Julie, yeah.
MS. WEISMAN: I'm anticipating the second one.

CHAIRPERSON RIDDLE: And the other that was suggested would be the, what, 11th through 14th or 12th through the 15th, right before Expo? In September, I'm sorry. September. Bea.

MS. JAMES: My brother's getting married and my kids start school that week, too, so I wouldn't be able to attend that week.

MR. SIEMON: But afterwards?

MS. JAMES: Yeah.

CHAIRPERSON RIDDLE: Okay, so that doesn't work for Bea, but afterwards would work like, say 18th through --

MR. SIEMON: The 19th is a Monday.

CHAIRPERSON RIDDLE: Okay, the 19th through 21st. Julie.

MS. WEISMAN: I'm getting into shaky territory with that. I'm concerned about my mental health and -- close to October 1.

CHAIRPERSON RIDDLE: I guess you don't need to elaborate.

MS. WEISMAN: My daughter's getting Bat Mitzvahed and another industry organization that I have great responsibility for has its major event of the year on the 24th of September. I'm just -- the Bat
Mitzvah can't be -- that date's been set for four years --

CHAIRPERSON RIDDLE: No.

MS. WEISMAN: -- so I can't change that. I was hoping for before Expo.

CHAIRPERSON RIDDLE: Okay. Yeah, Andrea, a suggestion?

MS. CAROE: Just that in the past, you know, it's grueling having both the Board meeting and the Expo and I don't know -- I mean, because this takes a tremendous amount of energy, what we do here. I can't imagine that after Expo that this Board and the participating audience would be up for a Board meeting.

CHAIRPERSON RIDDLE: Well, we can sing Some Magical Moment --

MS. CAROE: Well, I would suggest we do this before the Expo.

CHAIRPERSON RIDDLE: Yeah, well the other choice -- I mean, that doesn't work for Bea -- would be to separate the two and two trips to D.C. for the people that need to do both. George?

MR. SIEMON: How about the 27th, 28th, 29th of September?

CHAIRPERSON RIDDLE: That's worse. That's definitely --
[Simultaneous comments]

CHAIRPERSON RIDDLE: We don't even have to think about that, yeah. Okay. I know this is, you know, really fun for the audience to watch.

MR. MATHEWS: Jim?

CHAIRPERSON RIDDLE: Yeah, Rick.

MR. MATHEWS: If you're going to talk 27, 28, 29 of September -- well, I know you just ruled it out, but if you're going to -- you might as well just be talking the middle of October right now, because that's only another couple weeks and we normally try to have a meeting in mid-October, anyways. So maybe if we just forget August and September and Bea -- well, the only reason why I'm saying that is that it's still a wild card that we're going to be able to do something in August and so if you're planning late September, then we might as well just do the mid-October and that'll give you another two or three weeks to do your work and be that much more prepared to address the issues that the commenters are going to provide to you. That's not a mandate, it's just a suggestion.

CHAIRPERSON RIDDLE: Uh-huh, yeah. And it may come to that, but right now we're just trying to pick out a couple dates in that August/September -- and so I would call on George.
MR. SIEMON: How about the 30th and 31st of August and the 1st of September? Going once.

CHAIRPERSON RIDDLE: Okay, people check their calendars. So it's suggested August 30 through September 1.

MS. OSTIGUY: No matter what, I'm going to be missing classes. I do not like to miss the first day.

CHAIRPERSON RIDDLE: Oh.

MS. OSTIGUY: That's really bad.

CHAIRPERSON RIDDLE: Yeah. Bad first impression.

MR. SIEMON: Is that the 1st or how about --

MS. ROBINSON: Jim.

CHAIRPERSON RIDDLE: Barbara.

MS. ROBINSON: You know, when we set this Board meeting, do you remember you all e-mailed me the dates that you were unavailable?

CHAIRPERSON RIDDLE: Right.

MS. ROBINSON: You sent me an e-mail and I mapped it out on the calendar and we found these dates. If you want to do that rather than sit here and -- it's up to you, but I'm --

CHAIRPERSON RIDDLE: I appreciate --

MS. ROBINSON: -- willing to once again, if you just pick the months from August through October --
CHAIRPERSON RIDDLE: Yeah.

MS. ROBINSON: -- the dates that you are
totally unavailable and then we'll find dates
wherever --

CHAIRPERSON RIDDLE: Yeah. But last time we
ran out of time and didn't have the chance to play this
Board game live, so -- I mean, we have come up with one
window now. Yeah, I appreciate the offer and we may --
it may come -- and in reality, it probably will come to
that at the end of the day, but it's good if we can all
agree to --

MS. CAUGHLAN: And the other problem is --

CHAIRPERSON RIDDLE: -- another window.

MS. CAUGHLAN: -- because we do still pretend
to have lives and it's the idea of trying to -- with all
the summer schedules.

CHAIRPERSON RIDDLE: Right.

MS. CAUGHLAN: Kids and family and --

CHAIRPERSON RIDDLE: I'm trying to anticipate
when the fish will be biting. Nancy.

MS. OSTIGUY: I was actually going to suggest
that we take up Barbara's offer.

CHAIRPERSON RIDDLE: Well -- Kevin.

MR. O'RELL: Actually, I like Barbara's offer
and this is why, because I also get in trouble at home

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
because I don't have all my personal things on the
calendar and then I'll find out, you know --

CHAIRPERSON RIDDLE: I think we've heard

enough about that. Andrea and then Hugh.

MS. CAROE: I would just ask if we can go that
route and if we can do it quicker, or earlier than
later, because what notoriously happens, if I wait until
the last minute, my calendar's filled up with a bunch of
things in-between the time that I submitted it and the
date comes back.

CHAIRPERSON RIDDLE: What we have -- yeah,
Rose.

MS. KOENIG: Yeah. And I would just want to
point out to Richard, I just think that because of the
fact that we have so many new members and then after
December there's going to be another group of new
members, to me having these two meetings, as much of an
apprentice-kind of -- so that by the time we leave that
the members feel really comfortable with the process. I
think that there's a lot of value to that for the newer
members because it just -- coming up to speed on how
things function is really hard to the fact that a good
chunk of people are going to be gone after the last
meeting. I think we need two meetings between now and
the end of the year.
CHAIRPERSON RIDDLE: I support that, appreciate --

MS. CAUGHLAN: And Rose is volunteering to do more work, so we can't pass that up.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Okay. I'm ready to declare victory and that is we have a -- oh, Hugh. I did say --

MR. KARREMAN: Just, you know, with all respect, you know, having three meetings like you want, I like Richard's idea of having it in October and having everything really thought about and worked on before that.

MR. MATHEWS: That's just my opinion, save the government's money this year, too. Just have the second meeting in October in the new fiscal year.

CHAIRPERSON RIDDLE: Okay. Well, we have identified one window, 16th through the 18th where everyone here agreed they were available and we'll propose -- August, I'm sorry. August 16 through 18 and beyond that, Barbara, we'll -- you'll send around something, a calendar for us to fill in our impossible availabilities and then propose something official.

Yeah, Rose and then Hugh.

MS. KOENIG: I actually think the August
meeting will work and this is why. We identified materials by committees that need to go -- that we know we want to Sunset, okay, so if we send those to the TAP review, whether that Federal Register notice comes out or not, we still may have a bulk of things that we could get off our table as far as beginning the Sunset TAP process, I believe. So I think that we could -- and plus we have how many TAPs do the contractors have of new materials? Three. Plus we had the old ones from Nancy, so I think we have enough material-wise to substantiate a meeting in August.

CHAIRPERSON RIDDLE: Right, and plus hearing the committee work plans, there's a lot of things that are well in development that we should be able to act on and we'll have comments back from some of these drafts, so I think we'll have plenty to have a meeting.

Richard, then Hugh.

MR. MATHEWS: And we've been holding off giving you questions, so we have more questions for you.

CHAIRPERSON RIDDLE: I appreciate that.

There's always that to add, yeah. Hugh.

MR. KARREMAN: I thought you were talking September 16th to the 18th, right before Expo. August is my absolute worst month. I'm driven crazy by emergencies, so it's the worst month for dairy cows in
this area, so August is not good for me.

CHAIRPERSON RIDDLE: We'll consider that
before we firm up the date. Anything else on that?

Well, we did that in only 15 minutes and we will -- I
have a couple more things here and that is I will send
around suggestions for the next Executive Committee
meeting. We don't have to spend time discussing that
for all the members who aren't on the Executive, but we
will set that in a timely manner before the end of March
in order to act on the issues from the Policy Committee,
the AAPFCO input and the good guidance document
comments. Dave?.

MR. CARTER: Yes, and just before we take the
short break that I know you're going to declare before
we go to public comment, I would like to -- well, when
we do take that short break, I'd like to get together
with the Policy Committee and we'll just set a date for
our next --

CHAIRPERSON RIDDLE: Oh, okay. All right,
good. And then the only other thing I had is, at one
point I passed around a cover sheet for recommendations
and so this is for committee chairs. After the meeting
now, a number of those drafts that we voted on were
amended and it's your responsibility, as committee
chair, to make those final revisions, polish them up,
but then to also fill out the recommendation cover sheet and submit that with each of those final recommendations. And Arthur, would you send that around electronically so people can complete them electronically and I ask each of the committee chairs to copy me on those finals that you sent in and -- so I can review them, as well. Arthur.

MR. NEAL: On the finals that are sent in, it actually should come through you with a signature, so --

CHAIRPERSON RIDDLE: Okay, right.

MR. NEAL: Right. That way we'll know -- oftentimes it happened we got them from different people, but if we get them from one person with the chair's signature on it, we'll know that this is the final.

CHAIRPERSON RIDDLE: Okay. So send them to me and I'll review them and sign off on them and submit them to the program. George.

MR. SIEMON: I'm pretty sure that we made changes on the Livestock -- I don't have those final wording, so I think Arthur -- we were making the changes on the screen yesterday. Yeah, we --

CHAIRPERSON RIDDLE: Oh, no. Yeah, we changed the numbers --

MR. SIEMON: Is that -- well, Arthur, I just
want --

MR. NEAL: George, I got --

MR. SIEMON: Okay. Well, anyway you'll send
to all the committee chairs if there's any changes, but
I just want to make sure I get the right one.

MR. NEAL: I've got changes. Now, if we
replace everything you said, I can't say yes and that's
why it's going to be up to the committee and the Board
chair to verify all these things.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: I'm not the secretary of the Board.

CHAIRPERSON RIDDLE: Well, between Arthur,
Dave will help you, George, and I'll review it and that
particular one was the guidance -- no, no, that was the
proposed rule change, that was the rule change, yeah.

Yeah. So we'll go from here on that. Anything else on
that? If not, then let's take 10 minutes and be back
here ready to listen to public comments at 9:00 a.m.

Thanks.

***

[Off the record]

[On the record]

***

CHAIRPERSON RIDDLE: Come back through and
take your seats, get set up here. Some of them may not
be here, but you know -- okay. Okay, we'll begin the
second public comment period and just hold on a second
because I should read the -- from the Board policy
manual the rules for commenting, which I can't find.
What tab is that, Dave?

      MR. CARTER: Six.

      CHAIRPERSON RIDDLE: Yeah. Okay, once again.
All persons who wish to comment need to sign up, and if
you haven't signed up, I do have the book up front and
there is still time available for walk-ins today. You
will be called on in the order that you signed up, but
you can pass for the time being. You'll have five
minutes to speak.

      You need to give your name and affiliation
before you start your comments and you may -- someone
may submit a written proxy requesting that another
person speak on your behalf, however if you're carrying
a proxy, you will be limited to a total of 10 minutes,
so you can't bring in multiple proxies and get more
time. If you do have a proxy, please state that before
you begin your comments, as well, so that the timekeeper
knows.

      Goldie will be keeping time and she has a one
minute warning sign that she'll hold up. If you don't
see it, that's not her problem, but she will hold that
up at one minute just to let you know where you're at. And also, anyone giving public comment will refrain from personal attacks or remarks that impinge on the character of any individual. That includes Board members, USDA staff, any other members of the public organic community, including companies.

We have no problem with you expressing, you know, honest opinions in a passionate manner, but once you start making personal attacks, that detracts from your comments; it's counter-productive, and if I sense someone making a personal attack, I will mention that, ask you to please restate your comments. If you continue, I will ask you to conclude your remarks.

Okay. So with those understanding of the rules we will begin and the first person up is Steven Protanic [ph]. I'm sure I didn't pronounce that right and on deck, Julia Sabin. Steven.

MR. PROTANIC: Yes, I'm here but I'm having a problem setting up the PowerPoint.

CHAIRPERSON RIDDLE: Okay, so you'd like to pass.

MR. PROTANIC: If I may.

CHAIRPERSON RIDDLE: Yes, indeed. So Julia and then on the list is Mark Retzloff. Will Mark be speaking or is someone speaking on Mark's behalf? Okay,
then the next person would be Dr. Juan Velez. Is Juan still here?

    MR. VELEZ: No, I spoke Tuesday.

    CHAIRPERSON RIDDLE: Well, you signed up for both.

    MR. VELEZ: No.

    CHAIRPERSON RIDDLE: Clark, will you be speaking?

    MR. DRIFTMIER: No, we already commented.

    CHAIRPERSON RIDDLE: Okay, so none of those -- boy, that is the quickest comments we've received. So Wendy Swan. Is Wendy here? Yes, so you will be on deck and then if Steven's ready, we'll come back to you at that point. So Julia, thanks for your patience. Welcome.

    ***

    MS. SABIN: Good morning, the National Organic Standards Board, National Organic Program and interested members of the organic community. I'm Julia Sabin, General Manager at Smucker Quality Beverages. We procure organic ingredients, manufacture and market a number of organic products under our brands of RWP [ph] -- After the Fall and Natural Grocery [ph], as well as our all-organic brand, Santa Cruz Organic. Today I would like to address our extreme concern over the
outcome and possible ramifications of the Harvey versus Veneman lawsuit.

According to the USDA the court ruling not only prohibits synthetics in processed food products in organic label category 95 percent plus, but in a "made with organic", 70 to 94 percent category, as well. Furthermore, though we were hoping the USDA could obtain a hearing en banc for an expanded review of the case, we understand that the test of import -- the court for testing a standard review ONPO [ph] may not be met. The case has already been returned to the district court from the court of appeals and the USDA has to be prepared to implement the judgment of the district court.

Though we do not know what the details of the implementation or its timetable, it appears that the USDA will have to amend the regulations to come into compliance with the Act. We have been told that though this ruling will have intense financial and social damage to the farming and manufacturing community, the court will not address such damage, except in the case of damage possibly impacting a timeline for application of the rewritten regulations. The NOSB can address and mitigate some of this damage.

We urge the SOB -- NOSB, excuse me. I
apologize. I apologize. We urge the NOSB to work in concert with the NOP, Organic Trade Association and the organic community, please, please, please review the definition of the ingredient and ingredients statement. We could possibly refine the definition of ingredient in the regulation definitions, but of course, we do have to be responsible and make sure we can still capture non-ingredients that we do not want approved.

The NOSB should come up with workable definitions and should then revisit all materials currently deemed synthetic as stated in 205.605(b) of the National List. At Smucker Quality Beverages we believe in quality of the organic raw materials supplied to us by our farmers. We believe in the quality of the finished products for our consumers. We strive to innovate and rely on natural and organic ingredients and we believe in the strictest possible standards. We have been dedicated to organic mission for over 20 years. We remain dedicated to the growth of the organic industry. By providing consumers with more choices in organic products, we provide farmers with more value-added opportunities.

We strongly urge this Board to immediately begin assisting with the regulatory remedy the ramifications of the lawsuit. If left unchecked, would
require many products to be discontinued, ultimately
cutting off demand for organic ingredients and thereby
hurting the very farmers who have supported this
industry. Thank you.

CHAIRPERSON RIDDLE: Thanks, Julia. Any
questions? Thanks, it was very clear. Okay, Wendy Swan
and then next up will be Steven Protanic.

***

MS. SWAN: Members of the Board, good morning.
My name is Wendy Swan and I represent the Animal Welfare
Institute, a non-profit organization founded in 1951 to
minimize the sum total of fear, pain and suffering of
animals. I submit the following comments on behalf of
AWI's legislative division, the Society for Animal
Protective Legislation. As part of its advocacy on
behalf of farm animals, the Animal Welfare Institute
maintains a farm animal husbandry standards program that
allows farms to abide by our strict husbandry standards
to use its name in connection with marketing of their
products. We are very concerned about maintaining the
integrity of organic standards with respect to farm
animal welfare and consumer expectation of this.

We thank you for the opportunity to speak
today and support access to pastures ordinance. With
the following exceptions, we urge the National Organic
Standards Board to adopt the Livestock Committee's pasture requirement recommendations. Ruminants must have substantial access to pasture. Cattle, for example, allowed to graze in grasses, herbs and leaves. Of the bush and open plains, cattle travel on average about two and a half miles per day while grazing and will graze up to nine hours a day in exceptional cases. When grass is sparse, cattle will graze up to 15 hours per day. They may spend two hours per day going into or searching for suitable grazing sites. Maintenance is rare on cows on pasture.

Grazing provides both nutrients and exercise. As herbivores, cattle are adapted to high-fiber, low-density diets and do not adapt easily to high-grain diets or manufactured items with grains -- with high-protein and low-fiber. Routine confinement of cattle on slatted or concrete floors has been associated with lameness which implies poor welfare. Access to quality pasture, exercise and the ability to graze, therefore, are essential to the biological and behavioral health of cattle.

Furthermore, customers believe, consumers believe that organic meat and dairy products come from animals who have substantial and legitimate access to pasture. We support the position of the NOSB, that
grazed feed must provide a significant portion of the total feed requirements of ruminant animals. In answer to the NOSB and Livestock Committee's request for clarifications, we agree with other groups submitting comments, including Cornucopia Institute and Northeast Organic Dairy Producers Alliance, that organic dairy animals must consume no less than 30 percent of their daily dry matter intake from pasture for a minimum of 120 calendar days per year.

To assure quality grazing, we agree further that stocking density per acre must not exceed three lactating dairy cows and may need to be less as appropriate for soil and climate. We further support the additional recommendation of these organizations to -- the definition of pasture. With respect to temporary confinement, we support the need to shelter animals during inclement weather that could harm the animals or other life or health-threatening circumstances and in the case of veterinary care, to treat disease or injury.

We agree with the NOSB Livestock Committee that lactation is not an appropriate stage of production recommendation -- excuse me -- is not an appropriate stage of production for routine confinement. We agree with the NOSB Livestock Committee recommendation that birth is a stage of production where it seems temporary.
confinement, but only in the case of severely inclement weather as in winter, when newborn calves could become chilled or when weather could impair the mother's ability to care for her calf or in the case of an anticipated birth -- an anticipated difficult birth or the purpose of improving the farmer's ability to observe and care for the animal and never as a routine procedure surrounding birth.

In general, cattle on pasture are fit, healthy and capable of unsupervised -- we do not agree with the Livestock Committee that confinement of beef animals during the final finishing stage is appropriate for organic production unless animals must be confined for feeding during seasons when quality pastures are not available or when pastures or poor conditions outside the farmer's control, such as drought. In such cases, cattle should continue to have access to pasture while feeding, while being fed hay and other feedstuffs that support normal ruminant function and deliver sufficient nutrients to maintain health. Thank you.

CHAIRPERSON RIDDLE: Thank you. Thank you for your comments. Did you -- were you here the last couple days and know how we've worked on documents and how do you feel about that?

MS. SWAN: I regret -- I had plans to attend...
the previous days and I regret that I wasn't able to come.

CHAIRPERSON RIDDLE: Well, we -- I think we've substantially addressed some of your concerns, group's concerns. What I've found -- what I've always kind of been wondering about -- I don't know what certification process -- I think AW has one for farm animals. I'm familiar with Free Farm, I guess another group, that there's a humane society, that the -- they had another one. Do you feel that organic livestock would pass your group's -- not the other one's, but your group's standards for humane care?

MS. SWAN: I think right now the Organic Standards have a lot to meet this -- they don't address all the concerns that we have regarding animal welfare.

CHAIRPERSON RIDDLE: Do you have some right off the top of your head that --

MS. SWAN: Oh, well ensuring access to pasture as far as cattle and ruminants, but as far as other species, there's not even a requirement for outdoor access. Looking more specifically at the different types of mutilations that might -- I don't know if the Organic Standards do prohibit mutilations.

CHAIRPERSON RIDDLE: Does your group, AWI -- are your certification for humane care of animals, is it...
mainly based on a per animal kind of assessment or a whole herd?

MS. SWAN: In essence, each animal -- if there's an animal that's not being cared for. It's an individual basis.

CHAIRPERSON RIDDLE: Do you have any certified organic livestock farms that are certified with your group at this time?

MS. SWAN: We do.

CHAIRPERSON RIDDLE: You do have some farms that are becoming certified with your group now?

MS. SWAN: Yes, right now. Right now, we're only working with feed farmers, but we've begun -- for other species and we're working -- we work with now over 400 pig farmers. We're working with dairy and cattle farmers.

CHAIRPERSON RIDDLE: Well, I'd just like to say for as long as I'm on the Board, I would like to have your group's input in our standard making.

MS. SWAN: We are available to assist you any way you want, absolutely.

CHAIRPERSON RIDDLE: Okay, thank you. And I just -- I wanted to add to that, just to -- since you weren't here the last few days, just to let you know that the Board did vote on two recommendations for rule

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
change, took final votes, but those will be posted eventually as proposed rules and open for public comment during the notice and comment rule making process. We also voted on a very detailed guidance document that will be posted just for public comment that we'll be reconsidering at our next meeting, so please stay tuned and thanks for your comments.

And before the next speaker comes, if any of you have either multiple copies or just a single copy of your comments, if you please make sure and get that to Toni Strother so we can have those written comments for the official record. I should've said that at the very beginning. Okay, next up, Steven Protanic and please straighten me out on how you pronounce your last name.

***

MR. PROTANIC: Mainly Protanic, but I also go by Pritenick [ph] or whatever you want to call me.

CHAIRPERSON RIDDLE: Okay.

MR. PROTANIC: Thank you for being here this morning. My name's Steve Protanic and I'm with the National Chicken Council and I'm here on behalf of Dr. Clothe [ph], who has taken ill. He's undergoing procedures to find out what's wrong. He asked me if I would give his presentation and express his concerns and really, they're the concerns of the industry, of the
poultry industry, in general, and the government, and
this is not new. If you could change this line -- some
of you have heard this before, but it's taken on a whole
new twist. Avian influenza, as you know, has been
considered an economic problem with industry, could be
devastating to industry if it's not handled when there's
an outbreak and so forth, and it's very well known that
wild waterfowl can introduce this into birds that have
access to them. But this has taken on a whole new
connotation with what has happened in southeast Asia.

The World Health Organization, which is part
of the United Nations, is taking avian influenza very
serious. Our own Centers for Disease Control in
Atlanta, Georgia, is taking this very serious. Even
Homeland Security has a board member on the U.S. Animal
Health Association and is actively participating in the
transmissible disease. We are very, very concerned
about potential disease, as the viruses are constantly
mutating. Any H-5, H-7 virus, even if it's low-
pathogen, has the potential to become highly pathogenic
and as we've seen in Asia, it appears to be maybe
crossing species. There's concern it could maybe mutate
even further, become an pandemic situation.

So this -- if we could go to the next slide.
AI happens and we don't have to go back very far. In
2002, in the Shenandoah Valley, we had an outbreak -- it
was an economic loss to the industry, 130 million. If
we could go to the next. Amsterdam, almost wiped out
their industry, but they learned from this that they
need to protect the birds from coming into contact with
wild waterfowl. They've reached that conclusion. If we
could go to the next one. Delmarva, as late as last
year we had an outbreak, had to destroy 300,000 young
chickens. And when you have an outbreak, it impacts all
of the farms in that vicinity. It's not just the one
where the disease shows up. If it's an H-5 or an H-7,
they're going to test the geographic region or perimeter
and if they find birds that test positive, the general
treatment is to destroy all of those birds. Next one.

This year we had turkey breeders, a breakout
in North Carolina. It wasn't a big outbreak, they
contained it, but it had trade implications
internationally. We have some trading partners, such as
Japan. Anytime we have an H-5 or an H-7 outbreak, even
if it's low-path, they cut off imports from all of the
U.S. And just to show how much the government is trying
to address this issue, the USDA awarded a $5 million
cooperative grant -- this is shared with five
universities, the University of Maryland is the lead
university -- to study and address avian influenza.
Okay, next one. APHIS has implemented a program to monitor, control and eradicate a -- with particular emphasis on the live bird markets and here we have the Asian thing. If we could move on again. This is a sustainable agriculture organization that works with school-age kids and they're learning from the lesson. Well, Dr. Clothe is asking that you suspend the mandate that the birds have to be -- have to be outdoors. I would like to offer just one more --

CHAIRPERSON RIDDLE: Conclude your remarks.

MR. PROTANIC: Closing remark.

CHAIRPERSON RIDDLE: Yeah.

MR. PROTANIC: That -- if we could go to the next slide. If we could do something like this and make it applicable to those areas where avian influenza has a history or we have large waterfowl populations, let the folks invoke this sort of thing to protect those birds from avian -- those are your danger points. Where you've got a history, it's going to likely happen again. We have watched water fowl --

CHAIRPERSON RIDDLE: Time.

MR. PROTANIC: You put your birds at risk.

CHAIRPERSON RIDDLE: Thanks.

MS. OSTIGUY: Jim.

CHAIRPERSON RIDDLE: Yeah, question.
MS. OSTIGUY: Do you know of a single example -- actually, I should preface this. My concern about avian influenza's very high. I have a public health degree. I would like to know if there is a single incidence of avian or other outbreak from an organic poultry operation?

MR. PROTANIC: I couldn't answer that specifically, but you know, organically raised, and the Council raises organic and several companies have organic, certified organic flocks that they raise -- they are susceptible. It doesn't matter --

MS. OSTIGUY: I'm not talking about susceptibility. I'm talking about source. My understanding is that the outbreaks that you are discussing are primarily transmitted by workers when they're moving from one facility to another.

MR. PROTANIC: We have that, we also have the live bird markets.

MS. OSTIGUY: And in confinement situations.

MR. PROTANIC: Well, we have -- well, that's not entirely that. If you look at the live bird markets in some of your major cities, New York and so forth, a lot of those birds come from flocks in Pennsylvania that -- I guess you would call them range farms. These birds do come in contact with other species, so there is a
cycle within that type of market and you've got two
things going. You've got the commercial that you're
alluding to and you also have the live bird market,
which has a different source in --

MS. OSTIGUY: Not organic.

MR. PROTANIC: And yes, you -- I mean, if you
think that you'll never have the exposure, run the risk
of avian influenza in your flock, I think you're --

MS. OSTIGUY: Who currently does allow for
confinement for health reasons? Have you considered
that?

MR. PROTANIC: Well, this -- and what
Dr. Clothe is asking is that where they're in a
high-risk area, if they can still raise birds
organically, but not expose them to wild waterfowl,
which they would be exposed to if they were allowed.

CHAIRPERSON RIDDLE: We have two more
questions and we have a lot of other commenters, so
Hugh.

MR. KARREMAN: I'm new on the Board, so if
I've heard about the poultry, this poultry question and
I know the Under Secretary of Agriculture of
Pennsylvania has told me, personally, that this is
definitely on their radar screen, this whole topic and
personally, I just -- quick glance, I like your
statement here behind me that's on the screen and if we
do already have something in the regulations for
confinement, temporary confinement for health reasons,
that's great.

Maybe we could further delineate that, but I
must also say that the -- you mentioned the open, or the
bird, live bird markets in New York and a lot of the
birds come from small organic farms in Pennsylvania,
many of my farmers are those farmers who you speak of.
They're dairy farmers that free-range birds and whatnot
and I have yet to hear of a single case being traced
back to any of my farmers. Believe me, I would've heard
about it, being a veterinarian with, you know -- with
public health and so I'd --

MR. PROTANIC: Well, that's about to change
with -- when the monitoring system takes full effect
that APHIS is implementing, which is focusing on
commercial poultry, as well as the live bird market
system. You'll have testing certification where the
birds come from. We'll have bird identification, either
on an individual or lot basis. And that's going to all
occur within the next few years. The Animal and Plant
Health Inspection Service, that we have worked with very
closely, have expressed very great concern about the
live bird market and it's the back and forth that has,
on a number of occasions, introduced -- into commercial. And I'm not trying to defend commercial or organic, I'm just saying there's a real risk out there and folks who would like to raise organic chickens are very concerned in those high risk areas and they're asking for some help.

CHAIRPERSON RIDDLE: Mike, did you still have a --

MR. LACY: Thank you. Steve, appreciate you coming and sharing with us and I wanted to address Nancy's question. I don't think that there is any documented case where organic poultry have been infected with avian influenza. The point is there are documented cases where birds that have access to outdoors has spread avian influenza to other flocks and that's been documented in Texas, California, Virginia. In fact, I think if you go back and look at any avian influenza outbreak, you can trace it back either to birds that had access to outdoors, or to wild birds, as Steve indicated.

CHAIRPERSON RIDDLE: And I just have a factual, you know, clarification. The 300,000 birds in Delmarva that you referenced and the turkey breeding facility in North Carolina, those were both confinement operations. Those were not outdoor --
MR. PROTANIC: I wasn't trying to --

CHAIRPERSON RIDDLE: All right. Okay, thanks for your comments. And I forgot to give the next person fair warning that they were up and it's Jay Feldman is on the list. Is Jay here? No, okay. And no one's speaking on his behalf. Well, then Kim Dietz, so -- and next up is Lynn Coody.

***

MS. DIETZ: This is new for me.

CHAIRPERSON RIDDLE: I hope your battery lasts.

MS. DIETZ: It's in a very bad spot. And since I didn't have the use of your printer, I had to put it on here. Okay. Ready, Goldie? Okay. I stand before you today for two purposes. I'll be reading a document on behalf of GMA, or Grocery Manufacturers of America and lastly, I'll be addressing the Board as a concerned organic industry leader. However, before I begin, I would like to put on the record that although I was invited to attend this meeting by the USDA -- they're not covering my expenses. My actions this week should in no way be linked to the USDA. I sincerely thank the USDA and this Board for allowing me to serve you over the past five years as an industry representative.
I'm not going to read this entire statement.
I'm just going to read the bullet points that I think
are not redundant of what you've heard over the last few
days. Did everybody get a copy?

UNIDENTIFIED SPEAKER: I didn't.

MS. DIETZ: The ramifications -- and this is,
in fact, the Harvey versus Veneman -- on the food
processing industry, organic foods industry,
particularly. The ramifications of this decision span
the organic industry from the farm to the grocery store.
Virtually all products with the possible exception of
some fresh fruits and vegetables will be affected.
Therefore, we request that the National Organic
Standards Board and the U.S. Department of Agriculture
see to -- instructions to growers, industries and
consumers as this ruling is addressed or implemented.

We support the responsible oversight of the
NOSB and urge an administrative remedy that recognizes
the efforts of this Board and the organic community over
the last dozen years to review and in good faith approve
synthetic materials for addition to the National List.
Due to consumer demand, a substantial increase in
organic products has occurred, not only in organic
agricultural commodities like fresh fruits and
vegetable, but also in processed organic foods and

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
beverages. Many of these processed organic foods and beverages depend on the use of approved substances, some non-synthetic, some synthetic.

A precipitous response to that ruling in Harvey versus Veneman would cause significant disruptions, loss of markets for many small growers because processors can no longer make certain products resulting in a disappearance of a number of acceptable organic products for consumers and potential confusion about what the term organic means. Again, we encourage the NOSB and the U.S. Department of Agriculture to minimize the disruption to organic growers, to the organic food processing community and to consumers when this ruling is implemented.

Now, I'll take the balance of my time addressing my personal concerns that are directly related to this Board and the functions of this Board. Materials. Many of you know that over the past five years, while serving on this Board, I was the Handling representative and also served as the Materials chair. I'm very concerned that a significant amount of Board time has been spent preparing for the Sunset review period, yet here we are today with October, 2007 right around the corner and we have no process implemented.

Although I fully realize that we're still
waiting for the ramifications of the Harvey law suit to reveal itself, I'm fearful that we may not meet the Sunset timeline for hundreds of materials. Unless that process begins immediately. I urge the USDA and the NOSB to keep on -- keep this as a high priority.

Committees. With a background in human resource management, I have been a strong advocate on proper committee and board structure. Earlier this week we discussed the natural attrition of this Board and how 11 of 15 members will be replaced in the next two years. I encourage the chair of the Board and new Board members to get people in places immediately. I'm also very concerned that if a steep learning curve over the next year will be forced on new members, I encourage this Board to form some type of formal entry program for these new Board members so that they can get up to speed as quickly as possible. I also recommend that an orientation session be mandated prior to any NOSB meeting with new Board members, to throw them into the -- not into service to this industry.

CHAIRPERSON RIDDLE: Okay, your time. Do you have any concluding remarks?

MS. DIETZ: Yes. I cannot emphasize enough on the importance of clarification of ag versus non-ag and most importantly, the definition of synthetic and
non-synthetic. You clarify these terms to either assist all stakeholders in this industry and help us make it through this catastrophic time or worse yet, do more damage to the entire industry. I will submit my formal recommendations to the Board on those definitions so that you have them and that's it. Questions.

MS. JAMES: Kim, what would you recommend as far as a process that might give more incentive for senior members to stick around after the end of their term?

MS. DIETZ: Well, I think that fortunately, you have farmers that can participate in these meetings and you have others, those of us who are hoping, you know, through this -- after these four meetings, but the incentive, really the only incentive, to me, would be to help assist them to these meetings, some of us who work for companies who support this industry, would still allow us to come on behalf of the industry, but some type of financial assistance, if possible.

MS. JAMES: So are you recommending that the -- that perhaps the NOP or the USDA could help supplement the cost of senior members to come and help the mentoring, the meetings like you did today?

MS. DIETZ: Realistically, that hasn't been...
the past -- I mean, I would encourage that. I also encourage, you know, the industry to help, if at all possible, through -- you know, maybe we could get some grants or if there's something to help through -- help this Board over the next couple of years get educated and help us make it through this.

MS. JAMES: That's what I was just going to say. It seems to me that if any such --

MS. DIETZ: Yeah.

MS. JAMES: -- scholarship or whatever were to be constructed, that it's more appropriate to come from OGA and the industry.

CHAIRPERSON RIDDLE: Kevin.

MR. O'RELL: Kim, I just want to personally thank you for all of your good work participating on this Board over the last five years and particularly for me in serving on the Handling Committee, working together on the Handling Committee. The Handling Committee and this Board to your comments --

MS. DIETZ: Which kept me up last night. I think I got the fix, believe it or not. It came to me.

MR. O'RELL: So we welcome those comments and review them and obviously, we have your phone number, so --

MS. DIETZ: Yeah, yeah. And I'm not going

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
anywhere.

UNIDENTIFIED SPEAKER: And your e-mail address.

CHAIRPERSON RIDDLE: Gerald.

MR. DAVIS: Kim and the rest of the Board, the topic of determination of synthetic versus nonsynthetic. I think of what kind expertise we need, like a task force-type input and there is people who would help us determine that answer of what it is, so what we come up with is not shot down by a lawsuit later on under -- science in general says uh-uh, that's not accurate, I mean, you can't just say that, because it seems like a very specific thing, chemically versus our professional opinions.

MS. DIETZ: Yeah, and I think you have to -- that's valid, and Rosie and the Materials Committee did a great job on really defining what synthetic means from a scientific term. I think where we're lacking is maybe the industry perspective and how we got to where we're at today and we need to look at both of those and possibly what was the intent of synthetic and you know, we've all been around as you know and you know, my revelation last night was really clearly defining, you know, what so far have we allowed as a process and mix the process with the term synthetic and I think we've
got our answer. You know, task forces are great, but I'm not sure whether we need one in this case. I think we've got some good people on this Board right now and good historians out in the audience to help fix this and we should be able to do it.

CHAIRPERSON RIDDLE: And I'd just like to point out that individual Board members or committees can draw on outside expertise at any time and then the sooner that a draft recommendation is posted for public comment, the more the industry can focus and respond to that language. So we're trying to get things up in a timely manner. Nancy.

MS. OSTIGUY: Kim, I also want to thank you for all your efforts. It was very much appreciated and certainly helped me get up to speed on the Board. I agree also that we do not have to use a scientific definition of synthetic. We have words that we've been using a long time. Organic -- we all use that in a way that completely violates the scientific definition and that's okay.

MS. DIETZ: Yeah.

MS. OSTIGUY: But what we have to do is agree upon a definition. The law does this all the time, where they define things and I look at them and go oh, really. That doesn't look like the definition I know,
but that's okay.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I just want to clarify that we -- perhaps for Gerald, we do have a definition in OFPA.

CHAIRPERSON RIDDLE: Yeah.

MS. KOENIG: All we can do is clarify words -- so we're not defining from that, it's just really -- the definition's clarification of the terminology and the one that's in here is chemical change and that's why that document focuses on chemical change and we're bound by that -- you know, we have to work within the definition that exists and we -- there's some leeway, but you can't create -- you can use examples to help, you know, and that's where we need --

MR. DAVIS: That's what I was alluding to. I often don't speak well. In pinning down that issue, how do we do that without someone else shooting us down later?

CHAIRPERSON RIDDLE: George then Andrea.

MR. SIEMON: Kim, you know all about our processes here. There is -- you're not aware of anything we didn't do today that was in our agenda and like -- that might aid the situation?

MS. DIETZ: To have a definition by the end of this --

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. SIEMON: Yeah, is there any suggestion --

MS. DIETZ: George, I've been an advocate on this Board to not rush things unless they're really good, thorough thoughts. You're probably asking the wrong person, but I think that, you know, I would make this a priority for me and certainly give you my -- what I think would work and it's fairly simple and that's give it to the Processing Committee or the Handling Committee and they can take it where it needs to go, you know. We are where we're at and we can't go any faster, but I don't want to go backwards.

CHAIRPERSON RIDDLE: Andrea.

MS. CAROE: I would like for the community to know, if you don't know, the amount of work that Kim has put in on this Board has been head and shoulders above the average. I mean, she has done amazing work; it's all been behind the scenes and come out with these wonderful recommendations and policies that have built what this Board does to the status of excellency and I appreciate that. And also, I would like to recognize the company you work for that has allowed you to commit this time to this community.

You know, nobody ever talks about the folks that we work for allowing us to do this and I think that they deserve our appreciation, as well. Also, I know
you kind of got cut off with the timer and I wanted to
know if you had any other guidance on your list because
I'm going to pick your brain every minute I can, so
starting right now I wanted to know if there's anything
else that you had that you were unable to get to?

MS. DIETZ: I breezed through it fairly
quickly and I got my main points. I think, you know,
the definitions, you know, we can all work together.
The industry needs to work together, that was my
conclusion. We have -- we've gone through -- and we'll
come to consensus one way or the other. I really -- I
want to leave saying that I am very concerned with the
attrition of this Board and whatever we can do to help
ease that pain of the new Board members and give you
what you need. I talked to a number of people over the
last couple of days and with my HR hat on -- I think at
the end of this meeting you should ask all the new Board
members what do they need from us and what can we give
them to help them make it through the next five years
over the next year and you know, assist you with some
kind of -- you know, here's what I would do if I were
you and you know, I'd be happy to stick around and talk
to new Board members and try to pull something together.

CHAIRPERSON RIDDLE: Thanks, Kim, and thanks
again for your service. It's always been a pleasure to
York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
work with you even when we've disagreed. Okay, Lynn
Coody and then Leanna Hoods.

***

MS. COODY: Hi, everyone. My name is Lynn
Coody. For the record it's spelled C-O-O-D-Y. My
business, Organic Ag Systems Consulting, is located in
Eugene, Oregon and focuses on assisting certification
agencies with complying with requirements of both NOP
and ISO accreditation. I also serve as the current
chair of OTA's accreditation subcommittee. On the first
day of public comment, Bea asked us to tell her exactly
what we wanted, so I'm going to do just that. The two
things that I want the most are these: I want the NOP's
accreditation system to be managed in full compliance
with the International Standard for Accreditation, which
is called ISO 61. I also want the NOP to set up a peer
review panel as an integral part of the management of
the NOP's accreditation system.

When I can say it that way it sounds really
simple, but believe me, I've been trying to explain the
importance of these two statements to many people for
many years and I recognize that the subject of
accreditation is both complicated and detailed. So
today, of course, I can only present a very cursory
overview of this critically important element of NOP's
responsibilities.

I'd like first, because I know some of you are new -- you actually haven't heard me talk about this before. Well, almost every single meeting for years I've been talking about the same types of things, so I'll give you a quick overview of what the subject is about. Both the rule and the law require establishment of a peer review panel as a way to provide regular assessment of both -- of the accreditation functions of the NOP. The rule in Section 509 provides specific details about the function of the peer review panel, stating that the peer review panel will review an accreditation systems against both the rule itself and ISO 61. The NOSB, a few years ago, made an excellent recommendation about the structure and function of the peer review panel, but the NOP has yet to institute the panel.

However, in 2003, NOP did take a wonderful step to get an analysis of its accreditation system, which you heard about just a few minutes ago, by the American National Standards Institute or ANSI. ANSI did an audit and on January 14, the USDA, the NOP, released the results of the report, which is great, because now we all know what's in the report. The report, for those of you who didn't get a chance to read this

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
scintillating document, details 22, 22 non-compliances, some significant enough that if they occurred in the quality systems of a certifier, in my experience -- and this is my area of expertise -- the NOP would not grant accreditation to that certifier without requiring the correction of these non-compliances, nor would the USDA's audit review and compliance branch grant that certifier ISO accreditation. So this is something we should all look at.

So I only have a few seconds here, so I'll just give you a few examples of these non-compliances. One is the accreditation body does not have a detailed description of the accreditation process, and even more specifically stated, the NOP does not have a procedure for granting, maintaining, withdrawing, suspending, or denying accreditation.

The quality system. The NOP does not have a documented quality system, including no document control. There are no procedures for resolution of complaints, appeals, and disputes against the accreditation agent, itself. ANSI noted that the NOP does not have systems in place for current internal audits nor to analyze the result of the audits through the formal systems required by ISO, called management review. And also it's not clear who's authorized to
review and approve the documents that go on the website.

Concurrent with the ANSI report, NOP released its own responses to the report in detail, point by point. In my opinion -- well, the USDA indicated that a lot of current deductions were based on documentation that's new. We have no verification of that, but I'm sure they're working on it very hard and -- but we'd like to -- I'd prefer it if we could see this in a transparent manner so we could understand exactly what the fixes are. Even more importantly, there's no system in place for surveillance, which is continued oversight of the fixes of these problems. In a normal accreditation systems this does occur. For example, there's a government agency called the National Institute of Standards and Technology, specifically, does have a program to oversee accreditation in the organic industry. So in closing, I'd like you to consider the many benefits of -- whoops.

CHAIRPERSON RIDDLE: You're on it. Closing.

MS. COODY: Okay. So basically, here are the benefits of the ISO -- complying with ISO 61, as I see it. One, better communication of the NOP's rules and requirements to certifiers, farmers, processors, and consumers. Two, rigorous, transparent, and equitable application of accreditation requirements to all the NOP
accredited certifiers located throughout the world,
indicating a trickle down of increased rigor and quality
in the systems used by both certifiers and producers.
And third, increased acceptance to the extent for the
NOP accreditation systems by other governmental
authorities. So that's my ending.

CHAIRPERSON RIDDLE: Thanks. Thanks, Lynn.
Any questions, comments from the Board? Hugh.

MR. KARREMAN: I was just wondering, being new
to the Board, I always -- you know, I mean, we're here
in the U.S. and everything, but there's, you know,
certifiers in other countries that are accredited. And
how often does the NOP need to, you know, kind of do
site visits on them and was there anything in this
report that said anything about that? I really don't
know.

MS. COODY: Yeah.

MR. KARREMAN: It seems so far away when it's
in a different country. We talked of pasture in this
country and you know, it affects other countries. And
how much do they look into those other certifiers?

MS. COODY: Well, the foreign certifiers
theoretically are handled exactly the same way as
American certifiers. They -- the NOP's program does not
require a site visit prior to accreditation. So most of
the time, all -- not all of the -- all of the foreign
certifiers were accredited, received accreditation prior
to the site visits. Now, though, the NOP has started
doing some of these site visits, and I think that
sometimes -- I know I've heard you talk about this a
lot, but I think that it was at this meeting where he
explained that process, where they had to have a chance
to come up to speed. It is difficult, though.

I personally work with a number of foreign
certifiers. It's difficult, I'd like to point it out,
for them to know what's going on, what changes have
occurred to standards and things like that. It's their
responsibility, though, to check the NOP website and
through other communications from the NOP to know what's
going on. That's why it's so important that these
documents are distributed in a transparent way, so not
just those of us who can attend these meetings, one way
or another, can know what's going on. That's why the
issue of transparency is so important, but especially
with regard to accreditation and certification of the
standard issues, in my opinion.

CHAIRPERSON RIDDLE: Thanks, Lynn. Okay,
Leanna Hoods, and then we'll take a break, and then
after the break the first person up will be Mark Kastel.

***

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MS. HOODS: Good morning. My name is Leanna Hoods, I'm the Organic Policy Coordinator for the National Campaign for Sustainable Agriculture. I'd like to welcome the new Board members and thank the entire Board once again for your incredible work. It's just amazing. I really think over the years you've become, every meeting, more and more efficient, and it's unfortunate that it's not helping you get through -- it seems like it's piled on more and more, but kudos for all that you do. To the new members, I'll be giving you a copy of a book of decisions by the NOSB in years prior to 1997 and that -- and also, George, you get another one because you lost yours, and anyone else who needs another green book, ask me.

I have a list of comments, and so I'm just going to whip through them. Regarding the directives, I'd like to reiterate comments made earlier by others regarding the fate of the directives. While we clearly understand that NOP responses were sent up the line months ago, it would be useful to see a posting that either notes that the process outlined by NOP is under way, or specifically, post the directives on the web as deleted or rescinded so that -- because it's really of no help to the community that is not present here, you know, the majority of the community that doesn't come to
these meetings to know -- they do not know about the
announcement, other than to look at the -- in detail, at
the transcripts. And so the standing of the
announcements becomes murky.

As noted in the ANSI report, there needs to be
clear control of documents. Once issued, then
rescind and eventually archived. And these guidance
documents, the Federal Register notice on the guidance
documents, I think will absolutely help all of this to
really move in the right direction, but I think
something is needed soon, especially because you don't
know how long it's going to take to get down from above
to here, so if there could be a notice on a the website
that's clear.

General comments on the NOP process. I do
think full compliance to an ISO 61 quality system, as
described by Lynn, would put in place a participatory
transparent structure that would obviate, in many cases,
the reactive process that we find ourselves in. I think
I've noted many times I hope not to make a career of
coming here and saying, well, that's done poorly --
wrong, you know, and criticize it. We'll always be here
as advocates for organic integrity, but a process put in
place by detailed adherence to accreditation principles
is essential to the proper functioning of this program,
and its absence will impede the progress made for a more complete implementation of NOP.

I would like to address -- we've been looking at public interest groups that have been working on the petition process. You all suggested that if we saw a need to take materials off the list, that we could petition for that and I've been watching groups do it, and the process is really hard and really burdensome.

But I remember -- I'm remembering the meetings where you developed this process. It's an important process to be detailed. So I'm asking, can you think about, in all the other things you have to think about, how we could make that process work the way you want, when the materials look like they need to come off, that there could be some sort of streamlined initial part of the process. It's very burdensome for the public interest community to compile what's required on a petition. And I think it's a work-in-progress of how we make that work for those that -- to get materials off. But it's got to be a consistent process; so I'm just bringing that up.

We'll also bring up, in relation to the public interest community, the idea that Kim actually brought up about the burden on doing this work on the whole community and I think it's a great idea to think about.
scholarships for Board members that come off and that are still willing to work. It's really important to think about the volunteer hours that happen.

Also quickly, is there a way to figure out how to stagger the NOP appointments better? You know, that's another long-term piece. Also just quickly, in the comment period that occurred on Tuesday, it occurred to me that the -- is there a way to ask -- to have questions that relate to a group who come to propose something, be able to go back out, specifically with the NODPA group that came. Several of them got up and the questions were great, ongoing new things you thought of that you asked someone who was speaking, but did not necessarily represent that community. I'm thinking specifically of how they got to the 30 percent consensus on dry matter and would there have been a way to have a conversation and say is there someone in the group who represents the group that could tell us how you got there, because you were talking to one member and they may not have had the answer, and I don't know how you do that when the commentary is so long. Anyway, great work. Thank you very much.

CHAIRPERSON RIDDLE: Thanks. Hugh.

MR. KARREMAN: On your last point there, I believe there were various people that spoke to that,
how they came up with their numbers, at least to my satisfaction.

MS. HOODS: Okay.

CHAIRPERSON RIDDLE: But that's just an example. I think the issue she brings up is a good challenge for us, how can we draw in or extend that dialogue without showing favoritism --

MS. HOODS: Yeah.

CHAIRPERSON RIDDLE: -- as well, so -- Rose.

MS. KOENIG: I think, you know, as far as the petition -- and Arthur's probably the best to let us know about this, because some of it -- you know, the completeness question really is answered at NOP, via the sly [ph], but what I hope is happening is that -- you know, I think, if everything was provided in the petition, we wouldn't have to have a contractor, okay?

So I think that the concept is that, somebody who's doing due diligence and doing the literature review and really trying their hardest to obtain information is in this category, but that's not to say that you're identifying every single thing or maybe be able to -- you know, to know the world, and that's where the contractor, I think, confirms what's there and looks for additional information. I think that the process, you want that.
MS. HOODS: Yeah.

MS. KOENIG: And I think that there are groups out there that are attempting this; I think that they should, you know, do the best job they can and put it through the process and let, you know, Arthur and the folks at NOP to look at it and do that feedback and again, you know, we can probably have him answer that. But I think there is some flexibility there.

MS. HOODS: I appreciate that. I'll tell you, though, literature was the biggest thing that several of these groups came to us with saying that they're overwhelmed with all of the literature.

MR. NEAL: Are we talking about the petition process?

MS. HOODS: Yes.

MR. NEAL: The issue specifically with the petition process is if you look at the petition of ferric phosphate, there's only one person. He had two weeks to respond to a TAP -- and he came back with comments like this.

MS. HOODS: That's industry --

MR. NEAL: I understand. The thing is, though, if you expect the Board to have the information that they need to make an intelligent decision -- and the material is very important to the industry, then you
have to do due diligence to provide them with the
information. I mean, we tried the short-circuit method
and we -- for the livestock medication, and we're still
behind on it.

MS. HOODS: I understand. Well, it's just
that we're a bit -- the public interest groups are not
industry. Their interest is not economic to get them
off, it's -- and they're not paid to -- staff paid to do
this. That said, we are for a consistent process. So
I'm just talking about having a continuing conversation,
but -- and I take that point of view, as complete as we
can, that it goes out and that's really helpful.

CHAIRPERSON RIDDLE: Yeah. And you know, this
time there were a number of extenuating circumstances
that really compressed that, you know, public comment
time period way down, then what I've come full with as
chair, or a member of the public, when I've been on the
other side. So I think, you know, the point here is for
the Board to try and get its work done well in advance,
but also to not be afraid to set something aside in
recognition there hasn't been adequate time for public
consideration, too. That's a good decision in and of
itself when warranted. So thank you, Leanna.

And I just took a look at the numbers.
There's still 13 people signed up, which if everyone
took five minutes, that would be 65 minutes with absolutely no discussion. That's going to -- you know, we -- it, you know, can fit, but we certainly need to be disciplined. And I would suggest a 10-minute break. So coming back at 10:15, but a little break --

***

[Off the record]

[On the record]

***

CHAIRPERSON RIDDLE: I'd like to resume public comment and we have eight Board members in the room, so we have a quorum. We have nine, ten. Okay. And before we -- before we begin or resume public comment with Mark Kastel, I would just like to publicly acknowledge and thank, for the record, another Board member, Becky Goldberg, who, I understand, received your plaque of thanks in my absence. I didn't get a picture of you, but I would like to thank you for your contributions and it really has been a pleasure working with you, as well, Becky. And if you would like to give any remarks, you're welcome to, but you're not obligated.

MS. GOLDBERG: I just want to say thank you to everyone and I'm going to miss you all. I see Jim has his turkey, the stress turkey. I am so pleased.

CHAIRPERSON RIDDLE: Yeah. I explained that
the stress squeeze toys came in a complete set of five. We only had four Board members outgoing last time, so we're stuck with the turkey here. And just -- I haven't had to squeeze it yet, but I said it would a very bad sign if people saw me squeezing the turkey. Thanks, Becky. Okay, Mark Kastel. And up next is Arthur Harvey.

***

MR. KASTEL: Thank you, Mr. Chairman. And I have a proxy here from Mary Ellen Franklin, who's a Vermont dairy producer, but I'll try not to take the full time here, though.

First of all, I really want to thank the commitment of this Board and the retiring members. You know, maybe it's time we thank your employer for the largesse and support for this process, but maybe it's time that we think about stipends in our budget in the future, and appropriations to accommodate farmers and you know, folks like Jim and Hugh, folks who don't have a corporate backing to support this process, so that you don't have to be injured financially for the kind of time commitment you invest here.

I met with Robert Hadad and the Cornucopia first point here and the Humane Society. Since we now are considering identifying yeast as livestock, we want...
to go on record as opposing the factory farm production of organic yeast. Look at the transcripts. And Robert couldn't be here, so I have his proxy, too.

First of all, let me very sincerely thank the Board and the NOP staff for the respect that you all showed for the dairy farmers who made the trek here to Washington and the seriousness in which you analyzed their testimony. Thank you very much. And thanks to Hugh for guiding the Board and the public through what was a very emotionally charged issue and still is.

I think together, the organic community has sent a clear and strong message to the investors who are building these large industrial-scale dairies. We have come together and we're still going to have some additional public discussion. But we've come together and things have really gelled here in the last few months and especially the last few days. So I don't think there's a lot of gray left anymore and that's what the farmers really came here to Washington to accomplish.

There was -- and just to make sure that your comfort level's high, there was some references to the 5,000 comments that came in, which is substantial. It's really over 8,000 comments when you look at what was submitted before the meeting, submitted from groups

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
like, not only the Cornucopia Institute, but Northeast Organic Dairy Producers, Organic Valley, and Organic Consumers Association, and I'm still getting them on my -- you know, I haven't been able to print them out and I'm still getting them on my laptop at the hotel. More importantly, the dairy farmers who were here, I really want to emphasize, were not just a few, a sampling of dairy farmers from Maine to California, they were the officers and directors of the Northeast Organic Dairy Producers Alliance, the Midwest Organic Dairy Producers Alliance, the Western Alliance, and this ad hoc group they call the National Interstate Conference Calls, where they've all worked together. So the people you were hearing represent a lot of folks.

And those groups -- it was the front article on the NOFA, NODPA -- I don't know how to say that -- Northeast Organic Dairy Producers newsletter. They included a sample letter and instructions on how to participate. It was posted on their website. The Cornucopia Institute has now developed a nationwide database of organic farmers, not just dairy farmers. We put that out. So I guarantee you that the majority of all dairy producers in the United States knew about this meeting, knew about how to participate, and we received zero correspondence that didn't support those tighter
standards that you folks helped incorporate. So I don't know what we'll hear in the future on the comments, but I'm really confident that you folks acted in consort with the feelings of the dairy farmers around the country.

The next point, though, is we really want to encourage this Board as we go down the road to visualize and concentrate on transparency. Because as we've tried to take a look at some of the farms that are operating in this country, not just dairy farms, we've run into a brick wall. And in LaCrosse, at the Midwest conference last week, Roger Goldbaum [ph], one of our policy advisors and -- on our policy board and someone who I think a lot of folks in the community trust -- I've got the proxy, too. Thank you. We're really bemoaning the fact that when we asked to take a look at farm plans, when we've asked for any information, we can't get anything, zero. It's all proprietary and protected.

When we started working in the '80s to try to come up with a regulatory system with integrity, we thought that a consumer could say -- go to a retailer and say, how do I know that's organic, and that there may be an audit trail, a paper trail all the way back down to the farm, that the manufacturers, be it Organic Valley or Horizon or whoever they are, we would say, how
do I know this particular product's organic? They'd say these are the farms that produced it and here's how the farms are managed. But there's a total disconnect out there. There's a blanket of secrecy. And yes, there is proprietary business information that needs to be protected, but I don't know what that would be on a dairy farm, because we got grass, we got genetics, we got the mechanical infrastructure to a dairy farm and all that is pretty much open domain. And if somebody is doing something special, by all means, they should be able to protect that.

I once visited the Stony Field [ph] plant 10 or 15 years ago and they feel that their incubation process is very special. I couldn't get in that room, no pictures, that's it. Well, let's respect that. But on a farm, no matter what you're producing, and as an ex-certified organic producer, I'm not sure what should be secret. So sunshine is a great disinfectant and we need more of that.

In terms of Aryan influenza, I wanted to just briefly comment to please --

CHAIRPERSON RIDDLE: That'd be avian.

MR. KASTEL: Avian. What'd I say?

CHAIRPERSON RIDDLE: You said Aryan.

MR. KASTEL: Okay. I read the Washington Post
this morning and I'm really saddened, you know, at what
happened to that judge's family in Chicago, so it's
unfortunately a little engrained in my mind.

Avian influenza. I really want this group to
weigh all testimony very carefully. And you know, this
is a serious matter. But we're looking at Cornucopia a
number of these -- particularly, egg laying operations.
And some of these industrial dairy setups that we've
discussed, and some of these egg producers, are very,
very large split operations. They are industrial farms
first and organic farms second. And some of them is the
reason we're looking at questionable commitment to
access to outdoors. And so if there are special needs
in terms of bio-security on some of these very large
split operations, we don't want to put the smaller
units, who are really doing this ethically, at a
competitive disadvantage. You know, I have to ask the
question, is this a back door into confinement in large
industrial operations?

And I do want to -- I found Lynn Coody's
comments on the ANSI report, you know, very concerting
and we want to work with the NOP and especially if we
don't have adequate staffing levels. You know, we've
discussed the fact that we're being shortchanged in the
organic community in terms of research dollars. And you
know, we're not getting anywhere near the one or two percent that our industry represents in terms of research and we could certainly build a bigger and better organic movement if we had that. But we also should have a proportionately represented staff presence supporting this, you know, almost $15 billion industry now. And you folks need the tool if you need to communicate with us when you don't have adequate funding.

And in closing here, I'd like to just read the comments of Mary Ellen Franklin, relating to the Harvey v. Veneman ruling in terms of the transition for dairy animals. Because this is a very serious matter, most of us are committed in this room to family farm agriculture and it's one of the prime drivers that keeps the consumers committed. And she writes that our -- and by the way, this was posted on the ODAIRY list serve and I asked her for permission to read it today and it was posted in January.

"Our farm has just recently completed its organic transition, 12/04." Excuse me. "We just received our first organic milk check this week. When we started the final three months, we were outside with our grain company, knowing that we would not be able to keep up with the grain bill while receiving conventional..."
prices and we are well aware of the fact that the
conventional price has been good as of late." So I
mean, historically, this would be even harder. "Our
grain company has been very good to us and we will catch
up with them on the grain bill as soon as possible.
There is no way we could've asked them to do the same
thing if transition had required a full year of organic
grain. This is one farm that couldn't have done it
without the 80/20 rule. The 80/20 rule has to stay in
place or be brought back. I'm not sure how the rule
stands at this time. There are many transitioning farms
out there that shouldn't have the rug pulled out from
under them now. The world needs a lot more profitable,
sustainable, environmental-friendly, cow-friendly,
family-friendly, grass-based dairies. Mary Ellen
Franklin, the Franklin Farm, Gilford, Vermont." And
that's the extent of my statements.

CHAIRPERSON RIDDLE: Thanks, Mark.

MR. KASTEL: Thank you very much.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: Just maybe a question -- or
just a statement. With the trace-back that you were
wondering about, you know, this is kind of maybe
parallel to that, but with the mad cow, you know,
disease that has happened at one time in this country
now officially, you know, the -- I forget which segment
-- the USDA and other segments of the cattle industry
are doing -- are going to be mandating that cattle are
identified properly. So that might help somewhat, but
that's mainly from a slaughter standpoint looking
backward, if needed. But -- you know, so it is
possible to actually -- I think it's still in its
infancy, but the trace-back system here in the United
States in agriculture is certainly beginning.

MR. KASTEL: Well, there's a lot of focus on
beef. Yeah, I'm going to turn this over to somebody
else. You know, New Zealand's a model for that.

CHAIRPERSON RIDDLE: Thanks. A new point.
Okay, Bea.

MS. JAMES: This actually has to do with the
information regarding three cows per acre, 120 days, 30
percent, and it's my understanding that your
organization really helped to collate all of that
information.

MR. KASTEL: Well, we supported the process
with the dairy -- it really came from the dairy
producers, not Cornucopia. We technically supported
them and we supported them in getting the word out.

MS. JAMES: Okay. All right. I'm looking for
a way for that survey to be put together in a
spreadsheet so that the averages can -- we can actually
look at those averages and have, you know, documentable
proof as far as 30 percent and 120 days.

MR. KASTEL: We'll ask something to be
submitted, but what they really did is they started at
much higher figures and they were trying not to lock
people out --

MS. JAMES: Right.

MR. KASTEL: -- based on geography, based on
the areas of the East Coast that were colder, and we had
areas in -- particularly out west that get 60 inches of
rain that could have stocking levels --

MS. JAMES: Sure.

MR. KASTEL: -- higher than three and we were
trying -- the dairy farmers were trying to make sure
that it was very reasonable levels that wouldn't shut
either anybody who's producing -- today or somebody who
really wanted to do a good job to have pasture. These
are not the ideals. Most of the farmers who appeared
today have much lower stocking levels and higher --

MS. JAMES: Sure.

MR. KASTEL: -- dry matter intake.

MS. JAMES: Yeah. And I understand that, but
I think it would be helpful for the Board if we actually
could take a look at that spreadsheet --
MR. KASTEL: We'll collaborate with them and we'll submit them to the Board --

MS. JAMES: Thank you.

MR. KASTEL: -- during the comment period.

CHAIRPERSON RIDDLE: Okay, thanks, Mark. And next up is Arthur Harvey and then Dave Engel. And as Arthur's making his way up, I would just -- I would remind Board members to please limit your comments or questions because we have a number of people signed up. The comment period ends at noon and if we're taking time in our discussions, we're going to take time away from people's even ability to offer their comments, even though they signed up. Thanks. Arthur.

***

MR. HARVEY: Arthur Harvey. Yesterday after the chair -- the chair announced the adjournment of the public questions until eight o'clock this morning, I left the room with other members of the public. Shortly after that, the NOP staff called the Board to reassemble away from the recording system or the press and other interested parties. Then the NOP proceeded to present the one-sided version of a private meeting between myself and the NOP, which had been called for the ostensible purpose of seeking agreement on a joint proposal for summary judgment. Of course, exploratory
ideas put forward during such a private meeting are not correctly described as the true position of the party in this NOP tactic.

By accident, I was able to hear the latter part of this NOSB meeting, but was denied the chance to reply except during my five minutes before you today. Of course, I could not possibly reply to allegations when I don't have access to the complete text, for a time, equivalent to what the NOP had. I hope the Board will resist any future activities that discredit the process and which may be illegal. Secondhand and fragmentary quasi-legal opinions do not cut it.

Now that the NOP has abandoned any serious interest in achieving an agreement, I can discuss two issues. Section 606 of the rule disallows all non-organic ingredients in processed foods except for the five listed ingredients. This applies to organic as well as "made with" organic products according to 606. When I asked how they proposed to deal with thousands of "made with" organic products currently out of compliance with 606, the NOP's answer was a denial that this is the case. We have not received any compliance, they said.

Well, 606 has been in effect for several years. Almost everyone in this room knows, I dare say, that virtually every "made with" organic product

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
contains up to 30 percent ingredients that are not
listed in 606. The NOP will not admit this and I can
think of only two possible reasons. Number one, total
ignorance of the real world of organic marketing. Or
number two; I will not describe this other possibility.

My other subject is the NOP effort to expand
the scope of the appeals court ruling so that it would
forbid synthetics in "made with" organic products. This
I will call the NOP's doomsday scenario, or it would, if
successful, bring the industry to its knees. An agency
that is supposed to serve organic producers and
consumers is engaged in a vigorous attack on one segment
in that industry, or perhaps the entire industry, by
mobilizing forces to rock the very foundation of the law
and Congress, given that OFPA was approved in the House
originally by a single vote, which may well succeed, and
has completely unpredictable consequences.

In passing, I should mention that the U.S.
attorney in Maine initially agreed with me that the
court judgment does not extend to "made with" organic
products, but he reversed that opinion upon hearing his
client's wishes. Of course, the U.S. attorney must
represent his client, which is the NOP, but he also has
a duty to the appeals court. We shall see what that
means in practice. Here's a letter by a competent

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
Washington attorney which addresses this matter. Unlike the NOP position, which is not given in writing in written form with any backing from an attorney willing to accept responsibility for the opinion, this letter is signed.

CHAIRPERSON RIDDLE: Yeah. Closing remarks or are you providing a copy of the letter for the record?

MR. HARVEY: Well, I could --

CHAIRPERSON RIDDLE: There wouldn't be time to read it, but --

MR. HARVEY: I could make copies, but I don't have a copy at the moment. Would you like a copy later?

CHAIRPERSON RIDDLE: Well, you referenced the letter, so it's in the transcript, but yes, then the letter itself should be entered in the record. So if you can get --

MR. HARVEY: I'll get some copies.

CHAIRPERSON RIDDLE: Great.

MR. HARVEY: I'll bring them back.

CHAIRPERSON RIDDLE: Thanks, Arthur.

MR. HARVEY: Okay.

MR. HARVEY: Okay, Dave Engel, then Brian Baker.

***

MR. ENGEL: My name is David Engel. I want to
thank everybody for this opportunity. I'm a dairy farmer and I'm the Executive Director of the Midwest Organic Services Association. I have spent the last 25 years along with my family milking cows and doing administrative work in the organic industry. I was one of the original crop -- the seven-crop dairy farmers and one of the original pioneers to develop organic dairy standards and I have spent the last 17 years working for these standards. Most -- at this time, certified is 291 dairies, one of which is a goat dairy doing very well. He markets off of his own farm.

And my main concern today, per the last couple days of testimony and discussion, is a tendency here for the community to represent and try to address a regulatory issue via philosophical and cultural differences. And you know, in simpler terms, that's -- we're taking the reins and trying to make them address corporate versus a small farmer, big versus small concerns. And I, as a farmer, much less a certifier, I have concerns with that. That is resulting in specificity in the rule and I don't think we should go there. There's an old saying, how blessed is the one who can from holy water run, and I would urge you to not to adopt specificity in the rules.

I did take a bit of time here in the last
couple of days to talk with a couple of dairy farmers back in our area, one is certified by MOSA and one is certified by Oregon Tilth; they are both part of the original seven-crop dairy farmers and both of them, along with my farm, are going to have challenges to meet the specificity that is being put into the rule, much less the specificity that is being talked about, for example, the number of cows per acre.

On other matters, I would like to show support for four different topics here. One is I'm looking forward to an executive director being hired for the NOSB and I'm looking to -- forward to a final collaboration document implementation. I'm looking -- I'm impressed with the content of the NOSB, I have been all along. And I would echo several of the comments recently as to -- Kim called it the attrition on the Board, which may not be quite the right term, but there is people coming onto the Board and leaving, and the training that's going to be necessary for that, to maintain the dynamic ability to grasp the fine details -- that are coming up here quite often.

The continued development of the National Organic Program via timely compliance with the recent ANSI audit, I'm looking forward to that. I have two questions. Will this be on an annual basis as it is
with ACAs or not and what place will the mandated -- the law -- rule-mandated, PRP, the peer review panel, play in the near future, vis-à-vis the recent ANSI audit report? And last but not least, the recent -- I'm going to call it the bounces of the ball of the Arthur Harvey case through the different literal and figurative courts, I hope -- I sincerely hope that all due consideration and discretion can be taken that can be taken will be taken by both the NOSB and the USDA as the next steps in deliberations take place for the benefit of the entire organic community. Thank you.

CHAIRPERSON RIDDLE: Thanks, Dave. Okay, Brian Baker, and you have a proxy from Dave DeCou. So next up will be Urvashi Rangan. Is Urvashi here? Okay. But I do see that Jay Feldman has arrived. He signed up and his name was called earlier. So Jay, would you like to speak next, Jay Feldman? Not immediately, but on deck. I take that as a yes. Brian, please proceed.

***

MR. BAKER: Thank you, Mr. Chair and members of the National Organic Standards Board. I'm very pleased to be here. I appreciate all the work you're doing and I had a lot to say when I got here on Tuesday, and with each passing day and deliberation and action, I had less to say. So I'm going to get through very
quickly. I just wanted to introduce myself to the new Board members and just say that OMRI is a nonprofit that provides independent, transparent professional review of materials and processes compatible with organic production and handling, and we publish a generic materials list and a brand name products list to serve the industry and the public. We're committed to continuing our work with the National Organic Program. At the last NOSB meeting we talked about our -- the work that we are doing and getting recognition from the National Organic Program for the work that we've done prior -- since prior to the implementation and propagation of the National Organic Program, and we hope to continue to be serving the industry with quality for years to come.

I'd like to offer a few opinions about synthetic and nonsynthetic. That's something we deal with every day, certifiers deal with every day, producers deal with every day, handlers and processors deal with every day, people make decisions in production and handling all the time based on whether something is synthetic or not. Every single one of those decisions with -- it would not be practical for every single one of those decisions to be brought before the National Organic Program or the National Organic Standards Board.
It's imperative that we're all on the same page so we all know what we're talking about when we talk about what's natural, what's synthetic, what's nonsynthetic. And I applaud Rose's work in helping to bring about clarity and consistency there, but we still have a ways to go. We still have a lot of work to do.

And it's -- something that I should I mention is that we also, from 1999 to 2002, OMRI was the TAP contractor and offered a little bit of, you know, a few observations that are based on our experience, but it was not an easy job and my sympathies to the new contractors. I wish them well. The -- I'd like to say this, as far as the petitioned substances go and the content of petitions, it's often the case that a petition is going to be biased so that it's perceived as favorable and that's one of the more difficult tasks before the contractors or the NOSB, to get the facts and to see if a petition's complete, if it's accurate.

And it's -- we've been put in a difficult situation with respect to some of the petitioned substances before you, both at previous meetings and the current meeting because we've had access to information and again, it's been difficult for us to bring it forth because it's either confidential business information that is given to us by our applicants or we've had
access to information in -- through other channels,
based on our expert advisory council or our review panel members.

So coming to you and commenting on those petitions is a delicate subject and one we want to do with great consideration and deliberation. Two weeks prior to a meeting does not give us sufficient time. The 90-day period that we had to comply with when we were doing the TAP contracts, it was often difficult to meet, but we were -- if that was expected and demanded of us in order to give the public, the petitioner, and everyone time to respond and get accurate information and complete information before you so you can make sound decisions.

I'll skip over a few other things I was going to say and get to seeds. OMRI has an organic seed database. It's mentioned in your proposal. It's one of a growing number of databases out there and you know, in some ways it's -- it's not really clear if it's ever going to -- if we're ever going to have a single comprehensive database that will be able to provide the real-time inventories that can give the information needed to determine commercial availability. Our board is -- told us that if we can't do it right, we're not going to do it all.
We've got a database, ATTRA's got a database, OTA's got a database, OCA has a database, they're -- none of these databases are being used to their full potential. They are not being of service to the seed suppliers, they're not being of service to the certifiers and they're not being of service to the organic farmers. We need to come up with something that's going to work for everybody. And a couple of observations there, we're going to need to have a more clear procedure of what's expected of an organic farmer who wants an exemption from that. The lines need to be drawn very clear. Asking three suppliers and getting three answers, we've found that that is arbitrary. That is also subject to manipulation in some cases; an allegation that's been made by the suppliers who use our listing service.

So the other thing is that this question of equivalent varieties, we believe that's best undertaken by a jury of people who have experience with breeding and selection and development. So those -- that's a service that we're very interested in providing, but like I said, if we can't do it right and we don't have clear guidance on what to do, then we'll leave it for somebody else, so -- finally, I'd like to end with an offer of service to you. We want to share with you our

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
expertise. Like I said, we have an advisory council that consists of many former National Organic Standards Board members, experts in industry, academia, and the public interest sector, and we want to -- we have a broad, open, transparent process that includes all stakeholders and we think we can be of service to you. So let's know us how we can help. Don't just wait until there's an NOSB meeting to ask a question. Thank you.

CHAIRPERSON RIDDLE: Thanks, Brian. Okay, Jay Feldman, and then next up would be Joe Mendelssohn [ph]. I haven't see Joe. Is there someone to speak on his behalf? No. Then Joe Dickson would be next.

***

MR. FELDMAN: Hi. Good morning. Thanks, Jim. I apologize for not being able to be here at the whole meeting. I actually just got back from the Learning Disabilities Association meeting out west, and I can tell you --

CHAIRPERSON RIDDLE: Did you give your name and affiliation for the record?

MR. FELDMAN: Jay Feldman, Beyond Pesticides in Washington, D.C. -- that people across this country who rely on organic being a pure standard, especially when it comes to sensitive individuals whose immune systems and nervous systems are damaged. The organic
industry is successful, we believe, in large part
because of the trust that exists between organic
consumers and the industry. Our organization is trying
to bridge that since its very inception, working with
small farmers and consumer organizations. Consumers are
willing to pay a premium price for organically labeled
food in order to provide healthy food for themselves and
their families and also to support sustainable
agricultural and processing practices.

In order to maintain this trust, consumers
must feel confident that practices and materials used by
organic growers and processors adhere to the highest
standards and provide labeling disclosure when there is
not -- when this is actually not possible. And in
designing the law back in the late '80s, this issue was
at the top of the list and I guess it continues to be at
the top of the list today. The role of the NOSB is
extremely important in this regard, not only in carrying
out its statutory duty, but to serve as a check on the
USDA and the USDA's compliance with the law.

Beyond Pesticides joined as an amicus in the
Harvey case because of the strongly held belief that
organic practices are the solution to the pesticide
problem and that's why we believe the organic industry
has grown to what it is today, because of informed
consumers going to the marketplace for an alternative, a meaningful alternative to chemical-intensive agriculture and the food produced off of that land. To the extent that the organic industry or the organic solution is not viewed as meaningful or is eroded over time, then consumers will not support it.

I'd like you to note, please, that the issues that are in the Harvey case were issues that we commented on specifically back in June of 2000 during the public comment period, saying that truth in labeling requires differentiation, as the law does, between organic products and those products made with select organic and synthetic ingredients. The Sierra Club did the same at that time. The Sierra Club said the USDA should note OFPA does not provide on the National List for a class of synthetic substances to be used in processed foods labeled or sold as organically produced.

And I think the -- history and the record and the intent will show that that applies to the 95-5 only and it does not, as I take it, NOP -- this preliminary position is that -- to the "made with" category as well. This position grows out of the discussions during the drafting of and leading up to the passage of OFPA in 1990. The consumers who currently support organic in the marketplace are making an informed decision to
purchase, as I said earlier, outside the conventional chemical-intensive food production system, expressly because of concerns associated with the use of chemicals in the production and processing.

While it has been established that USDA allowance of synthetic materials in organically labeled food products is in violation of the law, some are citing or raising the question as to whether the law needs to be changed to reflect current realities of synthetic chemical use that has emerged under the current misapplication of the law. The real question from our perspective is the proper labeling. Really, it's the labeling, from our perspective, of processed organic products, not the viability of organic agriculture processing. That's a clear distinction there.

These issues need further discussion, but must be addressed and resolved in the context of consumer and industry viewpoints, resulting in a plan for moving forward that protects organic integrity and most importantly, consumer trust, which obviously, I've used that term numerous times. And we feel it's very important that the beauty of OFPA is the opportunity, we believe, to label products in a manner that conveys clearly to consumers what is in the products that they
are buying; that the five percent in 95 percent
organically labeled process products is reserved for
nonsynthetic -- non-organic ingredients, when necessary,
is clear to us and it's clear in the law and that's
where we sat down on this. I'll skip over some of the
other comments and let that -- that them be in the
record, please, but --

CHAIRPERSON RIDDLE: Yeah, summarize your
conclusion. You weren't given the warning, so --

MR. FELDMAN: Okay. One thing I'd like to say
is this whole issue raises this whole issue of good
government. You know clearly that just over six months
ago the USDA issued a directive which allowed for
across-the-board uses of certain inert ingredients.
While the directive was withdrawn shortly after its
issue, it represents a pattern, we believe, of
government action that erodes public confidence in the
process or in organic.

Clearly, the reversal of that was a good thing
and we appreciate the work that the NOSB did in that
regard. The progress -- and here's the conclusion. The
progress that has been made in the organic sector and
the growth in consumer support for it is incredibly
gratifying, and given -- and gives us a great sense of
hope for future opportunities. We realize that we still
face enormous challenges in many of the food production
processing issues. Our greatest hope is that consumers
and food producers will continue to work together to
meet these challenges rather than defend them away, and
clearly we're open, as I'm sure others in this room are,
to collaboration and working to try to resolve this.
Thank you for the opportunity.

CHAIRPERSON RIDDLE: Thanks, Jay. Rose.

MS. KOENIG: So I'm trying to get it clear.
Are you -- were you suggesting that perhaps the labeling
regulations is a place to seek some kind of resolution
as far as, you know, dealing with the regulations
without going back to OFPA?

MR. FELDMAN: Yes.

MS. KOENIG: And can -- do you have any
written suggestions that you might be able to provide?

MR. FELDMAN: Well, you know, we've been
trying -- we have a working group. I think that others
may have referenced this, and our hope is that in
collaboration with industry and consumer groups we can
resolve that issue as a labeling issue and move forward
on the restraints and parameters of OFPA. So we can
submit those and would like to when we've completed that
process.

CHAIRPERSON RIDDLE: Thanks, Jay.

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. FELDMAN: Thank you very much.

CHAIRPERSON RIDDLE: Okay, Joe Dickson, and then next up, Leslie Zook.

***

MR. DICKSON: Good morning and thank you for this opportunity to speak here. I wanted to talk about an issue which came up yesterday regarding the certification of retailers and the listing of the certifying agent's name on packaged products. Whole Foods Market supports the Board's decision to return its recommendation to the Accreditation and Certification Committee for further review and discussion. The recommendation on certified retailers and private label products relies on a simplified example scenario which does not reflect the complexity of businesses such as ours.

We ask that the committee develop a recommendation which clearly differentiates between retailers who are also acting as processors and who have obtained separate handler certification from retailers who are simply re-labeling products and putting them in their voluntary retail certification.

The example scenario provided in the recommendation supposes a retailer which has undergone voluntary retail certification and then sells organic

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
products which are produced by a third party with their labels provided by the retailer. Those labels show the name of the certifying agent which has certified the retailer's retail certification. In contrast, our private label products show the certifier name, which reflects the separate and distinct certification of our private label division, not our voluntary retail certification.

Whole Foods Market 13 separate organic certifications, our retail certification, a separate handler certifications for each our eight regional distribution centers, handler certifications for each of our bake houses and a handler certification for our private label division, which produces our store brand products. We have never understood the rules that allow for retailers to create processed organic products under their own label without separate handler certification.

As a point of clarification, there is no retailer certification, or retailer classification for certification. A retailer is technically a handler and retailers who do not act as processors are exempt from the requirement for handler certification. Once a retailer becomes a certified handler, whether voluntarily or because the retailer is acting as a processor and thus not exempt from certification, that
retailer becomes a handler under the rule, including the part of the rule which requires that the final handler and its certifier be identified on the label.

While we don't own or operate a single processing plant, our company contracts with hundreds of vendors to produce our organic products. Far from passively selecting pre-existing products from the vendors to produce our organic products -- I'm sorry. Far from passively selecting pre-existing products from the warehouse shelves, our buyers specify the source and the quality of our ingredients, they exert control over the manufacturing processes and they make other specifications which we believe qualify our business as engaging in the act of processing as defined in the rule. Unlike the retailer in the committee's example, Whole Foods Market does more than simply re-label and distribute the products. Most of these products would not have existed in organic form if not for our buyers' demands. We take full financial and legal responsibility for our private label products.

When a retailer has obtained separate handler certification for its private label products, that certification should sufficiently verify the organic integrity of the product being sold. And when a retailer is certified as a handler, they become the
final handler in the chain of custody of the product. 
The label should not be required to bear the name of the 
prior certifier in the chain of custody. Sections 
205.2, the definitions, 205.303(b)(2) and 205.304(b)(2) 
provide a regulatory basis for this distinction. 
The Handling Committee's recommendation and 
the ensuing discussion yesterday made it very clear that 
there's a need for clarification regarding the 
definition of the phrase "otherwise manufactured." If 
the act of simply re-labeling a product with one's own 
brand name constitutes "otherwise manufactured," then 
the retailer in the example is not -- certified. That 
retailer is required to be certified because it is 
technically acting as a processor and thus not exempt 
from the requirement for certification. We ask that 
NOSB and NOP carefully consider the issue of retail 
certification and the very gray area at the root of this 
disagreement. What does it mean to otherwise 
manufacture? We strongly believe that issue needs to be 
addressed so that the certification requirements for a 
retailers, private labelers and processors are clear to 
all stakeholders. Thank you. 

CHAIRPERSON RIDDLE: Thanks, Joe. 
MR. DICKSON: Thank you. 
CHAIRPERSON RIDDLE: Leslie Zook and then --
then I have some written comments that I'll summarize from David Granatstein, and then Cissy Bowman would be the next live commenter.

UNIDENTIFIED SPEAKER: Pardon?
MS. ZOOK: I have a proxy --
CHAIRPERSON RIDDLE: Oh, okay.

***
MS. ZOOK: I'm Leslie Zook from Pennsylvania Certified Organic and I've been -- I must say, I heard Kim's concerns about the Board attrition and I thought he said nutrition. I've seen you all eating that whole food, so I didn't really understand that. But since you brought that up, I have been thinking about that a lot and I would feel really bad about trying to rely too much on the outgoing Board members, because five years is a long time. And I thought if maybe you could look into the procedures and there might be a way to go back and figure out a way to re-stagger your terms, because if three people went off the Board each year, and three times five is fifteen, I think that would work -- it seems like it wouldn't be as critical to bring people up to speed. I'm not sure how that would happen, but you know, I just wanted to kind of throw it out there. We talked a lot about pasture guidance and -- I really want to encourage you to continue to work on...
these guidance documents and not be put off by worrying
that they don't have any teeth. I don't want you to get
discouraged about that, because although that's
absolutely true at the enforcement level, these
documents are extremely important for the producers at
the farm plan level.

And you know, I guess I'll give you an
example. If we don't have any of these guidances, which
we don't on pasture right this minute, and a farmer
submits a farm plan to a certifier who looked at the
farm plan, we would look it over and we see their plan
is very complete. It talks about their feeding and
their pasture for their cows. And they might have a
hundred cows and they're submitting a farm plan and our
team looks it over and they have two acres of pasture.
So our certification team looks at it, thinks about it
and decides that they're not going to approve that plan
and they send it back to the client.

What's the first question we're going to get
from that farmer when they get that determination
letter? Well, if two acres isn't enough, how much is
enough? And we're like well, you know, we kind of go
well, you know, we can't tell you that. We kind of try
to make it sound like it's reasonable. We can't give
you an exact number, though. And they say to us well,
you don't know what the heck you're talking about. You know, how can you run a program and not really give us this kind of information? You know, how can you certify some and not certify others? You know, we couldn't really even tell them well, why don't you go to NRCS and use their recommendations, because that would be consulting, giving advice to overcoming an identified barrier to certification. We've told them why they weren't getting certified. We can't tell them then, well, use the NRCS guidelines, then we'll certify you. So I really want to explain to you that it's very, very important that you continue to work on these and it really does matter, you know, at that farm level. And again, just to be clear, we know that we can -- it's not enforcement and we can deviate and from those -- if it's three cows per acre or 30 percent dry matter and a farmer submits a plan to a certifier that is different from that and has more cows per acre, then we don't -- we can't automatically deny it because it's guidance.

But what we can do is put the burden on them to prove to us why do you think we should certify you with four cows per acre because of your management plan or your rainfall, what it might be, and if they have come back to us with a good reason, then our certification team can accept it. So there's built-in
flexibility, but it gives us something to give to the farmers so that they can work on their farm plan and they can continue to be in the program.

On Section 301(c), "made with" -- your proposed change for, rule change for the "made with" category, I really want to thank you for clearing up that confusion over, you know, whether or not organic and non-organic ingredients can be in the same product -- non-organic and organic forms of the same ingredient can be in a "made with" product. That's great and I thank you for that. But I will ask you to think about working on some guidance on what does "same ingredient" mean? If we have a tomato sauce and 70 percent of the tomato sauce is Roma tomatoes and 30 percent of the tomato sauce is another variety of paste tomatoes, what does that mean? Are they the same ingredient or not?

Another example might be pretzels that have 70 percent white wheat and 30 percent red wheat. Okay. Is that the same ingredient or not? And you know, some people may think that's a clear answer, but believe me, I'm asking you now because that's probably going to be one of your next Q and A's in the pipeline. Oh. No, I thought you had an answer for me there.

MR. MATHEWS: I do have an answer for you.

MS. ZOOK: Do I get more time on my --
MR. MATHEWS: We have actually ruled on this issue in the past when it comes to hops in beer. And there were two varieties of hops, one -- and what happened was the person claimed hops and we told them, no, that's not approved because you're using organic and non-organic hops. And he said well, but they're different varieties. And we said okay, name the variety and tell us which one is organic. So if they're -- we don't look at two varieties of tomatoes as being the same thing so long as they're differentiated on the label.

[Simultaneous comments]

MS. ZOOK: I guess that --

MR. MATHEWS: But you can still --

MS. ZOOK: Okay.

MR. MATHEWS: And we can get it out --

MS. ZOOK: Yeah, there could be a variety difference, there could be color differences within a variety and I'm not a scientist so I don't know how it all works out, but I think at some level we should know whether it's the same or not. And on the Q and A process, I know it's frustrating and it may seem like it's really painfully slow, but it is very important. Again, what you're doing here relates right on down the line to the farmer level and I really want the Board to
understand that, because that's what happens every day
in our office. The client calls us and we're like, well, we can't answer you, it has to go to our policy
committee. The policy committee thinks about it. Well, we can't answer you. We've got to get some information
from NOP. NOP now has this opportunity to be able to
send it on to you. Now -- but really, what else are we
going to do other than -- besides having a whole bunch
of different questions? There could be answers all over
the place from different certifiers and different, you
know, staff.

So the Q and A is a great thing and I do
encourage you to continue it. And the reason I ask on
this proxy is I come up here and I've got a lot to say
and I end up sort of dispensing with the you guys are
doing a great job, thank you very much, and I don't want
to use up any of my five minutes to say that, so -- but
I want -- we really do appreciate it, and the certifiers
especially really appreciate the communication between
the staff and the NOSB and this whole public process
because it's really the only way we can do our job, to
have this information from you. And it has been a long
meeting and a very good one. Thank you.

CHAIRPERSON RIDDLE: Thanks, Leslie. We
always recognize proxies for that purpose. Dave?

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
MR. CARTER: Yeah. Just two real quick. One -- and I appreciate your comment on the staggered terms, because that's one of the things we're looking at. The problem is we got a little bit of difficulty with OFPA because it does specify that the Secretary can only appoint for five years, but we're looking maybe if somebody goes off the Board, you know, early or something like that, they'll start at least with the staggering, because I think that's a good approach. And then on the other thing, I guess, with the organic and non-organic ingredient, one of the things that we -- that I guess you need to look at on that, do those two ingredients have different functional -- like the two different types of hops, because almost by definition, organic and non-organic for different varieties of -- you know, of the same thing, so --

MS. ZOOK: There are a lot of questions like that that come up when we start to discuss that and that's why I'm asking if you guys can put some guidance on it. I did forget one thing. I totally agree with Joe Dickson's comment on the certifier label on the private label product. What he was talking about is really the best way to go about it and if we can get that fixed so that can work because otherwise, you are going to have the retailer put -- have products out
there with all these different types of seals from
different handlers that actually just co-pack for them
and that's a nightmare.

CHAIRPERSON RIDDLE: Okay. And I think Rick
has a comment on the staggering Board members.

MR. MATHEWS: Yeah.

MS. ZOOK: It's that poor nutrition that's
really contributing to the staggering.

[Simultaneous comments]

MR. MATHEWS: Well, it was like at 12:30 last
night when I was taking the photographs, so I'm not sure
if it's nutrition. But anyway, just joking. The -- we,
too, recognize that there's a problem that has developed
over time with the staggering of the Board members and
actually, this may be the perfect time to address that
as we get ready to move forward with six nominations;
five that will expire at the end of -- well, on January
24 of 2006, plus one that has just resigned for personal
reasons.

With six of them coming up, we could go back
and look to see how we might stagger those six positions
so that we can kind of even this out a little. I don't
think that we would get to a three per year, but we
could at least try to get to a point where we've got
less than four or five, less than five. And some years
where we have none, we could get some into those years, which would definitely help out. I don't feel that we can do that on our own.

And Dave's right, the -- the statute says the first Board will be staggered and after that it's five-year appointments. I will say that, in light of recent events, it's always prudent to be careful about doing things outside of the statute. But if it was the sense of this Board, if you could -- if you had a recommendation coming forth to us, we could take it to the attorneys and see if we couldn't stagger the next appointments. And to me it's kind of like a voluntary thing, too. We could ask people to volunteer to serve shorter terms or something. There may be some way that we can do this. But I think that, first of all, we've heard from the public, we've heard from the Board, and I think there needs to be a formal request to the Department to try and solve the problem.

CHAIRPERSON RIDDLE: Dave.

MR. CARTER: Great, one more item for the Policy Development Committee.

CHAIRPERSON RIDDLE: Add it to your work plan.

Okay, thanks. Okay. And I have -- and he has started the timer -- some comments submitted in writing from David Granatstein, Washington State University Center

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
for Sustaining Agriculture and Natural Resources, and it pertains to research on certified organic land at universities, so it's directly relevant to one of the work plan items. And I'm not going to read the entire thing. The copy is available for the record, and I would ask that it gets scanned and then provided to both the Policy Development and Crops Committee for consideration.

Some of the concerns that Professor Granatstein has encountered: the testing of products for use in organic systems, just what is eligible for consideration for research purposes and how those products can be used on a certified organic or transitional research, things that are not currently approved substances. Second is experimental design and specifically, being able to run conventional treatments as baseline comparison alongside organic in replicated studies. And then the use of certified or transitional land and making sure that having that alongside the conventional land doesn't mean that the organic or transitional doesn't qualify. Once again, it's kind of duplicative and I'm just summarizing his comments.

And then preventing loss of an experiment. And here, researchers have pointed out a major disincentive to conducting organic research, that being
the inability to rescue a trial about to be lost due to
a factor for which there is no immediately effective
organic control. Well, farmers have to face this, as
well. I don't know that there's any answer, but it's
something else for the committees to look at.

And we would like to propose several ideas for
your consideration on this matter as a possible
solution. Two approaches include: develop a variance
for research on organic land that would address that
concerns. Well, that exists in the regulation. We're
just trying to explain it better. Develop a separate
organic research land verification process -- I assume
separate from certification -- that would accommodate
the concerns and satisfy funding requirements without
conflicting the certified organic and transition rules.

In either case there should be a stipulation
that product grown under the organic research category
would not be represented or sold as organic. So that's
something for the committees to consider. So I'll give
that to Toni and if you could scan it in and then e-mail
it as an attachment back out to the committees, thanks.

Question? Yeah, Nancy.

MS. OSTIGUY: Yes. On that topic, I think we
ought to include organic research for livestock in how
we consider this, because there certainly are issues
there that one would hope that we'd be doing research on.

CHAIRPERSON RIDDLE: Yes. And I would also like to point out that that section of the rule mentions products, ingredients, and it mentions production and handling. So there could be -- you know, and there certainly are universities and private companies doing research and you know, expanding organic handling options. So it might be -- we certainly don't want to focus only on the production side to the exclusion they're boxing in the handler side, as well. Okay, next up is Cissy Bowman, and then Michael McGuffin. Then we only have two more after that.

***

MS. BOWMAN: I'll try to keep this short. I don't have a lot to say. I'm Cissy Bowman. I am the CEO of Indiana Certified Organic, a private certifier. I'm also a certified organic farmer. I'm on the board of Beyond Pesticides and I'm chairman of the Indiana Organic Peer Review Panel, which is working on a statement for the program at this time.

First of all, I want to welcome all the new people to the Board and thank all of the people who have been with this for so long and the people who are going off that have shared their time. This is going to be
long, hard job for you guys. Do depend on the people who have history with this and I know that there are a lot of people, especially the ones that stay here until the last minute of these meetings, they're here. I've been coming to these meetings since 1994 and they'll be here. Please talk to us and I know everyone's willing to share their opinions with you, for better or worse. I want to say -- especially thank for your generosity with time to the farmers, and thank you, Richard, for your comments to them. I have always wished more farmers came to these meetings. It's difficult and it's wonderful that they were respected so well.

I also -- I'm just going to kind of ditto a few people here, on what Leslie just said, Lynn, Leanna -- gosh -- Jay Feldman and Dave Engel, Brian Baker, ditto on everything that they just said, all right? And what do I want? Okay. I really want two things. I want to not let the differences that are being paraded today with everything that's going on to divide this community. This is a special thing, it's a very special thing, absolutely miraculous what's happened with organics and I don't want to open up OFPA. That scares me so much, it really does. I believe, like Jay said, I think we can work on some of these issues with labeling, and I've got some ideas and I'll go put them in writing,
but I really think we can fix this.

Yesterday we talked about waxed boxes. I have a new one for you, just for the future, I don't expect any answers. Can you use wax to dip a duck that's going to be organic? I've got clients asking me that. I don't even know how to classify the wax in this case, but inquiring minds want to know. Wax for dipping ducks so you can pluck them. And another alternative is in lye, which has also -- I've been asked about that. Apparently, Old Bally's Hogs Gall [ph] makes a good duck dipping solution. I'm serious. I have had a lot of conversations over this and it's one that we need to struggle with, because we're -- at this point in time we are -- we are limiting the growth in the organic duck industry. Pardon? I have faith that this -- that what's going on, what challenges today is not going to stop us. It's not going to -- I hope it does not ruin what we've achieved in these however many years? Since 1990 we've been working on it.

This community industry or business, whatever you want to call it, was built on folks who wanted to prove that the impossible could be done, and we will, we have, together. There's no difference between us. That's a democratic process, and the public input as farmers, consumers, regulators, et cetera; that we
cannot meet and overcome. The future is ours if we continue to fight for what organic means. Thank you.

CHAIRPERSON RIDDLE: Hugh and then Bea.

MR. KARREMAN: As far as dipping ducks, it's new to me, but I'm just thinking of my farmers in Lancaster County that do a lot of home processing of poultry and they're certified organic and they -- I do believe they're represented as certified organic free-range poultry. So I don't know -- but you might want to find out or I can try to find out.

MS. BOWMAN: Any contacts that you can give me. I have talked to one person who says that they have a mechanical process that works. I'm not advocating wax, I'm just saying --

MR. KARREMAN: Yeah.

MS. BOWMAN: -- it's an issue -- it's a hard one because what is -- is it a process? It's not an ingredient, you know what I mean? It's just -- it's a difficult question. So anybody who knows anything about it, send them to me, please. I would love to try to get this answer.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Would you mind formally submitting that question to the NOP and make sure that you specify that it's a petroleum base?
MS. BOWMAN: Okay.

MS. JAMES: Petroleum-based wax.

MS. BOWMAN: It's a paraffin wax.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: A quick thing on that. Mineral oil is okay for topical use and that's paraffin.

CHAIRPERSON RIDDLE: Well, you can contribute to the answer. Okay, is that it? Yeah, Michael McGuffin, and then next up, Pete Gonzalez.

***

MR. MCGUFFIN: Good morning. My name is Michael McGuffin. I'm the president of the American Herbal Products Association. I have communicated with this Board and the Policy Development Committee, as well as with NOP, in writing on more than one occasion and I'm here this morning to make the same points that I have made in writing and to urge the Board to help me to clarify the dietary supplements that contain herbal ingredients, which are defined as a subset of food under federal law, are clearly within the scope of the NOP. And I appreciate very much the opportunity to address you and also the presence of NOP staff here.

Members of my trade association grow herbs and sell herbal products. To the best of my knowledge, all of our members who are growers are certified organic.
growers. Several of our members who market herbal products use these organically grown and produced herbal ingredients in their products and market their goods as organic. For example, certified organically grown Valerian root is extracted and certified organic grain alcohol. The resulting tincture, Valerian tincture, is clearly an organic product. When my members read what the NOP has said about the inclusion of their products in the National Organic Program, they're confused. NOP has at times stated that dietary supplements are outside of the scope of the NOP and other times NOP has stated the opposite, acknowledging that dietary supplements are, in fact, within the scope of the NOP. To add to the confusion, all of the decisions that NOP has ever taken on this issue have been withdrawn, so growers and marketers of organic herbal products really don't know what NOP's position is.

On the other hand, when my members read the Organic Foods Production Act, there's no confusion whatsoever. Though FDA defines an agricultural product to be "any agricultural commodity or product, whether raw or processed, that is marketed in the United States for human or livestock consumption." This is very clear. Valerian root tincture is an agricultural commodity. It is processed in organic alcohol.
manufactured from organic grain and so also an organic commodity. The resultant product and other dietary supplements are clearly within the NOP's scope.

And we are not, by the way, asking for any special treatment under the NOP. I read in the December edition of the Organic Business News that a staff member of the NOP has stated "that the NOP has no standards for dietary supplements." This is not accurate. The standards for dietary supplements are exactly the same as the standards for all organic foods. There are other similar subsets. Low-acid canned foods are foods and if you want to sell a certified organic low-acid canned food, we don't need separate standards, you just need to conform to the existing standards. Manufacturers of dietary supplements who conform to these standards must be allowed to participate in the NOP.

The American Herbal Products Association believes that the plain language of OFPA can only be read to include these products within the scope of the NOP. We hereby request this Board to revise its draft scope document to reflect the fact that dietary supplements are included in the NOP's scope and to do whatever else you can in the way of advising NOP to correct their erroneous interpretation of the OFPA as it relates to dietary supplements. There is no principal
argument to exclude these goods from the NOP's scope.

Thank you very much.

CHAIRPERSON RIDDLE: Thank you for your comments. We'll certainly take them very seriously. I think we're waiting on the official written response. Our previous posting before then, we would, you know -- and we've spoken before. I acknowledged that in our drafting last time, we lumped the herbal products in with the personal care products and didn't distinguish them as foods.

MR. MCGUFFIN: And the arguments would clearly be different for personal care products. And I'm here really just to argue about tinctures and tablets and capsules from certified organic folks. Thanks very much.

CHAIRPERSON RIDDLE: Thanks. Pete Gonzalez and then Jim Pierce.

***

MR. GONZALEZ: Thank you. I'm Pete Gonzales. My current occupation is to serve the public benefit as the executive director of a nonprofit organization, Oregon Tilth. It's about 750 general individual members who would like to thank the Board for their service and welcome the new members. And also wish the best to Katherine and her recovery. And also my final comment
is that Oregon Tilth will be providing written comments
on numerous issues that have been discussed, but the 10
or 12 days notice is simply insufficient.

CHAIRPERSON RIDDLE: Okay, thanks, Pete. And
the clean-up batter here, Jim Pierce.

***

MR. PIERCE: But not the least. Thank you for
that. Put that in the record. I'm Jim Pierce. I'm the
Certification Czar at Organic Valley. And I wish I
could speak without any notes at all. I see people do
that, but I'm always afraid I'm going to miss something,
so I like to speak with notes.

This will always be known as the NOSB meeting
that the farmers showed up to. You know, every one of
them has their unique flavor. I think the farmers left
-- that I spoke with, left here satisfied and with a
much better understanding of the process and the
difficulty of coming to a conclusion on these issues. I
think they were happy with the rule change that you put
in it on pasture, and that they were finally comfortable
with the guidance document going forward as guidance,
and not as official guidance, because I think, if
someone was to call the NOP and ask what is your
position on these new rule changes as they're moving
forward, they would say look at the guidance and public
comment. That's basically our concurrence at this point. We're going along with the NOSB. So I think you're on the right track.

I also think -- I hope that we sent a very clear message to the poultry industry yesterday that if you get in the target, look out. You know, farmers are adamant and passionate and they'll come out in force. I really thought things were going extremely well yesterday up until Barbara came in and sort of sobered the whole moment. But we won't shoot the messenger. It was definitely a wet blanket on an otherwise very productive afternoon, though. And as meeting leader, Mr. Chairman, you get an A plus. I think you've done an excellent job of working through this extremely long agenda. At one point we thought we were either going to be here until midnight or Saturday and it was just a matter of figuring which.

On methionine, we are very pleased with the unanimous vote to allow methionine to continue for use for another three years. And I'm just very pleased to go back to our task force and sign on to that petition and say that they are not only behind us in their decision, but they are also very clear that this is now a continuing allowance and we have some work to do. Along those lines, I will -- I've already begun
discussing with the OTA about setting up a separate task force to deal with methionine. I think there'll be a few adjustments on who's going to be on that task force and we will be getting regular updates.

We really, as an audience, would've appreciated a little more contention and less agreement. The unanimous votes -- but then, of course, you didn't get your calendar, your next meeting discussion is -- one of the things about rotating boards is that I can use the same clichés after three or four years and they sound fresh. One of them that I'd like to say is that I am a staunch standards conservative, that I'm a lot more of a materials liberal. And I think being a liberal on anything right now is kind of a kiss of death, but I was very pleased, as a materials liberal -- I don't mean I want to see anything and everything added to the list, of course not. But I'd really like to see any suitable tool for organic processors or farmers to be added to the list with as wide of an interpretation of use as possible. I really don't like narrow annotations. I'm really glad to see the ferric phosphate thing turn around. At the beginning of this meeting, I thought that was right on the wrong track, so it's come back -- so congratulations on that.

Being the last one up, you tend to have

York Stenographic Services, Inc.
34 North George St., York, PA 17401 - (717) 854-0077
already seen things said before and I was -- I'd like to
think that I have the same good idea that Kim did, and
that is as you struggle with synthetic versus
nonsynthetic, look at the definition of processing.
There is a definition of processing in the reg and it's
my favorite one. It reads like poetry. But it also
includes a lot of words that indicate chemical change,
which is what this pivots on, baking, curing, grinding,
extracting. Extracting is the first section in that
document on chemical methods and the Chemistry 101, so I
think there's a lot of room to call something processed
without calling it synthetic and hopefully -- continue
working with the certifiers on things where they have
clear answers as retail certification question, I think
it would become a lot more clear to the certifiers.

Despite all the work you've done I see you've
got a very full agenda coming up. The work plans are
very full. I'm going to offer a couple things that I
heard yesterday. One is clarification on the livestock
about temporary confinement. You've elaborated that a
lot as it applies to pasture, but I think I heard a
request to go back now and clarify that as it applies to
the rest of the livestock. I have we're going to be
talking to you about the $5,000 exemption as it applies
not to retail, but to crops and livestock. And then, my
final thought, I really wanted to end by biting the head off a moisturizer bar, but that's been done, too.

CHAIRPERSON RIDDLE: You can have the turkey.

MR. PIERCE: So I will end with this, it's my standard benediction, which is thank you, God bless you, Godspeed until we meet again.

CHAIRPERSON RIDDLE: Thanks, Jim. Okay, and I -- yeah, Dave.

MR. CARTER: This isn't for Jim, but one of the previous speakers brought this -- this would be appropriate, Mr. Chair. I would like to make a motion to direct the chair of this Board to send an expression of our best wishes for a speedy recovery to Katharine Benham on behalf of the Board.

CHAIRPERSON RIDDLE: Yeah, and I don't know that we need a second and a vote on that. I'll actually go you one better. I've got money to put on the table here and in my closing remarks, I wanted to suggest that any Board members who felt so inclined -- you're certainly not pressured to -- but I kick in a little money to send some flowers, suggesting $5, but don't feel obligated, at all. But certainly, we send her our best --

MS. KOENING: I grow flowers. I know the price of flowers -- $10.
CHAIRPERSON RIDDLE: $10, is that suggested?

That's $150 if all members put in.

[Simultaneous comments]

CHAIRPERSON RIDDLE: Okay, well let's not get bogged down. We'll figure that out. A few closing remarks and one is just in response to Jim Pierce and you said that, you know, we have adopted a rule change. I just want it to be clear in the record and for everyone, especially the farmers that were here, the Board has recommended a couple of rule changes, but you know, they aren't enforceable until they've gone through the whole notice and comment rulemaking process, so I just want to be clear about that.

And I want to once again thank the commenters today and on Tuesday for both the informative content, which really helps us make informed decisions on your behalf of recommendations, but also the respectful manner that the comments have been offered. And I want to, you know, take this opportunity to thank the NOP staff, everyone at USDA who's working on the organic program. You are understaffed, under-funded. I know that, I can say that, and I think people should work to increase the funding for this program so that we are getting somewhere close to our fair share. But you're doing a valiant job with limited resources and we do
appreciate your efforts.

Once again, I'd like to thank outgoing Board members and to thank the current Board members and especially the new Board members for your input. It's been -- you've jumped into, you know, the middle of a fray, but it's that way every time. There's lots of issues on our plate, but you've certainly done your homework, come up to speed and offered some really valuable input as the meeting's gone along, so I welcome you and look forward to working with you and all the rest of the Board. And our work's not done and we do have the follow-through that I've already mentioned just coming out of this meeting, but we heard very ambitious work plans.

One thing I haven't mentioned is we do have monthly Executive Committee calls and any Board member is welcome to sit in on those calls, so that can be an effective way of self-mentoring by listening in to those calls, so you're welcome and we'll make sure that the notices of those calls go out to all the Board members with instructions on how you can listen in, essentially, and join those calls.

I think, in the big picture, though, we do have some, you know, large challenges ahead of us, certainly, and we're all aware of those. And I would
just repeat what I've said before, that we all see this
as an opportunity to work together in a deliberative
manner and to be inclusive and transparent in how we
move forward and that as we have new rule changes or
legislative changes, that we do our homework, get
together and reach consensus before anybody rushes off
for premature actions that could backfire and could harm
the very farmers that we've worked so hard to protect
and to protect the organic integrity in the process. So
one last thing, I would just like, while the Board
members are all here, before we run away to get a group
photo of the current Board for the record, so I close
with that. Are there any further motions? Andrea moves
to adjourn, Dave seconds, non-debatable, all in favor
say aye.

BOARD MEMBERS: Aye.

CHAIRPERSON RIDDLE: We're closed. Thank you
very much.

***

[End of proceedings]

CERTIFICATE OF REPORTER, TRANSCRIBER AND PROOFREADER

IN RE: National Organic Standards Board

HELD AT: Washington, D.C.

DATE: March 3, 2005

We, the undersigned, do hereby certify that the foregoing pages, numbered 1 through 135, inclusive, are the true, accurate and complete transcript prepared from the reporting by the reporter in attendance at the above identified meeting, in accordance with applicable provisions of the current USDA contract, and have verified the accuracy of the transcript by (1) comparing the typewritten transcript against the reporting or recording accomplished at the meetings, and (2) comparing the final proofed typewritten transcript against the reporting or recording accomplished at the meeting.

The National Organic Standards Board (NOSB) meeting of August 15-17, 2005, was attended by 13 members:

NOSB Members Present:

James Riddle, Chair
Kevin O'Rell, Vice Chair
Goldie Caughlan, Secretary
Andrea Caroe
David Carter
Gerald Davis
Michael Lacy
Bea James
Hubert Karreman
Rosalie Koenig
Nancy Ostiguy
George Siemon
Julie Weisman
Absent: Rigoberto Delgado

National Organic Program (NOP) Staff:

Barbara C. Robinson, Agricultural Marketing Service Deputy Administrator; Demaris Wilson, Arthur Neal, Katherine Benham, Mark Bradley, Alena DeLoatch, Keith Jones, Toni Strother, Robert Pooler, and Francine Torres.

OPEN SESSION – Jim Riddle, Chair - August 15, 2005, 10:30 a.m. - 5:30 p.m. (Pg. 5)

Mr. Riddle thanked and welcomed everyone for coming to the meeting. He also made the following announcements: Mr. Delgado will not attend the meeting because of other commitments; and Dave Carter will arrive late. He said that the Board would also have a discussion with NOP regarding a new date for the upcoming fall meeting, NOP’s announcement for a new Program Manager and the Executive Director position, and the Board’s response to the ANSI Report.

Mr. Riddle also commented and expressed his appreciation on the surprise visit of the new AMS Administrator, Mr. Lloyd Day.

Approval of the Meeting Agenda:

The Board unanimously reviewed and approved the meeting agenda. See Discussion Document http://www.ams.usda.gov/nosb/meetings/0805agenda.html

Secretary’s Report: – Goldie Caughlan, (Pg. 12)

Approval of February/March Meeting Minutes Summary:

Executive Committee Conference Call Minutes

NOP Report: Barbara C. Robinson, Deputy Administrator, Arthur Neal, and Keith Jones, (Pg. 17)

The NOP provided an update on the:

- Job announcement for the Executive Director position;
- The status of recommended substances and materials dockets in the process of being published in the Federal Register;
- NOP’s plans with respect to complying with the court order on the Harvey vs. Johanns lawsuit; and
- NOP’s response to NOSB recommendations that were made at the Feb-March 2005 NOSB meeting.

PUBLIC COMMENT SESSION: August 15, 2005, 1:00 p.m. – 4:00 p.m.

The following individuals presented public comments. Each person’s comment was recorded and transcribed; and some individuals presented written comments. Transcribed comments, and where applicable written comments can be found at the DESIGNATED ATTACHMENTS.

PUBLIC COMMENT REGISTRATION SHEET (ATTACHMENT A)
SIGN-IN SHEET (ATTACHMENT B)

Kelly Shea, Director, Government and Industry Relations, WhiteWave Foods, (Pg. 45, Attach. 1)
Lynn Betz, Co-Founder/President, Sensibility Soaps, Inc. (Pg. 48, Attach. 2)

Mark Kastel, proxy for Maury Johnson, Blue River Organic Seed, (Pg. 60, Attach. 3 & 3A)
Tony Azevedo, Organic Farmer, (Pg. 74)
Monica Gonzales, GMA, (Pg. 83)
JoAnn Baumgartner, Wild Farm Alliance, (Pg. 86)
Stephen Clark, Florida Crystals Corp., (Pg.89)
Leslie Zuck, Executive Director, Pennsylvania Certified Organic, proxy for Jessica and Erin James (Pg. 99)
Kim Dietz, HR and Regulatory Compliance Manager, Smucker Quality Beverage, (Pg. 106 Attach. 4)
Grace Marroquin, Marroquin International Organics, (Pg. 136, Attach. 5)
John Tedeschi, Bath and Body Works, (Pg. 157, Attach. 6)
Jackie Greenbug, Organic Dairy Farmer, proxy for Lyle Edwards, Jr., and Barbara Buckmayer, (Pg. 160)
Juan Velez, Director of Farm Operations, Animal Welfare/Health Reform, (Pg. 162)
Clark Driftmeier, Aurora Organic Dairy, (Pg. 166, Attach. 7)
Steve Pechacek, President, Midwest Organic Dairy Producers Association (MODPA), (Pg. 176)
Jim Greenburg, NODPA, (Pg. 180)
Tom Hutcheson, Associate Policy Director, OTA, (Pg. 182, Attach. 8)
Steve Morrison, Organic Dairy Farmer, representing Northeast Organic Dairy Producers Alliance, (Pg. 195)
Steve Bowen, proxy for Ernest Martin and Ed Zimba, (Pg. 202)
Brian Baker, Research Director, OMRI, (Pg. 205)
Dick Siegel, Attorney, (Pg. 212, Attach. 9)
Debra Claire, President and Owner, Perfect Organics, Inc., (Pg. 216)
Joe Dickson, Organic Programs Coordinator, Whole Foods Market, (Pg. 222, Attach. 10)
Richard Theur, Consultant, (Pg. 230)
Kevin Engelberg, Engelberg Farms, (Pg. 233)
Henry Perkins, Organic Dairy Farmer, (Pg. 234)
Lisa Engelberg, Co-Administrator, NOFA-NY, (Pg. 243, Attach. 11)
Sally Brown, Organic Dairy Farmer, (Pg. 246)
Jim Riddle, proxy for Lynn Coody, (Pg. 248)
John H. Cox, proxy for American Spice Trade Association (ASTA), Flavor and Extract Manufacturers Association (FEMA), and International Association of Color Manufacturers (IACM), (Pg. 250, Attach. 12)
Gwendolyn Wyard, Processing Program Reviewer, Oregon Tilth, (Pg. 261)
Rick Segalla, Organic Dairy Farmer, (Pg.267)
Nancy Cook, VP, Pet Food Institute, (Pg. 276)
Urvashi Rangan, Environmental Health Scientist, Consumer Union, (Pg. 287)
OPEN SESSION: August 16, 2005, at 8:00 a.m.

Call to the Meeting to Order – Jim Riddle, Chair

PRESENTATION AND DISCUSSION OF FUTURE AGENDA ITEMS

Policy Development Committee – Dave Carter, Committee Chair, (Pg. 3)

Mr. Carter talked about how the Policy Committee met most of July to review and discuss their future agenda items, and he asked Mr. Riddle to provide a report on the draft guidance document for temporary variances for research.

Guidance on Temporary Variances for Research 205.209(a) (3): Mr. Riddle stated that he prepared a draft for the committee to work from based upon some input that he received. He said that after researching information and interviewing six agricultural researchers, he was able to develop a working draft document for the committee to review and discuss at the meeting. He stated that based on the regulations, it does allow for temporary variances for research purposes. However, there are no fence posts set in place or guidelines as to how those determinations were made, such as what constitutes a credible research project and a variance to certain sections of the rule. He said that the report was circulated to the research community, and received input from 20 researchers before constructing a second draft. The document was posted for public comment prior to the meeting.

The committee received a substantive amount of comments from the Organic Farming Research Foundation and USDA’s CSREES, and the comments will be taken into consideration for the next round. He would also like to
see incorporated into the draft the whole notion of split operations because many of the research projects really function as split operations; such as part conventional, part transitional, and part organic. Additionally, he will address in the future draft some of the comments regarding the split operation concept, and submit to the committee for review before posting for another round of public comment, and for action at the next meeting.

Criteria and Procedures for Determining Commercial Availability 205.606: Mr. Carter reported on the Policy Development and the Handling committees’ joint project to determine commercial availability under 205.606. He stated that the first plan was to meet Monday morning before the meeting; however, because of travel plans and other issues, the committee was unable to meet. Mr. Carter stated for the record that the project is still a work in progress.

He stated that one discussion item that was not on the agenda, the development of a new member orientation or a survival guide called “NOSB 101.”

Chemistry 101- Survival Guide for New Members: Ms. James stated that in response to the rotation proposal that was not approved, she, and Mr. Delgado developed a survival guide to assist all incoming new members who are selected to serve on the Board. Additionally, Mr. Riddle submitted some proposals for scheduling a rotation in order to alleviate so many members going off at the same time. However, according to the Organic Foods production Act as written, each member are subject to serve for five years, and the scheduled rotation changes that was submitted would have conflicted with OFPA. The survival guide will help new members to understand how to prepare for a meeting, understand each committee, and how to work with NOP.

Livestock Committee – George Siemon, Committee Chair

Apiculture Task Force Report – No Action Taken, (Pg. 8): Ms. Ostiguy on behalf of the Livestock Committee was not available to provide an update to the Board on the Apiculture Task Force Report. Mr. Riddle summarized the adoption of the report for beekeeping, which contained draft standards. He stated that there would need to be a discussion with the Program regarding the status of the recommendation, whether it will move forward as a rule change or a guidance document, and if further actions are needed from the Board before that could happen.

Mr. Neal stated that with respect to the Task Force Report, Ms. Ostiguy, who is a bee/honey specialist, had some concerns, and requested further review of the report prior to submitting feedback to the Program. Mr. Riddle commented that in the interim and in the absence of guidance or a rule change, operations are being certified organic – beekeeping operations, and additionally, there are products on the market carrying the USDA seal.

Materials Committee – Rose Koenig, Committee Chair (Pg. 11): On behalf of the Materials Committee, Ms. Koenig stated for the record that the published Federal Register Notice was scheduled to close and the public will only have a couple of days for comments. She said that the Board received some public comments that are posted, and will sift through the comments and forward to the appropriate committees for review and action. Mr. Siemon wanted to make Ms. Koenig aware that the Livestock committee did not request a TAP review for ivermectin because they have enough information. The Livestock Committee only needed to revisit it. Mr. Neal stated that he had begun to initiate the process of doing a full-blow TAP on the materials, and if there are specific questions, the committees should let him know before they start the actual evaluation.

Ms. Koenig requested a discussion from the Board and the Program regarding a posted document that specifically dealt with the OFPA categories, and would like to make sure that the list conforms to what is spell out in OFPA. She would like NOP to address some of the legal questions surrounding those categories to ensure that no materials are inappropriately included on the list.

Mr. Riddle stated for the record that once the public comments have been received on sunset for this round, the top priority for the Materials Committee and each of the relevant committees would be to first identify any of the more substances that needs a review – whether it’s a full review or just narrowly focusing on review of specific questions. The NOSB committeees would try to have recommendations for sunset by the next NOSB meeting. For more discussion, see the meeting transcripts.
Handling Committee – Kevin O’Reill, Committee Chair

Pet Food Task Force Update, (Pg. 34): Mr. O’Reill reported that the Board received the Pet Food Task Force update from Nancy Cook on yesterday, and stated that on a conference call, the Task Force discussed a timeline to present final recommendations to the Board at the Spring 2006 NOSB meeting.

Certification, Accreditation, and Compliance Committee – Andrea Caroe, Committee Chair

Peer Review Panel Report – No Action Taken, (Pg. 34): Ms. Caroe presented, as a future discussion item, the procedures for peer review panel. She stated that the committee would be submitting its recommendation on the ANSI report response from the Board. She also reported that the committee would like to submit its recommendations and vote on the Q&As for retailer and private label.

Crops Committee – Nancy Ostiguy, Committee Chair, (Pg. 36): Ms. Ostiguy stated that the committee would submit for discussion a draft document on hydroponics, and additionally would like to receive clarification on the Q&As for compost. The committee will also discuss moving forward on the apiculture task force report recommendation as a rule change or as guidance to the existing rule. Mr. Neal commented that NOP drafted the guidance under the current good guidance document practices for apiculture. However, it’s not published, because it’s still under review, and will look for further input from the NOSB.

Aquatic Species Task Force Report – Keith Jones, NOP, (Pg. 38): Mr. Riddle provided a brief summary on the published Federal Register Notice soliciting members for the Aquatic Species Task Force. He stated that the task force has two working groups, one for aquaculture, and one for wild aquatic species. The Aquaculture Working Group has many expertise members who participated in the National Organic Aquaculture Group (NOAG), and who also issued a white paper. Mr. Riddle stated that he already participated on three conference calls, and the task force is making good progress. He said that the white paper was use as a basis for drafting a report to make recommendations to the Board.

Mr. Jones reported that there were a number of comments that came in on the white paper and concluded that some good standards could come out of the white paper. He also stated that the wild fishery side continues to be problematic, in that the NOP will need to go back out and request nominees for the panel, and be more specific regarding requirements and qualifications. He also stated that the complexity and nature of the issues being discussed by the working group could result in the scheduling of some face-to-face meetings with working group members.

PRESENTATION AND CONSIDERATION OF COMMITTEE ACTION ITEMS

Policy Development Committee – Dave Carter

Board Policy Manual Revisions – Action Item, (Pg. 44): Ms. James presented, for a vote, the recommended revisions and additions to the Board Policy Manual. Proposed revisions and additions included: (1) TAP review information inserted on page 31 (Chemistry 101); (2) the sunset review material process inserted on page 45; (3) a NOP/NOSB collaboration document inserted on page 18; and, (4) Q&As for how NOSB should handle Q&As submitted from the NOP was consolidated in with the collaboration document on page 20. Discussion took place concerning wording included in the NOP/NOSB collaboration document and Chemistry 101 document. Changes were suggested in both. Mr. Carter moved to approve the entire Board Policy Manual as amended, and Ms. Ostiguy seconded. Board Vote: 13 Yes, 0 Nos. Recommendation Passes

Certification, Accreditation, and Compliance Committee – Andrea Caroe

Peer Review Panel Draft Recommendation – No Action Taken, (Pg. 89): On behalf of the committee, Ms. Caroe presented to the Board a draft recommendation on the Peer Review Panel procedures. She stated that Mr. Lacy initiated the original work, and the recommendation received a significant amount of input from the committee and Mr. Riddle. Mr. Lacy reported on the status of the upcoming review process that will give NOP
and NOSB time to react and make thoughtful changes based on a thorough review process. The committee was pleased with the ANSI review report; however, they would like to have an agency that is familiar with and have the expertise to conduct the actual audits. They would like to consider conducting an audit on a three-year basis to ensure a thorough review that will yield a thoughtful response and an action to that review.

Finally, the committee hoped that the audit process would be an opportunity to have and develop a collaborative discussion between NOP and NOSB. Mr. Lacy stated that there will be no action at this time, however, they did receive public comments prior to the presentation and would like to review before they come up with their final draft recommendation. Ms. Caroe stated that the committee will vote on the recommendation as an action item at the next meeting.

NOSB Response to the NOP Response to the ANSI Report Recommendation – Action Item, (Pg. 93): On behalf of the committee, Ms. Caroe presented, for a vote, a committee recommendation regarding the NOSB response to the NOP response to the ANSI Report. Ms. Caroe made a motion to adopt the recommendation, and Ms. Ostiguy seconded. Mr. Riddle provided a brief summary regarding the audit of the accreditation program that was conducted by the American National Standards Institute (ANSI). He said that NOP did a line-by-line response to the corrective actions on the deficiencies identified in the report. The Board received a request to evaluate the response and provide feedback. He provided a background summary on each of the eight recommendations listed on pages 2 and 3 of the report. After his report, Mr. Riddle commended NOP for contracting with ANSI to conduct the review and provided thoughtful responses to the findings of the report. It was determined that NOP will create drafts by September 30 to received feedback and comments from the Board. Board Vote: 13 Yes, 0 Nos. Recommendation Passes.

Listing of Certifying Agent’s Name on Packaged Product Recommendation – Action Item, (Pg. 111): On behalf of the ACA committee, Ms. Caroe presented recommendations on the Q&As submitted for retail and private labeling. Ms. Caroe stated that she had received some concerns from an ACA regarding the issue and had dialogue with a private retail labeler. However, they did not provide written comments or language suggestions to incorporate into the committee’s recommendation. “The CAC committee recommended that the term “otherwise manufacturing” be understood to include: creation of labels, formulation of products, and procuring ingredients for products. Mr. O’Reill moved to adopt the recommendation and Ms. Caughlan seconded. However, Ms. Caroe offered a friendly amendment to strike the words, “creation of labels” on pages 2 and 3. Mr. O’Reill seconded. The Board vote was 5 Yes, 7 Nos, and 1 Abstention – the vote failed on the amendment. Final Board Vote on recommendation: 8 Yes, 3 Nos, 2 Abstained. Recommendation Passes. See Discussion Document.
Livestock Committee – George Siemon

Consideration of Petitioned Substances: Sucrose Octonate Esters – Action Item, (Pg. 145): Ms. Ostiguy presented the committee’s recommendation to approve sucrose octanoate esters for listing on the National List with an annotation of only for use as a miticide in apiculture. Mr. Karreman seconded. Ms. Ostiguy offered a friendly amendment to delete the annotation, “only for use as a miticide in apiculture.” Mr. Karreman seconded. She offered the amendment because, according to EPA, the only approved uses for this material, at this time, are on mites. The NOSB voted to approve the amended recommendation to add to the National List for livestock use with no annotation. **Board Final Vote: 13 Yes, 0 Nos, 1 Absent**

Materials Committee – Rose Koenig

National List Categories Recommendation – Action Item, (Pg. 160): On behalf of the Materials Committee, Ms. Koenig presented the Committee’s proposal to revise the Organizational structure of the National List to resemble the Organic Food Production Act (OFPA) exemption categories. The committee reviewed both the livestock and crops list to ensure that things were in line with the OFPA categories. Ms. Koenig asked Mr. Neal to consult with legal counsel regarding the proposal that is on the table because one of the ways of getting the materials that we have approved to get within the OFPA categories is to be able to broaden the production aids category, as it exists in the OFPA. Ms. Koenig made a motion to adopt the recommendation and Mr. Siemon seconded. Mr. Neal stated that NOP would commit to taking the document to OGC for legal review and clarification. After a lengthy discussion, Ms. Koenig made a motion to adopt the recommendation and Mr. Siemon seconded. NOP agreed to go back to the Office of General Counsel for further legal research, and look at OFPA and its categories. The Committee voted to submit the document to the NOP as a recommendation pending reconstruction of the National List. **Board Final Vote: 13 Yes, 1 Absent, 0 Nos, 0 Abstentions**

Crops Committee – Nancy Ostiguy

Sucrose Octanoate Ester, (Pg. 184): Ms. Ostiguy presented the committee’s recommendation to approve sucrose octanoate ester for use in crops with no annotation. Ms. Caroe seconded. Ms. Ostiguy commented that the material acts as soap, has no toxic breakdown products, and is effective on soft-bodied insects. She also stated that it is currently registered by the EPA for mites and is non-toxic to bees (important if substance is sprayed on crops). The Board Final Vote: 13 Yes, 1 Absent, 0 Nos, 0 Abstentions. Approved

Chitosan (Poly-D-Glucosamine), (Pg. 195): Ms. Ostiguy presented the committee’s recommendation to add poly-D-glucosamine to the National List for crop use with an annotation to read “as an adjuvant only.” Ms. Koenig seconded. Ms. Ostiguy recommended the annotation because the committee did not want chitosan to be used as a plant growth regulator (which it could be if used in high quantities). As an adjuvant, chitosan will only be used in limited quantities (only as necessary) and would prevent its use as a plant growth regulator. Ms. Ostiguy made a motion to add chitosan to the national list and Ms. Caughlan seconded. **Final Board Vote: 13 Yes, 0 Nos, and 1 Absent**

Livestock Committee – George Siemon

Guidance on Pasture Requirements for the NOP Recommendation – Action Item, (Pg. 228): On behalf of the Livestock Committee, Mr. Siemon presented the guidance document on pasture requirements for the NOP to the Board, and asked Mr. Karreman to summarize the report. Mr. Karreman stated that the committee submitted two rule changes in March, and based upon public comment and input, the Livestock Committee proposed a rule change at 205.239(a) (2), not to be voted on today. At 205.239(a) (2), reflects public input, and that raising is a prominent and one of the most distinctive visible features of organic dairy farming. They proposed that it should say ruminants over six months of age shall graze growing pasture no less than 120 days per year, and the committee will work on that with the NOP. The committee would also consider the additional text that was sent back regarding the stage of life consideration.
Ms. Caroe made a motion to strike where applicable, the word “shall” under Section A, of the Organic System Plan and replace with the word “should.” Ms. Caroe motion to insert the word “a” and strike the word, “livestock are” to read as, “Temporary confinement means the period of time when a ruminant is denied pasture.” The committee motioned to strike the word “only” and to read as, “Temporary confinement is allowed in the following situations.”

Mr. Siemon stated the committee agreed with the following input that says, “both significant portion and not less than 30%,” and added, “per year after 120 days.” He wanted to make sure people didn’t take it out of context of the growing season which is one year growing season. The committee also revised the word, “maximize” to “optimize.”

Mr. Siemon moved to amend the guidance document as recommended by the Committee, and Mr. Karreman seconded. Final Board Vote: 13 Yes, 0 Nos, 1 Absent – Unanimously Approved. See Discussion Document

Clarification of the Definition of Synthetic as it is Applied to Substances Petitioned for Addition or Prohibition to the National List(s) – Action Item, (Pg. 243-): On behalf of the Materials and Handling Committees, Ms. Koenig presented for clarification a guidance draft document for recommendation to define synthetic as it pertains to determination for substances petitioned for addition or prohibition to the National List(s). She stated that the draft also includes two friendly amendments, and made a motion to approve the recommendation as amended, and Mr. O’Rell seconded. The Materials Committee recommended the following changes to amend wherever it says, “of food,” to insert the word, “or an agricultural product by a handling operation” to read as, “processing of food or an agricultural product by a handling operation.”

In Item 5, to insert the word “or handling,” to read as, “must be separately listed in the National List for use in organic production or handling.”

After a lengthy review and discussion of the draft recommendation, the full Board voted to accept the amended changes, and to submit the document to NOP for posting. Final Board Vote: 12 Yes, 1 No, 1 Absent, 0 Abstention

Handling Committee – Kevin O’Rell

Recommendation Relative to “Agricultural” and Non-Agricultural Substances - Action Item, (Pg. 373): On behalf of the committee, Mr. O’Rell presented as an action item a recommendation seeking clarification and consistency regarding the review of agricultural and non-agricultural definitions for substance. He stated that in regards to the determination and classification of substances as agricultural and non-agricultural, it was felt that the definition listed in the NOP final rule was vague, and included conflicts. There is no rule or guidance for the definition of what is and what makes a product agricultural or what is agriculture? He talked about the definition of an agricultural product listed in OFPA, but said that OFPA did not provide a definition for non-agricultural product; however, it defines non-agricultural substances. The definition of non-agricultural products was conflicting because there are many processed agricultural products, which have been extracted, isolated, or fractioned during processing to a point where they are no longer, resemble the starting agricultural material.

The committee met to discuss the removal of the non-agricultural definition, and decided to recommend a change for the definition of non-agricultural substances. The proposed definition would stated that a substance that is not a product of agriculture such as mineral or bacterial culture, period, striking the remaining portion of that definition, making it more simple and adding clarification. The committee recommended to adopt the guidance document for defining agriculture as it applies to agricultural products, and the second recommendation was for a rule change to the current definition of non-agricultural substance, which is a short version of the existing non-agricultural substance definition. The committee also recommended adopting the decision tree as guidance in determining a substance’s agricultural or non-agricultural status. The committee received public comments about a process in defining organic yeast – to take yeast and then using organic inputs, come out with a product that is more along the handling guidelines. The commenters did not addressed the committee’s concerns and issues in terms of how to classify yeast, whether it is agricultural, how does it fit in with the current standards guidelines, and how to
develop an organic system plan for yeast. Ms. Koenig provided a background and brief explanation regarding the guidance document.

Mr. O’Reill presented to the full Board three recommendations as separate votes, and move to adopt the attached guidance document for defining agriculture as it applies to agricultural products. Mr. Siemon seconded. After further discussion, Ms. Ostiguy made a motion to defer the entire recommendation, and Mr. Carter seconded. Final Board Vote: 12 Yes, 1 No, 1 Absent. DEFERRED

Crops Committee – Nancy Ostiguy, (Pg. 419)

Soy Protein Isolate and Ammonium Bicarbonate: Ms. Ostiguy reported that the committee is waiting for a decision on synthetics; therefore, the two materials are DEFERRED.

Compost and Compost Tea: Ms. Ostiguy reported that the committee would like to take the information back to incorporate comments and to increase the amount of agreement that relates to the topic. The Board voted to DEFERRED.

Guidance on the Commercial Availability of Organic Seed Requirements, (Pg. 421): Ms. Koenig provided a brief summary on behalf of the committee, regarding receiving comments and incorporating the amended changes into the document and Section D regarding a written description of research comparing organic and non-organic seeds or planting stock if such information is available. Research provided should be conducted using scientific methods. When conducting research, it has to be done in a way that reflects real research using scientific methods, and will provide proper controls in replications. Research supporting the justification of using non-organic seeds should address the form, quality, and genetic attributes of specific varieties. When a producer makes a claim that, the varieties of organic seed are not equivalent to a non-organic seed that producer prefers to use, supporting documentation must be provided to the certifying agent. Documentation of on-farm trials should be recorded in the operations organic farms systems plan. The comments that came in regarding sections (c) and (e) were deleted from the original document. She also stated that the committee would consider some of the additional comments that came in after the initial draft.

Ms. Ostiguy stated that the committee discussed and voted on reinserting what was (c) previously in the old version. The new insertion (d) is maintain and annually submit to the NOP as an updated list of specific non-organic crop varieties permitted by each agency. Each certifier should collect information in an organized fashion to assist producers who searched for an organic seed source, and if they did not find a source, they will have the opportunity to cross-reference that information. Ms. Ostiguy made a motion to adopt the amended recommendation from the committee. Ms. Koenig seconded. Board Final Vote to Adopt – 13 Yes, 0 No, 1 Absent

Maintaining or Improving Natural Resources – Organic System Plan Template, (Pg. 449): Ms. Ostiguy presented to the Board as an action item to amend its draft recommendation to delineate the natural resource component of the organic system plan on biodiversity management. She acknowledged assistance from Wild Farm Alliance and the National Center for Appropriate Technology. She stated that the committee received many comments and made a decision to go for the check boxes because the farmers understood more clearly, what the goals were. The form also provided additional items that they might consider doing, which means that it has both the educational aspect of what else one can do to increase farm biodiversity, and increases the chances for a farmer to get credit for what they are doing. Ms. Ostiguy made a motion to accept the additions to Part D of the Organic System Plan on Natural Resources on Biodiversity Management. Mr. Siemon seconded. Board Final Vote to Adopt – 13 Yes, 0 No, 1 Absent

REPORT ON FUTURE COMMITTEE WORK PLAN ITEMS – (See Committee Work Plans)

Handling Committee - Kevin O’Reell, Committee Chair - (Pg. 117): On behalf of the Handling Committee, Mr. O’Reell reported on future work plan items. He stated that the committee high priority issue is ag vs. non-ag that was deferred; and would submit a request to expedite a full TAP review for yeast to receive more information on the manufacturing process for both conventional and organic, and propose new recommendations. The
committee would review the public comments and move forward on materials that was marked priority, and look at other materials to see if they should be move up on the priority list as well. The committee will continue to observe and participate in the Pet Food Task Force as it moves towards making a recommendation. Finally, the committee will review any petitioned substances to be place on 606 as required, and work on the determination of commercial availability criteria in cooperation with the Policy Development Committee.

**Policy Development Committee – Dave Carter, Committee Chair** – (Pg. 119): Mr. Carter presented six items on the Policy Development Committee's work plans. Mr. Carter talked about the committee's collaboration with the Handling committee regarding 205.606. The committee will obtain public comments and develop final recommendation on research for temporary variances, and continue revising/updating the policy manual. The committee will complete revision of the 101 document for new member orientation, review of potential separation of mineral source supplements from ag source supplements, and also complete the analysis of the issues relating to the remediation of the court order based upon the document that NOP provided. Finally, the committee will plan the graduation party for the class of 2006. Additionally, Mr. Carter requested all Board members to submit their ideas on all or any of the court rulings and on how to change the rule to come into compliance. He will work with Bea James to construct a letter to the Secretary from the Chair on behalf the Board and circulate for concurrence and signature from each member. Members should submit their ideas and information to Bea James within two weeks for circulation to the Board and set a deadline for response.

**Crops Committee – Nancy Ostiguy, Chair** – (Pg. 128): Ms. Ostiguy reported on the Crops Committee future work plan to revise the compost and compost tea recommendation, and write Q&As, and review materials for sunset - streptomycin and tetracycline for the upcoming meeting. She stated that the committee would also present its recommendation for contaminants in fertilizer, and review and assess public comments for commercial availability of organic seeds. The committee will present recommendations for soy protein isolate and ammonia bicarbonate, and the draft guidance document for hydroponics.

**Compliance, Accreditation, and Certification Committee – Andrea Caroe** – (Pg. 131): Ms. Caroe stated that for the CAC committee future work plan item will be to submit the retailer Q&As for a Board vote; and submit a response to the NOP response to the ANSI Report document; work on the Peer Review Panel recommendation. She also stated that as those ANSI response items are generated, the committee should keep the plate clear for a quick response.

**Livestock Committee – Michael Lacy** – (Pg. 134): Mr. Lacy stated that for the Livestock committee's future work-plan items would be to continue working on the pasture requirement, and to develop clear rationale for the proposed rule change and guidance. The committee will continue working with Nancy on developing standards for organic honey; work on the ivermectin and moxidectin issues and other materials for sunset, and continue working with NOP on the impact of the court ruling for livestock. They will continue monitoring the avian influenza situation, and work on a statement of how organic poultry production should respond to animal and human health threat. Finally, aquaculture – Aquatic Species Task Force is still an issue, however, they will continue monitoring, and assisting the working groups to make sure nothing drops through the crack during the transition.

**Material Committee – Rose Koenig, Chair** – (Pg. 137): Ms. Koenig reported that there are some materials that have come up during the meeting that the committee will need to consider if they want to request a TAP, such as requesting a full TAP; or answers to specific questions or information. She talked about the need to have hard copies of all of the comments from Arthur regarding the sunset process. The committee would obtain concurrence on the committee’s procedures for synthetic/non-synthetic and the legal aspects of the reorganization of the national list. Ms. Koenig will send out a form outlining the process, and each committee fill out the materials process using those evaluation forms for each substance. Mr. Neal suggested each committee to submit those substances to Rose as soon as possible, and she will submit to NOP for additional clarification regarding manufacturing process.

Mr. Riddle requested that each committee chair to submit the final recommendations that came out of the meeting to him for review before submitting to NOP. Additionally, to fulfill the mandate under OFPA, he will also write a brief report of the meeting to the Secretary itemizing accomplishments and a summarizing of future work-plan items. Mr. Riddle presented for discussion the role of the Board regarding review of applicants for the Executive
Director position, and stated the job description has gone to Personnel, and will work with Barbara to provide a report at the next Executive Committee meeting.

NEXT MEETING

The week of the November 14th; to include the primary focus being the sunset review and election of officers.

CLOSING REMARKS

The Chair announced for the record that the Board adopted a rule change; however, he wanted to make it clear, especially for the farmers that the Board recommended a couple of rule changes, but they are not enforceable until they’ve gone through the whole notice and comment rulemaking process.

Ms. Caroe moved to adjourned, and Mr. Carter seconded. Approved unanimously.

PROCEEDINGS

(10:34 a.m.)

CHAIRPERSON RIDDLE: I'd like to call the meeting to order. It's 10:30, 10:31.

Just a few announcements before we get started. There are copies of the agenda outside, and there's a sign-up sheet for public comments out there as well.

I'd like to welcome all of you and thank you for coming. There are restrooms down the hall and to the right. I'd ask you if you have a cell phone to please turn it off or to vibrate mode. Also let you know that Rigoberto Delgado will not be here for this meeting. He had another commitment, a conflict, and so can't make it. Dave Carter will be coming in later this afternoon during the public comment period. He needed to get his son off to college yesterday and so had to take a flight this morning.

By the end of this meeting we will be talking further about whether or not there will be a fall meeting this year. So we're still in discussion with NOP about that.
I do want to thank the staff for all of the work that you put out to pull all of these documents together. It's a huge work load to have it. These books with all of the content and everything up on the Website and making the hotel reservations, I just want to acknowledge and thank you for that. It's a very lovely place where some of us especially not quite used to the accommodations, but we could get used to it.

(Laughter.)

CHAIRPERSON RIDDLE: I do want to acknowledge though that I have heard some concerns from especially farmers coming in that this is an expensive place and just like the parking is $33 a night, and we certainly always need to take the cost into consideration, as well.

But this is a very significant meeting. As many of you know, there are a lot of issues on our own agenda, but also in light of the court ruling. You know, we don't have things on our agenda directly, but some of our documents certainly have indirect impact, but that presents, you know, an ongoing
challenge for the Board and the program, and really everyone involved in the organic community, whether you're a farmer, processor, retailer or consumer.

And I have full confidence that we'll rise to meet those challenges and to get beyond, you know, some of the conflicts that we face right now.

It's also a time of change. At the AMS we have a new Administrator, Lloyd Day, who if you weren't here yet stopped by this morning to say hi. So I really appreciate his interest in this program, and we've looked forward to having that position filled for quite a while. So we're delighted to have Lloyd in that position of AMS Administrator.

But there also are some staff changes at NOP. There will be a new program manager. A position was advertised and names submitted, but that remains open, and then the position of NOSB Director, a staff position, also has not been announced yet, but we look forward to that being filled.

Two other things, I think, that are not on our agenda that I'd just like to comment. We have the ANSI report, the American National Standards Institute
report. We will be considering a Board response on that. There's also the USDA Office of the Inspector General conducted a review of the program, and that report has been submitted.

So, you know, it certainly is a time of upgrading and improving the quality systems, but it means more work and more challenges for everyone involved in the program.

I'm looking down at my agenda finally, and I had some remarks and I've concluded that, but next we have introductions. So I would ask the Board members to introduce yourselves, a little bit about yourself or share any remarks that you may have, open mic at this time. So we'll start with Mike and go around.

MR. LACY: Thank you, Jim.

I'm Mike Lacy. I am a poultry scientist at the University of Georgia and represent or am a science representative on the Board. This is my -- Jim always corrects me. I can't remember if it's third or fourth year, but somewhere in that general time frame that I've been on the board.
MR. KARREMAN: My name is Hugh Karreman, veterinarian in Pennsylvania. I work with, oh, 85 certified organic dairy farms at this point in time; got my start in agriculture with the USDA Soil Conservation Service about 20 years ago, and I'm one of the environmentalist seats.

MS. JAMES: My name is Bea James, and I'm the retailer out of Minneapolis, Minnesota, and this is my second meeting, and I'm happy to be here.

MR. SIEMON: George Siemon. I'm a farmer rep., organic eggs, 35 organic hens, and I also work for Organic Valley and have a lot of experiencing in manufacturing as well.

CHAIRPERSON RIDDLE: Is that 35 hens?

MR. SIEMON: Thirty-five hundred.

CHAIRPERSON RIDDLE: Oh, okay. Just for the record.

MR. SIEMON: For the record.

MS. KOENIG: My name is Rose Koenig, and like my fellow CEO farmer here, I'm a producer in Gainsville, Florida and just represent organic farmers on the Board. The last year on the Board.
MR. O’RELL: Kevin O’Rell. I’m from Longmont, Colorado, and I’m a handler representative on the Board, work for a company that produces organic soy milk and organic dairy products, and I think I’m finishing up my fourth year. I think, Mike, you and I go together.

CHAIRPERSON RIDDLE: Yeah, and Jim Riddle, organic producer of watermelons. That's just for our own, but inspector and educator and certifier rep. on the Board from Minnesota.

MS. COUGHLAN: Goldie Caughlan, working with consumer cooperatives in Seattle, Washington, PCP natural markets, and finishing the fifth year here on the Board.

MS. CAROE: I’m Andrea Caroe, and I’m an environmental rep. on the Board. I work for a nonprofit group that promotes sustainable practices in agriculture.

MS. WEISMAN: I’m Julie Weisman from Tenafly, New Jersey. I’m a handler rep. on the Board. This is my second meeting as well. This is my first year on the Board.
MS. OSTIGUY: Nancy Ostiguy. I'm in the Entomology Department at Penn State. This is my fourth year on the Board. I do research on honey bees. So when we finally get to that piece of information, I'll be having things to say.

MR. DAVIS: I'm Jerry Davis. I'm a grower representative on the Board. This is my first year, and I work for a certified organic vegetable farm in California.

CHAIRPERSON RIDDLE: Okay. Thank you. Are there any Board members who have announcements?

(No response.)

CHAIRPERSON RIDDLE: Seeing none, I will move on, and I already essentially gave the report in my remarks. I think the agenda speaks for itself. We certainly have plenty of work to do. So I won't take any more time with any further remarks at this time.

So we'll move on to the Secretary's report. Goldie.

MS. COUGHLAN: Well, the Secretary's report actually consists at this point of moving for
the approval of the February-March minutes, which are summarized in the book.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. Goldie moves and Nancy seconds that the minutes, the meeting summary of the February-March 2005 NOSB meeting be approved. Any discussion?

I'll just say that Catherine had sent these to the Board. I had submitted some revisions and those are incorporated and reflected in this draft. I don't know if any others had submitted any or not, but any other comments?

(No response.)

CHAIRPERSON RIDDLE: Hearing none, seeing none, all in favor of approving the minutes, please say aye.

(Chorus of ayes.)

CHAIRPERSON RIDDLE: Those opposed, nay.

(No response.)

CHAIRPERSON RIDDLE: Okay. Unanimous, the ayes have it.

Next Goldie?
MS. COUGHLAN: Well, for the Board members present, I'm not sure if we want to do it this way at this time, but I guess we will. Just ask for the Board's approval -- approval or review? Probably more review at this point -- of the executive minutes that are currently in the book through July, executive minutes. We don't normally take those up at meetings.

CHAIRPERSON RIDDLE: Right.

MS. COUGHLAN: And these also include the minutes that were taken in my absence by Katherine, and then there had been a long hiatus because of Katherine's unfortunate absence via a fall on the ice. So those are all completed.

How shall we?

CHAIRPERSON RIDDLE: Yeah. Well, during our executive call we talked about this, and the November minutes and then the June and July have now been approved by the Executive Committee, and we discussed having the executive vote at this time for the record, and that way we don't have to come back to it since they're in front of us. So --

MS. COUGHLAN: So I would ask if anybody
would like to move for --

CHAIRPERSON RIDDLE: You can make the motion.

MS. CAROE: For each individual?

CHAIRPERSON RIDDLE: Yeah, individually, just to be clear in the record.

MS. COUGHLAN: Okay.

CHAIRPERSON RIDDLE: So I would entertain a motion to approve the November 2004 minutes if someone would so move.

MS. COUGHLAN: I would move.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Goldie moves, Nancy seconds, and this is an Executive Committee vote. So if you're not on the Executive, you don't need to vote now.

So all Executive Committee members in favor of approving the November '04 minutes say aye.

(Chorus of ayes.)

CHAIRPERSON RIDDLE: And those opposed?

(No response.)

CHAIRPERSON RIDDLE: Okay. Thank you.
And June 2005?

MS. COUGHLAN: So moved.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. Goldie moves; Nancy seconds, approve the June '05 Executive minutes. All Executive members in favor say aye.

(Chorus of ayes.)

CHAIRPERSON RIDDLE: Opposed.

(No response.)

CHAIRPERSON RIDDLE: All right.

MS. COUGHLAN: And July 11th --

CHAIRPERSON RIDDLE: Fourteenth.

MS. COUGHLAN: -- July 14th minutes.

CHAIRPERSON RIDDLE: You move?

MS. COUGHLAN: I move.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. Goldie moves and Nancy seconds to approve the July 14th, '05 Executive minutes. All Executive Committee members in favor say aye.

(Chorus of ayes.)

CHAIRPERSON RIDDLE: Those opposed?
(No response.)

CHAIRPERSON RIDDLE: All right. Thank you.

We're up to date, and, Katherine, are those now all on the Website as well?

MS. BENHAM: Except for July 14th.

CHAIRPERSON RIDDLE: Yeah, except for the July ones. Okay. So the others are on the Website for members of the public to review as well, and then the July ones will show up as final minutes now.

Thanks so much for helping us catch those.

Okay. Well, we're actually a little ahead of schedule. The next item on the agenda is the HOP report, including the response to our recommendations from the February-March meeting.

So, Barbara, are you ready got take over now?

MS. ROBINSON: Yeah. Mostly Keith will follow up behind me. I just have a couple of things. The job announcement for the Executive Director has gone to Personnel. So as I've explained to you before, I kind of lose control of the process once it
goes to the Personnel people. It gets into their
hands and their process. So as soon as they classify
it and, you know, announce it and they'll let me know
that, we'll post it on the Website for 30 days, all
sources, and let you know that.

And we have moved all of the docket
materials that were in our offices. Those have all
moved and are on their way to the Federal Register, if
not already published.

And we are beginning work now to prepare
to comply with the court order on the lawsuit, and
I'll turn it over to Keith to address the March NOSB
recommendations.

MR. JONES: Thank you.

What I'll do is go through the March
recommendations. By our count there were 14
recommendations that we were asked to respond to.
I'll go through those.

The first recommendation was for the
development of a standardized compliance certificate
and Web based issuance system. Our response is that
the NOP concurs and agrees to develop and implement a
standardized certificate of compliance to engage in notice and comment rulemaking to amend 7 CFR 205.400(b)(3), and to continue development of a Web based system for the issuance, confirmation, storage and retrieval of certificates of compliance.

Recommendation No. 2 regards the amending of 7 CFR 205.301, Paragraph C, to prohibit organic and nonorganic forms of the same ingredient and multi-ingredient products labeled as made with organic. The NOP concurs with the recommendation and agrees to engage in notice and comment rulemaking on the issue.

Recommendation No. 3 is to amend 7 CFR 205.601(b), to add ferric phosphate. The National Organic Program submitted a proposed rule amending this section for departmental clearance, and it was submitted on August 4th, 2005.

Recommendation 4 dealt with recommending changes to the natural resource section of the ATTRA organic farm plan template. There's actually no NOP response that's needed on that because the Board action is directed to a non-USDA agency.

Recommendation No. 5, the use of boxes
coated with a synthetic wax to pack, store, or transport organic produce. That recommendation is currently under review at OGC for a response.

Recommendation No. 6, the status of albumen in wine making. The recommendation was that albumen must be petitioned. NOP concurs and informed the questioner about this particular issue on May 2nd, 2005.

Recommendation No. 7 dealt with the status of bitter orange under the petition process. The recommendation was that bitter orange must be petitioned, and the NOP concurs.

Recommendation No. 8, the use of calcium carbonate as a livestock feed supplement. The recommendation was that mined calcium carbonate be considered as a nonsynthetic substance allowed for use as a feed supplement or additive and recommends that calcium carbonate not be considered as an agricultural product able to carry the term "organic." The NOP concurs, and the NOP informed the questioner on May 4th, 2005.

Recommendation No. 9 was the use of
proteinated and chelated materials as additives in livestock feed. There was a recommendation that these substances be considered as synthetic feed additives and supplements, and that those proteinated and chelated materials that were listed by AAFCO be allowed, except those products that were products of excluded methods or slaughter byproducts.

NOP concurs with that, and the NOP will publish guidance on this issue in accordance with NOP's good guidance practices.

Recommendation No. 10 dealt with changes to the regulatory language at 7 CFR 205.603, Paragraph D(1), recommends an extension of the expiration date for synthetic methionine to October 21st, 2008.

The response is that the National Organic Program published on July 29th, 2005, proposed rule extending the expiration date of synthetic methionine.

The comment period for this rulemaking actually closed today, August 21st, 2005, or August 15th, 2005.

Pardon me.

Recommendation 11 deals with suggested regulatory changes to 7 CFR 205.239(a)(1) or (a)(1),
It recommended changes to the language by striking "stage of production" and adding the phrase "stage of life," and making that change consistent and also Paragraph (b)(2).

It also recommended amending 7 CFR 205.239(a)(2) by striking the phrase "access to pasture for ruminants" and replacing with the phrase "grazing pasture during the pasture's normal growing season."

We're returning this recommendation to the NOSB due to a lack of clear and concise regulatory objective and would ask that the NOSB continue to work on this matter, and we're happy to engage in consultation on the subject.

Recommendation No. 12, Board policy manual revisions. The materials review process, the recommendation was that the -- to insert revision in the Board policy manual. There's no NOP response required. This recommendation just addresses standard operating procedures used by the National Organic Standards Board.

Recommendation No. 13 also dealt with the
Board policy manual, additions regarding review of substances subject to sunset review, recommended additions to the Board policy manual. Again, there's no NOP action required. The recommendation only addresses the standard operating procedures used by the National Organic Standards Board.

Recommendation 14 dealt with the status of livestock medications when use is recommenced by the NOSB or inconsistent with FDA approved uses. The recommendation dealt with encouraging the NOP to pursue further can are you at higher level of USDA and FDA recommend that USD investigate FDA recognition of minor species use categories for organic livestock, medications, and recommended that the NOP review all recommended materials more correctly placed in categories consistent with FDA regulation.

Our response is that the FDA center for veterinary very forward and CVM have explored as an expedient option, limiting the use of these substances to a licensed veterinarian. The NOP and FDA CVM continues to seek a workable solution to this issue within the Agency's respective statutory and
regulatory constraints.

Thank you.

CHAIRPERSON RIDDLE: Okay. Any further comments? If not, any questions from Board members? Discussion?

MR. SIEMON: Well, that's the first I've heard about the livestock. So I guess you said we'll just compare on that? It's not on our agenda now, and like another phone call? What's the process?

MR. JONES: Yeah, the process will be that we'll inform the Board with our concerns with a recommendation. Our primary concern with the recommendation is the lack of regulatory objective. It doesn't really say what it tries to accomplish.

We also have some concern with the languages as proposed, and so we think it's appropriate to have an extensive consultation on this entire issue.

MR. SIEMON: So that would just be back on our work plan.

MR. JONES: It will, yes.

CHAIRPERSON RIDDLE: Any other comments,
discussion?

(No response.)

CHAIRPERSON RIDDLE: All right. Hearing none, seeing none, it's not even 11 o'clock yet.

(Laughter.)

CHAIRPERSON RIDDLE: Now it's time for the NOP report. No.

Well, are there any suggestions? The next item on our agenda is public comment, which is scheduled and was advertised in the Federal Register as beginning at 1:00 p.m.

Yes, Hugh.

MR. KARREMAN: Is it okay to also ask about the FDA CVM?

CHAIRPERSON RIDDLE: Sure. Any of those topics.

MR. KARREMAN: Yeah, I'm kind of curious about that. Where does it look like it's going as far as the FDA CVM views on the troubled substances that were categorized perhaps inappropriately?

MR. JONES: Yeah, we continue to have very intense conversations with CVM on that issue. One of
the things that has come up, Hugh, and I'm going to let Arthur talk more of the details about it.

There has been this notion of where we run into problems where we've got this inconsistent use dilemma, perhaps one solution and CVM hasn't said it's a solution yet, but as I understand, they are entertaining it, where these substances would be used or could only be used by a licensed veterinarian, where a valid client-patient relationship exists.

I think from the prevalence perspective, that seems to be a workable solution. It may not get the Board where it wants to go entirely, but there's some pretty serious statutory and regulatory concerns here that have to be addressed from CVM, and I think the Board needs to recognize that CVM has really bent over backwards in terms of recognizing your dilemma, what you're trying to do, and they're really been pretty creative in my estimation of trying to think outside the box.

I'll let Art talk about it in more detail though.

MR. NEAL: For the most part what Keith
has stated is exactly what has happened. If I understand you correctly, there were six that were really problematic.

MR. KARREMAN: There were six that were not NADAs, and I think there were six others that were just over-the-counter, which were actually more problematic than the NADAs.

MR. NEAL: Right.

MR. KARREMAN: Could you say what the NADAs are versus the over-the-counters?

MR. NEAL: We have drafted the proposed rule for all of the livestock materials. That proposed rule is now undergoing OGC review for submission to the Federal Register. The six that had no NADA, we are in consultation with FDA concerning regulatory discretion.

Now, there's no guarantee that we're going to be granted regulatory discretion for those, but we're exploring all options with CVM. This is at right beneath the center director's level. So we're in active conversation with them concerning these materials, and what Keith has said is they do
understand the dilemma that we're faced with because some of these veterinarians that work on that staff have also worked on organic forms.

So they're aware of the dilemma, and we're in consultation about how to best resolve the issue. If those substances are not resolved concerning their use by the time the proposed rule hits the street, just understand that we'll still be working on it.

MR. KARREMAN: And then what about the NADAs themselves?

MR. NEAL: Everything is pretty much accounted for in the proposed rule, and we're looking at what Keith said earlier, licensed veterinarian use only, which is pretty much how FDA has its regulations set up for off-label use. It took a lot of research for us to do it, but we've got that done.

There's one snag, and that's moxidectin. Moxidectin by structure is an antibiotic. It's function is parasiticide, but the Board had NOP respond that no antibiotics could be used in livestock production. This is something that we've addressed in the proposed rule that the Board will have to consider
evaluating, this overall ban on antibiotics.

And Ibermectin also is an antibiotic.

CHAIRPERSON RIDDLE: I have a question just to make sure I'm clear. When you said something about, you know, as a required licensed veterinarian, that would be an annotation to a substance?

MR. NEAL: Yes. The way that you recommended many of the substances will not look the same way when you see it in a proposed rule, and that's why we've got a public comment period for that. So we won't engage in any dialogue about the proposed rule.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: When you see it, then you talk back to or through the proposed rulemaking system.

CHAIRPERSON RIDDLE: And that has moved forward as proposed.

MR. NEAL: For clearance.

CHAIRPERSON RIDDLE: So that should be coming out in a couple of weeks.

MR. NEAL: As soon as OGC clears it.

CHAIRPERSON RIDDLE: Oh, right.
MR. NEAL: And if they don't have any more suggested changes, it normally takes about one to two weeks for it to get in the register. So we can't give you an affirmative time, but it's on its way out.

CHAIRPERSON RIDDLE: Okay. Well, I'm glad I asked because I misunderstood. I thought it had moved to the register, but, no, it's to the final OGC clearance.

MR. NEAL: For movement to the register.

CHAIRPERSON RIDDLE: Yes. So what I'm hearing, and I think it's really important for the Livestock Committee to take note is that those annotations will be different than what we originally recommended, and we'll certainly be looking for a close review by the Livestock Committee of that language, and if it is consistent with our original intent or if our intent needs to change, but if we can live with that, we should be prepared to submit our comments on those annotations because previously they would not have received NOSB input. There would be some new language from what we originally proposed.

So I think to make the circle complete we
certainly need to submit some comments, whether we agree or disagree, whatever.

MR. KARREMAN: If it comes out on the Federal Register and we want to comment on that, they are though in the Federal Register, and they would be allowed to be used under what is stated or would it --

CHAIRPERSON RIDDLE: No, this would be as a proposed rule. So they wouldn't be allowed yet.

MR. KARREMAN: Okay.

CHAIRPERSON RIDDLE: And it most likely would happen between meetings. So we wouldn't be able to wait until we have a full in-person meeting. So that's why the Livestock Committee would be charged with drafting the comments that then can be reviewed by the Executive and may need to take the form as a letter, you know, from the Chair and the Livestock Committee Chair to submit to the program since it wouldn't be able to come up in a full Board meeting as a Board recommendation.

Sound like a plan?

(No response.)

CHAIRPERSON RIDDLE: Okay. Any other
topics that you may not be clear about or have any follow-up?

(No response.)

CHAIRPERSON RIDDLE: Well, hearing none, I just wanted to say how much I appreciate this process, and I think it certainly sets an excellent precedent. I know it's a bit tedious, but there have been concerns in the past that we submit recommendations and then don't know what happens to them, and this really gives us a good sense of which ones you concur and accept, which ones you're going to move to some proposed rulemaking, and which ones need further work by the committees of the Board. So I really appreciate this process.

MR. NEAL: You're welcome.

MR. DAVIS: I had a question.

CHAIRPERSON RIDDLE: Yes, Gerry.

MR. DAVIS: About from what I'm hearing on the past year recommendation, I forget what item number it was, but that's going to be deferred back to us to rethink it, which would realistically mean next spring for a meeting or is it something that's going
to go on in between meetings, I guess?

CHAIRPERSON RIDDLE: Well, the work will happen between meetings. Certainly I think, you know, as George asked that we need to have, you know, more details as far as what's lacking in our recommendation so that we know what to focus on in further work.

But then it's going to be up to the Livestock Committee, again, to take the lead between meetings with conference calls and E-mails to draft a recommendation working in collaborations with the program so that the revised recommendation is something that they can work with better.

MR. DAVIS: I guess my main question was a timeline.

CHAIRPERSON RIDDLE: Yeah.

MR. DAVIS: Being that the proposed possible fall meeting probably would not include this because we're trying to abbreviate it or--

CHAIRPERSON RIDDLE: Right. We still have to talk further about that, but the prime focus for the fall meeting will be the sunset. You know, certainly our members of the Board, and I'm one of
them, that would advocate if there are some topics
that we can address, you know, and that are well
prepared, that aren't big, new controversies, we don't
need any additional new controversies, but if there
are some things that we can take five minutes and just
resolve and move on, I'd certainly be in favor of
including those kind of items on the agenda. But this
may not be one of them.

MR. DAVIS: Yes, considering the response
we got from the last meeting, anything new that's
substantive at all we would expect a lot of public
comment and might influence what meeting we put it at.

CHAIRPERSON RIDDLE: Yeah. So I think we
just need to really look at our work plan, look at the
time frame and prioritize what can happen at the fall
meeting if there is a fall meeting, and then what
would have to happen at the first meeting next year,
which is going to really pile up.

MS. COUGHLAN: Well, Katherine, I'm
noticing that I don't know if this is representative,
but if it is, when we go into it -- there, how was it?

CHAIRPERSON RIDDLE: That's nice.
MS. COUGHLAN: I think Michael decided to put us in the dark.

CHAIRPERSON RIDDLE: Pete did, yeah.

MS. COUGHLAN: Or Pete.

(Laughter.)

MS. COUGHLAN: I'm wondering if we need to rethink the afternoon seating arrangement. I think there's seats for 60, did I count? And I don't know with public comment. Is it a fire reg?

MS. BENHAM: Right.

MS. COUGHLAN: Well, what do we do if we have that many more people this afternoon that want to be in? Require people to stand?

MS. BENHAM: (Speaking from an unmicked location.)

CHAIRPERSON RIDDLE: Well, there are a few empty seats. That's one thing.

MS. BENHAM: That's the other thing. People could like move closer to each other.

(Laughter.)

CHAIRPERSON RIDDLE: Or you can actually spread the chairs apart so that you have a little
elbow room.

MS. BENHAM: Exactly.

CHAIRPERSON RIDDLE: But we can't increase the numbers of chairs is what I'm hearing.

MS. BENHAM: Yeah, we still have seats available.

PARTICIPANT: Unlike church, don't be afraid to come up here.

MS. BENHAM: Right, exactly.

Unfortunately, Goldie, I don't think we can change rooms either.

CHAIRPERSON RIDDLE: So, Rose.

MS. KOENIG: Since we have received a lot of public comment this morning, I'd like to recess early since we have the time so that we can have a little more time to review that before the public comment section and also have an opportunity to find cheaper lunch sources if possible so that my food and my mental things can be satisfied.

CHAIRPERSON RIDDLE: All right.

MS. ROBINSON: As far as lunch is if you walk down --
MS. KOENIG: Yeah, I know, down that street.

CHAIRPERSON RIDDLE: Well, other people may not.

MS. ROBINSON: There's also -- Tony, where are you? -- L'Enfant Plaza down D Street. Maryland, there's a food court in there. There's also right here at Portals, there's a little Chinese place. Just walk through the Portals literally. There's a Chinese.

MS. COUGHLAN: What does that mean?

MS. ROBINSON: Through the Portals? You'll be transported. "Beam me up, Scottie," that kind of thing.

What's the best way to get to that, Tony?

CHAIRPERSON RIDDLE: Is that helpful?

MS. ROBINSON: Yeah, and you're going to walk back out to the corner and then walk down. Walk down going towards the waterfront, but literally you see the Portals building.

CHAIRPERSON RIDDLE: Oh, it's a building, Portals.
MS. ROBINSON: Yeah, yeah. Portals is a building.

MS. COUGHLAN: Oh, the one with all of the fake store fronts along the street.

MS. ROBINSON: Yeah, yeah, yeah, and you can walk through the Portals, and there’s a courtyard, and there’s a Chinese restaurant.

CHAIRPERSON RIDDLE: Okay.

MS. ROBINSON: If you keep walking down the others, there’s the waterfront and there are restaurants down there along the waterfront. There’s Jenny’s, which is a great Chinese place. Like I said, L’Enfant Plaza over on D Street, all kinds of places in there, too.

CHAIRPERSON RIDDLE: Okay. So before we recess here, I’d like to be clear on what committees want to meet during this recess.

MR. SIEMON: Livestock Committee would like to meet.

CHAIRPERSON RIDDLE: Livestock Committee would like to meet.

MR. SIEMON: And maybe, Keith, we could
CHAIRPERSON RIDDLE: Yes, between this afternoon's break and dinner, let's try and have a Policy Committee.

Okay. So far all I'm hear is Livestock would like to meet now. Any other committee?

(No response.)

CHAIRPERSON RIDDLE: So those on Livestock hang with George, and we'll figure out a plan.

Yes, Barbara.

MS. ROBINSON: Jim, to make sure you are on time this afternoon because we typically run into this problem, can we insist that we all be back here at 12:45 so that we really do get --

PARTICIPANT: -- USDA update.

MS. ROBINSON: You already got the USDA update.

CHAIRPERSON RIDDLE: Yes. We got ahead of schedule. I apologize.

PARTICIPANT: -- published schedule. We have dairy farmers come from all over the country to hear the NOP report, and we got here at 11, and we
missed it. So I'm wondering if you would be kind enough to have maybe Ms. Robinson or someone summarize the particular response.

CHAIRPERSON RIDDLE: Well, I'll just respond to that.

We convened the meeting at 10:30, called to order, and, yes, it's surprising, but we got ahead of schedule. But the agenda is approximate, except for when we convene. We stick to that, and when we start public comment. Otherwise things do flex with time.

I apologize, but the bulk of the NOP update was a line-by-line response to each of the 14 recommendations that the Board made. I can't go through those again, but that was the bulk of the report.

And we can talk off line about the content of those.

PARTICIPANT: Well, in deference to the many people who traveled as far as from California, people who were interested in that issue, could you at least repeat so you don't have to do it 15 times for
each one of us?

CHAIRPERSON RIDDLE: Well, in particular, for the dairy producers, on those issues I will summarize that on the state of life and pasture rule change recommendations that we adopted at the last meeting, we were informed that those are being sent back to the Board for further work; that they did not contain adequate justification for why they needed to be rule changes.

So we need to do further work to give them some further information.

And then is that sufficient or, Keith, do you have something to add?

MR. JONES: The reason that that recommendation was coming back to the Board is a lack of a clear regulatory objective and the fact that we believe that the proposed language as written, as given to us, contains a number of ambiguities. Because this issue is of very high importance we want to make sure that the Board and the department are on the same page, one, in terms of exactly what your intent is, in other words, what's the problem that
you're really trying to fix; how you intend to fix
that in a way that provides clarity and concreteness
so that when we do, if that's the course that's taken,
go out for the proposed rulemaking, we're not
confronted with a proposal that is ambiguous at best.

And so that's really what it's designed to
do, and as we said, we're happy to engage in
consultation with the Board to resolve those issues,
to look at the concerns that we have so that the
Board's desires can be fulfilled.

CHAIRPERSON RIDDLE: Okay, all right. So
any other comments?

And Barbara's suggestion, I think, is a
really good one, that we be back at a quarter till
one, 12:45, and we will start public comment at 1:00
p.m.

So I don't have a list yet to know who's
up, but it's out front. So if you submitted your name
by E-mail or by phone call, you would be towards the
top of the list. So you might check that to make sure
you're here when your name is called. Otherwise
you'll roll over and be placed at the end of the list.
MS. COUGHLAN: Is the room to be secured as we exit?

CHAIRPERSON RIDDLE: Okay. As far as laptops and things?

MS. COUGHLAN: Right.

CHAIRPERSON RIDDLE: Does anyone know if it's going to be locked up?

PARTICIPANT: We will lock it.

CHAIRPERSON RIDDLE: It will be locked.

Okay, all right. So I have 11:18. So we will recess, and the Livestock Committee will meet, and we will be back here by quarter till, and we will definitely reconvene at 1:00 p.m. for public comment.

Thank you.

(Whereupon, at 11:20 a.m., the meeting was recessed for lunch, to reconvene at 1:00 p.m., the same day.)
AFTERNOON SESSION

(1:01 p.m.)

CHAIRPERSON RIDDLE: I'd like to reconvene here and thank everyone for being prompt.

We'll be starting with public comment, and I'll read off the first two people on the line, and then I will read through the kind of rules and procedures.

So as a warning, first up will be Kelly Shea and then Debra Claire on deck. So you can prepare yourselves.

The Board does have policy for public comment at meetings, and I'll just read through the seven simple steps, and that is all persons wishing to comment must sign up in advance, and the sign-up is still out in back. If you haven't signed up yet, you still can.

Persons will be called upon to speak in the order they sign up, and like I said earlier, if you missed your chance, you'll be moved to the end, and we'll ask again when we get to the end if there's anyone who had not been here when their name was
called.

And each person will be given five minutes to speak. Persons must give their names and affiliations for the record. The recorder has asked that if your name is somewhat difficult to spell, if you might spell that so that he can make sure to get that accurate in the record.

You may submit a written proxy to the NOP or NOSB requesting that another person speak on your behalf. No person will be allowed to speak during the public comment period for more than ten minutes. So you can carry one proxy, speak for yourself and on behalf of one other person, but no more than that.

And anyone providing public comment will refrain from any personal attacks or remarks that otherwise impugn on the character of any individual or company. So please keep your remarks focused. We certainly don't mind passion, but let's refrain from making any personal attacks.

Oh, yes, and Goldie will be timekeeper on your five minutes, and she'll hold up a sign giving you a one minute warning when four minutes have
expired, but if you don't happen to see the sign, that's not her problem. The clock continues to tick, and when five minutes is up, I'll ask you to conclude your remarks.

If you're in the middle of a sentence, conclude your thoughts, but then there is a possibility of Board members asking follow-up questions after your comments as well.

So everyone clear? Yes, Katherine.

MS. BENHAM: If they have written comments, make sure that I get a copy of it, please, and if they could pass it on down to the Board members. So make sure I get a copy of your comments, please.

CHAIRPERSON RIDDLE: Yes. The most important copy is to go to Katherine and to share with members of the Board, but make sure Katherine gets a copy.

MS. BENHAM: Yes. Thank you.

CHAIRPERSON RIDDLE: All right. With that, Kelly Shea.

MS. SHEA: Okay. Good morning. Thank you
for the opportunity to speak with you today.

I know it's going to be a really busy day.

So I promise to be quick and not use my full allotment of time.

My name is Kelly Shea, Director of Government and Industry Relations for White Wave Foods. Horizon Organic, which is now part of the White Wave Foods family, has been a leader in the organic dairy movement since its inception nearly 15 years ago.

As the first national organic milk brand, we're proud to have helped create today's growing organic dairy marketplace, as well as the standards that govern our industry practices and the seal that now differentiates organic dairy products from others.

Our strict and unwavering adherence to the best practices of the organic movement is a cherished part of our heritage. Organic is all we do at Horizon Organic. It's all we've ever done.

All of us who work at Horizon Organic are passionate about bringing healthful organic products to more American lunch boxes and dinner tables and
doing it in a way that respects the land, the animals, and the resources they provide us.

We know this mission is shared by the entire organic community. We believe the guidance on pasture that you will consider tomorrow will help further our common efforts by providing welcome certainty for farmers, dairy companies, and consumers.

So on behalf of Horizon Organic Dairy, I would like to publicly reiterate our full and unequivocal support of grazing guidelines and take this opportunity to thank you for helping the organic dairy industry achieve consensus on such an important facet of organic dairy production.

It's an exciting time for organic agriculture, and we're proud to be part of such a dynamic industry. It's also an important time. Now more than ever what matters is that we stand together in defense of our shared values and our common support for strong organic standards.

We're encouraged by the industry consensus reached on pasture, and we hope to see this sort of constructive dialogue occur with other challenges we
will undoubtedly face as an industry.

On that final note, Horizon Organic would encourage the USDA to move as quickly as possible to publish a Federal Register notice on the rule change that closes the lactation as stage of production loophole. We fully support this rule change and want all organic farmers, including those in the process of transitioning to organic to have certainty versus ambiguity wherever possible.

Thank you very much.

CHAIRPERSON RIDDLE: Thanks, Kelly.

Next up, Debra Claire and on deck, Lynn Betz.

Debra Claire.

(No response.)

MS. COUGHLAN: Okay. Lynn Betz, and next up is Tom Betz.

MS. BETZ: We would like permission to share our cumulative ten-minute time frame. We're back to back, if that is acceptable.

CHAIRPERSON RIDDLE: Sure.

MS. BETZ: Okay. Thank you.
CHAIRPERSON RIDDLE: And then on deck would be Mark Kastel. Thanks.

MS. BETZ: Thank you.

I'm Lynn Betz, co-founder and president of Sensibility Soaps, since 1996, a manufacturer of natural and organic bath, body and skin care products.

We have come here to request that the Board consider and take action on the decision of the USDA to prohibit the use of the USDA seal on the labels of personal care products.

In a May 2002 policy statement on the scope of the NOP, the USDA made clear that producers of non-food products, such as personal care, containing agricultural ingredients, quote, are eligible to seek certification under the NOP, end quote.

Based upon and relying upon this policy statement, our company achieved organic certification as a processor in July of 2003 along with other producers of personal care products. We invested in sourcing and formulating with NOP certified organic ingredients, adhered to the food standards, sought and
obtained certification for products under the NOP, thereby allowing our company to label and market our products as certified organic under the NOP.

Certifying agencies such as Pennsylvania Certified Organic understood the policy statement and authorized such certification.

In April 2004, the USDA issues a guidance statement reversing this position indicating that producers of personal care products would not be eligible to seek certification. A month later, however, that guidance statement was ordered rescinded by then Secretary of Agriculture Ann Veneman.

Then in April of 2005, the USDA issued an informal response to a statement of the National Organic Standards Board, and in that response indicated again that personal care products are not eligible to be labeled in accordance with NOP.

In the April 2005 statement, the USDA indicated that personal care products cannot display USDA seal and labels. As a result, we've been informed that continued use of our labeling would result in USDA enforcement action, including the
imposition of civil penalties.

The newest USDA pronouncement contradicts the foundational 2002 USDA NOP policy that invited personal care companies to invest in certifying NOP qualified products. Our company relied upon that statement and spent considerable time, money and effort to develop 21 different personal care products which were approved by Pennsylvania Certified Organic as meeting the NOP food standards.

Our labels carry the USDA seal and are 95 to 100 percent certified organic.

Our product line is called Nourish, food for your healthy skin, and that line was launched late last year. This decision has had a significant negative impact upon our business. Most retailers will not buy the brand fearing that the products will have to be pulled from the shelves. Our real and potential losses are significant.

In good faith, our company sought and achieved certification as an organic processor early on in 2003. We were successful in getting those 21 products certified under the NOP current food
standards in the fall of 2004.

The scope of the NOP included personal care, and we did what was required. And as we all know, compliance is not easy.

We are proud to have meet this challenge of formulating personal care products, and we proved that it could be done. I understand that there are groups who are working on standards for personal care. However, we're advocating that instead of replacing those standards or adding to them, if the food standards can be met, why can't we use the USDA seal.

It's the only credible way for consumers to truly distinguish organic from the misleadingly branded labeled "organic personal care products." To offer consumers the purest organic products should be encouraged and not prohibited. These products should carry a seal that consumers trust.

If the result of this issue boils down to a matter of jurisdiction, I would like to think that the USDA and FDA can work together in supporting businesses, such as ours who sought to do the right thing and now face punitive measures as a result of
following the rules.

The support of the original scope will ultimately serve consumers in seeking legitimate organic alternatives. Please make a decision to support personal care products which have demonstrated compliance with the current food standards so that we can again proudly carry the USDA seal.

Thank you.

MR. BETZ: I am Tom Betz, co-founder and vice president of Sensibility Soaps.

We invested a substantial amount of time and expense getting certified as an organic processor. We invested a substantial amount of time and expense developing an organic line of bath and body care products.

We have lost several potentially large amounts of business due to the recent ruling that would prohibit us from displaying the USDA seal on our labels.

What is the difference if we apply organic olive oil to a salad and from the same drum include this oil with other certified organic food ingredients
into a bath and body care formula? Don't we owe it to the consumer to have the same faith and truth in both products by displaying the trust and integrity guaranteed by the USDA's seal?

We were the first company in the USA to develop 21 organically certified bath and body care SKUs made from food ingredients as certified by the USDA. Why is this different from consumable food products made from the same certified list of organic food ingredients?

A large number of consumers depend on accurate food labeling, and in particular, those items displaying the USDA seal. Without the strength, an end-user trust of the USDA seal, much opportunity exists for companies to stretch the interpretation of the law by listing on their bath and body care products labels, such statements as "made with some 100 percent organic ingredients," clever looking pseudo seals to persuade that customers that the product has some regulatory strength behind it.

We are not using USDA certification as a marketing trick like competitors who claim organic but
are not certified. We are committed to it. It is confusing and misleading to the consumers when companies state 90 percent organic and their labels include ingredients which are chemicals and synthetics.

It undermines the good work in the food industry by allowing a double standard in defining organic. The seal is consumers’ only insurance of integrity and is not that what the NOP is all about?

We are following all of the existing guidelines. We are supporting farmers with our purchase of agreements. We are helping to reinforce organic lifestyles as mainstream. We are promoting USDA and PCO and the work they do on our labels. We respect USDA guidelines by not lobbying for looser regulations, unlike competitors.

Doesn’t the U.S consumer deserve truly organic skin care products when a company has found a way to make them consistent with food processing?

We have raised the standard for skin care products and needs the support of the USDA. It does not conflict with the role the FDA plays. It is
separate for it deals only with organic integrity.

Thank you.

MS. JAMES: Have you also lobbied with the FDA or is most of your lobbying just done here at the SBA?

MS. BETZ: We have not lobbied with the FDA. We’ve talked with the FDA, but not lobbied perse.

MS. JAMES: Have you considered?

MS. BETZ: I don’t know where the problem exists. I guess that’s the bigger issue. I don’t understand what it is, you know, why the decision was made. So I guess it would be important to move forward to understand that before we could decide on another appropriate plan of action, and I don’t know if anyone could shed any light on that here or not because that would be very helpful.

CHAIRPERSON RIDDLE: I can’t shed light on, you know, the NOP’s position, but just to inform you, it’s currently not on the work plan of any committee. I appreciate you coming again to reinforce
the need for the Board and the program to resolve this issue.

I know that's not very satisfying.

Andrea?

MA. CAROE: One, I just want to make sure you understand that -- and this is my understanding -- that you can still have your product certified organic and you can still label it as organic. You just are not allowed to use USDA symbol. Certifiers are free to certify organic body care products.

So you can continue to make that claim, and to my understanding the issue is in that this is a labeling law for agricultural products and that personal care products like yours fall under the jurisdiction of the FDA and not this area.

So, you know, it's a matter of the scope of labeling. This is about a marketing claim and the definition of that marketing claim so that the consumers have a consistent understanding of that, but within the realm of these products.

You know, if any other Board members want to shed some light, that's exactly where I see the
issue is for you. It's not that this Board considers those products less organic than food. It's a matter of, you know, within the regulatory arena, you know, how far can we go. How far can the program go?

MS. BETZ: I guess then it would boil down to an agreement with the FDA which, you know, I don't understand why if it does boil down to that that couldn't happen, you know, between the USDA and the FDA. Because I'm sure there are other examples of where government agencies work together to support initiatives, as well as businesses, to make things happen instead of stifling those things from happening.

I am aware that we can market our products accordingly. I'm also aware that when you look at the landscape of personal care products out there and the claims of organic, that there's nothing that would differentiate products that are truly made according to that, those standards, from other products.

You know, we can say all that we can. A seal was a very powerful, powerful way of determining that a company has, indeed, met a level of standard
that's higher than other companies could meet.

MS. CAROE: Jim, can I address that?

CHAIRPERSON RIDDLE: Yes, Andrea.

MS. CAROE: I just want to say that before this regulation was implemented, organic was out there on the marketplace and the organic certifier seals meant something for those products, and I think that your industry is where the food industry was not too long ago, and if you persevere, I mean, I think you might end up where you want to go, but at this point you do have the option of labeling your product and your certifier seal means something in the marketplace and, you know, with more products will mean more.

So I would suggest that, you know, don't lose heart over it. I think your products are valuable, and I think the consumers understand the value in those products, and we did see in food that there was recognition of those certifiers, and I would venture to guess that the certifier seal will still be recognized with your products now.

CHAIRPERSON RIDDLE: Thank you.

Okay. We have Mark Kastel and Tony
Azevedo on deck.

MR. KASTEL: Good afternoon. My name is Mark Kastel, K-a-s-t-e-l. I'm here today representing the Cornucopia Institute based in Cornucopia, Wisconsin.

I also have a proxy in my possession from Mr. Maury Johnson, one of our Board members who operates the largest certified organic seed production business for agronomic crops, Blue River Hybrids, based in Seward, Nebraska. That's formerly NC+ Organics.

I'd like to divide my time, my presentation today into two sections. The first will address our read on the sediments of the nation's organic dairy producers regarding the pasture debate, and I will briefly discuss the draft pasture guidance and some of the minor language changes supported by a broad coalition in the organic farming community.

First, let me talk about the survey we did of organic dairy producers in the country, which we shared with the Board. I hope you all received a copy of that during the formal comment period. And at this
time I want to kind of update you on some of the results. We've had a little more time to process that.

What prompted us to do that survey was concerns articulated by some that the requirement for a 30 percent minimum dry matter intake from pasture and a minimum of a 120 days would be onerous or impossible for some dairy farmers to meet.

What we did was we went out a survey to approximately 550 farmers throughout the country, which probably represents upwards of 50 percent of the organic dairy producers, at least certainly 50 percent of last year's numbers. We received 30 percent back, which in any survey is just a phenomenal response, but I want to emphasize that this happened during that public comment period, was done during spring planting and the first cutting of hay in most dairy regions. So to have 30 percent of farmers take their time to respond was really impressive.

Over 20 percent of our respondents were located west of the Mississippi River. We've made a real effort to make sure that we encourage
participation from dairy farmers out west because some of those regions are the ones under question.

And the results: 85 percent of producers supported the draft pasture guidance without qualification. Another 7.2 percent of producers who responded said that they supported the document and it would require them to make some operational changes on their farms. That's a combined 92.2 percent of dairy farmers that supported the document and felt they would not have any material problem in meeting the spirit and language of the document.

Three, point, six percent of the respondents indicated that they supported the guidance document, but would have some challenge that they felt would prevent them from complying, although I want to say that not all of them totally understood because they included, as an example, a farmer with 110 cows providing 98 acres of pasture for cattle over six months of age.

And there were one percent of farmers -- I'm sorry. Within that same small percentage of farmers, there were at least one example which I
illustrated in my previous commentary of a 25-cow operation in Maine with no pasture, and the explanation was all the pasture on our farm is on neighboring farms away from the milking operation.

And I'm not sure who certified that farmer, but our law is scale neutral, and there's nothing really more acceptable about a 25-cow herd that's not in compliance vis-a-vis no pasture than a 2,500-cow herd in the West with no pasture.

So finally, there were one percent of farmers that were just outright opposed to this language. They didn't want specific numbers or they didn't want additional regulations by the federal government, but really an overwhelming statement.

And I want to emphasize the document that we prepared and distributed was objective and unbiased in manner. We take our role as a foreign policy research group seriously. Our presentation was balanced. Given the arguments for and against adopting the guidance -- is that my five minutes, Goldie? Yeah. Thank you -- it was devoid of any advocacy on either side and if you recall, we included
the survey itself in our initial comments.

Now, if you'll allow me to switch hats, once the Cornucopia Institute was convinced that the vast majority of dairy producers support tough judicious enforcement of the pasture regulations we made an effort to give dairy farmers around the country the opportunity to chime in. I'm going to present to you today over 300 proxies that have come in almost exclusively from organic dairy farmers. So this is a very large percentage of the farmers in the country represented, a super majority, and they support this tough pasture items, and they're really articulating their support for the other farmers who have made the effort to come here today.

I also have about 400 petitions that were distributed by the nation's food co-ops and a staff petition that were submitted by all of the food co-ops in central Minnesota. We didn't solicit folks for these. This is a hot button issue that people can really relate to, both consumers and dairy producers. This is the spirit of what organics is all about.

And then I do want to distribute to the
Board, if I may a sign-on letter, signed by dozens of the most prestigious -- that's different than the original, I hope -- it's not. Okay. I'll get that to distribute. Sorry.

It's signed on by many of the leading agricultural sustainable ag. groups in the United States, consumer groups in the United States, and again, a number of food cooperatives, backing the draft plan with some very minor language changes that were presented to the organic community by a coalition of the Northeast Organic Dairy Producers Alliance, the Midwest Organic Dairy Producers Association, and the Cornucopia Institute.

And the language proposes changing not the substance, but just a number of small potential loopholes. As unfortunate as it is, the entire process is about closing loopholes that a very small minority of producers are exploiting. We want to make sure that we have a good approach here. I'm just going to highlight the two that have a little bit more than a language change, if I will. And I will distribute those to the Board. I'm really sorry.
The language was added, quote, significant portion of total feed. This describes the goal of the organic system plan as it was supported by the full Board in its October 17th, 2001 pasture recommendation. So we're going back to your original language.

And in reference to the 120-day minimum, language was added to qualify that at a per year, and that was added for time frame clarity without this clarification in areas with a long or continuous growing season. The minimum grazing time might be applied to an interval longer than one year.

So I will close at this point, thanking the Board for your efforts during this past six or eight months in deliberating this, and I also will further elaborate during my comments on Wednesday morning. The dairy community as it's represented here today very, very disappointed in the delay which could be at least a year in effecting a rule change. To suggest that the language was ambiguous or a lack of intent, there is plenty of language dating back to the June 2000 NSOB -- sorry. It's an occupational hazard.
I hate acronyms.

(Laughter.)

MR. KASTEL: -- dating back to the National Organic Standards Board meeting in 2000 and the 2001 recommendations, made it very, very clear that the intent of requiring pastures is to, quote: “the intent to require access to pastures to ruminants is to insure an organic production system that provides living conditions that allow animals to satisfy their natural behavioral patterns, et cetera. There is great documentary evidence that supports the position of this Board, and again, I will comment further and I will give my time at this point unless there are questions.

CHAIRPERSON RIDDLE: There is no time left.

MR. KASTEL: Okay.

CHAIRPERSON RIDDLE: Thank you, Mark.

MS. COUGHLAN: Good timing actually.

MR. KASTEL: Okay. I will get you that copy and make sure you have the tweaks to your language.
CHAIRPERSON RIDDLE: Question, Nancy?

MR. KASTEL: While you're asking the question I'll look for my copy.

MS. OSTIGUY: About the survey, did you get any information on the size of operations that were responding?

MR. KASTEL: Yes. I did not tabulate those. We were mainly looking at their ratio of pasture to the number of cows they had that were over six months of age, and there was quite a range, and in some cases some of the farmers who said they had a problem I made it a point to personally interview them because I wanted to understand what problem they had.

In one case there is a dairy producer in the northeast that thought they couldn't achieve 30 percent, and we did the calculation together, and they were already feeding 40 percent.

In another case somebody milking 120 to 150 cows, in essence, voted against the guidance document, and when I interviewed him, he said, "Well, we have no problem making it now. I'm worried about growth."
And obviously there are constraints to the organic management system. Not every size farm based on their land mass can accommodate a pasture based operation.

MS. OSTIGUY: And I also did some calculations on the number of respondents because you did everything in percents.

MR. KASTEL: Yes.

MS. OSTIGUY: So out of the 550 -- and I want to make sure I just have the ballpark numbers correct -- out of the 550 individuals that you sent surveys to, 165 responded.

MR. KASTEL: That's approximately correct.

MS. OSTIGUY: And then approximately 33 were from the West.

MR. KASTEL: That's probably about right.

MS. OSTIGUY: Okay.

MR. KASTEL: But that is probably a disproportionately large percentage of those producers because the farms out West, you'll hear from at least one farmer out here today, and he could probably comment on the average size of both
conventional and organic operations are large.

I visited five, 600-cow operations. I know I'm from Wisconsin, and we have a lot of 40 and 50 and 60-cow organic herds.

MS. OSTIGUY: Well, that was actually part of the question, was did you in any way stratify to represent farm size so that you got a cross-section?

MR. KASTEL: We didn't. I can tell you what I really -- so this is anecdotal instead of statistical -- I scrutinized very carefully not the mass of the respondents, but just the ones who thought they were going to have a problem. None of those were large farms. The largest of those, I think, was maybe 150 cows and as small as the one that was 25 would have been the smallest of those.

They were pretty rank and file, and I don't believe -- most of them were in the Northeast and in the Midwest.

MS. OSTIGUY: And how did you originally select the 550?

MR. KASTEL: They were every farmer, every dairy farm that we had the capacity to identify, that
we had resources to mail to.

    Now, I should qualify that. There was one
certifier that did their own, and we skipped that one,
that one certifier. And you have the text, and if you
don't have it, I can supply you with a copy today, but
we really -- to be in all sincerity, the reason that
we did this is I work for dairy farmers, and I heard
some very good, compelling questions as to how this
would affect folks. We know how not doing anything is
going to affect folks. There's a perfect economic
model for that, and that's conventional agriculture
where the size of the farms and the production model
have switched to confinement, and it squeezed any
profit margin down far enough that it has forced
people off of the land.

    And there's no reason to believe that we
won't, in the supply-demand continuum, we won't end up
with more milk at some point than the market can
absorb, and then we have a downward spiral. So we
know what doing nothing will do. We at the Cornucopia
wanted to figure out exactly what the impact on
farmers would be of this rule, of this guidance.
But remember we're not changing the rule itself. Most all farmers understand perfectly that pasture is a key component of feed, and they're complying. We're just trying to clarify.

CHAIRPERSON RIDDLE: Thank you, Mark.

MR. KASTEL: Okay. Thank you very much for your efforts.

CHAIRPERSON RIDDLE: Hugh.

MR. KARREMAN: A question for you, Mark.

MR. KASTEL: Yes.

MR. KARREMAN: What do you think of let's say large operations in the West that could graze? If they had 1,000, 2,000 head, would that be okay?

MR. KASTEL: Well, the largest legitimate organic farm that I've been on is 600 cows, and I know there's a few folks with a couple hundred more than that. I haven't visited them myself. You would be hard pressed to call that maybe a family farm because there's a lot of hired labor, but incredibly beautiful pastures, well maintained, permanent water, irrigation for some. This was in Northern California. We have at least one 500-cow producer in Wisconsin, but we get
30 or 40 inches of rain there.

The largest grazer in Wisconsin has graded 800 to 1,200 cows, not certified organic, but definitely pasture based. The question is: are some people going to legitimately dairy organically with pasture or are they going to farm by press release because can you move logistically 2,000 cows to a milking facility and then out far enough to a fresh piece of pasture, a fresh paddock every day or so?

And that's really questionable. What's the upper limit? But you know, obviously we're open to scrutinizing that, and if people want to make the proper investment, but to suggest that where some of the farms are being investigated right now can somehow switch to a pasture system that is maybe four to five times the largest of any legitimately operating pasture based organic dairy right now and do it in an area of the country where all of the crops are produced with irrigation without a really wacky kind of investment; you know, we could probably produce pasture on the moon if we could get the shuttle to work again, but I'm not sure if it would be cost
effective.

CHAIRPERSON RIDDLE: Okay. Thanks.

MR. KASTEL: Okay. Thank you.

CHAIRPERSON RIDDLE: All right. Tony Azevedo and on deck is George Wright. Is George here?

PARTICIPANT: No.

CHAIRPERSON RIDDLE: I hadn't seen him.

So on deck would be Monica

MR. AZEVEDO: My name is Tony Azevedo, and that's A-z-e-v-e-d-o. I am from California, where I live in the San Joaquin Valley, right in the heart of the San Joaquin Valley. It actually feeds one-third of the United States. It's a very fruitful valley, and I've been there all of my life, actually was born there.

And I appreciate having the opportunity to testify. I'm somewhat disappointed on the pasture issue, but I would like to kind of set it up in this scenario. In the late '50s, one of my favorite pastimes was going with my father and watching these small family farms selling out. It happened from about I'd say '55 to about '63, and these were
basically people that were guilty of just trying to make a living.

And so we'd get in the old flatbed pickup and we'd go to sometimes three sales a weekend. My father was also a small dairyman, and they would have all of their belongings on the lawn. I mean everything went for sale, and with the banks and the universities and what everybody was telling them is you've got to get bigger. You've got to get better. You've got to get efficient, man.

So they did. All around me they got efficient. Now I live in one of the most polluted valleys in the United States. The groundwater contamination and the air is just about to where you can't imagine it.

And to help it along a little bit, it also makes it conducive for the West Nile virus. I lost one of my best horses last week to West Nile, and we have 29 cases just in our county. Two people have already died.

What's wrong with that scenario, 1,000, 1,500? Actually nothing. These are all good people.
These are farmers that are my friends, my neighbors, but it's just too much for the land, folks.

So how does pasture fit into this? If you're going to have the proper amount of pasture for the cows that you have, it disburses those cows evenly through more ground. It's plain common sense.

Now, many of you recognize me. I've been here before, and I didn't bring my black hat because I was in a hurry and I forgot it, but I don't think I'm coming back because after all the testimony and after everything that's been done to prove this, that pasture has to be a requirement, if it's not understood by now, you're never going to get it. It's just not going to happen.

And probably a better approach to this issue is to educate the organic consumer on the importance of what pasture means for sustainable agriculture and forget this process. It's just not working.

Okay. I appreciate the effort, and I think this is my third time here. I've seen everything there is to see. So I'm not coming back.
Okay?

But like I said, if everything that's been documented and all of the petitions and all the people that have done everything and they still don't understand the importance of what pasture means to the environment, to the health of the animal, to the individuals that are on the farm, it's not going to happen.

I hope you continue the fight to pursue pasture, but right now I'm a little bit wobbly on it ever happening.

Once again, thank you very much, and do you have any questions, I hope? Yeah.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: I guess constructively informing us on what aspects of the guidance that needs improvement, like is it the numbers, is it the whole thing, just throw out everything, but I mean, we need through this process to have alternative proposals and --

MR. AZEVEDO: What the NODPA suggested, the writing, we are -- when I say "we," I shouldn't
say "we." I actually only represent about -- there's not that many dairymen in California, but I actually only represent about ten, but these are very passionate individuals that don't understand why we're doing this to start with with pasture. I mean, is there somebody that's not?

But as this becomes more and more popular and it's getting more and more attention, it's going to go the same way the conventional world is, and I had first hand experience to see this happen.

MS. KOENIG: But, I mean, that's the question, and I haven't seen that proposal. I mean, I'm not on the Livestock Committee. So have a little patience with me.

But was there specific numerical values that needed to be changed? I mean, this is an effort to --

MR. AZEVEDO: Well, through the whole process it's been cut and watered down, cut and watered down, cut and watered down, and I've been very patient, and what they have, what you've recommended I'm fairly good with. I can live with that. There is
some tweaking that needs to be done. I'm just not really sure we can get it done.

And the reason I say this is because in my area there were some major, major environmental spills by the dairy industry, and under the current administration a lot of them were swept under the rug. They finally had to address one, the second largest creamery in the United States, could say that they were so violating they finally gave them a $4 million fine, but that's after an entire town couldn't stand living there anymore.

And I think this falls under that scenario. I think there's another power or other being that's --

MS. KOENIG: Well, I just wanted you -- I mean, we're not the -- the Board -- I mean, there's different levels. You know, if it's an implementation issue, you know, that's different from the issue that we're dealing with today, which is actually the writing of the clarifications. So what would be helpful is if, you know -- and it sounds to me -- am I getting this right? I'm passionate about a lot of
things, too, but what I'm interpreting from your thing is that you are okay. You think that this is okay --

MR. AZEVEDO: Absolutely.

MS. KOENIG: -- as far as the guidance for that.

MR. AZEVEDO: Yes.

MS. KOENIG: Okay.

MR. AZEVEDO: Absolutely. And I appreciate --

MS. KOENIG: And you're satisfied with that. You know, your frustrations on all other levels, I definitely understand where you're coming from, but, I mean, our job and what we're responsible for is to get consensus on this particular guidance document. So I don't want to misrepresent you. Okay.

MR. AZEVEDO: No, and once again, I appreciate what you folks do, and you take an enormous amount of time. I'm just not sure if we shouldn't be bowling or something else.

(Laughter.)

MR. AZEVEDO: That's it. Any other questions?
CHAIRPERSON RIDDLE: Jerry, just a clarification of what you're trying to get out of the data. You like the current guidelines, but you're reading the statement from the NOP this morning --

MR. AZEVEDO: Yes.

CHAIRPERSON RIDDLE: -- as an indication that even these that are semi-watered down for what you think is good won't even make it?

MR. AZEVEDO: I don't want to diminish our chances.

CHAIRPERSON RIDDLE: Okay.

MR. AZEVEDO: But just between me and you, I don't think it's going to.

(Laughter.)

MS. KOENIG: Can I say something? Again, I think there was a misunderstanding and, again, I don't want to speak to the NOP, but as I understood what Keith Jones said, it was that, you know, in fact, the writing, what we presented wasn't clear enough, that it really didn't get us where we wanted to go any better than what's written. So they're not going to propose a change that doesn't improve or clarify the
process. So they basically sent us back to do our homework.

Now, I think I wouldn't let that cloud the issue. I think, you know, you heard me speak at other meetings, and I'm glad to see that it is more specific. I think these are exactly the types of things that the NOP wants to see.

MR. AZEVEDO: You did your homework. You guys did your homework.

MS. KOENIG: So, you know, sit back. Obviously you're not applying to get on the Board, but you're certainly invited to come back.

(Laughter.)

MS. KOENIG: Anyway, come on back.

MR. AZEVEDO: What you've already done is fine. I can live with it, and I've watched this thing being diminished, being chappened (phonetic) up. Fine. You know, I know how to play ball, but it's just I'll tell you right now the way I look at it I think we're -- and I can't even think of the right term without swearing -- but I don't know.

Thank you very much for your time.
CHAIRPERSON RIDDLE: Thanks for your comments, and I think we share some of your frustration as well, but we will be back, and we will persevere, and hope you will, too.

MR. AZEVEDO: Thank you very much.

CHAIRPERSON RIDDLE: Okay. Monica Gonzalez and on deck JoAnn Baumgartner.

MS. GONZALEZ: Good afternoon. My name is Monica Gonzalez, Director of Scientific and Regulatory Policy at the Grocery Manufacturers Association, widely known as GMA.

The Grocery Manufacturers Association is the world’s largest association of food, beverage, and consumer product companies. With U.S. sales of more than 500 billion, GMA members employ more than 2.5 million workers in all 50 states. The organization applies legal, scientific, and political expertise from its member companies to vital food, nutrition, public policy issues affecting the industry.

Led by a Board of 42 chief executive officers, GMA speaks for food and consumer product manufacturers and sales agencies at the state,
federal, and international levels on legislative and regulatory issues.

The Association also leads efforts to increase productivity, efficiency, and growth in the food, beverage, and consumer products industry.

I am pleased to be here at the National Organic Standards Board meeting to provide some of our comments. GMA has submitted written comments to Docket No. TM0407, National Organic Program Sunset Review.

We fully support the national list process as implemented by the NOP and NOSB and believe it is sufficiently rigorous to meet the requirements of the OFPA. The national list contains a limited list of materials and helps keep appropriate controls on what can be called an organic product.

We have reviewed the proposed clarification provided by the Materials Committee regarding the application of the statutory definition of synthetic. We believe it correctly observes the distinction between offering a new definition of synthetic and offering a construction of the existing...
statutory term.

We support Board action to clarify the range of substances to which this synthetic definition should apply, but we would also like to request an extension to comment appropriately on this issue and also on the ag. and nonagricultural definitions.

We would also like to comment that GMA and its members fully support the existing national organic program. Companies have built their organic line business models based on this program and have supported farmers in their transition to organic by developing products that use their crops.

Because of the recent court decision in Harvey v. Johanns, identified inconsistencies in the program that can only be cured by Congress, we support efforts to have Congress clarify the OFPA so USDA can keep the program it spent 12 years designing.

We also support any necessary rulemaking by the USDA to insure the organic program comports with the court's decision.

Thank you very much.

CHAIRPERSON RIDDLE: thank you.
Okay. JoAnn and then Steven Clarke.

MS. BAUMGARTNER: Good afternoon. I'm JoAnne Baumgartner with the Wild Farm Alliance.

Tomorrow you will vote on the final biodiversity amendments to be added in NOSB's model organic system plan. This is an important step in providing implementation for biodiversity requirement already in the NOP rule.

The definition of organic production includes preserving biodiversity and the rule requires maintenance or improvement of natural resources of the farm operation, including wetlands, woodlands, and wildlife.

The original writers of the NOP recognize that biodiversity conservation had to be part of organic premier ecolabel. How could it be otherwise and still be held credible? Our nation and our world is in the midst of the largest biodiversity crisis that has ever occurred. Without our careful stewardship many declining species will wink out for good. Our waterways will be bereft of aquatic life. Our farms will need more and more artificial and
costly inputs.

This past spring we met with two dozen organic farmers in California and New Mexico to test biodiversity inspection questions. The farmers all felt biodiversity was an integral part of organics and a large number of them are planning on making improvements, like installing native plant hedge rows since reviewing and helping to refine the questions.

It is because the questions serve them as well as determine that they are conforming with the rule. In fact, some of the farmers are already figuring out how they can improve on their marketing strategy by sharing their biodiversity farm stories with their customers.

These biodiversity questions are opening up a new way to grow and market agricultural products. Becky Weed, Wild Farm Alliance board member and a Montana organic and predator friendly sheep producer, says we can only evolve toward improved management of local and global biodiversity is leaders like the NOSB strive toward that end.

Recognizing and understanding the roles of
biodiversity are part of an iterative process. The more you learn, the more you begin to learn. The NOP can't be true to its mission unless it integrates a full understanding of biodiversity.

When I myself was an organic farmer, I valued diversity for the resiliency it provided, but I think I would have been a better farmer and a better conservationist if I would have had these biodiversity -- this checklist that is part of the proposed additions to the OSP.

This checklist was created with the help of organic farmers, certifiers, and conservationists, including input from NCAT. It helps a farmer look at how he/she can contribute to the big picture conservation needs and at the same time address practices beneficial to the farm.

Ultimately the biodiversity amendments to the OSP will help make organic farmers more ecologically and economically viable, and society at large will benefit from the improved health of our landscapes.

Thank you.
MS. COUGHLAN: Thank you. Thank you for the work you do.

CHAIRPERSON RIDDLE: Thanks, JoAnn for your comments, and also I'd like to thank you and Wild Farm Alliance for the background work you did to prepared the draft.

MS. COUGHLAN: So, so important. Thank you so much.

CHAIRPERSON RIDDLE: Thank you.

Stephen Clarke and then on deck Leslie Zuck.

MR. CLARKE: Good afternoon and thank you for this opportunity to talk to you.

My name is Steve Clarke. I’m the Director of Industrial Research and Development for Florida Crystals Corporation. I did my undergraduate and graduate degree in England and then moved on to do a postdoctoral fellowship at Yale, and after that, went to teach chemistry at the University of the West Indies in Jamaica, which is when I became involved in the industry.

After that I went on to spend 16 years
with the Audubon Sugar Institute at LSU, Baton Rouge, as a research professor, and ten years ago I joined Florida Crystals, where I am responsible for developing and implementing new technologies, including the processes we use to make our own organic sugar products, both domestically and some of the international suppliers which, since they are supplying to the United States, are under the same regulations as we are domestically.

I joined Florida Crystals the same year this calcium hydroxide was approved for processing *organic sugar, and we can continue to use it confidently ever since. Yet although I am very familiar with the science and technology of sugar processing, I must admit that my knowledge of the history of NOSB decisions leave me rather confused sometimes.

So anyway, the definition of synthetic in both the OFPA and the national organic program regulations, while trying to cover all manner of substances in all circumstances, is justifiably very generalized, and I agree with you that it needs to be
I've been reviewing the recommendation of the Joint Materials and Handling Committees to clarify the definition of synthetic, and I believe this recommendation is on the right track.

However, maybe more specificity is necessary, and I will offer our comments and response to this. Over the last month we have provided substantial input to the OTA, and we support their comment to your recommendation and have added additional comments of our own. You should have copies of our full response, and I'd like to mention just a couple of the most important ones right now.

The definition of chemical reactions and synthetics and nonsynthetics as a chemist I find rather confusing. And I suggest or we suggest the definition of acceptable chemical transformation of chemical reaction as a process of manufacturer formulation that does not increase molecular complexity or has not resulted in changes to covalent both in the original substance.

Changes in ionic pairing would make sense
and should be considered as a nonsynthetic change. Oxidation reduction by chemical means are obviously not okay, and any increase in the number of complexity of covalent bonds is obviously, again, not okay.

We also support OTA's suggested language of the definition of nonsynthetic, which is a substance that is naturally occurring plants, animals, minerals, water, or air or a substance that has been created by naturally occurring biological processes or food processing techniques or actions as defined in the act. Nonsynthetic substances have not undergone changes to covalent bonds during manufacture, except in the case of naturally occurring biological processes or accepted food processing techniques.

We would also offer as well the suggestion that the term processing as it is defined in the OFPA and the NOP regulations be expanded to include processes such as crystallization, evaporation, and combustion.

Within that suggestion, the combustion and the term "heating" already included as allowed processing methods be further defined by the
committees.

We also strongly encourage you to follow the same processing methods allowed in food manufacturing to be extended to the manufacturer of inputs and substances used in food processing.

Materials on the unambiguously nonsynthetic list maybe should be allowed to be transformed into other materials which could be used as processing aids and so on, along the lines of the same techniques as used in food processing.

We appreciate your work and to continuously improve organic standards and organic production. I know how complex that these may be at times. Personally this opportunity to respond to your recommendations has shown me how complex your responsibility really is.

We have letters of support for this position, and these will be distributed shortly.

MS. COUGHLAN: Perfect.

CHAIRPERSON RIDDLE: Thank you.

Any questions? Rose.

MS. KOENIG: Well, comments, and a couple
I still think, and I thought it was clear in our document, that we're not defining processing or what is allowed in processing. This document specifically is to help make decisions on both throughout the crops, the livestocks, the materials decisions no matter what list things are.

As you know, the reasons for specific methods in the regulation for processing or handling was in that section for a reason, to describe post harvest changes or treatments so that you could take an apple and make applesauce, you know, acknowledging that bonds break when you're heating it, et cetera.

MS. CLARKE: I thought it was clear in our document, and maybe it isn't clear, that in that paragraph where we say that, number three, we distinguish between that in saying we're not talking about processing. We're talking specifically about materials to be added to lists.

MS. CLARKE: Right.

MS. KOENIG: And the comments that seem to be coming in confuses that issue, and I understand in
the light of other things that are going on there's a
great emphasis to try to solve everything through the
definition of synthetic and nonsynthetic.

However, I would implore you because I've
done an analysis of this, and one of the goals of
writing this definition was to be consistent with
things and decisions that had been made on the past
for materials, and I believe, and if I'm wrong I
certainly should be corrected, that the definition
that stands is reflective of past NOSB decisions in
terms of what we've said were synthetic, what we said
was not synthetic, and what we prohibited.

Okay. By doing the fundamental changes,
and I haven't studied all of your proposals because
we've gotten them kind of late. So I haven't been
able to do that type of analysis, but my gut reaction
is that by making the alterations that you are
suggesting, it would mean that things that we've
prohibited or not necessarily prohibited, but things
that we've called synthetic would now be nonsynthetic
in crops and in out livestock materials list.

So in other words, because it's
fundamentally changing the way that the Board has looked at materials, this definition was supposed to further describe the way and really present a document that helped Board members make sure that we were consistent with past an present and future materials decisions.

MR. CLARKE: Okay.

MS. KOENIG: Okay? So that's just fundamentally the difference. So what would be helpful to, I think, the handling and the Crops Committee would be perhaps for you to look at your proposal with the light of what our objectives are.

MR. CLARKE: Right, right.

MS. KOENIG: And see if that works. See if your proposal would change things, and it certainly will, I think, as you admitted, will change things on the handling list, but that really is not what we're trying to achieve with this document for the entire materials process.

MS. CLARKE: I understand, but the way I read this was -- the way I put this together, thought it through -- was this would restrict the number of
nonsynthetic, greatly restrict the number of nonsynthetics, but allow a redefinition of synthetic or of nonsynthetics.

MS. KOENIG: That's what you understood from the writing of this or what --

MS. CLARKE: No. The goal was to be able to redefine.

MS. KOENIG: No, it's not a redefinition. This is a clarification of how we've been doing up to now.

MR. CLARKE: Right, okay.

MS. KOENIG: That's all it is, and that's where I think therein lies a problem. We're not trying to fix results of recent happenings in the world of organics.

MS. CLARKE: Okay.

MS. KOENIG: We're trying to confirm how we've made decisions in the past so that we can feel comfortable with the decisions that we've made and have checks and balances to make sure that we are fairly assessing materials that are petitioned in front of us.
MR. CLARKE: Okay.

MS. KOENIG: That we can say, yes, we've been consistent, and as we go through our sunset process, we can say, "Well, maybe we had better look at this because something doesn't jibe with how we've been doing business."

That's the intention of this document, and it's the sole intention of this document.

MR. CLARKE: Okay.

CHAIRPERSON RIDDLE: Thank you, Mr. Clarke.

Okay. Leslie Zuck and then Jessica Greenblatt.

MS. ZUCK: Before you start the timer, Jessica and Erin James, the next two people won't be speaking. It will just be me.

CHAIRPERSON RIDDLE: You're still limited to ten minutes.

MS. DIETZ: I only want five minutes.

CHAIRPERSON RIDDLE: You only want five even though you've got two proxies.

MS. ZUCK: I thought you just might want
to let the next person know who they are.

CHAIRPERSON RIDDLE: Okay. Good point.

Thank you.

MS. COUGHLAN: So you're only going to five?

CHAIRPERSON RIDDLE: Then Kim Dietz would be on deck.

MS. ZUCK: I only need five minutes as far as I know.

CHAIRPERSON RIDDLE: And you get ten.

MS. ZUCK: Okay. That's probably good and it also says I'm speaking on personal care products, but I'm not. I'm speaking on pasture and stud.

CHAIRPERSON RIDDLE: All right. Carry on.

MS. ZUCK: Thanks.

I'm Leslie Zuck, Executive Director of Pennsylvania Certified Organic, an accredited certifying agency in Pennsylvania.

I attended the last meeting here in D.C. where many of the organic dairy farmers came down here and spoke and really did a very good job of convincing us all that we really needed to take a good look at
enforcing the pasture requirement of the rule.

I'm not a dairy farmer, and I reviewed the Livestock Committee's recommendation not as a dairy farmer, but as a certifier of over 100 organic dairy farmers mostly in Pennsylvania, and I have a concern that I want the recommendation to be really useful, and I want it to be understandable, fair, practical, and at the same time reflect the letter and the spirit of the law, and I think those are concerns that all of you have, as well.

So with those concerns in mind, I would like to suggest a few changes. As we all know, the guidance document is not law. Therefore, I would suggest that the word "shall," as it appears three times in the recommendation, be changed to "should" or some other language being less directive. So "shall" and "must" think are probably not appropriate for a guidance document.

And to make the document more understandable, I would suggest some brief introduction explaining why the pasture guidance document came about and what purpose you expect it to
serve. This could be done in a few sentences, and I think it would really help put things in the correct context for the producers and certifiers who have not been involved in the process.

I actually did that. I hadn’t been reading a lot of the comments on the Web and everything, and I took the current draft, and I just read it trying to read it as cold as possible, as though I knew nothing about why this was being done, and I think that it would really help to have some introduction in that regard, and I don’t think it will take much to do that, although I don’t have any language here for you, but I have faith that you can have that.

And I have another concern. It’s a little bit bigger. In Pennsylvania we have not yet been faced with this issue of the huge organic dairy farm versus the family scale organic dairy farm. All of our farms are small, averaging, oh, 60 cows or so on 100 acres or so, somewhere around there, and all of these farms have pasture.

As most of them also grow feed crops, such
as corn and soybeans for silage or just to feed, and this does seem to be changing. Many farmers do see the benefits of grazing and are converting more to hay and pasture, and we all think that's a really good thing.

However, I do not believe that converting all of a farmer's cropland to hay and pasture is the goal of the OFPA or the national organic rule, although some of us think that it should be. You know, it is not the case today as we speak about this issue.

I have a concern about the language in the recommendation that says, "The organic system plan shall include a time line showing how the producer will satisfy the goal to maximize," maximize, "the pasture component of total feed used in the farm system."

You know, according to this particular statement, if I'm a traditional farmer and I'm growing crops, should my organic system plan state how and when I'm going to convert all of my cropland to pasture?
I mean, I don't think that that's where we really want to go, and I feel it's a little too swayed in that position. I didn't think that was originally what the phrase meant. I really though it meant the cow should be out on pasture as much as possible, as often as possible rather than just having a few minutes a day access a few days a year.

And then when I started discussing this with other farmers and other certifiers, it turns out at least in some cases it's their understanding that, you know, as stated, the goal is to get as much land in pasture as possible.

So here we are. It's not even a final recommendation, and we're confused. The use of the term "maximizing this document does sound like we're supposed to start at 30 percent DMI and try to get to 100 percent DMI. I mean, if you read the document with that in mind, it could be interpreted that way, and I don't think that's fair. I really don't think this is the way some producers wish to farm, and I think we should respect that.

I would just suggest deleting the phrase,
you know, or drafting in a more balanced way that it's clear.

I'm not sure that the document really needs that if you're going to keep the 30 percent dry matter guidance in there. I don't know about the time limit to maximize pasture. I think maybe in a case where the person doesn't have 30 percent yet, you know, we can give them some time to get there, but you know, that's a certifier's issue, I think, more than a compliance issue, in my opinion.

Otherwise I think the recommendation is a really good effort, and I appreciate the time and energy that the committee put into it with all of the drafts and reading all of the comments and taking them very seriously.

That's it. Did I make five minutes?

MS. COUGHLAN: Five minutes.

MS. ZUCK: I'm getting good at that. Any questions?

CHAIRPERSON RIDDLE: All right. Thanks Leslie.

Kim.
MS. COUGHLAN: I'd also like to say that you either grow or have friends who grow -- oh, wonderful -- sunflowers, and we acknowledge and thank you for them.

CHAIRPERSON RIDDLE: Yeah, thank you for the sunflowers.

Kim Dietz, and then Julia Sabin.

MS. DIETZ: She's on Wednesday.

CHAIRPERSON RIDDLE: Oh, okay. Well, she won't be here.

MS. DIETZ: No, she won't be here.

CHAIRPERSON RIDDLE: Grace Marroquin, and we should make sure. Yeah, Wednesday it's noted. Okay. Thanks.

MS. DIETZ: I'll make sure Katherine gets that.

Okay. Rosey, I wish I was up here before the sugar guy. So hopefully I can help tame things a little bit.

Good morning, National Organic Standards Board, National Organic Program, and interested members of the organic community. My name is Kim
Dietz, HR and Regulatory Compliance Manager for Smucker Quality Beverage, past NOSB handler (phonetic) representative from 2000 to 2005.

Today I will be presenting comments to you on behalf of the Organic Trade Association's 205.605(b) Task Force and a few personal comments of my own. Comments from Smucker Quality Beverage will be presented on Wednesday by Julia Sabin, our General Manager.

I will begin with my personal comments which do not reflect those of Smucker Quality Beverages or the Organic Trade Association. I used to have to say NOSB, right, gang?

(Laughter.)

MS. DIETZ: Okay, all right. All I can say is the life after the NOSB has not slowed down at all for me. Over the past 60 days I have been advocating to the industry about the sunset deadline August 16th. I'm confident that the process is working. It makes me feel good.

However, I see by the comments posted on the NOP Website that there are not many comments...
received for crops or livestock. So I believe that my personal belief is that all materials should remain on the national list unless there's a comment or a petition to remove them.

Somehow you guys are going to have a task in front of you if there's no comments.

I urge this Board to be consistent when reviewing materials and to use the guidance and historical precedence that prior boards have adopted. Your duties are to represent the entire organic industry throughout this process.

Handling materials. I'll briefly talk on this. I did submit a recommendation again on those five handling materials that have been voted on by this Board from 2000 to 2002 that are still not on the national list. I urge a Federal Register notice as soon as possible on those.

There's five materials that the handling committee on this Board approved for recommendation on the national list: activated carbon, boiler chemicals for tempering glass and for packaging sterilization and peracetic acid. So I'd encourage a Federal
Register notice as soon as possible.

I'm getting calls weekly, monthly about these materials and whether or not people can use them.

Okay. So now I'll switch my hat and read to you on behalf of the organic trade association and hopefully I can answer some questions for you.

Okay. "Dear National Organic Standards Board and National Organic Program, OTA thanks NOSB for your excellent recommendation, taking us one step further closer to clarifying the definition of synthetic with regards to handling materials and all materials.

On April 22nd, we submitted to you a draft paper clarifying some concerns we had with the Materials Committee discussion document, dated February 2nd, 2005. Although not all of our points were incorporated into this current recommendation, we do acknowledge the overall intent that was taken into consideration, and we thank you for that.

We have submitted our comments by the task force. There's 14 members on our task force, four of
which are past NOSB members, and quite a few food
scientists and technical people on that task force.

A lot of it just went over my head. I'm
trying to decipher this document.

We didn't make a lot of changes, just some
clarifications and, again, we're just trying to
protect those processes that the handling industry can
use. The definition of synthetic does need
clarification so you guys can do your job and do it
right.

And I E-mailed all of you. The changes we
made were highlighted in blue, and there's not a lot
of them. Mainly when you talk about protecting food,
you mentioned the definition of food throughout this
document. Food is not defined in OFPA, and it's not
defined in the NOP regulations. So we have also
inserted handling operation and handling processing
methods.

Let's see. And, Rosy, to answer your
concern, we do see where you said that the intent of
the recommendation is not intended to address
processing of food. We see that. Again, we just --
thank you, Goldie -- we're just trying to make sure that the language is correct in there.
The most contentious area, again, for us is protecting the processing.

CHAIRPERSON RIDDLE: Could you finish? Go ahead.

MS. DIETZ: Okay. Thank you.

And chemical reaction. This task force went round and round and round on how to better define what is a chemical reaction and when does something turn synthetic and when does something not turn synthetic, and again, there was numerous scientists on this Board trying to distinguish between covalent bonds and non-covalent, and perhaps this is an area where you just need -- I hate to say this -- but a task force or something to help make sure that this is solid so that if we can understand it as a group, we had hours and hours on phone calls, and we still had a lot of trouble getting our group to understand it. So if we can't understand it and you can't understand it, the public isn't going to understand it.

I do know that this is a recommendation,
and it's a guidance document, but if you're going to use it, you should try to clarify it.

We've also submitted a decision tree. Whatever you do, I think that you need to make sure that you have a decision tree to help you step through the process.

Okay. Thank you.

CHAIRPERSON RIDDLE: Kevin.

MR. O'RELL: Thank you, Kim.

Kim, just following up on your question, and I know you submitted to the Board and to the NOP asking earlier electronically about the six items, the boiler compounds, the activated carbon and peracetic acid, and it's my understanding that those items have been submitted in a docket.

MS. DIETZ: Okay.

MR. O'RELL: Barbara, do you want to?

MS. ROBINSON: That docket is in OGC, Kim, but it is caught by the lawsuit, and so we're not totally certain of its outcome at this point.

MS. DIETZ: Okay. You know, I think the industry is being put in a horrible situation. You
know, you have peracetic acid and the activated
carbon, and certifiers are having to make decisions on
whether we can allow them or not allow them, and
regardless of Harvey they're going to be in some
label, and they're needed for handling.

CHAIRPERSON RIDDLE: Rose, go ahead.

MS. KOENIG: Well, first, back to what you
were saying. I've got so many copies of different
documents.

Okay. The first change you have, "or
allowed processing methods." I mean, if that's not
correctly written, what we are saying is extracted by
everything and anything in any matter with any
substance, physical process, you know, I'm not
opposed to listing other ones there, but again, by
specifying -- taking out four organic handling
operations, again, this is a generalized
clarification, and it shouldn't matter whether it's
allowed for handling operations, crops or livestock.

I thought it was covered with giving
examples and, you know, so I'm amenable to make that
more clear, but we do say any manner, which --
MS. DIETZ: Right. The clarification, as long as the extraction process does not chemically change, and heat changes the chemical; it chemically changes something. So, again, heat is an allowed process. So if you're allowing the processing methods to deem something nonsynthetic, such as heat, then make sure that the extraction method doesn't -- if you're using heat to extract and it chemically changes something, make sure that that doesn't turn it synthetic in that extraction method.

CHAIRPERSON RIDDLE: Barbara, did you have a comment?

MS. ROBINSON: Well, I have some comments and some questions, but I want to be sure that the Board is done first.

CHAIRPERSON RIDDLE: Okay, okay. Rose.

MS. DIETZ: So extraction is allowed. We know that extraction is an allowed handling practice.

MS. KOENIG: What I was saying is that I was trying, again, to be consistent with the way, you know, -- I just think that this is where people
just -- maybe I'm not being clear. I say it over and over and over again, that we're not talking about the processing of foods. We're talking about the ingredients.

So the best exercise, and again, I'm sorry if I'm being repetitive, the way to analyze this is to take your definition or take the definition that's here and look at the decisions that have been made by the Board to see which definition is consistent with the way we've been doing business.

MS. DIETZ: Right.

MS. KOENIG: Okay? And what I hoped our definition was reflected the way that we did business based on materials, and materials has nothing to do with processing of food. It has to do with either the list of substances that are on any of those --

MS. DIETZ: Well, then this recommendation should be for everything but 205.605 because there's food on 605. There's processing aids. There's things that are considered food.

So, I mean, it's a great document and it's very, very good. I just, again --
MS. KOENIG: What I mean by food, I mean products that have multiple ingredients or, you know, something that's 100 percent organic is applies.

MS. DIETZ: Right.

MS. KOENIG: You can do whatever you want with the darn apples after you run those apples. You know, you can heat them, you can juice them, you can blah, blah, blah.

MS. DIETZ: Right, right.

MS. KOENIG: And, again, I don't think we're going to solve this, but I would love for you guys who have this alternative to really take into consideration what I'm saying and I'll take into consideration what you've proposed here, but you know, again, my gut reaction is that all of a sudden we're going to have no substances on any list because now this changed.

MS. DIETZ: Right, and again, my intention is, again, just to protect the processes that we have and we tried to incorporate into this document and, as well you have.

MS. KOENIG: So can we agree that the
agreement is to look at both proposals that are there?

MS. DIETZ: Yes.

MS. KOENIG: And to kind of examine it?

MS. DIETZ: Yes.

MS. KOENIG: The process we're trying to achieve is really clarifying how we've been doing business.

MS. DIETZ: Right, and I think we're after the same goal. It's just the semantics of some of the wording.

MS. KOENIG: Okay.

MS. DIETZ: We're very close.

MS. KOENIG: Alright.

MS. DIETZ: And the chemical reaction we'll just have to work with.

MS. KOENIG: And, again, those chemical reactions, I don't think we should just -- you know, we need to think those.

MS. DIETZ: Right.

MS. KOENIG: Again, those chemical reactions should confirm the way that we deem things synthetic, and the objective is for the larger group.
When we send this information to a TAP contractor, what we want back from the TAP contractor is we think it's synthetic because you have a decomposition reaction or you have an ion exchange and, therefore, so that it's clear --

    MS. DIETZ: Right.

    MS. KOENIG: -- we're not going to get back things that -- you know, and again, we're not doing the review process where we have outside reviewers, but you know as well as I do that we would sometimes get TAP reports back where two people said it was synthetic and one said it was not synthetic.

    MS. DIETZ: Right, right.

    MS. KOENIG: Okay? It's impossible. You know, that shows not a clear understanding of a definition.

    MS. DIETZ: Right, right.

    MS. KOENIG: So this is to make sure that when somebody says it's synthetic, when we bring it to Barbara and those folks, that they can say the Board said this, and they're all in agreement that we now have a decomposition reaction. It's synthetic. The
1 lawyers will love it and, you know, it should
2 hopefully bypass the stalling of materials that are
3 sitting in limbo because we haven't done our job the
4 way we should have.
5
6 CHAIRPERSON RIDDLE: Other Board members?
7
8 MS. DIETZ: Barbara, did you have a
9 question?
10
11 CHAIRPERSON RIDDLE: Barbara?
12
13 MS. ROBINSON: Okay. Let me start with
14 questions that I had. On page 2, Kim, you say -- and
15 maybe this is also in the Board's -- "any synthetic
16 substance using the extraction process that remains in
17 the final extract above insignificant levels."
18
19 Will someone be defining insignificant
20 levels?
21
22 And then that has a technical or
23 functional effect. I assume those would be the
24 definitions that FDA uses, but sort of globally, my
25 feeling here when I read this, as my feeling is when I
26 read the Board's recommendations, the way that I come
27 at this -- I mean, you know, I've read these things
28 now and I'm not a scientists, as are most of us in
this room, and I guess something like -- I'm not even
going to say this right, I'm sure -- covalent bonds,
covalent, covalent, and ion exchange, and I'm like,
yee, yi, yi.

(Laughter.)

MS. ROBINSON: How am I going to explain
this one to the public at large, to people out there,
to consumers, to farmers, to people who say, "Can I

Are you guys proposing that we somehow are
going to at some point either write guidance or amend
a regulation and use the words "covalent bond" and
"ionic exchange"?

MS. DIETZ: No, no.

MS. ROBINSON: Okay.

MS. DIETZ: This is a --

MS. ROBINSON: You're writing the
underlying guidance for TAP contractors? You're
setting your guideposts?

MS. DIETZ: This is a working document.

This should reflect how we make decisions as a
document of guidance for our Board as we go through
our decision making process.

MS. ROBINSON: Okay.

MS. DIETZ: And it's intended for technical. I mean, it's not really intended for, you know, the average layperson out there.

MS. ROBINSON: Okay, but at some point, you all will understand ionic exchange and covalent bonds, right?

MS. DIETZ: No, you don't. What you do is that's why you hire a technical -- if we all understood it, we wouldn't need a TAP contractor. We would all be able to say we can read these things. We can understand it.

We hire a technical person to look at the information a petitioner sends and then provide clarification, you know, and then look at our regulation and try to figure things out.

This document is intended for those TAP contractors to specifically be able to say, you know, these are the reactions that are occurring because they have the scientific know-how and hopefully you've screened them well, that we can have confidence in
their ability to meet that decision.

MS. ROBINSON: That was going to be my next question. You'll believe them then, right?

MS. DIETZ: Well, we do have some expertise on the Board. These things do come up for public comment. So there are certainly scientists out there that can say, "No. Joe Blow has got it wrong. It's not an ionic reaction. You know, it's a covalent," you know.

MS. ROBINSON: That's going to be my next question. Are these scientific events or actions, whether it's a change in covalent bonds or ionic exchange; are these discrete and definitive? Is it like DNA where there's a 99.9 percent probability that it has occurred and it cannot be debated?

MS. DIETZ: Well, if you read the document, the things that really have not been definitive and what has been problematic has been these biological substances that are extracted, and that's why we spent a lot of time trying to get our handle on what extraction means.

And I think that there's a lot of
concession going out there by saying that it can be extracted in any way. I mean, some people might want to say no. You need to even look at how something is extracted. We don't want to allow X into the extraction.

So I think there are ways to further nit-pick--

MS. ROBINSON: Okay.

MS. DIETZ: -- at the process, but --

MS. ROBINSON: And the other thing is that at some point I -- this is my own preference -- but I'm going to do this anyway. I'm going to take your work and I'm going to take this comment from OTA, but for me to get a grasp on, you know, now where am I, I'm going to take what is in the reg. and then what you have proposed, and then yours. Because the only way I can figure any of this out is to do some sort of side-by-side to see how have you just changed what is existing and, you know, what's going to change as a result of this.

Did you just change the criteria? Did you move the fence post?
MS. DIETZ: Right.

MS. ROBINSON: What substances on the national list would now no longer be there or would you now allow? And then sort of what are, again, my pros and cons? What damage? What benefits? What kind of impact would we --

MS. DIETZ: That has -- and I think that --

MS. ROBINSON: That has to be done.

MS. DIETZ: And, Barbara, instead of doing it the easier way, the cheat-sheet way to do it, which I'm glad you're volunteering to do this, you know; you said you had a full plate.

MS. ROBINSON: I need more physical therapy.

MS. DIETZ: Go back to the original take. You don't even have to do it. Take a sample of old TAPs. Okay? And in the first thing it will say how is it made. Okay? And how it's made, many of the well written TAPs, including the newest ones, show the chemistry right there.

If you look at these things, even probably
a layperson could say, "Oh, that's" -- you know, but the chemistry should be in those TAPs, and in the past people have told us what the chemistry is, but they haven't explained what that chemical reaction is. Hopefully they'll say that and then we can confirm it.

MS. ROBINSON: Well, that will be good for the illustration, but I mean, just for the language itself I need to be able to see this, and I probably will do it because I'm not a scientist and because so far I don't get it, and until I get it, just to be honest with you, it's probably not going to get out of the box just because, you know, I keep reading it and I'm like, "I don't get this. I don't understand it."

And it's because I'm not a scientist. I'm an economist, but I just keep getting lost.

MS. DIETZ: Well, it has to be understandable. Everybody needs to understand it.

MS. ROBINSON: Yeah, and even though you're not going to share it with the public, even though you're not going to use it for the public, this is a public program, and I'm going to have to be able to defend it, and somebody some day is going to say,
"Why didn't my material get accepted for the petition?" and I'm going to have to say, "Well, your covalent bonds didn't" --

(Laughter.)

MS. ROBINSON: They bonded when they shouldn't have. Ionic exchange, and I don't mean to be flip, but somewhere I have to sound at least semi-intelligent so I need to get a little smarter about it, but I mean --

MS. KOENIG: What is your alternative choice, saying, "Well, we really don't have a" --

MS. ROBINSON: I agree.

MS. KOENIG: -- "and I don't really know why"?

MS. ROBINSON: I agree.

MS. KOENIG: I mean that's what you've been asking us to do.

MS. ROBINSON: You're right.

MS. KOENIG: To product what you want.

MS. ROBINSON: Rigor.

MS. KOENIG: There is your rigor. There's you defensible document.
MS. ROBINSON: Yes, but if you walked in and magically produced Albert Einstein and he said, "I have the answers," I would still say, "That's great, Albert, but you know, the theory of relativity just doesn't -- I still need it in English, you know," because English is the language that we all have to live with here, and this is a marketing program, not an astrophysicist program or a chemical program.

So we're just going to have to get it from there to there.

MS. DIETZ: And mind that we were looking at it from the food scientist perspective, not just, you know, for crops and livestock. So there's got to be a happy medium there somewhere, I'm sure.

MS. ROBINSON: I'm not criticizing any of this.

MS. DIETZ: I know.

MS. ROBINSON: Don't take it that way. I'm just saying the next step is going to have to be, you know, to translate into English and figure out where did we just land.

MS. KOENIG: I'm just saying -- all right.
I'll give you an analogy, okay, just so that you're not afraid of science. I mean, our crop producers are producing plants.

MS. ROBINSON: I am afraid of science.

How did you figure that out?

MS. KOENIG: Well, I'm producing vegetables. There's a chemical reaction that goes on in my vegetables. I don't need to know about the chemical reaction of photosynthesis to produce those plants, but you know, I could use -- you know, somebody spends a lot of time learning about those things and that can be used to understand better my system.

So that's all this is. Chemistry is not there to confuse things. It's to try and explain and provide justification for what we do. So don't get bogged down. Don't be afraid of the science.

CHAIRPERSON RIDDLE: There's two other Board members who would like to ask questions. I have a brief comment, well, two. One is we have a break pending and so Grace is up next. If you would come first after the break, we'd appreciate that. So as
soon as we wrap this up, we'll go to a break.

On the subject, I guess, to me once we get this voted on and approved, this is guidance for how the Board assesses petitioned substances, how those are evaluated, not food processing technologies, but petitioned substances, and to me the logical place for it to be housed will be in the Board policy and procedures manual because it will guide this Board and future Boards.

If you want to issue it as program guidance, that's fine, but it does need to provide information to future petitioners as well as TAP contractors so that there are consistent determinations made on each substance.

MS. ROBINSON: It's not sufficient to be in a Board policy manual. If you want this to be the way that the program operates in the future, if you are setting a precedent and you want this to be guidance --

CHAIRPERSON RIDDLE: Well, that's even better for me. I was just saying at the very least it can guide our work by being housed there.
MR. ROBINSON: That's fine, but if you want the program to use this and you want this to be, say, going to TAP contractors, then the NOP needs to understand it and incorporate it.

Now, it can be on the Website and you may have to get your science degree to understand all of the technicalities, but we'll provide the English 101 version of it as well.

CHAIRPERSON RIDDLE: I was thinking of hiring contractors with science degrees, and the statement of work for the contractors is in the Board policy manual, which is what I thought was a logical place to put it.

MS. ROBINSON: Yes, and that's a good place for it, too, but we will also adopt it.

CHAIRPERSON RIDDLE: Okay. Bea and then Hugh.

MS. JAMES: I mean, this is the first time that we've had this conversation about being able to understand how we literally write everything down, and we try to represent ourselves on the different guidance documents. And I think to Barbara's point,
that it would save us a lot of time if we did try to
write our documents in a way that we were writing them
not just for ourselves, but for other people who may
not have as much information, especially if they're
going to end up on the Website for public comment or
in the Board policy manual.

Because we're not only writing things to
help us try to translate and understand how we're
going to move forward with different documents, but
we're also writing history and for people in the
future, they need to be able to understand what we're
talking about.

CHAIRPERSON RIDDLE: Okay. Thanks.

Hugh, and then I've got Rosalie.

MR. KARREMAN: Just one thing on the
covalent bonds and the ionic processing or whatever.
Can't you explain those kind of things in plain
English in the Addendum 1 under basic chemistry? I
mean, really, that's exactly what that addendum is
for.

CHAIRPERSON RIDDLE: You're next anyway.

MS. KOENIG: Okay. What I was going to
say is, number one, you know, as far as how the document would potentially be used, it would be used by the NOP on the Website through the petition process; that if a manufacturer, which most of them should know how they produce their product, they have chemists on staff, they would be providing that information.

The TAP contractor would look at that information, confirm it or perhaps gather other ways that something could be processed so it would be used at that level, and it certainly would be used by the Board in their work. So it's those types of things.

As far as the clarification, I had the chem. for the NOSB 101 that everybody said couldn't go in this document. So we took it out and put it in the policy manual so that the public and layperson could. You know, that was the beginning of trying to make sense out of this.

So this document was not put forth originally in this form. It had the explanation. If you remember, we moved that for the policy manual. So it was there because I knew it would be confusing, and
if there's nothing enough examples in that or we have
to go back to Chem. 101 again, we can go back to that.

MS. DIETZ: No, we'll build on.

MS. KOENIG: But there was justification
originally in that, and our objective here was now to
take that out and let's get the concise recommendation
that that really belongs in the policy manual.

MS. DIETZ: So maybe you should table the
chemical reaction portion of it and further clarify
that so that it doesn't change the way you currently
look at materials on the national list.

MS. KOENIG: But, Kim, we used the
chemistry to view that. That's what the first
question we asked, is how is this made. So don't be
afraid of those reactions. That's how we do business.

MS. DIETZ: But the comment from our
committee was the reaction that was used as an example
would make salt synthetic. So just be careful of what
you do and look at it from all perspectives is all
that I'm asking.

MS. KOENIG: There are ways to make
synthetic salts.
MS. DIETZ: Okay.

MS. KOENIG: And that's what we wanted to be able to distinguish about, you know, natural salts and synthetic salts. So that's what I'm saying. This is the way so that we can make the distinctions between.

MS. DIETZ: But from an industry --

MS. KOENIG: But that's what's consistent on -- you know, sea salt I think is on there.

CHAIRPERSON RIDDLE: Kevin and then Arthur, and then we're going to take a break.

MR. O'RELL: Well, Rose hit on most of the comments that I wanted to make, but to just throw out there, you know, the purpose of this is truly a guidance document for our TAP reviewers. We've been making these calls and determinations about synthetic/nonsynthetic since the beginning of the program, and we've been making these without anything really written in one place as to what are we meaning when we say synthetic/nonsynthetic.

So, you know, the purpose of this is to put out some guidelines on the table that we can work
with, that TAP reviewers can work with, the industry
can work with because, as Rose said, they know the
materials. They know where it fits in.

And I think it does bring a level of
clarity, and certainly there are these nuances that
we're going to hit. This is a difficult subject to
approach, but I think it's a good start, and we're not
trying to make chemists out of everybody.

MS. KOENIG: Right.

CHAIRPERSON RIDDLE: Arthur and then I do
have Andrea. I had missed her, and then we will
break.

MR. NEAL: Real short. I just wanted to
clarify the placement and purpose of this document
will also serve for the industry because there's a
whole host of substances called naturals that are not
on a national list that will also have to be assessed
against this criteria. So that means all ACAs and all
producers that currently use these things called
naturals, and nobody maybe have looked at in some
time, will have to be reviewed against this same
criteria.
CHAIRPERSON RIDDLE: Good point. Thanks.

Andrea.

MS. CAROE: Well, it just kind of tagging onto Arthur's point who made part of what I wanted to say, it's also in the spirit of transparency for this Board. It's very important that those petitioning materials know whether their material is synthetic or not, especially as we move forward with the new program.

So you know, we're talking about justifying our decisions, but before it even gets there, if I'm going to invest hours and hours and hours into putting together a thorough petition, I need to know if it's got a snowball's chance if it's a synthetic and is going to be deemed that way. You know, it's not worth it to move forward necessarily.

CHAIRPERSON RIDDLE: Okay. Thanks, Kim.

MS. DIETZ: Thank you.

CHAIRPERSON RIDDLE: And we will take about a 12 minute break until whatever it is, 2:50, 2:50. We have a lot of commenters left. So a quick break, please.
WHEREUPON, the foregoing matter went off the record at 2:41 p.m. and went back on the record at 2:56 p.m.)

CHAIRPERSON RIDDLE: Is Grade Marroquin here? Okay. Grace is coming. You might hold up, but I'm glad you're here and ready.

Any other Board members?

While Grace is wetting her whistle, just a reminder that if you have a proxy to please announce that at the very beginning so that Goldie knows how much time you have.

So Grace Marroquin and then on deck John Tedeschi.

Grace.

MS. MARROQUIN: My name is Grace Marroquin, President of Marroquin International Organic Commodity Services, Inc., a company based in Santa Cruz, California. We supply organic ingredients to the food industry.

I'm here once again to request that the Board recommend the classification of yeast as an agricultural product. It was over a year ago on July
30th, '04, that we filled out a request to the Board that it recommend that yeast be transferred from 605(a) to 606 as an agricultural product.

Presently processed food products are being labeled and sold as organic that contain conventional yeast instead of organic yeast, and even though organic yeast is fully available, it cannot be officially recognized as an organic ingredient and required in products with an organic label.

Organic yeast cannot be officially recognized until yeast itself is reclassified as an agricultural product. Organic yeast is the only ingredient that is available in the market today that cannot be recognized as a required organic ingredient, and all we’re asking is that the Board allow organic yeast the same status as other organic ingredients.

Since filling this request I have traveled to Washington to address this Board three times with this same request. I would like to turn to the latest roadblock that we have encountered and this is a handling committee’s paper that is coming before the Board at this meeting. This proposed guidance
document concludes that yeast cannot be classified as agricultural.

I now want to explain what it would mean if the Board approves this guidance document. One, to produce yeast in a conventional way involves ammonia, sulfuric acid, caustic soda lye, synthetic vitamins, and synthetic anti-foaming agents. It required rinsing twice, and this generates contaminated waste water that has to then be further treated.

The process to manufacture organic yeast uses no chemicals and produces no chemically contaminated waste water. We have an appendix that clearly details all of this out.

Secondly, if the Board adopts this guidance, it would set the Board's policy that conventional yeast and not organic yeast should be the standard yeast in processed products that bear the organic label. This would be in direct conflict with the goal of organic integrity.

Thirdly, organic yeast could not be required as an ingredient in the last five percent of organic processed foods, nor could it be required in
any organic product. Organic processors would choose to use organic yeast could not count it toward their organic ingredient content when they're aiming for 70 percent or 95 percent threshold. Therefore, anyone using over five percent yeast would then not have an organic product.

Since organic yeast is certified in Europe and Japan, nonrecognition of organic yeast by the NOP would remain a barrier to equivalency and a restriction of free organic trade.

I will turn now to the finding of the committee that while mushrooms and yeast are both fungi, yeast is nonagricultural.

If yeast is not agricultural, then mushrooms cannot be agricultural. The guidance document rests on the distinction that mushroom produces fruiting bodies and yeast produces by budding.

Several members of the scientific community have submitted comments pointing out that this is a distinction without a difference. Here's a sampling of their comments.
The first one is from Professor Dr. Jean-Claude Hubert from the former chair of the Microbiology Department of the University of Strausberg. He said yeast can reproduce sexually as can mushrooms. Yeast, like mushrooms, can even produce fruiting bodies.

The second comment is from Susan Ulrey, Director of Regulatory Affairs for Synergy Company of Utah. Algae like yeast are single celled organisms, and algae like yeast are grown in a solution. Both algae and yeast can be and are grown in closed tank solutions. So how can algae be considered agricultural and yeast nonagricultural?

The third comment is from Paul Stamets. He's the author of six books and has written several scholarly articles on mushrooms, and he's a founder of Fungi Perfecti, and he said that many fungi that formed mushrooms can also express themselves in the form of yeast. Yeast are a simpler form of the life cycle of these mushrooms. Like beads on a string, these mushrooms can disassemble themselves from their mycelial form into their one cell form.
So to call yeast a nonagricultural product would logically require that mushrooms be called nonagricultural, and I'm not here trying to say that. I don't want to see that happen.

And more than a dozen individuals have filed comments in opposition to the yeast decision. The 606 task force of the Organic Trade Association is also opposed to treating yeast as a nonagricultural substance.

These comments come from ingredient suppliers and manufacturers and certifiers, scientists, and consultants, and it's now time to have yeast declared as agricultural.

I thank you all.

CHAIRPERSON RIDDLE: Thank you, Grace.

Questions? Kevin.

MR. O'ReLL: I'm sure there's going to be a lot of questions.

MS. MARROQUIN: I hope not.

MR. O'RELL: Well, no, this is the good thing. This is part of the process. This is why we're here.
The Handling Committee worked long and hard in trying to get some kind of recommendation to the table so that we had some form, some document, work product to get public input and get a discussion going. So I can see we did that, and that's a good thing.

Just some housekeeping. You said you filed a request with the Board for yeast to be transferred from Section 205.605(a) to 205.605(b). Was that a formal petition to do that or is that just your public comment to the Board? Because I haven't seen a formal.

MR. SIEGEL: That was a request.

CHAIRPERSON RIDDLE: Okay Could you identify yourself, please?

That document that we presented to the Board on July 30th, 2004, was not a petition because we were not talking about a substance that was going on the national list or coming off the national list.
That was a request to reclassify a substance that was in one part of the national list, move it to another part.

MR. O'RELL: But that was in your public comments; is that correct, that you submitted to the Board?

MR. SIEGEL: Yes. The reason for that characterization was explained. I explained that at the time.

MR. O'RELL: Okay.

MR. SIEGEL: And the regulations for submitting a petition, the guidelines say a petition is for a substance either coming on the national list or going off the national list, and so we didn't fit within that framework.

MS. MARROQUIN: And the other reason we did it that way was that Dick Matthews sent a letter to Richard in February 11th, and he said, "Should you desire reclassification of yeast as an agricultural product, a petition is required to remove yeast from 205.605 and to seek yeast reclassification as an agricultural product."
MR. O'ReLL: Okay. I just for clarification wanted to know it didn't go through the petition process, but it was part of the public comment process to request the Board.

MS. MARROQUIN: Right.

MR. O'ReLL: The other thing, in the Handling Committee in taking on this issue, the issue, we obviously were aware of your issue, and you have been speaking to this issue on organic yeast now for three meetings, I think, and we felt that the first place that we needed to start was to look at the definition of agriculture and to define a nonagricultural product and an agricultural product.

What we did in the process, and we looked at -- we spent a lot of hours in trying to decide which way we needed to go. The route that we chose, we tried in drawing the lines to draw the lines specifically to support past decisions by the Board that the decision that yeast was put on 205.605(a) as a nonsynthetic and was deemed at that time as nonagricultural.

And in all of the comments that are coming
to us from you and from others that we support, we
certainly want to have more organic inputs available
for us to use, but what seems to be happening is that
you're describing an organic processing plan, and the
yeast that you use, you're feeding an organic
substrate, and you're following to us more of the
guidelines for a handling plan than going back to the
yeast themselves being agricultural.

And I guess that's where we struggle. So
maybe you can help us out and tell us how do we go
back to the agricultural roots of yeast being organic
and deal with that as opposed to the production
methods because we all agree that the production
method is a better method.

MS. MARROQUIN: Right, and I think what
I'm going to do is when I leave here work with the
folks that we've been working on and be able to -- I
think there may be further comments that come along
that can support that and be able to come up with a
better explanation to you as to how I think that can
work. I think my concern here is it's just like how
textbooks get written every 20 years. There are so
many new ingredients that are becoming available, and we have to open up how we look at these new ingredients because we have ingredients that are going to be eliminated possibly from what we can use today, and here we have an ingredient that is produced with methods that follow clearly what would be the organic integrity of how you handle something and even how you grow it, your propagate it, you harvest it, you have quality control systems in place.

So I see Rosy wants to say something here.

MS. KOENIG: Yes. First of all, you know, on the technical definition, if you look at fungi, in parentheses when we say multi-cellular fruiting bodies, we say ascocarp and basidiocarp, and I intentionally put that in there knowing that mycologists might come forth, but those terms mean something and they're supposed to be and maybe parentheses shouldn't have been there.

We were trying to, again, write this for the layperson. If I just said multi-cellular fruiting bodies, I didn't think it was concise, but ascocarp and basidiocarp are the actual mushroom bodies that
edible mushrooms are formed of.

Yeast don't produce ascocarps and basidiocarps, and that's the distinction in that document, and so I just want to say that, you know, as far as that comment goes, you know, nobody addresses ascocarp and basidiocarp. They talk about the ascis, and I was never denying that they go through sexual cycles. I understand that. They do produce ascis, but they don't produce ascocarps and basidiocarps which are the edible -- and that's what I was trying to show -- the edible, what people refer to as edible mushrooms, but we --

MS. KOENIG: How about algae?

MS. MARROQUIN: The algae is in another section of the document, and similar to the synthetic/nonsynthetic document that was written, we have a regulation that first divides things into categories, and we have industries and things on our material list such as spirulina that already exists, you know, as we do business today.

And this document was, again, -- the Handling Committee was working on a way to somehow
make a definition that encompasses all of the things that we all have considered was in our process and lists as agriculture.

So that's what's reflective of that policy, and I used -- to not be arbitrary and not to forget things, we utilized the classification systems of organisms because all of these things are organisms, to make those divisions for us so that we could justify some of the thinking of why things were precisely done the way you're saying.

But you know, the larger issue, and that's what Kevin was stating, and this is really the perplexing part of the problem, is that in order for something to be agricultural, it has to either meet the crop standards, and as I explained to you, or the livestock standards.

MS. KOENIG: Right.

MS. MARROQUIN: I spent many hours trying to figure out through my knowledge of how yeast is produced, and forget just yeast; some of these other microorganisms that are fungal, aspergillus, et cetera. How one could fill out a farm system plan in
the various sections of the regulation to get certified. Okay?

And I could understand I could go there because I understood that. Like you said, you used the term "manufacturing." I like that term. It is very distinguished between farmed or produced, you know, farm production.

Manufacturing is closer to handling, and I'm assuming that those are the parts of the standards, the handling section are those that your yeast production system need most consistently, you know, if you were to fill out a plan. Okay?

But you certify handling operations so that they can handle agricultural products. Handling operations are not producers of agricultural products.

MS. KOENIG: But isn't the algae the same thing and there's a handling process?

MS. MARROQUIN: Exactly what you're saying. I'm not -- if there is an algae farm --

MS. KOENIG: Certified organic.

MS. MARROQUIN: If there's algae out there that's certified organic, I would use the same line of
questioning. What standards are they being certified to? Is it crops or is it livestock?

You know, in this proposal it says they photosynthesize. So they naturally should be able to meet -- you know, they would have to fill out the crop section of the farm system plan.

MS. KOENIG: Sure.

MS. MARROQUIN: And there may be some algae production that don't meet the standards, and that really is a certifier's job to see if that does or does not meet the standards, but the statement I will make to you, and again, I think Kevin said, not only go to the standards and find out what, but as far as this Board is concerned, I don't believe that this operation meets the crops or the livestock standards.

So if we were to say that they were agricultural, it would mean the next step would be microbial standards would have to be written so that one could fill out a farm plan based on microbial standards. Okay?

And mushroom growers have acknowledged that they sometimes find difficulty fitting into the
crop standards, and that's why we throughout the history have mentioned we need mushroom standards and recommendations.

So even if, you know, after reviewing this and it's the will of this Board to call it agricultural, I still feel that there's no appropriate standards as we see in the regulation to meet microbial crops or microbial fungi or however you want, however they would be written.

So it's still a long process to go through to get at your objective. What I explained to you before, there's another I think more simpler way to get at your objective, and I think this meets the comment that OTA came out with.

We have the materials process, and that will go back to where your substance lies. It can stay within that same category in nonagriculture products, but yeast are already annotated to exclude, I think, Petroleum manufacturing.

We could further annotate or change the annotation. It would have to go through the petition process, but you could basically petition ot have
yeast not change its position, but to be annotated, and you would have to go through, I'm saying, and prove this and state your case. I'm not telling you to do this in a light fashion because it does require input in work.

MS. KOENIG: Sure.

MS. MARROQUIN: But you could propose to change the annotation that might say made on substrates containing only organic grains and nonsynthetic substances. Okay? That doesn't change our definition of ag. It stays where it's at, but that would require certifying agencies to verify that the yeast that is used in breads or products have been raised on organic grain.

So it creates that stimulus in the industry that I think we all can agree is important, but it doesn't require us to go ahead and have to create a whole other set of standards for microorganisms, which, heck, if it's not in the scope of certify soaps, I don't quite think NOP is going to think that microorganisms are necessarily in their scope, but I may be wrong.
MS. KOENIG: Well, I can appreciate a solution that you're trying to present, and it's worthy of looking at. However, it has taken since July to come to this point, and I don't think I have the wherewithal within me right now to say, "Well, okay. This is what makes it a crop standard."

But I'll bet you there could be a way. It could be wild harvested spores, and I don't know. I'm not a scientist, just like Barbara is not a scientist. So --

MS. MARROQUIN: You don't need to be a scientist to figure that out, that one.

MS. KOENIG: Well, --

MS. MARROQUIN: It can't be done.

MS. KOENIG: Well, I would ask two things. I have two concerns here. Okay? And one is that if you're going to make a decision, that maybe you give it a little bit more time because there's a lot of things on the plate. I know that, with everything that's going on within the industry, but this is a place where you think you can make a decision. So let's make a decision.
But given that it has taken this long, you know, I can come another time and present my case.

And then secondly, my bigger concern is if we make an annotation for yeast, then how many other things do you have to make little, specific annotations for? And you could be doing that for a lot of new ingredients that are new, innovative ingredients. It's where we want to be going. We don't want to be stuck in a box.

And having spent 15 years in the industry developing ingredients for manufacturing and seeing the industry come to new levels of new products that become available and then it develops other products, I think we just have to stay open that way and not pick off each one.

But again, I appreciate the possible solution you're giving; worth considering, and I thank you.

CHAIRPERSON RIDDLE: Kevin.

MR. O'ReLL: Just a final comment. I know we don't particularly like to deal with annotations. I know the NOP doesn't like to deal with annotations,
and I'm not sure that this opens up a can of worms of a lot of things coming with annotations because this is a very specific thing in trying to find it, and I think it might be a better route than reclassifying something or drawing lines to make something agricultural where we don't have a systems plan in crop or livestock that this readily fits into.

However, if you can come up with some suggestions in that area, you know, that would certainly shed some light on it, and we will take your consideration as well. You know, we deliberate long and slow on this and make sure we're moving in the right directions.

MS. MARROQUIN: I appreciate that.

CHAIRPERSON RIDDLE: And thanks, Grace. Thanks for your input and your willingness to come back.

Goldie?

MS. COUGHLAN: I would also like to add, however, I think we recognize that it doesn't truly meet what you're talking about, which may or may not be able to be met, and that's our concern because
there is no way that an annotation obviously could guarantee that. There’s no way to mandate that it would be organic, and you want it obviously.

CHAIRPERSON RIDDLE: Okay.

MS. MARROQUIN: Thank you.

MS. COUGHLAN: So we’re aware of that.

CHAIRPERSON RIDDLE: Thanks.

MS. MARROQUIN: Thanks.

CHAIRPERSON RIDDLE: John Tedeschi is up and Jackie Greenburg is on deck, and while John is coming up, I’d just like to point out for the Board that John is number 17 out of 53, and we can’t debate all of the standards despite how worth it is.

George, did you have a point first?

MR. SIEMON: Yeah, my point is we’re doing committee work now with all the testimony, and to me it would be better to call these people back up if they’re in the audience still when we’re doing actually the committee work, and I think we should keep to the public testimony.

CHAIRPERSON RIDDLE: Okay. Thanks.

John.
MR. TEDESCHI: Thank you.

I am John Tedeschi. That's T-e-d-e-s-c-h-i, for the record.

I represent Bath and Body Works. We are an operating division of Limited Brands, a specialty retailer of apparel, fine fragrances and personal care products.

The company currently offers a line of natural and certified organic essential oils that have been certified through the National Organics Program and carry the seal. A major investment was made to develop very pure and high quality product forms being the existing food standard breaks. We have attained a seal through Penn Certified Organic, unauthorized certification organization, with a rigorous evaluation process with regard to organic submissions.

The purpose of my presence here today is to present the position of my organization and petition the Board regarding the recent decision to rescind the use of the National Organic Program seal for personal care products.

We believe the seal should continue to be
granted for personal care products. So please consider your decision as it will have significant impact in the marketplace.

I do not wish to review the activities that brought us to this junction as some previous presentations have already articulated it.

The USDA should consider maintaining the use of the national organics seal for personal care products for the following reasons. Consumers recognize the seal on products as high quality, high purity and meet required standards from a government agency or authorized certifying organization.

The NOP seal represents a credible differentiator for the consumer for products that attempt to imply organic, but contain synthetic chemicals.

The consumer must be provided honest, truthful, and no misleading information so that a proper decision of the point of purchase can be made. Without the NOP seal, the consumer will face the market with our product differentiation. It will leave the confusion for the consumer and create a
level playing field, whereas products using low grade materials or synthetics will be allowed the same recognition as higher grade forms.

Personal care products capable of being formulated according to the current food standards should be allowed to carry the USDA National Organic Program Seal. The action will allow consumers who desire a certified organic product alternative to purchase a form that has been formulated and manufactured with very high standards.

The United States Department of Agriculture and the United States Food and Drug Administration, each having jurisdiction over food products with the FDA providing oversight for cosmetics and personal care product forms pose a unique opportunity to collaborate in this product area.

Please accept our sincere appreciation for allowing Bath and Body Works the time to present our point of view related to this most important issue.

Thank you.

CHAIRPERSON RIDDLE: Thanks, John.
Okay. Jackie Greenburg and then on deck Juan Velez.

MS. GREENBURG: I'm Jackie Greenburg, an organic dairy farmer from Stratford, Wisconsin. I am going to read two statements from other producers. The first statement:

My name is Lysle Edwards, Jr. My wife and I have an organic dairy farm in Vermont. We milk 50 cows. I recommend to the Board that you pass the guidance document under consideration with revisions suggested by NODPA.

Pasture is a very important part of organic dairying and must continue as a requirement to keep organic dairying viable.

And here is the second statement from Barbara Buckmayer:

My husband Terry and I run a certified organic dairy since 1995. We currently milk 65 cross-bred cows on 550 acres of pasture and hay land in north central Missouri. We buy an organic grain and feed a small amount, two to six pounds per head per day.
We also process our milk on farm and sell it in half gallon glass bottles in three major metro areas.

In talking with consumers in stores and at the farm, we find that most people are interested in organic milk because of the health benefits they perceive are gained by drinking milk that has been produced in a humane fashion without the use of pesticides, herbicides, inorganic fertilizers, hormones, GMOs, antibiotics, sewage, sludge, or irradiation. They want milk that enhances both their health and the health of the cows that produce it.

The pasture requirement is the key to both aspects of this production. By enforcing the use of pasture organic milk becomes more than milk produced without questionable input. It becomes milk that is enhanced with CLA and Omega-3s.

Cows on pasture also have a quality of life that is not obtainable in confinement or factory farm situations. Pastures focus cows to get exercise to obtain that forage and allows them the freedom to exist in a social situation that is natural for
herding animals.

Consumers currently assume that organic dairies provide pasture for their cows to a great extent and are amazed and disillusioned when they discovered organic milk can be produced on factory farms.

If the pasture requirement is not adhered to, there will most certainly be a grassroots movement to find milk and other products that are produced using methods beyond organic. We strongly encourage the adoption of the organic dairy pasture requirements. We strongly encourage the NOSB to adopt the pasture guidance document with the modifications endorsed by MODPA and others.

Thank you.

MS. COUGHLAN: Thank you.

CHAIRPERSON RIDDLE: Thank you, Jackie.

Okay. Mr. Velez and then Clark Driftmier.

MR. VELEZ: My name is Juan Velez. That's spelled J-u-a-n V-e-l-e-z.

I am the Director of Farm Operations for our organic dairies.
First of all, I want to thank the NOSB and the NOP for giving me the opportunity to present my public comments.

It has been apparent over the last several months that there’s mainly four reasons why you guys have had to work so hard on coming out with a guidance document for pasture. I may say that those four in my opinion are the animal welfare and health issue; a second, expression of natural behavior; the third one, public perception, consumption, the consumer’s perception of organic milk; and the fourth one also of use is politics.

I am not going to talk about the last one.

I want to refer to Mr. David Engel’s comments on the February-March meeting in regards to the last one.

On the welfare and health issue, my opinion is that the current guidance document does not do anything to address that. I’m going to give a copy to NOP and to the chairman of the Livestock Committee of more than 150 scientific papers expressing very controversial results that differ tremendously depending on the management system.
The conclusion is that the system itself, the production system is not what produces health or welfare. It is the management of such a system that produces welfare and health.

I would like to propose that in order to guarantee that organic dairy farms do have a good system in place that takes care of animal welfare and health, we put a proposal to make all organic dairy farms go through an assessment and an audit of animal welfare performed by an accredited organization.

There are some of them already that are created by the USDA, and that eliminates all of the other aspects of how you are managing your dairy or how you are not, but it assesses and evaluates the end result, a very, very good program that is already in place in some of the dairies, organic and nonorganic.

On the aspect of natural behavior, I question whether this will have any real result when, in my opinion we also seem to ignore two extremely important aspects of natural behavior. One of them is allowing the cow to walk freely to water, in search for water and in search for feed during some periods.
of time during the year. So we are pushing this natural behavior during the summer or during the growing season, but we completely ignore them and allow cows to be tied with a chain to a tight stall, completely depriving the cow from some of the most natural behaviors, which is walking in search for water.

And also, a little controversial when we also allowed another natural behavior that is critical. I want to remind the Board that milk is a byproduct of the most natural behavior, which is the sexual behavior and natural service.

And on the issue of consumer perception, I am not an expert on the subject. However, I hear that depending on the way that the research is conducted, you get different results. If it is a guided survey, you get some answers. If it is nonguided, in other words, what I understand is you’re asked what are the most important reasons why you guy organic milk, no pesticides, no antibiotics, and no hormones come always on top of the list, and the pasture or access to pasture does not show up always when it’s a
nonguided.

Again, I'm not an expert. I do believe strongly that pasture is extremely good for cows. I do believe that the prescriptive measurements that are being suggested do not accomplish the results that perhaps are needed.

thank you for your time, and I will consider your questions if you guys would like.

CHAIRPERSON RIDDLE: Thank you.

Okay. We have Clark Driftmier and then Steve Pechacek.

MR. DRIFTMIER: Thank you very much.

I'm using a very small portion of Mark Retslough's, and I'm going to start actually, in addition, responding to Kim Dietz on her question about the national list, and I'm happy to tell you this is a very short comment on the national list.

Kim asked about livestock and why there were no responses. We will be turning in a livestock comment, and it will come tonight. That comment will be that we want to improve the entire national list for livestock, except for oxytocin and ivermectin,
which we believe should be removed from the list.

And regarding the processing part of the national list, we approve of the entire list as it currently is.

So now to my other comment. Mr. Chairman, distinguished NOSB/USDA colleagues and fellow members of the organic community, I'm Clark Driftmier, Senior Vice President of Marketing at Aurora Organic Dairy. Thank you for the opportunity to speak today.

I bring you greetings from the 170 employees of Aurora Organic Dairy and from the more than 200 partners, many of them family farmers who work with our company. I would like to share some of our thoughts about the growth of the organic movement, organic consumers, along with recommendations to this august body.

In our opinion, the organic movement has two principal goals: first, to convert a significant percentage of U.S. agriculture to certified organic production methods and, second, to stimulate an equally significant demand for organic products among U.S. consumers.
Let me propose a definition for significant that sets the organic at no less than 20 percent of U.S. agriculture and 20 percent or more of the food purchases of U.S. consumers.

To put this goal in perspective, there are currently three and a half million to four million acres of organic agriculture in America, certainly a testament to all of the work that all of us in this room and everyone in the movement have done.

However, there are 936 million total acres of agriculture in America. Within this larger context, organic agriculture comprises only .4 of one percent.

Certified organic milk cows comprise approximately .8 of one percent of the total U.S. dairy herd of nine million animals. There are about 75,000 organic cows.

To reach a goal of 20 percent, we will need to convert more than 180 million acres of agriculture to organic and nearly two million organic cows or milk cows need to be converted to organic.

Some in this room might disagree with so
high a figure, and yet I believe this goal is imminently achievable. Indeed, it is absolutely necessary in order for organic to fulfill our fullest promise.

Most of us came to organic because we rallied to the mission oriented call to convert agriculture, to change paradigms, to storm the ramparts, if you will. But a strong sense of mission must be accompanied by a practical nuts and bolts set of activities that will facilitate its achievement. As organic moves from the fringe of society towards its center, organic products must appeal to mainstream American tastes and expectations. They must be sold in packages and forms that consumers know and trust using processing techniques that uphold the highest standards of quality and food safety. They must also be offered at affordable prices.

And yet I see a dichotomy in this regard among a few of our organic colleagues. Some say they have a strong mission orientation to build organic, but they argue for illogical restrictions that would prevent organic from fulfilling its promise. They
want everyone to eat organic, but they won't allow for
certain practical and necessary items.

For example, they seek to disallow the
leavening agents to make organic baked goods and the
pectin to make organic jam. I ask you: how can we
storm the ramparts, convert agriculture, and convince
millions of consumers to buy organic if our dough
won't rise and our jam won't set?

Some of these people say they want
everyone in organic to drink organic milk, but they
seek to impose geographic exclusivity to limit the
production of organic milk to a few verdant acres in
the wettest climates and to prevent its expansion to
all regions of the country.

They also seek to limit organic only to
smaller farms and to prevent larger farms from
participating in the organic opportunity. All of this
to me is counterproductive. If the goal truly is to
convert anywhere near 180 million acres and up to two
million organic cows, then all of us are needed, and
then some, growing as rapidly and diversely as
possible east and west, big and small, all
geographies, all ranges of scales, all types of operations, and all with a set of rules and guidance that facilitates significant growth.

I know that the rapid growth of organic is disconcerting to some. There are some who warn that organic is getting too big, too corporate, too mainstream.

I argue something different. Organic is actually much, much too small. A portion of agriculture that we comprise, .4 of one percent, isn't good enough. It isn't big enough. It doesn't have the size or the scale or the clout to achieve the goal we all hold, which is to make organic a real force for change in America.

We need a much more robust plan to convert organic acreage. Certainly every conversion is good.

CHAIRPERSON RIDDLE: I think we missed the --

MS. COUGHLAN: I didn't know you had a proxy that was --

MR. DRIFTMIER: That's all right.

CHAIRPERSON RIDDLE: Please continue.
MR. DRIFTMIER: Certainly. Every conversion is good be it one half acre or 100,000 acres, but there are some who argue that only the small conversions, only the small farms are true to the spirit of organic.

We respectfully disagree. Both small and large conversions are necessary, and both small farms and large farms are vital in the enormous task that we have.

We also need a pragmatic, practical set of rules and guidelines designed to facilitate the rapid growth of organic across all segments, geographies, sizes, and scales. This is where you all come in. The NOSB and NOP fulfill critical and irreplaceable roles in the growth of the organic movement, and your actions have a major impact on the course of organics.

We call upon you to fulfill your charter in a way that promotes the rapid growth and expansion of organic and to reject those forces who would use lawsuits and other defeatist strategies to derail the progress we have made thus far.

We also ask that you give equal support to
all segments of organic, east and west, big and small, family farms, incorporations, and LLCs and what have you because in the final analysis, we are all in the same boat. We are all pulling on the oars towards the same destination.

The conversion of U.S. agriculture to organic methods and the widespread adoption of organic products by the American people.

Thank you very much, and here's to our organic future.

CHAIRPERSON RIDDEL: Thanks, Clark.

Okay, Dave, I'm sorry.

MR. CARTER: Yeah, this might be directed as much to Juan as to you, Clark, but one thing that I didn't hear either of you talk about was the part of the recommendation that came out last time trying to use some of the NRCS standards as a basis. I mean, I agree with you that you can't take the type of agriculture in one part of the country and say that those are the standards that have to be applicable for everywhere.

What about using some of the guidelines of
things like NRCS?

MR. DRIFTMIER: We think it's a useful voluntary tool, but at this point we would not recommend it to go into any sort of guidance like you must use this or you really ought to use this. We think that there's way, way too much that's not known about that.

But we do think that the progress that NRCS has made in trying to establish, you know, individuality between all the different counties in the country is an interesting thing to look at, but I think it's way, way premature to have any sort of prescriptive or, you know, you need to use this because we really -- I mean, I don't think anyone has done any significant study out of what it would actually mean in organic livestock.

Great. Thank you.

CHAIRPERSON RIDDLE: Yes, sorry.

MS. KOENIG: So specifically to the -- again, I'm not on the Livestock Committee. So I don't pay attention to the daily discussions that go on with the recommendation, but we do have that recommendation
brought forward in front of us to vote on.

So what specifically in that recommendation will you point out you have issues with?

MR. DRIFTMIER: We think you ought to go back to the drawing board. We think there are so many problems in that as is that you really need to take it back and reconsider.

Juan already spoke very eloquently about many of the problems involved in numerical prescriptive requirements. The body of testimony, actually it's not testimony. It's essentially every research study that we could find. There are over 100 research studies in the CDs that were turned across. They show evidence all across the board. There is no body of evidence supporting one versus the other.

So we think you ought to go back and keep working.

CHAIRPERSON RIDDEL: Dave?

MR. CARTER: Just one, and this is on the first part of your thing on the national list, the oxytocin and the ivermectin. What about moxidectin?
MR. DRIFTMIER: Juan.

CHAIRPERSON RIDDLE: Yeah, please approach the mic.

MR. VELEZ: We feel the same way about that one, too. We heard this morning from NOP there is also an antibiotic. Therefore, we disagree strongly to put it on the list.

CHAIRPERSON RIDDLE: All right. Thanks.

MR. DRIFTMIER: Great. Thanks a lot.

CHAIRPERSON RIDDLE: Okay. Steve Pechacek, then Jim Greenburg.

MR. PECHACEK: My name is Steve Pechacek, spelled P-e-c-h-a-c-e-k.

And I'm President of the Midwest Organic Dairy Producers Association, or MODPA, which represents 12 states in the Midwest and more than 300 certified organic dairy farms.

I'm also President of Organic Choice, a certified organic milk procurement agency from the Midwest which has more than 50 certified organic dairy farms as producers, as well as being an organic dairy producer myself.
I would like to thank the NOSB and the USDA for allowing my input here today and for the contemplation and deliberation over these important issues.

In 1948, Wisconsin peaked in its number of dairy farms at around 148,000. Today Wisconsin has slightly more than 15,000 dairy farms. That means that Wisconsin lost in the neighborhood of 2,333 farms per year, or around 6.4 farms each day, for 57 years.

There are other figures that show that the United States at its peak had more than three million dairy farms and today is down to around 70,000. Before the peak of the dairy farm numbers in Wisconsin and in the United States, most dairy farms would have been considered organic or would have probably met the organic standards or definitions of today. Most or almost all dairy farm utilize grazing as an integral part of their ration.

At that point in time, dairy farmers were also receiving 100 percent of parity. There were no great surpluses. Debt didn't run rampant, and the government balanced the only budgets between the
Depression of the 1930s and the present.

In Wisconsin, the dairy industry represents $19 billion of industry per year. As more small, independent family farms go out of business, the towns and agribusinesses supporting them go out as well, depleting the nation's entire economy and the U.S. further.

It is said that every empire that has existed in our world has crumbled when the empire failed to recognize the needs of the farmers who were producing their food. Please, accept, pass, and enforce the pasture guidance document under consideration with minor clarifications which has been endorsed by several organizations like the Northeast Organic Dairy Producers Alliance, the Midwest Organic Dairy Producers Association, the Cornucopia Institute, Organic Choice, and many others.

The chemical revolution of the country has not been kind to the family dairy farmer. While it may have made them more productive, it hasn't necessarily made them more efficient or more profitable as was previously explained by the great
number of dairy farms who have exited the industry and continue to do so to this very day.

In some cases it has already caused serious environmental problems, like erosion, water quality, and pollution. The arrival of the organic industry has been a catalyst which has allowed some dairy farmers to hang on. However, a fair organic pasture rule must be implemented to keep a level playing field for dairy producers nationwide.

The guidance document will help implement this. If we were to look at a map of the U.S., we would see that the previous top dairy producing states are located in areas where topography are conducive for grazing, also utilizing our nation's natural resources to their maximum potential.

Many of these areas in our country are now earmarked for recreation and development. The access to the renewable resources of food production on this land will be lost forever. Please keep America live today and help give our children the incentive they need to continue to keep our nation the productive land that it is while preserving our natural resources.
for future generations. Keep America strong and keep consumer confidence strong in American produced organic foods.

Thank you.

MS. COUGHLAN: Thank you.

CHAIRPERSON RIDDLE: Thanks, Steve.

Okay. Jim Greenburg and then Tom Hutcheson.

MR. GREENBURG: Good afternoon. My name is James Greenburg. I, along with my wife and three children, operate a grazing based dairy farm in central Wisconsin.

I want to thank the National Organic Standards Board and the USDA for allowing me to address this committee today regarding the grazing issue.

My number one concern with the grazing issue is that the integrity of the organic dairy products be maintained. People have the perception that organic dairy products are made from milk that is produced by cows as nature intended it to be produced from pasture.
Deviating from this perception will eventually water down organic milk to the point where it will become a meaningless name in the marketplace. Dairy cows were created to graze grass and breathe fresh air, and we need to retain this aspect as much as possible and project it to the consumer.

The organic dairy industry must have distinguishing characteristics like grazing to keep it a viable industry. By approving the grazing guidance document along with the minor clarifications that have been endorsed by the Northeast Organic Dairy Producers Alliance and the Midwest Organic Dairy Producers Association, of which I am a member, you will be insuring a future for small organic dairy farms that originated the organic dairy industry and currently make up the majority of all organic dairies in this United States of America.

In concluding, I would like to say that we all know that cows cannot receive all of their nutrition from grazing throughout an entire year due to varying climatic conditions. But we need to have a reasonable minimum standard which the guidance
document is that applies to all dairies.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Jim.

MR. SIEMON: Jim.

CHAIRPERSON RIDDLE: Yes, George.

MR. SIEMON: Is somebody going to be given hard copies of the NODPA refinement? We keep getting reference to it. Is that happening here?

CHAIRPERSON RIDDLE: We received that already. It was included in Mark's.

MR. SIEMON: Okay. Was it in Mark's? Okay.

CHAIRPERSON RIDDLE: Yeah. Okay. thanks.

Tom Hutcheson and then Steve Morrison.

MR. HUTCHESON: Tom Hutcheson, Organic Trade Association.

First, responding to earlier comments on materials held up for publication in the Federal Register, for instance, activated carbon peracetic acid, et cetera, perhaps rulemaking on these could proceed for these to be placed on 605(b) with the understanding that the title of 605(b) may change from
"allowed inorganic and made with" to simply "allowed
and made with" as a separate rulemaking due to Harvey
v. Secretary of Ag.

I think that that rulemaking could proceed
for those materials with that understanding that there
might be further rulemaking regarding the title of
that section. That might make it easier for that to
get cleared.

There are a number of specific comments in
detail on the sheet that I passed around. I'd just
like to hit a few of the priority ones.

First, back for a moment to agricultural
and nonagricultural definitions, it is a complex
issue, and I think we need to identify all the issues
and options, and we would appreciate having some more
time to work on that within OTA.

We have come up with some recommendations,
including changing the definition of a nonagricultural
substance to a substance such as a mineral that is not
a biologically derived material produced through
cultivation or propagation by humans. And you'll see
also we support amending the guidance document and

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
(202) 234-4433 WASHINGTON, D.C. 20005-3701 www.nealrgross.com
decision tree in accordance with a rationale that supports the position that bacteria, yeast, and other single celled organisms, whether or not they are photosynthetic, are subject to being cultivated or propagated by humans for the purpose of providing a biologically derived material.

Just as farmers feed the soil in an organic agricultural process, so have farmers for millennia produced yeasts and the products that they add value to, for instance Roquefort, one of my favorite cheeses and things such as champagne yeast. These have been traditionally the province of agriculture and on-farm value added processes, and I think that it would be a mistake to move forward with something that cut off some real possibilities that we have here for these processes to be included in the organic world.

Just a quick comment on compost. I urge the Board not to overlook the option of recommending a rule revision of the definition of compost if the result would help organic farmers. I noted that the discussion within the Board paper was very, very good.
and thorough, but it was within the box of the current
definition, and I would propose that the Board be
willing to look at a definition revision if that were
actually to benefit organic farmers, and I have some
ideas in the handout.

Regarding the commercial availability of
organic seed, OTA supports the comments of Richard
Siegel to come, especially as they represent the
position of OTA member seed companies.

Regarding the sunset, OTA has commented
that the proposed rule which follows the advanced
notice of proposed rulemaking should include all
materials listed in the advanced notice of proposed
rulemaking, together with a brief discussion of which
materials received comments during the ANPR comment
period and whether those comments were positive or
negative.

OTA has tried very hard to get people to
comment during this comment period, including
contacting certifiers and urging them to contact their
clients. I hope that comments are received on all of
the materials, but in case they're not, I don't think
that’s a reason for taking them off the proposed rule.

And just one note --

CHAIRPERSON RIDDLE: Summarize and conclude.

MR. HUTCHESON: One note on the piece that Kim handed out. The last page didn't print well. The committee chairs of the NOP have an electronic version of the decision tree for synthetics that we're proposing.

CHAIRPERSON RIDDLE: Kevin.

MR. O’RELL: Thank you, Tom, for your comments.

Clearly in the rule, bacterial cultures are carved out as part of the definition of non-agricultural products, that they cannot be or are a part of nonagricultural and cannot be an agricultural product. And your recommendation would now include bacterial cultures as well as the yeast area.

Just if you could give us a comment, I know you're asking for more time. Is this following up on what Rose and I had said earlier that the single cell microorganisms that do not have photosynthesis
don't readily fit into the livestock or crop standards as we see it now? And opening this door for bacteria as well as yeast, what's your thought about that? How would they fit with the current standards or do you think that we would have to look at standards for single cell microorganisms?

MR. HUTCHESON: That's exactly the question we need more time to answer. I think that it's quite possible that we could come up with a recommendation for microbial standards just as well as the mushroom specialty crop recommendation. It's also entirely conceivable we could come up with an adaptation that did the same thing.

One of the potential side effects of that is making it subject to commercial availability, and we just -- it's new ground for us and rather than paint ourselves into a box now, if you could present something that noted that at least the case of yeast needs further review and discussion so that we're free to come back to you with some responses on that, we'd appreciate that.

CHAIRPERSON RIDDLE: Rose.
MS. KOENIG: Yeah, and the questions I had, because you're both on that document following up. So you're requesting further information, further time to see whether -- I guess that's the question. You want to look at alternative ways upon achieving your objective or do you want just more time to comment on this because it seems like you sufficiently commented on our proposal.

I mean, if you can acknowledge that there may be alternative ways and we really didn't think about the standards, that acknowledges that because, you know, I've got a thing this thick that doesn't even address the points that we've brought up, the standards and the possible ability to annotate something. What this says is that we're going down that agricultural, you know, definition road.

I mean, if you're still considering that it's an ag. product, I don't see how your comments might change in a meeting, but if what I'm hearing from you is that we want to explore some of the alternative options that are out there, I think that's something different than what you're stating.
MR. HUTCHESON: Yes, I would --

MS. KOENIG: What you stated in your statement. Okay? So I want to give you the opportunity to explain that.

MR. HUTCHESON: Yes, I think that we are interested in coming up with the best result, and it may be that that best result would be a proposal for a rule change to include standards. It may be that there are other means, such as an annotation to come to something that would be a result that would encourage the kind of production that we're talking about.

We believe it's possible that that can be labeled organic, and if not, we need to be very clear on why, making sure we've teased out all of the issues and all of the ramifications of those decisions. We don't think that we're there yet.

MS. KOENIG: And then on the other document what I'm hearing -- and you've heard the other comment that you -- do you believe that there needs to be further analysis of your proposal or do you feel that your proposal is the way to go in terms
of the synthetic/nonsynthetic? Because you have pretty specific comments in your written document.

MR. HUTCHESON: The end that we're heading for is maximizing organic production. In order to do that, this is the way that we believe the synthetic versus nonsynthetic discussion ought to proceed, if that's the document you're referring to.

MS. KOENIG: Yeah, just based on some of that discussion. So you've done the analysis to look at the list to determine if the outcome of what you proposed, how it's going to impact those lists or you haven't done that analysis?

MR. HUTCHESON: The major analysis that we've done on the 605 is to identify the materials on 605(b) which might be able to be petitioned to be reclassified if petitioning is necessary to reclassify. That seems to be a gray area as well.

MS. KOENIG: Have you done an analysis of the crops and the livestock materials list to see the impact on those particular lists?

MR. HUTCHESON: No.

MS. KOENIG: Okay. I would suggest that
maybe when you come to public comment again think about that, doing that analysis or trying to see how that impacts because you said you wanted, you know, for the organic industry to grow just to make sure that you're representing all constituents in the association.

And then the other question I had, did the trade association actually vote on it? How does the Association come up with the recommendations? Is it voting by members or is it by committee? Who do these recommendations represent? I'm just not clear on that.

MR. HUTCHESON: The task force that was formed that came up with the report that Kim presented was formed by the Board of Directors specifically to look at 605(b) issues, which is one of the issues that it was limited to that due to, as I believe you put it earlier, other pressing matters, and that was the result of what that task force came up with, which was vetted by staff and then presented. That's why it's limited to what it was limited to. If we were going to go beyond that, of course, we would want to make
sure that all stakeholders were represented.

MS. KOENIG: Okay. I just was wondering about the ag. versus nonag. Was that the same process or was it a different task force?

MR. HUTCHESON: Formally that is a sub task force of the Board task force on materials issues.

MS. KOENIG: Okay. Thanks.

CHAIRPERSON RIDDLE: Okay. Hugh and then Bea, and, Tom, I think you are still up.

MR. KARREMAN: I guess, you know, I'm new to the whole yeast, agricultural/nonagricultural debate, but from the comments I've read and everything it seems as though I really like your rationale. Just as in cultivating grain crop farmers of these cultures must use seed, proper nutrients, growing environment, quality control, and appropriate harvest, it's like farming, you know, and agricultural production.

And I also hear, you know, the, I guess, definition of crops as something that undergoes photosynthesis. Is that in the definition of the crops? Just wondering.
MS. KOENIG: You need to probably go into the -- there's kind of a clarification. I forget what we officially call it, but it's in your ag. versus nonag. discussion item.

MR. KARREMAN: Okay. I mean, if I wasn't then I would say, you know, then the yeast probably should be okay, but then also the asexual reproduction versus sexual reproduction, certain worms, I guess, reproduce asexually.

MS. KOENIG: I would suggest reading that document because --

MR. KARREMAN: I apologize. I'm getting swayed by --

MS. KOENIG: Okay. I would suggest reading that document.

MR. KARREMAN: I'm not in that committee on a daily basis. Okay. Go on, go on.

CHAIRPERSON RIDDLE: We'll be discussing it tomorrow. So it would be good to read it before then.

MR. KARREMAN: Just I like your rationale.

CHAIRPERSON RIDDLE: Bea, did you have
something?

MS. JAMES: Yes. To take you down another path here, I'm just looking for your expertise and some of your research that perhaps you did. How did the OTA come to the decision that a retailer can be a final handler? I'm just curious about the conclusion between the space of no retail standards to a retailer should be a final handler, and that little piece of information between there and how you came to that decision.

MR. HUTCHESON: It is a very small space, and that is that there are only three kinds of certification. There's a certification for crops, livestock and handling, and therefore if a retailer is going to be certified, they have to meet the handler standards and, therefore, that is the kind of certification that they are held to.

MS. JAMES: I guess I'm just wondering why the OTA wouldn't be more concerned about the fact that there's not retail standards for certification and why you wouldn't pose that as being something for the Board to look at instead of jumping to just putting
the retailer into the handler category.

MR. HUTCHESON: I'd have to review our comments on the proposed rule. It is, of course, in the rule that retail stores are exempt from certification. Therefore, I would say it hasn't been -- of course, we have our own good organic retailing practices which we promote, but I would say it hasn't been a priority for OTA to work on mandatory certification of retail operations because of the way that the rule was written, which seemed to be the consensus at the time.

MS. JAMES: Okay. Thank you.

CHAIRPERSON RIDDLE: Thanks, Tom.

MS. COUGHLAN: Thanks, Tom.

CHAIRPERSON RIDDLE: I think that's it.

Steve Morrison and then Ernest Martin.

MR. MORRISON: Hello. I'm Steve Morrison, and I'm an organic dairy farmer from Maine, and I represent the Northeast Organic Dairy Producers Alliance.

I appreciate the chance to talk to you about this pasture guidance document that you have, I
think, been E-mailed or else you at least have had a chance to hopefully look at it. In both capacities as a farmer and as an NODPA representative, I think it's critically important that the Board pass the guidance document under consideration with the clarifications that are endorsed by NODPA by the Midwestern Organic Dairy Producers and other organizations.

The proposed clarifications to the guidance document are included in the first three sentences of Section A, which is the organic systems plan, and they don't change the substance of the guidance document, but they clarify certain points, and I'll read those first three sentences for the benefit of people that don't have a copy of this edited version in front of them.

And if you do have a copy, you might as well follow along. What it says is that ruminant livestock shall graze -- it says "shall graze" and maybe we should consider changing that to "should graze" -- pasture during the months of the year when pasture can provide edible forage. The certified operation as reflected in the organic systems plan
shall, and then maybe that should be reconsidered, have the goal of providing a significant portion of the total feed requirements as grazed feed, which means greater than 30 percent dry matter intake on an average daily basis during the growing season and not less than 120 days per year.

Growing season means the time of year that pasture growth is possible from natural precipitation or irrigation, and the rest of the Section A is unchanged by clarifications.

I think that it's important for the NOP to take immediate action and accept this clarification and disseminate it to the various certifiers so that certification agencies have some kind of a yardstick to go through the process of evaluating people's or producers' adherence to the requirement to have pasture in their operations.

The guidance doesn't change existing regulations. It simply quantifies the existing pasture requirement which will help the USDA perform its duty of enforcing the requirement, which exists already equitably across all sizes and, you know,
locations of funds.

NODPA also strongly urges the NOP to adopt the rule changes, which are a separate subject under consideration, to eliminate confusion about what constitutes pasture and access to pasture.

The cumulative effect of the rule changes which have been being reviewed and are going to continue to be reviewed, I guess, and this guidance document we feel will serve to promote the spirit and accomplished goals of the Organic Food Productions Act, which is to require that ruminants have access to pasture.

To follow up on a few comments that we've heard in earlier testimonies, I don't think that this quantitative guidance necessarily discriminates against farms by size. However, it does serve to discourage the concentration of large numbers of animals around a single melting facility.

The obvious solution, of course, would be to break large herd sizes down into groups, which are more manageable on a pasture based system, and distribute milking facilities over the landscape so as
to produce the effects of large numbers of animals
concentrated in a specific location.

Those are my comments. Thank you very
much.

CHAIRPERSON RIDDLE: Thanks, Steve.

Hugh.

MR. KARREMAN: Could you remind the Board
where did the 30 percent joint matter come from
exactly?

I'm just wondering. I've heard so much,
you know, comments.

MR. MORRISON: It came from within NOP by
the Northeast Area Producers Alliance after discussion
with members of farm production facilities outside of
that region. So we talked with people from -- you
know, after kind of coming up with that number, we
discussed it with people further west than just the
Northeast, and it seems like, you know, the number was
arrived at kind of after a lot of consideration.
There's a lot of tug-of-war in both directions on that
number. It seems like it was something that was
doable.
And it may be inconvenient for some operations which are not pasture based. You know, it may require that people reallocate their land use a little bit and change some of their corn grown to pasture and then maybe go outside of that immediate barnyard area, which is where it's most convenient to have pasture and plant crops elsewhere.

That's the answer to that question.

MR. KARREMAN: I thought it was based on a study from Cornell to be included in that survey. Wasn't that the original basis?

MR. SIEMON: No, it was the floor that they set for a farm to be called pasturing, was 30 percent dry matter was the floor.

MR. KARREMAN: In that one study.

MR. SIEMON: But I think that's what we heard last year.

MR. KARREMAN: Okay. Because, I mean, I talk a lot with my farmers just on daily farm calls, and to be honest, they don't really have any idea, many of them, what dry matter their cows are getting from pasture or not. They can figure it out and all,
and I just -- it would be difficult for a certifier to go in and inspect a place and say, "Are you getting 30 percent on a daily basis?" and what not.

I feel very comfortable at the 120 days, but personally just not the 30 percent, and I just wanted to make double sure where that was coming from the very first time.

MR. MORRISON: It's what we arrived at after a fair amount of discussion on this very subject, and it included discussion from people that were much heavier pasture users than that, and I think that with respect to the question about certification, I think that it seems like a daunting task to figure it out, but it really isn't when you -- I think that it wouldn't be as big a task once we had gotten used to figuring it out. I think the very first time it might seem like a challenge, but certifiers currently on dairy farms are responsible for trying to determine whether or not a farm has the right amount of forage and has purchased the right amount of organic grain to make the milk that the farm has purchased.

That's a calculation that certifiers are
required to do, and this would be another calculation of similar, you know, scope I think.

CHAIRPERSON RIDDLE: Thanks, Steve.

MR. MORRISON: Okay. Thank you.

CHAIRPERSON RIDDLE: My sense is that we could use a break.

PARTICIPANT: If we can have just one more.

They've got to leave on a plane.

CHAIRPERSON RIDDLE: Yes, we could. That would be Ernest Martin, and then we will have a break.

MR. BOWEN: Hi. Actually my name is Steve Bowen. I'm here with a proxy for Ernest Martin and another gentleman by the name of Ed Zimba.

(Laughter.)

MR. BOWEN: Hi. My name is Ernest Martin. My wife Norma and I own and operate a 60-cow organic dairy farm in northern Ohio. We have been farming since 1994 and we're certified organic in 1999.

In discussion among us and organic neighbors, we have come to the conclusion that organic dairy, the organic dairy industry is not enforcing the pasture requirements they way it should. We have been
in contact with NODPA and are in full support of the pasture guidance document with the minor revisions that are supported by NODPA, MODPA, and many other groups.

We believe that this is what the organic consumers expect of organic products and will be very displeased if informed about this lack of compliance.

We also believe that the integrity of the organic industry is at stake here. Let’s all work together to bring organic standards back to where they should be.

Sincerely, Ernest Martin.

And here’s the other one from Ed Zimba.

My name is Ed Zimba. I’m an organic dairy and crop farmer in Michigan. We milk approximately 300 cows and farm 2,700 acres. I regret not being able to attend the August NOSB meeting myself and am thankful for the opportunity to express my comments through a proxy.

As I stated at the March NOSB meeting, the health of our cattle and as well as the qualify and quantity of our milk production greatly benefitted
when we began grazing our cattle. For this reason, as well as the fact that the consumers expected to uphold the high integrity of the organic industry, I strongly recommend that the Board hear the voice of the organic farmers and pass the guidance document in question, along with the minor clarifications implemented by the NODPA, MODPA, and other organic organizations.

Your attention and consideration to this very significant issue is greatly appreciated by the organic consumer as well as organic farmers.

Thanks.

CHAIRPERSON RIDDLE: And your name again for the record?

MR. BOWEN: I’m Steve Bowen, B-o-w-e-n.

CHAIRPERSON RIDDLE: Okay. Thanks, Steve.

Okay. When we come back from a break, Brian Baker and then Richard Siegel will be the next up. Let’s make it ten minutes, please.

(Whereupon, the foregoing matter went off the record at 4:14 p.m. and went back on the record at 4:29 p.m.)

CHAIRPERSON RIDDLE: Okay. First up we
have Brian Baker and then Richard Siegel.

And before Brian starts I'd just like to encourage people to condense their comments as much as possible, and if you'll still be around on Wednesday, we are offering frequent flyer miles for those who will take a seat on a later flight.

(Laughter.)

CHAIRPERSON RIDDLE: But no. We'll try and get through all of the comments we can, and I think some of the Board actions for today or the discussion items we can get through in a condensed fashion.

Okay. Brian, go ahead.

And I really appreciate the opportunity to speak here. I have a lot to say, very little time, and I know there are a lot of people behind me. You know, if you guys met more often, you know, we could probably get a little farther in the agenda, but you know, you've heard all of this talk about pasture. I'm going to be talking about the other end of the
animal mostly and looking at manure and manure standards and how all of that is taking place and shaping up.

You know, manure in various forms is the most important input that organic farmers use, and manure management, of course, is a significant part of the NOP rule, and there remain a number of ambiguities in how manure management is carried out under the rule, and we're looking for some clarification.

There are two or three areas. The whole question of other methods of composting that are equivalent to those that are in the rule really need to go forward. We strongly support the recommendation of the compost task force and how that's not reversed. The recommendation previously made in May of 2002 is not reversed.

Other processes to further reduce pathogens or processed manure really is more appropriate to be limited in scope to thermal processing or dehydration. Processed manure can refer to the various chemical treatments, such as formaldehyde, metam sodium or Vapam, using carbon
dioxide or sulfuric acid to chemically react the ammonia. Those are synthetic processes, in our opinion, prohibited by the current rule.

Irradiation is another process to further reduce pathogen that in our opinion is not compliant with the NOP.

So, please, stick to dehydrated manure, thermally dehydrated manure as a process to further reduce pathogen. In our opinion that's consistent with the rule but some guidance is needed as to what is sufficient heat treatment to meet pathogen reduction standards.

We also see that because of the low carbon and nitrogen ratio that processed manure or dehydrated manure is not sufficient by itself to maintain or improve soil or organic matter content. It doesn't have the microbiological activity that compost has.

So for those reasons, its use should be limited, but it should not be restricted by days to harvest.

To switch to compost tea, in compost tea the task force recommendations to use potable water,
well intentioned but ill founded, out of place. Is potable water required for fully osprays (phonetic) of fish, for example, for example? Is potable water required for irrigation? Is potable water even required for post harvest handling of produce?

The use of nonpotable water in making compost tea would be a sound strategy for water conservation. It may be counter to the water conservation objectives of the NOP to require potable water sanitizing equipment, would require the use of pesticide, many of which are not on the national list. These sanitizing agents would need to be petitioned for that purpose. Chlorine, of course, is on there and hydrogen peroxide, but other sanitizing agents would have to be subject to the same kind of TAP review process.

Synthetic/nonsynthetic. Strongly support the NOSB's efforts to provide clarity and consistency. I really appreciate the incorporation of OMRI's comments.

We're moving ahead and making decisions already. A number of items that we review, you know,
to back up, you know, OMRI was the TAP reviewer or was the TAP contractor from 1999 to 2002, and we really needed this kind of guidance back then. This really would have helped us, and it will help with the sunset process and the rereview of the substances will help to bring clarity and consistency.

We understand there's a lot of fear and loathing about sunset, but you know, we also understand it's an essential process, and it was deliberately put in the Organic Foods Production Act because things change, because we get new information. We have to look at these things again.

OMRI is not going to support or oppose the sunset of any specific item. We are going to have to make adjustments. It's going to be work for us just like it is for everyone else, whatever the outcome and -- anyway.

CHAIRPERSON RIDDLE: You were saying? You conclude?

MR. BAKER: Yeah, the NOSB should prioritize those items that were not TAP reviewed and the ones for which the NOSB called for accelerated
rereview or sunset in a two year or other accelerated phaseout.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: On those sunsettled materials, you provided written comment.

MR. BAKER: Yes.

MS. KOENIG: Regarding ones as going through the minutes that you pointed out two committees. So I suggest that perhaps, you know, the committees can look at the ones that you pointed out and evaluate those.

They've already submitted some of them on lists that they've pinpointed, and you know, I'll look it over and probably suggest that the committees look over your list and confirm your statements and determine whether they want to as a committee review those.

MR. BAKER: Right. It would be a good idea to come back through the minutes and through the discussion and find out what data gaps were identified. The NOSB made these recommendations with great reticence; that there wasn't complete
information, and that data gaps needed to be filled in
order for those materials to remain on the national
list after the specified period.

CHAIRPERSON RIDDLE: Brian, were those
submitted as sunset comments?

MS. KOENIG: They were in his public
comment submissions, but not -- I don't think as from
the Federal Register notice.

MR. BAKER: Right. We're not necessarily
responding to the Federal Register notice. We're just
procedurally pointing out that these were things that
the NOSB identified as requiring greater scrutiny and
it's up to this NOSB whether to follow the previous
NOSB's recommendations.

CHAIRPERSON RIDDLE: Yes, I understand
that it's really background information, but it's very
useful information, and I just want to make sure that,
you know, if it's possible to get it into the sunset
comments, it's not advocating for or against any
substance.

MR. BAKER: Right, right.

CHAIRPERSON RIDDLE: But that way it
wouldn't get lost and that way it's on the Web when people look at sunset comments. So that's till tomorrow. If it's possible, just something to consider.

MR. BAKER: Okay.

CHAIRPERSON RIDDLE: But thanks. Either way this Board will consider it.

MR. BAKER: Okay.

CHAIRPERSON RIDDLE: All right. Thanks, Brian. Was there another question? No. Okay. All right. Richard Siegel and then we have Debra Claire.

MR. SIEGEL: Good afternoon, Mr. Chair and members of the Board. Richard Siegel, S-i-e-g-e-l. I'm an attorney in private practice here in Washington, D.C.

One of the remarkable things about the organic program is its comprehensive sweep, and it runs all the way from the seed that goes into the ground to grow an organic crop all the way to the handling processes and complex ingredients, and I find myself earlier involved in a discussion of the
handling issues, and now I'm going to talk about organic seed.

I represent eight companies. You've probably seen our comments, which are a full statement of our more than five pages which I will try to condense very, very concisely. The eight companies I represent are a cross-section of companies that are entering in or have been in the organic seed production and distribution business. They're in the Midwest; they're in California; they're in the Pacific Northwest, and we do appreciate the work of the Crops Committee to bring forward its recommendation on commercial availability for organic seed.

The organic seed requirement is one of the weakest and most ambiguous provisions in the NOP final rule. This is why organic seed production and sales have not realized their potential, and they will not until we can strengthen the organic seed regulation.

There is organic seed on the market. It's available, but it's not being sold even though it's equivalent to conventional seed which farmers are using to grow their organic crops.
As for seed that is not yet available as an organic version, there will not be a full range unless seed companies can count on this regulation as being strict. So we need to raise the level of information and accountability. Only then will we have an organic seed regulation that will be understood, that will be respected and will be enforced, enforceable and enforced.

There are many reasons why the organic seed regulations is so weak, and one reason is the regulation allows growers to receive exceptions when organic seed is not available in an equivalent variety.

Another reason, there is nothing in the rule that insures that the certification decisions on these exceptions will be consistent, predictable or transparent, and so in granting these exceptions, the Crop Committee has addressed this by requiring thorough documentation and that's the heart and the soul of this regulation, of this proposal that the Crops Committee is bringing forward.

Now, because the aim of this provision is
predictability and consistency and transparency and accountability, we want to address two provisions that were in the earlier draft that made the earlier draft strong that have been for some reason dropped from the current draft.

One of these provisions is a requirement that the certifiers make reports to the NOP of all the exceptions that they have granted to growers to use conventional seed. The original version called for these reports to be made yearly by certifiers.

When we testified in March we said that these reports should be even more frequent than that, hopefully as often as monthly in order to be timely and provide a higher level of accountability. So we were very troubled to see no mention at all of reports in the new provision.

The other provision that we would like to see restored is the final one, 5(e), which underscored that unless growers meet the commercial availability requirement, this could affect their certification.

Maybe some people thought that was a little strict. Maybe some people could say that was
redundant, but we think that because the Crops Committee has taken the trouble to bring this document forward, we think that this emphasis was very well placed. We were sorry to see it removed.

Thank you.

CHAIRPERSON RIDDLE: Thanks.

MR. SIEGEL: And I'll be very happy to respond to questions.

CHAIRPERSON RIDDLE: Okay. We have your detailed comments in writing. So thank you.

MR. SIEGEL: Yes. Thank you.

CHAIRPERSON RIDDLE: Okay. We have Debra Claire and then Joe Dickson on deck.

MS. CLAIRE: Good afternoon. My name is Debra Claire and I'm the president and owner of Perfect Organics, Incorporated, an organic skin and body care company based in the Washington, D.C. area.

Our products are distributed nationally through both large retail and natural food chains and independent natural food stores. I'm requesting that this Board consider and evaluate the significant reasons why the USDA should reallow the USDA seal on
personal care products that meet the required standards.

Perfect Organics, Incorporated was founded on two main principles: providing consumers with exceptional quality, effective personal care products which do not contain synthetic chemicals or artificial additives, and to support sustainable agriculture and organic farming.

We accomplish our goals by offering organic personal care products formulated with certified organic ingredients sourced from certified organic farms. Our entire product line, all formulations, ingredients, and processing methods were specifically developed to meet the USDA organic food standards.

Understanding the role the USDA has in supporting farmers, expanding new agricultural markets, and offering a consistent, reputable seal of approval for consumers to depend on are key factors of this issue.

The following information and statements are provided on the USDA's Website. First, on the
Website the USDA’s mission which states that one of the key activities of the USDA is, and I quote, “expanding markets for agricultural products, developing alternative markets for agricultural products and activities.”

Second, concerning the USDA’s support of organic farming, government efforts to boost organic production have focused on developing national certification standards to assure consumers of consistent product quality and uniform standards to facilitate further growth in the organic sector.

Third, and again, on the USDA Website, regarding the credibility of the USDA seal in a consumer brochure explaining the USDA seal, it informs that with the seal, “you can be sure of the highest organic production and handling standards in the world.”

When reading the mission and goals of the USDA, it is completely understood as to why the USDA made the initial decision to allow personal care products to be eligible for the USDA seal. For companies such as ours who adhere to the USDA
standards, we are supporting sustainable agriculture. We are expanding the market for organic farmers, and we are providing personal care products based on agricultural ingredients to consumers.

The USDA seal is the best way for us to communicate the standards to which we adhere and to have a positive impact on the farms we choose to support. It is extremely important to understand the differences between conventional personal care products and organic personal care products. Our product ingredients are comprised of the same ingredients used for many organic food products. I've compiled just some of the certified organic ingredients that we use in our product formulations: oat bran, wheat bran, corn meal, almond meal, rice bran, sugar, sweet almond oil, sunflower oil, olive oil, coconut oil, hazelnut oil, camomile, and green tea.

All of these organic ingredients are grown on certified organic farms. All of these organic ingredients are purchased from farms that also supply the same ingredients to organic food manufacturers.
If, in fact, it is true as mentioned on the USDA Website that the USDA's mission includes supporting expanding organic agricultural and farming industry and offering a legitimate government standard in the best interest of consumers. Then it should be a given that it's appropriate that the USDA seal be allowed on personal care products that adhere to USDA organic food standards.

This is right in line with the USDA's mission and allows opportunity for companies such as ours to significantly impact the growth of the farms that the USDA supports.

Since May 2002 -- and I'll preface this by saying "in our opinion" because I do have respect for opposing viewpoints -- we feel the USDA has essentially taken on four different positions on the eligibility of personal care products using the USDA seal: first yes, then no, then yes, and now back at no again.

As a company whose main mission is to offer truly clean inorganic products to consumers and to support sustainable agriculture and organic
farmers, the inconsistency in the USDA's position has made it very difficult to plan or implement consistent marketing strategies.

These strategies would directly benefit the organic farmers we purchase our ingredients from and the consumers who look for guidance and some form of reliability when selecting organic, agriculturally based, personal care products.

I respectfully submit that this Board recommend that the USDA reallow the USDA seal on personal care products. With the USDA seal organic personal care companies, such as ours, will have a much greater impact in positively affecting the organic farming industry, sustainable agriculture, and the consumers who seek organic agriculturally based personal care products.

CHAIRPERSON RIDDLE: Thank you. Your time is up.

MS. CLAIRE: Thanks.

CHAIRPERSON RIDDLE: Thanks for your thoughtful comments.

Joe Dickson and then Rich Theuer.
MR. DICKSON: Hi. I'm Joe Dickson. I'm the Organic Programs Coordinator for Whole Foods Market. I just want to comment briefly on two specific issues. The first is the Board's recommendation on retail certification requirements.

We appreciate the Board's revised recommendation regarding the certification requirements for retail food establishments. We were among the first retail businesses to undergo voluntary certification of our stores, and we remain the only national retailer to be certified.

Based on our understanding of the rule, we have obtained separate certification for each of our produce warehouses, our commercial bakeries, our coffee roasting company, and our private label products because we believe that certification for those facilities is required by the rule since these portions of our business act as bona fide food processors.

But clearly defining the term "otherwise manufacture" to include practices such as the creation of labels, formulation of products, procuring
ingredients for products, et cetera, the Board's recommendation provides a valuable clarification which clearly establishes the responsibilities of all retail private labelers.

Under this recommendation, retailers who wish to simply sell organic products in a retail setting remain exempt from certification. Retailers who choose to otherwise manufacture organic products, including the creation of labels for private label products, must undergo certification.

This is a clear benefit for consumers as it requires third party verification of the organic integrity of all processed products regardless of the type of company that produces them.

And then on the Livestock Committee's pasture recommendations, we applaud the Board's recommendation regarding access to pasture for livestock. The most recent revision of the recommendation adds even clearer definition to the role of pasture in organic livestock production. There is a clear consumer expectation that organic ruminant livestock are grazed on pasture as this
practice allows the animals to fulfill their natural behavior as closely as possible.

In general, this recommendation is well crafted. It balances the flexibility required by farmers in various geographical areas with the expectation that livestock be given as much access to pasture as possible. However, Section B of the guidance fails to sufficiently regulate the specifics of temporary confinement.

In order to insure compliance with the intent of this recommendation, we believe that more specific criteria, including concrete time limitations and a precise definition of "to protect soil or water quality" is necessary.

While the intent of these recommendations is admirable and they represent a huge improvement over previous recommendations, we hope that the Livestock Committee will work to develop further clarification which would prevent the misuse of this guidance at the jeopardy of an animal's welfare.

Thank you.

CHAIRPERSON RIDDLE: Thank you, Joe.
George, then Bea.

MR. SIEMON: You know, I saw your private label. I'm kind of baffled. If in order for retail to have a private label they have to participate in producing the label, with their name on the label, it's their name. They want to be in charge or look at the way it looks.

MR. DICKSON: Right.

MR. SIEMON: Why would that make them have to be in the manufacturing world?

MR. DICKSON: According to the recommendation you guys just put out --

MR. SIEMON: You're supporting it. I'm asking you why. I'm baffled by it.

MR. DICKSON: Well, I mean, the way it happened for us, I mean, our private label has been certified now for, you know, three, four years under the standards or since these standards were out. We have certified our private label because in our minds, you know, we make the labels, but we also specify the formulations of the products. We specify what types of ingredients can be used. We basically have such a
huge hand in creating those products that it never
crossed our mind that we might not be certified for
that.

MR. SIEMON: You also certify your
retailers, your houses and all of that kind of thing.

MR. DICKSON: Right.

MR. SIEMON: But the label part, just
everybody has got to be involved with labels. I just
don't see that as a manufacturing role. So I just had
to ask that question.

MR. DICKSON: You mean if a retailer
simply has no other hand in the production of the
product except for making the label, just has their
name on it?

MR. SIEMON: Yeah.

MR. DICKSON: And it is certified
otherwise?

MR. SIEMON: Yeah.

MR. DICKSON: I don't know. I mean,
that's --

MR. SIEMON: Well, I'm asking your
opinion. We'll talk about it during the committee.
MR. DICKSON: In my opinion, if a retailer is just putting their name on a product that was formulated and produced totally separately by other folks who are certified processors, then maybe that retailer doesn't need to be certified.

CHAIRPERSON RIDDLE: Bea and then it looks like Julie or Andrea. Oh, Andrea.

MS. CAROE: Well, George, just not to cut this short, but we do have a lot of comments. We will get into that when we go through the recommendation because it does specify what gets you into the manufacturing realm, and as Joe has pointed out, there are activities that really bring a product to be, and those activities are regulated by the regulations. So we're covered.

CHAIRPERSON RIDDLE: Back to Bea.

MS. JAMES: I just wanted to ask you when you read the recommendation, does it say to you that if a retailer is involved in the process of label making that they should be certified for a private label product?

MR. DICKSON: I don't have the
recommendation in front of me, but I think that it --

MS. JAMES: I'm just asking because I want
to make sure that we are really clear.

MR. DICKSON: My understanding of that
recommendation when I read it is that basically
retailers are exempt from certification as long as
they don't process and process is defined as, you
know, cut, cure, mix, et cetera or otherwise
manufacture.

This recommendation to me defines
"otherwise manufacture" to include the creation of
labels, formulation of products, procuring ingredients
for products, et cetera, and that's right from the
recommendations.

MS. JAMES: Okay. So may be need to be
more clear on that because if a retailer says, "I like
that color" from our label, then that's about the
extent of their label making, then they would not
necessarily need to be certified.

MR. DICKSON: Right. Yeah, that should be
clarified.

MS. JAMES: So we can clarify that.
CHAIRPERSON RIDDLE: Yeah, that is committee work.

Julie.

MS. WEISMAN: But I do want Joe's opinion.

You said that if they're only making a label and nothing else, that then they don't have to be certified, but my question is: do you think are they allowed to if they want to be?

PARTICIPANT: Voluntarily.

MS. WEISMAN: Voluntarily?

MR. DICKSON: Voluntarily? Absolutely.

MS. WEISMAN: Okay. There's no reason that that should not go out.

MR. DICKSON: You know, I haven't thought about that because what we do is go different from that situation.

MS. WEISMAN: I understand.

MR. DICKSON: I hope it's something you guys take up in your discussions of this, but I can't think of an argument against that retailer being voluntarily certified.

MS. WEISMAN: Okay. Thank you for your
opinion.

MR. DICKSON: Thank you.

CHAIRPERSON RIDDLE: Okay. Richard Theuer and then Kevin Engelbert.

MR. THEUER: Good afternoon. I'm Richard Theuer, a consultant from Raleigh, North Carolina, and as a former Board member of the NOSB from the original '93-'95 crowd and as a TAP reviewer more recently, I applaud the efforts of the Materials Committee to clarify the interpretation of the definition of synthetic and to solicit the input from industry and the public because it's a task that has long been needed.

Over the past 12 years, the definition of synthetic or the application of the definition of synthetic to materials has been arbitrary, maybe capricious, ambiguous, and frequently inconsistent.

MR. SIEMON: Some of your best work, huh?

(Laughter.)

MR. THEUER: Well, George, I have proof. I'm reading from a TAP review dated April 4th, 2002, where someone, not me, said impure shellac appears to
be a natural product, et cetera. However, after treatment with ethanol and clarification with activated carbon, which is not on a national list, shellac is unquestionably synthetic.

Getting closer to home, a Ph.D. biochemistry with food industry experience in the Eastern U.S. made the great comment that the steam explosion process may yield clean cellulose without the use of harsh chemicals. If this is true, wood cellulose from those steam explosion process may be acceptable for inclusion on the national list, the temperatures involved, 200 to 250 degrees Centigrade, are within the capability of a home oven. Mine goes to 550 degrees F.

So the NOSB might consider it acceptable.

So that's another definition that we're in the position of Alice when she asked Humpty-Dumpty about a word, and he says, "When I use a word it means just what I choose it to mean, neither more nor less."

Therefore, I think it's extremely critical that the document that you produce as guidance to the Secretary, giving more flesh to synthetic is
absolutely critical, and it's critical for a petitioner so that he's dealing with a full deck rather than one where half of the cards seem to be missing.

And I notice that in Recommendation 3 from the Inspector General that final procedures will be completed by September 30th, 2005 for new procedures on petitions and TAP reviews, and that information is desperately required so that a petitioner and a TAP reviewer can do a decent job because many of the nontechnical members of the NOSB historically have relied upon the TAP reviews, and it's obvious the TAP reviewers didn't know exactly what the definition meant and applies a variety of interpretations.

The other thing I would like to emphasize is in the sunset process, when you see a TAP review and you read the determination of synthetic or nonsynthetic, be skeptical. Be extremely skeptical because I thought I did pretty good jobs on those, and I was out to lunch on that one.

Thank you.

CHAIRPERSON RIDDLE: Thanks.
Kevin Engelbert and then Henry Perkins.

MS. ENGELBERT: Thank you to everyone, the NOP and the NOSB members, for hearing us today.

I'd like to make a quick comment about the number of dairy farmers that are here this time as opposed to last time. Some of you have a dairy farming background or work with farmers and realize just what is involved to get a dairy farmer off the farm. And at the first meeting that we were at in March or February and March, one of us heard the comment from a person talking on a cell phone in the lobby of the motel saying that the lobby was swarming with dairy farmers.

Now, our harvest goes on year round, but spring, summer and fall add even more to our time constraints, and the fact that there are fewer numbers here shouldn't be an indication that we don't believe that this pasture issue is unimportant, actually that there are any of us here is quite remarkable because the sacrifices that we've made and the people that are at home doing the work for us are very, very large.

And the reason we are here, again, is
because of this pasture issue. We believe that pasturing ruminants has already been defined many, many years ago, and that this standard is coming under attack by various people or organizations whose motives are less than sincere.

Growth in our industry can come about with pasture based agriculture, and that isn't a restrictive component. We believe that pasture is what nature has intended. It's what makes animals healthy and it's what keeps them healthy.

And we realize that this process is slow and that, while some of us are somewhat discouraged by things that have taken place, we won't give up. We will continue to pursue this matter because there's too much at stake to not get it right.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Kevin.

Okay. Henry Perkins and then Lisa Engelbert.

MR. PERKINS: I'm Henry Perkins, a dairy farmer from Maine. I was here this spring, and I don't think I'm going to repeat what I said. You'll
have taken it well and did a pretty good job with what you did with it.

The 120-day think in the "should" versus "shall," I think you in the guidance document, I think you can get that all straightened out.

Now, the 30 percent thing that people are questioning, I personally am not speaking for anybody other than myself, but I don't really think the 30 percent thing should be cut in stone. It seemed like you wanted a number to work towards, and we came around and gave you a number.

Now, whether it's 20 or 40 or 30 I don't think is a very important thing, but you wanted a number. So you got a number.

Now I don't know what I'm going to say, but I know what I want to say. I don't believe I'll be back here. It's kind of like pissing into the wind. It seems like this table sometimes fights with this table. I could be wrong, but there's an awful lot of ass-dragging going around here. So I just don't -- I've got better things to do. So you won't see me again.
Okay? If you've got any questions I'll answer them.

CHAIRPERSON RIDDLE: Question.

MR. KARREMAN: Henry, Mr. Kastel mentioned a Maine farmer with I think it was 25 cows and the pastures were, I guess, not right next to the barn and that kind of farm shouldn't be certified. Do you agree with that, I mean, just because the cows have to go a little further away from the barn?

MR. PERKINS: Okay.

MR. KARREMAN: He mentioned Maine and you're from Maine.

MR. PERKINS: I don't know who it is.

MR. KARREMAN: No, no. I don't -- I'm just saying --

MR. PERKINS: Okay.

MR. KARREMAN: -- being a --

MR. PERKINS: All right. It's not me.

MR. KARREMAN: Right. I knew that.

(Laughter.)

MR. PERKINS: Okay. Am I under the time limit now?
CHAIRPERSON RIDDLE: No, this is --

MR. PERKINS: This is off the record.

Okay, all right. Let's say you have a farm and this guy wants to milk organically, and he is surrounded by houses or mountains. No way he can pasture. Okay? He can't be organic. He can milk conventionally.

Now, if you have this person that has this farm and he is surrounded by a corn field, he can pasture. So he should pasture. What's wrong with him seeding down his corn field? And he can. If he doesn't want to, he's off the list.

He can ship milk conventionally. We're not trying to deprive him of shipping milk, but if it's not produced by a pasture based feeding system, then it can't be called organic. That's just my opinion of it.

MR. KARREMAN: Do you think the consumers know how much dry matter that the cows are taking in when they're out there? Are the consumers who we're trying to protect --

MR. PERKINS: No, I don't.

MR. KARREMAN: -- do they just want to see cows outside on the green grass? That's my belief. I
don't think the consumers really know that much about dairy nutrition, but they want to make sure that cows are out on pasture.

MR. PERKINS: Yeah.

MR. KARREMAN: But I don't think they're going to hold each organic farmer when they go and drive by and they say, "Hey, that's an organic farm. Are they getting X amount of dry matter?"

What's your?

MR. PERKINS: I agree with you, but are you going to take this five acre thing, little piece of pasture and let's put 300 cows on it? Isn't that --

MR. KARREMAN: That wasn't what I meant.

MR. PERKINS: Yeah, I know.

MR. KARREMAN: There might be ten cows an acre or six or three or one or whatever, but I guess, you know, I just really firmly do believe that cows have to be out on pasture to be organic, but I have a tough time with extra conditions on that after that.

MR. PERKINS: Okay. You're all right with the 120-day thing?
MR. KARREMAN: Oh, yeah.

MR. PERKINS: Yeah. So am I.

MR. KARREMAN: That's why I was asking about that small farm where the guy had to send his cows to a neighboring field or whatever, you know.

MR. PERKINS: Can he send them to a neighboring field?

MR. KARREMAN: Yeah. That would be okay as long as they're out in the field, correct?

MR. PERKINS: Yeah, but if he couldn't send them to a neighboring field.

MR. KARREMAN: Well, I would tend to agree with you.

MR. PERKINS: And he had nothing out around his barn but just enough space for a dry lot because once they've been out there a week, there's nothing.

MR. KARREMAN: Right.

MR. PERKINS: Well, then he's not organic, right?

(Laughter.)

MR. KARREMAN: Yeah. Good question,
CHAIRPERSON RIDDLE: Bea?

MS. JAMES: Yeah, I just wanted to make a comment because you're the second person who has kind of divorced themselves from these meetings, and I just wanted to say that I think all good relationships take time and effort, and I hope that the community of people that come here to lobby can continue to see this as a long-term relationship and not immediate results because sometimes good things take time.

So that's my comment.

MR. PERKINS: Okay. You didn't want me to respond to that though, did you?

MS. JAMES: Sure.

CHAIRPERSON RIDDLE: It's up to you.

MR. PERKINS: I'd rather go home.

(Laughter.)

MS. JAMES: So would we.

CHAIRPERSON RIDDLE: You had one more thing?

MR. KARREMAN: I just want to add on to what Bea said. I think it was back in 2001 when I
first came to these meetings standing right where you are petitioning for medically necessary materials to relieve pain and suffering in organic livestock, and I'm still waiting. So --

PARTICIPANT: Look where it got him.

MR. KARREMAN: Yeah, I know. You might be up here some day, but stick with it. Okay? Stick with it. We're trying to do it right.

MR. PERKINS: Yes, I know that. I know that.

MR. KARREMAN: I mean, so it's --

MR. PERKINS: And it looks to me like you've done a very good job and you kick it over to this table, and they just punted it right back to you.

MR. KARREMAN: No, I think they're trying to do it right as well. So once we get, you know, everybody doing it right, we'll be all happy.

MR. PERKINS: Okay, but I don't want to die of old age first.

(Laughter.)

MR. PERKINS: Okay.

CHAIRPERSON RIDDLE: Rose.
MS. KOENIG: You know, speaking as a farmer, I know it's really hard for all times growers to operate in different worlds, and you just have to realize that your realm sometimes is hard for other people to understand what you do, you know, how you communicate, but everybody has different roles in this process, and the farmer's role is integral to getting the whole industry going.

So I don't think throwing your -- you know, this is impacting you and you can choose to be involved or not to be involved, but just because you don't like necessarily conversation or people's opinion I don't think is a basis to ignore something that impacts your operation, and this really does.

So that's just my comment.

CHAIRPERSON RIDDLE: Yea, Nancy.

MS. OSTIGUY: I just have a quick one that's along the same lines. The phrase I like is that democracy is messy, but the alternative is very unpleasant. So we really want people to come in and tell us that we're doing this wrong or right or whatever and just help us get it right, and even
though it's incredibly messy.

MR. PERKINS: You're giving me hell, aren't you?

(Laughter.)

MS. OSTIGUY: But we want you to return some time. When it's important, show back up again.

MR. CARTER: I just have one question. Are we upwind or downwind?

(Laughter.)

MR. PERKINS: My olfactory senses have been burned out so long ago that I can't tell.

(Laughter.)

CHAIRPERSON RIDDLE: Thanks, Henry.

MR. PERKINS: See you later, maybe.

CHAIRPERSON RIDDLE: A sign of hope there. Okay. Lisa Engelbert and then Sally Brown.

MS. ENGELBERT: My name is Lisa Engelbert. I am co-administrator with NOFA New York Certified Organic in New York State.

I'd like to take an opportunity to thank the NOSB and the NOP for the hard work that they're
putting in not only clarifying these standards, but hopefully maintaining strict standards. It's appreciated.

Our organization is currently working with 104 certified organic dairies. We have 17 more in transition. I can't think of any of those 104 or the 17 that aren't meeting the new guidance of the 30 percent dry matter from pasture. We may have to tweak our organic system plan a little bit to be able to verify that, but it shouldn't be really difficult at all. I just wanted to put that out there.

I support the recommended rule changes, and I've got a couple of things. I have a joint statement from the NOFA, the Northeast Organic Farming Association of New York, Vermont, Connecticut, and New Jersey. I'm not going to read it. It's very redundant; basically says the same thing that NAPA, MIPA, Cornucopia, and many other agencies have already said. I have given that to Katherine.

I am going to read a statement from NOFA New York, which is Northeast Organic Farming Association of New York.
Our organization, the Northeast Organic Farming Association of New York, would like to reiterate our support of the committee’s recommendation for clarifying the regulations, the organic system plan, detailing the minimum dry matter intake standard of 30 percent and requiring descriptions that will assist producers in understanding the significance of pasture management in organic production.

We would also like to reiterate that the 30 percent dry matter intake standard is a minimum target, not a maximum. This minimum standard allows for the seasonal and regional variability, while still providing a standard that is reasonable for ruminants.

Lastly, we would like to commend the NOSB for its work to date and urge the committee to continue the job of upholding the integrity of the USDA’s national organic program. This certification program is providing the link between food quality and healthy farm management practices.

Problems of lack of clarity or manipulation in order to allow for lower farm...
production standards must continue to be addressed as they arise. We understand that there's a great deal of interest in meeting the demand for organic food products. Farmers and businesses can meet these standards if they're the standards that are currently in place.

The role of the NOSB in reviewing the many issues that relate to what appears fairly simple guidance is appreciated.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Lisa.

Okay. Sally Brown and then I have a few comments from Lynn Coody.

MS. BROWN: Good evening. I'm a dairy farmer from central New York. We've been farming for 27 years. The last four years we've shipped organically, the best thing we've ever done.

When we did this, we initially did it for the economic reasons, but we've done a complete paradigm shift in the way that we treat our animals, and that's also the way we treat ourselves.

My daughter calls us now affectionately
Granola Crunchies.

I would like to thank you for the time and the attention that you're giving to this pasture issue, and I believe that the requirement to pasture is key to providing quality feed and a healthy environment for our animals. This allows us to produce a healthy product with the health benefits of CLAs and Omega-3s that benefit both man and beast.

Using the simple elements of nature helps us to realize the wholesome goodness that the organic consumer has come to expect, appreciate, and demand. They realize that the pasture and the ingredients and the benefits of pasturing is what separates our product, our organic product, from our commercial counterparts as they strive to feed their families with the purest and healthiest product available.

As a dairy producer, my husband and I support and request that the Board pass the pasture guidance document with the minor changes supported by all the organizations you've heard of previously, NOPA, MOPA. All of these little names drive me nuts, and the Cornucopia, oh, and with the support of both
consumer and producer organizations.

We request immediate action from the Board upon acceptance asking you to distribute these requirements to certifiers, allowing them to enforce the regulations on any farm that is not currently compliant.

I would also like to comment on the existing regulations that require a last 30 gestation for replacement animals and ask that the Board keep that in place, and also not to reopen the law in response to the Harvey's lawsuit.

Thank you for your consideration.

CHAIRPERSON RIDDLE: Thank you, Sally.

MS. BROWN: Yes, sir.

CHAIRPERSON RIDDLE: No, I said thank you. I have after Lynn is John Cox, and I have comments from Lynn Coody who signed up to speak, but couldn't make it here and then asked me to summarize her comments.

And her comments are directed to the Accreditation Committee's recommendation on peer review panels. So something we haven't heard about,
and I will be brief for the sake of time here.

Just for background, Lynn's business is organic ag. systems consulting, provides assistance to certifiers meeting accreditation requirements for NOP, ISO 65, and IFOAM.

And Lynn offers some suggested changes to the definition of peer review panel that the committee is recommending be changed as a rule change, and I won't go through those, but just make note of that.

And then the committee's draft calls on a rule change for the accreditation section of the NOP, and Lynn opposes that and encourages that the draft be restructured as guidance.

And then she submitted some detailed changes in revision mode for how that should be reconsidered. So I just ask the committee to take that into consideration before the action item tomorrow.

MS. JAMES: Jim.

CHAIRPERSON RIDDLE: Yes.

MS. JAMES: I just want to add that that information she put together was very well thought out
and very well written, and that we should definitely take a look at that.

CHAIRPERSON RIDDLE: Yes, all right.

MS. JAMES: Yes, and I have questions for Lynn.

CHAIRPERSON RIDDLE: Well, I'll entertain questions. No. All right.

PARTICIPANT: Jim, how will we be able to see that?

CHAIRPERSON RIDDLE: This is in your meeting book in the packet for the Accreditation Committee, but I have the colored version because I printed it off on my own printer.

Okay. John Cox, and then next up would be Gwendolyn Wyard.

MR. COX: Good afternoon, Mr. Chairman and members of the Board. My name is John Cox. I'm a lawyer here in Washington, D.C., and I have proxies today for three organizations that wish to comment concerning the sunset review. I understand that my comments will be limited to ten minutes; is that
correct?

CHAIRPERSON RIDDLE: Yes, that's correct.

MS. COUGHLAN: Wait a minute. We'll have
to start over. All right. Go.

MR. COX: Thank you.

First I would like to comment on behalf of
the American Spice Trade Association, ASTA. ASTA
represents the interest of approximately 300 members,
including companies that grow, dehydrate, and process
spices.

ASTA members and their customers produce
spices and seasoning blends certified as organic under
the National Organic Program.

ASTA requests that the National Organic
Standards Board renew the exemptions allowing the use
of the following items as nonagricultural, nonorganic
substances allowed as ingredients in or on processed
products labeled as organic or made with organic
specified ingredients or food groups.

Acids, citric and lactic, used as
acidulate to adjust for pH stability; colors used to
add color to seasoning blends; flavors used to add
flavor; sodium bicarbonate used as buffer and neutralizer; carnauba wax used as a formulation aid, lubricant, and release agent; yeast, autolyzate, Baker's, brewers, nutritional, and smoked used as a flavor ingredient; alginates used to maintain texture; ascorbic acid used as an antioxidant; chlorine materials used for disinfecting and sanitizing food contact services; lecithin used as an emulsifier for product stability and solubility; silicon dioxide used as an anti-caking agent; and xanthum gum used as a thickener.

The items listed above are important to ASTA members as either components of certified organic spice or seasoning blends or as processing aids used in their production. Therefore, ASTA requests that the NOSB renew the exemptions allowing their use.

ASTA also requests that the NOSB renew the exemptions allowing the use of the following items as nonorganically produced agricultural products allowed as ingredients in or on processed products labeled as organic or made with organic specified ingredients or food groups.
Corn starch used as a flavor carrier, gums, arabic, guar, locust bean, carob bean used as flavor carriers or emulsifiers.

ASTA is grateful for the opportunity to provide comments during the sunset review, and we are available to provide additional information to the NOSB.

The second organization that I'm representing today is the Flavor and Extract Manufacturers Association of the U.S., FEMA. FEMA is the national association of flavor manufacturers representing the vast majority of flavor companies in the United States. FEMA members create flavors for use in a wide variety of food and beverage products, including those certified under the national organic program regulations.

FEMA requests that the NOSB renew the exemption allowing for the use of flavors from nonsynthetic sources only and not produced using synthetic solvents, carrier systems or any artificial preservatives as nonagricultural, nonorganic substances allowed as ingredients in or on processed
products labeled as organic are made with organic specified ingredients or food groups.

The Organic Foods Production Act provides a strong presumption in favor of the use of natural ingredients in organic products. As you know, flavors are currently permitted in certain categories of organic products under NOP regulations. FEMA requests that the NOSB renew this allowance under the sunset review provisions of the OFPA.

Organic food and beverage producers use natural flavors in very small amounts, but they provide significant enhancement to organic products. When organic commodities are processed, they may lose taste. This is an issue with all processed foods. While the foods may be good for you, consumers are unlikely to eat foods that do not taste good even if they are good for you.

The addition of flavors to organic products makes the food more acceptable to consumers. Therefore, we strongly encourage the NOSB to renew the exemption for flavors.

FEMA also requests the NOSB renew the
exemptions for additional items permitted under Section 205.605, including acids, citric and lactic, colors, enzymes, sodium bicarbonate, carnauba wax, yeast, bakers, Brewer's, nutritional and smoked, alginates, ascorbic acid, chlorine materials, glycerine, silicon dioxide, and xanthum gum.

FEMA also requests the renewal of the exemptions allowing the use of the following nonorganically produced agricultural products allowed as ingredients in or on processed products labeled as organic or made with organic specified ingredients or food groups: corn starch, gums, arabic, guar, locust bean, and carob bean, lecithin, and pectin.

FEMA is grateful for the opportunity to comment during this sunset review, and we are available to provide additional information to the NOSB.

The third and final organization that I may representing today is the International Association of Color Manufacturers, IACM.

IACM is the International Association of Color Additive Manufacturers. IACM's members
manufacture and market colors that are incorporated into a wide range of foods, drugs, and cosmetics. IACM members also produce colors that are currently permitted in foods and beverages certified as organic under the NOP.

IACM requests that the NOSB renew the exemption allowing for the use of colors for nonsynthetic sources only as nonagricultural, nonorganic substances allowed as ingredients in or on processed products labeled as organic or made with organic specified ingredients or food groups.

Continuing to allow the use of colors from nonsynthetic sources only as nonagricultural substances allowed as ingredients in organic products is consistent with the mandates of the OFPA.

In addition, it will allow organic food and beverage producers to continue to utilize these colors which enhance the value of their products to organic food and beverage consumers.

IACM is grateful for the opportunity to comment during the sunset review, and we are available to provide additional information to the NOSB.
Mr. Chairman, this concludes my comments.

I appreciate the attention of the Board.

CHAIRPERSON RIDDLE: Thank you, John.

Kevin and then Rose.

MR. O’RELL: I just had a comment on your 606 recommendations. You talked about organic corn starch native, and there are native corn starch nonorganic, but there are organic sources of corn starch available. I’d just like to know your comment on that.

Have your associations or any members of the associations looked at these organic sources?

MR. COX: I can’t tell you directly. We haven’t had dialogue on that issue. I would be happy to ask them about it.

MR. O’RELL: As well as the availability of some of the gums. Organic locust bean gum is available as well.

MR. COX: Yes.

MR. O’RELL: So knowing that availability I don’t know if that would change your comments.

MR. COX: I trust they’re aware of the
market and still advance the request, but I will go back to them on that.

CHAIRPERSON RIDDLE: Okay. Rose.

MS. KOENIG: Two questions. Well, one comment and then a question. Well, two questions actually.

The way that you have them listed, is that to suggest that -- you have a use specified that's not what's on the list, on many of these, and I don't know if that's for you to make it clear of what your understanding of it is or if you're, in fact, suggesting annotations, which means that you would not agree with the way it's on the list.

So I need clarification on your statement because if you read the docket, it's to provide comment on the way that as the list appears.

MR. COX: We do not intend to ask for any annotation in these comments. The indication of how it's used is an attempt to let you know the importance of the significance of it. If a use has been listed in the comments that's inconsistent with the regs., then that's an error on my part.
MS. KOENIG: I don't know if you submitted these as a sunset material comment, but --

MR. COX: Planning to tomorrow.

MS. KOENIG: Okay. What I would suggest is if you're going to list those, if you are in agreement with the way that it appears on the list and its legal implications of its use under the way it appears on that list, I would suggest that you write your comments as it would appear on the list because then it would be clear that you're not suggesting that you're limiting or changing a use.

MR. COX: So perhaps just the item itself.

MS. KOENIG: Correct.

CHAIRPERSON RIDDLE: Or if you do put that "uses" in parentheses, an explanation, a paragraph explaining that you're giving examples of uses, that you're not calling for a change in annotation or something.

MR. COX: Okay. Thank you.

MS. KOENIG: And then the second question I had, since you list yeast under the way it's characterized in the book, I just want to make a
comment that, you know, you're asking other comments that your industry could provide. It's likely that we may not make a decision on yeast at this meeting. I don't know, but we certainly welcome comments on yeast since it applies to things that your three companies that you're representing produce.

MR. COX: You mean you would welcome comments from our companies concerning --

MS. KOENIG: Well, anything, but I'm saying --

MR. COX: -- designation of yeast as agricultural?

MS. KOENIG: Well, I am just saying that your final statement was there anything that, you know, we should be aware of or I don't know what your last comment was, but it suggested that --

MR. COX: A general invitation.

MS. KOENIG: Right. So I'm just saying that there are things if you look on our Website, there may be things that are applicable to your companies, and I just encourage you like I encourage farmers to keep involved and perhaps provide comment
on those types of issues also.

MR. COX: Okay.

MS. KOENIG: But I appreciate your list.

MR. COX: Thank you. Thank you.

CHAIRPERSON RIDDLE: Thank you.

Okay. Gwendolyn Wyard and then Rick Segalla.

MS. WYARD: Greetings, Mr. Chairman, Board members, officers of the NOP, and ladies and gentlemen of the gallery. My name is Gwendolyn Wyard. That's W-y-a-r-d, and I am the processing program reviewer for Oregon Tilth. I have a degree in fermentation science, and I am a practitioner of making wine and beer.

I'm here today on behalf of Oregon Tilth to provide comment on the recommendations relative to agricultural and nonagricultural substances.

First, I want to say I really appreciate the comments and the discussion that have occurred here today regarding this matter, and it's good fodder or, rather, substrate, and I plan to take it back and digest it all and hopefully prepare thoughtful
comments and suggestions for Wednesday.

But here today I do want to get in a ten cents, and first and foremost, I want to thank you. Oregon Tilth appreciates the NOSB's efforts to bring clarity and consistency to this very challenging issue.

We also thank you for acknowledging and taking into account the decision tree that Oregon Tilth proposed to the Board in October of 2004.

Oregon Tilth feels that the determination of agricultural versus nonagricultural should focus on whether a substance is derived from a living organism and has been intentionally gathered, raised, cultivated or propagated domestically or in wild harvested areas.

In the case of yeast, the breeding stock can be gathered from the wild or on a farm and then taking to a facility where it is maintained and further processed for use as a food. I personally have produced and handled wine in this fashion, and it's good.

If you were to adjust the first box of the
decision tree to focus on biologically derived material and how it's cultured and remove box number two which deals with bacterial cultures, you could run the substance through the rest of the decision tree and essentially verify whether or not it's synthetic or nonsynthetic.

From there if the substance falls out of the tree as agricultural, it can either be petitioned for inclusion onto 205.606 where the evaluation criteria for allowed and prohibited substances, methods and ingredients would be applied, or reviewed for organic certification according to OFPA and the National Organic Rule.

This approach works well because it allows for the organic production of yeast or other like substances that could be otherwise classified as nonagricultural and, therefore, not eligible for organic certification.

Oregon Tilth feels that we should have a rule that encourages in all cases possible the organic production and certification of ingredients or products that are intended or allowed for human or
livestock consumption. This is consistent with Oregon Tilth’s mission statement and it is consistent with the intent of OFPA.

I’m here asking you today to please reconsider your recommendations, particularly the guidance document defining agriculture as it applies to agricultural products and continue to work on this matter.

I thank you very much for your time.

CHAIRPERSON RIDDLE: Kevin.

MR. O’RELL: Gwendolyn, I just want to be clear on this. Are you saying that you would be in support of bacterial cultures, them being available for agricultural?

MS. WYARD: I do. I think we need to start with living organisms and then you have to go on with your review from there, but I think if you allow yeast, you also have to allow bacteria. I think it’s only consistent and fair that way.

MR. O’RELL: And in the conversation we were having earlier in terms of having a standards crop or livestock to have a single cell microorganism
fit in for an organic systems plan, do you see --

MS. WYARD: You would have to look to see
if that yeast or bacteria, if you're filling out your
handling plan, would you fill out the wild harvest
portion of it? Would you fill out the crop portion of
it?

You would have to see if you could
appropriately fill out a handling plan. I think you
could do that for yeast. I would have to further look
into, you know, different possibilities of bacterial
cultures and how that would work, but right now I can
say I've done it with yeast. So there's at least one
good example of where it could be included in both the
farm and the handling plan and work.

CHAIRPERSON RIDDLE: Rose.

MS. KOENIG: Just describe -- I mean,
since it sounds like you've certified yeast already.
You have?

MS. WYARD: In my own practice, I've made
wine where I've collected the naturally occurring
yeast on the farm and have used that naturally
occurring yeast to carry out the fermentation and then
have maintained that culture over time.

I've also, as a certifier, actually in my independent world, going back as an independent inspector, also did certify an operation that was making blackberry wine and also was collecting the naturally occurring yeast on the far.

MS. KOENIG: So then you would certify it to the wild? So it's wild harvest standards in addition?

MS. WYARD: Right.

MS. KOENIG: So in your mind as long as the yeast that people are talking about are collected each time you make -- you know, you have to get your inoculum just like the wild harvest standards state. You would have to go to the field, get a new culture, and then inoculate and make sure that the area that you're collecting it from meets the parameters of wild harvest, which means that you can assure that there's no prohibited substance that's applied to whatever you're fathering this microorganism.

So you can check all of those things and feel assured that any field that you might collect
that, and I agree with everything you said, except for having to go out each time. I mean, I would only go out, well, in some cases once and collect that naturally occurring yeast, and then I would maintain a culture, and that maintaining of the culture would be processing. That would be covered under handling.

MR. O’RELL: I assume you’re going to be around tomorrow when we have our discussion.

MS. WYARD: Yes, I’ll be here for the rest of the time.

Thank you.

CHAIRPERSON RIDDLE: Okay. Rick Segalla and then I'd ask Nancy Cook to give a report on the Pet Food Task Force because she needs to leave.

MR. SEGALLA: I am Rick Segalla, one of two certified dairy farmers from Connecticut. I milk about 100 cows now. When I was originally certified, went for certification in ’79 or ’99, I was milking about 135 cows.
And growing up in Connecticut, the Extension Service preached wall-to-wall corn, grow your energy, buy your protein, and that's what my farm consisted of originally.

And going to the organic process, my corn fields are now my pastures. I rented some land a little bit farther out to grow some of my other crops, and as for the 30 percent of pasture, I started out with the 135 cows, and as I developed my pastures and fed more and more pasture to my cows, I found that my four dogs take up a better part of my vet bill than my cows do. And I see my vet twice a year for pregnancy checks, and other than that the only time I've had them is for prolapse or something of that nature where, you know, you just can't do it yourself, and sometimes the vet can't do it either for you.

But it's conducive, I think. We go for the larger portion of pasture in our diet because it's healthier for the cows. You can sit there and say, well, gez, this farmer can't do this or can't do that, but either he reduces his numbers to work with the system that we're trying to set up and make it work.
It's not going to work at all because the consumers out there, you talk to consumers and the ones that are buying the organic milk, they know that pastured cows produce better quality milk. They know it. They know that they're out in the sunlight. They know that they're getting fresh product. They know about the fatty oils and acids and all of that stuff that people need, and they're not being fooled.

And if we allow so-called confinement dairies to survive in the organic atmosphere, they're not going to buy the milk because they're not going to, you know, readily the way that we would like them to do.

And also, if we allow these confinement dairies to move in, they're going to flood the market. They're always -- right now the handlers talk about, well, gez, we've got a little surplus milk now. Well, if we jump up production all of a sudden, there's going to be a lot of surplus milk, and then it's going to hurt the whole industry, and then there's going to be more of the smaller farmers going out and more of the bigger ones stepping in to take their place.
I want a place for my daughter to take over when I'm done. The farm was first bought by my mother's grandparents when they came over from Italy. They worked on the farm and then they bought it when it was sold, and it went to my mother and my father and now I'm trying to keep it going and keep it viable for the rest of us.

That's about all I have to say. Thank you.

CHAIRPERSON RIDDELE: Thanks, Rick.

Nancy has a question for you.

MS. OSTIGUY: Yes. Where in Connecticut?

My question is how urbanized is the area.

MR. SEGALLA: I'm in the northwest corner of Connecticut. There's about 4,000 people in town, and there's probably with conventional dairies and myself, there's more cows than there are people. For some reason we're just keeping at it. I have one farm in town that milks 700 cows. I think their farthest field is probably 40 miles away, which they grow crops on and bring in.

I have another farm that has got 400 cows,
and most of his land is beyond me. So I watch his trucks haul manure one way, and I watch his trucks haul feed the other way, and that's not sustainable. That's foolish, I think. With the price of fuel going up, I don't expect some of these farms to be in business because it just isn't going to work.

I mean, we're getting into the position where we're seeing higher fuel prices and everything else, and to put more vehicles on the road and move things around more and more when they don't need to be, I think, is foolish. I mean for some people they say it's good business, but you're making money for somebody other than yourself, and you know, I was number four in the State of Connecticut to get my certified pesticide license, and I was the first one in our area to put a sprayer on my corn planter, and I did away with all of that.

I mean, my health at the end of the spring plant, I was sick for two or three months in the summer because of these chemicals that I was handling, and I don't believe we got an honest answer from the chemical companies on what it does to the environment.
And after I stopped using chemicals, I would go out and plant my corn fields and it would take three to four years before I would see the actual response for the new crops. You'd see areas. Being I get to spray it myself, there were times when you would double spray and things like that, and you go back and plant it and you watch the crop grow funny. So you know it's still there.

And if you know how chemicals work either as a growth inhibitor or as an organophosphate that affects the brains and the operation of the system, you know, I mean it's basically rat poison. So it's in the system, and it gets into our food. Somehow or another it's there, and we've got to stop it, you know.

But that's my feeling. Thank you.

CHAIRPERSON RIDDLE: Thanks for coming.

MR. KARREMAN: I actually do have a question.

CHAIRPERSON RIDDLE: Okay. Hugh has one.

MR. KARREMAN: When you took your corn out and put it in the pasture, I'm just curious because
where I'm in Lancaster County, we have a lot of
landlocked farms, after size about 60 to 70 acres.
And so if they take land out of production for
pasture, they're generally buying in with higher fuel
prices, grain or other forages from Nebraska, from
Illinois and whatnot.

I'm wondering, you know, is that -- I hate
being the devil's advocate and everything -- but I
mean, it's just a reality thing. I mean if pastures
are, let's say, maximized and you take land out or
corn, let's just say then is it a sustainable thing if
you're going to be importing from across the country.

MR. SEGALLA: If you do a good job with
pasture management, the tons of dry matter that you'll
receive off the pastures will more than equal after
you've done it and, you know, maintained the
microorganisms and stuff in the soil the way you
should be will equal what you're getting off from
these other crops.

I mean, I see it in my alfalfa. I mean my
alfalfa crops, my neighbors will go by and they always
say, geez, your alfalfa looks good. Well, I'm doing
it organically. I'm not buying the high priced chemicals and all that stuff that they do. Their stands don't last. I've got stands that are five and ten years old.

Well, when I started going organic it's like everybody is going to look at you kind of funny, and I think that's the problem. You know, if they're not doing what their neighbor is doing, then maybe they aren't doing it right. But maybe the neighbors aren't doing it right.

I mean, it was done that way before and people survived.

MR. KARREMAN: Yes. No, I agree. I think it's just a paradigm shift basically from high production, let's say, down to lower production. I would imagine your production has probably dropped.

MR. SEGALLA: My production has dropped some, yes.

MR. KARREMAN: All my farmers have, yes.

MR. SEGALLA: You can't expect to produce like you would on, you know, a conventional herd and feed them everything. I mean I have neighbors that
were -- you know, if it came on the market, they tried it, from BST to what was it that Kodak had? Kodak produced a product that they used to feed to cows. What was it?

CHAIRPERSON RIDDLE: Well, this is --

MR. SEGALLA: But, I mean, what I'm saying is it just -- you know.

MS. COUGHLAN: In spite of the fact that we have to move on, what you have had to say has been very interesting at many levels, including your passion, and thank you.

(Applause.)

MR. SEGALLA: Thank you.

CHAIRPERSON RIDDLE: All right. Next we'll have Nancy Cook give a report on the Pet Food Task Force that Nancy is chairing, and while she's making her way up here, Ed Zimba is not here, is he? His name is down, but I think someone read a proxy on his behalf, and so Urvashi Rangan will be next and then Jim Kotcon.

So, Nancy, thanks, and please state your name for the record.
MS. COOK: Good afternoon. I'm Nancy K. Cook. I'm Vice President of Pet Food Institute, located here in the United States.

Do you like that? That's because there's one in South Africa, too.

Anyway, we're here in Washington, D.C., and I'm here today on behalf of the Pet Food Task Force set up by National Organic Standards Board through the handling group, I believe.

Well, who are we? We're organic producers, the manufacturers of organic products, manufacturers who have yet to make us single organic pet food, regulators, and then, of course, the ubiquitous trade associations.

Our charge from the group was to identify issues pertinent to the production of organic pet foods, including dealing with previously existing laws, and just in case anybody gets real worried about whether or not pet foods are regulated, there is the Association of American Feed Control Officials' handbook, their official publication. It's over 500 pages this year, and about 90 percent of that pertains
to pet foods, and that's before we make the first claim for being 75 percent or 70 percent or 95 percent or 100 percent organic.

Yes, it's a great place to be, isn't it? We have to look at labeling standards. We have to look at recommendations for the materials that we're dealing with, and we also have to make sure that we are conveying at the end of the day what organic really means back to the consumer.

So where are we? Well, we found that we're getting pretty good at conference calls. When we started out, some of us were speaking Irish and some of us were speaking Cockney, but we all think we have the same English language now, and we've pretty much worked our way around the same definitions. So one in June, one in July, and one in August just so we could make sure that we had something to report today has been a pretty active schedule.

The next scheduled call is about the middle of September.

We have determined that we have three areas of need: materials ingredients used for pet
food. There's a significant difference between those materials and what's available for livestock feed.

We need to look at the national list because there's certain nutrients that aren't on the national list for livestock feed, for instance, such as taurine which are essential for cat foods because cats can't make taurine arginine, which is derived from taurine.

And then finally, we have to look at those ubiquitous labeling requirements because the feed laws that have developed around pet foods since about 1962 have very specific naming requirements that we have to work with with all of the organic ingredients.

We have an outstanding group of people that are serving on this task force. Emily Brown-Rosen in the back here can slap me if I've said anything wrong, but she really works hard to keep me straight.

One of the major rules that we've come right slap up against is whether or not pet food is to be regulated like human food or like animal feed. Under existing laws in the states it's an animal feed.
We're finding that some of the regulations that to this point within NOSB have been developed around human food laws.

And to make it even more confusing, FDA is the controlling entity for pet foods in the federal government. So it just makes life really interesting.

We spend a lot of time on philosophical discussions, as everybody in this room, I'm sure, gets a chance to do, but to do that, we essentially had to do that to find out where we are at this point.

We really appreciate the support of Keith and his group, and without Emily and her team, we'd be in a lot of trouble. Trust me on this. I've learned a lot more about organic labeling processes and everything else I can think of that I ever thought I'd have to know, and I thank you for that opportunity.

If you have any questions, I'll be happy to bring those forth.

CHAIRPERSON RIDDLE: Dave.

MR. CARTER: Yes, thanks, Nancy. You mentioned the AAFCO book, and I know that on some of the things in the labeling there's quite a difference
in a draft code that you can say is made with three percent as opposed to under the USDA standards 70 percent, which when you come into those kind of things, which way is the task force looking at that?

MS. COOK: Well, you know, Dave, we've danced around that now for about three months. I heard a comment from Dr. Rod Noel, who is our direct AAFCO official on this task force, who in our last call was discussing that that might not be something that would be an opportunity to be used in dealing with organic pet foods at the three percent level.

It could be that there's going to be some melding of these two programs, where AAFCO actually has a subset of regulations for organic pet foods, and as I look forward at this and as I talk to the state regulators and some of these other folks, that's kind of what I'm feeling.

Now, that's just my thought sitting here, but to put it in a little perspective, I was five years as a state feed control official in Virginia before I came to BFI nine years ago.

So I kind of feel like if Dr. Noel and Dr.
Burkholder from FDA, who's also working with us on the
group, and I have an idea that that might be a way to
go, and if it works with what we need to do for
organic products, it may make life simpler rather than
harder.

CHAIRPERSON RIDDLE: Yeah, Andrea.

MS. CAROE: Just you had mentioned that
you're struggling with whether to consider pet food
feed or human food, you know, which track you're going
to go down. I just want to know kind of where the
line of thinking is with the task force. Which way
are you thinking you're going to go?

MS. COOK: Again, that's not something
that has been fully delineated at this point, but sine
it is considered to be animal feed under every state
law and under FDA, it's highly likely that it will be
an animal feed situation.

However, I've been working with Rod
Crossly on some issues, and I think some of you know
him. You know, again, it may be a situation where we
tweak the livestock definition and say livestock feed
except for pet food or something like that. There
might be something that's easier to do and makes it
more simple throughout.

But remember that everything I've given
you here is just kind of top note from where we've
been thinking and not anything that we've decided on
at this point.

We're lobbying Keith for a face-to-face
soon because body language over the telephone just
doesn't get it.

(Laughter.)

MS. COOK: I really like learning -- I'm
on conference calls all the time, and I have a rule,
two calls in a meeting because I really get tired of
"no."

CHAIRPERSON RIDDLE: Keith.

MR. JONES: First of all, I do want to
thank the task force for the work that they've done to
date, particularly Nancy and Emily. Nancy has done a
great job in terms of keeping us focused and keeping
us moving forward. Emily has done a marvelous job in
making sure that everything is recorded and that we
really have an accurate record of all the meetings.
Dave, to go to your point, one of the things I think that is emerging, there's no crystal ball that we can look in, I think, and see how this is going to work out, but there is an emerging recognition, I think, of the three labeling categories that exist, the made with, the organic, and the 100 percent. That seems to be -- I saw some kind of coalescing this last call of a recognition that we really didn't want to and certainly we weren't pushing an overturning of the apple cart, but a full examination of the NOP labeling regulations and also AFCO and kind of where those go.

What I see is that one of the things I've learned is that while people talk about pet food being manufactured in accordance with NOP regulations, in fact, when you scratch the surface what in my mind is being manufactured is a very narrow product line. There are no cat foods being manufactured because of the lack of taurine on the national list, and so what we've had through the conversations over the conference calls is just a recognition that while the regulations may be sufficient to allow a very narrow
spectrum of product to be produced, they're really perhaps not as robust as we'd like to see for an array of pet food products, that I think at least what's coming through the conference call is that a lot of manufacturers would like to make.

Andrea, going to your question about how the task force is looking at the feed, one of the livestock versus human, one of the things that did come up in the call last week, which I felt was useful, was a recognition that maybe the current heading in the what, 205.238, livestock feed, would be more appropriate to label that animal feed. Okay?

So you've got then a wider category to work under rather than just livestock feed.

MS. COOK: And labeling in that manner would also be then coherent with and cohesive with the International World Animal Health Organization for Animals -- World Health Organization for Animals, which is the Codex. Codex labels human food and animal feed, and then in all of the codex animal feeding regulations they say animal feed for human consumption. That's how they break it down.
I think there's another question here.

MS. CAROE: One quick question. If you go down the animal feed route or, you know, making that category more broad, how are you going to deal with the prohibition of animal byproducts in feed?

MS. COOK: That, again, is part of the situation that we're in. You may or may not be aware that the pet food industry produces or uses something in excess of 28 percent of the total rendered products produced in the United States. Now, that's not just talking about meat and bone meals. That's talking about tallows. That's talking about some of those products that you must have to do a lot of the things that we're dealing with.

It's a real learning curve for us. We're trying to learn as fast as we can so that we can get it back to you all hopefully by February or so.

MR. JONES: And one of the things, too, that we've recognized, Andrea, this last conference call was really a great call because we've now been together enough where we can respond to each other's questions.
But in fact, what you see is that you see a number of pet food products with chicken meal in it, which is really a byproduct. Yet it's not called chicken byproduct. Okay? Because if it was called a byproduct, then it would immediately be subject to a prohibition under our regulations.

And so what we're seeing, and in fact, Emily, I think, brought this up, is that we really need to have longer conversations with certifiers because we, I think, are seeing some rather artful interpretations of some of the ingredient listings in order to get around some of the prohibitions that we have under the regulation, but yet also produce a product that conforms to AFCO's regs. under animal feed and things like that.

So it has been a fascinating exercise over the last three months just to really get our hands around it.

MS. COOK: Yeah, I've learned to develop a whole new skin.

No, seriously, any questions any time, be sure and drop them to Keith or to me and we'll be
happy to try to fill you in on where we are. I really appreciate the opportunity to participate in this group.

So thank you very much.

CHAIRPERSON RIDDLE: Thanks, Nancy. I've been monitoring the calls, and I feel like really just starting to make progress. Like you said, things are coming together.

MS. COOK: It takes a little bit for folks to understand that nobody is in the business of putting anybody else out of business.

CHAIRPERSON RIDDLE: It's going to be a good product.

MS. COOK: Thank you. Have a great day.

CHAIRPERSON RIDDLE: Thanks.

Okay. We're going to carry on here for at least another half hour. We have a few people left, more than I want to count right now. Urvashi Rangan and then Jim Kotcon.

MS. RANGAN: So good evening at this point. My name is Urvashi Rangan. I'm an environmental health scientist with Consumers Union.
The spelling is U-r-v-a-s-h-i and R-a-n-g-a-n.

I’m with Consumers Union. We publish Consumer Reports Magazine. We have over 6.5 million subscribers. I know many of you, and I’m here today to talk about a couple of different issues.

One, I want to say that we appreciate the really tedious, tedious efforts to establish the clarifications for synthetic versus nonsynthetic and agricultural versus nonagricultural. We are in strong support of those recommendations.

I have one comment about a loophole in number six, but I’m going to get to that in just a second.

There has been a lot of discussion today about synthetics, and I as a scientist find myself in the painful position of educating the public about what a synthetic is, and I think one way to look at this and one way we try to engage consumers is to flip the lens, which is what is natural, and that is ultimately why consumers are looking to organic food products, because they are looking for something that is authentically and through verification natural, and
that seems like a very sort of big generalization, but that's the bottom line for consumers in looking for organic and their willingness to pay more for organic products. It is about how natural that product is.

And the organic products that are more natural than others are worth more to consumers. That is what they're looking for and not just in the ingredients, but in how animals are raised.

So whether we're talking about pasture requirements or whether we're talking about synthetic ingredients, ultimately know that for consumers the highest value of organic is one that is purely natural.

Also, I just want to mention that synthetics is a term that is outlined in the Organic Food Production Act. So this isn't about whether we like it or not or understand it or not. We have to understand it, and it is a scientific term, and again, the clarifications that are being made are science based clarifications that can be quantified and quantitated, and that's exactly what we need because when producers, George, like Organic Valley make
claims on their packages, "no synthetics used," we had all better know what we mean by that and so consumers know what they're buying and getting what they expect when they pay more for the product.

So as that, I also want to say that based on a recent court ruling about synthetics, it's sort of the elephant that's in the room, but we strongly support that court ruling, and we strongly support the petition that's been submitted to you by the Campaign Center for Food Safety and others on having the regulations come into compliance with the law that would basically prohibit the use of synthetics in the organic food category.

Consumers Union conducted a survey in March 2005 of over 1,200 online adults. Eighty-five percent of them do not expect artificial ingredients in food that they buy as natural. That is a very large number.

So what constitutes synthetic, what constitutes natural is at the center of the integrity of this label, of your job as the Board, and of what consumers are looking for in that label.
My one comment on the synthetic clarification has to do with number six, substances created by naturally occurring biological processes. Our concern is that a naturally occurring biological process I interpret as a scientist to mean a process that would occur in nature. So if you take a natural substance and you use it in a reaction to create something that would not occur in nature per se, then we do not agree that that outcome product would necessarily be a natural, and we think that it does require additional review by this Board to determine whether that's a natural or asynthetic ingredient.

I'd finally like to close. I wasn't going to comment on dairy, but the pasture is so fundamental, again, to what consumers think of as how animals are raised naturally, and we can argue about percentages, but I'll alert you all to the fact that unfortunately or fortunately, organic has been a highly meaningful label for consumers who buy milk, but there are other labels that are coming up. The grass fed label is one that the USDA is actually defining right now, which if we don't define pasture,
that label is actually going to impart more meaning in terms of what those animals are eating than the organic label will, and that will ultimately create a two tiered organic system where some organic dairy producers could do organic plus grass fed, and some would just do organic, and that would leave a lot of explaining for why organic does not incorporate those principles, does not mandate pasture, and does not really take into account the natural raising of the animal.

Thank you.

CHAIRPERSON RIDDLE: Thanks.

Julie.

MS. WEISMAN: Yes. Urvashi, I was wondering on the subject of substances from naturally occurring biological processed, could you give us an example of a process that is naturally occurring but doesn't occur in nature?

MS. RANGAN: Sure. An example would be an alpha analace (phonetic) extracted from a bacteria that would be used to convert dextrose extracted from corn into fructose and then the next enzyme that's
used to convert it into high fructose, that's an example of a reaction where everything seems natural on the surface and when you react it all together you actually end up with a product that was never occurring in nature, even though it was made with so-called natural ingredients.

Okay. Thank you.

CHAIRPERSON RIDDLE: Thanks.

Okay. Jim Kotcon and then Barbara Buchmayer.

MR. KOTCON: I took the liberty of preparing some written comments and so what I will do for those who hate reading as much as I do is just summarize them briefly.

My name is James Kotcon. I'm an associate professor at West Virginia University and have been managing an organic research farm for the last six years. This year I'm doing a one-year sabbatical leave with USDA's Cooperative States Research Education and Extension Service as the interim program leader for organic agriculture, and I'm bringing up a new topic today: the proposed guidance for variances
for organic research.

The USDA’s integrated organic program funds organic research. We receive a number of proposals each year. Many of those involve comparisons of conventional versus organic food in terms of the nutritional quality of conventional versus organic pest management practices and so on.

A requirement of the integrated organic program is that the research be done on certified land, and so we have this fundamental conflict of researchers desiring to evaluate conventional versus organic on the same farm and at the same time remain certified organic, and so I am simply going to say that I generally support the proposed guidance that was listed on the Web page.

I do have three additional points that I want to cover briefly that have come up. In the discussion on that guidance you have what you call a definition or three criteria that help to define what is research, and I certainly recognize the need to come up with some definition of what research is so that every grower that comes up with a noncompliance
doesn't suddenly apply for a research variance.

At the same time, I think it's important that we not try to get so specific that we ask certifiers to become the gatekeepers of what constitutes research. Certifiers have enough heartburn coming to certify a research farm as it is without having to evaluate what some of our highly technical methods are and whether they really constitute research. So that is an issue that I think needs a little bit more consideration.

Point number two is an editorial rewrite about recommendation A(3). I just have this thing about misplaced modifiers in sentence structure.

(Laughter.)

MR. KOTCON: Take it for what it's worth.

Number three, the recommendation A(4) specifically allows buffer zone requirements be waived in research areas, and I think that that's a very useful requirement. Plots that have prohibited substances applied could not be used to produce that would be certified organic, but they could be done on a certified organic research farm.
My concern is that that needs to actually be carried through for several years because those plots would need to be permanently marked and go through that transition phase again, and I think some additional attention to how a variance would be granted so that those plots would, in fact, go through that transition again and there would be appropriate requirements to prevent commingling and contamination of organic produce needs to be considered.

The other issue I wanted to bring up dealt with the natural resources guidance that is being proposed. In general, what is being proposed are some changes or additions to the model organic systems plan. I think those are very useful things. I think that they will help certifiers evaluate farms to assure that they are conserving natural resources. My only concern is that there's an implication that automatically applies if there is a requirement or even a line on the system plan, that that automatically sooner or later will come into a regulation.

I think it's important at this point to
recognize that these are not regulations. I don't think that the science is there to define a regulation as to how to encourage wildlife and what actually is required for that, and so I would suggest that some additional guidance on this point might be useful, although I do support the natural resources plan as offered.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Jim.

Okay. Barb Buchmayer and then Emily Brown Rosen.

PARTICIPANT: I carry Barb's proxy, but as long as you are going to get through this list, I'll just wait and hold it until my turn comes.

CHAIRPERSON RIDDLE: Okay. Then Emily Brown Rosen and after her, Diane Joy Goodman.

Sorry. Caught you by surprise.

MS. BROWN ROSEN: Well, I thought I was 47 and we're about 35. So we're making progress.

CHAIRPERSON RIDDLE: We are.

MS. BROWN ROSEN: Hello. I'm Emily Brown Rosen. I'm a consultant with my own little firm
called Organic Research Associates.

I'd like to thank you all for all the hard work and there are so many position papers done for this meeting that it's just a lot to absorb, and that's why I think we're getting so many comments. There's a lot that you've addressed. So it has been really great.

I'll just be real brief, and I have a handout that you can read it more later. Just number one, the peer review panel document, I really support Lynn Coody's document. I think she's got very sound ideas, and yes, the definition does need to be changed to match up with the regulation, but the 509 section I think is fine as stands, and then you can go ahead and clarify it with your policy of how you're going to interpret and work with NOP on the peer review process.

So this is a case when we don't need a rule change. I think it's a strong part of the rule and we should keep it.

On the synthetic/nonsynthetic issue, I'm very supportive of the document that you've produced.
I think it's very clear that as Brian said, we've needed it a long time, and so this is great progress to have this for the materials review aspect.

It's probably not perfect, and I think as you go to apply it and move forward with it that there will need to be modifications or more details in certain areas, but I think it's a great working start, and you should go ahead and approve it and move forward.

I also want to reinforce a couple of other people's points that you know, this is a critical role for the Board to be making this decision or being able to make a consistent decision on synthetic/nonsynthetic, and that's your role as collecting the necessary science and advising the Secretary and the NOP so that they can make the proper role writing that's based on good science.

Agricultural versus nonagricultural. You know, this is a whole new situation here, especially post Harvey, I think. If you look back at OFPA, it doesn't really specify that the handling materials have to be categorized as agricultural or
nonagricultural, but what is says is that the substance is nonsynthetic but not organically produced.

So not organically produced means or could mean agricultural as well as nonagricultural substances. They could theoretically all be in that section, but as you pointed out, in the history of the Board, didn't feel it was necessary for agricultural substances to be on that list, and so that new category was created, which leads to this odd three-part category, natural, synthetic and agricultural. You know, one is sort of more like under here.

So it's hard logically to figure out how to put it in one place or the other, but I think because of Harvey it's more complicated because we have the possibility of these three classes, in which case we'll have nonsynthetic, which will be permitted for use in organic products; synthetic, which will likely only be allowed and made with organic products; and then agricultural which will be presumably allowed in the five percent nonorganic fraction of products that are labeled organic.
So now the classification of agricultural implies that the substance is compatible for products that are labeled organic, provided they're not available in organic form.

So it's tied in with the definition of synthetic and your definition of nonagricultural, and I support the definition on the flow chart on nonagricultural where it says that it can't be chemically changed other than by biological process or mechanical process, which I think is consistent with the synthetic position, and it means that agricultural basically means nonsynthetic. Otherwise you'd need to have another category of agriculture, meaning agricultural synthetic that could only be used and made with organic. You know, we're getting further and further down the road here.

So I just think you have to kind of rethink agricultural in that context.

And then this question of microorganisms being agricultural and certifiable as organic is difficult, and I can appreciate -- one minute? Okay. One minute.
One point is that if microorganisms were to be listed as agricultural, that implies that they are subject to commercial availability, and that it's possible to produce them organically.

This, as I think Rose has pointed out, area has many unanswered questions of which standards are you using to certify them as organic, and because our crop standards and our livestock standards really don't apply to microorganisms.

So I think before deciding whether to include all microorganisms as agricultural, I think it would be wise if you conducted a TAP review on the production methods used to produce commonly used microorganisms, including those that are claimed to be organic at present to evaluate with their compatible.

If that determination is made that you're going to put it as agricultural, then you're going to need a task force to say what are the standards for these. So it's kind of a whole long process here.

And I think you also have to remember that you recommended two years ago that all microorganisms should be classed as nonsynthetic. So you are going
to have to go back and revisit that, too, if that's what you decide.

CHAIRPERSON RIDDLE: Okay.

MS. BROWN ROSEN: I have more.

CHAIRPERSON RIDDLE: Questions?

MS. BROWN ROSEN: Okay. I have one more little point that's important. Would you like to hear one more little point, very quick?

CHAIRPERSON RIDDLE: Do you have another point quickly?

MS. BROWN ROSEN: Yes, very quickly. One other point is I think it's very important to draw the line on microorganisms as to the organisms, not their products because you can use natural organisms to produce all kinds of things like antibiotics, preservatives, you know, and God knows what's coming down the road next.

So don't lump them together. If you're going to put them over there, it's not them and all of their products.

That's all.

CHAIRPERSON RIDDLE: All right. Thanks.
We have Diane Goodman and then Dave Engel.

MS. GOODMAN: Good afternoon and thank you to all of the members of the National Organic Standards Board and the National Organic Program for the opportunity to speak to you, and thank you for all of your hard and diligent and excellent work.

Never being one to sweep important issues under the table or under the rug, I want to air a few of them out. I'm speaking today on behalf of my own opinions, myself, not any other entities.

And I'm not specifically referring to comments to any of the recommendations that are on the table, but I feel compelled to tell you what's on my mind.

I really wish that I could make an offer to you of some magic language that would resolve the controversy between synthetic and nonsynthetic, agricultural and nonagricultural, but I don't have those issues, but I do believe I don't have those solutions. I don't have those answers and those magic bullets.

But I believe that if we continue to work
together that we will as an industry be able to find those solutions, and I know that we can do that. I really know it in my heart that we can do this.

So I want to offer something to you that's my perspective. What you are responsible for is much more than what is synthetic or how many days a cow spends on pasture. You're responsible for the trust that is implied in the organic program. That's consumer trust; that's farmer trust; that's the trust that the media has placed in our program, and it's the trust that the government has in our program.

We've built this trust right along with the growth of this industry. As we've grown in the industry, as consumer demand has grown, the trust in what we have done has grown as well, and this trust is there because we had a system that works. It needs repairs from time to time, but overall it works.

Our NOP standards aren't perfect, and the challenges that we face point out those imperfections. This is an important undertaking. This is an important thing. So let's lift up the rug and up until the last few moments and few commenters,
everybody was skirting around the issue today about
the Harvey v. Johanns lawsuit and the court order that
NOP has to respond to.

This has been the elephant in the room
it's been called. It has been called other pressing
matters, and until the last few comments, I felt like
it was being treated like some contagious disease,
that if we bring it up we're all going to catch it,
and the truth of the matter is that this lawsuit --
how do I word this? -- the truth of this matter is
that what we are all dealing with in this room today
and for the next two days is the lawsuit, and we all
know it, and we're all aware of it, and if anybody in
this room isn't aware of it, you need to be aware of
it, that this is super most in our minds.

Yes, there's a lot of other business in
the National Organic Program that will go on that's
not affected by it, but this is huge.

So my comment really is to encourage
everybody to remember that we already have consumer
trust. Consumer trust is not what we're in jeopardy
of losing because of our current standards. Consumer
trust is what we could be in jeopardy of losing if we make changes to our standards that radically change what our consumers already believe about the truth of what we have done about the integrity of organic.

We have to preserve that trust at all cost. Yeah, we may need to be more restrictive, and we may need to use more constraint in some areas, and we need to be much more flexible in other areas.

Does that mean that we need to rethink the national list? Absolutely.

Does it mean that we need to remember to maintain and continue to grow our markets? Absolutely.

And does it mean that we preserve the truthful consumer trust that we have, that the public has in organics? Absolutely.

Thank you very much.

CHAIRPERSON RIDDLE: Thanks, Diane.

Dave Engel and then Kathie Arnold. We have, I think, a total of seven commenters left. So maybe we'll get through.

MR. ENGEL: My name is David Engel. I'm
an organic dairy farmer from Wisconsin. I'm the current Executive Director of Natures International Certification Services, and I was the former Executive Director of the Midwest Organic Services Association.

And my comments today, first of all, I would like to thank everybody. I think this is great, these kind of sessions.

My comments today are primarily as a dairy farmer, and I will bring in some of my experience running the organization of MOSA and the over 300 dairy farmers that that organization has.

I've milked cows for 24 years, and 14 of those years I've grazed per, you know, my inclinations from year to year, and my main concern concerning the numbers that the guidance document is proposing is the numbers and that as Hugh is indicating and as a couple other dairy farmers here have allowed, that the numbers may not be that important, but I do think the numbers are problematic.

And, again, I'm resting on many years of farming, a few less years of grazing, and a lot of exposure to and rubbing elbows with dairy farmers.
The survey that we did at MOSA of 290 dairy farmers at that time last April, just this past April, we had a 36 percent response rate, and of those 36 percent who responded, about 44 percent indicated concerns with the numbers.

Now, that wasn't necessarily that they couldn't do it. Some could not. Most probably could if they were forced to, but I do not disagree with anything that has been said here concerning the passion for grazing. I just have a concern that the way that we're trying to approach this with numbers is not in the spirit of the rest of the rule, nor is it in our best interest in the long run.

I really liked what Leslie said from the certifier perspective. I think she has some good suggestions. I don't really have any concrete suggestions on the wording. I know this is where that gets taken care of, but I know you guys have gotten everything in your minds and you're going to take it into committee, and I thought Leslie's comments were very good.

That's about all I have to say.
CHAIRPERSON RIDDLE: Thanks, Dave.

Okay. Kathie Arnold, and then Liana Hoodes.

Do you have a proxy? Okay. It doesn't mean you need the full ten minutes, but you have it.

MS. ARNOLD: I'm Kathie Arnold. My husband, his brother and I milk 110 cows on a farm in central New York, and we've been organic since 1998 and been in intensive grazing since 1993.

I want to start out making a few clarifications on things I've heard. Number one, I want you to be sure you know that Tony Azevedo, who spoke earlier, does indeed support the pasture guidance document, but he was just sort of expressing some frustration he felt from a seemingly setback that, you know, he heard this morning.

I also want you to know that Jim Greenburg from Wisconsin who commented earlier, who was rather modest in his comments, and I want you to know that he does graze 1,100 head on his farm, 550 of them being milking cows.

As far as where the 30 percent dry matter
intake comes from, I first hear it as a minimum pasture intake figure in 2001 when it was discussed at an Organic Valley Task Force meeting, and its use as a minimum grazing parameter has been supported by the Cornell dairy farm business summary using either 30 percent or 40 percent forage and pasture intake as a cutoff as to whether or not a herd is considered a grazing herd for their grazing dairy farm business summary, and I believe that also either the University of Wisconsin or Michigan also uses that kind of parameter similarly.

And this is a figure that has been deliberated widely among organic dairy farmers across the country and agreed to by a vast majority, and the reason we need to have minimum numerical standards is because the rule already requires pasture, and yet some operations are not providing pasture for their lactating cows.

So experience has shown that the current situation with the rule does not cut it. We need a definitive floor.

I would also say that even though not all
organic consumers may know about the fact that milk from grazed cows has higher levels of CLA, Omega-3, Vitamin E and beta carotene than milk from cows fed stored feeds, a significant portion of organic consumers and consumer advocacy groups are aware, and this consumer awareness will only continue to grow.

And I'd also say it's not appropriate to have four, six, or ten organic cows per acre of pasture as those levels of animal density will lead to over grazing, overload of nutrients, and overload of manure, and lead to environmental degradation.

Animal numbers must be appropriate, in appropriate balance with land acres.

Also, contrary to a previous comment, I would say that it is appropriate for the word "maximize" to be part of the organic system plan goal. The word "maximize" shows that there should be the intent on the part of producers that they will work when possible to provide more pasture than just the barest minimum.

For example, it's not appropriate for a producer who lives in an area where pasture grows for
eight months of the year to say after 120 days that they've met the minimum and now the cows can go back to 100 percent stored feed.

This is a guidance document. It guides. It's not a regulation, and it should encourage us striving for something better than the minimum.

I would also add that although no Pennsylvania farmers came today, they have shown through their overwhelmingly positive response to the Cornucopia pasture survey that they do support the pasture guidance document.

And I would also like to point out that the survey described by Dave Engel, the text that accompanied the survey to MOSA farmers advocated against the adoption of the pasture guidance document and thus did bring a question of bias to that survey.

And, Hugh, I wish you could have heard Darrell Emmick, New York State NRCS grass specialist who keynoted at our NODPA field days this weekend. He reported that he has measured annual pasture yields far in excess of average hay yields for the same geographical area. Properly managed pastures will
also provide a higher quality of feed than stored forages so that your farmers in Lancaster can feed lesser quantities of that expensive organic grain.

And then speaking both personally and on behalf of the membership of the Northeast Organic Dairy Producers Alliance in my role as policy committee chair, keeping organic dairy standards strong is of paramount importance.

At our NODPA annual producer meeting this past weekend, having a strict pasture standard and overall strong standards were identified by the membership as being in the top three issues of concern this year, just as in 2004.

So I ask that the Board adopt the draft guidance document with the minor revisions endorsed by NODPA, and I respectfully request that the NOP move quickly to post and disseminate the pasture guidance document when adopted by the NOSB.

And I would also like to thank the NOP for initiating this process back in January when Richard Matthews directed the NOSB to bring forth a guidance document on pasture.
I also would like to comment on organic dairy farmer sentiment regarding the loss of the 80-20 dairy herd transition clause because of the Harvey ruling. When the more than 50 organic dairy producers from Maine, Vermont, Connecticut, New York, Pennsylvania, and Wisconsin were asked at the NODPA annual meeting this past Friday how many were in favor of opening OFPA, not a single hand was raised.

The risks of opening the law are too great. Rather we support rule rewriting that would allow a dairy herd to be converted using third year transition feeds allowing the animals to be transitioned with the land.

NODPA also fully supports that rulemaking insures that all replacements be organic from the last third of gestation.

And lastly, I do realize that democracy takes time, and I will return.

(Laughter and applause.)

MS. ARNOLD: Thank you.

CHAIRPERSON RIDDLE: Thanks, Kathie.

Okay. Liana Hoodes and then Michael
Sligh.

MS. HOODES: I'm Liana Hoodes. I'm the organic policy coordinator for the National Campaign for Sustainable Agriculture.

I have detailed comments that I will get you in writing in the next day or so. So I'm going to try and whip through this, and I'll speak a little bit about what Michael wanted to talk about.

In the pasture guidance, we fully support the two previous recommendations by NOSB and the guidance proposed here, with the addition of the minor changes from the Cornucopia Institute, NODPA, MODPA, et cetera. We support this.

We think it's very necessary for a guidance. In general it has been clear there is confusion about pasture. So the idea of a guidance here is exactly what guidances are for.

On peer review panel, I refer you to Lynn Coody's comments. Excellent comments, and I would just like to talk briefly about that.

We specifically agree with Lynn and oppose the suggestion of the committee to change the peer
review panel to a peer review auditing/auditing organization. This clearly implies that only organizations could sit on what was the panel, and we disagree with that. We think it's very important to encourage the participation of knowledgeable individuals, as well, and there are some questions about how you deal with conflict of interest that can be dealt with. I think it's really important to keep that as a panel of experts.

We also find that this proposed language is more correctly a guidance than a regulation change, and we specifically are concerned that reference to ISO Guide 61, now ISO 17111, is important to be kept the way it is written in the current regulation. It's very important for the program to be compliant with ISO 61.

Guidances for research variances, we agree with the Organic Farming Research Foundation comments that were submitted, very strongly agree with those.

And sunset. You know, what I'll do? Synthetics. I'm sorry. The synthetics definition we absolutely agree with the proposal, and we support the
clarification of the definitions. This is what the NOSB is about, and you're right on target. This is really, really hard work over years, and I think you've got it right now. So we support that.

On the sunset, we acknowledge the fact that the sunset process is moving, but sunset has a clear implication. It describes a process whereby the decision to be permitted on the national list ends and the burden for any other action is heavier than that to take it off, and that is not what's happening.

It is the opposite of what a sunset means to have an automatic renewal.

We believe that materials must be reviewed before they go back on. At five years they are essentially off, and that is what a sunset means, and this is not a sunset.

We acknowledge there's a time constraint here, and we hope that at least you know about this and realize that what Michael Frye was going to talk about was that the Board that he chaired and subsequent Boards reviewed materials carefully and had discussions over materials where the vote was very
close, and the decision to approve it was based on the fact that they would be re-reviewed in five years; that it would come off and that it would have to be re-reviewed.

And those decisions would basically be thrown out with this kind of process that's set up now. We at least hope that as the process continues after this first deadline, that you relook at the sunset process and think about sunset the way it is clearly defined.

With reference to several comments here today, I just wanted to note that we strongly feel that the NOSB is not NOSB's job. In fact, the National Organics Program job is not about promoting an increase of organic acres or organic production. It's about the integrity of an organic label.

And we feel the Board has been doing a job to keep high standards and that that is what you're about. It is not about doing everything you can to have more product out there.

And we applaud the work that you've done to uphold strong standards.
Finally, we support the integrity of the organic label as specified in the Organic Foods Production Act, and we oppose any weakening of the act, and we have proposed regulation changes and we stand by them.

MS. COUGHLAN: I apologize. I did not give you one more minute. A one minute warning.

MS. HOODES: That's all right. I was running through it fast anyway.

CHAIRPERSON RIDDLE: Right on track anyway.

MS. HOODES: Right. Thank you.

CHAIRPERSON RIDDLE: Okay. Thanks Liana.

George has a question.

MR. SIEMON: I know you all are concerned about the sunset. So are you going to put forward the materials that you think should be reviewed since we're not doing all of them?

MS. HOODES: We're at a loss to find the resources to do this, and we'll try to do what we can, but we feel that the burden should not be heavier to take the materials off than to keep them on.
That's not what a sunset means.

And so we are looking to find a way to make some --

MR. SIEMON: Well, you're talking about petitioning. I'm just saying giving your input to us about which materials you think should be reviewed.

MS. HOODES: I am really trying to get that together.

CHAIRPERSON RIDDLE: You have until the end of tomorrow.

MS. HOODES: I know. I know. I have several meetings tomorrow to get that finished.

CHAIRPERSON RIDDLE: You're talking about red flagging things.

Okay. Marty Mesh and then Kathy Seus.

MR. MESH: And I wasn't even going to speak, just to get us to dinner, but I did want to express my appreciation.

My name is Marty Mesh with Quality Certification Services, Florida Organic Growers.

I really just wanted to touch on a couple of things, and one was to express my appreciation for
the work of the NOP staff the last few months and
Barbara. I don't know what to call you. Barbara.

And my appreciation for all of the work of
the committees by the Board and the documents and a
lot of the work that has come.

MS. COUGHLAN: Are you officially on
proxy?

MR. MESH: It depends if I run over time.

MS. COUGHLAN: No. Are you or aren't you?

MR. MESH: Okay. I am and ten I'll finish
early.

CHAIRPERSON RIDDLE: All right.

MR. MESH: So my appreciation for all the
work done by the Board and its committees.

The pasture recommendation, I want to
express my hope that for some resolution based upon
the desire as pastor of the Certifiers Council for
some consistency out in the field for certifiers to be
able to look and figure out what the intent was, what
the regulation says and take the guidance and hold
dairy producers accountable to doing that.

I am empathizing somewhat with Dave, but
disagree with -- you know, I think that is probably a good thing.

While I appreciate Liana's view and the Campaign's view on sunset. I am concerned about making sure that the materials are on the list, although in spirit I do agree that the Board meetings in years gone past, the idea that a material was going to be put on the list with the idea that five years from now it would come off the list, would be sunsetted, that I do think that the responsibility has been shifted to those people that might be questioning why the material remains on the list versus those people that want to keep the material on the list.

And then finally, finally, our certification program director Angela Caudle, who has come with me for years really, has accepted a position, and it will be assuming the executive directorship of IFOAM early in September, and so she won't be here, but we're going to keep on doing what we do.

And with that, why don't we go eat dinner?

CHAIRPERSON RIDDLE: Soon. Thanks, Marty.
Kathy Seus and then our last person that signed up, Luis Monge.

MS. SEUS: Hi. I'm Kathy Seus. I'm the farm program manager with Food Animal Concerns Trust or FACT. I'm going to try and be very quick because I'm commenting on the guidance for access to pasture, and I really just want to sort of offer my support for some of the things we've heard already today.

Graze pasture is a key feed component for dairy cows, and it provides a fundamental distinction between organic dairy farming and conventional factory farm style dairy production. In the eyes of the consumer it's a key value add and it's a benefit for which they're willing to spend additional food dollars.

I support the pasture guidance document that's under consideration with the few clarifications that were endorsed by the Northeast Organic Dairy Producers Alliance, the Midwest Organic Dairy Producers Association, Cornucopia Institute, and dozens of other organizations, FACT included.

This guidance and its clarification have
been discussed multiple times with public comment. There are a lot of farmers that came from across the country to support it, and there's a reason for it. Clearly, there's a lot of support for this.

And like Kathie Arnold said, I provided comment back in March on this issue, and I'll come back next March if I need to.

So that's it. I'm trying to make it short.

CHAIRPERSON RIDDLE: Thanks, Kathy.

Okay. Luis Monge.

MR. MONGE: It's Monge.

CHAIRPERSON RIDDLE: Monge.

MR. MONGE: Yeah. It's M-o-n-g-e.

Well, again, my name is Luis Monge. I'm from Dole Fresh Fruit International.

First of all, I want to say thank you for that opportunity to stand in front of you and put my two cents on this.

English is not my first language. So if I say something without sense, you'll let me know and I will explain that again. All right?
I don't know if you have in mind what you are doing right now, the big responsibility that you have on your shoulders, because you are making or, yeah, proposing standards that the NOP are going to put in place, and you're going to make the final rule for the United States, but it will affect us in Latin America and the rest of the world very hard.

I mean this is not only about the U.S. farmers. It also involves the lives and the industry all around the world. So good luck.

(Laughter.)

MR. MONGE: Yeah, really. It is very hard to satisfy 100 percent of the people. So you must do your best and good luck in that process, really.

Dole has organic operations in five countries. It is Honduras, Dominican Republic, Colombia, Ecuador, and Peru. This is only for organic bananas, and organic plain apples in Costa Rica.

We want to speak in favor of the continued allowance of ethylene on the crop production for pineapple flowering. It is extremely necessary to allow the use of ethylene. Otherwise you won't be
able to unifore (phonetic) the flower in on the fields, and you're going to need I don't know how much times more labor to harvest every pineapple on time to deliver well to your market, to you and your consumers.

And also, well, banana is a tropical fruit that needs to be harvested green in order to be shipped in a period of time that will vary from five days to ten days to 12 days, depending on the country of origin and depending on the market, and it must be in a ripening facility. It must be sprayed or fumigated with ethylene. Otherwise we will need to put the banana green on the supermarket, and obviously it won't be let's say a choice for the consumer because it will be like completely different from the conventional bananas.

I don't know or I just wanted to say again that there is many people behind your decision or behind our decision at the NOP and you guys. What are you going to do in the future? What are you going to propose to do in the future? But there is many people waiting for your decision, as well as we are waiting...
for a decision on the EU regulation in 2006 and Japan regulation, but U.S. is the main market for us.

So I think I learn in this country something that it maybe will take place this time, that you used to say if it works, don't fix it.

MS. KOENIG: If it's not broken, don't fix it.

MR. MONGE: Okay.

CHAIRPERSON RIDDLE: Rose?

MS. KOENIG: I just wanted to say that at least for the ethylene for the uniform flowering, that you should submit your comment if you have it --

MR. MONGE: Absolutely. I will in July.

MS. KOENIG: -- for the sunset review.

MR. MONGE: Yes. We did it.

MS. KOENIG: And you should additionally do it for the proposed harvest treatment, although that may be --

MR. MONGE: Can I ask you a question? Because I have had time to find the answer, but I haven't. Is ripening included where? I mean in the law.
MR. SIEMON: Handling.

MR. MONGE: Handling? I mean in the definition that you have in the NOP --

MS. KOENIG: No, we have it on our crops. Like it's crops, but it's listed, if I'm correct, as a post harvest treatment only, I think is how it's annotated.

CHAIRPERSON RIDDLE: Right, on the TAPs list.

MS. KOENIG: So it's actually under crops, but it's considered a post harvest.

MR. MONGE: So ripening this in 601?

MS. KOENIG: Right, but what I'm saying is that the sunset notice that came out wants comments on everything on the list.

MR. MONGE: Absolutely. We did it.

MS. KOENIG: There may be things on the list that get impacted by other decisions, but you should go forth and complete your sunset comments for everything that's on the list.

MR. MONGE: And if ripening is included in 601, why, ethylene for the greening of tropical fruit
or ripening of tropic fruit is included in 605(b)(10).

So what is going to happen with the lawsuit?

MS. KOENIG: It may be in both places. I don't know. It's probably in both.

MR. MONGE: It will be? Okay. Well, thank you and good luck again.

CHAIRPERSON RIDDLE: Thanks.

We're going to recess for today, but then we'll start at eight in the morning with the discussion items.

George?

MR. SIEMON: Just a second please. I don't always go for dinner. I'm concerned about the discussion items. First it's going right to the meat of our issues.

CHAIRPERSON RIDDLE: That's what I was going to ask mini chairs to really make those brief, just to report but not really a discussion. Just an update on where we're at.

MR. SIEMON: Okay. Because we have a lot.

CHAIRPERSON RIDDLE: I agree.

MS. CAROE: Can I ask the Accreditation
Committee, everybody at 7:30 tomorrow morning.

CHAIRPERSON RIDDLE: Accreditation Committee, 7:30 tomorrow morning here. Just come early, and then dinner at seven, but I'll tell them we're going to be a little late.

(Whereupon, at 6:53 p.m., the meeting was adjourned, to reconvene at 8:00 a.m., Tuesday, August 16, 2005.)
UNITED STATES DEPARTMENT OF AGRICULTURE

NATIONAL ORGANIC STANDARDS BOARD

TUESDAY
AUGUST 16, 2005

The above-entitled matter convened at 8:00 a.m. in Oriental Ballroom C of the Mandarin Oriental Hotel, 1330 Maryland Avenue, S.W., Washington, D.C., James A. Riddle, Chairperson, presiding.

NOSB MEMBERS PRESENT:

Adjourn
PROCEEDINGS

8:09 a.m.

CHAIRPERSON RIDDLE: Okay. Good morning.

I call the meeting back to order. And we have two
staff members here so we officially exist. We can
carry on.

And we have quite a workload before us.

And we will resume our work at 4:00 p.m. yesterday as
far as the agenda goes with some fairly brief
committee chair reports on kind of future agenda
items. These would be the discussion items that will
not be voted on at this meeting. So they are really
just an update of works in progress.

So we'll start off with Policy Development
Committee. Dave?

MEMBER CARTER: Okay. Thank you, Mr.
Chair.

Policy Development Committee met most
recently in July to look over the items that are on
our agenda. And the first one was the guidance on
temporary variances for research 205.209(a)(3). And
I'm going to throw it back to Jim because Jim had
prepared a draft for us to work from based upon some
input that he had received. He had done some research
and interviewed -- got input from about six
agricultural researchers and developed the working
draft that we discussed at the meeting. So --

CHAIRPERSON RIDDLE: Okay. Thanks, Dave.

Yes, the regulation allows for temporary variances
for research purposes. But there really aren't any
fence posts set or any guidance as to how those
determinations are made, what constitutes a, you know,
a credible research project and a variance to certain
sections of the rule.

And I did construct an original draft with
some input from researchers. That went out for a kind
of narrow circulation to the research community,
received input from about 20 researchers in that round
before constructing the second draft. And then that
is what was posted for public comment leading up to
this meeting.

And we did receive some substantive
comments, notably from Organic Farming Research
Foundation. And then USDA's CSREES. And those will
be taken into consideration for the next round.

And in particular, I envision fleshing out the draft to incorporate the whole notion of split operations because a lot of the research projects really functions as split operations similar -- you know we certify organic farms that have part conventional, part transitional, and part organic.

And a lot of research projects really are in a similar situation where part is essentially conventional research. So that hasn't been reflected in the draft. So I anticipate trying to address some of the comments that have come in by incorporating the split operation concept in a future draft.

So anticipate another draft being submitted to the Committee for then posting again for a round of public comment and hopefully action at our next meeting.

MEMBER CARTER: Thank you, Jim.

The other item that we have on the agenda here is determining the commercial availability under 205.606. This is a joint project between the Policy Committee and the Handling Committee. And Plan A was
we were going to meet Monday morning before this meeting. And because of my travel schedule and because of other issues then that Barbara wanted to visit with the Board about, we did not get that accomplished. So that's still a work in progress.

One item that is not on the agenda but is coming from the Policy Committee as a discussion item is some work that we Bea and Rigo have been putting together on orientation or a survival guide for new Board members. We call it NOSB 101.

And this kind of came about from the folks that just came on the Board talking about things that would be helpful to help them get up to speed as they came on. And looking forward to the number of new folks that are going to be coming on in January and trying to prepare that.

So Bea, I'll let you discuss that briefly.

MEMBER JAMES: Well, Rigo and I basically put together some information to help new members. And this was in response to the rotation proposal not going through. Jim had put together some rotation proposals so that we wouldn't have so many members
going out at one time.

And because of the way the Organic Foods Production Act was written for NOSB members to serve five years, and the changes that we would have had to have made in order to have that rotation schedule put into action, it would have gone against OFPA. So what we've done instead is we put together a survival guide.

And there is probably about three pages of information just to help new members understand exactly how to be prepared for the NOSB meetings, how to understand the different committees, how to understand working with the NOP. And we can have more information on that at the next meeting.

MEMBER CARTER: And then the other item that the Policy Committee has been discussing, we want Everett here because it is an action item for tomorrow. But that is the Board Policy and Procedures Manual.

CHAIRPERSON RIDDLE: And that's actually later today.

MEMBER CARTER: Or later today. Tomorrow
being Tuesday, of course.

CHAIRPERSON RIDDLE: Unless today is yesterday.

MEMBER CARTER: It's still four o'clock on Monday.

(Laughter.)

CHAIRPERSON RIDDLE: Right. Okay. Thanks, Dave.

All right. Livestock Committee? George, do you have your discussion item -- Nancy's not here.

MEMBER SIEMON: Nancy is the leader of the agriculture discussion. She's not here.

CHAIRPERSON RIDDLE: Right.

MEMBER SIEMON: That's the agenda item, right? Agriculture?

CHAIRPERSON RIDDLE: Right.

MEMBER SIEMON: And Nancy -- can we come back to her when she arrives? I don't know where she is.

CHAIRPERSON RIDDLE: Yes, no, I don't either.

But, yes, for an update so we hopefully
don't have to come back to this, the Board did adopt a task force report that contained draft standards. And I think what is needed now is a discussion with the program as far as the status of that recommendation and if that, you know, will move forward, you know, as a rule change or guidance document and if any further action is needed from the Board before that could happen.

MR. NEAL: Which recommendation is that?

CHAIRPERSON RIDDLE: Yes, the Agriculture Task Force Report, the beekeeping.

MR. NEAL: With respect to the Agriculture Task Force Report, what we're expecting to happen is that I think Nancy is going to take a look at it because she's got some concerns about it.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: And we are going to get some feedback from her on it as well because we didn't have a bee specialist, a honey specialist on board at the time. And now we do. So she's going to take a look at it and give us some feedback on it.

CHAIRPERSON RIDDLE: Okay.
MR. NEAL: And what we'll do is that we'll probably begin the dialogue again on that particular document. We know that there is a lot of concern about how can bees be produced organically. And how can honey be produced organically.

But before we go with guidance on that, we want to make sure that we have at least the specialist on board look at that so that we don't go off in left field with guidance that does not apply.

CHAIRPERSON RIDDLE: Right. Yes. And in the interim, operations are being certified organic, you know, beekeeping operations, and there are products on the market carrying the USDA seal. So in the absence of guidance or rule change.

MR. NEAL: That's understandable.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: But before we go out with anything, we are going to make sure we've at least got feedback --

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: -- from Nancy.

CHAIRPERSON RIDDLE: Okay. Well, I wish -
- just stay tuned on that.

Anything else from Livestock right now?

(No response.)

CHAIRPERSON RIDDLE: Okay. All right. Rose, Materials?

MEMBER KOENIG: Originally I had a slide show just to show the national sunset Process, which we're undergoing right now. I'll just summarize that verbally by saying that the closing date on the Federal Register notice is coming up really quickly. I guess you have a couple more days. When is the last date? Today? We've got today. And we've gotten some comments. And they are being posted on the Web.

And then the Board will begin the task of sifting through those and the appropriate committees will start viewing the comments and following the procedures that we outlined at the last meeting as far as how committees are supposed to report those back to the Board in recommendation form.

So if anybody has any questions or, you know, wants more information, you can either -- there are two places to look. One is the last meeting book.
had the procedures that we voted on for sunset as far as the working document for the Board.

And then this meeting, if you look at the slide show, there are some flow charts there that kind of explain the process, how it goes from the Federal Register notice, through the Board process, through the writing of the regulations which takes quite a bit of time.

And that's why we're under a lot of pressure to at least start the process, get as much as we can accomplished hopefully by the next meeting date.

The second item, in the materials -- in the sunset process that we established by the Board, each committee -- the Board has the ability to look at materials that they know may be problematic or they've heard public comment on or they may know information such that was brought forth yesterday by one of the commenters that, you know, the minutes reflected that it was supposed to be re-reviewed or, you know, there was some indication that the Board had the intention of looking those over.
So I asked each committee chair to identify materials that they would like to send directly for technical review. And the Crops Newspaper was brought up other than recycled without glossy or colored inks. Just because technology in newsprint has changed pretty dramatically, there are a lot of soy-based products out there. So it just needed to be looked at.

Aquatic plant extracts, humic acids, and liquid fish products, these seem to be problematic in terms of some of their annotations may not be clear.

Really the Committee is seeking just some details on the extraction processes and just really how they’re made because there are a lot of -- not a lot but some of the petitions, I guess, that come in seem to deal with these different products. And we’ve heard from folks out there -- certifiers -- that the annotations don’t seem to make a whole lot of sense. So anyway, we’ve decided to look those over as a large group.

And then Livestock, ivermectin and oxytocin have been requested thus far. And then in
handling colors, non-synthetics versus only in flavors, the way it reads in the regulation is non-synthetics sources only must not be produced using synthetic solvents and carrier systems or any artificial preservatives.

So those are the Committee's materials that they are sending for technical review thus far. I hope that the committees will get a chance to discuss any other materials that have come up, you know, as far as things that were in the minutes that you may not have considered that commenters have brought forth.

And I made a note of things that were discussed yesterday were streptomycin and I think tetracycline in crops. They are antibiotics that are used for fire blake control if I remember.

And then vitamins and minerals in livestock, specifically just looking at technologies because I guess the commenter was concerned about there are some processes that now involve GMOs. So we may want to consider that.

And then chlorine products, since chlorine
and chlorine products are on all three lists, so I guess because of the rates and some of the confusion, there was a suggestion to maybe look at that.

So it is really up to the committees but you have that information. I suggest you try to meet and determine if -- you know go to the minutes and confirm what we have gotten in public comment. And see whether you want to bring forth any more. That's it.

CHAIRPERSON RIDDLE: Any questions for Rose on that?

Yes, I have -- oh, George, go ahead.

MEMBER SIEMON: Just a comment that not necessarily will all those require a new TAP. Like we're not requiring a new TAP for ivermectin.

MEMBER KOENIG: Do you have specific questions that you have forwarded?

MEMBER SIEMON: I think we did.

CHAIRPERSON RIDDLE: Well, we did on oxytocin. I submitted those. I don't know about ivermectin.

MEMBER SIEMON: Ivermectin we just wanted
-- we felt we had enough information. Just need to revisit it so --

MEMBER KOENIG: Well, I suggest if you are going to revisit, if you know ones and you've got the information, go ahead and do it now because once you start getting into looking at it, there may be questions that come up. And now is the time to get additional questions answered.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: I guess we need to be clear on this now because what I've begun -- I've already begun to initiate the process. And they're going to be doing full TAP, full-blown TAPs on these. So if there are specific questions -- only specific questions that you want to have answered, let me know those before they start on a full-blown evaluation because we're going to get charged for it.

CHAIRPERSON RIDDLE: Yes.

Hugh?

MEMBER KARREMAN: I think with ivermectin, I think the NOSB has said that if moxidectin comes on, ivermectin can go off. And I think that's the main --
so it would be really sunsetted. And I don't think you need to a full-blown TAP at all.

MEMBER KOENIG: But didn't we hear though that moxydectin was an antibiotic? So all three of them, I think you may need to look at all of those.

MEMBER SIEMON: We discussed that when we did moxydectin.

CHAIRPERSON RIDDLE: Right.

MEMBER SIEMON: Thoroughly. So --

MR. NEAL: That's understandable. But we're still got a dilemma. In May 2004 I think it was or October 2004, we said -- we concurred with the Board that antibiotics could not be used in dairy production. Now we've got three materials -- two on the list and one potentially about to go on the list that are structurally antibiotics but function as parasiticides. We've got a technical dilemma here.

What about any other material that is an antibiotic and functions as an antibiotic, can they be allowed for use in dairy production because we've got two on the list and one that's been proposed for inclusion on the list. They are antibiotics by
structure. So how does that impact the statement that we've gone out with to the public?

CHAIRPERSON RIDDLE: Hugh, what are the two on the list right now?

MEMBER KARREMAN: Ibermectin, oxytocin. Oxytocin is not an antibiotic.

CHAIRPERSON RIDDLE: No, it's a hormone. It's a naturally occurring hormone.

MR. NEAL: Well, definitely ivermectin because we've checked with FDA on that. We've actually had FDA chemists look at the structure of those.

MEMBER KOENIG: Okay. So it sounds like the Livestock Committee -- the other, I guess the final thing that I do want to state, although we'll come back to it in the discussion of the item is that there is a document posted that we will discuss on the OFPA categories, trying to get the listing -- making sure that is what on the list conforms to what was spelled out in OFPA. And hopefully NOP will be able to answer some of the legal questions surrounding those categories to make sure that there are not
materials that are not appropriately placed -- have been inappropriately placed on the list.

So when we get to that, we may have to come back to the sunset discussion. But let's just move forward now.

CHAIRPERSON RIDDLE: Yes, I just have a couple questions myself and that is I want to be clear that now once today is over and the public comments have been received on sunset for this round, that the top priority for Materials Committee and each of the three relevant committees is to first identify any of the more substances that need a review. And exactly what questions need to be asked in that review. And whether it is a full review or just a narrowly focused review with specific questions. So that's top priority, correct?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: And then --

MEMBER KOENIG: So in other words, what you are identifying now are substances that don't necessarily have to have public comment to trigger the review. So we'd like all those Board materials -- now
there may be some comments on those additionally. But we're trying to, you know, whatever, you know, however many materials there has to be to come forth from the committees.

Now once comments come in, that list may grow. But you have the opportunity now as committees to identify those that --

CHAIRPERSON RIDDLE: Yes, and I think the committees have done that. There may be additional ones triggered by public comments that have come in either verbally yesterday or in the written comments that come in by the end of today. But that should be done in very short order.

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: And then the committees need to focus on essentially the non-controversial items that can be kind of reviewed, set aside for renewal. And then we have to go back to those more controversial or where we're lacking information, where we've requested a review. And decide on their status or recommendation for their status.
Hugh and then Kevin?

MEMBER KARREMAN: Just for clarification, what about something that is on the list now that has an annotation, I need to be a little clearer on that. For instance, the term biologics and in parenthesis right next to it, vaccines. If I were to want to just have the broad category of biologics, how do I work with --

MEMBER KOENIG: That changes the intent of the list. I mean that's --

MEMBER KARREMAN: Well, is that during sunset or not? I'm just curious.

MEMBER KARREMAN: -- really adding.

MEMBER KARREMAN: Those kinds of things. How does that come about if I want to work on that?

CHAIRPERSON RIDDEL: Yes, well, that's a good question. And a good example. You know the Federal Register notice, as I read it, didn't set limit on annotations.

I think we had made a recommendation that kind of annotations were not in play and this process could not be used to extend some things's use. It
would be to renew its existing, you know, item and existing annotation. But that wasn't reflected in the Federal Register notice. I just want to know the rules of the game there.

MR. NEAL: That's still the intent. And the reason why is because it will complicate this process. And the process for amending the national list is always going to be the same, through the petition process.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: The sunset is a deal that takes every five years for substances. So we don't -- we want to separate amending the national list with renewing the national list.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: Changing the national list with conducting a sunset review of the national list. Whether or not a substance should be continued for use in organic production and handling.

MEMBER KOENIG: One -- I mean one thing the committees could do is that, you know, basically if there is an annotation that just doesn't work, is
not appropriate, I mean the obvious solution is you do not renew it during sunset. But you ask for the review of that so that you have the technical information that you could perhaps use that petition to re-review it with a different annotation. But I guess it is a separate process.

MEMBER KARREMAN: Well, you just do through the sunset, you know, just like anything else. Like ivermectin, oxytocin biologics. And then just go through that. And as it comes through sunset, they may change. It's getting reviewed in other words.

MEMBER Koenig: I don't -- I mean I'd have to defer to Arthur. I mean that's -- I don't know how these Federal Register notices and what lawyers decide in this. So I don't --

MR. Neal: If you are looking at broadening the scope of biologics, what you are essentially doing -- unless you decide to hold off on renewing its use until you conclude on that discussion, what you are essentially doing is that you are going to preclude the use of that material just because you want to take on additional work on it that
is not needed through this process. Because the farmers won't be able to use them anymore if it is not on that list. So that's why we're keeping sunset strictly to the continued use of a substance.

Now if we want to take up additional work on it, we can always do it through the regular process. But we don't want to do it through sunset because people are going to need to use these substances.

CHAIRPERSON RIDDLE: Yes, so --

MR. NEAL: And we can always have contractors do work on obtaining information for clarification purposes.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: That's throughout the entire year. Not just sunset.

CHAIRPERSON RIDDLE: Okay. Everyone clear on that? Kevin?

VICE CHAIRPERSON O'RELL: Just one question. What is the timing for the Board to receive the public comments once they've been submitted?

MR. NEAL: What was etched out in the
outline was 90 days after the comment period closes, which roughly puts us at about November 14th, 15th for the Board to come through with a recommendation. Depending on the meeting date when that is finalized, whatever date is going to be the next meeting, that's the date that we'll be looking for the recommendation to come from the Board.

VICE CHAIRPERSON O'RELL: No. But when will we see the comments? When will the Board see the comments that have been submitted to NOP?

MR. NEAL: Oh, the comments are being posted weekly on sunset. What we can do, we can send out hard copies to the committee chairs. But all of the sunset comments that we are receiving are being posted weekly on the website. On the home page, there is a link that says Sunset Comments.

And we've broken those down into Crops, Handling Livestock, and then Multi-Purpose, Multi-Practice, in general, comments so that you won't have to look for those that pertain particularly to your committee.

CHAIRPERSON RIDDLE: And one thing, I was...
reviewing those the other day and I did notice under crops there were a couple of handling substances. So I think every committee chair, when you get your packet, really look through it carefully and redirect it if you find something that is not for your committee. And some of them may be mixed and may have gotten missed by the staff. So we'll need to work together.

MEMBER KOENIG: And the forms, you know, when I get home, I can e-mail it to the chairs and everyone. Again, that process, and there is actually forms and a way you are supposed to present the recommendations. So we voted on it I'm sure. I know how I forget things I voted on, too.

But I'll send those to everybody since you are going to be engaged. But it really is -- you know the chairs have to be really active -- proactive on this thing because, you know, I would like to see at least if we're going to do this November meeting, to have a large list of kind of expedited stuff that there is no controversy.

You know we were all expecting a few but
it would be great to get the bulk of the work done at this November meeting so then we can concentrate on those materials that are more problematic.

CHAIRPERSON RIDDLE: And I had one other question that has come up and that is if there is not public comment one way or another on a substance, what is the Board's authority as far as recommending its continued use?

MR. NEAL: The way that the sunset process was put together is that if no one had commented on it, that meant there is not a continued need for the use of that substance by the industry. Because the industry was supposed to comment to you to let you know --

CHAIRPERSON RIDDLE: Right.

MR. NEAL: -- whether or not if they needed to continue to use the substances. So for the Board to say we need to continue to use this substance when nobody has commented on it, I think that's why OTA stated that we need to know in the proposed rule what substances have received comments and which ones have not because I think that they were going to go
back out and say look people, these substances have not received any comments and will potentially be removed from the national list. If you need to use it, you need to let the NOSB know.

MEMBER KOENIG: But essentially some of the commenters have said that we agree with keeping the list the same except for. So that kind of has covered them all --

MR. NEAL: Right.

MEMBER KOENIG: -- in the one comment.

MR. NEAL: We have had some comments that virtually say renew the entire national list.

MEMBER KOENIG: Keep it.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: So everything should be covered.

CHAIRPERSON RIDDLE: Okay.

MR. NEAL: But I was answering your question specifically.

CHAIRPERSON RIDDLE: All right. Yes, Hugh? And then we'll move on.

MEMBER KARREMAN: One thing that I brought
up at one of the Livestock Committee calls was the potential removal of strychnine was a natural prohibited due to certain medicinals that are used now with livestock that are naturally occurring medicinals that happen to have strychnine in it as alkaloid. And there could be some certifiers that say hey, that compound has strychnine.

So I thought that was going to be with the oxytocin and ivermectin. But maybe it doesn't need to be but I just wanted to say that I thought I'd submit it for that.

CHAIRPERSON RIDDLE: Right. And yes currently it is listed as prohibited natural. What I'm understanding from you is you'd like there to be an annotation allowing certain uses.

MEMBER KARREMAN: Certain naturally occurring forms of it.

CHAIRPERSON RIDDLE: Yes, yes. Well, it's a prohibited natural. So its natural form is prohibited and the synthetic form is prohibited by definition currently.

MEMBER KARREMAN: Right.
CHAIRPERSON RIDDLE: So that really is more an issue of adding an annotation and would be more appropriate to be petitioned through the regular year.

MR. NEAL: Yes.

MEMBER KARREMAN: Okay. That's fine. Thanks.

MR. NEAL: And let me make one more comment. The reason why we don't get into the changing of annotations, another reason is because it is going to require a lot more work, a lot more justifications just like a person would petition normally and have to make their case as to why the Board should do such a thing as to change a certain material, it's going to take up more of your time.

CHAIRPERSON RIDDLE: Right. And as a, you know, veterinarian, you are certainly free, even though you are a Board member, to submit that petition. You would just, you know, recuse yourself when it is being considered if you are the one who submitted it.

MEMBER OSTIGUY: Jim, I have a question.
CHAIRPERSON RIDDLE: Yes, Nancy, sorry I've been focusing over here.

MEMBER OSTIGUY: Well, I have a question about what you said in particular.

CHAIRPERSON RIDDLE: Yes?

MEMBER OSTIGUY: If you have no financial interest, you just think it is a good idea -- I'm trying to figure out --

CHAIRPERSON RIDDLE: Yes.

MEMBER OSTIGUY: -- sort of the conflict of interest here.

CHAIRPERSON RIDDLE: Well, right. And I was specifically referencing Hugh as a veterinarian and someone who uses the substance, even though he probably doesn't profit from it. But yes, in that case --

MEMBER OSTIGUY: I could see bringing it up.

CHAIRPERSON RIDDLE: Right.

MEMBER OSTIGUY: It makes sense to say okay, there is a potential here. And then allow the Board to say yes or no.
CHAIRPERSON RIDDLE: Yes, I think it -- yes, it would definitely have to be revealed. And it would just depend on what your interest in getting it reviewed is. If it is just general public good and you see a need, then it may not lead to your --

MEMBER OSTIGUY: Okay.

CHAIRPERSON RIDDLE: -- recusal.

MEMBER OSTIGUY: Okay.

CHAIRPERSON RIDDLE: Case by case.

Okay. And the revisions to petition notification, Rose, did you have a brief update on --

MEMBER KOENIG: That's the one you keep on putting on my work plan but -- no, at our conference call, we determined that that was not a big priority.

And so it may come up. It really is going to be triggered whether the NOP needs that because it's really -- you know I don't see that as our job unless it is requested from us. I mean I think we've got other pressing matters we've got to get on.

CHAIRPERSON RIDDLE: Yes, okay. And just for the record, we are still operating off a proposed petition that was posted June 2000 before the final
rule came out. And it does need updated. But maybe
the Board will be asked to have input.

MEMBER KOENIG: We have --

CHAIRPERSON RIDDLE: We've submitted --

MEMBER KOENIG: -- two meetings ago, we
submitted a copy of one which Arthur has but we can't
authorize him to use it.

CHAIRPERSON RIDDLE: And that was before
the court ruling as well.

MEMBER KOENIG: Right.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: That's the reason why it has
been postponed --

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: -- from this meeting because
there are some 606 issues that need to be adequately
captured.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: The whole commercial
availability piece.

CHAIRPERSON RIDDLE: Yes. Okay. Thanks,
Rose.
Handling, do you have anything?

VICE CHAIRPERSON O'RELL: No. We had the update for the Pet Food Task Force meeting, which Nancy Cook gave yesterday. I guess the only thing that I may add to that update that she presented was that on the conference calls, we had discussed a timeline that the task force would present final recommendations to the Board at the proposed February/March meeting, 2006.

CHAIRPERSON RIDDLE: Okay. Thanks.

Certification, Accreditation, and Compliance? Andrea?

MEMBER CAROE: We have three items. The first item is the peer review panel process. And we are prepared to -- the procedure --

CHAIRPERSON RIDDLE: Yes, these would be just any discussion. And right now it is blank for yesterday's agenda. But it's just -- we'll come to those in a little bit.

MEMBER CAROE: Right, right. No, but I was just going to -- just presenting just the three items that we will be discussing.
CHAIRPERSON RIDDLE: Yes, sorry.

MEMBER CAROE: One is the peer review panel procedure, which we did receive some comments on. And this item is not for vote. It is just for discussion of the Board right now because based on those comments there will be some reworking of the document to make it stronger.

Next, we do have an ANSI report response from the Board and that is prepared for vote out of efforts with collaboration with the NOP to address those items that were identified during the ANSI audit.

And lastly, we do have the vote on the Q&Gs for retailer and private label recommendation. We didn't receive any written comment on this. I did receive late comment yesterday after the meeting. So I ask that any of the ACAs be around for that discussion. We may call you up to get further comment as we discuss it because I would like to vote on this.

And I also ask any ACAs that have concerns with the document to come prepared with language so that we can wordsmith this and get this voted on.
don't expect there will be any major changes -- some minor changes, clarifications, and plan on moving forward with that.

CHAIRPERSON RIDDLE: Okay. Great. Thanks.

Crops, Nancy, do you have any -- there's nothing listed for discussion there. We've got plenty of items for action.

MEMBER OSTIGUY: Right. No, the only things that we're working on that are currently not there is in theory the hydroponics, which nobody has taken up at the moment. And we're going to be dealing with compost in a little bit but we still have all the Q&As to do which will help clarify things hopefully.

CHAIRPERSON RIDDLE: Yes. And just to update you before you got in the room under the Livestock Committee, we did talk about the apiculture and the desire of the program to get your input in particular on the task force report that had already been recommended by the Board.

And if that would be appropriate, if there are changes needed, and then if it would move forward
as rule change or as guidance to the existing rule.
So just be thinking about that and hopefully we can
move that forward.

Yes, Arthur?

MR. NEAL: One thing I left out about
that, we have drafted guidance under the current good
guidance document practices for apiculture.

CHAIRPERSON RIDDL: Oh, okay.

MR. NEAL: We have not published it yet
obviously because we’re still looking at all of the
pieces to make sure that what is going to go out
covers the major points. So -- but we will be looking
for Nancy on some input on the Board document.

CHAIRPERSON RIDDLE: Okay. And yes, I
would ask that that input be channeled through the
Livestock Committee and at least the Executive
Committee to have a chance to review it as well.

I had chaired that task force even though
I’m not a beekeeper or a honey expert and I recognize
it may have some deficiencies. I look forward to it
being improved.

And I did also just remember that under
Livestock, we should just give a brief update on the aquaculture task force.

PARTICIPANT: Let’s ask Keith to do that.

CHAIRPERSON RIDDLE: Yes, and Keith just got in the room. I hate to put him on the spot right away. So I’ll start going on while he gets himself settled.

There was a Federal Register notice soliciting members for an Aquatic Species Task Force that has two working groups, one for aquaculture and one for the wild aquatic species. The Aquaculture Working Group has been seated. A lot of expertise members who have participated in the NOAG, the National Organic Aquaculture Group that issued a white paper.

And there have been, I think, three conference calls. I’ve sat in on those calls. And they are making good progress. And really using that white paper as a basis for drafting a report, recommendations to the Board.

Anything to add on that Keith?

MR. JONES: No, Jim. That’s an excellent
overview. The last two days, there's been a number of comments that have come in on the white paper. People are now coalescing around that. And I think there's really going to be good work that will arise out of that white paper. Actually probably standards will come out of that which is what we wanted. So I think there is excellent progress being made on that work as well.

The wild fishery side continues to be a dilemma for us. We have not been able to seat the panel. And, in fact, in conversations that I've had with folks who are interested in this particular area, they believe that we actually need to go back out and request again nominees for this particular panel. And be more specific as to the requirements that we're looking for.

It has been suggested that we actually try to find an oceanographer that can look at ocean patterns, water quality, temperatures, migration patterns, things like that, a fisheries manager that can also dovetail into the work of the oceanographer.

It's also been suggested that we really
need a certifier on this wild fisheries panel which we would certainly concur with. We do have a certifier identified through the previous work on the aquaculture side that could be -- that actually has said that they are willing to participate. So I think we've got that pinned down.

We've got some sustainability experts that we've got identified. And then it has also been suggested to us that perhaps a fish geneticist would be useful in terms of working with these wild species. So that's where we're at on the wild side.

It's been much more difficult than I personally ever anticipated in terms of putting that panel together. I think it is a reflection of the -- I guess I should say the kind of convoluted feeling about that particular sector that exists.

What we found is that you are either totally for the sector and believe it could be labeled without a problem as organic or you are totally against the sector and it is anathema to label as organic. And what we're trying to do is to seek enough of a diversity in that group so that we could
at least have a rational dialogue.

It's also been recommended to us that this is probably a task force where we really are going to need some face-to-face meetings, that because of the issues and because of the depth of the feeling on the issues, that a conference call is probably not going to be sufficient to wrestle out some of the details.

So that's really where we're at on both of those.

CHAIRPERSON RIDDLE: And just one question, with all of the high priority items already on, you know, the program's plate and the Boards, is there any chance of kind of setting that aside? Or that still has to maintain focus?

MR. JONES: Well, we would like to move forward with the process because we really think it is needed to meet some of our mandates and things like that. So I don't think that we could ignore it nor would we want to ignore it.

Whether or not it deserves, in the time frame that we're in right now, deserves the priority that one might attach to it I think is actually a call
for the Board. I mean maybe that is something that you want to think about it in terms of how we would -- if we would want to stand down that particular aspect.

And then, perhaps, in the spring go back out, you know, once we've got some of this other work behind us.

I don't know that we've actually thought about it at any level in terms of standing down. But it is certainly, I guess, an option for us.

CHAIRPERSON RIDDLE: Okay. So Livestock Committee maybe should think about that -- if there would be a recommendation or a sentiment to convey to the program on that. But, you know, I'm really glad the two are separated and, you know, delays on the one have not prevented the other from making progress because I think there is good progress being made on the aquaculture.

MR. JONES: Yes, I think we are, Jim, quite pleased with the progress that we're making on the aquaculture side. They are an enormously energetic task force as is the pet food group. And so they've really made good progress. The calls have
been quite useful and energetic. And I think we've got a lot to look forward to coming out of that group.

MR. MESH: Do you have a time frame?

MR. JONES: Marty, I don't think we know. I mean they are probably, you know, farther along than certainly the pet food group. And they do have actually a paper -- I mean they've got, you know, some draft standards that they are responding to.

If I had to -- this would be pure speculation on my part so let me preface it that way. You are probably not looking at anything concrete until the spring coming up.

CHAIRPERSON RIDDLE: All right. Thanks, Keith.

Okay. So moving on to the action items. So now we are at today. And Policy Development Committee is up first with some Board Policy Manual revisions. I'll turn it back over to Dave.

MEMBER CARTER: Okay. As I mentioned yesterday, which seems only a little bit ago --

(Laughter.)

MEMBER CARTER: -- Bea has been guiding us
through some updates and some revisions on the Board Policy Manual so I'd just like to turn it over to Bea to kind of walk through that.

MEMBER JAMES: Okay. The first thing I'd like to do is some of the Board members during a conference call asked if we would be able to see the changes that were made to the Board Policy Manual.

And the -- I have it in printed form but I wasn't able to electronically e-mail it out to everybody because I lost it on my computer. But I do have it in hard copy so I'm going to pass this around. And it shows all of the -- these are mostly format changes. It just has to do with just kind of reformatting it, cleaning it up, changing spelling errors and what not. So you can take a look at that.

And then the significant changes to the manual -- I'll just go through the list that's on our agenda for today starting at the top.

The TAP review information is on page 31, inserted on page 31. The sunset review material process, that's inserted on page 45. The collaboration document is inserted on page 18. And
then the Q&A for how NOSB should handle Q&A submitted from the NOP has been consolidated in with the collaboration. And that's on page 20 under Standard Interpretation and Handling Questions and Answers Submitted to the NOP.3, in particular the fourth bullet point down.

The Committee -- I just want to review this so the NOP can hear this. The Committee will receive necessary information from the NOP to help resolve the standards interpretation and questions or will be given the authority to do the research.

So that's something that we discussed at our last meeting is how the NOSB can get more support when questions are submitted to us for information that we might need from the NOP.

And then -- let's see -- that's as much as we have as far as what's been inserted. And then we would like to be able to include the decision tree. And we would like to be able to include the document that Rose put together, Chemistry 101.

And so those are some of the points that we need to discuss.
CHAIRPERSON RIDDLE: Yes, Andrea?

MEMBER CAROE: Which decision tree are you talking about? The one that is in synthetic versus non-synthetic? Or ag versus non-ag?

MEMBER JAMES: Yes.

MEMBER CAROE: That's the one that was put together by I believe it -- was it OTA?

PARTICIPANT: Yes.

MEMBER JAMES: And we've reworked it.

MEMBER CAROE: Okay. But that recommendation hasn't been voted on yet. Okay, so it's kind of simultaneous.

MEMBER JAMES: Yes. And we also haven't voted on what to do with the basic chemistry that Rose put together, which I think is a really valuable document for helping new NOSB members understand a little bit more about basic chemistry.

CHAIRPERSON RIDDLE: And as we proceed with our vote here, I guess I had envisioned that we would have separate votes first on just the collaboration document. And so, you know, if we need a focused discussion on that, let's maintain that.
MEMBER CARTER: If you get that on the table, Mr. Chair, I would move the approval of the collaboration document.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: Second.

CHAIRPERSON RIDDLE: All right. Dave moves. Andrea seconds.

MEMBER OSTIGUY: No, no, I did. Nancy.

CHAIRPERSON RIDDLE: I'm sorry. Nancy, thank you, seconds approval of the collaboration document.

PARTICIPANT: Which page is that on?

CHAIRPERSON RIDDLE: That begins on page 18 through 20. Right. Any discussion? Any discussion on that?

Andrea?

MEMBER CAROE: Dave, what kind of feedback have you gotten from the NOP on this document?

MEMBER CARTER: The feedback that we got was that because we couldn't do it otherwise, that this was the appropriate place to put the collaboration document, was to have it as a part of
our Board Policy Manual. So --

CHAIRPERSON RIDDLE: Yes. And we
certainly received feedback, input on the content of
the document back and forth a number of times. And
then I also note that in the Office of Inspector
General Report, the program makes reference to this
document as being considered at this meeting and
evidence of our collaborative process.

MEMBER CAROE: I guess I just -- I
remember a document that Barbara Robinson wrote --

CHAIRPERSON RIDDLE: Right.

MEMBER CAROE: -- on collaboration. Was
that the basis for this? I can't remember the whole
history of this document.

MEMBER CARTER: Yes, that's the basis for
this. And because of running into some roadblocks
trying to adopt that otherwise, then it was suggested
that it become part of our Board Policy and Procedures
Manual.

MEMBER CAROE: Got you. Thank you.

CHAIRPERSON RIDDLE: Great. Any other --

George?
MEMBER SIEMON: Yes, the only input I have is that it says NOB Alerts, NOSB of the issue. I'd like to see NOB encouraged to put forward, you know, drafts for proposals. Just a general collaboration. Here's how we would handle it. Or here is a suggestion. I just don't quite see enough of that in here that NOP could take the lead on some of these issues rather than us always following -- I mean us always leading and them then redoing. So I just don't see that wording clear enough in here. I don't know.

CHAIRPERSON RIDDLE: Okay. Andrea?

MEMBER CAROE: Well, George, to speak on that, I think the whole dynamic may change when we have an NOSB Executive Director because we will have more at our hands in order to start documents and start that. Right now I can understand your point, especially with our action items so lengthy for the committees. But hopefully an Executive Director will make a change to that.

MEMBER SIEMON: And hopefully alerting NOSB of the issue might be the same as putting forward a proposal.
MEMBER CARTER: Well, I think --

CHAIRPERSON RIDDLE: Well, yes, Dave?

MEMBER CARTER: Yes, I think certainly that phrase, you know, is inclusive. It can certainly include some things like that. I think as we've had previous discussion, you know, we've always gone back and forth, you know, at what point does NOP need to make us aware of an issue coming up.

And I think this speaks to the point that when it first comes up, they need to let us know that an issue has arisen even though they don't have something formally prepared on that. So it's sort of the early warning system.

CHAIRPERSON RIDDLE: And also number two gets at that necessary information shall be provided by NOP. Well, necessary information could include a draft for our consideration. It's broad but, you know, that could be read to include that as well.

Any other comments? Any input from the program? Yes, I guess so. All right. Arthur?

MR. NEAL: I think the statement you made a little bit earlier that at what point does the NOSB
need to be engaged at such level is probably one that
we need to wrestle with at the program because some of
the questions that you wrestled with at the last
meeting I think some of you felt were not necessary,
that we could have probably handled them at program
level.

But we wanted to make sure that we
encouraged the collaboration process. First, taking
your comments into consideration, NOP providing a
draft, does that mean NOP re-framing the question,
providing the answer, and then giving it to the Board?
Is that what you are saying?

MEMBER SIEMON: I'm not afraid of that.

MR. NEAL: Well, that --

MEMBER SIEMON: That way we can work
together instead of us going on the road.

MR. NEAL: It hasn't been beneficial for
the program. The reason being is because what happens
in such a situation is that if we put our answer on
it, then we've sent you down another road. When we
give you something framed in a question, that allows
the deliberation to take place from the public and
from the Board. And gives us a fully vetted response.

So that's why we do it that way. Because we don't want to frame your thinking with our thinking.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Well, I would just concur with what Arthur just said. I think that, you know, as I think about the discussions that we've had and some of the train wrecks and getting it back on track through the last few years, it's really come down to that point that the sooner that an issue comes up and at least both sides are notified of it, then we can start working together rather than having, particularly the NOP draft something and then we're just reacting to it.

So I really think that this is a good step forward to make sure that we start the collaborative process right from the get go.

CHAIRPERSON RIDDLE: Okay, Bea?

MEMBER JAMES: We actually have it in the collaboration document that it says the NOP will alert the NOSB as to how NOP would address the incoming
question or situation. So I guess the way it is proposed in the collaboration document that Barbara had put together is that how you want to have the question or the issue addressed will come from you to us.

MR. NEAL: And when we say addressed, we're not saying what the answer will be.

CHAIRPERSON RIDDLE: Right, right.

MEMBER JAMES: You might decide that you want to have your answer. And share that with us. And ask us for our feedback. You might decide that you don't want that.

MR. NEAL: What we would do is provide insight in our thinking but not the answer because that takes the public out of the process. That pretty much puts a bias from the NOP level.

And what we're trying to encourage is a collaborative process that really involves the public because the whole retailer question is a prime example of how the public dialogue impacts the NOSB recommendation. Now if we had come up with a response to that issue, it would have been, you know, beat this
answer up but it may have taken the public's dialogue out of it to where it may not have had more of the positive impact that it is having on this recommendation today.

CHAIRPERSON RIDDLE: I think George was next. And then Kevin. George?

MEMBER SIEMON: Well, I guess my sense of the group is that. But to me, I've never seen a shortage of opinions in this room here and anybody railroading anything through.

And my concern more so is that we've done work and then we've found out there is legal limitation, there are Department limitations. And we've been rolled down the Hill. And I'm talking about making more efficiency, more collaboration.

So me I'm still not satisfied that we don't. So I would suggest in the number two, we have at least something like legal limitations added into that necessary information somewhere. Departmental regulations related -- we need to get some boundaries.

It's great to open up the door and say talk about everything. But when we find out it is
illegal or it's this or it's that, then we're back --
another meeting, another meeting, another meeting,
another meeting -- what can we do to streamline this
process?

You are not going to limit the opinion of
this community, you know. It's more so get the
boundaries out first before we go forward. So I think
we need something more here about input before we go
down the road.

MEMBER CARTER: Are you providing that as
an amendment?

MEMBER SIEMON: Legal limitations right
after research.

CHAIRPERSON RIDDLE: Or some other legal
analysis. It's not --

MEMBER SIEMON: Legal analysis -- I'm
thinking on the fly here. But I think we need some
input from the Department about issues.

CHAIRPERSON RIDDLE: It doesn't bind them
to provide legal analysis every time there is an
issue, though. I mean I want to avoid that. These
are just examples of the types of information --
MEMBER SIEMON: Exactly.

CHAIRPERSON RIDDLE: -- that could be relevant. Okay. So have you offered that as a --

MEMBER SIEMON: I have offered that.

CHAIRPERSON RIDDLE: -- as an amendment.

MEMBER SIEMON: Legal limitations or analysis.

PARTICIPANT: Where is this to be added?

CHAIRPERSON RIDDLE: Okay. On --

MEMBER SIEMON: Number two after the word --

CHAIRPERSON RIDDLE: -- page 18, General Procedures, Item No. 2, after Research to insert legal analysis -- that implies limitations.

MEMBER SIEMON: That would be fine.

CHAIRPERSON RIDDLE: Okay. Is there a second?

MEMBER KARREMAN: I second.

CHAIRPERSON RIDDLE: Hugh seconds. So we'll stay focused on that for a moment. Okay. Do you have an alternative suggestion?

MEMBER KOENIG: Give me a second.
CHAIRPERSON RIDDLE: No, we had a second.

MEMBER KOENIG: No, give me a second.

CHAIRPERSON RIDDLE: Oh, give you a second.

(Laughter.)

MEMBER SIEMON: Watch your wording here.

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: Give me a minute.

CHAIRPERSON RIDDLE: And this is only on this point.

MEMBER KOENIG: Yes, it is.

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: But the problem with putting that in is the assumption in some ways that you know the path, okay? And if you go to a lawyer and pose that, they may not give you the answer. You have to present something to a lawyer for them to analyze. Okay?

And sometimes, you know, you are giving that power to a legal person. And you actually may be able to come up with innovative ways that they haven't thought of.
So, I don't -- I mean, you know it is unfortunate -- I think that we have the abilities on this Board -- I think a lot of us have learned, you know, it's a learning process and we have to somehow pass that down. I think we're more aware of the legal implications now than we ever were, you know, when we first got on the Board.

But I don't know if you want to tie it up with lawyers where the NOP has to first ask their lawyers and then advise us legally about -- you know you talk about complications.

CHAIRPERSON RIDDLE: Okay. Kevin has been waiting. Then Bea.

VICE CHAIRPERSON O'RELL: Well, I think that the problem is -- and I agree with George -- we have gone down the path on certain answers to questions only to find out that what we're recommending back to the NOP is just going to be kicked back because the OGC doesn't agree with it.

MEMBER KOENIG: Right. But in defense of the NOP, because I remember this early on and I fought it, but they have always advised us that we need to be
specific. And most of the things like the livestock, when things are vague because we, as a group, don't want to make a hard decision, that's when it gets kicked back.

VICE CHAIRPERSON O'RELL: I think it would be helpful up front if there are some legal boundaries or directionally -- and I don't know if analysis is the right word but I do think that there needs to be some -- it's a collaboration effort.

So up front we should be free to be able to at least discuss some of the direction that we might be going. And run it by the NOP and say, you know, do you foresee any pitfalls here from the legal side of it. And I don't know if it is a requirement for the NOP in terms of the direction or analysis that they give us, but as part of the collaboration, I think we're free to have a dialogue with the NOP.

MEMBER KOENIG: I'm not saying that we --

CHAIRPERSON RIDDLE: Rose, would you --

MEMBER KOENIG: I'm sorry.

CHAIRPERSON RIDDLE: -- please.

MEMBER OSTIGUY: I have a question of
privilege. Could the Chair please look in this direction on occasion?

CHAIRPERSON RIDDLE: I'm sorry.

MEMBER OSTIGUY: I have been trying to get your attention for a while.

CHAIRPERSON RIDDLE: Well, speak up. I'm sorry.

MEMBER OSTIGUY: Bea was next. You had called.

CHAIRPERSON RIDDLE: Yes, Bea is next. And then Nancy.

MEMBER JAMES: I was just going to say that we're -- are we still discussing a point that has already been seconded?

CHAIRPERSON RIDDLE: We are. We are on that point.

MEMBER JAMES: Okay. So I think what George is saying is that there just needs to be a friendly amendment to change point two so that when the NOP submits an issue for us to look at or a question, that they have fully taken into consideration that there is not going to be things
that are going to cause us to -- our time and effort
that is put into it won't end up going back to the
table because they didn't consider certain legal
issues that could cause it to be -- need to be
reconsidered.

So I think that's what George is say is
that the NOP, before they give us an issue, just needs
to fully really look at it and analyze it before
submitting it to us.

CHAIRPERSON RIDDLE: Nancy.

MEMBER OSTIGUY: I object to the insertion
because I think that what this whole process is
supposed to be is a collaborative one where we do
begin at the beginning and we come out, through the
conversations, with what the legal implications are.
And we go back and forth. And if we start at the
beginning, then we don't end up going down a pathway
that is worthless.

So if the input is going back and forth,
as this document is supposed to be outlining, we never
get very far before we find out oh, okay, that won't
work because Arthur doesn't let us do that.
So the whole document is doing what George is talking about. So I don’t think it is necessary. And the implication, by putting it in there, is that we aren’t going to get that unless we put that in. And I think we are. It is to the NOP’s advantage. It is to our advantage.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Just -- I agree with that. And I guess I was thinking specifically like the example of the two regulatory changes that the Livestock Committee made last February. Just maybe there ought to be some insertion or some kind of memorandum of understanding that timeliness is critical.

MEMBER OSTIGUY: Well, we’re just beginning this process.

MEMBER KARREMAN: Right. I just wanted to say that, that’s all.

CHAIRPERSON RIDDLE: Okay. Keith has a point here.

MR. JONES: Yes, I think what you need -- reassurance from the program is that we’re not going
to play hide the ball on you, okay? We don't play hide the ball on you, okay?

What we're trying to do is to learn almost with each passing day kind of one, what triggers Board involvement, and two, what is the level of information that you need when we begin to frame the issue so that you feel that there is -- that you have a comfort level that the information is full and complete. And then you can make a decision on that.

Now I think Nancy's point is a good one. And that is this is an evolutionary process. We are continuing to refine it. I think what we see is that the dialogue would begin very early on through the identification of an issue. Okay? And when that dialogue begins very early on, we have an opportunity to flag things that may be problematic, whether it is a legal issue, whether it simply is a broader policy question that has to be addressed.

I mean keep in mind that this is really a dialogue, okay? And I think what you need to be reassured, and it appears to me that the document gives you what you need, you just need some
reassurance that we're not going to play hide the ball, that information will be full and complete when you receive it.

And I think that's my message this morning is that is indeed the case and you have our assurance that it will be the case.

CHAIRPERSON RIDDLE: Yes. And after, you know, listening to the discussion, I guess my position is that by inserting, you know, a legal analysis or legal implications could actually hinder the collaborative process.

Yes, I understand the sentiment. We want to know the legal boundaries or implications. But at the same time, if we're saying the program should do that first, that's going to really limit their ability to engage with us. But -- so I guess -- yes, go ahead.

VICE CHAIRPERSON O'RELL: And I would support that. I think that the sentence we have there now with necessary information is sufficient because this is the start of a collaborative process. And I think that's where we get everything on the table.
And, Keith, what you said, you're not trying to hide anything from us. It's an open collaborative process. We'll discuss these pitfalls in the beginning and get it out in the open. I don't think we need to have the word legal.

CHAIRPERSON RIDDLE: Okay. George?

MEMBER SIEMON: I guess I'm going to disagree still. This is a broad policy statement where we're trying to paint a broad picture for future Boards to know the kind of things you might want. You, yourself, said this is just necessary information. Maybe they will this time. Maybe they won't. It says prior to. It says general procedure.

It's a very broad statement. This is what we're painting for the future group. Why wouldn't we want that in there? We just all agreed we need to have that sometime prior to discussions. Why wouldn't we want it in a broad group?

The second thing is I certainly think implications is a better word after listening to that.

So however we can do that.

CHAIRPERSON RIDDLE: Well, that would be...
to just accept that as a friendly amendment.

MEMBER SIEMON: I'd certainly accept that.

CHAIRPERSON RIDDLE: If the seconder accepts that, we'll change it to legal implications. And then we'll proceed to vote.

MEMBER SIEMON: Yes, let's call the question.

PARTICIPANT: The second was Nancy.

CHAIRPERSON RIDDLE: And the seconder was Nancy. But right now -- no --

PARTICIPANT: The seconder was Bea.

CHAIRPERSON RIDDLE: Yes, the seconder was Bea on the --

PARTICIPANT: Oh, I'm sorry.

CHAIRPERSON RIDDLE: -- Hugh -- I'm sorry -- on the amendment. Bea tried to. But Hugh got it.

I'm sorry. Never mind.

MEMBER SIEMON: Let's call the question.

CHAIRPERSON RIDDLE: Hugh was the seconder. Do you accept that -- implications instead of analysis --

MEMBER KARREMAN: Yes.
CHAIRPERSON RIDDLE: -- yes, as a friendly amendment.

MEMBER SIEMON: Let's call the question.

CHAIRPERSON RIDDLE: So let's vote on -- Bea?

MEMBER JAMES: Are we also inserting George's recommendation that we include some kind of a written draft?

MEMBER KARREMAN: No, no.

MEMBER JAMES: That we would like to have some kind of written draft from the NOP? So we're not including that?

CHAIRPERSON RIDDLE: No, right now this is very narrow. Just insert the words legal implications after research. So we'll proceed with roll call. And I have it set up to start with Gerald. Surprise.

MEMBER DAVIS: No.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: No.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?
MEMBER CAROE: No.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: I guess I will vote to retain the original. So I'm voting against this.

CHAIRPERSON RIDDLE: Okay. So that would be no.

Kevin?

VICE CHAIRPERSON O'RELL: No.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: No.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: No.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: No.

CHAIRPERSON RIDDLE: And the Chair votes no. So we have nine no and would that be four yes?
Four. So that is defeated.

So we stay with the original language.

Any further discussion?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: On page 18 under General Procedures, numbers three and numbers five, I suggest adding the word may. I make that motion. So it's the issue may be placed on the agenda. And NOSB may make a formal recommendation. These issues may not be at the level that they require either one of those things.

MEMBER OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. Nancy seconds. Andrea moves. And Nancy seconds to change item three and five to include the words may and then the appropriate linguistic changes.

MEMBER CAROE: Yes. Thank you.

CHAIRPERSON RIDDLE: Okay. Any discussion of that amendment?

(No response.)

CHAIRPERSON RIDDLE: Hearing none, voice
vote. All in favor say aye.

(Chorus of ayes.)

CHAIRPERSON RIDDLE: Those opposed?

(Clares of ayes.)

CHAIRPERSON RIDDLE: All in favor say aye.

No response.

CHAIRPERSON RIDDLE: Those opposed?

(Clares of ayes.)
CHAIRPERSON RIDDLE: Yes, Nancy?

MEMBER OSTIGUY: On page 20, the fourth bullet that Bea talked about, the way she read that sentence, the last part of it read or will be given the authority to do research. We're missing the do in there. At least on the printed copy. Well, I'm just saying that that is how she read it. So I'm wondering if that was the intent.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: And if so, we're missing that.

MEMBER CAROE: Is it research as a noun or as a verb? If it is as a verb, it's perfect the way it is. If it is a noun, it needs do.

MEMBER OSTIGUY: Well, it's --

MEMBER JAMES: It should be do. I think you are right, Nancy.

PARTICIPANT: Conduct research.

MEMBER OSTIGUY: Conduct, yes.

CHAIRPERSON RIDDLE: Oh, so we're inserting conduct as well?

MEMBER OSTIGUY: Instead.
MEMBER CAROÉ: Instead of do.

CHAIRPERSON RIDDLE: To conduct research.

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Okay. That is on page 20. That's Item No. 3. And then the fourth bullet point down toward the end of that sentence to insert the word conduct so that it reads, "or will be given the authority to conduct research."

And, Bea, you accept that as a friendly amendment?

MEMBER JAMES: Yes, I do.

CHAIRPERSON RIDDLE: And Nancy you accept that?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Okay. So that -- we'll just go with that.

PARTICIPANT: Do we need a voice vote on that?

CHAIRPERSON RIDDLE: No, not if they accept it. And we could have done the same with may really but we didn't.

PARTICIPANT: You confuse me.
CHAIRPERSON RIDDLE: I'm sorry. We change the rules every time to keep your attention.
Okay. Anything else on the draft now as amended? This is pages 18 through 20 still. Hugh was getting excited.

Okay, well let's take it to a final vote then. So now we go with Nancy first?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: No.
CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: And the Chair votes yes. So we have 12 yes, one no. So that's approved.

Thank you very much, Bea, for your work on that.

And thank Barbara and NOP staff for your engagement as well. It was a collaborative process to develop the collaborative document.

(Laughter.)

CHAIRPERSON RIDDLE: Okay. Now we also intended to vote on the Chem 101 on its own, correct?

MEMBER CARTER: That's correct.

CHAIRPERSON RIDDLE: As inclusion of --

MEMBER CARTER: And I would so move approval of that section please.
MEMBER OSTIGUY: Second.

CHAIRPERSON RIDDLE: That's towards the end.

MEMBER CARTER: It's on page --

CHAIRPERSON RIDDLE: Fifty-three, 53 through 57. Before we go to consideration of the rest of the document. So Dave moves and was it Nancy second? Approval of the basic chemistry section, pages 53 through 57. Any discussion?

Hugh?

MEMBER KARREMAN: Just from listening to Barbara yesterday, you know, mentioning the covalent bonds, the ionic forces, I'm not certain I read that in here. Could they be explained?

MEMBER JAMES: It is in there.

MEMBER KARREMAN: It is in there? I didn't see that but okay.

CHAIRPERSON RIDDLE: Good. Okay. Any other discussion?

(No response.)

CHAIRPERSON RIDDLE: Hearing none, we'll go to a vote. And Julie is up first. Julie?
MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O’RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: No.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: The Chair votes yes.

Unanimous, 13 yes, zero no.

Okay. Now I think the --

MEMBER CARTER: So, Mr. Chair, then I would move approval of the entire document as amended.

MEMBER OSTIGUY: Second.

Discussion?

Hugh?

MEMBER KARREMAN: Yes, on page 36, under Item B -- actually page 37 -- just flip the page over to No. 7 and 8, basically it's talking about the information that is supposed to be submitted by a TAP reviewer regarding the regulatory authority registration numbers and the CAS numbers and other product numbers of the substance.

PARTICIPANT: What point are you on?

MEMBER KARREMAN: I'm at No. 7 and 8. It's kind of both those sentences together. One thing
I've seen out in the field -- case in point, is the
TAP review for calcium borogluconate. That has been a
really difficult compound, in a sense, because there
are different ways to call calcium borogluconate but
they're not necessarily all registered as such with
CAS numbers. They may be. But at least in that TAP
review, I don't have that in front of me but there's
different ways to call calcium borogluconate the same
compound.

And also what I'd like to see in addition
here would be that the TAP reviewer on whatever the
generic item is if possible list all commonly known
available commercial products that contain that
ingredient.

I know it might be really difficult. But
when it comes down to these medicinals used for
livestock health, there's been some real problems at
the certification level with the farmers. And that
goes from Oregon to New York to Pennsylvania to Ohio.

I've talked with many certifiers to kind
of clarify what is calcium borogluconate. And, you
know, they'll have a trade name. They'll say well
this has calcium gluconate or whatever. And that's not right on the list.

So what I'm saying -- what I'm asking for is that a TAP review has an exhaustive listing of synonyms and other USP or national formulary-type names for a generic substance.

CHAIRPERSON RIDDLE: Okay. Arthur, you have a response?

MR. NEAL: Let Nancy go first.

CHAIRPERSON RIDDLE: Oh, okay. Nancy first.

MEMBER OSTIGUY: Part of the reason for requesting the CAS number, the chemical abstract service number is because it provides us with in essence a legally definable substance. And the common names, as you have described, are all over the map.

And so if a material in a product cannot be linked to that CAS number, that's a problem with the product. We're only approving that CAS number. That actually has been much more the intent in recent years so that we know exactly what material we have put on the list. And we have a CAS number associated
with it.

If you then list all the assorted common names that that CAS number might -- might be attributed to that CAS number, that common name may be attributed to multiple CAS numbers. And that we're not approving.

So it could actually increase the confusion because we're not approving the common name. We're approving only that CAS number if it exists.

CHAIRPERSON RIDDLE: And yes, I would just like to point out that, you know, this section -- well, it's taken -- it is verbatim the statement of work for our technical contractors. And the petition information will be revised. And I think when that comes up for revision is the time to address some of your concerns or your experience in the field.

But right now this is the existing language of the petition instructions. So I don't think it is appropriate to just change it in the Board Policy Manual. We'd have to change it first in the petition notice and then upgrade the Policy Manual to catch up with the revised petition instructions.
MEMBER KARREMAN: When may that occur?

Because it is really, truly a major obstacle out in the field.

CHAIRPERSON RIDDLE: Yes.

MEMBER KARREMAN: Major.

CHAIRPERSON RIDDLE: Arthur, do you have a response to that?

MR. NEAL: Concerning CAS numbers, all the dockets that you will see come out of NOP's office will have CAS numbers associated with each material to be amended on the national list. Because TAP -- the technical contractors are not required to search for brand products, they're only looking at the generic ingredient. And they are only looking at what was petitioned.

So if the petitioner petition calcium borogluconate with the specific CAS number, that's all they're looking at. They are looking at, you know, synonyms and common names. But particularly the petitioner who petitions the substance may have petitioned only one particular type.

Now calcium borogluconate raises a
question because that's one of the substances that is in the livestock docket. So you may want to think about that one, too.

MEMBER KARREMAN: Well, I'm just saying --

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: -- that when we get to it at some point, I'd like to bring that up again at the appropriate time. I thought it was now. I apologize.

CHAIRPERSON RIDDLE: Yes, Rose?

MEMBER KOENIG: I know she posed that question and somebody answered it quickly on the covalent bonds. But I went through that document and I did not address those because that's not the route I took. I was just describing, you know, chemical reactions.

You know talking about all different chemical bonds, I mean then you are getting into a whole other area, you know, another chapter in the chemistry book. So that wasn't the purpose originally of that document.

I don't -- the document could remain in
there if there would -- you know as is and then if we want to make additions to it, we could always add sections on bonds if people really need it. But -- so it's not that the document is wrong or inaccurate.

I just want to point out that -- well, there are disulfide bonds that are talked about. I couldn't find anything that described it. So I just didn't want to be accurate because I know we passed that really quickly and I just went through it.

Nancy?

MEMBER OSTIGUY: Yes, and what I was implying was that the covalent bonds were described and discussed. Not necessary that the word was used because we actually purposely dropped --

MEMBER KOENIG: Right.

MEMBER OSTIGUY: -- most of the chemistry words because that tends to get in the way of understanding on occasion.

Now just as general information, and I mentioned this to Barbara yesterday, for those that are unfamiliar with chemistry terms and would like just an incredibly well done, very basic non-textbook,
there's what is called a Cartoon Guide to Chemistry.
And they are very effective for the lay person.
So if you are unfamiliar with the terms,
want to get a very quick read background, the Cartoon
Guide to Chemistry.

CHAIRPERSON RIDDLE: All right. We might
consider that in the future.

PARTICIPANT: Is that a friendly
amendment?

CHAIRPERSON RIDDLE: Barbara signs up.

PARTICIPANT: We'd have to copyright it to
put it in.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: Yes, I can bring a copy
to the next meeting because I have it.

CHAIRPERSON RIDDLE: Sure. Okay.

Further discussion on the entire document
as amended? I have one question. And Bea, when you
were making your introduction, I was a little
distracted getting my voting forms. So I have a
question.

You said something about those flow charts
for this --

MEMBER JAMES: The decision tree?

CHAIRPERSON RIDDLE: Yes, decision trees on synthetic. And those are not included, correct?

MEMBER JAMES: Right. We had -- originally we had put those in.

CHAIRPERSON RIDDLE: Right.

MEMBER JAMES: But the committee decided to take them out and leave it as a discussion point for today.

CHAIRPERSON RIDDLE: Right, right, yes.

It would really need to be part of the whole synthetics. And then that could be transferred in in the next edition of the manual.

MEMBER CARTER: This is indeed a living document.

CHAIRPERSON RIDDLE: Right.

MEMBER OSTIGUY: I have a question. Does any part of it ever die?

(Laughter.)

CHAIRPERSON RIDDLE: We remove parts.
PARTICIPANT: We don't want to go there.

CHAIRPERSON RIDDLE: We had a whole peer review section in there that died in the past. So anything else? Discussion on the document?

MEMBER JAMES: So are we going to talk about the decision tree to be --

CHAIRPERSON RIDDLE: As part of the --

MEMBER JAMES: Future document.

CHAIRPERSON RIDDLE: -- material? Well, isn't it part of your draft for the synthetics?

VICE CHAIRPERSON O'RELL: Yes. It's going to be part of the discussion when we take the non-synthetic synthetic and the ag-non-ag. But it's not appropriate at this time.

MEMBER CARTER: Yes, it's not germane to this.

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Anything else that is germane?

(NO RESPONSE.)

CHAIRPERSON RIDDLE: Seeing nothing, we're going to start the vote. And we go to Andrea.
MEMBER CAROE: Yes.
CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.
CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.
CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Yes.
CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.
CHAIRPERSON RIDDLE: Bea?
MEMBER JAMES: Yes.
CHAIRPERSON RIDDLE: Hugh?
MEMBER KARREMAN: Yes.
CHAIRPERSON RIDDLE: Michael?
MEMBER LACY: Yes.
CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: The Chair votes yes.

We have unanimity, 13 yes, zero no.

And once again, I really want to thank Bea for taking this on. It is the best manual we've ever had. It just keeps getting better. And I'm glad that someone has adopted it to keep it alive.

(Laughter.)

CHAIRPERSON RIDDLE: Yes, we put it up for adoption.

Okay, Dave, back to you. Is there anything else from your committee?

MEMBER CARTER: No, that is the only action item that we had on the agenda.

CHAIRPERSON RIDDLE: Okay. All right. Well, let's try and move on before break here if that is okay with the Board. It is nine-thirty.

And so it goes to Andrea of the Accreditation Committee.

MEMBER CAROE: As long as we get a break after this.

CHAIRPERSON RIDDLE: Yes.
MEMBER CAROE: All right.

CHAIRPERSON RIDDLE: If we can move through it.

MEMBER CAROE: Okay.

CHAIRPERSON RIDDLE: At least we can get one or two items done before a break.

MEMBER CAROE: Well, that's all we've got. Okay, well we have a discussion item. The first item is a discussion item. Do you want to do that? Or do you just want to do vote items at this point?

CHAIRPERSON RIDDLE: Well, I -- just a little summary of where that is at, I think.

MEMBER CAROE: Okay.

CHAIRPERSON RIDDLE: Why we're not voting on it today.

MEMBER CAROE: All right. Well, the first item on our agenda is a peer review panel procedure recommendation that we have in a working document at this time. And that document was initiated by or worked on by Michael. So I'm going to ask Michael to do that presentation. With a significant amount of
input from the committee and from Jim in particular, put this document together. So, Michael, if you can summarize?

MEMBER LACY: Thank you. I'll try to be very brief. We've been batting this peer review panel thing back and forth I guess for a number of years before I came on the Board. And with Jim's help and really good input from Keith, Andrea, others, I think that we're coming close to something that we think that will work for this peer review requirement that is part of the OFPA and the organic rule.

Just to sort of tell you where we are and where we're going with it, we are trying to come up with a review process that is thorough and meaningful and that gives NOP and NOSB time to react and make thoughtful changes based on a very thorough review process.

We're very pleased with the way that the ANSI review worked. We think that that's the way that we want to head and have an agency, an organization that is familiar with and expert at conducting audits, do the actual audit.
Then we would have -- we've debated back and forth whether that should be on a one-year basis, two-year basis, three-year basis. Going back to the idea of a very thorough review and a very thoughtful response and action to that review, I think we are thinking a thorough review less often, probably on a three-year basis, rather than on an annual basis where you just go from one audit to another and don't have a chance to really make substantive changes based on thoughtful thinking on the results of the audit.

The last thing, and probably the most important thing, on the direction that we're heading with this audit process is that we really want to make the audit process an opportunity to have collaborative discussion between NOP and NOSB.

And with Keith's help and encouragement, I think we've come up with a process that will improve communication between NOP and NOSB as a result of the audits, which is a goal that NOSB and NOP both are desiring.

As Andrea said, we are not going to take action on this right now. We think we do have a good
draft. We've gotten some good comments that were part of the public comments yesterday. And we'd like to take those into account before we come up with our final draft.

But essentially, just to summarize, we'd like to have an outside organization that is an expert at doing audits conduct the audit. We would like for the results of the audit to be something that is meaningful, that there is time given in to making changes to respond to the audit, and the last thing is that we would like for this to be -- the result of the audit to be an opportunity to engage in very constructive and positive communication between NOP and NOSB.

Thank you.

MEMBER CAROE: Thanks, Michael.

Again, to reiterate what Michael had said, we did receive some very pointed comments in writing, which was wonderful, and they were well supported by the community, so we do want to consider all of those.

Also, the end part of this process is we are working very closely with the program to make sure
that these comments -- and this recommendation, I should say, is a recommendation for a procedure that is meaningful and can be used by the program. And put it into place immediately.

So that's where we're at in the process. We're just smoothing that out and polishing that with the program to make sure that this is a procedure that will be used -- can be used and will be used.

So I think we'll have action to vote on this in the next meeting. But it would have been premature at this point. We did want the organic community to understand though that we are working on this. This is important. We're moving forward with it.

Okay. So --

CHAIRPERSON RIDDLE: All right. Thanks Andrea and Michael for that.

MEMBER CAROE: Okay. The next action -- we do have an action item on the next item on the agenda. And that is the NOSB response to the NOP response to the ANSI Report. And this primarily was worked on by Chairman Riddle. So I'm going to ask him
to present that document. And we are prepared to vote on this document during today's meeting.

CHAIRPERSON RIDDLE: Okay. Well, first as Chair of the Board, I would ask that it be moved before consideration. So --

MEMBER CAROE: Well, I will move to adopt the recommendation for the response to the response to the ANSI Report.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: Second.

CHAIRPERSON RIDDLE: All right. Andrea moves and Nancy seconds adoption of the NOSB response. Okay?

And then I'll just summarize here. This really is a first stab at kind of closure of the audit process where, you know, a professional auditing agency, American National Standards Institute, conducted an audit of the accreditation program. And the NOP did line by line response to the, you know, corrective actions or the deficiencies that were identified in that report.

And then the Board was asked to evaluate
those responses and give some feedback. And as we continue work on the peer review procedures, you know this certainly could be a model for how they function in the future.

But we were encouraged to go ahead and issue a response. And so I will just focus on the recommendations. And there are eight recommendations that are on pages two and three of that document. This is found after your ANSI Audit Report tab in your meeting book.

So Recommendation No. 1, the next audit should explicitly verify assessment of the NOP’s adherence to accreditation procedures in Subpart F of the final rule and evaluate NOP’s accreditation decisions in addition to adherence with ISO Guide 61 in order to demonstrate that the audit meets the requirements of 205.509.

And just a little background, in the section of the ANSI Report where they discuss scope, they really focused their audit on the ISO 61 requirements. And it was not clear that it covered the rest of the requirements of 205.509. So just
recommending that future audits make sure and cover
off all of those requirements.

Yes?

MEMBER CAROE: Jim, is this appropriate to
put the new number in for the ISO document at this
point? Or since this is historic and already
happened, is 61 appropriate here?

CHAIRPERSON RIDDLE: Yes. That is. It is
appropriate to keep it the way it is. The 61 is what
is mentioned in the rule. That's what the audit was
carried out to. So that's what our response is directed
to.

I think in the procedures --

MEMBER CAROE: In the next one --

CHAIRPERSON RIDDLE: -- document, we
should mention that the ISO Guide 61 has a new number.
It has been revised, yes. But right now, it is
appropriate to leave it the way it is.

MEMBER CAROE: Okay.

CHAIRPERSON RIDDLE: Recommendation No. 2,
NOP should address the need for a quality manual and
follow a quality system that fully documents all
accreditation functions, policies, and procedures.

This information may be in a quality manual or the quality manual may reference information contained in separate policy and standards manuals.

And this is all something that is underway. This is not new insight at all. But it is just reinforcing work that is already ongoing.

Number three, NOP should document that explanations to the regulation are developed by impartial persons or committees who possess necessary technical competence in the requisite subject matter.

And that was a finding that ANSI noted.

And, once again, this is not new information. We are just reinforcing that need.

Number four, NOP should demonstrate how it has established a clear wall described in the quality manual between its accreditation activities and other certification-related functions specified in the rule, including how it handles suspensions, revocations, complaints, appeals, and enforcement actions.

Once again, it is a reinforcement of what is already happening.
The next one is truly a reinforcement where NOSB endorses the NOP's responses that are listed above in Items A through G. And encourages the Secretary to provide adequate support to accomplish the tasks listed above in a timely manner.

Okay, number six, NOP should establish or clearly demonstrate the existence of job descriptions with minimal qualification requirements for auditors and technical experts who provide advice on or verify compliance with organic regulations.

This is just another point from the ANSI audit that we are reinforcing.

In preparation for the next -- number seven -- in preparation for the next audit, the NOP should demonstrate that the document and data management system being implemented fully complies with the requirements of ISO Guide 61.

And number eight, NOSB acknowledges that NOP and ISO Guide 65 requirements are not identical, which restricts access to international markets and results in increased costs and bureaucracy to certified operators and certifying agents.
So it's more just an acknowledgment there. We're not saying what should be done about it. But it was pointed out in the ANSI Report.

And then in conclusion, we certainly commend NOP for contracting with ANSI to conduct the review and providing thoughtful responses to the findings in the report. And we also understand the creation and operation of the accreditation program are huge undertakings. And we stand ready to continue to collaborate and cooperate.

So, there's a motion on the floor. And it's been seconded. Is there a discussion? Andrea?

MEMBER CAROE: Well, I'd like to further discuss this. I want to also let everybody know that this document was created by the committee but it was vetted with collaboration with the program because we, again, want this to move forward. We want this to be meaningful and it was a good effort.

And I commend Jim for working on it. And, you know, the programs for helping us out with this. I understand Mark was the one that really vetted this with us.
CHAIRPERSON RIDDLE: Mark and Keith, yes.

MEMBER CAROE: Mark and Keith. And so I appreciate that. And we'll move forward in this way on future audits and working with the program. That's really --

CHAIRPERSON RIDDLE: Okay.

MEMBER CAROE: -- really any questions from the Board on this?

CHAIRPERSON RIDDLE: I have Nancy next. And then I think Mark has a question.

MEMBER OSTIGUY: Yes, I have a question that relates to what Andrea asked earlier about the ISO 61 because we are referring here into the future. Do we want -- does that number need to be changed? Or something that denotes that?

MEMBER CAROE: It is in one of the other recommendations that they be prepared for 61. So should we change that language to what is it -- 17011?

CHAIRPERSON RIDDLE: We'd have to look in Lynn Coody's comments.

MEMBER CAROE: It would seem to make sense just to footnote it at least.
SECRETARY CAUGHLAN: She acknowledges it.

CHAIRPERSON RIDDLE: Okay, Mark, do you --

MR. BRADLEY: For the sake of the contract that we worked on with ANSI is that we will close all these audit findings according to the original numbers in ISO 61. But all the new documents that we're developing are to the 17011 document.

PARTICIPANT: And it is footnoted.

MR. BRADLEY: So we're making that transition at that point.

MEMBER CAROE: It is footnoted? Okay. I didn't see that.

CHAIRPERSON RIDDLE: Yes, there is a footnote at the bottom of page two already making a reference --

MEMBER CAROE: You expect me to see that size?

CHAIRPERSON RIDDLE: -- so that would apply to the other point as well. Okay?

Bea, did you have a --

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Yes, Mark made his
point. Or do you have additional input first?

MR. BRADLEY: I do have kind of a response --

CHAIRPERSON RIDDLE: Yes, sure.

MR. BRADLEY: -- to your response to our response.

(Laughter.)

MR. BRADLEY: If I may. We're doing a lot of work at the program level right now. And, in fact, September 30th is the deadline that we've imposed or are working with on some other issues.

And in order to make that response as timely as possible and to get the ball rolling on all this and get some final documents out, we've already, you know, created some final internal working procedures that effect the certifiers directly. Those have been very well received to whatever extent, you know, they have been implemented.

Some of the things that we're having to create, though, for the accreditation program are going to be very invasive as far as accept or reject criteria for certifiers or for the inspectors

NEAL R. GROSS

themselves. And this is not something that we want the program to impose without direct participation by the Board.

So even though we may, you know, for the sake of responding in time to these audit findings, we may create some draft documents and this is going to go right to what George was talking about. We're going to create some things and let you comment on them.

We won't implement them until, you know, they've been thoroughly vetted through the Board. Whatever changes, you know, are appropriate, that the Board and the certifier communities think are appropriate. But they are going to be very -- they need to be responded to and implemented and finalized before we go into the next round of accreditations.

And that's where this is really going to hit the road. We've got -- have we got 100 yet? A 100 certifiers actively providing service to the organic community around the world. And when those come up for reevaluation, it's going to be a complete review process. And we'll want to have all these
changes completely finalized by that time.

So all I'm saying is that we're going to have some things that are going to look very final and invasive that you have not seen by the time that we have -- when we have the next meeting, we'll make sure that these get in front of the conformity assessment committees and --

CHAIRPERSON RIDDLE: Yes, well I have a question then, Mark. You are under a timeline, a deadline.

MR. BRADLEY: Yes.

CHAIRPERSON RIDDLE: It is self-imposed but it is real.

MR. BRADLEY: Well, it's -- yes.

CHAIRPERSON RIDDLE: Yes.

MR. BRADLEY: We agreed to it so I guess it is self-imposed.

CHAIRPERSON RIDDLE: So -- but you are wanting some feedback -- input from the Board, specifically the accreditation committee, I would think, on some of those drafts by September 30th.

MR. BRADLEY: No. What I'm saying is that
we'll go ahead and create the drafts to meet the September 30th deadline.

CHAIRPERSON RIDDLE: Oh, okay.

MR. BRADLEY: We won’t be implementing any of them.

CHAIRPERSON RIDDLE: Okay. All right.

MR. BRADLEY: So we’ll begin that process.

But like George was saying, he’s going to get to see some stuff that we’ve already done the work on.

CHAIRPERSON RIDDLE: Yes, okay.

MR. BRADLEY: ANSI asked the questions, provided what we think is going to be a good answer.

CHAIRPERSON RIDDLE: Yes.

MR. BRADLEY: But there will be a lot of work -- a lot of comments that we’ll need to have from the Board on this.

CHAIRPERSON RIDDLE: Okay. Great. I’m really encouraged to hear that. And look forward to being engaged in that. And it sounds like we will have time to give consideration. I was just thinking about September 30th. We’re not going to have a meeting by then. How are we going to comment. But I
was confused.

MEMBER CAROE: And let me ask --

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Just a point of procedure.

CHAIRPERSON RIDDLE: Yes, we'll stick on this.

MEMBER CAROE: Those comments will come to the committee and the committee will make recommendation. We can vote on that at Executive Committee. We don't have to come to full Board to respond to something like that, do we? I mean I don't see the reason to take this to full Board.

CHAIRPERSON RIDDLE: Well, I wish I could agree. But this would be --

MR. BRADLEY: Wait until you see some of this stuff.

MEMBER CAROE: If that's the case --

CHAIRPERSON RIDDLE: -- we can give preliminary --

MEMBER CAROE: -- then it is going to be very taxing. If they are coming with all of these procedures for Board approval --
MR. BRADLEY: No.

CHAIRPERSON RIDDLE: I understand. But we certainly can give preliminary feedback from the committee. But as far as official advice to the Secretary, that does have to happen at an NOSB meeting.

So even though we've provided input to the program, I would ask that it be ratified by the full Board and posted for public input to follow --

MEMBER CAROE: I'm not saying coming out of committee. I'm saying coming out of the Executive Committee.

CHAIRPERSON RIDDLE: Yes. But the Executive Committee cannot make official actions to the Secretary either. That's my understanding.

MEMBER CAROE: We'll work it out.

MR. BRADLEY: We'll work it out.

CHAIRPERSON RIDDLE: We'll figure it out.

MEMBER CAROE: Okay.

CHAIRPERSON RIDDLE: We'll provide advice.

And it will definitely go in front of the public.

MS. ROBINSON: Not necessarily.
CHAIRPERSON RIDDLE: Okay.

MS. ROBINSON: Not necessarily. We are not going to necessarily tell the regular community here's how we intend to do investigative procedures for example. Not everything will be given to the public.

CHAIRPERSON RIDDLE: I see.

MR. BRADLEY: There are just some things that directly effect the certifiers that as far as accept or reject criteria, where the bar is set for these that you will need to comment on.

CHAIRPERSON RIDDLE: Okay.

MR. BRADLEY: But you won't have to go through the whole manual. That's -- most of it is just work instruction, those types of things.

CHAIRPERSON RIDDLE: Okay.

MR. BRADLEY: But we will let you know exactly where we need your comments on this.

CHAIRPERSON RIDDLE: All right.

MR. BRADLEY: And we'll frame that and pose questions to the committee.

CHAIRPERSON RIDDLE: All right, good.
Thanks, Mark.

MEMBER CAROE: Is there any more comments on this document though at this point?

CHAIRPERSON RIDDLE: I think Bea has been waiting. Did you --

MEMBER JAMES: No, actually --

CHAIRPERSON RIDDLE: Okay.

MEMBER JAMES: -- Mark answered my question by saying September 30th.

CHAIRPERSON RIDDLE: Okay.

MEMBER JAMES: And the only other question I had -- it's the quality manual? That's something that the NOP is working on?

MR. BRADLEY: Yes.

MEMBER JAMES: Okay.

MEMBER CAROE: It's their document.

CHAIRPERSON RIDDLE: Not us.

MEMBER CAROE: Should we call the questions?

CHAIRPERSON RIDDLE: Yes, I think we've had enough discussion on this draft. And so let me get back -- this is the NOSB response -- just a second
-- and we start with Goldie.

SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.
CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.
CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Yes.
CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.
CHAIRPERSON RIDDLE: Bea?
MEMBER JAMES: Yes.
CHAIRPERSON RIDDLE: Hugh?
MEMBER KARREMAN: Yes.
CHAIRPERSON RIDDLE: Michael?
MEMBER LACY: Yes.
CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy.
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.
CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Jim? Yes. Thirteen yes, zero no.

MEMBER CAROE: Thank you. Thank you, Jim, for your work on that.

Okay. And then the last item for this committee is the Q&As for retail and private label. And like I said in my early introduction, this received no comment.

Actually, I'll take a step back. This document originally started in the Handling Committee and was presented at the February meeting. And there was a tremendous amount of public comment on this. And a little bit of panic.

So this was taken back. Handling had many issues and this really was more pointed at Accreditation and Certification. So it came to this committee and we worked on it. And then provided it to Handling for their comment if they had any.

The issue -- the questions that were presented were -- had all kinds of hidden issues
within them. The question is -- specifically they were in regards to which certifier is presented on a private label for a retail firm. And the questions that were hidden within that is what are the implications of a voluntary certification for a retailer who is exempt? That was one of the issues.

And the other issues were related to private labelers. And at what point are you a manufacturer? And at what point are you not? And when do you have responsibility?

So the answer to these questions required a tremendous amount of teasing out of those issues and then answering the questions so that those answers are more pertinent.

Last night after the meeting adjourned, I did receive some concerns from an ACA on this issue. And some dialogue with a private labeler, retail labeler. And, unfortunately, those comments aren't in writing. And they don't have some language suggestions. So it was very difficult to do anything with that.

I say this because moving forward, if you
see something in any of our recommendations, it really is very helpful to the committees if it is provided with substitute language so that we can really vet it through and make those changes. Because we are prepared to vote on this at this time.

The questions that I heard yesterday, and I'll just point them out to you, is in regards to -- on page three, under the Recommendations section, creation of labels. Otherwise manufacturing, which is part of the handling definition, we considered it to be those aspects that are regulated by the regulation. All of those issues related to the creation of this product that are restricted or under the authority of this regulation.

Included in that is labeling requirements. You know is you're making the made with label, the size and text of that declaration, information as far as naming your certifier, the information panel information as far as the ingredients, right. I'm sorry. So there are implications on the label that are regulated within the Part 205.

So creation of the label, this was to
capture those organizations that actually put together a label and are responsible for what is the test and how that is presented. They put themselves into a manufacturing role when they do that because they are participating in these things that are within the regulation.

So that's what we were trying to capture. Apparently that language is concerning to some. We definitely didn't mean the retail organization that asks for an organic manufacturer to make canned tomatoes -- and by the way, make the label purple. That's not creating a label. That is, you know, they are purchasing a finished product and simply selling it. And they are completely in a retail role.

But this would be for a manufacturer that may participate deeper into the process and provide that label that says, you know, super organic tomatoes, you know, or whatever they would put on that label. Then they become responsible for those claims.

I just like -- hopefully the Board has read this recommendation. And I would just like to take questions at this time from the Board.
CHAIRPERSON RIDDLE: It actually needs to be moved.

VICE CHAIRPERSON O'RELL: So moved.

CHAIRPERSON RIDDLE: Kevin moves.

SECRETARY CAUGHLAN: Second.

CHAIRPERSON RIDDLE: Goldie seconds adoption of the recommendation.

Now, discussion? Yes, George?

MEMBER SIEMON: I need one clarification. When we go into the recommendation, it says recommendations at the end of the document with the question/answers. But then it also has the Committee recommends the following clarification regarding otherwise manufacturing. So we're voting on the whole thing?

MEMBER CAROE: The entire document.

MEMBER SIEMON: Okay. So, Andrea, I'm kind of confused by what you just said about a retailer that wants to have a private-label item. They find somebody that manufactures it -- somebody offers it to them. In the long run, no matter what you say, they are responsible for what is on the label
for not only the organic rules but all rules. Because their name is on the label, they are responsible.

So you just said to examples where there was a difference. And I didn't see the difference there. The one where they said I want a purple label -- either way, their name is on the label. They are responsible for what is on the label.

I don't think that means they are responsible -- that they are the ones that are managing the certification or the manufacturing plant. That's a whole other issue. Who is responsible for managing the manufacturer? And the certification of the manufacturing. That's a different process than the retail label responsibility because that's very broad, bigger than organics.

MEMBER CAROE: Well, when I speak of responsibility, I'm speaking specifically of responsibility to meeting the requirements of the regulation. Not responsibility to food and safety, you know, none of those issues. Just specifically who is responsible for meeting the requirements to sell an organic product under this regulation.
MEMBER SIEMON: They are. There is no doubt about it. But why does that mean they have to be considered a handler? Or a certifier?

MEMBER CAROE: I think I'm misunderstanding what you are saying, George. If a retailer buys a product that is not labeled for them and sells it, they are a retailer. They are not responsible -- under this regulation, they are exempt from the responsibility of certification and the responsibility --

MEMBER SIEMON: Sure, of course, yes.

MEMBER CAROE: -- okay. Some situations, private labels act that way. They are purchasing a product that is labeled for them but they are not creating that label.

MEMBER SIEMON: Well, it has got their name on them, so they are putting their name on it. They are taking the liability of that label no matter how they purchase the private label, they are responsible for that label. That doesn't mean they have to be certified. There are two different issues. The responsibility of the legal label and the
responsibility for the handling and manufacturing.
Those are two different -- I'm seeing a -- I don't see
the difference that you are saying here. And I've
read this and I've got real concerns with the way this
goes and defines otherwise manufacturing.

I'm pretty familiar with what retailers
want and what their responsibility is so I've got some
concerns.

CHAIRPERSON RIDDLE: I've got Bea, Gerald,
and then Kevin.

MEMBER JAMES: Well, I guess I have
concerns with the creation of labels being in there at all. I think that it is confusing in that it is not
well defined. And that it does lead to the assumption
that if you are involved with label making that you
have to be certified.

And from the person that spoke yesterday
who mentioned that, I think that it reads that way.
And that that needs to be better defined.

I also think that -- I get the feeling
that we are trying to answer this question by finding
a loophole through defining otherwise manufacture.
Because the real issue is that there is not -- and I know that that is stated in here -- that there is not guidance for retailer certification. There is no documentation or anything that really defines what a retailer's position is as a -- when they become certified.

So that is the crux of really the issue and being able to answer the question. And so I feel like that is really what needs to be addressed in order to answer the question.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: My comment is for George to help me understand your objection. I'm thinking of a scenario where a retailer puts their own private label on a product certified by the producer/manufacturer. Everything is done except for the private label they put on the end.

Are you saying that that end private label holder is responsible to make sure that that truly is certified properly? They can't say well, they told it was certified and all that stuff? So is that the responsibility level you are saying that they have?
That they are responsible to make sure --

MEMBER SIEMON: They are responsible for every aspect of that label is truthful. Every aspect. Organic -- every angle. That doesn't mean that they are the certified handler.

MEMBER DAVIS: Right.

MEMBER SIEMON: And it doesn't mean just because they buy a private label that they should be certified because they are responsible.

MEMBER DAVIS: If there is any problem with that certification that maybe it says it is certified on the label but it really wasn't, that the manufacturer didn't mind their Ps and Qs and there is some problem with it, they become responsible for it.

MEMBER SIEMON: But you are saying the manufacturer is the one that was certified.

MEMBER DAVIS: Right.

MEMBER SIEMON: And I agree with that.

There is a dual responsibility there. The manufacturer got certified. They are producing a certified product. They are providing the basis to the retailer who then approves the label and puts it
out there. There is a dual responsibility there.

MEMBER DAVIS: Right.

MEMBER SIEMON: Now we're talking about whose certification covers the plant. And in that case, it is the manufacturer's certification. They are the ones responsible for all the things -- the integrity of the product all the way through. They are the certificate that counts, you know.

The certifier is not the one responsible for the manufacturing and the process. I mean I think that otherwise processing, you are taking a section that defines processing as an action, cooking, baking. All of a sudden you jump in there and have creation of labels.

It is a real stretch to me the lumping together of what was a physical act of manufacturing to going beyond that to labels and formulations. To me that's a whole other input level. I think you've stretched pretty far on that myself.

CHAIRPERSON RIDDLE: And I'd ask people to stay in order. So --

MEMBER SIEMON: Was I out of order? I was
asked a question.

CHAIRPERSON RIDDLE: -- Kevin. And I think Nancy did you have a -- okay. Then we'll go to Andrea.

VICE CHAIRPERSON O'RELL: George I'm trying to understand your position is that the retailer -- you don't want to have the option of the retailer to be able to be certified as a handler if they feel that they have input in terms of sourcing raw materials, speaking quality?

MEMBER SIEMON: You are talking about voluntarily?

VICE CHAIRPERSON O'RELL: Yes.

MEMBER SIEMON: Oh, I think absolutely they should have the option voluntarily. But I'm not reading that through this document. I'm reading otherwise manufacturing. And I'm seeing that all retailers could get ensnared by that.

I really agree with the third paragraph under number one that speaks to it very well. It says if they volunteer to, they can. And if they do not volunteer, then certifier is responsible. The one --
the handler. To me that is a great answer.

The first two paragraphs I have issues with. But the third one, which is kind of the summary, that answer I agree with. It is a voluntary responsible that retailers take on.

MEMBER DAVIS: Right. Okay.

MEMBER SIEMON: I agree with that wholeheartedly.

MEMBER DAVIS: Okay.

MEMBER SIEMON: But it is not a required one. But if I go to otherwise manufacturing, I see that anyone that is creating the label, which retailer has to be, now gets ensnared in a certification scenario.

CHAIRPERSON RIDDLE: Okay. Back to Andrea. And then to Arthur or someone from the program.

MEMBER CAROE: I just want to ask a question to the program. An enforcement. If there is a situation where a store private label product is not in compliance and the store private label -- the store -- the retailer is not certified, who is enforcement
going to fine for the product?

MR. NEAL:  I'm going to answer your question. Before I answer it, I'm going to go back to the original question.

When we framed this question, we framed the question which certifying agent is required to be on the final product -- required to be on the final product. And what the regs say is that it is the certifying agent of the final handler of the product.

Now that took us to otherwise manufacture. And what we -- we communicated our concerns about otherwise manufacture, the way that it is being expressed in this document is that you'd have to change the regulations to define otherwise manufacture as contracting and labeling so that everybody is aware of that.

Because what happens is that then would require retailers to be certified as handlers when the act expressly -- no -- when the act expressly exempts them. And the definition of handler exempts retailers from certification.

But for them to be captured as an
operation that has to be certified, you are going to have to define otherwise manufacture to say labeling, contracting, and all of these other things. But that then -- it contradicts the act, OFPA, and the definition of handler.

So these were the concerns that we've expressed. Now the original recommendation that came from the Board last February I think reflected our concerns. This was just a tad different. And there is nothing wrong with the thought process.

But we want to share with you the legal implications of it. And the legal implications is that there is going to be, you know, a downward ripple concerning the impact that it is going to have on all retailers who contract for private labeling.

And then what that would then do is put the burden of ensuring that the product was produced according to the regulations on the retailer just as it would the final handler. If they manufacture the product, the burden is going to be on that retailer as being the manufacturer of the product.

MEMBER CAROE: You didn't answer my
question.

MR. NEAL: And the compliance actions would be directed at them.

MEMBER CAROE: At who?

MR. NEAL: The retailer.

MEMBER CAROE: The retailer?

MR. NEAL: Yes.

MEMBER CAROE: Even if they are not certified?

MR. NEAL: If they are going to be -- no.

Oh, if they are not certified, it's the final handler. The final handler.

MEMBER CAROE: Even if it is the co-packer.

MR. NEAL: Right. Whoever is the final -- that's why we said required because the regulation says place the certifying agent of the final handler on the label.

CHAIRPERSON RIDDLE: Yes, Keith?

MR. JONES: Jim, I think what we'd like to do on this is this has been a very difficult issue for everybody. This is a very well thought out document,
notwithstanding some of our concerns. I think what we'd like to see is to get this where we could really wrestle with it.

And the only way that we can really wrestle with it is to get it to us in a recommendation. Then we can really then begin to ascertain the implications of what you've got here.

So I think what we'd like to see is that this recommendation go ahead and come to us. It keeps the process moving. We can look at the language -- not that we haven't and not that we don't have some concerns with it. But we may be -- as really focusing on this, we may be in a better position then to come back to you and say we've examined your recommendations. We have these specific concerns.

It may that you don't want to hang your hat on otherwise manufacturing. There may be some other language in here that you can hang your hat on.

But we're going to need some time to really just examine this down at a very minute level.

This is a difficult issue. So --

CHAIRPERSON RIDDLE: Thanks for that.
That's quite helpful.

MS. ROBINSON: Also, I want to add one more thing here.

CHAIRPERSON RIDDLE: Barbara?

MS. ROBINSON: One thing that keeps coming back to me in this is the hang up between the fact that retailers are exempt from -- well, I don't even quite know how to articulate this.

The fact that somebody is exempt and then the fact that someone may get certified. I mean there is this confusion that keeps popping up. Okay, they're exempt. Well, so are small farmers. But then somebody may get certified.

Set aside that you are exempt. That never enters into the picture again. Once you become certified, now you are subject to the requirements of the regulations, okay?

If you chose to become certified, now you are playing by all the rules. So if I was looking at this question, I would first say okay, you know, are we saying -- are we forcing someone to become certified? No, we were not. The question didn't
hinge on did you have to become certified. We already know what the rules say about that.

But if in this case the company chose to become certified, then the question is what is it they are doing? And, you know, then what must they do to comply with the regs? And then, you know, go on with the rest of the question.

But don't confuse this who is exempt from the parts of the regulation with then what do they have to do. Let's get -- those are separate issues.

CHAIRPERSON RIDDLE: Okay. Last comment.

MR. NEAL: And I think the thing that is confusing that issue, Barbara, and for the Committee as well, is that the definition of handler says that any person engaged in the business of handling agricultural products, including producers who handle crops or livestock of their own production except such terms shall not include final retailers of agricultural products that do not process.

And so they are trying to capture the retailers under the handler definition.

MS. ROBINSON: Once you chose to become
certified, the rules begin to change. Once he chose
to become certified, he accepted the responsibility of
the regulation in its entirety. And from that point
on, now you answer the questions is my point.

CHAIRPERSON RIDDLE: Okay. Well --

MR. JONES: Well, I think you can tell
there is a robust dialogue at NOP on this issue.

CHAIRPERSON RIDDLE: We're engaging in NOP
work now.

MR. JONES: That's right. Which is why we
would like to have the recommendation fully come to us
so that we can really wrestle with it.

CHAIRPERSON RIDDLE: Okay. Bea? Well,
Bea has had her hand up. And then I would like to
move to a vote.

Bea?

MEMBER JAMES: I have two comments.

CHAIRPERSON RIDDLE: Yes.

MEMBER JAMES: First of all, I'm not
comfortable giving -- I'm not comfortable having this
document go to the NOP so they can fix it. I think
that we need to do a good job of writing this document
out so that it makes sense what we're saying about labeling, what we're saying about otherwise manufacture. I think it is unclear. So --

And then the second question I have is so from what -- Barbara, what you just said, what I'm understanding then is if I am a retailer and I want to do a private label grocery item, as long as I'm not certified, then I don't have to worry about any liability with that product.

But if I become certified in the grocery area, then I am responsible for the liability of that private label organic product. Is that correct?

MS. ROBINSON: I don't know, Bea. You just told me you didn't trust me to answer the question.

MEMBER JAMES: No, I didn't.

MS. ROBINSON: Yes, you did.

MEMBER JAMES: No, I didn't. I'm asking - -

MS. ROBINSON: Didn't we decide that we would like to go back and have a further discussion?

MEMBER JAMES: I would like to understand
how that got interpreted that I don't trust you to
answer the question.

MS. ROBINSON: You just said you're not
comfortable submitting this back to the NOP.

MEMBER KOENIG: No, she said that we
aren't comfortable on voting on it as a Board, as our
recommendation.

MEMBER JAMES: That's what I meant.

MS. ROBINSON: Well, what I said was I
think that once a handler becomes certified, that once
an entity, any entity, whether it is -- anybody that
we have said is exempt, once they choose not to become
exempt, they decide to become certified, it seems to
me that then they become subject to all of the
requirements of 7 CFR 205.

Now it is true that even when you are
exempt as a retailer, you are still subject to various
parts of this regulation. We know that. But once you
accept certification, you accept a whole lot more of
this.

So, yes, I guess I'm saying if you are a
grocery retailer and you are not doing anything, you
don't have that liability. You are buying all these products. They have been certified by other companies. They bear ACA's logos. They are, you know, Horizon's products, Organic Valley Products, Sensibility Soaps. You name it. You don't have -- what, you don't like that example?

(Laughter.)

CHAIRPERSON RIDDLE: Let's scrub the record.

(Laughter.)

MS. ROBINSON: They are certified organic products, I didn't say they have a seal on them. But they are certified organic. But you, as the retailer selling those products, are only subject to the requirements in the act, in the regs that say, you know, commingling recordkeeping, those sorts of things.

No, you don't bear the liability for the content of those products. But if you, instead, my interpretation is if you instead say I'm Acme grocer and I am going to go out and put my label on every product in my store, then I have assumed all of the --
and I'm going to get certified -- then I've assumed all the liability because my name is on every single product in that store.

Then my certifying agent and I now assume the liability for the content and for the processes.

And what difference is that then if I say I'm Swansons. I make a TV dinner. And I buy chicken from this company, mashed potatoes, mixed vegetables. I put them all in there. And now I'm going to call it the organic Swanson TV dinner.

Now I bought my chicken from Perdue. I bought my mixed vegetables from Birdseye. And I bought my mashed potatoes from Idaho. And they were all certified organic by those companies. You know but I am assembling them. Whose ACA goes on them?

CHAIRPERSON RIDDLE: Okay.

PARTICIPANT: You are handling them.

CHAIRPERSON RIDDLE: I've had Andrea waiting in line. And Rose. I'm sorry. George? Andrea?

MEMBER CAROE: I am going to offer a friendly amendment to drop the words creation of
labels from the recommendation, leaving only formulation of product and procurement of ingredients.

PARTICIPANT: I second.

MEMBER CAROE: Well, it has to be accepted by the motion which --

CHAIRPERSON RIDDLE: Well, it still would need seconded first. But I don't know that it is friendly because it changes the intent.

MEMBER CAROE: Kevin?

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: I would agree.

I think we need -- it's substantive, too.

CHAIRPERSON RIDDLE: It's substantive. Do you still want to offer it?

MEMBER CAROE: Okay. I motion it.

CHAIRPERSON RIDDLE: Okay. She moves.

VICE CHAIRPERSON O'RELL: I would second.

CHAIRPERSON RIDDLE: Okay. Then, yes, I think it is good to have a clear vote on that because it does change the intent.

Okay, there has been a motion to amend made by Andrea, seconded by Kevin to strike the words
creation of labels in the first paragraph under Recommendations on page three.

Discussion of that point?

Rose, on that point. And we'll get back to your general comment if you have one later. But on that point.

MEMBER CAROE: Let's call the question.

CHAIRPERSON RIDDLE: Well, I guess I have a concern with that myself. I think it is a very substantive issue that should remain in this draft that we submit to NOP. And if there are problems with it, let them wrestle with it and get back to us.

But if we don't include it now, then we're not asking them to look into it. So I would like it to be retained as my own position.

Rose? On this point.

MEMBER KOENIG: Okay. And maybe -- well, it is sort of this point because I think part of the thing that I'm struggling with -- and it is part of the collaborative, new collaborative process, but this document sounds like it's not going to be a final draft that we're presenting. That we're acknowledging
that it needs work.

Is there something -- can we call it an interim draft? I don't know. Something that's a final --

MEMBER CAROE: It's a recommendation. It's just not implemented yet.

CHAIRPERSON RIDDLE: Yes. They may send it back to us. That's part of the process. But for now, this is the work product we're giving them as a recommendation to consider.

MEMBER KOENIG: But if there are work products -- what I'm hearing is that there may be work products that people don't feel are complete. Yet they feel that it's not really -- the Committee can do nothing more with.

MEMBER CAROE: It's still a --

MEMBER KOENIG: I'm just afraid --

MEMBER CAROE: -- recommendation out of this Board.

MEMBER KOENIG: Okay. But if a recommendation goes and it is totally accepted but you feel that it is not complete, how can you vote on it
MEMBER CAROE: I think it is our complete work. I don't think we could do any more with it until we get the feedback -- further feedback.

MEMBER KOENIG: Okay. Because there may be other documents that we're faced with that.

CHAIRPERSON RIDDLE: Sure. That's always the case.

MEMBER KOENIG: Okay. If that's the understanding.

CHAIRPERSON RIDDLE: Yes. Okay. Anything else on this amendment to strike the words creation of labels? George?

MEMBER SIEMON: I think that refers strictly to the top of page two where it says otherwise manufacturing?

MEMBER CAROE: Yes.

MEMBER SIEMON: And I'd like to ask in Recommendations under question one, it also relates to that. So I'm a little worried, you know, is there other parts, you know, I want to make -- is there
other parts where it needs to be included that concern? Like in paragraph one or two after number one? The retailer provides the labels used. Is that not related to this or not? I just need to make sure.

CHAIRPERSON RIDDLE: I think that is a good point. I think it was written in relation to that phrase being included in the first paragraph.

MEMBER SIEMON: So I'm just trying to see what is this motion changing. Just that one section? Or is the last sentence in number one or sooner or later it's going to get --

MEMBER OSTIGUY: Can you call the question?

CHAIRPERSON RIDDLE: Yes. Okay. We will vote. Just on deletion of creation of labels.

MEMBER JAMES: On page three?

CHAIRPERSON RIDDLE: And we --

MEMBER SIEMON: On page two only.

MEMBER CAROE: And page two.

CHAIRPERSON RIDDLE: It's true.

MEMBER SIEMON: All right. Point specifically where we're voting please.

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
WASHINGTON, D.C.  20005-3701
(202) 234-4433 www.nealrgross.com
CHAIRPERSON RIDDLE: Yes. At the top of -
very top of page two, second line down.
MEMBER SIEMON: Right.
CHAIRPERSON RIDDLE: And then again on
page three right after Recommendations. So it would
be deleted in two places.
All right. And I've got Kevin up first.
VICE CHAIRPERSON O'RELL: Actually, Jim,
you convinced me. So I'm going to say no.
CHAIRPERSON RIDDLE: Okay, Dave?
MEMBER CARTER: No.
CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: I want to abstain.
CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.
CHAIRPERSON RIDDLE: Bea?
MEMBER JAMES: Reluctantly yes.
CHAIRPERSON RIDDLE: And yes is to delete.
Hugh?
MEMBER KARREMAN: It's only to delete.
It's not to send it up to the NOP?
CHAIRPERSON RIDDLE: No, this is just on
this point of deleting this from the draft.

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: No.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: No.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: No.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: No.

CHAIRPERSON RIDDLE: And Chair votes no.

MEMBER CAROE: So it fails, 7-4-1.

CHAIRPERSON RIDDLE: Thank you.

MEMBER CAROE: Oh, 4-7-1, sorry. Oh, 5-7-1, sorry, 5-7-1.

CHAIRPERSON RIDDLE: So we have five yes, seven no, one abstention which then would count with the majority. It fails.
MEMBER OSTIGUY: Call the question.

CHAIRPERSON RIDDLE: So it is retained.

So we have no changes then to the draft. And so we'll vote on the draft as presented by committee.

So now we will start with Dave.

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: I want to abstain.

CHAIRPERSON RIDDLE: All right. George?

MEMBER SIEMON: No.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: No.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Abstain.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: No.
CHAIRPERSON RIDDLE: Andrea?
MEMBER CAROE: Yes.
CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.
CHAIRPERSON RIDDLE: Chair votes yes.
MEMBER CAROE: Eight-three-two.
CHAIRPERSON RIDDLE: Eight yes, three no, and two abstentions. So that does carry. Okay.
MEMBER CAROE: That concludes action for this committee.
CHAIRPERSON RIDDLE: Very good, Andrea. Thanks so much. Thanks for the spirited debate. And we'll look forward to hearing back from the program on this. I'd love to be a fly on the wall.
(Laughter.)
CHAIRPERSON RIDDLE: So we will -- yes, okay. Just a second before we take a break. George has asked Livestock Committee to come over and also I need to talk to Rose, too.
So, Andrea, let's take a 15-minute break.
Be ready to start promptly at a quarter until eleven.

(Whereupon, the foregoing matter went off the record at 10:31 a.m. and went back on the record at 10:50 a.m.)

CHAIRPERSON RIDDLE: All right. So we're making progress. We're catching up with ourselves. So now we'll go to Livestock Committee. George?

MEMBER SIEMON: All right. Well, we are ready to go ahead with the material discussion. But we were going to ask if we could -- and I've already asked Jim if we could delay the pasture until right after dinner -- lunch --

CHAIRPERSON RIDDLE: Fine.

MEMBER SIEMON: -- at one o'clock.

CHAIRPERSON RIDDLE: Okay.

MEMBER SIEMON: And you agreed to that because we got some last-minute inputs that we never got a chance due to public comment last night going so long to review the comments we had. So we'd like to delay the pasture right now.

CHAIRPERSON RIDDLE: Yes. And I've asked
Rose to be prepared on her Item No. 1, National List Categories, if we have time here before lunch.

MEMBER SIEMON: And so that --

CHAIRPERSON RIDDLE: And she agreed.

MEMBER SIEMON: So I'd like to just move into the sucrose material discussion. And Nancy has lead us through that. And I believe Nancy will lead us through that discussion now.

MEMBER OSTIGUY: Okay. The material that we are looking at is sucrose octanoate esters. The committee's recommendation is to approve sucrose octanoate esters for listing on the national list with an annotation of only for use as a miticide in apiculture. And that's the motion.

MEMBER KARREMAN: I second it.

MEMBER OSTIGUY: I'd like to make an amendment --

CHAIRPERSON RIDDLE: Okay. Nancy moved -- just a second -- Nancy moved and Hugh seconded just to be clear on the record. Okay.

MEMBER OSTIGUY: I'd like to make an amendment to delete the annotation, only for use as a
miticide in apiculture.

MEMBER KARREMAN: I second it.

CHAIRPERSON RIDDLE: Okay. So now there is a motion to amend the original motion that was posted, to remove the annotation. So there would be no annotation, correct?

MEMBER OSTIGUY: Correct. The reason that I am recommending -- or made the motion is that -- well, a couplefold -- EPA already -- currently the only approved uses for this material are on mites. The material is unlikely to ever to be able to be used on anything but mites, mites are soft-bodied. The material can go through a mite.

Virtually any other insect, it would be very difficult to get enough of the material into the organism to kill it. So the likelihood that we would ever -- that we will see large-scale use is very small, not allowed at the moment because EPA does not allow it, the use in specifically for livestock would be very unlikely because of the nature of the material.

So it would have to be FDA approved
anyway. Now in this case, it does not have to be FDA approved. These are under EPA. But all other livestock are under FDA.

CHAIRPERSON RIDDLE: Okay. My concern with this with removing the annotation is placing the substance on the livestock list could certainly lead livestock producers astray if it doesn't have the annotation that matches up with the EPA restriction on the label in thinking that the substance is approved by this Board for general use in livestock production.

And, yes, they would be violating the EPA label in doing so. But I just don't want us to give any kind of incorrect or misleading information in how the substance is listed.

And I don't know if someone might use it for flea control or lice. Or attempt to use it even though that is a label violation in doing so. But without the annotation --

MEMBER OSTIGUY: But it has to be in their organic plan.

CHAIRPERSON RIDDLE: I understand.

MEMBER OSTIGUY: And it is not approved
for use in those.

CHAIRPERSON RIDDLE: Well, in reviewing an
organic plan, a certifier or inspector typically would
look at the organic regulation. They wouldn't
necessarily look at all the EPA registration of a
substance. They are --

MEMBER OSTIGUY: They would never look at
the label?

CHAIRPERSON RIDDLE: I'm not saying they
would never. I'm saying they definitely would look at
the organic regulation. And if it is on there for any
use, it could be misleading. That's just my concern.
And it was petitioned for this use.

MEMBER OSTIGUY: Yet --

CHAIRPERSON RIDDLE: And that's all it is
registered for at this time.

MEMBER OSTIGUY: -- yet at the same time,
we don't put these kinds of annotations on other
materials that we have put on livestock, that it only
can be used in sheep, only can be used in cows. We
haven't done that.

CHAIRPERSON RIDDLE: Arthur? And then
some other.

MR. NEAL: We could look at saying to be used only as prescribed in the approved label for the use of the substance -- the approved label. So that means that the substance has an approved label. And if the approved label only restricts it to use in mites and an organic producer uses it other than what the approved label says, then they are in violation of the regs -- our regs -- including EPA's regs.

CHAIRPERSON RIDDLE: Yes. That's an option. But that would be an annotation. And a Board member -- it's a good suggestion. But a Board member would have to take that up as an amendment.

But Hugh?

MEMBER KARREMAN: I generally agree with what Arthur said, you know, to not keep it just -- like you are saying. We don't approve things for sheep or cows only. But, you know, have it used according to EPA label, that's all. Just have that as the annotation then perhaps.

MEMBER OSTIGUY: I could take that as a friendly amendment or we could put it as a substitute
amendment. I don't care.

CHAIRPERSON RIDDLE: Okay. Let's have a little discussion before you do so. I've got Rose here. And then we'll come back to you.

MEMBER KOENIG: Well, I mean I guess again, after five years on the Board, I'm starting to change my view on annotations these days. But I mean why do we use annotations? It's usually to restrict. But the label restricts. I think it is a redundancy personally.

And I mean we have to have some assumptions here. There are other laws, you know, EPA is a law. And it's not our -- you know, if there is a violation, if they're not clear, they're violating a whole other federal agency's law where we have no jurisdiction.

So in the case of pesticides, I think it is just safer to just -- to list it unless you are limiting it from a label. But in this case, it sounds like the label, if you are 100 percent correct it's only for bees and mites at this point --

MEMBER OSTIGUY: Yes.
MEMBER KOENIG: -- I think we're safe on this. The only precaution would be if other uses came up, if we didn't have that list, you know, that in there. And so it may make sense to just keep the original one if we're doing it precautionary.

Because in the future, you could always add perhaps other uses. And then if we don't specify for honey bees, we wouldn't be covered.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: And if we just had by label, that we would be actually acknowledging all uses. So it's really up to the Board. I think Nancy's is appropriate for an annotation if you want to make sure that, you know, even with a potential label change by a company, you are restricting it. But right now it is redundant.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: But, you know, maybe that's -- you know that's something we can't address in sunset so maybe we'd better restrict it now.

CHAIRPERSON RIDDLE: Okay. I'm clear on where you stand.
(Laughter.)

CHAIRPERSON RIDDLE: We've got -- back to Nancy. Did you have a comment first? Then Gerald, then Hugh.

MEMBER DAVIS: The material itself, are we -- as new potential uses come up and are added to said label, is there something we would have a problem with that material on crops, for example?

MEMBER OSTIGUY: Well, it's being petitioned for crops.

CHAIRPERSON RIDDLE: Yes. That's a separate discussion. Right now it would be its uses in livestock.

MEMBER CARTER: Okay.

CHAIRPERSON RIDDLE: And it wasn't considered for other uses by the committee I don't believe. Was it? It was considered as petitioned.

MEMBER OSTIGUY: It was considered as petitioned. But the answers are not going to change. It will become obvious when we look at its petitioned use for crops. The answers don't change.

The material and this -- so I would still
argue for no annotation because the material is sufficiently innocuous -- it is naturally occurring but not in the quantity enough to be able to use it so it is synthetically created in this instance. It is a naturally-occurring material. It's basically a soap, you know.

I wouldn't drink it because I don't want to clean my organs out too much like that. But, you know, it's a soap.

CHAIRPERSON RIDDLE: Yes. All right, Hugh? Well, no, I had already recognized Hugh would be next.

MEMBER KARREMAN: I mean I can understand your concern that you were saying for a certifier or an inspector to see it on a shelf or something and it shouldn't be there. But if it is really clearly labeled and the laws are in place already, then maybe we don't need any annotation.

CHAIRPERSON RIDDLE: Yes. And I'm thinking about clarity to farmers. They look at this list. And this list is all the things they can use. This doesn't say if there is no annotation only for
apiculture, for one. And then only as a miticide in
apiculture, two.

So a livestock producer could look at this
list and just think oh, here's another tool for my
toolbox.

PARTICIPANT: That is true.

CHAIRPERSON RIDDLE: So, okay.

MEMBER OSTIGUY: But it's on the label.

CHAIRPERSON RIDDLE: I understand.

MEMBER OSTIGUY: They are supposed to
follow the label.

CHAIRPERSON RIDDLE: I understand. I
understand. I think we've had a good discussion.
We'll see where the votes fall.

And that is on removing the annotation
right now. So let me regroup my own --

MEMBER KARREMAN: It's the annotation
which is printed right now?

CHAIRPERSON RIDDLE: Yes. To remove the
annotation which currently reads only for use as a
miticide in apiculture. So it would be to remove that
and have no annotation unless another one is offered
as another amendment. But right now it would be to remove.

And let's see. We start with Rose, right? Dave, did you get your chance first?

MEMBER CARTER: Yes, I did.

CHAIRPERSON RIDDLE: Okay.

MEMBER CARTER: I'm just proud to be the lead off person.

CHAIRPERSON RIDDLE: Okay. Thank you, Dave.

All right, Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Okay, yes. I have Rose.

Okay, George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Actually no.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.
CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.
CHAIRPERSON RIDDLE: Andrea? Absent.
Goldie?
SECRETARY CAUGHLAN: No.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O’RELL: Yes.
CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.
CHAIRPERSON RIDDLE: Chair votes no in a losing cause I think.
(Laughter.)
CHAIRPERSON RIDDLE: So we have nine yes, three no, and one absent. So the annotation is removed.
So now we go back to the original material as amended, which is with no annotation currently.
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: So any further discussion?

(No response.)

CHAIRPERSON RIDDLE: Seeing none, we will start with George. And this is to add sucrose octanoate esters to the national list for livestock use.

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea? Absent.

Goldie?
SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O’RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Chair votes yes. We have 13 yes, zero no, and one absent.

MEMBER OSTIGUY: And now we finally have something to use in apiculture.

(Laughter.)

CHAIRPERSON RIDDLE: Even though we don’t have standards.

(Laughter.)

CHAIRPERSON RIDDLE: I’m sorry.

MEMBER OSTIGUY: Well, but they are supposed to be -- right now they function under livestock.

CHAIRPERSON RIDDLE: I understand.

MEMBER OSTIGUY: And that’s how they’re being approved.
CHAIRPERSON RIDDLE: That was a poor comment. Strike that from the record. Chair is getting irreverent.

MEMBER DAVIS: Should it be 13 yes or 12 yes? With one absent.

CHAIRPERSON RIDDLE: Andrea is absent.

MEMBER DAVIS: I think you said 13 yes.

But just to --

CHAIRPERSON RIDDLE: Yes.

MEMBER OSTIGUY: Yes, it should be 12. Andrea is not here.

MEMBER KOENIG: Yes, because we're missing two.

CHAIRPERSON RIDDLE: Oh, right. I'm sorry. Boy better check the math on some of these others. All right. Okay.

We're going to suspend the Livestock Committee consideration now and go to Rose in Materials and revision of national list categories.

Rose?

MEMBER KOENIG: Okay. This document came forth before actually even the new Board. It was in
February we presented it as kind of a discussion draft.

And we're bringing it back with a couple of changes. The need for kind of at least an analysis of perhaps reviewing the -- rearranging the national list for clarity was posed to the Materials Committee by the NOP so that we could check to see about the consistency of the materials that are on the list and whether they fall in the categories as designated by the Organic Foods Production Act.

And so that was the basic exercise that we were assigned -- to look both through the livestock and the crops lists to see if, in fact, we've been putting things on that are in line with the OFPA categories that were spelled out in the act.

So that was presented for the crops during the last meeting. And I went through the livestock list as an exercise. And present that to you as one of the appendices on -- I guess it is Appendix Two. I took it through the livestock materials.

And, in fact, livestock did better than crops in terms of fitting well with the categories...
that were specified. The big problem with livestock is, you know, it is not likely that, unless I'm wrong, like horticultural oils or treated seed would be used in livestock production. So a lot of the categories are just not appropriate to livestock. And there is not a whole lot of categories they fit in.

But all the substances that are on the list that, at least up to the -- I just went through the -- I'm trying to remember if I did the final rule and I think some of the things that were added on -- but, of course, I couldn't do some of the things that are in the pipeline that are --

MEMBER SIEMON: Did you say Addendum Two?

MEMBER KOENIG: It's Appendix Two.

CHAIRPERSON RIDDLE: Yes, just -- excuse me, Rose, just for a second. So everybody is on the same page, it's under Materials Committee. And then NL Categories tab.

PARTICIPANT: Thank you, Jim.

CHAIRPERSON RIDDLE: I had a feeling we weren't all on the same page just yet.

MEMBER KOENIG: All right.
CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: Is everybody there? Okay.

So that is one change. I did go through the livestock.

I’ve asked Arthur to kind of consult with legal counsel about this kind of proposal that is on the table because one of the ways of getting the materials that we have approved to get within the OFPA categories is to be able to broaden the production aids category as it exists in the OFPA.

Now in OFPA, it says including and it gives examples for what including includes. And it says netting, tree wraps and seals, insect traps, sticky barriers, row covers, and equipment cleaners are what is listed. So our first question was posed was does including mean that we’re stuck with just those? Or can we expand them?

And the assumption that this document was written was that there was room for an expansion. And that the production aid category is appropriate for substances that are active in, you know, usually manufactured products like pH adjusters or adjuvants.
But they may not specifically be spelled out in OFPA.
But the industry needs those to form an active role
in a manufactured product.

So I'd like to actually perhaps turn --
well, certainly if the Board has any questions on this
and then maybe we can have the NOP address the
questions regarding the document. Because I had asked
to legally look it over.

CHAIRPERSON RIDDLE: Well, first would you
or someone else move for its adoption?

MEMBER KOENIG: Well, I'll move for the
adoption of the document.

MEMBER SIEMON: And I'll second.

CHAIRPERSON RIDDLE: Okay. George
seconds. Rose moves and George seconds adoption of
the national list category recommendation.

Now, discussion? Yes, Gerald?

MEMBER DAVIS: Right along with what you
asked Arthur to evaluate for legal implications and so
forth is to me when you look at the production aid
category, not one example listed touches the crop.
And I see that as a potential problem equating these
other materials, the adjuvants, pH adjusters, and so
on and so forth, that will actually touch the crop,
contact the crop, being put in this.

I mean I don't disagree that we need this
but I see that as I wonder what the answer is going to be about the legal implication.

MEMBER KOENIG: I spoke to one lawyer and,
you know, and again, you know, there is going to be legal determinations. And that lawyer did not have,
you know, references in front of that person to give me the exact answer. But in general, they felt that it could be expanded. But maybe Arthur can shed some light on it.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: We will commit to taking this document and getting legal input from OGC. We've already begun drafting a document that addresses some of the concerns that NOP has.

Some of the concerns we expressed on the call last week. What is an active ingredient because the OFPA Section 6517 pretty much limits it to active ingredients used in production. Before -- then the
next paragraph it goes to EPA inert. So it doesn't get into non-active ingredients.

MEMBER KOENIG: Yes but in OFPA, and I'll bring it up to you, there are sections of OFPA that state that all ingredients would have to be listed.

MR. NEAL: Right.

MEMBER KOENIG: So there's conflicts within OFPA.

MR. NEAL: We concur. However, there is one section that carves out or creates exemption categories although OFPA says all ingredients must be approved. So the question then how do you get other ingredients on to the list when it does not expressly create an exemption category for such types of substances that are not active? But these are questions that we have to get answered by OGC.

Another question that we're going to have concerning this, too, is some of the substances that have been linked or are included on the production aid category are used in -- sort of natural substances used as fertilizers. And the OFPA has a blanket restriction on fertilizers that contain synthetic
ingredients. So that's another question we've got to have answered.

So there are a lot of questions that have to be answered concerning this draft. But we thank you for the work.

So we're going to move forward with getting clarification from the lawyers.

CHAIRPERSON RIDDLE: And my concern was what you just raised there about the fertilizer language in OFPA. And that's not reflected in this draft. But it is certainly on your radar screen so to speak.

Andrea?

MEMBER CAROE: Well, I just have a question, Rosie, on two things that are listed in there: aquatic plant extracts and fish emulsions. All the rest in that list seem to be things that don't have a function on the crop. But if you could explain how those aquatic plant extracts and fish emulsions are used, I thought they had a direct --

MEMBER KOENIG: Well, wait. There is a category. I put them in two -- well, let's see what I
did. I'm not sure what you are --

MEMBER CAROE: I'm looking at the -- well, these aren't page numbered but the page that has the footnotes four, five, and six. And the paragraph just above it -- the text where you state all the production aid category. And you have aquatic plant extract and fish emulsions listed there.

The rest of them I kind of understand. They really don't have a function on the crop. They have a function on something that is used on the crop. But those two, unless I misunderstand how they're used, they appear to be --

MEMBER KOENIG: Well, what I'm saying is that right now -- and this is part of the confusion, I think, and this is my opinion and, you know, based on going through the minutes from past Boards -- and actually, Richard may be appropriate to bring up because there are folks that were involved in materials decision at that time.

But what I understood is when things were placed on, and there was annotations, that those annotations didn't specifically mean that all
manufacturing processes were allowed. They may have limited it to a certain pH adjuster. But that didn't mean that anything else that would be synthetic was all allowed.

My sense is that anything that was in a -- and, again, a lot of the problem comes into these like fish emulsions that, in fact, most of them are these extracted naturals and that's why we went back to that definition of synthetic. Because they are on the list as synthetics because of the way they are extracted. And what can be left in the presence of that liquid, you know.

And there may be some products that are natural and I'm not meaning those. I am saying those that where the extraction methods left either buffers or pH adjusters so that it could be a usable product on the farm, those were deemed synthetic. And in many cases, they were annotated to limit the types of, you know, pH adjusters that might be in there.

But in reality, if you had a production aids category -- and, you know, I'm not proposing this as this is our process, but what appears to be unclear
is that when those annotations are there, the NOP is interpreting them one way -- that it allows everything else but limits the way the pH can be adjusted.

And that's specified, I think, in the document where some of the confusion is on how the list has been interpreted in the past. So that's why it was in there because there may be production aids in -- okay, so actually the plant -- the aquatic plant extracts and fish emulsions are not processing aids but they may include processing aids which are pH adjusters, stabilizers, buffers --

MEMBER CAROE: Right.

MEMBER KOENIG: blah, blah, blah. And I just want to make it -- the only reason why aquatic plant extracts, you know, some of these I had to be a little bit creative because OFPA says fish emulsion. Aquatic plant extracts -- it is my understanding that they are not fish emulsions. They are aquatic plants.

So that's what I'm saying. I had to even stretch that category to include that. It doesn't fit.

MR. NEAL: And I think at one of the
meetings that we had last year or maybe the year before last, we had all come to concur that the way that some of the substances have been included on the list are wrong. And that aquatic plant extracts probably should not have been included on the list as a synthetic.

But the things that were included in aquatic plant extracts should have been on the list. And that's where the confusion arose. So -- but as a result of that listing and the questions that were coming from petitioners, we had to dig deeper in that now you have other questions concerning soil amendments and fertilizers whether or not they can even contain fillers.

And some of the, you know, some of these areas are lignin sulfonates. Where is the OFPA exemption category for floating agents and post-harvest handling? Plant growth regulators? So there are a lot of things that now, as the result of the questions, are going to have to be looked at very closely against the OFPA exemption category.

So it could have an impact on the current
listing of the national list. But we're going to go back, like we said, to the lawyers to get some input from them.

CHAIRPERSON RIDDLE: Okay. Did we receive any public comments on this? Do you know? Did you make note of any? Pardon?

MEMBER KOENIG: No, I think there was other -- oh, yes, actually Emily did.

PARTICIPANT: No, I didn't actually.

CHAIRPERSON RIDDLE: We had one comment as part of OTA's package of comments in support of the draft?

MEMBER KOENIG: That they supported the general --

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: -- I guess the draft. I mean the reorganization is for two purposes.

One, if it is reorganized this way, I think it will be less likely that the NOSB would get into trouble placing things incorrectly because it only allows you to place it under the OFPA category. And then you create these subcategories that spell out

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
(202) 234-4433 WASHINGTON, D.C. 20005-3701 www.nealrgross.com
what the uses are. And it should also eliminate some of the annotations perhaps.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Just one more question, Rosie. Do you envision then that these items would show up under this new section with an annotation to what they can be used for so sulfuric acid for the pH adjustment of aquatic plant extracts? Or is it going to be open ended that they can use that?

MEMBER KOENIG: Yes. And what I think would be easier and better for the industry, although again we'd have to do an analysis and probably want a technical review, but it seems to me that certain acids or pH adjusters could be broadly put in and listed. And then if there was some specific objection, you would annotate that.

But the idea of going through every single thing and figuring out if this pH adjuster -- I mean you know there may be certain reasons why a certain substance you wouldn't want to use as a pH adjuster in some kind of a product, you know, or maybe like one of the things that has come out was phosphoric acid
because it could act as a synthetic nutrient. But those are some of the controversies out there.

But I think in general it would be a lot easier just to have these are general -- these are things that you can use to adjust the pH so that we don't have those annotations on naturally occurring.

CHAIRPERSON RIDDLE: Okay. I do have one more question. I think it is probably for Arthur. And that is, you know, if we adopt this and you'll certainly do the legal review of it and it moves forward, could this be incorporated in the revisions as part of the sunset? Or, you know, would this be a separate -- I mean this clearly would be a separate rule change. But could it happen at that time? Or would that complicate things?

What would you envision for moving it forward?

MR. NEAL: We will have to really consult with OGC on it. This is a pretty complicated matter.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: And just like the moxydectin or well, whatever the substance is, I can't remember
which one it is. We find out that it is an antibiotic by structure. In the process, we're going to have to consult with OGC, you know, what do we do about it now considering that we've got this position concerning the use of antibiotics?

And now we've got the OFPA categories that we have to look at in light of sunset. So we have to consult with OGC.

CHAIRPERSON RIDDLE: Yes, okay. I understand.

Rose?

MEMBER KOENIG: I guess I have one fear. And maybe you've already thought about this but what I don't want you -- I would rather you present the question about production aids category to the lawyers first. And not say we've got these lists and they don't conform, you know because really if those production aids category do not work, then in terms of sunset, it really is not truthful for the Board to renew those as I can see it.

And that's the dilemma because if we are acknowledging that --
MR. NEAL: I wouldn't take this document and say to them let's use this to assess the situation that we are in. We're going to look at OFPA and we'll look at the categories. And then we're going to ask OGC what are our boundaries.

I don't know what their response may be. They may let us go through sunset and deal with this after the fact. They may not. I'm not sure. But we've really got to look at this. This is a pretty serious issue.

MEMBER KOENIG: And will we have -- because we may be considering -- because some of these substances may be one that technically there is no reason why we wouldn't expedite those. So it sounds like no matter how we vote in November, ultimately that's going to be decided.

I just don't know how we should deal with those in committee. Do you want us to identify those? Should we set those aside? What should we do?

MR. NEAL: What we were just talking about is that on those substances that are real clear cut -- and I think you already of that mind -- is that you go
ahead and you make your recommendations on those for sunset.

For those that there are considerable concerns about, you know, we just have to deal with those in the most expedient manner possible to make sure that we make the date. But we have to work closely together.

That will entail, you know, more conversations with particularly you and I, Rose, with these substances in the production aid category. Primarily the ones that you have identified here.

MEMBER KOENIG: Well, the ones I identified in the last document, I creatively kind of got them in on this one. So I will go back and take a very conservative approach, if somebody was to really just look at those categories as written, and I'll present the ones that I think don't fit with that very conservative approach.

MR. JONES: Yes, Rose. I think that would be a useful exercise. The point that Gerald raised earlier in this discussion is a valid one. And that is when you look at statutory construction, you have
to look at the context in which that list appears. And what we don't know is how far the term production aids can be interpreted, how expansive that term can be interpreted, given the context of the paragraph itself and what appears to be some clear limitations on the phrases that follow including, okay?

So the point that Gerald raised is valid. That's the kind of questioning that we are going to go to OGC with. It is, you know, really what are the limits of this term production aids given the context of its usage as seemingly an active synthetic ingredient.

I mean that seems to be the context that it flows out of. And then the limitations that Gerald has identified. So it's -- Arthur said it very well. It's a very complicated issue.

CHAIRPERSON RIDDLE: And just a final point, you know, in looking at the examples, though, of production aids, those are not necessarily active synthetic substance. You know tree wraps, netting, row covers. So it's got to be in the context, I think, of the examples given.
MR. JONES: Yes, one of the things I think you need to realize though, Jim, is that if you look at the context of the paragraph, it is a natural -- it is a very logical conclusion that all of those things that are listed contain active synthetic ingredients. In other words, a pheromone could be -- okay? So that's what I'm saying is that you can't ignore the context in which those exemptions get talked about because what you've got is an absolutely prohibition.

Then you've got what we call at the program doors being opened -- certain doors being opened. And you can't ignore the context in which those doors get opened, okay?

CHAIRPERSON RIDDLE: Okay. Andrea?

MEMBER CAROE: Just a quick question. Maybe I missed it in here but are you suggesting that a definition for production aid to be put into the regulation as well?

MEMBER KOENIG: No. It's in -- I'm not -- I mean it is OFPA. We're not -- we're seeking clarification on what is already in OFPA.

MEMBER CAROE: The definition for
MEMBER KOENIG: Well, not the definition but it says including blah, blah, blah, blah, blah, blah, blah, blah, blah. And that's the question. What is the legal ramifications of how that is written? How it appears in OFPA.

MEMBER CAROE: So are you opposed to creating a definition for production aid?

MEMBER KOENIG: I don't think we -- I'm not sure that's the next step. I mean what we're hoping to find out is the legal -- you know what the legal entities would say about that. I don't -- I mean -- you know and I hate to say it but as writing it, I realized that what we're creating is a catch all category in production aids.

But that's really up to the industry. I mean you know if there are restrictions in crops and in livestock with just the actives of those that are listed in OFPA, there are some real -- well, I don't want to say there's some real problems because there aren't that many that don't conform.

But I'm saying it does certainly limit
what types of materials that are potentially available. Now, for example, today the materials that have been posed to the Board fit into soaps. So I'm not saying -- I think that that is really the question. How far do you want to stretch production aids?

And I, in this exercise, there are disease control materials in crops such as like baking soda, I think it is sodium bicarbonate that don't -- well, actually I think I put that under a mineral. So I got it in.

But I'm just saying you have to do a lot of creative figuring. Sort of the way methionine was put under sulphur. It's the same thing. And I think that also may be stretching the intent. So it's a legal issue.

MR. NEAL: One more comment?

CHAIRPERSON RIDDLE: Yes, Arthur?

MR. NEAL: To show you how complex this is, for the longest, the industry has been of the mindset that the national list is not for formulated substances. And just to show you, if you turn to OFPA
6517, paragraph (C)(a)(b)(I) --

MEMBER KOENIG: Hold on a moment.

PARTICIPANT: Can you give that reference again?

MR. NEAL: 6517(C)(1)(b)(I) -- it says, and I'm not saying that you are wrong, but these are the questions that we've got to wrestle with. For the exemption categories it says these substance is used in production and contains an active synthetic ingredient in the following categories. So we've actually got a substance that we're looking at that contains an active synthetic ingredient in the following category.

So to me, it's depicting that -- I'm not saying that the substance is an active synthetic ingredient. But the substance contains an active synthetic ingredient.

So these are questions that we have got to wrestle with. Have we been doing it right or wrong?

CHAIRPERSON RIDDLE: Okay. Any further discussion?

(No response.)
CHAIRPERSON RIDDLE: Seeing none, we'll move to a vote. There have been no amendments to it so it is as presented by the committee and by Rose. So I have Bea up first.

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Could you clarify for me what the vote is?

CHAIRPERSON RIDDLE: Yes. Well, the vote is to submit the document as a recommendation to the program for the restructuring of the national list. I mean it's at the end of the narrative what the recommendation paragraph.

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Okay. Was that an over-explanation. Okay, yes.

Nancy?

MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?
MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Chair votes yes. So we have 13 yes, zero no. And everyone is here.

And I really want to thank you. And Rose, I want to thank you for the work you did on this. You really took it on. That's a lot of time that is reflected in the document. And I think it certainly gives the program something to work with.

MEMBER KOENIG: You are welcome.
CHAIRPERSON RIDDLE: So thank you.

SECRETARY CAUGHLAN: And you have not had enough to do.

(Laughter.)

CHAIRPERSON RIDDLE: Well, you can check this off your list.

SECRETARY CAUGHLAN: It keeps you out of mischief.

CHAIRPERSON RIDDLE: Okay. It is eleven-thirty. And I've asked Nancy if she would be prepared to move a Crop Committee recommendation forward before lunch at her discretion.

So what have you come up with, Nancy? She agreed to do this.

MEMBER OSTIGUY: We have plenty of time. Let's see.

CHAIRPERSON RIDDLE: Let's do something that we can wrap up that's fairly noncontroversial. Let Nancy --

MEMBER OSTIGUY: Let's go ahead and do the sucrose octanoate ester just because we've already done it once. And we might as well look to see what
we have again.

The petitioner --

CHAIRPERSON RIDDLE: Okay. Let's make sure everybody gets on the same page. Let's give us a chance since we're shifting gears so under Crops --

MEMBER OSTIGUY: Yes, CC-SOE Eval is the tab you are looking for.

CHAIRPERSON RIDDLE: Eval, right. Okay. Do you want to give a little background? Or you want to just move it and then --

MEMBER OSTIGUY: Well, I'll move it and then we can talk.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: The motion is to approve sucrose octanoate esters for use in crops.

CHAIRPERSON RIDDLE: Is there a second?

MEMBER CAROE: I'll second.

CHAIRPERSON RIDDLE: Andrea seconds.

Nancy moves, Andrea seconds to approve SOE for crops.

No annotation recommended by committee, correct?

MEMBER OSTIGUY: No annotation.

CHAIRPERSON RIDDLE: Okay.
MEMBER OSTIGUY: The evaluation of the material is very similar to what we did for livestock. As I indicated, the material basically acts as a soap as much as we understand it, has no toxic breakdown products, is effective on soft-bodied insects, is on the rather innocuous side. But that, of course, is my opinion.

CHAIRPERSON RIDDLE: Okay. Any -- can you provide just a little background? The summary of the EPA registration for this use?

MEMBER OSTIGUY: EPA registration currently is for mites.

CHAIRPERSON RIDDLE: So it's the -- okay.

MEMBER OSTIGUY: And, you know, one of the other important EPA items which is sort of amusing to bring up is it is non-toxic to bees which is, of course, important if you are going to be applying any material to a crop.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: It actually biodegrades rapidly, photo-biodegrades usually within one to two days.
CHAIRPERSON RIDDLE: Okay, any -- yes, Andrea?

MEMBER CAROE: It is registered in a wide range of crops?

MEMBER OSTIGUY: Yes. I don't remember right now all of the crops.

CHAIRPERSON RIDDLE: We might ask --

MEMBER OSTIGUY: The representative is here.

CHAIRPERSON RIDDLE: Petitioner is here.

MEMBER OSTIGUY: We can ask.

CHAIRPERSON RIDDLE: If you'd approach the --

MEMBER OSTIGUY: Tony?

CHAIRPERSON RIDDLE: Mike and identify yourself. And then the question is what crops is it registered for?

MR. BARRINGTON: Thank you. Tony Barrington, the principle of AVA Chemical Ventures, the registrant. It's registered for -- I can't -- I'm not going to give you the whole list off the top of my head but a wide range of crops, fruit trees,
vegetables are the primary ones.

It's also got an exemption from tolerance for use on all food commodities. And it is also registered for mushrooms separately from crops based on the way EPA classifies registrations.

Offhand, I would say the crop list, there are about certainly 20 to 30 crops listed on the label as we speak, which I'm sure will add more.

MEMBER OSTIGUY: And one that is actually very difficult to work with is the thrips that it is effective on. In greenhouse situations, thrips can wipe out everything.

CHAIRPERSON RIDDLE: Okay. So it's not limited to mites?

MEMBER OSTIGUY: No, not limited to mites.

MR. BARRINGTON: I can clarify that. It's --

MEMBER OSTIGUY: Soft-bodied insects.

MR. BARRINGTON: -- soft-bodied insects including white flies, aphids, thrips, and a number of others.

CHAIRPERSON RIDDLE: Yes.
MR. BARRINGTON: So it is a fairly broad spectrum of insects and a large list of -- long list of crops on the current crop label.

CHAIRPERSON RIDDLE: Right. Thanks.

MR. BARRINGTON: Thank you.

CHAIRPERSON RIDDLE: Any other discussion?

Yes, Rose?

MEMBER KOENIG: I just wanted to point out for the audience because I didn't -- I realized with this and the others that in past meetings, we've had more debate and, you know, conversation about materials. And one of the reasons that I think we've had a really smooth process was that the new contractors -- this is an example of some of the technical reviews that the new contractors are producing.

And I would like to say for both materials, they did an excellent job. The process really worked. There were some concerns that -- through the committees we voiced with the contractor who got us the information. So the process worked really well.
And the lack of discussion is not because we're complacent now and we're just adding things to the list. It's because we actually have gotten good products from our contractors.

And, you know, I'd like to commend NOP on really kind of getting that process right and making the process better.

MEMBER OSTIGUY: And on that same note, I'd like to commend the NOP on our evaluation document because it really does smooth this process. It gets all of the questions asked in advance.

And so then when we post the information for public comment, you have our responses to what we have to answer in order to be able to say yes or no, this material belongs on the list.

CHAIRPERSON RIDDLE: And while we're at it, I'd like to commend Nancy for taking the lead in filling out those forms for both of the committees on this substance, truly.

Any other comments?

MEMBER OSTIGUY: Thank you.

CHAIRPERSON RIDDLE: Any other thank yous
while our arms are bent backwards?

(No response.)

CHAIRPERSON RIDDLE: Okay. Seeing none, proceed to vote. And this is to approve SOE for crop use with no annotation.

Hugh is first.

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Chair votes yes. We have 13 yes, zero no. And really one absence for the entire meeting. I stand technically corrected.

MEMBER OSTIGUY: Okay.

CHAIRPERSON RIDDLE: Well, we have some time. Is there another item--

MR. NEAL: Question, Jim.

CHAIRPERSON RIDDLE: -- that you'd like to bring forward before lunch?

MR. NEAL: Jim, I've got a question.

CHAIRPERSON RIDDLE: Yes?

MR. NEAL: A question on this substance.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: Considering that the crops list includes insecticidal soaps, do we want to list
sucrose octanoate esters on the national list positively? Or do we want to consider it already covered under the category insecticidal soaps? That's a question.

MEMBER KOENIG: What do you mean? It has to be on both, livestock and --

MEMBER OSTIGUY: Well, it already has to be livestock but the question really is on crops. Do we want to list it separately?

MR. JONES: Right. We've got a broad heading for insecticidal soaps.

MR. NEAL: That's the question.

CHAIRPERSON RIDDLE: Right. Well, my response is that for clarity of producers and certifiers, it certainly is better to list this particular item. It was petitioned. It has an EPA registration.

Emily has -- I recognize you from the audience, but please approach the mike and identify yourself.

MS. ROSEN: This is a new material. And I would recommend --
PARTICIPANT: Please identify yourself.

MS. ROSEN: Oh, sorry. Emily Brown Rosen, Organic Research Associates. This is a new material and it is kind of a hybrid soap oil. And I mean we actually reviewed it in an upcoming publication I have. It's very promising for white flies and other soft-bodied insects.

But since it is a sucrose ester-type of soap and the previous soaps that were reviewed in your previous TAP were all fatty acid -- potassium salts of fatty acids, they're really a different kind of soap.

And I think it would be beneficial to list them so we know we're not only talking about the old soaps.

MEMBER OSTIGUY: Yes. And I would agree with that because of its oil properties.

MS. ROSEN: Yes.

MEMBER OSTIGUY: It's hard to tell on some of the insects --

MS. ROSEN: Sometimes they are sold as oil --

MEMBER OSTIGUY: -- which one is working.
MS. ROSEN: -- soaps. They sort of categorize them as that. So --

CHAIRPERSON RIDDLE: Thanks for your input. Okay.

MEMBER OSTIGUY: Okay. Then let's go to the previous material, chitosan, also known as poly-D-glucosamine. And some of us may know of glucosamine from other activities since people do take it for arthritis.

The committee's recommendation was to add poly-D-glucosamine with the national list with no annotation.

CHAIRPERSON RIDDLE: Okay. Would you like to make that as a --

MEMBER OSTIGUY: That is a recommendation.

CHAIRPERSON RIDDLE: -- motion.

MEMBER OSTIGUY: Yes, motion. Excuse me.

MEMBER KOENIG: I'll second.

CHAIRPERSON RIDDLE: Okay. Nancy moves and Rose seconds.

MEMBER OSTIGUY: Oh, excuse me. There is an annotation. It wasn't written in two places. I'm
CHAIRPERSON RIDDLE: Okay. So the complete motion is to approve chitosan to be placed on the national list for crop use with an annotation to read as an adjuvant only.

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Okay. And that was moved by Nancy and seconded by Rose.

Discussion? Gerald?

MEMBER DAVIS: In the TAP review, it talked about the differences in rates of use as an adjuvant versus other uses, EPA-registered uses that non-organic crop practitioners would use this material as.

When we say that we're approving it as an adjuvant only, does that automatically restrict to only that low rate? Is that set in stone with label considerations? Or how do we ascertain whether that is truly the case?

CHAIRPERSON RIDDLE: Good question.

George?

MEMBER SIEMON: Same question. Can
someone support why there was an annotation versus none? Why the annotation?

MEMBER OSTIGUY: The annotation is because we did not want it to be used as an insecticide itself. So it's current -- excuse me -- yes, I'm sorry, it's a plant growth regulator. We did not want it to be used as a plant growth regulator, which it is in high quantities. But it is not in low quantities.

And so as an adjuvant, you would only use as much as necessary, which then necessitates that it is a small quantity that is not a plant growth regulator.

So that is how we were restricting quantity was for its use as an adjuvant produces that result.

MEMBER SIEMON: In my reading, it has antifungal, antibacterial functions. It is actually an approved feed additive. We can feed it to our animals. It's approved for human use. So when you eliminated the antifungal and antibacterial as well.

MEMBER OSTIGUY: Yes.

MEMBER SIEMON: Was that your intent?
MEMBER OSTIGUY: Yes.

MEMBER SIEMON: Because that's not a
growth regulator, is it?

MEMBER OSTIGUY: No. No it is not. Well, yes, there are things -- it actually works as an
antifungal because of its growth regulating ability.

CHAIRPERSON RIDDLE: Okay. We'll have Andrea and then back to you.

MEMBER CAROE: Just I have a question. In category two, number seven on the second page of the committee report, it seems like you are addressing alternative practices for those functional uses, not as an adjuvant. Because you talk about IPM practices. IPM practices wouldn't have anything to do with this as an adjuvant.

MEMBER OSTIGUY: Correct.

MEMBER CAROE: So I would suggest a correction to this report to reflect that yes or no, is there practices that would -- I think that was confusing to me because I looked at this and tried to figure out what we were considering this for. That indicates to me we are considering it for more of a
functional use other than as an adjuvant.

CHAIRPERSON RIDDLE: Okay. Could everybody -- could you point out exactly where you are at?

MEMBER CAROE: Category two, number seven.

CHAIRPERSON RIDDLE: Category two, number seven. And then to mark both yes and no. Is that what I'm hearing? I just want to hear what is being proposed. Is that correct?

MEMBER CAROE: Well, I am just looking for a correct because the comment section in there indicates alternative practices for functional uses it is not being considered for. Correct?

MEMBER KOENIG: Yes, but the thing is, again, it is inactive as an adjuvant. That's why we are suggesting it is in the production aids. But adjuvants are used in formulations to stick.

So the reason why we gave that as the alternatives was because IPM practices are alternatives to applying a pesticide. So the assumption is that the adjuvant is not going to be used in and of itself. It's used in a, you know,
formulated product as an adjuvant.

MEMBER CAROE: Right. I understand what you are saying. But I don't think that this question is reflected on the use of those functional ingredients. It's only in use of this product as an adjuvant.

So I think you've taken it one step further by talking about the use of the materials that it is included with. I mean I think specifically here we should be talking about is there -- are there practices -- could you apply these things without an adjuvant is, you know, would there be a reason why you wouldn't need to use this product?

MEMBER KOENIG: I mean it is more effective if you use an adjuvant.

MEMBER CAROE: Right. So there is no alternative. So what I'm suggesting is that this answer is no because it would not -- you don't have another way of applying the materials.

MEMBER OSTIGUY: But you might be able to use another adjuvant.

MEMBER CAROE: But this is about
practices. This one is about practices. This is not a substitute material. This is about practices instead of using the material. That's what the question says.

You know it would like if this was something that allowed for pelletizing a material and the answer is well, you don't have to pelletize it. You can apply it as a dust. Or you can apply it as a liquid.

MEMBER KOENIG: You're saying -- I see what you are saying. So if there is a way through physical force that you could spray a chemical on and stick it to a plant, that would be your alternate --

MEMBER CAROE: Right. So that's what this question should address. I mean it's not a change to --

MEMBER KOENIG: Right.

MEMBER CAROE: -- it's more of a procedural --

MEMBER KOENIG: So you're talking about --

MEMBER CAROE: -- change to how this document was filled out.
MEMBER KOENIG: Because we were looking at its secondary -- I mean there's -- you know we were looking at it more generally rather than specifically.

CHAIRPERSON RIDDLE: So an alternative practice would be to adjust the rate of spray or the nozzle?

MEMBER CAROE: I don't know the technical aspects of this material and how it is used.

CHAIRPERSON RIDDLE: But it would be to accomplish the function without the adjuvant --

MEMBER CAROE: Exactly, exactly.

CHAIRPERSON RIDDLE: Yes. That would be the practice.

MEMBER KOENIG: Well, there are definitely alternative adjuvants to this.

CHAIRPERSON RIDDLE: Yes. And that's under number four above. And that actually is a point I wanted to make is there are wholly natural substitutes available. And some of those are listed here. Why should we add this when there already are natural adjuvants available?

MEMBER DAVIS: What -- where are you
referring to?

CHAIRPERSON RIDDLE: Okay. Also on category two, item four.

MEMBER KOENIG: Is it possible -- can I make a motion to defer this until after lunch because I wasn't ready. I was going to look over -- I mean we made decisions and if you're going to start asking -- if people are getting into details, I think we need to --

MEMBER DAVIS: It is more complicated.

MEMBER KOENIG: -- I think we need to go back. I don't want to --

CHAIRPERSON RIDDLE: Sure.

MEMBER KOENIG: -- put the wrong answer out.

CHAIRPERSON RIDDLE: Okay. How to best handle this?

MEMBER KOENIG: Can we table it?

CHAIRPERSON RIDDLE: Yes.

PARTICIPANT: Does there have to be a motion on the floor?

CHAIRPERSON RIDDLE: There could be two
ways of approaching this as I see it. One is for the
time being, for the makers of the original motion is
just withdraw that. And then re-propose later when we
bring it up. That would be the simplest.

   MEMBER OSTIGUY: I withdraw the motion.

   CHAIRPERSON RIDDLE: And the seconder was
   -- and you seconded it. And that's fine. Okay. So
   then we don't have to vote. You'll just bring it back
   up again.

   So maybe that is a sign that it is lunch
time. Good effort.

   MEMBER WEISMAN: Question.

   CHAIRPERSON RIDDLE: Yes, sorry.

   MEMBER WEISMAN: So do we come back to
   this after lunch? Or do we go to --

   CHAIRPERSON RIDDLE: Either way is fine.

   Okay. That's good to get that clear. Thanks.

   MEMBER WEISMAN: Will that work for you
   two?

   VICE CHAIRPERSON O'ReLL: Can I ask for
   the Handling Committee to stay here for five minutes?

   CHAIRPERSON RIDDLE: Okay. Kevin asks the
members of the Handling Committee to stay here for five minutes right now. And Livestock, we're going to eat together, okay, at the café upstairs.

All right. So we will reconvene at 1:00 p.m. and we'll start off with chitosan again.

(Whereupon, the foregoing matter went off the record at 11:52 a.m. to be reconvened in the afternoon at 1:11 p.m.)

CHAIRPERSON RIDDLE: Yes, we'll resume our discussion of chitosan. And we did withdraw the motion. So I guess if you would reintroduce, just to be official here. Just a second, Nancy.

Could you take your seats please? Thanks.

Okay, Nancy. Oh, and okay -- while they're talking -- I was asked to make an announcement. There will be an Accredited Certifier Association meeting immediately following the NOSB meeting today in the lobby lounge. And non-ACA members who are interested in joining may attend. That's it. Okay.

Yes, so if you could turn your tabs back to the chitosan again and you'll be ready. And
Nancy's ready. Ready now?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Okay. Go ahead.

MEMBER OSTIGUY: The Crops Committee recommends, and I move, that chitosan be added to the national list with the proposed annotation of as an adjuvant only.

CHAIRPERSON RIDDLE: Okay. Is there a second again?

SECRETARY CAUGHLAN: Yes, I'll second it.

CHAIRPERSON RIDDLE: Okay, Goldie, thank you.

Okay, Nancy moves, Goldie seconds to add chitosan to the national list in the crop section with the annotation as an adjuvant only.

Nancy?

MEMBER OSTIGUY: Okay. Back to the question about wholly natural substitute products. At least -- is Brian in the room?

CHAIRPERSON RIDDLE: Brian Baker?

MEMBER OSTIGUY: Yes. There he is.

CHAIRPERSON RIDDLE: Yes, he is around.
MEMBER OSTIGUY: I'll start with this. The first adjuvant that's listed as a wholly natural substitute, the lactose bentonite encasing, that is available.

And Brian could you tell us what is going on with the pine based? And any -- you know, help inform us?

CHAIRPERSON RIDDLE: And your name, for the record?

MEMBER OSTIGUY: Or is this something that you can't speak of?

MR. BAKER: Oh, yes, well, that hasn't stopped me before has it? So anyway, the pine tar derivatives are an example of why we needed the synthetic/non-synthetic guidance long ago. We thought heck, the stuff comes out of a pine tree. It just, you know, gets bubbled around and spit out. It's natural, right?

We made that decision in 1986 or 1987 when Lou Falcon of the University of California, Berkeley
approached California Certified Organic Farmers for a research variance to do with Codling Moth Granulosis Virus. It was the best ultraviolet inhibitor he had found.

So we said it's natural. It's okay under California Organic Foods Act. And we went on the next 10, 15 years not knowing about the polymerization steps that took place. Don't want to go into too much detail but they are clearly synthetic under the guidance that's out there.

And, you know, we were in communication with the company and communication with the EPA. The other thing is that these pine tar derivatives are not all on list four. They are in the process of being reclassified. The person you need to talk to at EPA about that is Kathy Boyle.

Four different pinane derivatives have been reclassified from list three to list four in the past month. CAS numbers were published in the Federal Register. Whether or not those match commercial products that are currently on the market and have been accepted for a long time in organic production, I
can't say.

MEMBER OSTIGUY:  So what we have then is actually only one wholly natural material that is available because the pine-based functional agents are not.

CHAIRPERSON RIDDLE:  But you listed three others.

MEMBER OSTIGUY:  No, that's all one.

MEMBER DAVIS:  That's one product. It's a mixture.

MEMBER OSTIGUY:  It's a mixture.

CHAIRPERSON RIDDLE:  Oh.

MEMBER DAVIS:  Yes, it's one product that is a mixture of three.

CHAIRPERSON RIDDLE:  I see.

MEMBER DAVIS:  I mean I can say the name of it if you want it. But, you know --

CHAIRPERSON RIDDLE:  No need. Then I do have another question. And that is are inerts -- list four inerts available to use as adjuvants? They would still have to be on the list for that use. I mean on our national list to be used as an adjuvant because
that would not be --

MEMBER OSTIGUY: Correct.

CHAIRPERSON RIDDLE: -- being used as an inert in a pesticide formulation, right?

MEMBER OSTIGUY: Yes. So that is -- yes, that's my assumption also is that if it is a list four but not being used as an inert in a pesticide, then we would have to list it as a synthetic if it was, et cetera.

CHAIRPERSON RIDDLE: And Brian, you have -

MR. BAKER: All right. Again, speaking when maybe I should keep my mouth shut, historically tank mixes that have been made by operators, by pest control operators and by farmers, they have been viewed -- when tank mixes of EPA-registered actives are mixed with adjuvants that are on list four, that's been considered consistent with the list for inerts that is currently on the list.

That's been one way that we've been able to deal with all of these formulated products that have all list threes instead of buying -- you know,
the option for the farmers was to either go without something that was already being used but had a list three inert or to buy the technical and formulate one's own products on the farm that have all minimum risk inert.

CHAIRPERSON RIDDLE: So I just want to make sure I'm clear, you said some of these pine tar derivatives have now been classified as EPA as list four inert. And list fours have been allowed in tank mixes as adjuvants.

MR. BAKER: That's right. Our understanding from talking with our subscribing certifiers is that they have allowed the use of those adjuvants that are on EPA list four for farmers to make their own formulations on the farm using technicals that are either non-synthetic or synthetic and on the national list. And then EPA list four adjuvants.

CHAIRPERSON RIDDLE: Okay. And this is not on list four, the chitosan?

MR. BAKER: I don't know. I talked with the petitioner at break. I would defer to what he
said so you get it directly from him.

CHAIRPERSON RIDDLE: Is the petitioner in the room? Gerald?

MEMBER DAVIS: These pine-based materials, the list four thing is an issue but it comes back to if it is determined for organic certification purposes, if they are synthetic, then they would have to be re-petitioned wouldn't they? Because now they are allowed -- that would be an example of good material that has to be sunsetted out as it stands now and re-petitioned? Because it's not a natural anymore.

MEMBER KOENIG: I'm sorry. What was the question?

MEMBER DAVIS: The pine-based adjuvants, which would be an option supposedly to this chitosan that we're considering, before they could be used again now that it has been determined, you know, probably that they are synthetic, they would have to - - they were added to the list before because they were assumed to be a natural, but now that they are a synthetic, they would have to be re-petitioned or
something to get on the list, wouldn't they?

MEMBER KOENIG: I mean I guess the way I looked at maybe Brian, adjuvants have to be specific. They are registered with EPA, correct? If it is labeled an adjuvant?

MR. BAKER: No, they're not. Adjuvants are not registered with U.S. EPA. They are registered with Cal. EPA and also the State of Florida requires registration of adjuvants. But they are regulated at the state level and generally most states leave them unregulated.

MEMBER KOENIG: Okay. So -- and then you are saying that EPA, if they formulate -- if they are on list four, they are within formulations that already exist in pesticides. So they would, in a pesticide formulation according to the reg, they would be allowed as inerts.

MR. BAKER: That's correct.

MEMBER KOENIG: But -- and what were you saying? I wasn't sure. What EPA's view of it is that if they are on list four, they can be used as adjuvants? I didn't understand that part.
MR. BAKER: It's OMRI's opinion and it is an opinion shared by a number of certifiers out there, we have provided our generic materials list to the National Organic Program and this is one of many other issues that we've presented to the NOP for discussion.

The question of whether for use with an EPA-registered pesticide, it's not necessarily limited to formulated products only. And so one could take a technical-grade active that is NOP compliant and is also EPA registered and blend with it, on the farm, a list four adjuvant.

And one would be using with an active that is NOP compliant an inert ingredient that is prepared there right on the farm.

CHAIRPERSON RIDDLE: Regardless of whether it is synthetic or natural?

MR. BAKER: That's correct.

CHAIRPERSON RIDDLE: Right.

MR. BAKER: Yes. And so it doesn't seem to differentiate whether that mixing is done at an EPA-registered facility or it is done on the farm. But it has to be with an EPA-registered active
MEMBER KOENIG: If the petitioner --

CHAIRPERSON RIDDLE: I asked if the petitioner is in the room and --

MEMBER KOENIG: There are a few extra people.

CHAIRPERSON RIDDLE: -- and no response.

Arthur has a comment?

MR. NEAL: I don't know if I'm clear on all the issues. Based on the information that I think I recall, this particular substance poly-D-glucosamine is considered an active ingredient by EPA, right? As a result, under our regulations, it would not allow it to be considered an inert. Therefore, it would have to be on the national list to be used in combination with another active. Am I right?

MEMBER KOENIG: Although we still have it listed as production aid category. But what I hear you saying is that the active role is as an adjuvant.

MR. NEAL: Right. I'm asking for clarification.

MEMBER KOENIG: Oh, all right. I thought
you were making a statement.

MR. NEAL: I mean I think -- I'm just trying to think through the regs as they are set up. And inerts, EPA list four is set up as inerts to be used in conjunction with a non-synthetic or synthetic active that is on the national list.

And if this is not considered to be an inert in the capacity that it is going to be used, and it is an active, then we have to treat it as an active as it was petitioned.

MEMBER OSTIGUY: Arthur, I have a question.

MR. NEAL: Yes?

MEMBER OSTIGUY: A good number of the inerts are actually active. And it is only the circumstances of the formulation that classifies that material as an inactive.

MR. NEAL: Yes.

MEMBER OSTIGUY: And I don't know if we can hang our hat on that definition then because inerts aren't always inert.

MR. NEAL: True. But in this capacity,
MEMBER OSTIGUY: Well, no, no. I'm talking generically.

MR. NEAL: No, generically we do understand that the circumstances impact the performance of a substance. And all inerts that appear on EPA's list four are not always active in a non-active capacity.

MEMBER OSTIGUY: Okay. So then if we were going to be evaluating a material that its use was going to be as an inert, then we would not have to evaluate it if it was a list four? Okay. I'm just trying to clarify how we handle this.

MR. NEAL: And if I'm not mistaken, this particular petitioned use has an EPA-registered active ingredient use.

MEMBER OSTIGUY: Oh, yes.

CHAIRPERSON RIDDLE: Myself, the other problem I see with the annotation is kind of an inspector's nightmare. When it is a registered active under EPA but we are putting a restriction only as an adjuvant, so if it gets approved, then it is okay to
have on the farm and have listed in the plan and what
the inspector then has to verify is rate of
application on every use to verify that it is only
being used as a adjuvant.

MR. BAKER: That's a problem because
that's different than just checking that the substance
is approved but you also have to check its use when it
could easily be abused, I guess. So in other words,
they could be used on a farm that has multiple crops.
They could not use it on most of the crops and be
putting on way too high of a concentration to get the
other benefits of the active. And the inspector would
have no way to really determine that unless --

CHAIRPERSON RIDDLE: Yes. I mean what
level constitutes use as an adjuvant versus use as an
active? Is there a threshold? And is it dependent
upon crop, insect, weather, all the variables?

Nancy?

MEMBER OSTIGUY: I'm going to make a
motion to delete the annotation.

CHAIRPERSON RIDDLE: Is there a second?

(No response.)
CHAIRPERSON RIDDLE: Hearing none -- good try. No.

Andrea, and then Julie.

MEMBER CAROE: I hear what you are saying but we're dealing with split operations, too. And they're going to have a multitude of things that they'll use on conventional crops. So I mean I don't understand. I mean it's not like we're going to solve that problem. This product could already be there. A lot of these farms are not fully organic.

So, you know, it may take the edge off but it is not going to solve the problem if we worry about that issue with the inspector. Because products that are prohibited in organic production very well may end up in the storage shed of an operation that is doing split operation work.

CHAIRPERSON RIDDLE: I understand that.

MEMBER CAROE: I'm just pointing out that, you know, you have to open your mind to the fact that -- it is an issue but it is not an issue that can completely be solved anyway.

CHAIRPERSON RIDDLE: Yes. But it is
actually an issue that is being created as a problem. I mean it is a new problem that is being added. But that's just my simple way of looking at it.

Julie?

MEMBER WEISMAN: What is the worst case scenario if the annotation is removed and people can use it at whatever rate they want? Do we know like --

CHAIRPERSON RIDDLE: Okay, Rose respond.

MEMBER KOENIG: Well, because specifically the TAP dealt with the specific uses as an adjuvant. And because it is a registered pesticide that is used as a plant growth enhancer and a plant defense booster, we really didn't have the technical information provided. I mean that was not -- but -- so basically that's it.

I mean the one thing that I did want to point out in the petition that according to the TAP is they wanted to use this in a mixture with just copper to really see the effectiveness on late blight in potatoes. So they have a really -- and I -- which was not clear to me as if was -- it almost sounded like they wanted to test it to see if it would work in
You know if the petitioner was here, we could find out was it their intent down the road to look at other applications. But it was pretty specific. So --

CHAIRPERSON RIDDLE: Arthur, did you have a comment? I saw your hand a moment ago.

MR. NEAL: No, I pretty much had a question. And that was whether or not the other registered -- was it registered for other uses? I can't remember -- I can't recall if EPA had it registered for uses other than an adjuvant.

MEMBER KOENIG: Yes, that's what I just said. Yes.

MR. NEAL: It is registered for use --

MEMBER KOENIG: Well, it says it in the TAP that it is a registered pesticide that is used in crop production as a plant growth enhancer and a plant defense booster.

Target tests included early and late blight, downy and parity mildew and grain mold. They're all fungal. So it's pretty much a fungicide.
CHAIRPERSON RIDDLE: Okay. And, you know, I just want to be clear that in my line of questioning, I'm not opposed to it. I just see some problems verifying compliance with the annotation. And I'm always leery about adding a synthetic when we already have naturals available to us. So --

Jerry?

MEMBER DAVIS: We have -- this TAP -- we have -- or actually on the only product that is listed as a sticker is a combination of the bentonite casing and lactose, which is a white powder that renders it impossible to use on any crops that can't tolerate a white residue.

Our farm has tested this material and it is problematic. It's not something we could use because it sticks and it stays. And it's white. It is innocuous materials but you don't want that on vegetables --

CHAIRPERSON RIDDLE: Sure.

MEMBER DAVIS: -- for example.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Well, I mean I think that
should be noted in the report then because then it is
--- there isn't a substitute. There's only a
substitute for some uses and not all uses. It's
apparently not available for all crops. And I don't
know if this is consistent with all materials -- all
actives it might be used with, the alternative I mean.
If that is included, I mean I think we can
move ahead pretty confidently that this is a material
that is needed. And then based on the other criteria
that we've reviewed, that it is consistent with
organic practices. And vote on it.

CHAIRPERSON RIDDLE: Okay. Jerry?
MEMBER DAVIS: From my point of view,
using this as an adjuvant, the only other option is
the one material that for many crops is not an option.
It doesn't matter on citrus or something where
eventually it would probably be able to be washed off
and things like that. Or portions of the crop where
you don't sell the part of the plant that has had this
material applied to it.

So for many crops, the casing and
bentonite combination material is not an option. And
the pine-based materials, it looks like they're going to be determined as synthetics. And they are in the same category as this.

There are effectively no naturals other than the one that is rendered ineffective because of its residue nature.

CHAIRPERSON RIDDLE: So I think that is valuable information. And you'll amend the report before it is submitted to reflect that? Thanks, Nancy.

Okay. Any other comments? Oh, Bea?

MEMBER JAMES: A friendly amendment to category three, point number two, third sentence, removal of the word if. I think it doesn't need to be in there. It got in there by mistake.

CHAIRPERSON RIDDLE: Pardon? Oh, yes. Okay. So you're saying that sentence as an adjuvant, it is expected to reduce the number if and quantity --

MEMBER JAMES: Remove the word if, yes.

CHAIRPERSON RIDDLE: Yes -- number and quantity by application of copper sulfate. I think maybe it is number of, isn't it?
MEMBER OSTIGUY: I'm still not seeing that.

CHAIRPERSON RIDDLE: Okay. Category three, item two --

MEMBER OSTIGUY: Third sentence? Documentation?

CHAIRPERSON RIDDLE: Under Documentation. Can you find the sentence?

MEMBER OSTIGUY: Number of.

CHAIRPERSON RIDDLE: Number of, yes. Okay.

All right. Anything else on this?

MEMBER OSTIGUY: You accepted the amendment, right?

CHAIRPERSON RIDDLE: Yes. That was just a typo.

Okay. We're ready to vote. And this is to approve chitosan for addition to the national list in the crop section with the annotation as an adjuvant only. So we will start -- is there a question? Confusion? Nothing? Good.

PARTICIPANT: Always confusion.

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
(202) 234-4433 WASHINGTON, D.C. 20005-3701 www.nealrgross.com
CHAIRPERSON RIDDLE: That's not a good question to ask.

(Laughter.)

CHAIRPERSON RIDDLE: We will start with Michael.

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Goldie? I mean Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Chair votes yes. So we have 13 yes, zero no. And one absent.

Okay. Thanks for filling in there Nancy with the Crops. And we'll go back to Livestock now. Are you ready George?

MEMBER SIEMON: Yes, I'm ready.

CHAIRPERSON RIDDLE: All right.

MEMBER SIEMON: First of all, I'm going to try to use the PowerPoint now for some small changes we have in the guidance document. So I'm going to set that up. But we have been having some discussions about the rule changes. And Hugh was going to lead that while I set this up I hope.

MEMBER KARREMAN: Yes. Since the Livestock Committee needs to rework the two rule
changes we submitted back in March -- that's what
Keith mentioned we have to do -- it's coming back to
us to work on. And taking into account the public
comment and input, the Livestock Committee is
proposing a rule change at 205.239(a)(2), not to be
voted on today. It's just we're going to be working
on it back and forth with the NOP.

But at 205.239(a)(2), to reflect the
public input, it seems that raising is a prominent and
one of the most distinctive visible features of
organic dairy farming -- 205.239(a)(2), we would
propose that it should say ruminants over six months
of age shall graze growing pasture no less than 120
days per year.

And we're going to be working on that, I
guess, in conference calls and whatnot with the NOP
and hopefully have some action item at our -- probably
meeting in March I guess it would be. Unless November
but whatever. That's what I wanted to say.

CHAIRPERSON RIDDLE: Yes. And wouldn't
the committee also be considering the additional text
that was sent back to us, the stage of life change --
MEMBER KARREMAN: Right.

CHAIRPERSON RIDDLE: -- as part of the package?

MEMBER KARREMAN: Right. Absolutely. The stage of life we have to reconsider. But --

CHAIRPERSON RIDDLE: Yes.

MEMBER KARREMAN: -- right at that 205.239(a)(2), that was what was sent back to us also.

CHAIRPERSON RIDDLE: Yes.

MEMBER KARREMAN: That was one of the two points.

CHAIRPERSON RIDDLE: Yes. Okay. Thanks for that briefing there.

And now George, are you ready for what we are actually considering as an action item?

MEMBER SIEMON: Exactly. So unfortunately I put up there -- my computer is stupid. Instead of tracking changes, it adds all those boxes to the side. So I've elected to make the blue what we're deleting. So I apologize. I couldn't get the strikethrough. And the red is what we're replacing it with.

More or less what we've done is replace
all the shalls with should. There was four shalls.
We put should in.

PARTICIPANT: You missed one.

MEMBER SIEMON: Well, I could have missed one.

(Laughter.)

MEMBER SIEMON: Where at? All right. There I missed one. That's fine. Just take it out. Anyway, I'm sorry the track changes didn't work.

And then we took from the input we got, we added the significant portion of the -- sorry, I hate those little boxes -- anyway, let's keep to the gist of it. A significant portion of the last feeding requirements, which we had originally and we replaced with the 30 percent, putting in there just reemphasizing the 30 percent. And the committee agreed to the input we got there.

So it says both significant portion and not less than 30 percent now. And then added per year after 120 days, which is a little bit redundant but it was felt that that was needed to make sure people didn't read it on some other context of the growing
season, which is a year -- one growing season to me.

But anyway, that is the other addition.

So --

CHAIRPERSON RIDDLE: Yes.

MEMBER SIEMON: -- I think those -- and then we made maximize into optimize, which we had talked about before. And we couldn't remember why we didn't have optimize in the final draft because we thought that was what our objective was.

So those are the changes here. Now I have some more changes in the next paragraph but let see if there is any discussion on these before we move forward.

CHAIRPERSON RIDDLE: Sure.

MEMBER SIEMON: Or do we need to make a motion?

CHAIRPERSON RIDDLE: Yes, that would be good. Yes, we don't even have it on the floor yet.

MEMBER SIEMON: I'm sorry.

CHAIRPERSON RIDDLE: So --

MEMBER SIEMON: I would like to move that we adopt this.
CHAIRPERSON RIDDLE: Okay.

MEMBER KARREMAN: I second that.

CHAIRPERSON RIDDLE: Okay. George moves and Hugh seconds to adopt the pasture guidance recommendation, as amended --

MEMBER SIEMON: As amended.

CHAIRPERSON RIDDLE: -- brought forth by the Livestock Committee.

MEMBER SIEMON: Right.

CHAIRPERSON RIDDLE: Okay.

MEMBER SIEMON: So should and shall was related to the guidance versus a requirement.

CHAIRPERSON RIDDLE: Yes.

MEMBER SIEMON: And the other things are just refinements, you know maximize -- some were feared that everybody would have to put all their land in pasture. So optimize means, of course, in relationship to the number of animals you have, et cetera, et cetera. So I think they are all pretty small adjustments.

CHAIRPERSON RIDDLE: Any other discussion from Board members? Questions? Concerns? Comments?
Chairperson Riddle: I think it's pretty clear. Oh, Jerry?

Member Davis: I wasn't quite sure yet, does that allow an operator to not follow these guidelines with no penalty?

Member Siemon: The guidelines are a map to where we -- kind of the path we think you should go on. They're not a requirement. You could go on a different path. And that's why should and shall -- should seemed to be the better approach.

Chairperson Riddle: Yes. And a penalty would really apply if you violate the standards. This is a way to achieve compliance with the standards but there may be alternative ways as typical for guidance.

And I think, you know, the Committee will be proposing some enforceable rule change at a future meeting.

Member Siemon: Okay.

Chairperson Riddle: Hugh?

Member Karreman: To answer your question, Gerald, the rule change that I had mentioned when
George was setting up, that will be the regulation in black and white. This kind of colors it in, okay? So you can't have a guidance without a regulation for it. Isn't that correct? That's what I'm understanding.

CHAIRPERSON RIDDLE: Well, right. But this is also just guidance on our understanding of the existing regulation.

MEMBER KARREMAN: Absolutely.

CHAIRPERSON RIDDLE: Right.

MEMBER KARREMAN: Right.

CHAIRPERSON RIDDLE: But it in and of itself is not enforceable.

MEMBER KARREMAN: Right.

CHAIRPERSON RIDDLE: We're looking to propose recommendations to strengthen the enforceability of the regulation, too.

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: My question on this -- it is very specific with, you know, 30 percent dry matter and 120 days. Based on the fact that certifiers can only ask questions as they relate to the standard and
this is not the standard, are they going to be able to
ask for this information?

This is not part of the regulation. This
is guidance. So certifiers legitimately under their
operation can't ask for this information. It can be
provided but --

MEMBER SIEMON: They need to see that they
are reaching to the same goal that this points to.
Whether it is asking these questions or different
questions --

MEMBER CAROE: Right.

MEMBER SIEMON: -- this is the goal. This
is the path that we're saying --

MEMBER CAROE: I understand that. But you
can't use these as -- if somebody is not meeting 30
percent, a certifier cannot not certify them because
this is --

MEMBER SIEMON: Right.

MEMBER CAROE: And they can't make it part
of their criteria for certification.

MEMBER SIEMON: But they need to find like
criteria that defines pasture like this. That's what
the guidance documents are. This is one path to get
there. You can use another path to get there.

MEMBER CAROE: They can ask questions
about pasture but not these specific. Is --

PARTICIPANT: They could.

MEMBER SIEMON: They could.

MEMBER CAROE: I ask for the program to
answer this because I'm not sure whether the
certifiers can ask for this specific information or
not.

CHAIRPERSON RIDDLE: Is there a response
yet?

MEMBER CAROE: Based on where it is, where
it sits. And what kind of --

CHAIRPERSON RIDDLE: Just to clarify your
question, you're really talking about those five items
that the organic system plan should describe.

MEMBER CAROE: Right, right.

CHAIRPERSON RIDDLE: The amount of pasture
per animal, the amount of time, et cetera.

MEMBER CAROE: Yes, this shouldn't be on a
certifier's checklist to go out there and look for
these items --

CHAIRPERSON RIDDLE: No.

MEMBER CAROE: -- because it is not part of the regulation. It's guidance.

Now this is great guidance for a producer to meet the requirements for a pasture. But it is not the requirements for pasture.

CHAIRPERSON RIDDLE: Right. But as far as the information requested by a certifier on an organic system plan, I look at those five items and those are all relevant pieces of information for compliance with the existing standard --

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: -- that allows a certifier to assess compliance once you know how many animals, how much pasture per animal, the amount of time, what criteria for temporary confinement, etcetera. Those are already relevant for assessing compliance.

MEMBER SIEMON: I would agree with that, too.

CHAIRPERSON RIDDLE: Yes. Okay. Thanks.
That makes us all feel cooler for the moment.

Okay, Nancy?

MEMBER OSTIT GUY: Andrea, I think -- well first off, this is guidance. So no, they cannot hold an operator to these exact questions. But it does provide information that the certifier might use. They might use something different. That's all it is for.

MEMBER CAROE: I'm just making that point, you know, because we've been talking about the inspectors going out and verifying these amounts. But it can't be part of the criteria for the certifier because it's not in the reg.

CHAIRPERSON RIDDLE: Okay. Any other comments?

(No response.)

CHAIRPERSON RIDDLE: All right. If we can scroll on down.

MEMBER SIEMON: And then we look at temporary confinement, we got some feedback looking for more specificity -- a word I can't say -- so we looked through this and the only changes we made were
to make the lead line, instead of being a plural into a singular line. So instead of when ruminant livestock are denied to when a ruminant is denied pasture.

So, again, we were trying to get this to be individual livestock -- individual animal and not something you would do, for example, on a stage of production. Oh, I'll keep this whole group in at this stage. This is more so that each -- temporary confinement relates to each individual animal.

And then the last piece was because it was a guidance document, the committee felt that the word only was too prescriptive and should be broader than that. So they wanted to take the word only out.

Is that correct?

CHAIRPERSON RIDDLE: That's correct, yes.

And actually there is one more shall in the paragraph --

MEMBER SIEMON: There it is.

CHAIRPERSON RIDDLE: -- the top paragraph, the second to last line -- all instances --

MEMBER SIEMON: The three shalls, oh boy.
CHAIRPERSON RIDDLE: Yes, should be --

MEMBER SIEMON: Nobody mentioned those shalls, all right.

CHAIRPERSON RIDDLE: Oh, there's more than one? Oh, yes. There's another one.

MEMBER SIEMON: I see two so far.

PARTICIPANT: There are three of them.

MEMBER SIEMON: Three?

CHAIRPERSON RIDDLE: You should have done a word search.

MEMBER SIEMON: Yes, word search.

PARTICIPANT: Second to last.

PARTICIPANT: In no case should --

MEMBER SIEMON: Yes, there's three. Okay, that's the end of the changes we made. Otherwise, the document stands as it was put forward. Sorry about the -- okay.

CHAIRPERSON RIDDLE: So any further discussion?

(No response.)

CHAIRPERSON RIDDLE: Did you catch all those shalls to shoulds or? Yes.
MEMBER SIEMON: Everybody has got it.

CHAIRPERSON RIDDLE: All right. I think people get the drift anyway just to be clear what we will be voting on here. Okay?

MEMBER SIEMON: Okay. Any other discussion?

(No response.)

CHAIRPERSON RIDDLE: No other discussion.

MEMBER SIEMON: Well, then I'd say we call the question.

CHAIRPERSON RIDDLE: Yes. We're starting at the top here again. And that would be Jerry.

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: And I vote yes. So we have 13 yes, zero no, one absent.

MEMBER SIEMON: And that's all that I had.

CHAIRPERSON RIDDLE: Okay.

MEMBER SIEMON: I'm done with the Livestock Committee.

CHAIRPERSON RIDDLE: Well, thank you.

Where are we? Back to Materials. And so --
MEMBER SIEMON: Synthetic versus Non-Synthetic.

CHAIRPERSON RIDDLE: Okay. Synthetic versus Non-Synthetic.

MEMBER SIEMON: We did the national list category, right?

CHAIRPERSON RIDDLE: Yes.

MEMBER SIEMON: We completed that.

CHAIRPERSON RIDDLE: We did the national list category.

So, Rose, are you ready to -- if you need to have a conversation, if you could please take it outside or give it just a moment for the rumble to die down.

MEMBER KOENIG: Okay. On the document on page two, I would -- do you want me just to --

CHAIRPERSON RIDDLE: Okay. Let help us find it again.

MEMBER KOENIG: Oh, I'm sorry. Tab --

CHAIRPERSON RIDDLE: Materials Committee.

MEMBER KOENIG: -- Syn versus Non-Syn.

CHAIRPERSON RIDDLE: Syn, Non-Syn.
MEMBER KOENIG: Okay. I couldn't get the two committees together that were the original ones --

CHAIRPERSON RIDDLE: I'm sorry. I can't hear you.

MEMBER KOENIG: Syn versus Non-Syn.

CHAIRPERSON RIDDLE: Yes.

MEMBER KOENIG: Okay.

(Laughter.)

CHAIRPERSON RIDDLE: Would you say that again? I really like it when you say that.

(Laughter.)

MEMBER KOENIG: Okay. So I couldn't get both -- since it really was a document by both committees and people were kind of in and out of different meetings, we did not get a chance to meet on, you know, this draft.

I have a couple of friendly amendments to add. And then --

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: -- so I'd like to just modify it with a couple of friendly amendments and then maybe move it to the floor.
PARTICIPANT: Don't we need to get it on the floor?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Yes, you should.

MEMBER KOENIG: Okay. All right. I'll submit it as a recommendation.

CHAIRPERSON RIDDLE: Okay. Rose moves.

VICE CHAIRPERSON O'Rell: Second.

CHAIRPERSON RIDDLE: Kevin seconds. Since it is a joint committee, we'll get the chairs of both on record. Kevin seconds approval of the synthetic, non-synthetic recommendation. Okay?

MEMBER KOENIG: Okay. So what I'd like to -- on page two under formulation or manufacturing shall be understood to mean, I'd like to accept the recommendations of the OTA document where -- I guess it's one, two, three, four, the fifth sentence. Basically wherever it says of food in these two sections, these two paragraphs, the intent is to change that to of an agricultural product by handling operation or food.

So in other words -- and their comment was
saying that food was not defined in the regs but agricultural products are. And handling are.

So it just adds a reference to the reg.

So basically keeping food in but describing it a little bit more.

CHAIRPERSON RIDDLE: Okay. So could you be precise since we don’t have it up on the screen?

MEMBER KOENIG: Okay. Formulation or manufacturing as defined in this section is not intended to address the processing of an agricultural product by a handling operation or food.

It doesn’t change the intent. It just clarifies that.

Okay and then in the next paragraph in the second sentence --

MEMBER KOENIG: Okay.

CHAIRPERSON RIDDLE: I just want to make sure everybody has it right now. And you would be inserting an agricultural product by a handling operation between processing and food.
MEMBER KOENIG: Yes, right. And then or food.

CHAIRPERSON RIDDLE: What?

MEMBER KOENIG: Or food.

PARTICIPANT: Say it again.

PARTICIPANT: Say it again.

MEMBER KOENIG: Okay. After the of, okay, an agricultural product by a handling operation or food.

CHAIRPERSON RIDDLE: Okay. All right.

Everyone have that? Does Kevin accept that as the seconder?

VICE CHAIRPERSON O’RELL: I’ll accept it now for discussion.

CHAIRPERSON RIDDLE: Okay. All right.

Okay. I think we’re all caught up now.

Rose?

MEMBER KOENIG: Okay. And the same thing, in the second paragraph, the second sentence after the 205.601-606 reference, processing of an agricultural product by a handling operation or food.

And let me know when you are ready again.
CHAIRPERSON RIDDLE: Okay.

MEMBER CARTER: Just grammatically, it would read better if we said processing of food or an agricultural product by handling operation.

MEMBER KOENIG: Okay.

MEMBER CARTER: Because the way it's in there, it sounds like you are processing an agricultural product by food.

MEMBER KOENIG: Okay. Well, that is what their -- I mean I didn't have time -- I looked at kind of what -- I mean the intent that I understand but I guess it should have been proposed as -- that's a --

CHAIRPERSON RIDDLE: Okay.

PARTICIPANT: Can you say that again, Dave?

MEMBER KOENIG: Yes, why don't you?

MEMBER CARTER: Well, just it should be processing of food or an agricultural product by a handling operation.

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Okay. I'm glad we've got someone with a journalism degree.
MEMBER CARTER: Finally it comes in handy.

(Laughter.)

CHAIRPERSON RIDDLE: An English major.

MEMBER KOENIG: Okay. So then --

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: -- all right so that would be -- so we all understand that that would be that first and second correction.

CHAIRPERSON RIDDLE: Yes.

MEMBER KOENIG: And then finally the third would be the sixth sentence starting with below is the section. If you go to the last -- again, we're processing a food. It's the end of that sentence. And it would say processing of food or an agricultural product by a handling operation.

CHAIRPERSON RIDDLE: Okay. Everybody follow that? Catch that?

All right. Kevin accepts that. Okay.

MEMBER KOENIG: And that --

CHAIRPERSON RIDDLE: Okay. Do you see the sentence that begins below is the section? And go all the way to the end of that line and you see in the
processing of food. And then you just insert or an agricultural product by a handling operation. Okay?

All right. Rose?

MEMBER KOENIG: And that's the only changes I see --

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: -- that I'd like to offer.

CHAIRPERSON RIDDLE: All right. So it's been moved, seconded, and amended. Now any discussion?

MEMBER WEISMAN: I have one.

CHAIRPERSON RIDDLE: Okay. Julie?

MEMBER WEISMAN: I have a concern about the fact that extraction is mentioned separately. And that it would benefit from having the same clarification as in the second section. That we're not talking about extraction that occurs as part of handling an agricultural -- extract -- is everybody --

CHAIRPERSON RIDDLE: Okay. You are back to page one?

MEMBER WEISMAN: I'm back to page one.
CHAIRPERSON RIDDLE: All right.

MEMBER WEISMAN: First thing under the recommendation is extraction shall be understood to mean. And I feel like this would benefit from the same kind of clarification that we just put in to formulation or manufacturing.

CHAIRPERSON RIDDLE: Okay.

MEMBER WEISMAN: In other words, that we're not talking about extraction that is the processing an agricultural product --

CHAIRPERSON RIDDLE: During handling.

MEMBER WEISMAN: -- during handling.

CHAIRPERSON RIDDLE: Okay. Do you have language to propose to capture that?

MEMBER KOENIG: It's in -- excuse me.

CHAIRPERSON RIDDLE: Okay. Rose?

MEMBER KOENIG: I don't know if it covers it, Julie, but under processing, extracting is listed.

MEMBER WEISMAN: I had comments not during session where concern was expressed. Why is extraction being singled out in this document.

MEMBER KOENIG: Because that's -- if you
go back to the original definition of chemical change, extraction is in that definition. So we were trying to define -- see the substance -- synthetic is a substance that is formulated -- all right, a substance is formulated or manufactured by a chemical process or by a process that chemically changes the substance extracted from a naturally occurring.

And because many of the substances that create, you know, some controversy is the extraction methodology. So we wanted to be specific in that definition that we understood that, you know, that clarification from extraction, again, it has nothing to do with the processing of food but the extraction during the taking it out of a biological.

CHAIRPERSON RIDDLE: The manufacturing.

MEMBER KOENIG: The manufacturing of substances for the list.

MEMBER WEISMAN: Right. Could we note that at the end of that paragraph by just simply stating this does not refer to extraction that occurs in the processing of food or an agricultural product handled by a handling operation. Can we tack that in

NEAL R. GROSS
COURT REPORTERS AND TRANSCRIBERS
1323 RHODE ISLAND AVE., N.W.
(202) 234-4433
WASHINGTON, D.C. 20005-3701
www.nealrgross.com
there one more time?

CHAIRPERSON RIDDLE: Would you like to make a motion to amend?

MEMBER WEISMAN: I make a motion to amend recommendation one to include after the word national list at the end of the paragraph, extraction here does not refer to extraction that is -- how does this read -- used in the processing of food or an agricultural product by a handling operation.

VICE CHAIRPERSON O’RELL: Julie, would you accept a little help in that?

MEMBER WEISMAN: Sure.

VICE CHAIRPERSON O’RELL: I wonder if we say extraction for substances petitioned for addition or prohibition to the national list?

MEMBER WEISMAN: What? Say it again.

VICE CHAIRPERSON O’RELL: If we say extraction for substances petitioned for addition or prohibition to the national list shall be understood to mean, would that --

MEMBER WEISMAN: Well --

VICE CHAIRPERSON O’RELL: I understand the
sensitivity for clarification in that from the processing side.

MEMBER KOENIG: I guess that what I don't understand is -- and you can educate me, Julie, on this one. If you're -- this is stating that -- because the definition extraction -- in the definition of synthetic, extraction deals with naturally-occurring plants, animals, okay.

So if you are extracting something from a plant, it would -- the definition would apply.

MEMBER WEISMAN: Yes. But my concern is that when you extract say vanilla beans in an approved solvent, an organic ethyl alcohol, you have -- the extracteds contain about 250 to 300 aromatic compounds --

MEMBER KOENIG: Right.

MEMBER WEISMAN: -- that will react and change during that process.

MEMBER KOENIG: Right.

MEMBER WEISMAN: Now as long as we're talking -- so I have a concern that anywhere in this rule will be language that says the change -- chemical
changes that occur during the extraction process will make the product synthetic.

MEMBER KOENIG: But it acknowledges here that extraction -- you know it acknowledges that changes can be made as long as the final -- provide that any substance used in the extraction process does not remain in the final product above insignificant levels and so not have a technical functional effect.

MEMBER WEISMAN: What is insignificant?

PARTICIPANT: What reference were you reading?

MEMBER KOENIG: Okay. Go back to page one, I'm sorry, under extraction.

MEMBER WEISMAN: I'm not talking about the solvent that remains. In fact, that solvent has to stay there because of 21 CFR which is the FDA. That alcohol --

MEMBER KOENIG: Okay.

MEMBER WEISMAN: I'm talking about the compounds, many of which are not even identified that do undergo -- they do react with each other under heat.
CHAIRPERSON RIDDLE: Yes. I just want to step back a moment. You made a motion and Kevin offered some changes to it but it was not seconded yet. So I'd like --

MEMBER WEISMAN: Kevin, could you repeat your recommendation?

CHAIRPERSON RIDDLE: I'd like to know if we have a motion to amend here.

VICE CHAIRPERSON O'RELL: I just suggested after extraction in that line extraction or substances petitioned for addition or prohibition to the national list shall be understood to mean so that it is specific to substances.

MEMBER WEISMAN: I would accept that.

MEMBER CAROE: I'll second if you don't have a second on the floor.

CHAIRPERSON RIDDLE: Okay. We didn't. Thank you.

MEMBER CAROE: Well, then I'll second it and I'll accept the amendment. And we're all square?

CHAIRPERSON RIDDLE: Well, I don't know that. That's jumping to conclusions. I think we
still need to get the exact text down but it has been moved and seconded.

And, Arthur, have you captured it? Or no?

MR. NEAL: No. I can't.

CHAIRPERSON RIDDLE: Okay. Comment?

Whatever? Arthur?

MR. NEAL: I understand if we want to limit it to petitioned substances. The only problem with that is that there are naturals that are not on the national list that go through extraction processes. And however we characterize extraction in this document impacts all other materials that are going to be used in organic production and handling, regardless if it is petitioned or not.

As we talked yesterday, the way that we're looking at this list, there are a lot of things that are going to shake out. Things that have been considered natural probably won't be natural any more after this document is done.

MEMBER KOENIG: I don't -- again, I mean we can go through that analysis. But the -- as long as those -- basically what it is saying is that at the
end, as long as there's not -- if you are extracting a specific chemical out of your plant, you know, one specific chemical in your extraction process, when you finish that extraction, you can use solvents.

If that is not chemically changed -- now you may have isolated it but the question is have you chemically changed it. And that's where the fish comes in. Okay? It's extracted. The aquatic plants haven't -- the extraction hasn't changed the -- the plant material hasn't changed. But because of the buffer, it falls within a chemical change because of the way that we've defined -- you know the buffer is in there at significant levels. It's present.

MR. NEAL: The best thing for you to -- I guess the best example to use is a soy protein.

PARTICIPANT: I'm having trouble hearing you. You're speaking very low.

MR. NEAL: The best example for you probably to use is a soy protein isolate.

MEMBER KOENIG: Okay. Right.

MR. NEAL: Because what you're doing is you are isolating a protein and at the end of the
extraction -- I mean you start out with a soy bean but you want the protein in the bean. So you'd use a solvent to extract the protein.

MEMBER KOENIG: Right. And that wouldn't --

MR. NEAL: Right.

MEMBER KOENIG: Right.

MR. NEAL: The question is is after the extraction taken place, has the protein been changed?

MEMBER KOENIG: The thing is, Arthur, on that, the extraction procedure -- this is going to take me a little bit -- the extraction itself -- let me go back to what soy protein isolate is because I know it pretty well in my head.

The extraction procedure doesn't change -- well, if you consider the -- you can extract the protein and that's what is done in soy processing. We had the big flowchart. And I used soy as an example when I was writing this document. This document was triggered by soy protein isolate, which is in our packet, which we're deferring because we have to figure this thing out first.
And I don't know if that flowchart is still available and it might be instructive for people to look at. Was that included in our --

PARTICIPANT: Yes.

MEMBER KOENIG: Okay.

MR. NEAL: You want to look at it?

MEMBER KOENIG: Yes, what page is that on?

Oh, is it under --

PARTICIPANT: Page nine or page ten.

MEMBER KOENIG: Hold on, I've just got to figure out where it is in my -- what color is it?

PARTICIPANT: (Speaking from unmiked location.)

MEMBER KOENIG: Right. Okay. So if everybody can turn to page nine of the flowchart on the soy protein isolate.

MEMBER KOENIG: So when I looked at the definition of extraction and the chemical processes that we would call synthetic, when you go through those things, the spelt flakes away even though you
are using buffers, basically it is a series of bases and then acids and centrifugations.

But basically you're just isolating different components of the soy. You are fractionating. And the soy protein isolate is the last stop of this whole chain where it says soy protein isolate, 90 percent protein, okay?

So all the other forms of soy that typically would be used in food like the whey and the spelt flakes and also like soy bean meal that you use in crops, all that would be considered non-synthetic based on -- I'm talking about now the chemical reaction part of this document which talks about the chemistry.

So that extraction doesn't change those proteins until you come to the last part of this, the soy protein isolate. And what makes soy protein isolate chemically changed is if you go into the chemical reactions part of our document, which I'm going to have to get to --

CHAIRPERSON RIDDLE: In which document now?
MEMBER KOENIG: Now back to the synthetic/non-synthetic document, if you look at the chemical reactions, number four is a protein configuration changes as the result of a physical association of an added substance. Okay?

And I've been telling everyone that all along. The most controversial part of this document, as far as what food technologists should consider, and I brought this up on the phone call for those in Handling who were in it, that some of these really highly processed proteins would probably be impacted.

So most of the soy that we're dealing with -- and when I talked to the soy expert when we were looking at the review of soy protein isolate, the common use of that isolate is actually in creamers, soy creamers because it is a -- there is a -- there's actually a base. Even though it is not on this diagram, clearly that base stays in association with the protein.

And it basically changes the configuration from the native protein. If that base was not there, that protein wouldn't look the same. So it's what
they consider a physical change in the protein.

And that's why when I went through the description, I said proteins are in a lot of way different. And that's in our document if you read it.

And these are the ways that proteins change. They can be denatured. And we're not, you know, denaturing is fine. But I said well, I'm going to propose that we consider physical changes because of association of other things in a product, like buffer agents, because to me that is in contradiction to this concept of insignificant levels because now you have something that is impacting the chemical physical structure of that protein.

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: So I think in your case, Julie, you know, and that's why you have this document, you know I was hoping that maybe you would be able to show it to some of your chemists there. And, you know, I think the extraction is fine on these other naturals.

MR. NEAL: The only other question, too, that you're going to have to wrestle with is the
language -- I'm not sure of the page -- page one --

CHAIRPERSON RIDDLE: Okay.

MR. NEAL: -- it's going to Julie's issue.

CHAIRPERSON RIDDLE: Okay.

MR. NEAL: Any synthetic substance used in the extraction process that remains in the final extract above insignificant levels and any synthetic substance that has a technical or functional effect must be on the national list.

Okay. Because you were saying that what it was extracted with, there were some levels left over.

MEMBER WEISMAN: Right. But my only concern is the things that --

CHAIRPERSON RIDDLE: Yes, speak into the mike. We can't hear you.

MEMBER WEISMAN: Okay. My concern was the reaction that happened between the things that are naturally occurring in that agricultural product. If something synthetic has been used to process and that remains behind, that should be petitioned. That should be on the national list. I don't see that as a
problem.

CHAIRPERSON RIDDLE: Okay. Now I'd like
to get us back to the amendment and act on that.
We've had far-ranging discussion that is relevant to
it. But I'd like to get a narrower focus here.

So I didn't capture the exact language of
the amendment. Does anyone?

VICE CHAIRPERSON O'RELL: Well, in
discussion Arthur did bring up a point that what we
discussed would have been specific only for those
materials that are petitioned for the national list
and so --

MR. NEAL: They would have an impact
beyond those materials --

VICE CHAIRPERSON O'RELL: They would. It
would.

MR. NEAL: -- in the petition.

VICE CHAIRPERSON O'RELL: This would have
an impact beyond.

CHAIRPERSON RIDDLE: So do you withdraw
the amendment?

MEMBER CAROE: No, I would like to offer
that we change this to say -- instead of a positive when it is used, let's do the negative and say except for processes included in an organic handling operation. Exclude it from that and then you include all the naturals and those materials coming out to the list.

MR. NEAL: The question is what is a soy bean -- a company that handles soy beans for the purpose of making soy bean meal, they use an extraction.

MEMBER KOENIG: Right. And that's fine.

MR. NEAL: Okay.

MEMBER KOENIG: That's what I'm saying. When the soy --

MR. NEAL: So for a company that uses soy beans to extract soy protein isolate for coffee creamer as a food, that's fine, too.

MEMBER KOENIG: No, but I'm saying is that final -- if you take our definition of chemical reactions in combination with extraction, extraction is not -- the protein comes out at the end, okay?

The problem with soy protein isolate is
not the fact that -- well, it is an extraction problem in the sense that within that isolate, one of the buffers is there in a significant enough level that it changes the configuration of that protein.

MEMBER OSTIGUY: But it's not there in previous soy proteins.

MEMBER KOENIG: Yes so all the other soy proteins -- and it is because soy protein isolate is the most highly processed part of the soy bean. And if we can't acknowledge -- okay -- that there may be manufacturing of some foods, you know soys or whatever, there may come a point where you have to process it so highly, you know, as an ingredient -- the problem is that they are petitioning it as an ingredient.

MR. NEAL: For fertilizer.

MEMBER KOENIG: For fertilizer.

CHAIRPERSON RIDDLE: Okay. I've got Barbara and then Bea. Microphone.

MS. ROBINSON: You only want this to be referring to materials related to crop and livestock production?
CHAIRPERSON RIDDLE: No, it's petitioned substances.

MS. ROBINSON: All right. Extraction for substances being considered for use in organic operations -- in organic crop, livestock, and handling operations?

MEMBER WEISMAN: Can you repeat that Barbara? I'm sorry.

MS. ROBINSON: Extraction, for substances being considered for use in organic crop, livestock, and handling operations.

CHAIRPERSON RIDDLE: To me that's too broad because that could include ingredients being used. I guess petitioned to be placed on the national list.

MS. ROBINSON: Being considered for use.

CHAIRPERSON RIDDLE: Yes, I've got Bea. And then back to Julie.

MEMBER JAMES: Okay. I'm wondering if we looked at the submission from the OTA on extraction. They did a further clarification to your document, Rose.
Extraction, according to NOSB 1995, Austin, Texas, the concentration, separation, and removal of substance from a plant, animal, microbiological, or mineral source, minerals used in a plant, crop, and animal production may be extracted in a way that does not result in synthetic reaction as defined in 20103.1. The products of any other methods of extraction shall be considered on a case-by-case basis and reviewed for compatibility under OFPA Section 2119(M)(1-7).

CHAIRPERSON RIDDLE: That's the footnote.
VICE CHAIRPERSON O'ReLL: That's the footnote to our draft.
CHAIRPERSON RIDDLE: On page one.
VICE CHAIRPERSON O'RELL: On page one of our draft.
CHAIRPERSON RIDDLE: But I guess -- it's Julie -- I'm trying to keep --
MEMBER WEISMAN: Okay. Are you asking or am I coming after Bea now?
CHAIRPERSON RIDDLE: Yes.
MEMBER WEISMAN: Okay.
CHAIRPERSON RIDDLE: If you'd like.

MEMBER WEISMAN: My needs would be completely taken care of if at the end we just added a sentence that says extraction as defined in this section is not intended to address the processing of food or agricultural products by a handling operation. That would do it.

VICE CHAIRPERSON O'RELL: Do you want to withdraw your other motion and make a new motion?

CHAIRPERSON RIDDLE: Substitute.

MEMBER WEISMAN: Oh, I'll get used to this Roberts stuff. Sorry.

Okay. I would like to make a motion --

CHAIRPERSON RIDDLE: You'd like to withdraw --

MEMBER WEISMAN: I would like to withdraw --

CHAIRPERSON RIDDLE: -- and offer a substitute.

MEMBER WEISMAN: -- I would like to withdraw -- I forget what I'm even calling it now --

CHAIRPERSON RIDDLE: Your previous motion.
MEMBER WEISMAN: -- my previous motion and I would like to substitute it with the following motion. That at the end of this paragraph on extraction, after the word national list, we add a sentence that says extraction as defined in this section is not intended to address the processing of food or agricultural products by a handling operation.

VICE CHAIRPERSON O'RELL: I would second that.

MEMBER KOENIG: Can I get it -- because I was talking to George for a second.

CHAIRPERSON RIDDLE: Yes, just read back through it slowly. I think we're getting there.

Extraction as defined --

MEMBER WEISMAN: Extraction as defined in this section is not intended to address the processing of food or agricultural products by a handling operation.

PARTICIPANT: One more time.

MEMBER WEISMAN: Okay. Extraction as defined in this section is not intended to address the processing of food or agricultural products by a
handling operation.

CHAIRPERSON RIDDLE: Okay. Julie moves, Kevin seconds, with a new substitute language. Is there further discussion on just that language?

MR. NEAL: Question.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: Give me an example of what that would include.

MEMBER WEISMAN: Well, I gave the example of extracting -- making vanilla extract from vanilla beans where the extractives contain between 250 and 300 aromatic compounds that can react with each other under heat but should not render vanilla extract synthetic.

It's not much different than when you pasteurize a multi-ingredient dairy product and changes occur during that process.

MR. NEAL: I'm just trying to differentiate between that type of process from a vanilla bean and the type of process from a soy bean.

MEMBER WEISMAN: It's a one-step process.

And the process that Rose is describing for soy bean
isolate sounds like there is extraction and then there is fractional distillation. I mean it gets --

CHAIRPERSON RIDDLE: The big difference is that is in the manufacture of a petitioned substance. This is in the manufacture of --

MEMBER WEISMAN: Manufacturing of a food.

CHAIRPERSON RIDDLE: -- a food item that's allowed.

MR. NEAL: Because you can use that same product in a food.

MEMBER KOENIG: Yes, I think I figured -- I know where you are getting at, Arthur, and the conflict -- what Arthur is saying and I understand what he is saying, is that -- because something like soy -- you know, soy is a unique case because unfortunately it is a food ingredient that somebody wants to apply to a crop. Okay?

And what he's saying is that if we're saying that we are excluding them in the extraction process, okay, we're saying that you are allowed to handle food any way you want, you know, once it hits the processing mode, as long as you are in compliance
with synthetics or whatever is on the list.

MR. NEAL: Everything is captured.

MEMBER KOENIG: But just answer this one question, okay? Because I can't -- I'm not in the food industry so I'm not sure how the list is always applied to processing. But in the food industry, if you were extracting something, you have your extracting.

If then you were adding the buffer, would the buffer have to be on the list?

MEMBER WEISMAN: Yes.

MEMBER KOENIG: Okay. So we're covered with soy, okay, because the buffer is a synthetic that has to be usually on the list. So there is an acknowledgment that that buffer has now made that soy -- not made the soy but the buffer is the synthetic.

You know in our case, we're saying the soy is okay but it's that buffer that was present in a significant level -- we're not saying that the protein is.

MR. NEAL: What you're saying is just like we've clarified with aquatic plant extracts --
MEMBER KOENIG: Exactly.

MR. NEAL: -- fish emulsions that -- it's a natural.

MEMBER KOENIG: Right.

MR. NEAL: But if a synthetic is going to be added to it, it's got to be on the list.

MEMBER KOENIG: Right.

MR. NEAL: So that's a huge clarification from this document. Because right now it's saying that it's synthetic. So I think what we're saying is that everything is covered, everything is captured by this document. The extraction process is allowed for agricultural products.

When you get further down into the document, you'll then have to talk about reactions.

MEMBER KOENIG: Okay.

MR. NEAL: But if something is going to be added to the substance, the extracted substance to adjust anything, that synthetic has to be on the national list.

MEMBER KOENIG: Right.

MR. NEAL: Okay.
MEMBER KOENIG: Or because in the case of these weird natural things that can be applied to plants, that -- and the same thing -- that's why our annotation for aquatic plants, we're not questioning that the plants are not natural, it's the manufacturing of it because of the presence of that. And that's why the annotation is for the buffer.

MR. NEAL: Right. But we didn't have the understanding then that we have now.

MEMBER KOENIG: Okay. Got you. All right.

CHAIRPERSON RIDDLE: All right? So let's get back to the motion to add in the language that Julie presented. Should I read it again or does everyone have it? I'll read it.

Okay. And this is to add at the end of the paragraph about extraction the following sentence. Extraction as defined in this section is not intended to address the processing of agricultural products by a handling operation. Correct?

MEMBER WEISMAN: I had of food or --

CHAIRPERSON RIDDLE: Oh.

MEMBER WEISMAN: To be consistent with the
rest of what we just did.

CHAIRPERSON RIDDLE: Food or --

MEMBER WEISMAN: Food or agricultural products.

CHAIRPERSON RIDDLE: Okay. Thanks. I'm glad I read it. All right. So we'll go ahead and vote on that amendment. Just a minute.

PARTICIPANT: Mr. Chair?

CHAIRPERSON RIDDLE: Yes?

PARTICIPANT: Point of order. Just to protect the Board and to protect Julie if there is a conflict of interest --

CHAIRPERSON RIDDLE: Oh, that's -- yes, I've been remiss. The point is that I should have all along on each item as they come up be asking if anyone has any conflicts. And if so, to please declare them and we can determine whether they are sufficient to, you know, warrant recusal.

So on this topic, does anyone have any conflicts to declare? Or interests to declare, I guess.

MEMBER WEISMAN: I'm a manufacturer of
extracts.

CHAIRPERSON RIDDLE: All right.

PARTICIPANT: Should she recuse herself?

CHAIRPERSON RIDDLE: Well, no, she shouldn't have moved. It's up to us to determine. Are you in a unique position to benefit from this at all? We understand that you are a manufacturer of flavors and extracts.

Board members, do you feel that --

MEMBER KOENIG: On this particular section of it, yes. Not on the entire document. I just think it would be cleaner.

SECRETARY CAUGHLAN: I think it would be much better if you would recuse.

MEMBER WEISMAN: I recuse myself.

CHAIRPERSON RIDDLE: Okay.

MEMBER CAROE: And I'll make the motion.

CHAIRPERSON RIDDLE: Then let's step back and the motion previously made by Julie has now been taken off the floor and is substituted by the same language, moved by Andrea. Is there a second?

VICE CHAIRPERSON O'RELL: Second.
CHAIRPERSON RIDDLE: Still Kevin seconds.
Thanks for that reminder. I will try and keep that front and center as we move on.
Okay, back to the text. And Julie will be recusing when we vote.

MEMBER JAMES: Jim, I have a question.
CHAIRPERSON RIDDLE: That's fine.
MEMBER JAMES: If the public wants to make comment on this issue and they've been asking -- raising their hand or whatever to make comment, can we allow them to do that?
CHAIRPERSON RIDDLE: It's really at the discretion of the Chair. So yes, we can.
MEMBER JAMES: Okay.
CHAIRPERSON RIDDLE: I know and I've been trying to say when she really needed to. And when she needed to, it wasn't time. And then when it was time, she didn't need to.

(Laughter.)
MEMBER JAMES: We must be doing our job.
CHAIRPERSON RIDDLE: Anyhow, so I'm tuning in. Yes, I'm sorry. Okay, so this is on the -- just
on that amendment that is now offered by Andrea. And we start off with Nancy.

MEMBER OSTIGUY: Yes.

PARTICIPANT: Did you read Andrea's?

CHAIRPERSON RIDDLE: It's the same language.

PARTICIPANT: Okay. It's the same language.

CHAIRPERSON RIDDLE: Yes, it's just a --

MEMBER CAROE: Different voice.

CHAIRPERSON RIDDLE: -- voice, motion.

Okay, so all right, Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie recuse.

Andrea?

MEMBER CAROE: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.
CHAIRPERSON RIDDLE: George? Absent.

Bea?

MEMBER JAMES: Abstain.

CHAIRPERSON RIDDLE: Abstained.

Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Chair votes yes. So we have -- okay, 10 yes, zero no, two abstentions -- no, one absent, one abstention, and one recusal.

PARTICIPANT: Do you go with the majority?

Or is it nonexistent?

CHAIRPERSON RIDDLE: It's nonexistent but it needs to be recorded.

PARTICIPANT: Arthur?

CHAIRPERSON RIDDLE: So, okay, back to Arthur.

MR. NEAL: I know that you voted.

CHAIRPERSON RIDDLE: Yes. We can't hear
you.

MR. NEAL: I know that you voted. But I'm going to let you know right now that everything is captured by this extraction if it is agricultural products regardless if it is handled by a handling operation or a producer.

MEMBER WEISMAN: What do you mean now?

MR. NEAL: If you go to the definition, naturally occurring plant, animal, mineral sources. It doesn't differentiate between the production or handling operation.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Then what about the part of OFPA and the rule that for organic handling operations, the mechanical or biological methods, including but not limited to -- and there is the whole list there, cooking, baking, curing, and extractions is on that list.

MR. NEAL: What about it? That's a processing function.

MEMBER WEISMAN: Maybe I misunderstood the point that you were making.
MR. NEAL: We're talking about natural versus synthetic.

MEMBER WEISMAN: Right.

MR. NEAL: Okay. And let's take that point. Extraction is included in the definition of process. Okay? So I guess the question is now at what point does extraction become handling? At what point would it ever be captured under OFPA to be excluded by the regulations for the processing function?

CHAIRPERSON RIDDLE: Kim? And your name for the record?

MS. DIETZ: Okay, Kim Dietz. And thank you all for taking your time with this one. Look at apple juice. You know apple juice is extracted from a naturally-occurring plant, so to speak. Or even botanics are extracted. You have a steam extraction. You have heat extraction. You have centrifusion.

And, Arthur, all we're trying to protect is if you take this back to the chemical change, that does cause a chemical change. But is that synthetic in a handling operation? And no, it would not be
based on what they just passed.

So a handling operation deals with food and agricultural products. It does not necessarily deal with inputs that need to be petitioned for the national list. They're not a certified entity to make ascorbic acid or to make something that is non-organic on the national list. So they're not a certified entity.

Okay? So it's not a certified handler. It's not a certified handling operation. So really all the recommendation did was say if you are a certified handling operation and you use extraction as a method of processing, it does not turn it -- it does not mean it is synthetic if you use an approved processing method.

MEMBER KOENIG: All we're saying is that we're differentiating between -- just like in the other section where we were talking about formulating in manufacturing, we're talking about the inputs that are in the system. We're not talking about -- that handling is allowed, processing is allowed. And we're acknowledging that.
CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: But do you understand that everybody -- every operation that extracts is a processor. So that means that no one that extracts would be covered by this document?

MEMBER KOENIG: No, I don't understand what you're saying. So you're going to have to say it in a language that --

MR. NEAL: What example then -- what example would be captured by this document provided on the motion that you just passed?

MEMBER KOENIG: Just what we said in terms of the soy protein isolate.

MR. NEAL: Why? If I'm using it in food?

MEMBER KOENIG: What do you mean why? I don't understand. We're saying that if you take that soy and use it -- use soy bean as an ingredient and you make soy protein isolate. It's a food. You can use it.

MR. NEAL: What if I use the same soy in baby food?

PARTICIPANT: (Speaking from unmiked}
CHAIRPERSON RIDDLE: And I'd just like to suggest maybe we should add the word organic so it is an organic handling operation. Terms which are defined by the rule makes it clear what it doesn't apply to. Just an idea.

MEMBER CAROE: I think I know what Arthur is trying to get it.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: I think I know what Arthur is trying to get at. What Arthur is trying to get at is if you are making an ingredient, a non-organic ingredient, that is allowed. If you're extracting benzaldehyde for a natural flavor, whether you are doing it there inside or outside the handling facility, if I'm making cherry-flavored yogurt and I'm extracting my own benzaldehyde in my operation, it should be held to the same degree as if somebody else is extracting benzaldehyde.

The way that we have it covered right now puts -- gives a benefit to the operations that do more of the processing of their ingredients than those that
procure ingredients. Is that what you're trying to
get at Arthur?

MR. NEAL: That's part of it. You've got to
treat everybody the same.

PARTICIPANT: What?

MR. NEAL: You have to treat everybody the
same. There's no -- I mean you look at a non-organic
ingredient. You've got a category that says naturals.
But now if I don't do it on an organic operation, if
somebody is doing it organically, then they're not
covered here under this document.

But if I'm doing it for sale as a non-
organic ingredient, then mine could potentially be
synthetic.

CHAIRPERSON RIDDLE: Kevin and then Kim.

VICE CHAIRPERSON O'RELL: I guess I wonder
if we're trying to go too far to protect because I
know what the intent is, that we don't want a handling
facility in the processing of an organic product to be
labeled as a synthetic because we have a chemical
change through extraction.

And maybe we're going to far. And with the
addition of these, now we're carving it out and actually opening the door.

So are we not covered just by stating in the processing as we had it originally that extraction is a method that is allowed by OFPA.

MR. NEAL: It's allowed. Bottom line, it's allowed. And after the extraction process, it can still be considered a natural ingredient.

MEMBER KOENIG: Well, that's what I said first. But I was convinced.

MR. NEAL: But the additional "clarification" then creates a distinction that doesn't need to be created.

MEMBER KOENIG: Can we take a break, Jim, because I need to go to the bathroom?

MEMBER OSTIGUY: Not yet. Don't break when we're right at -- I'd like to move that we delete the most recent addition, extraction as defined, et cetera.

MEMBER KOENIG: Could we hear from Kim first?

CHAIRPERSON RIDDLE: Yes.
MS. DIETZ: You know remember you are trying to help yourselves define synthetic. And extraction is a manufacturing process but, again, what Bea had read -- you're going to be reviewing things on a case-by-case basis. And clearly there is going to be a simple extraction like manufacturing of a juice or a very complicated extraction process that has all these different inputs. And you're going to have to determine whether something is synthetic or not.

By taking that language out, you know, it's my belief that, again, extraction is covered under an allowed process. But if you have heat and a chemical change in the extraction, you're going to go the other way and truly cause something to be synthetic that really shouldn't be.

So I think what you're doing is you're trying to -- you know I also see from the audience, you're trying to pinpoint a soy protein -- you're trying to review a material at the same time you're trying to make a recommendation. And it's kind of confusing out there. But as an example --

PARTICIPANT: When we're using vanilla as an
example --

MS. DIETZ: Right. Right.

CHAIRPERSON RIDDLE: Okay. Board members?

Andrea?

MEMBER CAROE: Well, my question is actually directed at Kim.

CHAIRPERSON RIDDLE: Okay.

MEMBER CAROE: Kim, if there are processes -- extraction processes that happen in handling operations that change chemically the extracted material, why would that be considered differently than products on the outside? Why would you --

MS. DIETZ: Well, you -- then you're going back to a definition of the chemical change. And heat is a chemical change. So --

MEMBER CAROE: Well, that's where I think maybe lies the problem is that we do allow chemical changes.

MS. DIETZ: Right.

MEMBER CAROE: And we should allow them perhaps in the consideration of whether a material is synthetic or non-synthetic that are presented for
petition in that same way. So perhaps heat is an allowed treatment of a material and still keep it as non-synthetic. Maybe that's where our problem lies is that we're not being -- we're being too aggressive on those materials in considering them synthetic.

MEMBER KOENIG: You know the heat --
CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Sorry. I don't want to get mixed up with heat because even with proteins, you can use heat. It denatures it. If it comes back together, it's not synthetic. You know so heat is just a -- you know, it's like a buffer, you know it could be like one of these acids or, you know, certain things can take things away.

We're showing that in those -- that's why you can't -- in a way, you have to look at the document in its entirety. These were definitions. But they're also based on those -- to help understand those chemical reactions. But sometimes when you start picking apart, you know talking about chemical reactions and extractions, we're getting mixed up.

We're not saying that heat isn't allowed.
You know we're not saying that.

MEMBER CAROE: What is on the table at this time? Are we voting on --

CHAIRPERSON RIDDLE: Well, the entire motion as amended is what's on the table.

MEMBER CAROE: Okay. Well, I have another issue with this and I don't even know if this is the appropriate time to bring it up because we seem like we're revisiting the last motion.

PARTICIPANT: You need to be on the mike.

CHAIRPERSON RIDDLE: Well, no. Yes, right now what's on the table is the --

MEMBER CAROE: The entire document.

CHAIRPERSON RIDDLE: -- the entire document as amended.

MEMBER CAROE: Okay. Well then I have another.

CHAIRPERSON RIDDLE: Okay.

MEMBER CAROE: In that same section on extraction, the sentence that is any synthetic substance used, that sentence may not be appropriate if we're talking about crop extractions where you have
allowed synthetic extract solvents.

PARTICIPANT: What?

MEMBER CAROE: If you have a solvent that is allowed as a synthetic.

PARTICIPANT: Right.

MEMBER CAROE: So this says any synthetics. It doesn't say any prohibited synthetics. It says any synthetics. If they're --

CHAIRPERSON RIDDLE: I see what you're saying.

MEMBER CAROE: So all I would like is the addition of the word prohibited.

CHAIRPERSON RIDDLE: Okay. Would you so move?

MEMBER CAROE: I move.

CHAIRPERSON RIDDLE: Okay. Is there a second?

PARTICIPANT: Could you show me and read the sentence there?

CHAIRPERSON RIDDLE: Okay. It's the last sentence in the extraction paragraph. And Andrea is proposing adding the word prohibited right after the
first word any. So it would be any prohibited
synthetic substance to make it clear that if it is an
allowed synthetic, it's okay to remain in the product.

So is there a second to her motion?

MEMBER CAROE: Julie seconds.

MEMBER WEISMAN: I second.

CHAIRPERSON RIDDLE: Okay. Julie seconds.

Well, the only thing so far the Board determined that
she had a direct conflict was on that sentence she
proposed which really was relevant to her business.
This is a general topic as I see it unless someone
challenges that.

MEMBER KOENIG: Yes. And I understand where
Nancy is coming from. Yes, I do.

CHAIRPERSON RIDDLE: Pardon?

MEMBER KOENIG: Are we challenging the
motion or are we discussing the motion?

CHAIRPERSON RIDDLE: Well, neither. We're
just establishing whether Julie can second the motion.

MEMBER KOENIG: Oh, I'm sorry.

CHAIRPERSON RIDDLE: Okay. No one
challenges that. Julie can second. And we're going
to now discuss inserting the word prohibited.

Nancy?

MEMBER OSTIGUY: I think it is redundant because we're -- it has to be on the national list. It wouldn't be on the national list if it wasn't prohibited if it was on the national list. It's circular.

MEMBER CAROE: No, it's not.

MEMBER OSTIGUY: It is.

MEMBER CAROE: We're talking about the solvent.

CHAIRPERSON RIDDLE: Okay. One at a time.

MEMBER OSTIGUY: Great. But the solvent has to be on the national list. If it is synthetic, it has to be on the national list to be able to use it.

MEMBER CAROE: No, it doesn't.

MEMBER KOENIG: But that means remains the same.

MEMBER OSTIGUY: Right. If it remains. This doesn't remain. It says that remains in.

MEMBER CAROE: What I'm saying is that by saying prohibited, you're going back to what we just
said in the beginning that nothing is prohibited as long as it doesn't remain.

MEMBER OSTIGUY: Yes.

MEMBER CAROE: Okay. We just stated in the first thing that go ahead, guys, use whatever you want as long as you don't change the chemistry and it's not in the final product in significant levels.

MEMBER OSTIGUY: Then it's okay.

CHAIRPERSON RIDDLE: Okay. Andrea?

MEMBER CAROE: So what I'm trying to establish is that allowed synthetics may remain. And right now the way it is written, any synthetics may not remain.

MEMBER KOENIG: No, no. Let me explain.

CHAIRPERSON RIDDLE: Okay. Rose?

MEMBER KOENIG: The ones that are on the list are on the list because they have remained. Okay? Those that are listed is because they have remained and they, therefore, have made the substance synthetic.

CHAIRPERSON RIDDLE: Yes, anyone else? Nancy? And Jerry?
MEMBER DAVIS: Well, I agree with Nancy that Andrea's problem with this in saying you would need to put any prohibited synthetic, you don't need that. When you read the end of the sentence, it says if that synthetic remains, it must be on the national list.

MEMBER OSTIGUY: Right.

CHAIRPERSON RIDDLE: Yes.

MEMBER KOENIG: Do you understand, Andrea?

MEMBER DAVIS: It takes care of the problem.

MEMBER CAROE: I withdraw the motion.

Okay, so we're back to the full document as amended. Any further discussion? Concerns?

Rose?

MEMBER KOENIG: I just wasn't quite sure where we were on what we voted on. We never changed our vote.

CHAIRPERSON RIDDLE: There's been one amendment accepted and that's the sentence at the end of the extraction section.

MEMBER WEisman: And what about the
amendments to Section Two?

CHAIRPERSON RIDDLE: Oh, well, the ones that
-- those were already -- yes, I'm sorry -- so, yes,
those were friendly presented by the presenter.

PARTICIPANT: This is guidance, correct?

CHAIRPERSON RIDDLE: Yes, this is guidance
to the Board and TAP and petitioners probably. Right.

Okay. Bea?

MEMBER JAMES: I guess I'm just wondering if
we really fully addressed Arthur's concern. I'm not
sure if we did.

MR. NEAL: I think -- get me if I'm wrong --
we all agreed that extraction is allowed whether it be
a handling operation -- really extraction is a
handling function so all of them -- anybody who
performs an extraction is going to be a handler. So
there's no need to create a distinction between
handlers who do extracting because all of them are
handlers. All extractors are handlers.

So we can't create a distinction that says
handling operations that extract food ingredients,
this document does not cover them because anybody who
is going to be performing an extraction is going to be a handler.

And just because they're extracting -- I mean they're extracting an agricultural product so they're going to be covered by this document regardless if you create a distinction or not legally.

So I'm just saying I know that you voted but we won't be able to do much with what you've amended.

CHAIRPERSON RIDDLE: With that sentence.

MR. NEAL: Right.

CHAIRPERSON RIDDLE: Okay, Jerry?

MEMBER DAVIS: I would make a motion then that upon clarification from Arthur that we remove the inserted language in that last sentence.

MEMBER OSTIGUY: Second.

CHAIRPERSON RIDDLE: Okay. There's now a motion to -- we've got the second already -- that's Nancy, yes. So motion to remove the sentence we just added. And Nancy seconded.

Any further discussion of that? Rose? And then Kevin.

MEMBER KOENIG: I mean since I've written
this document and I don't understand it, I still -- I really need somebody to -- I just don't -- I don't get it, Goldie. I just don't understand what you're implying. If you could explain it because -- you know, and again, I'm not taking it to the level you are. And I know that's why I can't figure it out.

But this was meant to state that for substances that would be petitioned to the list, that they could be extracted, you know, in any manner, blah, blah, blah. Whether they're used on the crops list, the handling list, and the livestock list, okay?

CHAIRPERSON RIDDLE: Arthur, a response?

MEMBER KOENIG: Now --

MR. NEAL: Well, the problem isn't with the document. The problem was with the amendment to your document.

MEMBER KOENIG: Okay. Now I understand -- how does that amendment impact it? That's what I don't understand. That amendment, what does it actually do? Because I can't understand the baby food thing.

MR. NEAL: The amendment attempts to create
an exclusion for people who only extract food ingredients. And food ingredients are agricultural products. Am I right?

So if the definition in OFPA says that synthetic is a substance that is formulated or manufactured by a chemical process or by a process that chemically changes a substance extracted from a naturally-occurring plant, animal, or mineral source, how can I then create an exclusion through a document for an operation who is extracting a food ingredient from a naturally-occurring plant or animal or mineral source just because they desire to use it food? I can't.

CHAIRPERSON RIDDLE: Okay. I'd like us to - - Kevin, did you have a comment?

VICE CHAIRPERSON O'RELL: Arthur, do we have the same scenario with number two where we have formulation and manufacturing. And we also say formulation or manufacturing as defined in this section is not intended to address the processing of food? I'm trying to understand the distinction between that phrase there and having it in the
extraction section as well.

MR. NEAL: What paragraph?

CHAIRPERSON RIDDLE: Page two, item two, first paragraph.

MR. NEAL: Right here?

CHAIRPERSON RIDDLE: Middle of the paragraph.

VICE CHAIRPERSON O'RELL: It was added. Formulation or manufacturing as defined in this section is not intended to address the processing of food or an agricultural product by handling operation.

MR. NEAL: I'm not sure if that --

VICE CHAIRPERSON O'RELL: And, again, we're talking about to produce agricultural or handling inputs. So I'm just trying to get the clarification if we have the same issue with extraction. Is this also an issue in your mind?

MR. NEAL: Yes.

VICE CHAIRPERSON O'RELL: I mean.

MR. NEAL: It is but I'm thinking, too, that the sentence right behind it contradicts it as well. This definition applies only to the individual inputs
used in crop handling and livestock operations because the sentence right above it, formulation or manufacturing as defined in this section is not intended to address processing of food. So it's a double -- it's a contradiction.

What I think you're trying to do is you are trying to prevent the processing of food from being considered synthetic.

VICE CHAIRPERSON O'RELL: Or the outcome of processing --

MR. NEAL: The outcome.

VICE CHAIRPERSON O'RELL: -- to be conceived as synthetic --

MR. NEAL: Right, so --

VICE CHAIRPERSON O'RELL: -- because of a chemical reaction that may --

MR. NEAL: -- so from pasteurizing apple juice, from pasteurizing milk --

VICE CHAIRPERSON O'RELL: Pasteurizing milk --

MR. NEAL: -- it would not become --

MR. JONES: -- denaturation of milk
protein, it's not synthetic.

MR. NEAL: Right. That gets into the processing section. Number three. And it gets into the chemical reaction sections. And I think that's where some of the other elements that are really of concern have to be worked out.

It's not necessarily -- I think that we all agree, like I said earlier, that extraction is allowed. And that once I extract something, as long as I haven't changed what I intended to extract, I'm non-synthetic.

What I do with it after that is where the rubber then meets the road. So if I'm talking about through the extraction process I'm trying to extract soy protein but when I extract it, I really -- I've got another substance. I don't have soy protein.

I have got something different than what I intended to extract from the bean. Then I've got -- I've violated OFPA's definition of synthetic. Or I've now made a synthetic substance because I've created a chemical change through the extraction.

We agreed that if I'm going to add something
else to the ingredient that I've extracted, it's got to be on the national list. It's as simple as that.

It doesn't get you into synthetic or non-synthetic. It's just simply I've got to put the substance on the list.

Now for processing, I would suggest we continue to go through the document because I think, just like with apple juice, if I'm going to add anything to it, it's got to be on the list. If I'm going to extracts, it's got to be on the list.

So let's continue to move. But extraction is allowed. Anything you add to the extracted substance has to be on the list. It doesn't make it a synthetic. But it just means that the synthetic substance that has been added to it has to be on the national list.

CHAIRPERSON RIDDLE: Okay. Well, we have a motion to remove that sentence on the floor. So I'd like to proceed with the vote. And since Julie recused on adding the sentence, she should recuse on removing the sentence as well. And you were going to be the first in line.
MEMBER WEISMAN: Do I have to say I recuse? Is that important?

CHAIRPERSON RIDDLE: It wouldn't hurt.

MEMBER WEISMAN: I recuse.

CHAIRPERSON RIDDLE: Okay.

Andrea?

MEMBER CAROE: Now the motion is for the removal, so I say yes.

CHAIRPERSON RIDDLE: That's true. Yes means remove.

Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.
CHAIRPERSON RIDDLE: Hugh?
MEMBER KARREMAN: Yes.
CHAIRPERSON RIDDLE: Michael?
MEMBER LACY: Yes.
CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: The Chair yes. So now we've got 12 yes, and zero no, well, one absent, and one recusal.
Okay. So we're really back with the original document.
(Laughter.)
CHAIRPERSON RIDDLE: But as amended with those friendly amendments that Rose presented in the beginning. So we've extracted -- we've added and extracted and subtracted.
PARTICIPANT: Have we made a chemical change though?
CHAIRPERSON RIDDLE: We're going to if we don't get a break. We're going to make some physical
changes.

   Yes, okay. Can we move to a vote on -- okay. Nancy?

MEMBER OSTIGUY: Do we still need to -- we still need to so something with the remainder of it before we move on.

MR. NEAL: I thought you were working section by section.

MEMBER CAROE: Yes, we're working section by section.

PARTICIPANT: So are we just going to take a ten minute?

CHAIRPERSON RIDDLE: Well, okay. Are there more significant concerns that it is going to take a lengthy discussion you think? You never know.

MEMBER KOENIG: Well, I think four is -- I mean we need to go over four.

CHAIRPERSON RIDDLE: I hate to take a break in the middle of discussion.

MEMBER KOENIG: Well, like I said, we're going to see some chemical reactions on the floor.

CHAIRPERSON RIDDLE: It sounds like we need
MEMBER KOENIG: I need to.

CHAIRPERSON RIDDLE: All right.

MEMBER KOENIG: I drank too much iced tea.

CHAIRPERSON RIDDLE: I feel the pressure also. All right. We will take a 15-minute break and then resume our discussion. So ten after three please.

(Whereupon, the foregoing matter went off the record at 2:58 p.m. and went back on the record at 3:17 p.m.)

CHAIRPERSON RIDDLE: All right. Let's resume consideration of the synthetics, non-synthetics document. And right now it is as presented by Rose with those few amendments that she presented. And that's it.

So what additional concerns or comments are there? We took a break and we were just reconvening. There is nothing new. That was defeated or removed.

PARTICIPANT: What paragraph are we --

CHAIRPERSON RIDDLE: Well, we would be, I believe, at number two or three -- three, good.
That's better than two. Three. What's that? So three is really restating what is in the rule. I don't know if there are any concerns with that? That's just to reinforce that approved processing methods are allowed by organic handling operations.

Okay, number four, the chemical reaction or chemical change shall be understood to mean -- any concerns with that paragraph? Arthur?

MR. NEAL: Based on our previous discussions, I think that we need to talk about ionic transfers with respect to chemical reaction from the extracted substance. Because if we're talking about allowing extraction and agreeing that synthetics can be added to it after the fact but the synthetic has to be on the national list, then it is an okay process.

So we don't want to get into the situation that any agricultural ingredient that is extracted that has a synthetic added to it now becomes a synthetic substance. That gets into your food ingredients.

Any food ingredient that is extracted but has a synthetic added to it would become a synthetic
substance. That's why I think a lot of attention was focused on trying to protect processing because processing, you know, you take agricultural ingredients but you add additives that are on the national list, you may add, you know, some other things.

And that would get you into chemical reactions. But if you look at the definition of synthetic in the act, that's two tiered. The first one talks about -- let's go here real quick -- a substance that is formulated or manufactured by a chemical process.

And I think purely that's talking about you starting out with chemicals. And you're creating a substance using chemicals.

Then you've got the second tier that talks about or by a process that chemically changes a substance extracted from a naturally-occurring plant, animal, or mineral source.

The act allow for extraction but it wouldn't be feasible for the act to allow for extraction of an agricultural naturally-occurring product but then say
if you add a synthetic to it, now it is synthetic as well. It wouldn't make sense for you to even allow extraction. But you can't combine the extracted substance with anything that is synthetic.

PARTICIPANT: Come again?

MR. NEAL: Comment?

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes. That ends up opening up the door to too many things. Well, we'll use our protein isolate as an example again. The extractant material, the base which reacts then with the protein chemically changes that protein. As long as that base was on the national list, it could be used and the product of that reaction would be non-synthetic by what Arthur is describing.

And the difficulty with that is there is a point where if you take a non-synthetic, react it with a food, it's not non-synthetic any more.

MR. NEAL: Okay. And I'm talking here -- if you are using soy protein as an example --

MEMBER OSTIGUY: Well, and that's not the one that I'm necessarily concerned about at all.
MR. NEAL: Okay. So let's look at then -- and this gets the industry into its issue of chemical reaction because cake goes through chemical reaction. Bread goes through chemical reaction.

And just as processing is allowed in the definition -- I mean extraction is allowed in the definition of processing in the regulation, so is baking.

MEMBER OSTIGUY: Correct.

MR. NEAL: And heating.

MEMBER OSTIGUY: Correct.

MR. NEAL: And those are allowed in the act. So now we're back in the dilemma of cooking food and food becoming a synthetic substance. They are in the act, right. So it's hard to create a distinction between extraction for the purposes of petitioning a substance for inclusion on the national list and extracting just in day-to-day handling functions.

MEMBER KOENIG: Why? Because specifically they're two different sections.

CHAIRPERSON RIDDLE: Can you speak into the microphone?
MEMBER KOENIG: Oh, sorry. Even though they are both in the act, they are in two different, separate sections, one dealing with -- well, I'd have to go back -- I don't know the act inside and out but if I recall, one deals with materials. The other specifically deals in the section of handling.

And the act, as I understand it, you either -- you know you're talking about handling or you're talking about materials or you're talking about crops. Just because something is allowed in crops doesn't mean that it is allowed in -- you know even your standards, you know, standards -- those sections are for specific uses.

So what you are implying is that anything that is written there is fine in any application within your act. I don't think the act is written that way. But I'm not a lawyer.

MR. NEAL: No. I'm talking about processes right now from the standpoint of the same ingredient that a handling operation would process in the handling facility could be used as a food ingredient and it could be used as a crop amendment or it could
be used feed ingredient. But the process is the same.

So what we have to do is make sure that our 
thinking and logic concerning chemical change is 
consistent as well because the same way a chemical 
change takes place in creating a substance for crops, 
the same way a chemical change takes place in baking 
food or creating a substance for livestock.

So you have to apply chemical change 
consistent across the board.

MEMBER KOENIG: No, you don't.

MR. NEAL: Well, what we're trying to do 
right now is acknowledge the fact that extraction is 
allowed. And what Nancy brought up was that just 
because a substance is extracted, it does not 
automatically mean that a synthetic can be added to it 
and that's okay.

MEMBER OSTIGUY: No. If you extract a 
substance with a synthetic, you were saying that that 
-- an extracted non-synthetic is extracted with a 
synthetic, the product, you were saying, is still non-
synthetic even though that synthetic extractant 
remains chemically bound to the material that now is
the product.

MR. NEAL: If it has been extracted and has undergone a chemical change just through the extraction process, it would then violate the definition of synthetic. But if I've extracted the substance -- if I've extracted a substance and I still have that same substance, it's okay.

But if I've added something to it after I've extracted it, it doesn't mean that the substance now is synthetic. It means that the substance that I've added to it may be synthetic and has to be on the national list.

MEMBER OSTIGUY: Right, right. So that's what I'm saying. That you have a substance that is used as the extractant that is on the national list. You extract a food product. So you're starting with a food, you extract --

MEMBER KOENIG: I know what you're getting at.

MEMBER OSTIGUY: Well, then you explain it to him.

MEMBER KOENIG: Well, I think what you are
specifically talking about was -- and correct me if I'm wrong. I don't want to bring it up if we don't want to talk about it. But it is the sodium lactate concept and the way you interpreted that, is that what you're trying to get at?

MR. NEAL: That's a different issue.

MEMBER KOENIG: Okay. All right. Another issue. Okay, so all right. Then I don't know what you're talking about with this issue.

MEMBER OSTIGUY: Okay. We start with a food product and we want to extract it. That is non-synthetic. We then take a synthetic that is on the national list because it has to be because it is going to be in the product of that extraction. So there has been during that extraction a chemical reaction that has occurred that has embedded that solvent, the extractant, into the original food item.

And you're saying that that's then a non-synthetic?

MR. NEAL: No. If it has not been attached to anything -- if you don't have any of that solvent --
MEMBER OSTIGUY: Okay.

MR. NEAL: -- in the extracted material. Let's say I've only got the extracted material.

MEMBER OSTIGUY: Okay. So what you're doing --

MEMBER KOENIG: I know what you're saying now.

MEMBER OSTIGUY: So what you're doing --

MEMBER KOENIG: There are some -- okay, sorry.

MEMBER OSTIGUY: What you are doing is you are taking then a non-synthetic, using a synthetic on the list as the extractant. There is a chemical reaction that happens but the end product in that molecule of the end product, the natural still remains a natural.

MR. NEAL: Intact.

MEMBER OSTIGUY: It has nothing from the solvent itself.

MR. NEAL: Right.

MEMBER OSTIGUY: Okay.

MR. NEAL: Now, the second part is this.
I've extracted it. The extracted substance is still intact. Now I add something to it.

MEMBER KOENIG: Right.

MR. NEAL: Now, chemical reaction should not be associated with the adding something to --

MEMBER KOENIG: Right.

MR. NEAL: -- the extracted substance. It should be considered that I'm adding a synthetic substance to the extracting material. And that added synthetic substance has to be on the national list.

Because if you don't look at it that way, that means that I've got flour and I'm adding I guess you could say milk to it. I've got a mixture. Then I bake it. It's going through a process that is now having a chemical reaction.

So now I'm calling bread synthetic.

MEMBER KOENIG: No, no, no.

MR. NEAL: No?

MEMBER OSTIGUY: No.

MEMBER KOENIG: I think we have a multi-step process.

MEMBER OSTIGUY: No. I think what we have -
CHAIRPERSON RIDDLE: One at a time. Nancy?

MEMBER OSTIGUY: Yes, I think I finally understand.

We have several processes now. Okay if we start with the original. For simplicity's sake, the soy protein isolate. We have a non-synthetic that we add a synthetic material to it. There is a chemical reaction.

And that chemical reaction then results in the non-synthetic being bound to the non-synthetic. That end product then would be synthetic. If you start then -- that's number one.

If you start with a synthetic -- non-synthetic food. So we're taking your bread and milk idea -- or, excuse me -- wheat and milk idea. So if you add wheat to milk and you get bread, yes, there's a chemical reaction. But both of your precursors are naturals --

MEMBER KOENIG: And allowed.

MEMBER OSTIGUY: Yes, and the baking is one of the approved things that are allowed to do.
MEMBER KOENIG: In processing.

MEMBER OSTIGUY: And then the one that I think is in question is if you take then a non-synthetic, let's say again flour, and you are going to be using a synthetic. You're deciding that you are going to use baking soda -- not baking soda, excuse me, baking powder.

PARTICIPANT: Say you bleach the flour.

MEMBER OSTIGUY: Okay, okay, bleach the flour. So you do have a chemical reaction that is happening there because the bleaching process is a chemical reaction. Then the question is is that product, which is just bleached flour, is that a synthetic and, therefore, has to be on the list in order for us to --

MEMBER KOENIG: No, it doesn't. The bleach has to be on the list.

PARTICIPANT: How was it bleached? How was it bleached?

MEMBER KOENIG: The bleach does, not the --

MEMBER OSTIGUY: The bleach, right.

MEMBER KOENIG: That's consistent with what
we're doing. So what's the issue though in that chemical reaction.

CHAIRPERSON RIDDLE: Use your microphone, Rose.

MEMBER KOENIG: I follow what you're saying. But so where is there conflict? I don't understand where the conflict is in our --

MR. NEAL: There wasn't necessarily a conflict. But we need to clarify because here in number four, the last sentence talks about protein configuration changes as the result of physical association of an added substance.

MEMBER KOENIG: Right.

MR. NEAL: This needs to probably be stricken due to the fact that we acknowledge that a synthetic can be added to an extracted substance. But the synthetic would have to be on the national list. But if we consider it to be a chemical reaction, then it makes the extracted substance a synthetic substance just because I've added a synthetic to the extracted substance.

CHAIRPERSON RIDDLE: We, I'm sure, aren't
catching this on the transcript. I'm sorry.

PARTICIPANT: Can't hear you.

MR. NEAL: Barbara said then we would be making the flour a synthetic substance because I've added bleach to the flour and caused a chemical reaction.

MEMBER KOENIG: No, because with the --

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Well, because you were bringing up protein isolate and that's the example for this, the physical changes.

MR. NEAL: But the principle still should be applied across the board.

MEMBER KOENIG: Right. But the difference is that in the protein isolate, okay, what we're saying is that the isolate, the thing that we're extracting, the last stage is, in fact, chemically changed. That the buffer isn't coming in after. We're not adding something after.

It's the presence of that buffer that has changed that protein. It has changed as an isolate. That particular extraction product has chemically
changed if you agree with number four.

MR. NEAL: Well, then one of the things that would have to be clarified then what is the level of insignificant? What is the insignificant level? And the technical or functional effect?

MEMBER KOENIG: Okay.

MR. NEAL: Because that has to be applied consistently as well.

MEMBER OSTIGUY: I would actually argue that the chemical reaction that has occurred is number one. Not the protein configuration for the soy protein isolate because we have added --

MEMBER KOENIG: No, but they're not -- well --

MEMBER OSTIGUY: You know yes, the protein configuration has changed. But what makes the difference between a protein configuration change that is acceptable and a protein configuration change that is not acceptable is, you know, cooking an egg, frying an egg changes the protein configuration.

MEMBER KOENIG: Yes, it is an added substance. You're saying --
MEMBER OSTIGUY: It's the added substance. Not the protein configuration.

MEMBER KOENIG: Right.

MEMBER OSTIGUY: So I suppose we could delete --

MEMBER KOENIG: But it's from --

MEMBER OSTIGUY: -- protein configuration and we still would -- we would get to our intent without, I hope, messing up making bread.

MEMBER KOENIG: But the thing with the protein, it's not really -- it's an ionic reaction. Okay, that's fine. It would be covered.

MEMBER OSTIGUY: Does it work?

MEMBER KOENIG: Well, I think so.

MEMBER OSTIGUY: Okay.

MEMBER KOENIG: I mean you'd have to argue that it's an addition --

MEMBER OSTIGUY: Right. It is.

MEMBER KOENIG: -- reaction to that protein. And that ion. It's an ionic charge that is causing the protein configuration.

MEMBER OSTIGUY: Yes.
MEMBER KOENIG: All right.

CHAIRPERSON RIDDLE: So do you have some changes to the language to propose?

MEMBER OSTIGUY: I would move that we delete and for protein configuration changes as the result of a physical association of an added substance. And that's, in essence, repetitive is my argument.

MEMBER KOENIG: Let me just check one -- I need to look at one thing though before we -- I've got to go back to my Chemistry 101.

(Laughter.)

CHAIRPERSON RIDDLE: Good thing we have it. It's actually right there at that document.

Okay. So there's a motion and a second. Moved by Nancy. Second by Julie to strike and for protein configuration changes as the result of a physical association of an added substance.

MEMBER OSTIGUY: And I would argue --

CHAIRPERSON RIDDLE: I assume we would move the and in front of three as a part of that.

MEMBER OSTIGUY: Oh, we actually put an and after -- or before three. So we'd have one, two, and
three. So there is going to be an and inserted before the number three.

CHAIRPERSON RIDDLE: Yes.

MEMBER OSTIGUY: And a period after the parenthesis.

I would argue that protein configuration changes -- well, the way that this sentence is written, the added substance is covered under number one because you are either adding or combining reactions. Actually it would also include deletion reactions.

CHAIRPERSON RIDDLE: Okay. So we have the motion and a second. Is there further discussion?

MEMBER KOENIG: Yes, I just have a --

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Something we just have to think about. You know -- and again, I don't have a vested interest in protein isolate. We just brought it up.

CHAIRPERSON RIDDLE: Rose, it's hard to hear.

MEMBER KOENIG: Oh, sorry. I'm sorry that
these things are kind of far. Denaturation is really
the -- in proteins is really where you get the change.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: It's where you lose
activity.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: What that last one, four,
did was say that you can -- you don't have to
necessarily denature a protein. You can just change
the configuration, which actually changes its physical
properties.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: Okay. And that's what
happens to soy protein isolate. You are changing the
physical solubility of that protein with association
of those ions, okay? And that's why four is in there
because we can all see that denaturation causes it.

And you're right. In a lot of the
denaturation reactions, it might be with things that
actually cause a chemical change as in these other --
and the reason why -- like true denaturation could
come in by addition and combination, I guess,
decomposition. There may be a lot of ways that protein changes.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: That fourth one was to show that there can be physical changes. And that's why I said it's controversial. Some chemists feel that chemical changes are, in fact, chemical changes.

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: Where some chemists say that physical changes are not chemical changes.

MEMBER OSTIGUY: Right.

MEMBER KOENIG: And that's why I said that last one is the most contentious. And that is what we have to -- that's where if there's going to be a fight in this document, that's where -- the only argument I see.

MR. NEAL: The principle, though, impacts everything else.

MEMBER KOENIG: Right.

MR. NEAL: Yes. The principle of it impacts everything else. So I wouldn't want to take this down the road of going there because it's not worth it.
MEMBER KOENIG: What do you mean you wouldn't take it down?

CHAIRPERSON RIDDLE: Nancy and Julie had their hands up.

MEMBER KOENIG: I'm sorry.

MEMBER OSTIGUY: Okay. I'll give an example --

CHAIRPERSON RIDDLE: Andrea, I'm sorry.

MEMBER OSTIGUY: I'll give an example of just a configuration change that is significant and why I would actually agree with the chemists that argue that a configuration change is important.

Hormonal activity. You still have exactly the same components. All the carbon, all the hydrogen, et cetera, is identical. And if you change that configuration at all, it's no longer active. So configuration alone can determine activity.

Now it may not be important for what we want to do. I don't know.

CHAIRPERSON RIDDLE: Okay. Andrea?

MEMBER CAROE: My question is a little bit broader than just the motion on the table. But it
impacts the motion on the table.

CHAIRPERSON RIDDLE: Thanks for the warning.

MEMBER CAROE: I'm just warning you. Okay.

So I have some understanding of chemistry but not food and food processing to this degree. But if you caramelize onions, are you not chemically changing and developing sugars when you do that?

MEMBER KOENIG: But we're not talking about --

MEMBER CAROE: No, no, no.

MEMBER KOENIG: All right.

MEMBER CAROE: What I'm getting at is these definitions, would that become a synthetic because you are chemically changing --

MEMBER KOENIG: We're not talking about --

MEMBER CAROE: But cooking, you know, you can say --

MEMBER KOENIG: What I'm saying --

MEMBER CAROE: -- adding heat in a laboratory is cooking.

MEMBER KOENIG: Yes, but what I'm saying is in the case of -- we're talking about, again,
extracted substances. And what I'm saying is why -- you know and why I'm using soy protein isolate as an example is because it is before its -- like Arthur said, we can all agree, once it is extracted, you can do -- you can, you know, process it in food.

But what I'm saying, in the case of some of these proteins, we're talking about as the extraction goes on, there may be a chemical change in proteins called -- you know, that are result of a physical association with a buffer.

MEMBER CAROE: Okay. Then I would suggest that this section four is actually a subsection under section one because it only applies to extraction. It does not apply to synthetics in general. It is only applying to extracted materials.

Because right now the way it is formatted, it's talking about any chemical reaction forms a synthetic.

MEMBER KOENIG: No because the preamble says what the purpose of it is. And we're defining it based on that definition. I mean it could be -- I'm not opposed to -- if people think they want to
reorganize it. But I don't think it's -- I think the
document tells you what it's trying to do.

CHAIRPERSON RIDDLE: So we have -- you made
a motion to delete number four. You still want that
to be deleted?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Okay. Yes?

MEMBER OSTIGUY: What we're actually
discussing is part two of the synthetic definition.
So the first part is the substances formulated or
manufactured by a chemical process. It's the second
part that is hanging us up because we're taking
materials, substances, from plants, animals, or
mineral sources. So that gets us messed up in
processing.

So -- and extracted deals with that second
one, not with the first one. So if removing four from
number four helps us not interfere with processing, I
don't think it is going to substantially change our
overall intent with materials. I think we're still
going to be able to capture the things that we should
be able to capture.
CHAIRPERSON RIDDLE: Okay. Any other discussion on the motion to delete number four? Rose?

MEMBER KOENIG: Well, just to -- I don't personally have a problem with it. I mean I'd rather get resolution on protein. The only thing that I wouldn't mind if anyone out -- because I know there are a few chemists out there because I'm not sure of the implications of it. I mean keeping it in is safer because it just gives you -- I don't know. Is there anybody in there that has come forth?

CHAIRPERSON RIDDLE: And you'll be doing --

MEMBER KOENIG: I'll put it out to the audience.

CHAIRPERSON RIDDLE: -- a detailed response. I really appreciate your engagement in this. But he'll be looking at it again, I hate to say.

MR. NEAL: Yes. And it will be important because the question is going to be at what point in the extraction process of a natural process has a chemical change taken place.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: So it will still be important
because if I'm extracting protein and I've still got the same protein that I've extracted, we'll have to identify at what point will a change have taken place if we're trying to clarify the definition of synthetic in OFPA.

CHAIRPERSON RIDDEL: Yes.

MR. NEAL: A change takes place when the protein has an ion added to it. A chemical change takes place if the protein is attached to the solvent. That's going to have to be clarified.

MEMBER KOENIG: Well, see attachment -- well --

MR. NEAL: Or the solvent is attached to the protein.

MEMBER KOENIG: Can I?

CHAIRPERSON RIDDEL: Yes.

MEMBER KOENIG: The only thing is that as long as I guess -- and that comes back to the -- see, that's the whole thing is I just think that four, in some ways, has to be in there based on that presence of a solvent that makes -- see, I still think whether it's there or not, I think protein -- something like
soy protein isolate, based on our definition, still becomes synthetic because it does have a functional effect. But --

CHAIRPERSON RIDDLE: Nancy? And then I would like to vote on this.

MEMBER OSTIGUY: Yes. I know I made the motion. I'll give you another example of a situation where you change the protein configuration and you don't have a chemical reaction as far as we know.

There are macromolecules that can insert themselves into DNA so that you read the DNA improperly. So it structurally changes the DNA molecule so that it is not readable, you know. You get a mutation.

MR. NEAL: And it may just need to be looked at closer.

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Now what's that?

MR. NEAL: It may need to be looked at closer.

CHAIRPERSON RIDDLE: Well, right. And by keeping it in there, it stimulates a closer look.
So we still want to take a vote on removing it?

MEMBER OSTIGUY: You really don't have to.

CHAIRPERSON RIDDLE: Well, we don't have to if you withdrew.

MEMBER OSTIGUY: Oh.

CHAIRPERSON RIDDLE: But that's fine. We will. We will vote. Okay. So the motion is to remove that item -- sentence number four at the end of section number four on chemical reaction. So everyone is clear on that.

And we start with Andrea. So to vote yes is to remove.

MEMBER CAROE: I'll abstain.

CHAIRPERSON RIDDLE: Abstain.

Goldie?

SECRETARY CAUGHLAN: I just don't have enough information. I will abstain.

CHAIRPERSON RIDDLE: Okay.

Kevin?

VICE CHAIRPERSON O'RELL: I'll go yes.

CHAIRPERSON RIDDLE: Yes to remove?
VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Okay. Just wanted to be clear.

Okay, Dave?

MEMBER CARTER: I'm going to abstain.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: No.

CHAIRPERSON RIDDLE: No.

George?

MEMBER SIEMON: No.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Abstain.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: I decided a little while ago to abstain.

CHAIRPERSON RIDDLE: Oh, yes. You're not just joining the trend.

(Laughter.)

CHAIRPERSON RIDDLE: Okay, Michael?

MEMBER LACY: No.

CHAIRPERSON RIDDLE: No.

Gerald?
MEMBER DAVIS: No.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: No.

CHAIRPERSON RIDDLE: On her own motion.

(Laughter.)

CHAIRPERSON RIDDLE: That's okay.

Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Julie sticks with it there. Oh, boy. This is -- I mean it is defeated. The language is retained.

Oh, the Chair votes no. I'm sorry.

So that's one, two, three, four, five, six - whoops, I did the nos first. One, two yes. Six nos. Five abstentions. And one absent.

PARTICIPANT: How do the abstentions go?

CHAIRPERSON RIDDLE: They go with the majority. And the majority is no. The motion fails and so we're back with the language as presented.

Okay. Anything else on number four?

(No response.)

CHAIRPERSON RIDDLE: Moving on, number five,
substance. Any problems with that? Concerns?
Comments?
(No response.)

CHAIRPERSON RIDDLE: Seeing none, six? The substances created by naturally-occurring biological processes. Comments on that? Rose?

MEMBER KOENIG: Yes. I just wanted, I guess, to make it clear that we're -- what's allowed is that direct product from the natural substance. It's not a combination of natural substances that then produce another product. So we're saying, you know, the direct byproduct, you know substance created by natural process is allowed.

But that doesn't mean that by -- if you had somebody that came up with a substance that was a combination of all these things, that's a different identity. And I think it's understood. But I just want to make that statement.

CHAIRPERSON RIDDLE: Okay.

MR. NEAL: That's the issue.

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: One of the questions that is
going to have to be answered, where is that prohibited in the regulations or the act?

MEMBER KOENIG: It really would be a separate INS number. That goes back to the sodium lactate.

MR. NEAL: But where is tank mixing prohibited in the regulations or the act if all ingredients are approved for use in that production category? Say crops, for instances, all of the ingredients are allowed for use. Tell me how can USDA tell a producer that they cannot tank mix those ingredients if they are mixed.

MEMBER KOENIG: But I agree in crops and in livestock, it is somewhat an exception in food because of the fact that everything has to be petitioned. Any new substance, any new synthetic.

MR. NEAL: I understand.

MEMBER KOENIG: And so that is your case right there because it does have a separate chemical abstract, you know.

MR. NEAL: That's not recognized in the regulations or the act.
MEMBER KOENIG: Yes, it is because it said every substance must be petitioned. And because you - that's what I'm saying, you know you have one substance and you have another substance. It's true if it was processed, you know we'll go back to processing versus an ingredient, okay.

We're acknowledging that the process aspect of handling allows the cooking. And those things can happen. But when you combine Ingredient A, B, C, and D, each one of those ingredients have to be on the list because you're not --

MR. NEAL: They're on the list.

MEMBER KOENIG: -- when you combine -- if you combine A and B, okay, and they make that reaction in your plant through your processing, it's okay.

But if you buy it already made as a separate substance that now you are adding, that has to be petitioned.

CHAIRPERSON RIDDLE: Yes, that's a new substance.

MEMBER KOENIG: It's a new substance.

MR. NEAL: I understand what you're saying.
If you take that to the court, it's the same product. Ingredients are individually listed on the national list. And the regulations do not prohibit it. I'm just trying to be real with you here.

I understand the concept and the philosophy. I do. Legally, I don't see how you prevent it.

CHAIRPERSON RIDDLE: Keith?

MR. JONES: You know I think what Arthur is really getting at is that when you're out in the field and you have this regulation in front of you and you have substances that are on the list, as he said, there is no legal prohibition against tank mixing those substances.

Whether or not once tank mixed those substances create an additional synthetic material is beyond the knowledge base of the user of this regulation. Okay. You just don't know, okay?

MEMBER KOENIG: Agreed.

MR. JONES: And you wouldn't know.

MEMBER KOENIG: Agreed.

MR. JONES: And so because you don't know and because there is not a prohibition, then it is an
allowed practice to use those substances, tank mix them, and be in compliance.

MEMBER KOENIG: I don't disagree with that. But what we're saying is -- what I'm saying, Keith, I totally agree with you. We're in agreement on that.

But what I'm saying is that so -- and that's what I'm saying, if somebody was making Product A, okay, and they took individual things on the list that were approved and, you know, mixed them and created either a spray for their crop or a food, it would be okay.

But if they went and purchased them already mixed together in a formulated substance that wasn't those original two, it's a whole different substance. It's -- because -- it is, Barbara -- it's just -- that's -- you know, there's --

MR. JONES: Yes, I think our response to that, Rose, is that's an interesting argument. It probably, though, wouldn't hold up, okay? Because you're allowing -- I mean the flaw in the argument is that you are allowing the practice to go essentially within a facility. I step off the facility and I
can't do it? That -- you got a problem there, okay?

MEMBER KOENIG: No. All right. This one just seems -- I would beg to disagree and I think that it's pretty straightforward in that how can something -- if chemistry -- if chemists and the way chemists classify their own chemicals acknowledge that, you know, sodium lactate, that one thing is separate and another thing is separate.

I'm saying that as long as those two separate things are placed as ingredients, we acknowledge that we're allowing processing and it's being processed. That if through that processing you have changes, that's okay.

But I'm saying if you started with that ingredient as a separate ingredient, it is not lactic acid as you are adding it. And it is not -- well, whatever the other one was. It's sodium lactate, which is totally different. It's not on the list.

MR. NEAL: This is where the problem comes in to play. The petition process states in the Federal Register that I cannot petition a formulated substance. It says that I must only petition
individual ingredients, individual active ingredients.

If my individual active ingredients are on the national list and the petition process says that this is not for the review of formulated substances, we're sending that message that if the individual ingredients are already looked at and approved, and you buy a product that contains all approved active ingredients, you are okay.

MEMBER KOENIG: No, but what I'm --

CHAIRPERSON RIDDLE: Yes, if I can say something.

MEMBER KOENIG: Okay.

CHAIRPERSON RIDDLE: I mean these are chemical compounds. These are not formulated substances.

MEMBER KOENIG: Right.

CHAIRPERSON RIDDLE: And there are numerous chemical compounds on the national list. They aren't single elements. And, you know --

MR. JONES: The point that Arthur is trying to make is that if I had -- if Compounds A, B, and C are on the national list and I go buy a commercially-
available product that contains Compounds A, B, and C

MR. NEAL: It's been formulated.

MR. JONES: -- and nothing more, in other
words, nothing more --

MEMBER KOENIG: Right. I agree with you.

MR. JONES: -- no violative inerts, okay.

We would not be able to take an enforcement action
against that individual. That is just a straight up
and down fact, okay?

CHAIRPERSON RIDDLE: Yes, Nancy?

MEMBER OSTIGUY: I agree. But you are
talking about different things. If what you have
purchased is A, B, and C, and it's A, B, and C in that
bottle, absolutely.

MEMBER KOENIG: Right.

MEMBER OSTIGUY: That is --

MEMBER KOENIG: We're in agreement.

MEMBER OSTIGUY: -- okay.

MEMBER KOENIG: We agree.

MEMBER OSTIGUY: But if you've purchased A,
B, and C and they've reacted to make Q, Q is a new
molecule.

MEMBER KOENIG: Yes.

MEMBER OSTIGUY: It's a new substance. So -

MEMBER KOENIG: And that's our point.

MEMBER OSTIGUY: -- and we can argue about this but no chemist is going to say that if you've reacted them that it is not Q.

CHAIRPERSON RIDDLE: Kim?

MS. DIETZ: Okay. We've done this before. We've talked about CAS numbers. And if you're talking about --

MEMBER KOENIG: Right. That's what I'm saying.

MS. DIETZ: -- right. If it has a new CAS number, then past Boards and this Board has agreed that it needs to be petitioned because it is a new substance.

MEMBER KOENIG: Right.

MS. DIETZ: And we've tried to incorporate that into the petition process but if A, B, and C is on the list but it produces a new CAS number because
that's a recognized chemical, it has its own MSDS sheet, it has its own chemical abstract number, then that material does need to be petitioned.

It doesn't mean -- it doesn't prevent you from making that in your plant by using A, B, and C. I could make it and not have to petition it.

MEMBER KOENIG: In your product.

MS. DIETZ: But --

MEMBER KOENIG: In your product.

MS. DIETZ: -- in my plant in my product, right.

MEMBER KOENIG: In your product.

MS. DIETZ: Right. Correct. But if I bought that from a supplier, it has a separate entity because it has a separate MSDS sheet.

CHAIRPERSON RIDDLE: I've got Andrea then Kevin.

PARTICIPANT: So why are okay to make it but not okay to buy it?

MS. DIETZ: Because I'm not buying it as a finished product. I'm buying it as individual -- I am buying A, B, and C individually. Let's -- I mean --
MS. ROBINSON: And you are making Q?

MS. DIETZ: Yes.

MS. ROBINSON: Okay. So why are you okay when you make Q but I've violated the regs when I bought Q?

MS. DIETZ: When I buy A, B, and C, I receive MSDS sheets from my chemical supplier.

MS. ROBINSON: No, no, no, no, no. Kim, you make Q.

MS. DIETZ: Right. But I'm not selling Q. I'm using Q in my plant.

MS. ROBINSON: I don't care. It doesn't matter.

MS. DIETZ: Okay.

MS. ROBINSON: This program isn't about selling or buying.

MS. DIETZ: Okay.

MS. ROBINSON: You're talking about the end result of something. And we both got to the same end result. The only difference is I went and bought Q. You made Q.

MS. DIETZ: Yes.
MS. ROBINSON: You said that by making Q, you're all right.

MS. DIETZ: Right.

MS. ROBINSON: When I went and bought Q, I violated the rules. How?

MEMBER KOENIG: I'll tell you that. Okay.

CHAIRPERSON RIDDLE: Well, okay, actually I'll let you answer that if it is just limited to that.

MEMBER KOENIG: Well, I'm trying to answer that.

CHAIRPERSON RIDDLE: But then I have Andrea and Kevin waiting.

MEMBER KOENIG: Okay. Because if Kim is making -- if she's just doing A and B with no food involved, if she's a chemical manufacturer and making it, no, she is in violation.

But what Kim is trying to say is that she's got an ag product, you know --

CHAIRPERSON RIDDLE: An organic product.

MEMBER KOENIG: An organic ag product and she's adding A and she's adding B. And in the
processing, because processing is allowed, if those happen to combine as you are processing to form Q, that's okay. But if you're purchasing that ingredient as Q, Q has to be on the national list.

MS. ROBINSON: You changed my question.

MEMBER KOENIG: No. You asked what Kim --

CHAIRPERSON RIDDLE: Okay. We've got Andrea. I'm sorry. Maybe we'll regroup.

MEMBER CAROE: Okay. Well, let me just -- I know exactly where Barbara is coming from.

CHAIRPERSON RIDDLE: All right.

MEMBER CAROE: So if I'm a small operation and I'm only making the end product, I'm a two-person operation and I have to buy pre-prepared ingredients, I'm held to a different standard than the larger operation that has the capacity to make their ingredients.

MS. ROBINSON: You are?

MEMBER CAROE: If I am a small operation and I cannot combine A, B, and C and make Q and I'm forced to purchase Q, I can't do it. But if I'm a large operation with the resources to do that on my
facility, then I can.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: Well --

MS. DIETZ: Look at CO2 as an example. If I
buy CO2 -- I'm sorry, if I buy CO2, it's on the
national list and it has to be on the national list
because it is a substance and it has a CAS number. If
I make CO2 in my plant, if I combine ingredients to
make CO2, I don't have -- it does not -- and those two
things are allowed, they're naturals, then I don't
have to have that on the national list. It's the same
substance.

PARTICIPANT: Good question.

MS. ROBINSON: Again, I think you've
confused my question.

MS. DIETZ: Okay.

MS. ROBINSON: My question is you are
hinging this -- the question that I believe I asked
because the question -- the issue you posed, A, B, and
C are all on the national list, agreed?

MS. DIETZ: Right.

MS. ROBINSON: A, B, and C are approved.
MS. DIETZ: Agreed.

MS. ROBINSON: Keith makes A, B, and C in his plant together and comes up with viola -- Q.
I am very poor. I can't put A, B, and C together in a tank because I don't have the tank. I go down to Walmart and buy Q. It contains A, B, and C, all on the national list.

Now you think the certifying agent should come after me. But because he has the tank and he can mix it, we both have Q. We both actually --

All right. Let me just do this differently.

Now I'll be the mathematician. Q equals A, B, and C.

MEMBER KOENIG: Right.

MS. ROBINSON: Wait, Rose. If Q equals A, B, and C and A, B, and C are on the list, then by definition Q is also on the list. I'm sorry, folks. But take me to court over this. And I think I'll win if I just bought Q. And I don't think you're going to prevail in that. I think that's the bottom line.

Come at this another way then.

MS. DIETZ: As a handler, we do that all the time. If they're on the national list and you make
it, you justify why you did what you did. And those materials on are on the national list.

CHAIRPERSON RIDDLE: Kevin? You've been very patient.

VICE CHAIRPERSON O'RELL: Actually I've been waiting so long to say this but Barbara actually said what I was going to say. I mean I don't see the distinction from a compliance issue. I mean I understand we're trying to chemically say that it is a different component. We all agree that it is a different component.

But when somebody can do it in a plant and they have a two-step process in their plant and they have a tank here and Tank A and B, and they mix those components and then pump that over into the next tank -- they pump Q over from putting A, B, and C -- from a compliance -- I get it from a compliance side. I don't know how you can differentiate that.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: The only thing is that -- and again I think it is similar to the way annotations are on the list, I don't think when people add -- when
we ask for petitions on the list, okay, they're usually for a specific purpose, okay, for leavening of bread.

And so some of those with annotations would mean that the use would only be in bread. That you couldn't take now sodium bicarbonate -- you know, they're not all -- everything is not equal.

So what you are basically saying is -- because what I'm hearing and I don't think that was how people added things to the list -- but you are basically saying if you want to limit ingredients on that list to specific purposes and you have to annotate it -- just like the fellow -- he probably did us a favor with annotating it for us when he came up with those annotations of what they were for but you're saying if we want to control how something is utilized in processing for specific uses, we have to annotate it for those specific uses.

Or they can be combined to make anything.

MS. ROBINSON: That's correct, Rose.

MEMBER KOENIG: Okay.

MS. ROBINSON: I think you are right. I
think that's where you would have to go. If you don't want to see A, B, and C combined in any kind of way because you've got concerns about C -- A and B are perfectly fine with you. You don't care if people roll them, smack them, burn them, you know, whatever. But C is the one that gives you heartburn, then you annotate that C cannot be combined with any other this or that.

But that's what you do is you do it through your annotations or something like that. But you can't just blindly put things on the list and then come back and say hey, wait a second. Because we can't -- we just can't enforce on that basis.

MEMBER KOENIG: So we have come -- sorry.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: We've come pretty well full circle. We're now being advised to indulge in a lot of annotating where as we have been told by NOP, and I'm not being sarcastic, I'm simply saying maybe this is a joint learning.

But four years, five years, we've gone down the road of being told to severely limit all of our
annotations. We've had them cut from many of the things that we've passed on.

MR. NEAL: And I don't think that's Barbara's intent.

SECRETARY CAUGHLAN: I said I wasn't trying to be sarcastic. I'm asking --

MR. NEAL: No, I understand.

SECRETARY CAUGHLAN: -- if we --

MR. NEAL: I understand.

SECRETARY CAUGHLAN: -- base this, that's true.

MR. NEAL: Right. But it is impossible to do anyway because there is no technical evaluator out there that can possibly imagine all combinations that exist. There's no way you could do it.

MEMBER KOENIG: Yes, but's why --

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: -- that's why we'll have to change the petition process because the only way you can get around that is by petitioning for a specific use. Period. If it is so discomforting to the industry, that's the only solution which means it has
to be annotated. There's no way -- or, you're going
to have to do an extensive review of any combination
that could possibly use. And that's impossible.

CHAIRPERSON RIDDLE: Okay. Nancy? You
okay?

All right. So I take it we were talking
about number five there, substance.

MEMBER OSTIGUY: No, six.

CHAIRPERSON RIDDLE: Six? To me it's really
relevant to number five.

MR. NEAL: We're talking about six but it
was relevant to number five.

CHAIRPERSON RIDDLE: Yes, yes. The use of
separate identities of substances in order to be used.

MEMBER OSTIGUY: But we've been talking
about six is what I'm saying.

CHAIRPERSON RIDDLE: Yes, I know. But I did
have a comment on number five once I reread it. And
wonder if there is an oversight at the very end where
it says must be separately listed for use in organic
production or handling. Shouldn't that -- and it's
not limited to production here.
We're talking about either kind of substance -- or substances used in production or handling. Correct?

MEMBER OSTIGUY: Number six you're saying?

CHAIRPERSON RIDDLE: No, number five. The very end of the paragraph just -- shouldn't the words or handling be included there?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: Okay. If you'd -- I can't make that as a motion. But if you would just suggest it as an addition to you --

MEMBER KOENIG: Yes, I'll suggest to add --

CHAIRPERSON RIDDLE: -- original --

MEMBER KOENIG: -- or handling to number five.

CHAIRPERSON RIDDLE: Okay. And Kevin accepts that?

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Okay. All right. Arthur, back to you.

MR. NEAL: Unfortunately, on number five, if you go to 6517 and you look at that particular
characterization in light of 6517(C)(1)(b)(I), it says
the substance contains an active synthetic ingredient.

PARTICIPANT: (Speaking from unmiked
location.)

MR. NEAL: Right. But even Barbara was
saying the synthetic substances are impacted by
Harvey. But still even for made with products in
crops and in livestock, it still is a relevant issue.

And we're going to try to get clarification
from OGC on that.

CHAIRPERSON RIDDLE: Yes. And I agree that
the words active synthetic apply to crops and
livestock.

MR. NEAL: It's the substance contains.

CHAIRPERSON RIDDLE: Yes, contains, okay.

Yes but this still captures it. I mean --

MR. NEAL: Well, no.

CHAIRPERSON RIDDLE: -- it needs to be
broader, doesn't it?

MR. NEAL: This says --

CHAIRPERSON RIDDLE: Because it applies to
the processing.
MR. NEAL: This narrows it. This is saying that a substance -- well, it says includes compounds and elements.

CHAIRPERSON RIDDLE: Right.

MR. NEAL: But it doesn't limit it to compounds and elements, okay.

CHAIRPERSON RIDDLE: So --

MR. NEAL: You're okay?

CHAIRPERSON RIDDLE: -- you're okay?

MR. NEAL: Yes.

CHAIRPERSON RIDDLE: We're okay? Okay. All right.

So there was no change to number six? We had a robust discussion but no change. Okay.

And number seven, non-synthetic. And that's taken directly out of the rule, correct?

MEMBER KOENIG: Correct.

CHAIRPERSON RIDDLE: Any discussion of that?

(No response.)

CHAIRPERSON RIDDLE: Seeing none, any further discussion of either the conclusion or the document as amended? Diane?
MS. GOODMAN: If you don't mind. Thank you.

And I really --

CHAIRPERSON RIDDLE: Approach the mike and state your name for the record.

MS. GOODMAN: I'm Diane Goodman. I'm a consultant to the industry. And I appreciate your taking my question all of you.

I have a concern about the public comments that were submitted to you by the OTA and other commenters that added substantial suggestions for changes.

And I know that you said, Rose, your committee hasn't had an opportunity to meet yet. But before this Board votes on this particular document, I have a genuine concern from the industry's perspective that you may all not have a handle on what's in this document. You know?

And I feel like even though the comments that may have been submitted, they may not be right on but there were substantial comments and time and energy put into all those comments.

And I would request that you either table
the vote on the entire document until the committee has had an opportunity to meet or even if you think it might be appropriate to call in an expert to help you understand and get your hands around some of this stuff.

So I just wanted to bring that up.

CHAIRPERSON RIDDLE: Okay. Thanks for the reminder.

MS. GOODMAN: Thank you.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: I just want to say that those comments -- some of those comments and I didn't look through the documents to see if they were the exact same comments but OTA had submitted similar documentation because this is the second time we're looking at it. We were looking at it -- February we got those comments with similar suggestions.

PARTICIPANT: (Speaking from an unmiked location.)

MEMBER KOENIG: Well, I mean I personally looked them over and it goes in a total different direction than -- well, but it's not consistent with
the way that the Board has been functioning since the inception of materials. And I'm not saying this is 100 percent consistent because, you know, there may be some analysis.

But that, like I said, would drop so much stuff off of crops and livestock. I mean essentially large groups would go away because you are looking at bonds now. You're not even looking at chemical reactions.

I mean I'm not saying that bonds aren't involved but --

CHAIRPERSON RIDDLE: So I'm hearing that those comments were taken into consideration. And yes, they are different, but this is the draft that is before us. But thanks.

Nancy?

MEMBER OSTIGUY: On that same topic, Rose was not the only one --

CHAIRPERSON RIDDLE: Your mike is not working or something. Can you speak up? You've got to get closer.

MEMBER OSTIGUY: Rose wasn't the only one
that looked them over. So it's not that the committee didn't look at them. But for where we were going --

MEMBER KOENIG: They don't take us there.

MEMBER OSTIGUY: -- they didn't take us there.

CHAIRPERSON RIDDLE: Okay. Thanks. Thanks for the response.

Okay. George?

MEMBER SIEMON: How many changes did we make?

CHAIRPERSON RIDDLE: Pardon?

MEMBER SIEMON: How many changes did we make?

(Laughter.)

MEMBER SIEMON: Who has kept track of this?

CHAIRPERSON RIDDLE: Well --

MEMBER SIEMON: And I just wanted to ask -- nine people, so both committees voted for this draft and put forward?

CHAIRPERSON RIDDLE: Yes.

MEMBER SIEMON: And there was nine people on the Board that supported this draft?
CHAIRPERSON RIDDLE: Right.

MEMBER SIEMON: We've just got to be clear on this.

CHAIRPERSON RIDDLE: Right. And the only changes that have been made have been quite minor.

MEMBER SIEMON: Quite minor?

CHAIRPERSON RIDDLE: Yes.

PARTICIPANT: Can you review those for us?

CHAIRPERSON RIDDLE: Sure, what I have -- and make sure that I have them, there ended up no changes on page 1. Right?

And then really three changes at the top two paragraphs of page 2, inserting the words or an agricultural product by a handling operation in three different places. Do I need to point out exactly where? It was after the word food each time. Okay?

And then the only other change was on number five at the end of the paragraph to add the words or handling.

We voted on others but they were rejected. So those are the only -- those are the amendments that have been accepted.
Yes? Bea?

MEMBER JAMES: Before we vote, I wanted to ask the NOP if they are comfortable with this document as it is now?

MR. NEAL: Is it useful --

CHAIRPERSON RIDDLE: Well, they're not -- they're busy right now.

MEMBER JAMES: It's a question for Arthur.

CHAIRPERSON RIDDLE: Yes. Arthur, there is a question for you. If you are comfortable with us voting to submit this to you as it has been amended slightly?

MR. NEAL: It's still probably going to generate some dialogue from our end.

CHAIRPERSON RIDDLE: Yes.

MR. NEAL: Yes, I mean if you submit it, we probably won't accept it from the standpoint of adopting it. We're going to come back to you with more questions.

CHAIRPERSON RIDDLE: Right. This isn't the end of the story. But you have no problem with us voting on it --
MR. NEAL: Nope.

CHAIRPERSON RIDDLE: -- recommending it to you at this point?

MR. NEAL: Collaboration.

CHAIRPERSON RIDDLE: Right.

Kevin, were you trying to get my attention?

Okay. Yes.

Okay. We will vote on the amended synthetic/non-synthetic draft as presented by the Materials and Handling Committees. And on this, as a whole document, we have no one with interests to recuse. Is that correct? If so please speak up.

(No response.)

CHAIRPERSON RIDDLE: Hearing none, we'll proceed.

And the first up is Kevin.

VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

MEMBER WEISMAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: No.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: The Chair votes yes.

So we have 12 yes, one no, and one absent.

Okay. And that was --

MEMBER SIEMON: Let's do something simple like Ag versus Non-Ag.
MEMBER SIEMON: Let's do something simple.

CHAIRPERSON RIDDLE: Well, that is next.

PARTICIPANT: Do you want to check the audience and see if there are any tomatoes out there or anything?

CHAIRPERSON RIDDLE: And before we start, and this really is what I prefer to do is ask if there are any interests to declare before we start on something? Any particular interest relevant to this draft? Ag, non-ag from the -- we're shifting to the Handling Committee.

PARTICIPANT: Jim, will that get posted, every written draft of your recommendations?

CHAIRPERSON RIDDLE: Yes.

PARTICIPANT: Arthur said yes.

CHAIRPERSON RIDDLE: The question is will the revised draft of the synthetic/non-synthetic be posted. And yes, I don't know exactly when. But after every meeting now, the committee chairs submit to me and there is an official cover sheet that goes in. And then once that's happened, then they get
posted.

Okay. So we are to the Handling Committee. And it's ag/non-ag. And before Kevin introduces it, I'll just ask if there are any interests to declare.

PARTICIPANT: You already did.

CHAIRPERSON RIDDLE: Well, I didn't. I got interrupted. I didn't get a look around and sense if there were. Okay. I see none.

All right. Kevin, please proceed.

VICE CHAIRPERSON O'ReLL: Okay. If we thought we had a lot of fun on syn versus non-syn, I think this is a great segue into ag versus non-ag. So we're prepared for a lot of lively debate and discussion, which is good.

The Handling Committee was asked to take a look at the agricultural/non-agricultural definitions for substance. It was found, for some background information, that in regards to the determination and classification of substances as agricultural/non-agricultural, it was felt that the definitions found that in the National Organic Program final rule were sometimes vague and there were conflicts.
And one missing area was that there was really no rule or guidance for the definition of what is and what makes a product agricultural. What is agriculture?

The definition of an agricultural product in OFPA and in the NOP rule is consistent, 7 CFR Part 205, Section 205.2, Terms Defined, Agricultural Product. Any agricultural commodity or product, whether raw or processed, including any commodity or product derived from livestock that is marketed in the United States for human or livestock consumption. And this is consistent both in OFPA and the rule.

However, OFPA did not define non-agricultural. The rule defines non-agricultural substances, again, in the same Terms Defined, Non-Agricultural substance is a substance that is not a product of agriculture such as a mineral or bacterial culture that is used as an ingredient in an agricultural product.

For the purposes of this part, an agricultural ingredient also includes any substance such as gum, citric acid, or pectin that is extracted
from, isolated from, or a fraction of an agricultural product so that the identity of the agricultural product is unrecognizable in the extract, isolate, or fraction.

It was felt that this definition of non-agricultural products was conflicting because there are many processed agricultural products which have been extracted, isolated, or fractioned during processing to a point where they no longer resemble the starting agricultural material.

Example, evaporated cane juice. The evaporated cane juice, organic sugar doesn't resemble sugar cane. And by that definition would appear not to be agricultural.

The Handling Committee had many meetings and discussions around these issues. One discussion centered around the removal of the non-agricultural definition. But we came around full circle to deciding the best thing to do was to recommend a change for the definition of non-agricultural substance.

That definition that was proposed is a
substance that is not a product of agriculture such as mineral or bacterial culture, period, striking the remaining portion of that definition, making it more simple and adding clarification.

The Handling Committee made three recommendations. The first recommendation is the adoption of a guidance document for defining agriculture as it applies to agricultural products.

We felt this was necessary to get some definition and we wanted to look at historical decisions that were made by past Boards in drawing the lines and determining existing substances and where they were placed on the national list. And coming up with a definition that would accommodate the past history.

The second recommendation was for a rule change to the current definition of non-agricultural substance which is, as I previously mentioned, was a shortened version of the existing non-agricultural substance definition.

The third recommendation, the Handling Committee recommended was the adoption of a decision...
tree as guidance in determining a substance's agricultural or non-agricultural status. And this went hand and hand with the recommendation number one in terms of the guidance document.

We heard a lot of public comment, mostly centering around yeast. And we understand that there is a lot of passion for yeast being non-organic.

In the public comment, most of all of the commenters talked about a process in defining organic yeast. And they take yeast, and then using organic inputs, come out with a product that is more along the handling guidelines.

Our concern was, and the commenters who were in favor of yeast being agricultural, didn't really address our issues in their comments in terms of how do we classify yeast? If we say it is agricultural, how does it fit in with the current standards guidelines. How do you do an organic systems plan for yeast?

There have been previous questions, two commenters saying that they feel that they can provide this information. And certainly in our discussion, we
want to take all of that public comment into consideration for the full Board discussion here.

Rose, I don't know if you want to walk through just a brief explanation of the guidance document as we -- do you mind taking us through that for kind of a background of how we got --

MEMBER KOENIG: Well --

CHAIRPERSON RIDDLE: Before you get started, Rose, I do have a question for Kevin.

VICE CHAIRPERSON O'RELL: Yes?

CHAIRPERSON RIDDLE: And that is is your intent here to move this for a vote? Or are we just having a discussion?

VICE CHAIRPERSON O'RELL: Actually our intent, and we talked to the committee before this session, and we decided that we would like to move to put this on the floor for a vote for the full Board to be able to have dialogue. The public is here. They've expressed their comments.

So -- and although we voted on this document and it was a five yes to zero nos, I'm sure that there are some people who voted yes for this, thinking maybe
differently based on some public comment. So I think it is proper for us to put it up for debate.

CHAIRPERSON RIDDLE: Okay.

MEMBER SIEMON: Just for clarification. Does that mean we expect it to come back? Or do we expect this to be the final day?

VICE CHAIRPERSON O'RELL: If we can come to an outcome --

MEMBER SIEMON: Okay.

VICE CHAIRPERSON O'RELL: -- we would hope to come -- to get there. If we have to table it and take it back based on discussion of the Board, we'll go that route.

MEMBER SIEMON: Okay. Well, sometimes we passed -- like we passed the pasture guidance last time just to get it out in the public and get feedback --

VICE CHAIRPERSON O'RELL: Well --

MEMBER SIEMON: -- because we had made some changes. So I'm just trying to clarify this. We're not doing it just to get more feedback. We're doing it to send it forward today.
VICE CHAIRPERSON O'RELL: We may decide that we've changed the document enough that --

MEMBER SIEMON: But we're not done changing it. Oh, I get it.

VICE CHAIRPERSON O'RELL: We might take that approach, George.

MEMBER SIEMON: Okay. Yes.

CHAIRPERSON RIDDLE: But right now, you are just presenting it.

VICE CHAIRPERSON O'RELL: We're just presenting it.

CHAIRPERSON RIDDLE: And then once Rose is finished --

VICE CHAIRPERSON O'RELL: We're just presenting it and then we'll make a motion to move to --

CHAIRPERSON RIDDLE: Okay. Yes? Andrea?

MEMBER CAROE: Based on that fact, I think it might be prudent to set a time limit for a discussion on this. And at the end of the time limit, make a decision on whether we're going to move it for vote or --
CHAIRPERSON RIDDLE: Yes.

MEMBER CAROE: -- or actually vote or table.

VICE CHAIRPERSON O'RELL: Sure. I think that would be good.

CHAIRPERSON RIDDLE: But if you just finish presenting it --

VICE CHAIRPERSON O'RELL: And then we'll make a motion.

CHAIRPERSON RIDDLE: Yes.

VICE CHAIRPERSON O'RELL: Rose, if you'd just give some background on the --

MEMBER KOENIG: Okay. So I was asked to come into the process to help in the definition because when the committee was going to source various definitions, none of them seemed to be complete. Because if you look at ag, in an ag Department, they tend to look at major commodities and they miss out things like mizzuna and bok choy and, you know, all the little weird things.

So, you know, by simply, if you started listing every single agricultural product, you are bound to miss some, okay? So I was striving to take
an approach that would be not biased and arbitrary basically.

And the only other way that I know, you know, having a plant background and background in taxonomy is using the way that taxonomists, whether they are classifying animals or plants, I mean there is a system of classification that exists out there in science that is based on traits. Or different characteristics that distinguish among, you know, different entities, whether they are within a species or not.

So anyway, I thought well, why don’t we take this approach. Maybe we could grasp these broad groups and use, you know, again, the scientific classification so it is very clear what groups we’re talking about.

It was quite easy and I think, you know, we all would agree on them. And that is what this documents is basically saying, that historically in agriculture, people have harvested plants and animals for sure. I don't think there is a debate on that.

And the reason why plants are harvested and
utilized by people is because they go through photosynthesis. They are capable of producing their own energy.

So then I looked at other kingdoms where organisms have the ability to produce their own energy, okay? And that's where -- and then I started looking at those and saying well, which one of these produce things that would be considered, you know, either raised or managed or farmed and that have historically been certified, you know, by certifiers.

And, in fact -- so what I was afraid to miss out would be things like spirulina because we had already put cyanobacteria on our materials list for a particular material. Of course, that meant that we were in agreement that these were certifiable types of organisms.

So the plant kingdom -- so the definition reads that the plant kingdom is allowed, the cyanobacteria -- and those are in a kingdom and they're specific because there are others in that kingdom but those are the only ones that photosynthesize. Okay? So that's the distinction.
That's the characteristic.

The same with the multi-cellular algae. The kingdom Protista, you know, there are single-celled algae. But the multi-cellular algae are the ones that typically are harvested, the ones that have been recognized on the list as agricultural, as byproducts or agriculture ingredients, or, you know, the noris and the stuff that you might eat in sushi. Those cover those.

Then you come to the animal kingdom. And, again, we have livestock standards. So obviously the animal kingdom is allowed.

And then you come to the fungi which are similar, you know, they're problematic because fungi are similar to animals in the type of the way that they get their energy. They absorb their energy just like you absorb food in your gut, you know. Fungi absorb energy. They're non-photosynthesis -- they don't photosynthesize. Okay?

So one of the issues you have, you know when you look at the fungi is okay, are they plants or crops? Or are they animals? What standard have you
used? So when I looked at those, since many folks have come up and said we need mushroom standards, they're talking about edible mushrooms, mushrooms have historically been certified.

And they fit because as in the definition, they have fruiting bodies, ascocarps and basidiocarps, which are multicellular, that you can pick up, you can harvest. You know you can see them with your eyes. They're not microscopic. They have to utilize compost and they can be incorporated in a farming system.

So that was -- the reason why they were included was because of their higher fungi. Mushrooms have a distinct name, you know it's a common name for the edible fungi. And the ascocarp and the basidiocarp are the things -- the fruiting bodies similar to an eggplant that you pick or harvest, okay?

Now when we looked at other areas of the fungi, and we had folks presenting that they wanted yeast to become agricultural, I looked at the classification system and tried to figure out, you know, how are they harvested? How could -- you know is there a way that fits kind of in the concept of
Well, presently on the list, again I was looking at the historical perspective, you know if they are in existence in the program, where do they lie? Well, they happen to lie as a non-agricultural ingredient.

So that was one of the impetus of this document was to kind of figure out -- it wasn't to necessarily change things but it was to present a justification as to why past Boards have decided that they were non-agricultural.

And some of the reasons they're non-agricultural, in my opinion if you use this system of division, was because they tend to be, you know they tend to be single cell. You know they don't have mycelium. They do not produce -- they produce ascus, which one of the mycologists came up with.

And, again, my intention in this document was not to go through yeast biology. It was to try to simplify the matter as much as I could. But they don't produce ascocarps or basidiocarps which are actually the fruiting bodies.
Instead, they are manufactured. The spores are generated. They're grown in vats. They're usually centrifuged. They produce colonies in a day or two. And they don't photosynthesize. You have to give them all their food. So that was the basis of trying to take existing regulation and grouping things so that we could be consistent with our definition as it stood in the present regulation.

VICE CHAIRPERSON O'RELL: Okay. Thank you, Rose.

Since we have with this full recommendation from the Handling Committee to the Board, we have three separate recommendations. It's probably going to be easiest if we take this as three separate recommendations for voting.

So the first recommendation -- I would so move that the first recommendation from the Handling Committee for adoption of the attached guidance document for defining agriculture as it applies to agricultural products that Rose was explaining.

MEMBER SIEMON: I'll second.
CHAIRPERSON RIDDLE: Okay. Kevin moves adoption of recommendation number one. George seconds.

All right. Discussion? George?

MEMBER SIEMON: Yes. Kevin, I'm just concerned that your first recommendation is the guidance to define agriculture.

Your second recommendation is a rule change to change non-agriculture. And I'm just concerned that you are relying on a guidance to define -- you're saying since non-ag is so hard to define, let's define ag in the guidance. But it's in the guidance and the non-ag is in the rule.

And, of course, there is a definition of agriculture in the definitions of the present rule, which you all referred to that's quite -- so I'm just concerned about the layout if this guidance would help us with the rule. I'm just concerned about the way you've laid this out.

VICE CHAIRPERSON O'RELL: Well, okay. The guidance document as it was laid out, the first question that kept coming up to the committee was we
have a definition for agricultural substances. We

don't have a definition for agriculture.

MEMBER SIEMON: It's agricultural product is

what the definition is.

VICE CHAIRPERSON O'RELL: Yes, agricultural

products, yes. But we use the word agricultural as

part of that definition. And that was problematic.

If you look at the definition of

agricultural product, it says any agricultural

commodity. So you're back to defining --

PARTICIPANT: Or product.

VICE CHAIRPERSON O'RELL: Yes.

MEMBER SIEMON: So it's defined itself.

VICE CHAIRPERSON O'RELL: It's defined

itself. And so that's where we felt we needed

guidance first on where we draw the lines for

agriculture.

Okay. So the second recommendation, which

were not going to get into now but just a quick

explanation is just to give some clarification for

what a non-agricultural substance is.

CHAIRPERSON RIDDLE: Jerry?
MEMBER DAVIS: I'm trying to understand what you just said. In other words, the agricultural definition is just kind of there. We have to deal with it. It's defined itself, you know agriculture is defined as production of an agricultural product. So we can't really change that because that's in the industry. It's nomenclature. We can't deal with it?

VICE CHAIRPERSON O'RELL: That's --

MEMBER DAVIS: So we're going to work on non-ag instead?

VICE CHAIRPERSON O'RELL: That's the -- it's both in the law and the rule.

MEMBER DAVIS: Right.

VICE CHAIRPERSON O'RELL: For -- well, non-agricultural substance is not in the law. It's just in the rule. But yes, the agricultural product definition is in both the rule and the law. And any agricultural commodity or product.

So it's using the word agricultural to define itself, which is why we went down the route of trying to get some kind of guidelines as to what is agriculture. What defines agriculture with organic
handling.

MEMBER DAVIS: Okay. And you also mention in here non-agricultural substance --

CHAIRPERSON RIDDLE: Speak into the mike a little more.

MEMBER DAVIS: -- you mentioned bacterial cultures. Is the problem perceived about yeast not being agricultural because it's too much like a bacterial culture? And we don't want to go there as far as making bacterial cultures agriculture also?

VICE CHAIRPERSON O'RELL: Well, there were a couple of reasons. One, historically the past Boards had voted that yeast, by putting in 205.605(A) was a non-synthetic, non-agricultural product. So it was the placement of yeast currently on the list.

And two, is that bacteria is carved out in the definition of a non-agricultural substance and bacteria is a single-cell microorganism as is yeast.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: I just wanted to clarify, too, one of the reasons why we eliminated language on non-agriculture is because we were trying to avoid a
conflict where something didn't fit in either
category. The present -- the proposed definition for
non-agriculture, as it exists now, is kind of when
it's not -- when it doesn't meet agriculture, it
becomes non-agricultural. So that we didn't get
something that didn't fit into either category.

CHAIRPERSON RIDDLE: Dave?

MEMBER CAROE: Which is why we were
considering eliminating it completely.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: I've been dazed and confused
on a great many issues that have come before this
Board before but nothing to this level.

(Laughter.)

MEMBER CARTER: Because trying to draw this
line and, you know, everything that we do is we're
trying to create a threshold of what falls in on one
side and on the other.

And I really, in trying to go through all of
this, part of this number one is definitions based
upon the past Board action is always a good indicator.

But a lot of the folks that have filed comments are
noting that production practices and the ways of making yeast have changed since a lot of that was
developed.

CHAIRPERSON RIDDLE: I think Rose disagrees.

(Laughter.)

MEMBER CARTER: Okay.

MEMBER KOENIG: No, that's not what they're saying. I mean yeast -- production of yeast has not changed that -- I mean there's different ways you can produce it.

MEMBER CARTER: Practices, no that shouldn't --

MEMBER KOENIG: No, but the practices haven't changed. What they're saying is that they believe the practices of essentially industrial manufacturing are agricultural.

Now I'm not saying that there couldn't be some folks out there that are harvesting, you know, opening their bread and, you know, natural stuff is falling from the air. But that's not what we're talking about. We're talking about, you know, industrial production in usually zoned industrially
areas, not in -- you know you're not going to get an ag exemption for a yeast facility, okay?

MEMBER CARTER: So if we develop access to pasture for yeast --

(Laughter.)

MEMBER CARTER: Okay. Then the other aspect is that -- in one of the comments here that -- let me find it -- from Paul Stamets is talking about certain ones --

MEMBER KOENIG: Coreopsis?

MEMBER CARTER: -- coreopsis --

MEMBER KOENIG: Coreopsis, yes.

MEMBER CARTER: -- that exist in both a fungi or a mushroom form and in a yeast form.

MEMBER KOENIG: Well, what he's saying is that some, you know fungi before they produce those basidiocarps, you know some fungi, you know, that are higher fungi can do -- they can have different life cycles. Some life cycles can be yeast-like but when -- it's the life cycle when they go into that sexual phase -- getting warm --

(Laughter.)
MEMBER KOENIG: All of a sudden everybody is interested. Get that in there. No, but when they get into their sexual phase, which is the fruiting body, that sexual phase is not a yeast anymore. The sexual phase is actually a fruiting body.

And like I say, there was science out there -- I'm not disputing the science, you know, necessarily that was presented. But it wasn't -- they did not challenge the ascocarp/basidiocarp definition which, you know, I don't dispute that there -- you know that some things can have yeast-like lifestyles and also can produce an ascocarp.

But what I'm saying is if they produce an edible ascocarp, then hey they could be -- and you could raise them in compost and you could pick them, then yes, I think the industry has always identified that type as an agricultural product.

But that yeast-like form, if they were doing it in a laboratory and making single cells, I don't think that's the way most folks have been historically thinking of as an agricultural product. And that's the distinction.
CHAIRPERSON RIDDLE: Okay. Hugh? You've got Dave straightened so --

MEMBER CARTER: Well, yes, Dave is still shaking his head. Dave is still dazed and confused.

CHAIRPERSON RIDDLE: Okay. All right.

Well, you think about it while Hugh --

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: All right.

MEMBER KARREMAN: Just a question on the cultural practices on how yeast or bacteria -- just wondering if there are different cultural practices in how the yeast is reared. If it is in asexual or sexual reproduction?

And would that determine anything? I mean like if it is stressed, it is under asexual production? Or if it is cultivated, well, you know, then it is in sexual reproduction. You get the fruiting bodies and all that. I don't know.

SECRETARY CAUGHLAN: We need humane treatment.

MEMBER KARREMAN: You need humane treatment of yeast.
(Laughter.)

MEMBER KARREMAN: But are there stressors that make go one way or the other?

MEMBER KOENIG: Well, I mean -- well, if once they go in and they form an ascus, which is their sexual phase, they are -- and, you know, people said are they -- they go through sexual reproduction. I'm not doubting that. But they produce an ascus which is just a structure that has asco spores.

You know these are all microscopic things that, you know, I can't show you a single yeast cell without giving you a microscope, okay? But I can show you an ascocarp because it is visual. You know you can't individually harvest, you know, a yeast cell by hand but you can pick a mushroom, okay?

CHAIRPERSON RIDDLE: Okay. Kevin?

VICE CHAIRPERSON O'ReLL: You know I think that the commenters that were talking about organic yeast and wanting yeast to be agricultural so it could be organic describe mostly an organic systems handling plan of taking yeast and raising it or growing it on organic substrates, which is great.
But it doesn't draw the line of distinction of the yeast itself being agricultural. And that's where we struggled with it. And we're looking for help and comments from the Board as to, you know, what is the direction people feel we should go.

CHAIRPERSON RIDDLE: George?

MEMBER SIEMON: Yes I guess that's the part I'm a little confused about. I don't know anything about this. But if you raising anything in confinement, you've got to have a disease program. You've got to have a pest program. You've got to have nutrients.

So I don't know that I understand why it's more like a handler versus a farm plan. It seems to me they've got to deal with all the same components that you would in a farm plan. You've got to feed it. You've got to water it.

MEMBER KOENIG: No, no.

MEMBER SIEMON: You've got to have the right conditions.

PARTICIPANT: You've got to have the substrate part.
MEMBER SIEMON: You've got to have the substrate. You got -- there's disease. I just don't --

CHAIRPERSON RIDDLE: We have Goldie next.

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Goldie?

SECRETARY CAUGHLAN: And by -- in the proposed guidance, it talks about, Rose, that one component of designating it as being an agricultural product then is that it is managed by humans. The intentional act of gathering, producing, raising, or growing.

And I would submit that it's not, you know, to me it fits there then that these are very much -- can be accommodated under the -- they are coming from a wild source originally. They can be produced and managed domestically as it indicates.

I mean this has troubled me a great deal since we first talked about it. But as we began to get the comments, I wasn't being swayed because somebody wants to have a product out there that is certified organic. That's not the issue.
To me I think that we are closing ourselves off in a very -- we're narrowing the whole awareness of what is a living organism that has historically -- several of these types of living organisms, including the cultures that go into dairy to make beneficial substances that we take in like acidophilus or things like the cheese-making.

I mean to me there is a continuum or certainly a relationship there that if we begin talking about things as not -- I don't know. This narrowing of the framework that we've come up here with that's making me more and more feel that this is not the direction to go.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Okay. I just want to say that first of all, you know, another useful document is the Principles of Organic Farming because whether you're growing yeast or you are growing plants, if it is truly an agricultural product, it should meet the principles of organic farming, okay?

Now not everything is going to meet it to a T, okay? But it doesn't -- Goldie, when they take a
spore, okay, and you put it in a substrate, you first
-- you know what an autoclave is?

SECRETARY CAUGHLAN: Yes.

MEMBER KOENIG: Okay. The substrate is
autoclaved, okay? And basically you essentially kill
any of the biodiversity that might exist in the air,
you know. And in a lot of cases in regular yeast
production -- and, again, a TAP review would be nice.
Maybe we want to prohibit antibiotics and such. But
a lot of times they use antibiotics in that substrate
so that only those particular strains of yeast grow.

SECRETARY CAUGHLAN: I'm suggesting that
it's the classification of saying that these things
are beyond the scope of what we should be granting any
kind of status here that is really what's troubling me
on a much more generic basis.

I would, you know, if I take -- going back
to the wild -- gathering of your wild yeast, any time
a baker who bakes consistently bakes, the wild yeast
come. And you culture them. And you continue to feed
them. You feed them every week. You give them more
flour. You give them more water. And they do the
rest.

So there's all kinds of levels of intentional producing. And, of course, different kinds of levels of that need to be examined and looked at in this regard just like everything else in the realm of what we're here to talk about.

MEMBER CAROE: Rose?

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Rose, I hear your argument. And I know you are very passionate and very --

MEMBER KOENIG: I'm not -- I'm passionate about agriculture.

MEMBER CAROE: Okay.

MEMBER KOENIG: I'm not -- I mean --

CHAIRPERSON RIDDLE: Okay.

MEMBER KOENIG: -- I'm not passionate about microorganisms.

CHAIRPERSON RIDDLE: Andrea has the floor.

MEMBER CAROE: But my question to you is show me -- cite to me where in the regulation or in OFPA it prevents these practices that you are opposed to because I don't see it.
MEMBER KOENIG: Exactly. Because there are no standards for microorganisms.

MEMBER CAROE: But it doesn't prohibit it.

MEMBER KOENIG: Well, this --

MEMBER CAROE: And this -- hold on one second -- by allowing these practices to be considered as agricultural, we allow those practices to be defined by further regulations and rulemaking.

MEMBER KOENIG: Which is my point.

MEMBER CAROE: We do not -- we don't have any premise to not allow this in the regulation and in the statute.

CHAIRPERSON RIDDLE: Nancy? And then Kevin.

MEMBER OSTIGUY: Does anyone know the original reason for excluding -- this is not working.

CHAIRPERSON RIDDLE: You've got to really get closer.

MEMBER OSTIGUY: I just don't think it is live.

MEMBER KOENIG: I don't know why.

PARTICIPANT: Tap it and see if it works.
MEMBER OSTIGUY: Does anyone -- it's not working. No, it's off.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: So there it goes.

CHAIRPERSON RIDDLE: Okay.

MEMBER SIEMON: Does anybody know why it originally was -- well, I think Rich Stuart might be able to answer that.

MEMBER OSTIGUY: Why were yeast originally excluded?

MEMBER KOENIG: Not excluded. Classified as non-agricultural.

MEMBER SIEMON: I'll just take a stab at it because organic yeast weren't allowed. And they were trying to find a way to have yeast allowed. That's a --

MEMBER OSTIGUY: Organic --

MEMBER SIEMON: -- organic yeast was not available.

VICE CHAIRPERSON O'ReLL: Was nonexistent.

MEMBER SIEMON: But then it did not exist.

CHAIRPERSON RIDDLE: Bea, just on this
MEMBER SIEMON: And we heard testimony that commercial yeast uses synthetics in its process to make it available and, therefore, I know that doesn't help because it is not in the synthetic section. It's called a non-synthetic.

CHAIRPERSON RIDDLE: Just on this --

The petition and the petitioners said that it was non-agricultural. And the NOSB concurred.

MEMBER KOENIG: Thank you.

CHAIRPERSON RIDDLE: Okay.

SECRETARY CAUGHLAN: And Brian, do you have any recollection of a TAP? What was the TAP? What was the quality of it?

MR. BAKER: It was not very well developed. But we went mainly into various substrates. And we looked at substrates from a negative rather than a positive perspective. Rather than requiring organic, we prohibited various petrochemicals and synthetic sources. And that is contained in the annotation in
the current NOP rule.

MEMBER KOENIG: Exactly.

CHAIRPERSON RIDDLE: All right.

MEMBER KOENIG: Thank you.

CHAIRPERSON RIDDLE: All right, Bea?

MEMBER JAMES: Did that TAP review talk about production methods or different ways to culture microorganisms?

MR. BAKER: In a very broad brush sense.

VICE CHAIRPERSON O'RELL: I have them here.

MR. BAKER: You do? Yes. And it's not in any great depth.

VICE CHAIRPERSON O'RELL: No, no.

CHAIRPERSON RIDDLE: Bea, continue?

MEMBER JAMES: Well, it just seems like that is vital information to be able to make a decision about microorganisms being agricultural or non-agricultural is to have information on how they're -- all the different varieties and ways that they are cultured.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: I would have to
say going back to the 1995 TAP, that information would not be helpful in getting us to that point. And if we needed to do that, that's a direction we could go.

Just one -- I guess for me, I'd just like to know the people who support yeast. Then where do we draw the line? Do we go to bacteria because they are single cell. And even though the definition explicitly carves out bacterial culture as an example of a substance that is not a non-agricultural substance, if you include yeast, a lot of the same production methods are going to be applied to bacteria.

And I'm not opposed to saying that if we go that direction, we're going to have to handle it and develop standards. But --

CHAIRPERSON RIDDLE: And I've got Dave next.

Did you have your hand up?

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: But first I'm going to organize myself because I do just want to remind the Board that we did have a petition and a TAP on microorganisms within the last two years. Right?
VICE CHAIRPERSON O'RELL: Yes.

CHAIRPERSON RIDDLE: And those were seen as non-synthetic, non-agricultural.

VICE CHAIRPERSON O'RELL: Correct.

CHAIRPERSON RIDDLE: So just -- and there was an in depth TAP on the microorganisms there.

MEMBER KOENIG: From what year?

PARTICIPANT: Look at your book.

MEMBER OSTIGUY: You were on the Board as I recall.

MEMBER KOENIG: Yes.

MEMBER OSTIGUY: Microorganisms.

CHAIRPERSON RIDDLE: It was probably 2003 would be my recollection.

MEMBER KOENIG: Okay.

CHAIRPERSON RIDDLE: Dave?

MEMBER CARTER: Well, that's -- I guess that's where I struggle is, you know, if you draw the line here or if you erase the line here, where do you go? And I always look for -- and, again, you know, using my vast knowledge of food science based upon training in journalism --
(Laughter.)

MEMBER CARTER: -- you know, it just -- there's certain logical points that if it is a living organism, there's a big distinction between non-living and living organisms. And that's a pretty easy threshold. And when you cross that threshold and you get on the side of living organisms, then you can discuss and debate the nuances of production systems and all of that.

It's a lot easier for me to understand that distinction than it is between fruiting bodies and non-fruiting bodies and single cell, you know? So that's why I'm struggling with this.

CHAIRPERSON RIDDLE: George? And then Jerry.

MEMBER SIEMON: It's just so -- if yeast was removed from the list, just to go the other way around because we're talking a lot about yeast, then organic would be required? Or not? I guess -- no, it wouldn't, would it? I heard that said.

MEMBER KOENIG: Say that again.

MEMBER SIEMON: If yeast was removed from
the national list --

CHAIRPERSON RIDDLE: As a non-synthetic --

MEMBER SIEMON: -- then it would be required
on a commercially available basis.

MEMBER KOENIG: Right.

MEMBER SIEMON: Is that correct?

CHAIRPERSON RIDDLE: Right. It would have
to be organic unless it gets petitioned to add to 606.

MEMBER SIEMON: So there is another way to
go at this specifically -- yeast -- you know because I
mean it does seem like it is a real hard subject to
get clear.

CHAIRPERSON RIDDLE: I got Jerry next. Then
Andrea.

MEMBER DAVIS: I'd like to kind of reiterate
in a different way what David just said. It seems to
me the distinction between mushrooms and yeast is
fairly arbitrary based on size mainly. Yes, they are
more multicellular but I think that's pretty arbitrary
to say well single cell is less important or living
than something that has a few more cells.

CHAIRPERSON RIDDLE: Andrea, then Rose.
MEMBER CAROE: I just wanted to speak on George's point about removing it from the national list.

It doesn't really correct the problem if you remove it because if we threw this -- carve it out as non-agricultural, it will remain non-agricultural. You can't consider it agricultural just because it's off the list. I mean this codifies that position on the list.

PARTICIPANT: And conversely.

MEMBER CAROE: And conversely if we take it -- if we amend this to allow yeast to be included, then its position on the present list is in conflict and it will have to be removed.

MEMBER SIEMON: I agree with you. That's why I was asking. I was told there was another solution. There is no other solution then?

PARTICIPANT: Yes, there is.

CHAIRPERSON RIDDLE: And Rose, would you like to explain?

MEMBER KOENIG: I just want --

MEMBER SIEMON: Okay.
MEMBER KOENIG: -- to go back to Gerald's comment.

CHAIRPERSON RIDDLE: Oh.

MEMBER KOENIG: That is not an arbitrary distinction. That's why we use taxonomy. Those --

MEMBER SIEMON: I'm not --

MEMBER KOENIG: -- I'm just saying that that's -- if you think that you are as similar as, you know, yeast are further from edible mushrooms as humans are to dogs. I mean it is the same analogy.

MEMBER SIEMON: Right. I understand.

MEMBER KOENIG: So they are very different. They're not even in the same genus or species.

MEMBER SIEMON: I understand. I know the biology really well. That was my training --

MEMBER KOENIG: Okay.

MEMBER SIEMON: -- in school. I guess what I'm saying I support what David says as far as living versus non-living. I think that's an appropriate thing to consider as the dividing.

CHAIRPERSON RIDDLE: Kevin?

VICE CHAIRPERSON O'RELL: So, Gerald, just -
- so then you would include bacteria? It's living.

MEMBER DAVIS: One of my initial comments when we first started, I think that's the problem that we're grappling with is this opens up things we're not really -- that's going to cause problems -- opening up the bacteria to --

CHAIRPERSON RIDDLE: Goldie. Then Andrea.
Okay. Then Andrea.

MEMBER CAROE: I'm not quite sure it does cause us problems. It changes the landscape. But it does not necessary cause problems. I mean just think about what you're doing. Even if -- I don't even know where bacteria would be used but even if bacteria became allowed -- considered agricultural and was allowed to be organic, it allows for organic bacteria. It allows for that in processing.
It's a different thing. But I don't think it is necessarily all to the detriment. There are benefits.

MEMBER DAVIS: I wouldn't disagree with that. I didn't mean to say -- to use the word problem. It does change things greatly. But not
necessarily problems.

CHAIRPERSON RIDDLE: Yes, Kevin?

VICE CHAIRPERSON O'RELL: You know one of the areas that we have to consider if we draw the line and go in and like I say, maybe that's a landscape we want to go to with microorganisms. But we have to be very careful because we're saying that yeast is available grown on organic substrates and can meet -- there is certified organic yeast in Europe by European standards. But as far as I know, there is no certified organic bacteria in Europe.

So we have dairy cultures. We use cultures that are approved in a lot of the processes that we have today. And if we all of a sudden say they are agricultural, then we're going to have organic bacteria. And I don't see where that exists anywhere else.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Okay. If we go back to the -- if you go into your policy manual under our principles of organic production and handling that we've adopted, the first principle is organic
agriculture is an ecological production management system that promotes and enhances biodiversity, biological cycles, and soil biological activity. It emphasizes the use of management practices in preference to the use of off-farm inputs, taking into account the regional conditions require locally-adapted systems.

These goals are met where possible through the use of cultural, biological, and mechanical methods as opposed to using synthetic materials to fulfil specific functions within the system.

Okay? Can we all get by -- and then that is referring to a farm. Okay? Do we agree that the principles are based on farm-based systems?

PARTICIPANT: That sounds like a farm to me.

MEMBER KOENIG: Okay. Can we at least go there? That our principles are that agricultural products are produced on a farm? Okay.

MEMBER CAROE: Jim? I --

MEMBER KOENIG: Now I'm not denying that --

MEMBER CAROE: I don't agree. I don't think that that is solely what it says. It talks about
practices. It talks about the use of systems that don't rely on synthetics.

I mean I still think that you can be consistent with that with a process such as the production of spirulina or the production of yeast. But I can see a spirulina farm. I'm ready to -- I give that concession, okay? I cannot see a yeast farm. You cannot have a yeast farm, okay? You can't have it.

You can have a yeast industrial production facility. You can grow it in autoclaves. I mean you can autoclave it. You can grow it in vats. You can centrifuge it. You can handle it. I'm not saying that.

But fundamentally, organic agriculture has to have some connection to a farm to be classified as agricultural.

CHAIRPERSON RIDDLE: Okay. We're going to wrap up this discussion.

MEMBER CAROE: Just one more.

CHAIRPERSON RIDDLE: Yes, Andrea?

MEMBER CAROE: One more. Enoki --
CHAIRPERSON RIDDLE: You wanted to set a time limit.

MEMBER CAROE: I know. Enoki mushrooms are not grown on a farm. We recognize them as agricultural. They are grown in jars. There's nothing in the rule that says you can't use autoclave. I think the argument is completely emotional. I don't think it is based on statute. I don't think there is statute.

CHAIRPERSON RIDDLE: Well, there have been no motions to amend the draft. There's been a very lively debate. And I guess I would like to see us move to a vote if that's still the will of the Handling Committee Chair.

MEMBER OSTIGUY: I move to defer.

VICE CHAIRPERSON O'RELL: I would move to table this.

MEMBER OSTIGUY: Well, can we defer because it's easier parliamentarily?

VICE CHAIRPERSON O'RELL: Okay.

MEMBER CARTER: Yes. And I second Nancy's motion.
CHAIRPERSON RIDDLE: Okay. So there is a motion to defer and essentially hold the item at committee is what would be the function. It doesn't reject it. So -- and Dave seconds.

Let me see where we're at. And so everyone is clear, this is a motion to defer recommendation number one. Or would we defer the entire thing? Kevin?

Nancy is clarifying that the motion is to defer the entire document.

VICE CHAIRPERSON O'RELL: Yes. Yes.

CHAIRPERSON RIDDLE: Okay. And Dave accepts that.

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Okay. So everybody is clear, motion is to defer the entire draft as presented.

Dave is first.

MEMBER CARTER: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: George?
MEMBER SIEMON: Yes.
CHAIRPERSON RIDDLE: Bea?
MEMBER JAMES: Yes.
CHAIRPERSON RIDDLE: Hugh?
MEMBER KARREMAN: Yes.
CHAIRPERSON RIDDLE: Mike?
MEMBER LACY: Yes.
CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.
CHAIRPERSON RIDDLE: Andrea?
MEMBER CAROE: No.
CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.
CHAIRPERSON RIDDLE: Chair is yes so we have 12 yes, one no, and one absent.
I want to acknowledge all of the effort that
has gone into creating that document. It is quite
tought provoking obviously. And it is obviously not
the last time we'll hear it either or see it.

That concludes for the Handling, right?

And so we have three items still from Crops,
correct? The two materials at the top of the list,
soy protein isolate and ammonium bicarbonate are being
continued to be deferred. Is that --

MEMBER OSTIGUY: Yes, both soy protein
isolate and ammonium bicarbonate --

CHAIRPERSON RIDDLE: Microphone.

MEMBER OSTIGUY: -- are deferred waiting for
the decision on synthetics.

And then we are -- the next three items are
compost tea -- the next one is compost tea. The
committee wishes to take this back to incorporate
comments and to hopefully increase the amount of
agreement that we have on the topic. So we actually
would like to defer this in addition.

CHAIRPERSON RIDDLE: Okay. So item number
five, the compost and compost tea is being held at
committee.
MEMBER OSTIGUY: Correct.

CHAIRPERSON RIDDLE: Okay.

MEMBER OSTIGUY: Then guidance on the commercial availability of organic seed requirements, I'm trying to remember what we decided.

CHAIRPERSON RIDDLE: We met yesterday and made an amendment to it to bring it forward with the amendment.

MEMBER OSTIGUY: Okay. Yes. Let me find -- if you look at the current -- what is in the Board handbook, the committee first voted to change a couple of things. I have to remember what we were doing.

CHAIRPERSON RIDDLE: Do we need a little break for you to get reorganized? I hate to let people out.

MEMBER KOENIG: I can -- Nancy, I'll start.

MEMBER OSTIGUY: Sure.

MEMBER KOENIG: Then if you want to add -- the document was similar to the document that you saw on the last meeting except some of the comments -- well, comments that came in were incorporated into the document. D was -- we put in -- they are in bold.
In the first section, if you go under -- everything is the same on page one as what we saw in February. There were no comments that came in on the first part of the recommendation.

Under three, D, wherever you see bold, an and was incorporated and an or was incorporated. I don't remember what the original changes were.

And then D, a written description of research comparing organic and non-organic seeds or planting stock if such information is available.

And what the change was that in other words, I think -- we just said research provided should be conducted using scientific methods. We basically beefed up that section to say that if you're going to do research, it has to be done in a way that reflects real research, you know, using scientific methods.

And say that you are providing proper controls in replications. Research supporting the justification of using non-organic seeds should address the form, quality, and genetic attributes of specific varieties.

When a producer makes a claim that the
varieties of organic seed are not equivalent to a non-organic seed that producer prefers to use, supporting documentation must be provided to the certifying agent. And documentation of on-farm trials should be recorded in the operations organic farms systems plan.

In other words, if you were going to use research for verification of that, we wanted to make sure that it was, in fact, research that was replicated and done via the scientific method. You couldn't just put a thing out and say well, I tried this. I'm doing research because I'm growing three plants. Therefore, I don't have to use organic. So that was the change in that section.

And we didn't get any comments on this new round about changing any of that.

The comments that came in, we deleted sections (c) and (e) from the original document. And that was the comments that -- that was based on comments actually generated from one of the commenters last time.

And we now -- we're considering some of the additional comments that came in after the initial
incorporation. And those were to -- as stated yesterday, to bring back the language in those two sections.

So, Nancy, are you ready to --

MEMBER OSTIGUY: Yes.

MEMBER KOENIG: Okay.

MEMBER OSTIGUY: Okay. So what the -- when the committee met yesterday, what we discussed was -- and voted on was reinserting what was (c) previously in the old version. And the insertion, which would now be (d) is maintain and annually submit to the National Organic Program an up-to-date list of specific non-organic crop varieties permitted by each agency.

So the idea was that then each certifier would have the opportunity to basically collect the information in an organized fashion such that if there was one producer who had diligently searched for organic seed source, didn't find one, but a second producer had been able to, you'd be able to cross reference that information.

Whereas that may not be as easily seen if
you didn't assemble the information. So that was the
goal there.

CHAIRPERSON RIDDLE: And this would not be
the names of the operators or the names of the
companies. It would be a general list of the
varieties. --

MEMBER OSTIGUY: The idea would be --

CHAIRPERSON RIDDLE: -- the specific
varieties.

MEMBER OSTIGUY: -- the varieties, yes.

CHAIRPERSON RIDDLE: Yes. Okay.

PARTICIPANT: Do we have a motion?

MEMBER OSTIGUY: Yes, that was a motion to
insert that.

CHAIRPERSON RIDDLE: Nancy was still
presenting it so now is there a motion to adopt the
amended recommendation from the committee?

PARTICIPANT: Who seconded it?

MEMBER OSTIGUY: Nobody has.

CHAIRPERSON RIDDLE: No, I'm asking is there
a motion?

MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Okay. Nancy moves. Is there a second?

MEMBER KOENIG: I second.

CHAIRPERSON RIDDLE: Rose seconds. Okay. It's on the floor, open for discussion.

Andrea?

MEMBER CAROE: Is there any way of capturing geographic feasibility? So -- I mean say there is a particular corn seed available organically in, you know, someplace that is very -- you know, I mean this could be grown in Mexico. And if, you know, the grower is actually in Wisconsin or something like that --

MEMBER OSTIGUY: It's not an applicable corn variety actually in that case because you don't necessarily grow corn -- but I know what you mean. But --

MEMBER CAROE: Yes, don't use my example because I don't know the technical aspects of this. But I'm just thinking, you know, you are talking about anonymity when you're listing these and so you may -- it would show up as there is organic seed available
but it doesn't necessarily mean seed that I can get
because --

MEMBER OSTIGUY: Okay. I'm not requiring --
this statement does not require anonymity per se. It
doesn't require that you keep track of that.

Now depending on the usefulness that you
wish to make of it, you might want to keep track of
region. Something so that you could deal with
legitimate concerns of that sort.

Because yes, you are right. What is okay in
Maine isn't okay in Florida in terms of varieties of
tomatoes that can be grown.

MEMBER CAROE: Well, I'm not even just
talking about varieties. I'm just talking about
logistics of getting that seed, you know.

MEMBER OSTIGUY: Oh, sure, even logistics.
But, you know, all of that because that is -- part of
commercial availability is being able to obtain it.

But --

CHAIRPERSON RIDDLE: The form, quality,
quantity, and equivalent variety. And so we provide
some guidance on equivalent variety, meeting the
operations required, site specific, agronomic, and marketing characteristics.

Goldie?

SECRETARY CAUGHLAN: Did you say -- were you intending this to be mandatory or voluntary? I didn't catch it when it went by.

MEMBER OSTIGUY: This would be mandatory to collect this list.

SECRETARY CAUGHLAN: And zone? I mean I think the word was zone, whatever -- or there must be nomenclature that are preferred within the seed industry as to capturing information.

MEMBER OSTIGUY: We did not specify nor did the recommendation that came from public comment specify exactly what data would be most useful.

CHAIRPERSON RIDDLE: I think they used the same terms variety, not zone or anything like that.

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: And the reason why it was taken out and now reconsidered to put in -- and it's, you know, the benefits -- well, the problems with it
is it puts extra work on the certifiers. The

certifiers are actually the ones that are required to
compile the list from all of their certified entities,
okay?

And then -- so we want to limit that work
yet kind of provide some substantial information. So
what Nancy was referring as far as other data can be
collected, so in house a certifier may want to use the
names or keep track so that they can kind of check the
way they do business.

But what would be forwarded would solely be
lists of what varieties were non-organic that growers
used, which ones were organic. It's simply a
qualitative kind of a list that doesn't give numbers.
It just is a description of varieties.

And then the only thing this says is it goes
to NOP. It doesn't say NOP is required to make a
database. It doesn't tell NOP what to do with that
data. But it does require the information to go to
NOP.

CHAIRPERSON RIDDLE: And information on the
varieties are records that are required to be kept at
this time. They're just not then compiled and forwarded on to NOP.

MEMBER JAMES: Since this a guidance, how would that be regulated or mandated at the certification level?

CHAIRPERSON RIDDLE: Well, I think that's -- I think we'll receive some feedback from NOP if we forward this recommendation to them. There are annual reporting requirements already for all accredited certifiers. And this, you know, hopefully could be rolled into those. But we'll see.

MEMBER OSTIGUY: Jim?

CHAIRPERSON RIDDLE: Yes?

MEMBER OSTIGUY: One of the original recommendations on the change to this was to make the reporting even as often as monthly.

CHAIRPERSON RIDDLE: Right.

MEMBER OSTIGUY: And that was way too excessive. You know yes, there's going to be a lag time as a result. You'll have last year's data now. But at least you have the opportunity to possibly have that data.
CHAIRPERSON RIDDLE: Yes.

MEMBER KOENIG: And I guess what I was alluding to in my comment was that we may -- unless the information is used for some purpose -- that's why I'm saying the purpose hopefully because you're putting the certifiers to work is going to be within office. It's going to be useful so they can record keep.

But we're not guaranteeing any release of that information from NOP. So it may not create the purpose that the commenters have suggested.

So I just want you to realize that we're not suggesting it to go any further, to be used for any other purpose. So to me, it has a very limited application. But I may not be seeing the -- you know, the extreme usefulness. But we decided that -- it was asked and it seemed reasonable.

CHAIRPERSON RIDDLE: Yes. And I can certainly see how it has usefulness to the accreditation process to ensure that this information is being tracked and help bring consistency to the enforcement or compliance with this requirement.
Any other comments on the draft as proposed or as presented?

Hugh? Then George.

MEMBER KARREMAN: On 3A, it says, you know, where an organic producer can receive an allowance to use non-organic seed. And you have to provide written evidence of that for us to locate the source of organic seed. Should there be some kind of -- at least in my experience from the farmers I work with, you know, sometimes they'll just wait too long to look for organic seed. And it's all gone.

And then I think sometimes they're almost planning on that.

(Laughter.)

MEMBER KARREMAN: Sorry, but, you know, and then it might become a problem with the certifier later on. So I'm just wondering should there be some temporal type notation in here that they need to be trying at some point, you know, early in the season or whatever. Something like that. It's not a big thing but I know it happens.

CHAIRPERSON RIDDLE: Response to that?
Because otherwise I have George in line.

MEMBER CAROE: Oh, my response to that is that sometimes the growers don't know what they're going to be planting until the last minute. I mean it's not always that far in advance.

CHAIRPERSON RIDDLE: Right.

MEMBER CAROE: So, you know, there are legitimate situations where, you know, they're going to have trouble sourcing the seed because they're dealing with, you know, a food processor that's buying their crop. And so they're waiting to find out what they're going to plant from the processor, what they want.

And so, you know, I hear what you are saying. And you are absolutely right. I've seen it happen, too. But there are legitimate reasons why they wait to the last minute as well.

MEMBER KARREMAN: Can I respond to that just quickly?

CHAIRPERSON RIDDLE: Yes.

MEMBER KARREMAN: I mean I'm thinking for dairy farmers that have a crop rotation over seven
years or whatever. And they know what they're probably going to be planting.

CHAIRPERSON RIDDLE: That's true but this isn't standard, you know.

MEMBER KARREMAN: Yes, right.

CHAIRPERSON RIDDLE: It encompasses all kinds of production zones, too.

George. And then Julie.

MEMBER SIEMON: Well, I'll just respond to that. The truth is you buy enough seed for what you have. And you may plow a little more land. It's the day you are planting you are out of seed often.

So people have to overbuy is the bottom line. And that's not easy to do always because then the day you are needing it, your written evidence gets right down to desperate phone calls. So that's a whole other issue.

But I was concerned about (D). It seems that, you know, your average farmer is going to try a new type of broccoli. They're going to get some of the organic seed available. See how it works. If it doesn't work, they're going to stick with their old
variety.

To me, this written description with controls and replications, that's not what -- I mean it just sounds awful scientific compared to I'm going to plant a row of this and see how it goes this year.

Is it going to be satisfactory to plant a row of it and see how it goes this year? It's right next to the other. That's the right control replications?

Because that's what people are saying is they just can't get the quality of seed for this quality of end product. And I know there are people who are cheating or whatever you want to call it -- fudging. But --

So I'm concerned about (D) being too -- is it too scientific? Or is it okay? I mean you all have thought about this obviously. And that's what you're trying to say there. You've got to try some of these seeds. Don't just say they don't work. Try them.

I mean I agree with the purpose. I'm just worried it's wordy or too scientific.

CHAIRPERSON RIDDLE: Yes. I've got Julie
next. And then I'd like to comment.

MEMBER WEISMAN: Now I have a response to Hugh and to George. Am I allowed to do that?

CHAIRPERSON RIDDLE: Yes, you've got the floor.

MEMBER WEISMAN: All right. For Hugh, if a farmer, by waiting long enough intentionally, is not going to have organic seed available, it seems like a moot point to me because if he bought earlier in the season, then some other farmer -- I mean if there is not enough for everybody, there's not enough for everybody.

You know someone is going to get that -- you know, someone is going to get that letter. Someone is going to get that approval from their certifier. And that still points to the need that more needs to be available. And we do need to keep track of that.

Now, I'm forgetting --

CHAIRPERSON RIDDLE: George's comment about the on-farm research.

MEMBER WEISMAN: Oh, yes. In Handling, in manufactured food products where it often comes up
with flavors the issue that well, you know, there is an organic flavor available but it doesn't quite, you know, taste the same. And it's not codified.

But I know that there are certain -- many, many -- there are customers who I know are required by their certifiers to conduct panel tests with consumers and show research that consumers could taste the difference.

And, you know, if those panels don't prove that out, then they are required to use the organic.

CHAIRPERSON RIDDLE: Yes, and I just -- I don't have a copy of the previous draft. Jerry, do you have that? Or Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Because I share George's concern on the strengthening of the research requirements to determine what works on the farm. And didn't our previous language allow more flexibility? Or did we -- we did have language addressing on-farm research.

MEMBER OSTIGUY: Yes. The old wording was written descriptions of trials comparing organic and
non-organic seeds or planting stock. If the producer makes a claim that the varieties of organic seed are not equivalent to non-organic seed that the producer prefers to use, supporting documentation must be provided to the certifying agency.

Then in parenthesis, certifiers may grant an allowance from the organic seed requirement if an applicant or operator conducts on-farm trials comparing organic and non-organic seed varieties. If so, documentation of on-farm trials should be recorded in the operator's organic system plan.

CHAIRPERSON RIDDLE: Okay, so --

MEMBER OSTIGUY: It's basically the same thing.

CHAIRPERSON RIDDLE: Yes, it's not significantly different. It's just reordered and put in bold.

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: But, yes, Rose?

MEMBER KOENIG: The thing that this states, and that's what I was trying to just -- when you're doing the trial -- when somebody is doing research for
the -- when you're doing -- let's assume there's availability but you are claiming an exemption because you say it's not the right function or quality or, you know, it's a measurable difference that you can see.

Okay? And you're going to prove it because you've measured -- you can prove that. That's what I'm saying, to me that brings you in a higher -- that means you're actually conducting sort of the panels or the research.

When you say research in that sense where you're trying to actually say this one has produced -- you know, this reason, you know, you're doing numerical values, then you have to do replicated research with proper controls. It's beyond just a -- this one looked good so, therefore, I think it's better.

Because, you know, if you don't have that in -- and I believe that most farmers -- I'm not saying the farmers have to do it. Maybe they may have to find an extension person or somebody to help them set those things up, but if you're going to say -- you're allowing them to conduct research and you're going to
give them an exemption on the research, then I feel it has to have -- set up like a research plot.

MEMBER SIEMON: But they're not -- they're using organic seed. So there's no exemption. Well, if you're going to use that it didn't work --

MEMBER KOENIG: Here's they're using -- I'm saying the example where the organic seed is available --

MEMBER SIEMON: And they try it.

MEMBER KOENIG: -- there's plenty of supply and they're saying I don't like it because I didn't get good germination, okay? Then they would have had to have done germination tests in a way that they had proper replications and --

MEMBER SIEMON: And not hearsay.

MEMBER KOENIG: -- standard conditions to show that. It couldn't be okay, well, I threw -- you know, I think I put out like 50 seeds and I think 20, you know, it can't be that way. It's got to be scientific, replicated, with controls research.

CHAIRPERSON RIDDLE: Or if they just look at the germination results on that package and the
organic seed is germinating at 80 percent --

MEMBER KOENIG: Right, then somebody else provided that research documentation.

CHAIRPERSON RIDDLE: Right, right.

Andrea?

MEMBER CAROE: So would this allow them to accept somebody else's research?

MEMBER KOENIG: Yes.

MEMBER CAROE: A neighboring farm did this work?

MEMBER KOENIG: As long as that was conducted as research replicated but it doesn't have to --

CHAIRPERSON RIDDLE: No, the first sentence really covers that. So that just limits their own.

Bea?

MEMBER JAMES: Friendly amendment to 3(A).

CHAIRPERSON RIDDLE: 3(A).

MEMBER JAMES: Written evidence of efforts, I think that should be work or labor instead of efforts. I don't think efforts is direct or strong enough. To locate and source organic seed, blah,
blah, blah, blah, and then written evidence many include -- that's a typo. It should be written -- I'm proposing that we change it to written evidence includes, comma, but is not limited to, comma, letters, faxes, e-mail correspondence, and phone calls.

CHAIRPERSON RIDDLE: You lost me.

MEMBER JAMES: Okay. You see where it says --

CHAIRPERSON RIDDLE: Let's start one at a time.

MEMBER JAMES: Okay.

CHAIRPERSON RIDDLE: You started at the beginning.

MEMBER JAMES: (A) Written evidence of efforts -- I'm proposing that we change the word efforts to work or labor because --

CHAIRPERSON RIDDLE: How about attempts?

MEMBER JAMES: Attempts?

CHAIRPERSON RIDDLE: I mean work or labor don't work for me. I prefer efforts. I'm not the maker of the motion.
MEMBER JAMES: Efforts made or attempts. Effort doesn't seem strong enough. It seems optional. It seems like it should be --

MEMBER DAVIS: Does attempt sound more like you actually did something rather than just think about it?

CHAIRPERSON RIDDLE: I think those are -- attempts works.

MEMBER JAMES: Well, those pretty much mean the same thing. So if we're not going to make that change, then we can just leave it as it is.

CHAIRPERSON RIDDLE: Okay.

MEMBER JAMES: And then where there is a dash after organic seed, it says written evidence many include.

CHAIRPERSON RIDDLE: Yes, got that. That should be may.

MEMBER JAMES: Okay. It could be may or you could strike many. And it could be includes comma but is not limited to comma and then go on with the list.

MEMBER OSTIGUY: Yes. I think those are friendly.
CHAIRPERSON RIDDLE: Okay. So it would be strike many and --

MEMBER OSTIGUY: Put the S in there.

CHAIRPERSON RIDDLE: -- written evidence includes comma --

MEMBER JAMES: But is not limited to comma and then your --

CHAIRPERSON RIDDLE: -- but not limited to and then remain the same. Does Nancy accept that?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Rose?

MEMBER KOENIG: It's fine either way.

CHAIRPERSON RIDDLE: All right. Okay. So it's amended in a friendly manner.

Any other comments? Discussion? Yes, Jerry?

MEMBER DAVIS: Section four, buyer's organic agricultural products that contractually requires organic growers to grow selected varieties should require or provide organic seed or planting stock. Again, that's a should so it's not mandatory.

And -- but at the end, it says if they don't
do that -- if they can't find organic seed or it does not work, the producer must receive written documentation from the buyer describing. So that effectively -- it does bring the buyer in and get them involved. And gives them extra work to do instead of laying it all on the grower.

And I reading that correct?

CHAIRPERSON RIDDLE: Yes, that's the intent. I mean you've picked up on a must versus should there in the same paragraph. But the intent of that is to kind of hold the buyers who contract -- to hold them accountable. Because the grower, it's out of their hands here.

But that buyer typically is also certified and so the certifier could be checking those attempts of the buyer who is actually sourcing the seed.

But we could change both of those to should to be consistent.

MEMBER DAVIS: I don't have a problem with that. I'm just trying to picture the reality of what would happen in the real world if this is put in place.
What avenue would it be documented -- I'm trying to think this through -- on the buyer end that they are actually fulfilling this must?

CHAIRPERSON RIDDLE: That would be in their certification, their organic plan that they are documenting their efforts to source organic seed for their growers.

MEMBER DAVIS: So it essentially just bumps it up to a different level and the grower is no longer the only one on the hook then.

CHAIRPERSON RIDDLE: Right.

MEMBER DAVIS: Okay. So both of them are going to have to be documenting the same --

CHAIRPERSON RIDDLE: Well here the grower has nothing to do with the selection of seed. It's just provided to them. So they wouldn't have to --

MEMBER DAVIS: All right. This is the if the buyer requires something --

CHAIRPERSON RIDDLE: Yes. When it's contracted --

MEMBER DAVIS: Okay.

CHAIRPERSON RIDDLE: -- and the buyer is
supplying the seed, the grower has no choice, then
somebody needs to still be attempting to source
organic.

MEMBER DAVIS: Okay.

CHAIRPERSON RIDDLE: And that is a real life
problem out there right now.

MEMBER DAVIS: Oh, no, I understand.

CHAIRPERSON RIDDLE: All right. Anything
else on this document?

Yes, Julie?

MEMBER WEISMAN: Can someone just remind me
where we went -- we talked before about the original
(C) of this section in terms of the requirements of
certifiers to give back that information -- to report
that information to the NOP. But there was no motion
ever made to restore that, right? To its original
form?

CHAIRPERSON RIDDLE: That's actually part of
the motion from the committee.

MEMBER WEISMAN: Okay. Right. Okay, good.

CHAIRPERSON RIDDLE: It includes the
restored paragraph --
MEMBER WEISMAN: Okay. I just wanted to make sure. I think that should cover it.

CHAIRPERSON RIDDLE: -- that Nancy read.

MEMBER WEISMAN: Good. Okay.

CHAIRPERSON RIDDLE: Okay? Any other discussion?

PARTICIPANT: I'm looking for the comments.

CHAIRPERSON RIDDLE: Well, yes, I think the comments we received were those from eight seed companies presented by Dick --

MEMBER KOENIG: Yes, the only thing that we didn't add -- I mean (C) we amended, (E) we decided not to include --

CHAIRPERSON RIDDLE: Yes, because it was redundant.

MEMBER OSTIGUY: Right. The only other comment that came in during yesterday's public testimony was requesting that we, in essence, put back (E), which was require that operations not meeting commercial availability requirements not be certified organic and that products produced by such operations not be sold or labeled as organic.
The decision by the committee was that that was redundant because that is already the case.

CHAIRPERSON RIDDLE: Okay. So we proceed to vote. And we've got Rose. We're voting --

MEMBER KOENIG: Yes.

CHAIRPERSON RIDDLE: -- on -- all right.

George?

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?

MEMBER DAVIS: Yes.

CHAIRPERSON RIDDLE: Nancy?

MEMBER OSTIGUY: Yes.

CHAIRPERSON RIDDLE: Julie?

SECRETARY CAUGHLAN: Yes.

CHAIRPERSON RIDDLE: Andrea?

MEMBER CAROE: Yes.
CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'RELL: Yes.
CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.
CHAIRPERSON RIDDLE: Chair votes yes. And we've got 13 yes, zero no, one absent.
Okay. I think there is one more item for consideration.
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: And we're only five minutes after five-thirty.
(Laughter.)
MEMBER OSTIGUY: This item is, in essence, a carryover from February where we agreed in principle to delineate the natural resource component of the organic system plan on biodiversity management to expand that.
Now I'm not going to remember all the people that helped. Can you help me remember the people that helped us put this together.
CHAIRPERSON RIDDLE: Well --

MEMBER OSTIGUY: Oh, I'm sorry. It's there. It's there.

CHAIRPERSON RIDDLE: You got it?

MEMBER OSTIGUY: The work, the primary work that was done in order to get this to us was done by the Wild Farm Alliance and the National Center for Appropriate Technology. So credit really does need to go to them.

Lots of iteration. Lots of public comment in order to get it to this point. The decision was made fairly early on last spring to go for check boxes because what was found was that the farmers understood more clearly what the goals were.

And part of the reasoning is if the question was asked without the check boxes, the farmers didn't necessarily recognize initially what they were doing.

So not only did the check boxes, as currently structured, improve the reporting of what is being done, but it also, of course, provides additional items that they might consider doing.

So it has both the educational aspect of
what else one can do to increase farm biodiversity.
But also makes sure -- increases the chance that the farmer is going to get credit for what he or she is actually doing already.

So I'd like to move that we accept these additions to Part D of the Organic System Plan on Natural Resources on Biodiversity Management.

MEMBER SIEMON: I second the motion.

CHAIRPERSON RIDDLE: Okay. Nancy moves. And George seconds to adopt the biodiversity amendments to the Model Organic System Plan.

Discussion? George?

MEMBER SIEMON: I guess maybe a dumb question. It says recommend requirements be added to organic system template?

MEMBER OSTIGUY: That is -- the template is what we --

MEMBER SIEMON: But is there such a thing?

CHAIRPERSON RIDDLE: Yes, yes. We adopted that several years ago.

MEMBER SIEMON: Okay.

CHAIRPERSON RIDDLE: And those are posted on
the ATTRA website, among others, and many certifiers have adopted them and put their own logos and modified them slightly.

MEMBER SIEMON: But the farmers -- the certifiers who have not, how will this get out to them is what I'm trying to -- because if it is not in common use, I mean how will this get to all the farmers evenly?

CHAIRPERSON RIDDLE: Well, that is a good question with organic system plans in general. This will be available to any certifier to work from to use to upgrade how they're addressing biodiversity requirements.

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: But they aren't mandatory. And they're --

MEMBER SIEMON: The farm plan is not mandatory.

CHAIRPERSON RIDDLE: Right. The farm plan is mandatory but the model is not.

MEMBER SIEMON: Their template is not.

CHAIRPERSON RIDDLE: Yes, right.
MEMBER SIEMON: All right.

CHAIRPERSON RIDDLE: And we did, just to point out, as Nancy indicated, we received a lot of comments on this from quite a few different groups. And they are in your folder. And all were in support. And none suggested any amendments.

MEMBER OSTIGUY: And it wasn't just groups. It was also a lot of farmers.

CHAIRPERSON RIDDLE: That's true.

Goldie?

SECRETARY CAUGHLAN: Would it not be possible to actually just go ahead also and publish it prominently? I know it's not necessarily for -- you're not asking for -- it's not okay, here's the recommendation. But in some way put it up on the web?

MR. JONES: Yes, the problem, Goldie, is that these are not our documents. They are the Board documents that have been presented to ATTRA. ATTRA has taken them and posted them on their website as examples of farm plans that at least contain all of the elements.

SECRETARY CAUGHLAN: If we endorse this,
could it not be placed on our portion of the website?

MR. JONES: We don't have any way to force -
- to require its use, okay?

SECRETARY CAUGHLAN: No. But for
information, for education, or dissemination --

MR. JONES: Well, I think the problem is,
and as you know yesterday we had a similar
recommendation that came to us where our response to
you was that -- essentially there was no response
because this was directed to a non-USDA agency. Okay?

I suppose we could put it on our website. I
don't think we'd have a problem with that. But you
need to understand that it is there, you know, for
information purposes. And that's about as far as it -

SECRETARY CAUGHLAN: It could state so. It
could state so. My point is -- another thing, Keith,
is because just as during our collaboration and just
as the two audits and so forth on NOP have, I think,
sort of underscored is that there needs to be, I
think, creative ways of communicating information that
is helpful, that is maybe -- maybe somebody comes
there and looks at something that is not going to go
to these other sites.

But they go there seeking more information
about the Board, about the role, about -- and if that
is a way to do it, then that maybe is a good thing to
consider in your overall re-looking at your website --

MR. JONES: Yes, we --

SECRETARY CAUGHLAN: -- because I know that
that needs --

MR. JONES: Yes, we wouldn't have any
problem with posting the information. It would have
to go up with a disclaimer saying this is an example.
It is not binding.

SECRETARY CAUGHLAN: The Board has endorsed
this and blah, blah, blah. And you could even --

MR. JONES: Yes.

SECRETARY CAUGHLAN: -- say this is not, you
know --

MR. JONES: One of the things that we've run
into, Goldie, though -- I mean it's been a problem in
terms of the uniform application of -- when a Board
makes a recommendation such as this and it goes up on
our website, it is seen in many cases by certifiers as binding.

And we've had situations where certifiers would use certain recommendations as a binding requirement. And we'd have to go back and say no, that's not, you know that not the case.

My suggestion would be to get the recommendation to us. I think one of the questions we do have is when the recommendation is really directed to an non-USDA agency such as ATTRA like we talked about, whose responsibility is it to get the recommendation to the non-USDA agency?

Are you expecting us to do that?

SECRETARY CAUGHLAN: I'm only personally speaking about this because I see it --

MR. JONES: No, I understand.

SECRETARY CAUGHLAN: -- as a way to reflect the Board's thinking. Simply that.

MR. JONES: Yes but it does raise a larger question as to is the recommendation actually coming to the Secretary? Or is the recommendation simply going to another non-USDA agency that you have a
relationship with? Okay?

SECRETARY CAUGHLAN: It's a bulletin board. It's a community bulletin board. There should be a section for that, it seems to me, in one of the friendly ways of letting the public know what is happening. I don't know. That's just my thinking. And it's what I've thought for quite some time.

MR. JONES: Okay. Well, your point is well taken. We're not opposed to it. It is not quite as simple as --

SECRETARY CAUGHLAN: It never is.

MR. JONES: Yes. So --

CHAIRPERSON RIDDLE: And at any rate --

SECRETARY CAUGHLAN: I appreciate your consideration.

CHAIRPERSON RIDDLE: -- if we adopt this, it will be submitted to the program as a final recommendation of the Board and appear on the website as a final recommendation of the Board. And other groups can access it from there. And work further with it.

And I do anticipate continuing to be engaged
with ATTRA and Wild Farm to, you know, if this is adopted, to then actually insert it in the existing model so that it is a full package.

So it is re-posted on their websites and can be submitted back to the program because both things have been adopted by the Board. And you can do with it as you may basically.

Andrea, did you --

MEMBER CAROE: Yes, I did.

CHAIRPERSON RIDDLE: Okay.

MEMBER CAROE: I'm just a little unclear on the purpose of this document in that, you know, what constitutes compliance? And is there -- I mean what is this used for by certifiers? And, you know, if a grower fills this out and does all the check marks, is there a pass or fail on the requirements of the regulation? I mean what does this do? I don't understand.

I mean this obviously gives more information. But it is not clear what you do with that information.

CHAIRPERSON RIDDLE: Yes. Well, the
regulation, as it states in that under (D) on page 1 at the bottom there --

MEMBER CAROE: Right.

CHAIRPERSON RIDDLE: -- a couple sections require that producers maintain or improve natural resources of the operation. And --

MEMBER CAROE: Right. I just don't know how this connects to this.

CHAIRPERSON RIDDLE: Right. This gathers the information during the organic planning process that then a producer can document how they complied with those existing requirements. And then the inspector has the information in hand to go to the farm and assess their compliance and file their report.

So it's, you know, a tool for the producers to document their compliance. And it's a tool for the inspector and certifier to assess the compliance with those existing requirements.

MEMBER CAROE: I mean I understand this is a tool for the producers. And I think it is a very valuable tool because it does guide them to those
practices that are positive.

But what I don't understand is how is this consistently applied? I mean if a grower only checks off one practice on this whole sheet that they do, are they in compliance or not? And if they are with one certifier, are they with another one? I mean what does that all mean?

You know this is information. But what you do with the information is not defined. It's not, you know, being a tool for growers, I appreciate that. And I think that is valuable in itself.

But using this as a tool for assessment, I think is a bit of a stretch.

CHAIRPERSON RIDDLE: Well, unfortunately, I think there is inconsistency on a whole lot more program requirements than just this one. But this is a step to bring consistency just like the model plan was a step to bring consistency in how that is being assessed.

You know right now they are all over the map if not ignoring this requirement. So I think this has raised the visibility of the existing requirement.
And is a step towards more consistency.

George?

MEMBER SIEMON: It is a farm plan tool that
--

MEMBER CAROE: I appreciate it in that way.

MEMBER SIEMON: That's what it is all about.

CHAIRPERSON RIDDLE: Any further --

SECRETARY CAUGHLAN: Well, hopefully it will
stimulate discussion among the farmers, among the
certifiers themselves. And be something that could
become part of a continuing ed workshop thing, for
example, that goes on at some of those educational
bodies.

MEMBER CAROE: I just --

SECRETARY CAUGHLAN: I see a lot of
opportunities.

CHAIRPERSON RIDDLE: Okay. Andrea?

MEMBER CAROE: I just see if a farmer only
does one of these practices and a certifier says
you're not complying with that, I think they have a
reason to appeal the decision because it is not
defined. There is no guidance that suggests that you
must, you know, participate at some level.

SECRETARY CAUGHLAN: It doesn’t say 10 points or 10 of 30 or something. But then that would be too proscriptive and restrictive. And people would have a hissy fit over that. I think this is a start.

MEMBER CAROE: Okay.

SECRETARY CAUGHLAN: Call the vote.

CHAIRPERSON RIDDLE: Well, we’ve got a comment from Hugh?

MEMBER KARREMAN: I like the document. And it would make a farmer look to see how he could improve his operation just as kind of a philosophical --

MEMBER CAROE: And, again, I appreciate it for that.

MEMBER KARREMAN: -- self, you know, report.

MEMBER CAROE: I do appreciate it for that quality.

MEMBER KARREMAN: I don’t see it as any kind of a thing from certifier that you are going to be out of compliance with this. It’s kind of more philosophical, I think, than it is a regulatory thing.
SECRETARY CAUGHLAN: Well, no, there are real --

CHAIRPERSON RIDDLE: Yes, there are requirements. But yes, it usually would be in combination with other violations in my experience.

MEMBER KARREMAN: It's like a self-assessment guide. That's the way I see it. And how can you become better at these questions if you only have a few checks? It's part of the organic system plan, I guess.

CHAIRPERSON RIDDLE: Okay. I've heard no amendments to change it. And we've had a nice discussion of it. Let's move to the vote. And George is up.

MEMBER SIEMON: Yes.

CHAIRPERSON RIDDLE: Bea?

MEMBER JAMES: Yes.

CHAIRPERSON RIDDLE: Hugh?

MEMBER KARREMAN: Yes.

CHAIRPERSON RIDDLE: Michael?

MEMBER LACY: Yes.

CHAIRPERSON RIDDLE: Gerald?
MEMBER DAVIS: Yes.
CHAIRPERSON RIDDLE: Nancy?
MEMBER OSTIGUY: Yes.
CHAIRPERSON RIDDLE: Julie?
MEMBER WEISMAN: Yes.
CHAIRPERSON RIDDLE: Andrea?
MEMBER CAROE: Yes.
CHAIRPERSON RIDDLE: Goldie?
SECRETARY CAUGHLAN: Yes.
CHAIRPERSON RIDDLE: Kevin?
VICE CHAIRPERSON O'ReLL: Yes.
CHAIRPERSON RIDDLE: Dave?
MEMBER CARTER: Yes.
CHAIRPERSON RIDDLE: Rose?
MEMBER KOENIG: Yes.
CHAIRPERSON RIDDLE: Chair is yes. So we're
ending the day on a unanimous, positive note.
Thirteen yes, zero no, one absent.

So before we close for the day, committee
chairs are encouraged to put your work plans together
before tomorrow morning. And let's just look at the
agenda here quickly for tomorrow.
We're actually caught up and only a little late.

So we start off the day with public comment at 8:00 a.m. So if you want to comment and have not signed up, you could do it before you leave or you can -- it will be out there again in the morning. But that will be first thing up.

And then when that concludes, we'll move on to the discussion of committee work plans and timelines. And meeting dates, et cetera. So --

MEMBER JAMES: Has there been any --

CHAIRPERSON RIDDLE: Quiet please. We're still in session.

Bea?

MEMBER JAMES: On the committee -- discussion of committee work plans, if we have things that we want to propose that are in addition to what we already have on our work plans, should we discuss that with the chair of the committee? Or can we propose it --

CHAIRPERSON RIDDLE: Yes.

MEMBER JAMES: Okay.
CHAIRPERSON RIDDLE: Yes, pull the chair aside and help them think through their planning. And if you are a new chair coming on to committee, talk with the old chair and kind of pass the baton on on work plans as well.

Anything else?

PARTICIPANT: We don't have a new chair.

CHAIRPERSON RIDDLE: Well, there's -- yes, I think Michael is taking over Livestock. That was the plan coming out of here.

SECRETARY CAUGHLAN: Are we going to call a meeting? And if not, are they going to be here?

CHAIRPERSON RIDDLE: Okay, okay. I'll just ask them afterwards instead of yelling.

Okay, we recess for today. Thank you.

(Whereupon, the above-entitled meeting was concluded at 5:53 p.m.)
UNITED STATES DEPARTMENT OF AGRICULTURE

NATIONAL ORGANIC STANDARDS BOARD

WEDNESDAY,
AUGUST 17, 2005

The above-entitled matter convened at 8:00 a.m., in Oriental Ballroom C of the Mandarin Oriental Hotel, 1330 Maryland Avenue, S.W., Washington, D.C., James A. Riddle, Chairperson, presiding.

NOSB MEMBERS PRESENT:

JAMES RIDDLE                Chairperson
KEVIN R. O'RELL             Vice Chairperson
GOLDIE CAUGHLAN             Secretary
ANDREA CAROE                Member
DAVID CARTER                Member
GERALD DAVIS                Member
BEA E. JAMES                Member
HUBERT J. KARREMAN          Member
ROSSIE KOENIG               Member
GEORGE SIEMON               Member
JULIE S. WEISMAN            Member

AGENDA

I. Public Comment Session

II. Presentation and Discussion of Committee Work Plans and Timelines

III. Set Next Meeting Date

IV. Closing Remarks - James Riddle, Chair

V. Adjourn
PROCEEDINGS

(8:09 a.m.)

CHAIRPERSON RIDDLE: If people could take their seats, it's time for public comment. I suppose I need to read the rules again.

As stated on the agenda and in the Federal Register notice, we'll start our day today with another round of public comments. And for your information, I have 17 people so far that have signed up to provide comments. The book is still out on the back table, if you so choose, if you haven't signed up yet.

Once again, if there are any new faces in the crowd that didn't hear the policy for public comments, I'll just briefly go through that before we start. In order to offer public comments, you must sign up in advance, and we'll follow the order that people have signed up.

If I call your name and you're not present, we'll go ahead and move on. But then I'll call your name at the end if you're there, but you'll bounce to the end if you're not present at the time.
when I call your name.

You'll have five minutes to speak. You could carry a proxy and have an additional five. If that is the case, please state that at the very beginning, so that Goldie knows. And Goldie will be keeping time and has a one-minute warning sign somewhere that she'll hold up when you have one minute left. But like I said on Monday, if you don't see that sign, that's not her problem. It's just a courtesy to you.

But when the timer rings, I'll allow you to conclude your remarks, conclude that thought, if members of the Board have questions, and there could be additional remarks in response to questions.

And then, the final rule, individuals providing public comment will refrain from any personal attacks and remarks that otherwise impugn the character of any individual, or company for that matter. And as I said, we certainly don't mind passion, but we don't want any personal attacks.

And the comments on Monday were just excellent, a lot of passion and no offensive remarks,
unless you mind a little swearing.

(Laughter.)

But it was not directed at anyone, just the whole Board and everyone in general.

(Laughter.)

PARTICIPANT: Compliments and jokes are accepted.

CHAIRPERSON RIDDLE: Yes. Well, compliments could impugn on the character of an individual as well. Anyway, we will go ahead and get started, and I'll read the name of the person up, and also the person on deck. So first up is Mark Kastel, with Tony Azevedo on deck.

MR. KASTEL: Good morning. My name is Mark Kastel, K-A-S-T-E-L, and I'm here today representing the Cornucopia Institute based in Cornucopia, Wisconsin.

Goldie, I have a proxy not from Henry Perkins, but once again from Maury Johnson. So you're safe, Jim.

(Laughter.)

Okay. First, the good news. We want to
convey our thanks to the NOSB.

(Laughter.)

One person has to do this at every meeting. I don't know why it had to be me.

First of all, thank you very much for passing the guidance document on pasture that you did yesterday in support of protecting the organic dairy brand. And we appreciate the hard work, long hours, and especially listening to the diverse stakeholders in the issue.

We also want to convey our thanks to the Livestock Committee for renewing your efforts to pass a substantive rule change with teeth.

And now a note to the NOP. Get the gavel ready. You asked the Board specifically to revisit the pasture guidance document that was passed unanimously in 2001, and went unaddressed by the Department, languishing until this January when this hot button issue again caught fire.

The dairy producers now ask you -- you asked for this in January. We now ask you to please post this document, send it to all certifiers on an
immediate basis, without delay.

Okay. That's all the good news. Now, let's talk about the bad news. There won't be any flowery prose, and there won't be any swearing, and there won't be any disrespect. But in the words of my favorite philosopher, Rosanna Anna Danna --

(Laughter.)

-- I keep getting more and more cynical all the time. I just can't keep up.

I don't understand. We have some really good people working at the National Organic Program. When you put this rule back, when you turned it back to the Board and said you don't understand, I don't understand. What part of access to pasture do you folks not get? This has been a Board agenda item since 2000.

The delay has allowed a number of industrial farms, with allegedly almost exclusive confinement conditions, to operate. Farmers have spent thousands of dollars and hundreds of hours to participate in this process and feel disrespected.

Sending the NOSB-endorsed rule on pasture
back to this Board the way you did was just plain wrong. The question was about regulatory intent. In the 2001 document, which is on record, endorsed by this Board, there was a paragraph entitled "Intent." It's clear to everyone in this room what the intent of that process was, I think.

You could have, optionally, talked to the Board before you caught them flat-footed and us flat-footed, and engaged in a dialogue if you thought there was something deficient in the language that they crafted. Better yet, from a timing standpoint, the NOP could have crafted alternative language.

If you said, "Look, let's maintain the spirit of what the Board crafted, but we think the language isn't compatible with the regulations, or it isn't in the right legalese," or whatever the excuses were, I don't understand. But you could have crafted that language and presented it back to the Board on Monday and said, "Look, we think this is the good wording. We'd like you to bless it. If you will pass it today, we will then take it and post it on the Federal Register."
We're talking about years until enforcement can take place at this point. We have to revisit this at the Board. You folks have to review this again. It has to be posted, comments, and then once -- once it's passed, we're going to give farms that aren't in compliance some amount of time to file a new plan and come into compliance. We feel bad about this.

If we're talking about a participatory democratic system, which is what this organic movement was founded on, this is disrespectful. And I want to mention two other things that we're very concerned about.

One is you folks solicited public comments that were due in May. You took those into consideration. We were appalled to find that about a month after the deadline of May 20th passed, before the Livestock Committee met, that about a third of the comments had not been passed to the Board members or posted on the NOP website.

This was not a casual dialogue with stakeholders. This was a formal public comment period.
to benefit Board decisionmaking. That was just unacceptable.

The fact that there were 11 institutional comments that were listed by -- under the submitter's name -- Cornucopia's was listed under my colleague, W. Fantle's name. A lot of folks in the organic community would not recognize M. Kastel or W. Fantle. They might not recognize P. Odek as being the CEO of Wild Oats.

And to create a dialogue, rank and file farmers, consumers, and other NGOs would like to see the comments and the thoughts of other learned people in the industry. We need to do a better job on the democratic dialogue.

And, finally, and it might seem trivial, but this type of hotel is not conducive, and this location in Washington, D.C. in August is not conducive for public participation. Farmers who got the great deal and paid $30 a night for parking, paid $200 -- over $200 a night for accommodations, we -- if you didn't get in on that deal, it was over $300 a night. Breakfast, $19.
I talked to a farm couple yesterday who said, "Well, we didn't want to pay $19 for breakfast, so we opted for the $6 bagel." And the wife corrected him and said, "No, honey, that was the $7 bagel. You went for the optional cream cheese."

(Laughter.)

Lunch, we wanted to have a farmer lunch on Monday -- $40 in our $700 rented meeting room. Listen, for a lot less in the aggregate, we could meet again in LaCrosse, Wisconsin. We'd welcome you there. Farmers could find $50 hotel rooms, and, you know, $8 breakfast, and we'd treat you guys.

So as un-PC as this might sound, we will continue to bang the drum for democracy in this process. We love the organic food and farming movement. I mean, that's what -- the reason most of us are enduring these long meetings, especially you folks.

We love the energy and the collaborative environment that this community was founded on, and we refuse to give up this lucrative market that is now created -- some people will call it an industry -- to
those who just care about crap.

And we -- we want to -- we want to engage with the Department on good governance. And I think you folks as individuals -- I see you shaking your head, Mark -- are good folks, and you want to also. I don't get it. I don't know if it's coming from the Secretary's office, where this, you know, block we have is taking place.

But last year when those guidance documents were issued by the NOP, without collaborating with anyone, you guys got a very critical, you know, set of instructions from then-Secretary Veneman about collaborating. And then, we have this rule come back without collaborating. So you can issue edicts, or you can, you know, kind of through neglect maybe make decisions, but we need to have a dialogue.

So lastly, a message to the investors who own the industrial firms.

Thank you, Goldie.

And this isn't the first time I've given this message. The organic community has spoken. It's
very, very clear what the consensus is in terms of expecting dairy cattle to graze, not have access to 15,000 acres in the desert, not have, you know, temporary confinement for 305 days worth of lactation.

None of this might carry the weight of law today. But you know what? The regulations are in force. Most dairy producers understand that. And if you want to continue down the road of investing millions in these confinement operations, you're doing so at your risk and the risk of your investors. And, by God, we still have a Securities and Exchange Commission that requires disclosure, and you'd better be telling those investors how off the path you are.

That's the end of my comments, and thanks for enduring that, and thanks for not gaveling me down.

(Laughter.)

CHAIRPERSON RIDDLE: Thanks, Mark, for your pointed comments. I do have a comment myself. I won't have a question, but I do just want to clarify. On that pasture rule change draft, Keith had contacted me and other members of the Livestock
Committee that there were some problems with that
draft, and there was a dialogue occurring to try and
clarify our intent.

And I think -- you know, I don't know, and
I can't speak for Keith on this, but I know there's a
lot of other items on their work schedules. And it
certainly is possible that it could -- and you don't
need to respond, I'm not --

MR. KASTEL: Well, I --

CHAIRPERSON RIDDLE: Please do not.
Please do not. So there was a dialogue underway, and,
yes, it did catch us flat-footed as you say to have it
thrown back. And, yes, I would have appreciated --
and I know other members of the Board would have
appreciated -- kind of a conclusion to that dialogue
that we were engaged in, giving us a warning that it
was coming back.

But there was a dialogue underway, and I
guess I see more progress than we've ever had in the
feedback loop that's now occurring. And we've set a
precedent at this meeting that I hope can continue
into the future, where we hear a line-by-line report
on our recommendations and how they're being received by the program.

And as an Advisory Board, you know, we can't expect to have every one of our recommendations adopted, especially in a three-month time period. But we do deserve to know where the program stands, and that is exactly what's happening. And when it's appropriate, it's a lot better to have those recommendations given back to us for further work than to just be rejected out of hand, or ignored and that was the case for a number of years.

So you may get more cynical as time goes on, but I see progress in very small steps. So it's just a different perspective.

That's okay. We'll move on. I appreciate your comments.

Tony Azevedo, and then Diane Goodman.

MR. AZEVEDO: I'm back.

(Laughter.)

That's Tony Azevedo, A-Z-E-V-E-D-O. I have a proxy from some very good friends. My dairy is in California. These dairy folks --
CHAIRPERSON RIDDLE: So you'll have 10 --

MS. CAUGHLAN: Are you doing a 10-
minute --

MR. AZEVEDO: I hope not. I can wrap this
up really fast.

CHAIRPERSON RIDDLE: Okay. You do have a
proxy.

MR. AZEVEDO: Yes. Do you want it?

CHAIRPERSON RIDDLE: No, that's fine.

MR. SIEMON: Who is it?

MR. AZEVEDO: The proxy? It's Tom and
Sally Brown from Groton, New York. And they signed
up. So they're --

MS. CAUGHLAN: That's fine.

MR. AZEVEDO: I'll read this letter that
they had me read. They were here, but they had to
leave early.

"My husband and I have been farming for 27
years. We are the third generation farm and a few
years short of having a 100-year farm. If we had not
started farming organically, we would have been forced
out of business with nothing to show for 27 years of"
labor.

"We milk 100 cows. Farms of this size are close to being an endangered species. With exception, most will go out of business. We're losing more and more of the rapidly-disappearing family farms on the American landscape.

"Support of the pasture ruling will allow many of these farms to continue. Also, as the average age of the American farmer is 55, in 10 years there will be a serious need for young farmers.

"Thank you very much."

The only thing I'd like to add to that is obviously you folks probably caught the fact that I was very disappointed with not accepting the rule. But the guidance document was kind of a ray of light.

It's very important that we do have some guidance in the west, because we have many farmers that want to get into organics, and we want to bring them in. And these are young farmers, and in the west many of these young farmers suffer from an affliction called productitis. And that's where you finish four years of an agricultural college, which they basically
teach you three things -- produce, produce, produce --
and now they'd like to get into organics, and they
need to know, you know, where they stand.

And by having some kind of rule, guidance
-- and the guidance document is going to help a lot.
But it -- prolonging this is going to make a larger
problem. And I know there's a possibility of having a
meeting in November.

And if the Livestock Committee could just
come up with a simple statement that the NOP could get
behind -- and when I say a "simple statement" it's
going to be kind of an ongoing work, but a statement,
zero pasture for a lactating cow does not constitute
organic.

Now, that's something that's simple. You
couple it up with the guidance document, and a lot of
these young farmers can get on their way. And it's
not completely clear, but it's something. But to
prolong this year after year is going to be very
damaging.

So I was hoping that possibly the NOSB
would consider, while we're putting this thing
together, to get NOP to at least come up with a statement that young people from the west in my area realize, well, a statement like that, coupled up with a guidance document, at least they have somewhere to go and kind of formulate their dairy setups.

And these are young people that are coming -- their parents are -- have large conventional farms, and they want to do the right thing. They really don't like what their parents are doing, and so they want to do something different. They want to do something new.

But all the institutions in the west have not taught them anything about organics, which we know that. So they're looking at -- at groups like this, and at kind of old dogs like me, to tell them what to do. And I don't -- I don't want to misguide them.

I don't want to say, "No, no, you've got to do this, this, and this," which I do that a lot, but, I mean, I don't want to do that and come out wrong. You know? So perhaps you could consider in November when you do meet to at least come out with a statement that would kind of clarify, you know, zero
pasture for a lactating cow does not constitute organic. That's pretty clear. That's pretty clear. And coupled up with the guidance document I think it will work.

I'm not recommending that be the rule. There's a lot more to it than that, but at least it would give these young people an avenue to go down, so they can continue with getting into agriculture, because we are very short of organic milk. And we have a lot of folks that want to get in it but are just, gee, where are we going with this?

Other than any questions, I want to thank everybody. Are there any questions?

CHAIRPERSON RIDDLE: I've got Hugh.

MR. KARREMAN: Tony, thank you for that rule proposal, zero pasture does not constitute organic production.

MR. AZEVEDO: Well, please don't look at that as a rule.

MR. KARREMAN: Well --

MR. AZEVEDO: This is just something, you know --
MR. KARREMAN: Right. I wanted to ask, though, what do you think about the work in progress of what I had mentioned from the Livestock Committee -- was it yesterday? -- about, you know, ruminant animals over six months of age shall graze growing pasture at least 120 days per year.

MR. AZEVEDO: Excellent. Excellent.

MR. KARREMAN: That's a positive statement.

MR. AZEVEDO: Yes, but if --

MR. KARREMAN: I mean, we can go even --

MR. AZEVEDO: -- if somebody forgot to dot the i, or the shall wasn't in the should, or -- do you understand what I'm saying? If something goes awry, we're set back another year and a half. Do you see what I mean? We need something now that would -- that would give us some kind of guidance that we can move forward with all these farmers that want to get into organic, and 99 percent of them are pure of heart. They want to do it right.

But what you came up with, that's --

Mr. Azevedo: (Continued)
MR. KARREMAN: Well, we'll try to work on that.

CHAIRPERSON RIDDLE: Okay. Well, thanks, Tony, and thanks for coming back.

All right. I have Diane Goodman, but then it says time given to Steve Clarke. Steve is going to take it. And then, next up will be Michael McGuffin.

MR. CLARKE: Good morning. Steve Clarke with Florida Crystals Corporation. This is going to be very brief.

This is my first NOSB meeting. It's been interesting, and at the same time confusing and illuminating, so I understand more. On behalf of Florida Crystals, we agree very much with the mission of NOSB. We find it rather odd to be rebuked for suggesting another approach, some think because it's not been done way before, especially in the issue of the synthetic/non-synthetic confusion.

On this matter, I think at least the OTA decision tree should be incorporated in the documents from the NOSB. It's clear to me that there's some lack of chemical expertise on the Board. When a
A cartoon guide to chemistry is proposed as a useful source of information, I wonder whether a cartoon guide to law or auditing should also be proposed.

It would probably be a conflict of interest for me to offer my services, but I have no doubt that good expertise is available.

Finally, and more seriously, there are many operations abroad that supply organic products to the USA. The major impact of these operations has been in the field. Many farmers in South/Central America have gone over to organic, and this is wonderful.

But the confusion in the classification of synthetic/non-synthetic could, in a minor processing aid -- in the processing operations could jeopardize a large amount of this. And I think we need to bear in mind that what we are trying to do, from my perspective, is to change the way agriculture works. And this is being done in large part.

I was in an operation in Paraguay last week, which has a very large organic operation with many, many different farmers involved. But they are
concerned that they will not be able to continue in operation if this synthetic/non-synthetic issue is not resolved.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Steve.

MR. CLARKE: Okay.

CHAIRPERSON RIDDLE: Michael McGuffin, and next up Mark Cox.

MR. McGUFFIN: Good morning. My name is Michael McGuffin. I'm with the American Herbal Products Association, or AHPA. And I'm here today to discuss exactly what I discussed last time I was here. We need your support in clarifying that herbal dietary supplements are clearly within the scope of the NOP.

I want to review first what NOP has said on this matter to date. In the Federal Register of December 2000, they said, "Producers and handlers of agricultural products used as ingredients in cosmetics, body care products, and dietary supplements could be certified under these regulations. The ultimate labeling of cosmetics, body care products,
and dietary supplements, however, is outside the scope of these regulations."

Then, in May 2002, they reversed themselves, stated that because these products contain agricultural products, the producers and handlers of such products are eligible to seek certification. They reverted to their original position in April 2004, stating that dietary supplements are not eligible to seek certification. They gave two reasons.

These products are under the labeling and regulatory jurisdiction of FDA, and OFPA does not extend to non-agricultural products. And then, of course, the most recent statement from NOP, just to clarify everything, "Regarding dietary supplements, no determination has been made at this time concerning their labeling." Confused? Me, too. My members, too, and my members want to sell organic dietary supplements.

So I want to look at these two issues. And, first, related to the fact that labeling and regulation and dietary supplements are under the
jurisdiction of FDA, this is also true of foods.

Here's a can of soup. It's labeled according to FDA regulations. It's got these nutrient content claims. If you don't make them right, they'll seize your product. It says, "An excellent source of fiber." If it doesn't have 20 percent fiber, your product comes off the shelf, and it's got a USDA organic seal.

This company figured out how to have its product clearly under the jurisdiction of both FDA and USDA.

Now, here's a peppermint spirit sold as a dietary supplement, an herbal dietary supplement. There's nothing in here except extracted peppermint, certified organically grown, peppermint oil extracted from that same peppermint, and organic alcohol. Dietary supplement, can't put the word "organic" on it, can't put the USDA seal.

Peppermint flavor, a food, exactly the same ingredients. Actually, this one has alcohol, this one has a scent -- or sunflower oil I think it is, an organic vegetable oil. But there are organic
peppermint with an organic carrier, supporting organic agriculture. This one can be labeled as organic. This one can be -- cannot be under USDA's/NOP's restrictive reading -- the messages that we get every other time.

It's absolutely clear that the intention of OFPA is to allow both of these products, and it's a red herring to say that the fact that FDA has jurisdiction over the label somehow makes it impossible for us. It's not unless the organic seal is to be relegated only to the produce department, which was not the intention of the Organic Foods Production Act.

With regard to this idea that this is not an agricultural commodity, which is the other point, you know, here is what OFPA says. I'm going to quote the definition of an agricultural product is "any agricultural product -- commodity or product, whether raw or processed, including commodity produced or derived from livestock, marketed in the United States for human or livestock consumption."

This is clearly an agricultural product.
It's peppermint. It's extracted. It's processed. And it is for human consumption. In fact, the law requires us -- we're not allowed to sell dietary supplements to rub on your arm. The only way we can consume dietary supplements is by oral ingestion.

Again, I just think these are both excuses to not get this done. I believe this is a simple matter. And if I had another five minutes, I would also discuss that our industry does support organic labeling of cosmetic products and body care products, but we've really tried to separate those issues, because this one is simple.

We are putting it in our mouths. There is no question as to whether this is consumed. I understand -- is a body care product consumed? I can argue that it is. I'm not really here today to take on that issue.

I think this is a simple issue. It's not complicated like synthetic versus natural. It's just -- all I can ask you guys to do I think is to exert whatever influence you can to convince NOP to take the -- I think it's 30 minutes, maybe it's a half a day,
to issue a very clear rule that these are clearly allowed under NOP.

Thanks very much.

CHAIRPERSON RIDDLE: Thanks, Michael.

Gerry?

MR. DAVIS: It seems to me that part of the problem why diet -- you know, the herbal supplements, their intermingling with mineral supplements causes the problem for them of jurisdiction. Is it possible to separate herbal supplements to bring them under the organic program and to avoid -- I just wonder if that's the sticking point, because they're all lumped together with the minerals, which are not organic. They're not possible to call those organic.

MR. McGUFFIN: I'd love to respond. There are -- you're correct. There are four or five categories of ingredients. We would not propose that if this company wanted to sell peppermint spirits and a multivitamin, this would be the only one that they could market as organic, because this is the only one that's an agricultural product.
So we’re not proposing that the non-agricultural dietary supplements would come under. You know, clearly the first decision that would have to be made is, yes or no, is it an agricultural product? If it’s from an herb, clearly it is. So you’re right, it’s the herbal dietary supplements that we’re asking for.

But the fact that there are other dietary supplements should not complicate the route to the organic market for the herbal products.

Does that help, Gerald?

MR. DAVIS: Well, I guess my question is directed more to the Board on is -- is this the problem for solving their dilemma? Because we have in -- as a general category, they’re all lumped together versus being distinctly separate -- you know, mineral supplements versus herbal supplements.

CHAIRPERSON RIDDLE: Yes. Well, my response would be you’re right on there, that it -- and so is Michael, that our focus can only be the agricultural products or the supplements and other herbal products that are derived from agricultural
ingredients.

As far as what the Board can do, I might ask the Policy Committee to take this under advisement as well as the comments we received Monday on the personal care products, and consider recommendation or further statement to the program at the very least.

MR. McGUFFIN: And we did in our -- as part of our last comments, we provided you with a markup, I think a redline, of your earlier draft on this issue. And I can redistribute that if it's at all helpful, because we think that we've got some pretty close language in that document that you are already working on, Dave.

CHAIRPERSON RIDDLE: Any further -- yes, Hugh?

MR. KARREMAN: I know in the herbal tinctures and extracts I get from my herbal supplier for working with livestock he has been told by the FDA he needs to put on those -- like on the can there. So wouldn't even very small print -- couldn't you get that kind of information like is on the can onto that little tincture bottle? And then cross both --
MR. McGUFFIN: Yes.

MR. KARREMAN: -- bridge both things.

MR. McGUFFIN: Yes, right.

MR. KARREMAN: Okay. So --

MR. McGUFFIN: And that's what my members want to do.

MR. KARREMAN: Right.

MR. McGUFFIN: They want to put all of the information required by FDA --

MR. KARREMAN: Right.

MR. McGUFFIN: -- and the USDA --

MR. KARREMAN: Exactly. That's --

MR. McGUFFIN: Yes.

CHAIRPERSON RIDDLE: Bea?

MS. JAMES: I understand exactly what you're saying. But I -- I really think that even though you have two products there that both come from a plant source and agricultural source, one is used as a food ingredient, and the other one is used for medicinal purposes. Products that are medicinal are regulated by the FDA.

MR. McGUFFIN: Right, as are products that...
are food regulated by the Food and Drug Administration.

MS. JAMES: Right, right.

MR. McGUFFIN: And, in fact, if I make a medicinal claim for this, it becomes a drug. It's actually not medicinal. It's a supplement, which is federally defined under foods. This is a food. Even though it's a food supplement, it is federally defined as a food and not as a drug.

MS. JAMES: That's under DSHEA.

MR. McGUFFIN: Under the Dietary Supplement Health and Education Act. You need -- I mean, I can get you a copy of that if it helps. There's some additional --

MS. JAMES: No. No, I understand what you're saying.

MR. McGUFFIN: -- information.

MS. JAMES: I'm just --

MR. McGUFFIN: The fact that you can make a claim -- you're right, we can make a claim. So can this SOOP. It made a claim. It's a different kind of claim. Although we can -- we can pretty much make the
same claims anymore. They can make a -- we can both
make health claims. We're the only ones that can make
what's called a structure/function claim.

But we can't make a medicinal claim,
although I could argue that there's nothing that says
that a drug from organic herbs shouldn't be able to be
labeled as organic. But I'm not here to argue that
today. I'll come back. I'll come back --

CHAIRPERSON RIDDLE: I'm glad to hear
that, Michael.

(Laughter.)

Thanks for your input --

MR. McGUFFIN: Appreciate it.

CHAIRPERSON RIDDLE: -- and your patience
in coming back and working with us.

MR. McGUFFIN: Well, I know you guys have
a lot going on. My main point probably is I think
this one is simple. It's not weeks and months and
years, and we'd love to get it done. Thanks a lot.

CHAIRPERSON RIDDLE: Thank you. And we've
thought other things are simple before.

(Laughter.)
MR. CARTER: Simple for the NOSB is weeks and months and years.

(Laughter.)

Is Urvashi Rangan here? Okay. Take your time, since I didn't give you any warning. Next up will be Mark Retzloff. Is Mark here? So if Mark is not here, then Kathy Seus would be next, just to try and give you some warning.

Okay. Urvashi, thanks.

MS. RANGAN: Okay. Good morning. I also want to -- my name is Urvashi Rangan. I'm an environmental health scientist with Consumers Union, publisher of Consumer Reports. I want to thank this Board for the painful efforts of getting through the synthetics document yesterday and the guidance.

I would disagree with some previous speakers. I think you all have a lot of -- you've spent a lot of time and effort in trying to understand
Chemistry 101, and it is Chemistry 101. This isn't advanced doctoral chemistry. This is Chemistry 101, and it takes a little time to get familiar with the terms, but that's all that's really required to figure out the differences. So we really appreciate your time and your effort, and we strongly support your actions yesterday.

I'm going to talk today a little bit about looking forward, and I want to talk about labeling in general and a little bit about fish, because consumers are awfully confused out there. And while we appreciate the fact that the NOP has reconsidered how certain products are regulated in terms of do they have standards, don't they, do the standards fit under another category, don't they, and those things are perfectly legitimate in terms of fine-tuning this program and making sure that, you know, aquaculture really does need its own standards. It's not a cow. Fish are not cows.

And that we do need the time to create those standards, and we very much appreciate the fact that task forces have been set up to do that.
Unfortunately, there's an awful lot of organic fish product that's on the market right now. And while we talk about the USDA seal and surmise that that's the only thing consumers are looking for, that is not the only thing consumers are looking for.

They look at the front of the package, and if they see the word "organic" on it they assume it is as credible as other organic products that they are buying on the market. And it has been a very tedious task for us at Consumers Union to go through and constantly reexplain, no, organic fish that you're seeing on the market right now does not meet the same standards. It is not the same thing.

We really urge this Board and the NOP to reconsider whether or not that label should stay on organic fish right now while the standards are being made. It really does a disservice to consumers. It does a disservice to the industries that -- or the companies that are trying to do a good job and coming up with standards on their own.

Recently, we -- or I should say at the last meeting, I think last summer, the NOP stated to
us that no USDA seal would be found on an organic fish product. And yet a couple of months ago it came to our attention that certain companies were using the USDA organic seal on their fish and claiming to be the first USDA-certified company to be certified to livestock standards.

That was such in contradiction to what we were told at the last meeting, so Consumers Union called the Public Affairs Office at USDA and asked repeatedly and reexplained and sent the news stories, and we never got an adequate answer about why this was being allowed and whether it was going to be stopped.

We were told we would hear from the Compliance Office. We never did hear from the Compliance Office. Who we heard from was a reporter from Business Week Television who took this up, went to the USDA, interviewed them, and then finally we were told by that reporter that USDA told these companies to stop doing it.

And yet up until just yesterday there are materials on the website that say these companies are certified to USDA livestock standards. This is
awfully confusing, and we really would appreciate it if we could just ban the use of the organic label on these fish and seafood products until the standards are created.

And I very much urge those of you who are on the agriculture task forces to please strongly consider that as one of your main missions, and please to consider contaminant issues like mercury and PCBs. We do not want consumers in California, for example, who will see a Prop-65 label indicating that there's a carcinogen in their fish to also have an organic label slapped on top of that. Consumers will not be able to make sense of what that means.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Urvashi.

Okay. Is Mark Kastel -- I mean, not Mark Kastel, Mark Retzloff --

(Laughter.)

It's like confusing Arthur --

(Laughter.)

Okay. I don't see Mark Retzloff in the audience. So Kathy Seus, and then Joe Mendelson.
MS. SEUS: My name is Kathy Seus. I'm here on behalf of Food Animal Concerns Trust, FACT, in Chicago, Illinois. I just want to give a little bit of background on how I got involved in this whole organic process. My first NOSB meeting was the Chicago meeting a couple of years ago. And for anyone that attended that meeting, I think we would all agree that it was lively, to say the least.

And it became fairly apparent during that meeting that there was truly a lack of cooperation and collaboration between the NOP and the NOSB. In the past couple of years, it does seem like we've sort of taken a step forward, that in some respects there has been a little bit more cooperation.

However, what happened on Monday with the rejection -- the way the rejection of the pasture suggestions were handled, sort of felt like two steps back. That said, I'm going to acknowledge Chairman Riddle's comments earlier today that he does feel that there's a spirit of cooperation, a collaboration, that's -- you know, the precedent is being set today. I'd just like to say -- I mean, I'm going to put the
past behind and let's say let's just move forward on that, and let's keep that going.

We'd like to see these regulation changes on pasture move forward. I'm asking that the NOP and the NOSB continue this precedent that's been set of collaboration and cooperation and move forward on this thing. I think it's possible, and I'm going to sort of take a positive spin on this and -- and say that that happens, and it happens quickly.

I didn't say this earlier, I apologize. I also have a proxy from Kathie Arnold, and I'd like to read her comments.

"I do want to express my disappointment that the pasture rule changes have been sent back to the NOSB. I retain optimism that this is truly due to something lacking rather than due to pressure applied to the NOP by commercial and/or political interests. I retain hope that the NOP has or will clearly articulate to the Livestock Committee what specifics were missing in these NOSB-approved rule changes, so that the process continues as expeditiously as possible."
"Thanks to the Livestock Committee for working on modifications already. And I encourage posting of a draft rule change as soon as possible to allow public comment, to enable a vote at the fall NOSB meeting, if it happens.

"Great thanks to the NOSB for passing the pasture guidance document yesterday. I appreciate all the hard work involved, and the willingness to incorporate public comment. I ask that the NOP accept and post this guidance document as soon as possible."

That's it.

CHAIRPERSON RIDDLE: Thanks, Kathy. And just to clarify once again that the NOP did not reject our pasture rule change recommendation. They referred it back to us for further work. There's a significant difference in the two. And referring back to us is part of a collaboration. They need something that really works for them, and that can be enforceable and can move forward in the rule-writing process with sufficient justification.

So please have patience, and we all just need to stay focused on that.
Any other -- okay. Moving on, we have Joe Mendelson, and next up Liana Hoodes.

MR. MENDELSON: Good morning. I'm Joe Mendelson. I'm the Legal Director for the Center for Food Safety. I want to thank the Board and the program for all their hard work over the last several days.

Two brief comments. The first is more of a response to some comments that were made earlier in the week, and that to paraphrase those comments that the goal of the Board and the program should be to -- an almost undue speed in -- in a promotion sense you get to a point of 20 percent acreage for organic production, and we shall be striving to that, and that's the main goal.

And certainly the Center for Food Safety wants to see as much acreage as possible under organic production. But I just want to remind the Board and others that the goal, and specifically the legislative history of the Board, is to set standards, and to make sure when we get to 20 percent there's a road map on how to get there.
You know, percentage of acreage doesn't mean anything if the standards don't mean anything. And to suggest that folks in certain communities who are trying to make sure that the standards maintain what they feel their constituents -- consumers and environmental advocates -- have substance that those constituencies want to see doesn't mean we're trying to hinder in any way the expansion of organic.

On the contrary, we want to make sure that organic expands, but it also means something because that's the goal is to have organic mean something.

The second is to follow up on the comments of Urvashi Rangan from Consumers Union on the enforcement issue. I believe I commented a couple of Board meetings ago, and still am working on a paper I promised the Board, but we do have this -- this issue of enforcement that I don't think is resolved.

I mean, there was some suggestion this week that folks dealing with personal care products, while I'm not making any comment on whether they should be within the program or not -- and I certainly sympathize with some of the folks who had earlier
testimony on that -- but the idea was that if the personal care products aren't under the scope of the program, they can still go to an organic certifier to get certified, they just can't have the USDA seal.

And I think we -- if that's the road we want to go down, that folks can use the term "organic" without representation or without standards through this process for agricultural products. We're creating a two-tiered system. And as Urvashi mentioned, it is happening in fish, and it would happen in -- in personal care products.

And that is that people are out claiming that they're organic, implying that they meet USDA standards, whether they use the USDA seal or not, when, in fact, both the program and this Board have not made substantive findings as to what those standards are.

And it's very clear that the -- the law, 6519(a), says, "Any person who knowingly sells or labels a product as organic, not with a USDA seal, except in accordance with this chapter, shall be subject to civil penalties not more than $10,000."
I don't think we want to endorse or create a system by which people are out there using the term "organic" when we don't have substantive standards. And that term, as Urvashi mentioned, does imply, whether the seal or not, to consumers that it's meeting some type of USDA endorsement.

That may be very unfortunate to people who, if the program and the Board decide that personal care is not within the scope -- and I can sympathize with that -- but the fact of the matter is to -- to have -- the solution isn't to have product out there labeled organic, and have consumers misled on -- on -- and I would hope we would try and come to some resolution.

I don't think we're -- we've really gotten -- we've talked about scope, but we don't talk about how the program is enforcing. And I don't think enforcement of just pulling the seal is enough. I think it's the term "organic" that really is the heart of the matter.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Joe.
Okay. Liana Hoodes, and Lisa Hummon.

MS. HOODES: Good morning. I'm Liana Hoodes. I'm going to read comments verbatim from Michael Sligh.

MS. CAUGHLAN: Do you have a proxy? I mean, are you taking five and five?

MS. HOODES: No.

MS. CAUGHLAN: That's fine.

MS. HOODES: No. Michael Sligh is -- "I am Michael Sligh" --

(Laughter.)

-- "founding Chair of this Board, Co-Chair of the National Campaign for Sustainable Agriculture Organic Committee, and Policy Director for Rural Advancement Foundation International USA.

"Please let me start by thanking all of you for your perseverance and continued dedication to the advancement of organic agriculture. We may not always agree on everything, but the fact that we are all still here speaks volumes of our shared commitment."

"I send special thanks to the upcoming
NOSB retirees. I know well of your sacrifice, and welcome and many thanks to the new Board members for your willingness to answer the call to serve organic agriculture. I look forward to getting to know each of you better.

"I wish to use my time to strongly support several key points. First, I strongly support the inclusion of biodiversity language into the guidance template for certifiers. This is an essential element of organic agriculture and should be much more strongly visible in our verification documents."

"On a related point concerning how strongly -- how to strongly require organic seeds, I again remind the Board that since this program has a global reach, and especially because of this, it can have unintended impacts on program participants in the global centers of biodiversity.

"We must be very aware that forcing this requirement too quickly, or so strictly, will have extremely negative impacts on local seed biodiversity and farmer choices. Locally-adapted varieties, which have been proven winners over the centuries, must
always be supported over imported seeds, organic or not, which can have a narrower genetic base, be an inappropriate variety, and/or be of unproven local adaptability.

"I caution you about this and offer support in the development of appropriate steps to support the growth of organic seeds without undermining already vulnerable locally-adapted seed biodiversity.

"Secondly, I am very disappointed that the very solid work by family-sized organic dairy farmers to clarify the pasture guidance requirements has been delayed. A lack of greater specificity is critically needed to guide certifiers to make consistent decisions and to avoid loss of consumer confidence, not to mention ensuring the welfare and natural behavioral needs of the animals.

"However, we cannot have it both ways. We have asked, and the Inspector General of USDA has required, the NOP to demonstrate cooperation with the NOSB and to provide responses to the many previously unanswered NOSB recommendations. They have actually
responded to this issue.

"To expedite this critical issue, we need to request that NOP/USDA response be much more specific and that it be put in writing if further delayed. My suggestion is for you and the NOP to roll up your sleeves and fix this matter at this meeting. Failing this, I strongly urge an additional meeting before the end of this year, and for the meeting to be held out in the dairy country to facilitate greater farmer access to this timely matter.

"Please do not leave this matter hanging. It has very large implications. Some additional specifics are better than the current void.

"Finally, I rise to make critical comments regarding the sunset provisions. It is very important that NOSB exercise your full statutory responsibilities. You were very consciously awarded these responsibilities as a duly-appointed citizen board. Your actions should be consistent with and provide solid continuity from past NOSB decisions. It must also be rigorous and fully transparent.

"When the founding Board voted on the
original list of materials prior to the organic rule, we based our vote on several very important caveats. One, the sunset process meant that all materials were required to be rereviewed within the five-year requirements. Many of the votes were very close, controversial, and lacked clear consensus. Many of the materials would not be on the list at all if this caveat had not been clearly understood.

"Two, in fact, we also understood that if the material was not rereviewed within this timeframe it automatically went off the list. This is very important.

"Three, synthetics in processed foods labeled as organic were clearly understood by many on the NOSB to be not allowed by OFPA. We remanded USDA that they must be resolved in the rulemaking process, or that those materials voted as allowed synthetics for processed foods would be in violation of OFPA. Our votes were made based on that understanding.

"Four, many materials votes required additional caveats, such as accelerated reviewed, annotations, and narrow use requirements, to win Board
support, et al., especially regarding the use of synthetics in processed foods. It is incumbent upon this Board to ensure that the sunset process adhere to the legislative intent, the law, honors the original caveats, and does not set expedient precedents that will allow for unwarranted discretion and special interests to hold sway over organic integrity.

"Please feel free to contact me if I can be of additional help, clarification, or support. And thank you for your -- for this opportunity and for your continued dedication to organic."

Thanks.

CHAIRPERSON RIDDLE: Thanks, Liana and Michael. Oh, a question?

MR. DAVIS: Concerning Michael's comments, there was a lot of meat there that -- how do I get a copy of that, for example?

MS. HOODES: I actually have one copy, and I can probably make more here, too, so --

CHAIRPERSON RIDDLE: If you could make more to distribute, that would be great. And make sure that Katherine has a copy as well.
MS. HOODES: Okay. Very good.

CHAIRPERSON RIDDLE: All right. Thanks Gerry.

Okay. It's Lisa Hummon, and then Brian Baker.

MS. HUMMON: Good morning. I'm Lisa Hummon with Defenders of Wildlife. And that's spelled H-U-M-M-O-N.

Defenders of Wildlife is a national 501(c)(3) nonprofit conservation organization with over 490,000 members dedicated to the protection of native wild animals and plants in their natural communities. Defenders has been actively involved in supporting and strengthening sustainable agriculture and conservation working landscapes for more than 20 years.

We would like to thank the Board for passing the biodiversity amendments to the organic system plan. We helped provide input in the development of the amendments, and we would like to thank the Wild Farm Alliance and ATTRA for their leadership.
We believe that working lands can and are doing much to conserve biodiversity. With 40 percent of plant and animal species listed as threatened or endangered, found only on private and state lands, as well as 60 percent of at-risk species, it is extremely important that we continue to encourage biodiversity conservation and agricultural landscapes.

By eliminating the use of harmful pesticides and promoting ecologically sound practices, organic agriculture has great benefits for biodiversity and at-risk species. And by adopting these biodiversity amendments to the organic system plan, the organic label will clearly define what it means to conserve biodiversity on an organic farm or ranch, as well as the surrounding landscape.

By rewarding these ecologically beneficial practices, the organic program will further implement the goals of fish and wildlife and habitat conservation, sustaining rural communities and providing a trusted label for consumers.

We encourage the NOSB and the NOP to implement this revised OSP by providing it to
certifying agencies, putting it on appropriate websites, and any other means you can find possible. And Defenders will do what we can to get the word out about these as well.

We would also like to thank the Board for approving the guidance for organic pasture requirements. This is a good step in the right direction to ensure that consumers have confidence that the organic milk and other products that they buy have been produced in an environmentally sustainable manner, and that farmers who are using these good practices and being good stewards of the land are rewarded properly and fairly in the marketplace.

This will also help protect the food systems that provide health and nutrition benefits to humans and ecological benefits to wildlife.

We encourage the NOSB and the NOP to continue to work together to revise the proposed rule change, post it for public comment, and bring it to a vote at the next NOSB meeting.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Lisa.
Brian Baker, and then Joe Smillie.

MR. BAKER: Brian Baker, Research Director, Organic Materials Review Institute. And I'd like to start by recognizing and honoring your practical expertise and your experience and all of the work that you've done.

I really also want to specifically thank you for passing the synthetic/non-synthetic clarification recommendation. And I think that having this clear guidance will help us move ahead with our mission to independently and transparently review inputs for use in organic production and processing and handling.

When I came in the room yesterday while you were discussing it -- I apologize, I was out of the room, I came in late, and I sat down next to Pat Kane and I asked her how long the discussion was going on. She said about 20 years.

(Laughter.)

But, really, it's been more -- it's been over 30. Our -- we've been dealing with this question of synthetic and non-synthetic since the passage of
the California Organic Foods Act in 1979, or the first Rodale standards in 1972. It's not like we just came up with this yesterday.

And we've been grappling with these issues. They're difficult. But I think it's not rocket science, and, you know, it's -- it is -- there are some pretty fundamental guideposts that we have.

We're also not arguing about the vast majority of things out there. The vast majority of inputs used in agriculture and in processing are prohibited. There's no question about that. There are only a few things that are allowed in organic, and it's those gray areas where we're having all of the discussion, really.

So we've had experts on the NOSB and on the Technical Advisory Panel look this over, and, you know, reasonable people can disagree. But the disagreements, if you look at the record, are very few. And, you know, yes, they're contentious, they're passionately argued, but we're really only talking about a few things where we have deep-seated disagreements.
OMRI wants to work with all parties and the public, with the NOP and the NOSB, to help bring about an understanding, and to have a dialogue on these -- on these issues where we have -- have worked with decisionmaking, looking at different formulations, different mixes, and we realize that synthetic reactions don't always take place when you put a bunch of things in a bottle and shake it up.

But sometimes they do, and, you know, these side reactions do occur, you know, and to understand, you know, these -- these reactions run downhill, you know, and there are certain conditions where they'll take place, certain conditions where they won't. We need to have -- we need to look at that and have a better understanding.

The other thing is that all substances are active. Everything out there is used for a purpose. There are a few exceptions that are in federal statutes, such as EPA registered pesticides and FDA registered animal drugs. Those are specific exceptions. But everything put in a fertilizer bag, or everything put in a vitamin pack, is in there for a
reason.

So at the end of the day, you know, organic is a labeling law. And, you know, it's looking at the different ingredients that are on the bag or on the box, and I want to throw in as far as scope goes, also don't forget fertilizer and the way fertilizer inputs are labeled.

But, you know, it's our take that if it's on the -- if it's on the bag label, and it's synthetic, and it's not on the national list, it's not allowed. And I'd like to have, you know, clarity on that, because that's not -- if that's not going to be followed, that's a huge change from what we've been doing for the past 30 years or so.

And one minute left, I'd like to switch to the other thing I'd like to talk about. I talked about pathogens on Monday. I'd like to talk about another contaminant, and that's heavy metals. And, you know, we've been -- we also published a study on heavy metals found in organic inputs, and we are suggesting -- we are hoping that the NOSB will work with the NOP to clarify what it means to not
contribute to the contamination of crops, livestock -- crops, soil, and water, with heavy metals.

And we're looking at a no net degradation standard. We believe that this is the most protective and precautionary way to -- to deal with it. We also recognize that arsenic and lead are on the prohibited non-synthetics list, and we'd like to know what thresholds of arsenic and lead are acceptable.

Is that time?

CHAIRPERSON RIDDLE: That is time.

MR. BAKER: Okay.

CHAIRPERSON RIDDLE: And I think you actually finished your -- there's a question. Go ahead. I'm sorry. Yes. I had looked there first, but --

PARTICIPANT: A blind spot.

CHAIRPERSON RIDDLE: Yes, right.

MS. OSTIGUY: Brian, the Crops Committee is looking at contaminants in fertilizer specifically at the moment. Could I get a copy of that report? Is it done?

MR. BAKER: Yes, you can. I don't have it
with me. It is on our website.

MS. OSTIGUY: Okay.

MR. BAKER: It's on the Advisory Council section. I can send you the link, or I can send you --

MS. OSTIGUY: That would be great.

MR. BAKER: -- a hard copy.

MS. OSTIGUY: Just send me a link. That would be great.

MR. BAKER: Okay.

CHAIRPERSON RIDDLE: Gerry?

MR. DAVIS: Is George still next or --

CHAIRPERSON RIDDLE: No, he was just getting my attention.

MR. DAVIS: A comment about no net degradation principle for heavy metals in the environment, and so forth. Elaborate on that a little bit, please.

MR. BAKER: Well, you don't want the levels to trend up over time. So a no net degradation would mean if we've got, say, 10 parts per million of arsenic in the soil today, we want it to be no more
than 10 parts per million, you know, 10 years, 20
years, 100 years from now. And if we have -- if it
goes from 10 to 20, we have degradation.

MR. DAVIS: So that would be -- going from
10 to 20 would be based on a site-specific level, or
are you talking about an average for the country or --

MR. BAKER: That's a very good point, and
I would -- the suggestion is to make it an average for
the country, a national average, because what you have
if you make it site-specific is that the more polluted
areas receive more pollutants. The less polluted
areas receive less pollutants. And if you make it a
national average, then it averages out.

CHAIRPERSON RIDDLE: I have a comment, and
then back to Nancy. I really appreciate you bringing
this up, and it's been on my mind as well. And I see
that it relates to the whole term used in the
regulation, and even defined, of unavoidable residual
environmental contaminants, or UREC.

And in the preamble it discusses that the
Secretary will be establishing UREC levels. And to my
knowledge, the Board and the program has not taken
this up, and, you know, I -- there certainly are other priorities to be working on, but we can't ignore this one forever.

So I truly appreciate your bringing it up and providing some further information to the Board to consider.

Nancy?

MS. OSTIGUY: The national level, standard, whatever, would make -- I can see the logic of that. How would we deal, though, or has OMRI thought about how we would deal with materials or substances like selenium, which have very widely different levels in the country?

MR. BAKER: That's a good question, and I would suggest, you know, to echo what Jim says, I know that you have many things to deal with. And to make it tractable, to make it possible to deal with, I would suggest you prioritize certain metals starting with, of course, arsenic and lead, because they are on the prohibited national list, and they're referred to in the statute.

But then, also looking at -- I would
suggest that the next priority after that be cadmium, because it appears in so many different amendments used in organic production, and because of its mobility and toxicity.

CHAIRPERSON RIDDLE: Thanks, Brian.

MR. BAKER: Thank you.

CHAIRPERSON RIDDLE: Okay. We have Joe Smillie, and then Leslie Zuck. And before you start, Joe, if I could have someone check the list, sign-up list, see if there are any additional names, because we're getting down to the end. I want to make sure everybody gets their chance.

All right. Thanks, Joe.

MR. SMILLIE: Joe Smillie, that's S-M-I-L-L-I-E. I work for Quality Assurance International, and I'd like to speak today on behalf of that agency and also as an organic consumer.

Thank you for having this meeting. Thank you for allowing everyone to speak. As a certification agent, we deal with the issues that you're talking about every day. We have a policy meeting every Tuesday morning that lasts for two
hours.

We call our group Deep Gray, and we deal with this stuff all the time, so it's really refreshing to come here and hear fellow colleagues deal with the same issues, because they're tricky. And as Brian pointed out, we have general agreement on most things. It's the middle ones that we have trouble with.

I'd specifically like to thank the NOSB from the bottom of my heart for clarifying and coming back with a new recommendation on listing of certification agents on packaged product. That was really disturbing. The report last time we asked you to reconsider it. You did. You came up with what I think is an excellent recommendation, and hopefully the NOP, it sounds like, will adopt parts of it.

I've heard Barbara specifically talk about voluntary certification and the recognition of voluntary certification for retailers who accept the certification as a final handler. And that's very important, and I look forward to seeing that enshrined.
The issue about mandatory certification for retailers or others who go the private label route is complicated. And as you've discovered yourself, where do you draw the line between just having something made for you, and then also -- we also have clients who have co-packers, but basically they're running that co-packing facility.

I mean, they're filling out the application forms, the organic compliance plan, the specifications, ordering the agreements -- you know, they should be certified. But it's a tricky issue and one which I know that you'll deal with, and it will take some time to figure out where you would stand on mandatory certification of companies that commission private labels but are really much more involved in it. I look forward to that dialogue and hope to participate in it.

On the second issue, it's a mix of personal and professional concerns, and that's the whole idea of the yeast issue, which talks about a lot of living organisms. I especially liked the conversation. I loved Dave's very simple analysis --
living and non-living. I know it has its limitations, but I like it.

I loved Goldie's supportive culture, because we're talking about cultures that can be handed down from generation to generation that are cared and nurtured for in the -- and are truly organic.

I think Andrea's point on the regulatory that nothing forbids it, if you can come up with an organic compliance plan to justify the raising and culturing of these wonderful cultures, and that's a reasonable compliance plan, I think you'll see a great difference between the way conventional bacteria are produced and others.

And with the GMO threat to enzymes and that, I think we'd better start looking at organic culture of cultures.

On a personal note, I eat large amounts of miso, tempe, shoyu, and tamari. And these were -- some of these products were some of the original organic products in the organic industry, and it would just be more than a crying shame -- I can live with an
organic Twinkie, but I can't live without organic shoyu and miso. And I would hate to see those products eliminated because of a strict, rigorous, scientific interpretation about Koji cultures.

I've been to -- koji is, and I'm getting my, you know, cartoon book of Guide to Chemistry for sure, but aspergillus oryzae -- or, no, ryzobis -- ryzobis -- no, ryzobis is tempe, aspergillus oryzae is miso and shoyu and that. And I visited some of these cultures, and let me tell you, it's an agricultural culture.

I mean, the way that koji is raised is phenomenal, and you just need to go to South River Miso in Conway, Massachusetts, if you want to see organic culture raising. It's fabulous.

On that issue, you know, don't take away my miso and shoyu --

(Laughter.)

-- as organic. It really will get ugly, then, and betray my last name.

On the third issue, I really support --

and I thought Michael McGuffin really laid it out very
clearly for you. I think it's just really obvious, and I think we just need to deal with it. I don't think that's a complicated issue, as I carefully pointed out myself.

And I think we need, as a certification agent -- you know, we're tied. Joe Mendelson made some comments about having, you know, certifier seal up there without the USDA rule. And that's a problem for us, because when you get down to the logistics of what certificate do we issue, yes, there's no USDA seal, but what certificate do we, as an ACA, cut for a product that we clearly see as organic, we clearly see their right to do it, but we've got this jurisdictional issue.

So let -- I think that's solvable, and I think if we applied political pressure and allow the NOP to make the right decision, I think that's the route we should take on that.

So, once again, I thank the NOP for their great work, you for your great work, and I really enjoy these meetings. Some people find them tedious and boring, but for those of us who live every day in
these issues it's just fun to see other people have to suffer the same fate.

(Laughter.)

Thanks.

CHAIRPERSON RIDDLE: Thanks, Joe, and it's good to see you here.

Leslie Zuck, and then Marty Mesh.

MS. ZUCK: Good morning. I'm Leslie Zuck, Executive Director of Pennsylvania Certified Organic. In regard to the Board's recommendation on commercial availability of seed, I would like to say that we have farmers who often ask us if they -- "Do I have to purchase organic seed? I've never heard of this supplier before. They may be in California or New Mexico, and I'm used to buying my seed from my local dealer." And they really are reluctant.

It may be a vegetable grower who really needs to meet their customer satisfaction and demands for the quality of their vegetables, or it could just be an organic dairy farmer that doesn't want to risk their entire corn crop to some unknown variety of seed.
So we -- we tell them, you know, that -- I mean, these are also farmers who are very dedicated to organic, and they do want to do what the right thing is to do. They're not trying to wiggle out of it, but they've got -- their farm is their main -- their main concern.

So we tell them they have to make a good faith effort to use the organic seed, and in this case that they should try some of the seed, get some of it, try it, see how it works for them, see how they like it, and that's what it really boils down to. If the farmer likes it and it works for them, and it works for their customers, they're going to grow it.

And you know, I've seen this happen. You know, I have to say, I would be a bit embarrassed to have to tell the farmer, "Well, you know, you could try some, but you've got to use scientific methods and replicated trials." I mean, the farmer doesn't know how to do that, and I don't know how to do that. So that's -- that's the one issue I have.

And some farmers have actually done these trials and have been disappointed in the quality of
the organic seed. On the other hand, many produce
growers, particularly tomato growers of heirloom
tomatoes, have been happy to be able to switch to
organic seed because of the more availability of the
quality seed.

Personally, I had an entire year of total crop failure the first year I purchased all
organic potato seed, and I wouldn't buy those spuds again, scientific methods or not.

PCO also does not have a database or a list of the non-organic seeds that our clients are
growing on hundreds of farms in Pennsylvania. So the reporting requirement would impose an additional
paperwork burden on the farmers as well as this particular certifier to come up with that list.

I'm just really reluctant to impose more paperwork burdens on my clients without, you know, some strong justification that I can say that this information and data is useful somehow. And I guess I'm not feeling that way at this point, that the information will be used for something that would be useful for the industry.
Regarding the labeling of organic products by non-certified retailers -- different subject, sorry -- this is a major problem. The retailer's exemption was intended to exempt grocery stores from certification, allowing them to buy and resell organic products in their stores without having to be certified.

However, the problem is once a retailer starts putting its own products out there in the huge supermarket stream of commerce, it should be required to submit to the same organic certification requirements that, you know, other brand owners who have identical organic products that are competing with these store brands have to -- have to submit to.

You know, I'm also extremely uncomfortable with having the PCO seal and the USDA seal on millions of packages sold by a company that PCO does not certify. PCO is responsible for the organic certification of those products, yet does not have the right to inspect the premises or the records of the company that's selling them to the customers or consumers, nor does the company have -- that company
doesn't have to submit sales records to us, it doesn't have to pay certification fees, it gives them an unfair marketing advantage over identical products branded by certified entities, you know, which in most cases the store also sells those products and is making a profit on them as well.

So I feel like if they want the benefits of certification, and they want to use the USDA seal, that the retail operation should have to pay the price and submit an organic system plan and be inspected.

We've already run into problems with this following up on consumer complaints about products carrying the PCO seal, but branded by a company we don't certify. We also have a situation where our client's label, complete with the PCO seal, was being placed by a retailer on a product our client did not produce.

This product was then distributed throughout the east coast, and to this day I don't know if it was organic. But that's been resolved.

I support the recommendation that labeling products with store brand -- with the store brand
becomes processing and requires the store to obtain certification for that product. Not necessarily the entire store would have to be certified, but the production of that product should have to be certified, and I hope that this issue can resolve -- be resolved within the constraints of OFPA.

And one last thing -- two sentences -- honey standards are desperately needed. Organic honey is being marketed in the U.S., accompanied by certificates issued by USDA-accredited certifiers, which state that the honey complies with the NOP standards. And it's difficult for me to explain to potential clients why we can't certify honey producers when their competitors in foreign countries are being certified.

CHAIRPERSON RIDDLE: Okay. Yes, Hugh, then George.

MR. KARREMAN: Leslie, how is it that, if I understood you right, some of these -- some products are out there with the PCO label if you didn't give it? How is that?

MS. ZUCK: Good question. Originally, the
retailer was -- had a private label agreement with one of our clients, and had a label produced for that client and packaged -- the products were packaged and put in the stream of commerce. Our client was certified private label, no problem.

But then they ended their agreement, and the store found another supplier of the product, and used the labels and put it on the other product produced by another place.

MR. KARREMAN: So they had spare labels.

MS. ZUCK: They didn't. They actually -- from what I understand, they actually went and had them xerox copied and made the same way that the old ones were.

MR. KARREMAN: That would sound illegal, but I don't know what the statutes say on that.

CHAIRPERSON RIDDLE: Are they also using the USDA seal?

MS. ZUCK: Oh, yes. The seal was -- the seal was --

CHAIRPERSON RIDDLE: So both your seal and USDA.
MS. ZUCK: The label was identical to the one we approved. It went through the certification process, was approved by the certifier, had our certification on it, and they didn't think they were doing anything wrong. It was not -- I don't believe it was intentional.

CHAIRPERSON RIDDLE: We have George and then Gerry.

MR. SIEMON: But that's -- this is fraud. You know --

(Laughter.)

-- please don't confuse policy with fraud.

Please. Okay?

MS. ZUCK: They really -- I think it was totally an honest mistake. Sorry.

CHAIRPERSON RIDDLE: Okay. George, continue.

MR. SIEMON: You first said that there's places you did certify, and where you certified the plant, you certified the processing, you certified the ingredients. It's got your seal on it. You said that you still felt uncomfortable that the retailer was
selling that.

I don't understand that. You're responsible -- your seal -- for the integrity of that product when it's sealed. Why do you care what the certifier and private label -- I mean, the retailer's -- there's no difference between that or a brand and once it leaves the plant.

Why is it a concern to you about their certification when you're responsible for putting it in the container and sealing it? So I'm confused with what you said earlier. You said you were -- that it wasn't right. I disagree.

MS. ZUCK: Well, I --

MR. SIEMON: Or I didn't understand your point.

MS. ZUCK: It makes it really difficult for the certifier to follow up on any consumer complaints about a product that they purchased somewhere. We can't -- the situation that I just talked about would not have occurred had we been, you know, inspecting and looking at the records, and that the retailer, as a certified entity, would understand
what's required of them, what's not allowed to be
done, what is required as far as labeling, would not
have occurred had we certified that plant.

We had to spend a lot of time and effort
following up on this complaint. It was very
difficult. It happened in a state -- you know, five
states away, you know, somewhere else, that has our
name on it. So we're required to follow up on
complaints by -- you know, according to our
accreditation requirements, and, you know --

MR. SIEMON: But that seal was wrongly
applied. It was fraudulent behavior. You know,
you're always going to -- fraudulent is going to cause
a lot of trouble for all of us to follow up on the
research.

CHAIRPERSON RIDDLE: I have a comment, and
then we'll go to Gerry and Hugh. And that is in
response to your questions about value of seed lists.

Well, first, I'd just, you know, like to point out as
you well know that records are mandatory to
demonstrate compliance and to record transactions, and
that's inputs as well as sales.
And so, you know, and certainly something like records of seed purchases do need to be recorded by the operator and reviewed by the inspector. So it's not like the information does not exist. It should exist to comply with the regulation to begin with, but you -- yes, it's true that this would be an additional collection, and then submission of that information that already exists.

And why is that valuable? I guess to a certifier, if you do have a database where that's feeding in from different inspectors and different reviewers, you have a better tool for compliance between all of the operations you certify to make sure you're making consistent decisions, you know, and so that one operator isn't telling one inspector a certain story when those seeds are clearly available in an organic form, even in that variety.

So it can help with -- you know, with your own enforcement, but then also to bring consistency between certifiers in the accreditation process, so that you're on a level playing field with all other certifiers. So those coming into NOP certainly could
help bring consistency with that enforcement.

And then, finally, having that information come in in a generic form, not lists of names of the companies or the operators, but just the varieties, can certainly help advance the whole development of organic seeds and the availability, so that operators can better comply with the organic seed requirements. And maybe that wasn't spelled out clearly in our discussion yesterday.

MS. ZUCK: Yes. Generally and philosophically, I see that, but I guess my concern was all this data going to someplace and, you know, being collected but not necessarily being available for any useful purpose. I mean, I don't want to just send it and then have it be --

CHAIRPERSON RIDDLE: And for now, we've made our recommendation. I'm sure we'll hear back about it. And, once again, it's not the end, it's just the beginning of the story.

MS. ZUCK: Our clients do keep, you know, records. Those records are kept at the farm, and inspectors do review them. We just don't collect them
at the office.

CHAIRPERSON RIDDLE: Right. I understand.

Gerry, did you still --

MR. DAVIS: You covered most of it, Jim.

On the organic seed, the main thing is that -- I want to express to Leslie is that we're trying to make some progress toward further development of the organic seed industry, which several commenters have pointed out to us that it's stagnant, there's not progress being made towards fulfilling the requirements of growers using organic seed that's available, and the market is not developing to make that seed available because of the way we do things right now. And so we're stuck, and that's the --

MS. ZUCK: Ultimately, it will benefit the farmers to have more availability of organic seed, but I think there may be other ways to do it.

CHAIRPERSON RIDDLE: Any other - Hugh, and then Bea.

MS. ZUCK: Surveys.

CHAIRPERSON RIDDLE: Okay. You had -- hold my chain here.
MS. ZUCK: I think the USDA should have a -- send a survey to farmers or some other way to do it, or seed production companies, you know, some -- it doesn't really need to be the purpose of this Board or this -- or the farmers to come up with that.

CHAIRPERSON RIDDLE: No. But compliance with the existing regulations certainly is --

MS. ZUCK: Yes, we can --

CHAIRPERSON RIDDLE: -- fair game. Hugh?

MR. KARREMAN: You mentioned about the honey coming in from wherever it is, and that, again --

MS. ZUCK: Foreign countries.

MR. KARREMAN: -- it's a labeling issue. But your -- what is it -- you have to put on your seal? Or they're coming in with USDA approval and --

MS. ZUCK: Well, if a client -- yes. If a client has a product that contains honey, then we review that product and we determine that every ingredient in that product has a certificate accompanying it stating that it's USDA -- certified by a USDA-accredited certifier.
So we get this certified organic honey, and it comes with a certificate that says that it’s certified to the NOP standards by a USDA-accredited certifier. So in -- I then did -- investigated and looked at the standards to -- under which it was certified, and they are not USDA. I mean, they are not in the standards because there are no honey standards, so they are just sort of these other standards for honey production that this certifier uses.

MR. KARREMAN: So then you probably shouldn't be certifying that or putting a PCO label on it.

MS. ZUCK: Well, the way I understand it, that if -- you know, I can't really look behind the USDA certificate that states that. I mean, my job is to make sure the certificate is valid, which it is, and I can't really go past that and check to see at the farm level that it was done properly. If I did that with everything, I don't think that I'd really be allowed to do that even -- question other certifier's certificates.
CHAIRPERSON RIDDLE: Andrea, then Bea.

MS. CAROE: Just a quick question. Leslie, could you disclose to us how you found out that the label problem was happening? Was that through enforcement that you found out, or was that your own monitoring surveillance and --

MS. ZUCK: Our client had a regional distributor that found it in the stores and --

MS. CAROE: So it was reported back to you --

MS. ZUCK: By the client.

MS. CAROE: -- by private industry.

MS. ZUCK: By the client.

MS. CAROE: Okay. Thank you. I just was curious.

MS. ZUCK: No one would have known there was anything wrong with it.

CHAIRPERSON RIDDLE: Okay. Bea?

MS. JAMES: I have just some -- you know, a series of questions to help me understand exactly why you think it's important for a retailer to be certified in order to sell a private label product.
So bear with me, okay?

If a retailer -- if a retailer is certified, say, in the grocery department, what are just like the basic things that they have to do to be in compliance for that certification? And I think I know, but I just -- I'd like to hear from you.

MS. ZUCK: In the grocery as in the -- their store? We don't certify any retailers, so you might be asking the wrong person.

MS. JAMES: Okay.

MS. ZUCK: What we do is we certify branded products --

MS. JAMES: Okay. Okay.

MS. ZUCK: -- that are -- you know, we looked at the ingredients, and, you know, we -- mainly we checked the label to make sure the label is proper and the, you know, amounts of labels that are used matches the amounts of product --

MS. JAMES: Okay.

MS. ZUCK: -- that was produced, that sort of thing.

MS. JAMES: So it's my understanding that
if you're certified in the grocery department, that
that means that you have to make sure that you're
handling and receiving and that you're -- you're not
commingling, even though that's difficult to do,
because a lot of those packages are packaged anyway.
Correct?

MS. ZUCK: Yes.

MS. JAMES: Okay. So that's kind of like
the basic cartoon version of retail --

MS. ZUCK: I'm sure it's pretty simple
with packaged products, yes.

MS. JAMES: So I'm trying to figure out --
how does that help quality control, for a retailer to
be certified in the grocery department, if they want
to sell private label organic pasta sauce? How does
that help you monitor your quality control, and really
their -- they are -- are being certified to make sure
that their handling and receiving and commingling and
store operational level of organic compliance is done
at that level?

But if, say, a retailer is just
contracting out to have pasta sauce with their label
on it, that they don't manufacturer, they don't have any involvement whatsoever except to say, "Here's the artwork for our brand logo, and can you please make sure that that's a part of this," you know, that's on -- that's on this package.

MS. ZUCK: There's a couple of things that can happen. You know, we are only certifying the plant that makes that soup or that canned good, or whatever it might be, and we -- we know how much they make, what they put into it, how many labels they put, and how much they shipped.

But if the store is putting, you know, other -- having contracted with another certified producer to put it on -- to make it as well, it is not certified by us, we don't know that, we -- you know, it's --

MS. JAMES: I'm not sure I follow you, because if you certify a plant to produce -- to make pasta sauce, and that retailer contracts with them to put their label on something that the plant is fully responsible for for making sure that they're in compliance with the organic regulations for
manufacturing and handling, I just don't see the connection for -- for making sure that that grocery retailer is certified at the retail level.

And the only reason I -- I bring this up is because I think that it would actually hurt a lot of manufacturers if that stipulation was put on a retailer in order to sell an organic product. I think there is an exception. I think there are some retailers that definitely go above and beyond and want to have more involvement and want to be to use that seal, and that's fine.

But because of the exemption, I think that the real -- and tell me if I'm wrong here, but, I mean, how can we continue to drive retail certification when there's not clear, concise retail certification guidelines that we have. And why would we -- why would we press that issue in the retail level when, really, the bigger issue has to do with the fact that there is no guidelines for retailers. They're being certified as a handler.

CHAIRPERSON RIDDLE: Comment from Barbara Robinson, AMS.
MS. ROBINSON: Leslie, I'm -- let me try to help answer Bea by asking you -- I think isn't -- isn't what you're trying to say is the fact that you have -- if you had a relationship with this retailer whereby, based on what I heard you say, you had access to records, you had access to records about the product itself, so that you can trace back beyond just what is on that label, you have some -- you have some access to the traceability that gives you this comfort level about what's behind the label on that product, that you do have more of a comfort level about your logo on that private label.

And that's what's discomforting to you is a private label that just may say "PCO certified" on the label. Okay, fine, but you don't know really what was in the -- it's -- okay, let's just take, you know, vegetable soup. You have nothing -- you don't know anything about what's in that can of vegetable soup because it was co-packed someplace else.

But if you have an agreement with the store, and so you've got access to those records, whereby you can go in and see, okay, are all the
contents of that vegetable soup actually produced to
NOP standards that then -- then you've got a better --
you've got a better relationship and --

MS. ZUCK: Well, as Bea has said, I've
done that already at the production level. And to
explain it one step further, from -- I'll just tell you
in real life what it cuts down to is these are not
processed products that were -- I'm talking about with
PCO. They are large quantities of mushrooms and large
quantities of eggs. Okay?

So these products can -- you know, are
just basically sent to the store, overwrapped, and
gone, or they're done at the plant and gone. So, you
know, the -- you know, the idea that we don't -- we
can't follow up with any of that is -- is really, you
know --

MS. JAMES: Is that the retailers' fault,
or is that the person that you certified, the plant
that you certified?

MS. ZUCK: Well, it is, but, you know --
and there's also repacking of produce like oranges and
things that, you know, say certified organic by PCO.
And we're in Pennsylvania, so that's kind of odd. But we get a lot of people calling us up and saying -- you know, they have a complaint about the eggs, and we -- and it's, you know, in a carton with the store brand up in Connecticut or something, and we don't know how -- you know, we really don't know much about how they got there from the distributor.

I mean, they go to the distributor and they go -- you know, these retail distributors are huge, and then they go to all these stores.

I feel like I'm taking a lot of time.

We don't have any traceability once it goes to the distributorship, and then it goes to 50 million stores, and, you know, I --

CHAIRPERSON RIDDLE: I have George, Julie, and Andrea. But I'd like to remind the Board that there's only 15 minutes left in public comment, and we still have five people signed up, so -- George?

MR. SIEMON: What's the difference between somebody out there putting your seal on their package and somebody moving from a certified plant to a non-certified plant and putting a private label or a
branded? What's the difference? Someone has illegally applied your seal to a product that was not certified by you. What's the difference between private label and branded in that illegal incident?

MS. ZUCK: I'm going to say one more thing and then I will -- the way it really happens is there are these producers of mushrooms or eggs, and they're farmers, and they don't have a really huge operation. Like, in Pennsylvania, they're not as big as maybe in the Midwest. And this big supermarket comes to them and says, "We want to market organic eggs under our store label."

And the farmer gets really excited, "My gosh, Giant is going to buy my eggs, and this is so exciting." And so they call us up and they say, "What do we want to do? Giant wants to put, you know, our eggs in their cartons and call them organic. And don't they have to identify a certifier?"

And, yes, they have to identify a certifier, which is PCO. So, and then we tell them we have to have a private label agreement with this, so we can like -- if there's a customer complaint, we can
go inspect the premises, or we can at least call them up and they'll tell us something and they'll talk to us about it, you know?

And they're like, oh gosh, I don't know if they're going to do that, you know? Well, you know, if they want to get certified -- if they want to get organic eggs, we have to do that.

MR. SIEMON: I'm asking about the plant who has illegally applied your label. It's their responsibility to put the seal on there. That plant has done the illegal activity, putting a seal on there that was not who they were certified by.

MS. ZUCK: Yes. Well, we're trying to prevent more of these, you know, problems from happening. Illegal --

CHAIRPERSON RIDDLE: Well, we're not going to resolve that today. Andrea has a very quick point, she promises.

MS. CAROE: Just one quick point, and everybody should remember that when you're talking about store private labels, the only one that has control over that label is the retailer. And the
gross assumption you cannot make is that the co-packer we're aware of is the only one that's applying that label.

MS. ZUCK: Yes.

MS. CAROE: You can't make that assumption. This is not the first time we've heard of this. It has happened before. And the only way that we'll work this out is to be able to understand what happens in that retail operation when they're applying a label that they own.

MS. ZUCK: And the stores often refuse to sign these contracts because they don't want anybody inspecting their store.

CHAIRPERSON RIDDLE: All right. Thanks, Leslie.

MS. ZUCK: Sorry.

CHAIRPERSON RIDDLE: That's fine. It wasn't your fault people asked questions.

(Laughter.)

We have Marty Mesh.

PARTICIPANT: He's coming. He--

CHAIRPERSON RIDDLE: Well, he may have
missed his --

PARTICIPANT: He's right here.

CHAIRPERSON RIDDLE: Okay. In the nick of time, and then -- and Julia Sabin is next.

And, Marty, do you have a proxy?

MR. MESH: I do. Steve Walker.

CHAIRPERSON RIDDLE: Okay. Steve Walker.

MR. MESH: Well, you've heard the articulate, and you've heard the succinct. Now for a change.

I want to thank the -- my name is Marty Mesh, M-E-S-H, the Executive Director of Florida Organic Growers Quality Certification Services, and as is usual, a member of the Board of Directors of the Organic Trade Association, although my comments do not represent the official position of the OTA.

CHAIRPERSON RIDDLE: Please speak into the mike. Get a little closer.

MR. MESH: I wanted to thank Board members for your efforts over the last few days. Thanks to Tony and USDA for making the hotel available.

In relation to Mark's comments, there's
lots of other hotels available. The metro system has worked well for -- for me, and I would be willing to take any farmer under my wing and show them how to save money in Washington, D.C. by --

(Laughter.)

-- finding alternative living arrangements.

It does bring up the point about having meetings outside of D.C., though, and I think that that point deserves to be considered. Again, the meetings used to be outside of D.C.

I believe the NOSB, a group of committed volunteers from different stakeholder groups needs to have increased resources in order to do what's being expected of them, including adequate scientific help accessible for them, and I think it would make your job easier.

I think you're being held to -- to -- I think your job description has grown, and the expectation is that maybe even the program staff -- is putting on you are not workable given the resources that you have.
I, too, have a concern about what I thought about was unfunded mandates of certifiers. You know, annotation has always kind of caused concerns, but if carried out will only translate to increased costs for certified entities.

Michael Sligh's comments articulated well the potential unintended consequences of the organic seed requirements affecting local seed viability. The seed-gathering discussion, while from a macro conceptual point includes admirable reasons, the implementation and suitability in variance and regional specificity of plant varieties, the likelihood that the data, if gathered, and if turned in, is misinterpreted for private corporate gain, private profit, or not available in a timely manner, is very high as well as the effects on internationally/locally adapted seed varieties that are typically and historically used in organic seed production.

After all, it brings -- it brought the memory back of the certificate discussion. We, as certifiers, always wanted dates on the certificates,
that as certifiers the industry and consumers raised numerous concerns. What we were promised by the national organic program staff was a national database -- was held up as the solution. And years later the situation remains the same, where dates on certificates would be helpful in the field.

The database is yet to be implemented, and it's not due to the program staffs, you know, not caring about things. It's just other priorities have taken -- have taken their attention, I assume, or the resources haven't been there.

Speaking of resources, this brings me to the -- to the proposal which I brought forward, and which was brought forward by others as well years ago, for which there was lukewarm reception, and, no, it wasn't for compensating farmers for government-mandated spray programs, which that concern still is out there in the case of citrus growers growing Valencia oranges.

Under the current program, they can still lose access to the organically-grown label for two years without any compensation for the increased cost.
of farming in a more sustainable manner, and the
public benefits which accompany that. Those public
benefits, while becoming more well-known, have not
been espoused with U.S. Government help as the
purported benefits of biotech have enjoyed through the
years.

But concerning unfunded mandates and lack
of resources for this industry to grow, I, once again,
bring up the idea of a simple one percent retail
check-off. Yes, years ago it was a half of one
percent retail check-off -- which would mean a 99-cent
yellow squash would sell on the retail level for one
dollar.

The retail sector, where a large amount of
the money -- a disproportionate amount of the money is
which -- that price captures the whole supply chain,
on the U.S. national retail sales now exceeds $7- to
$8 billion. And so for the sake of easy math, I used
$10 billion, given the continued growth of the
industry. One percent is $100 million.

Certification could be free. I'd be more
than happy to gather seed data and turn it all in to
the U.S. Government with some additional resources on
the certification end.

Certifiers -- the $50 million that we
advocated for for organic research would be there.
Money to do research education would be available in a
painless -- in a more painless way, funded on the back
end, not the front end, at the farm gate level or the
source.

An organic producer in Florida who was
devastated by the 2004 hurricane season, crop disaster
payment, e-mails, there's a lot of work to do at the
USDA. I'll just read this one line into the record
As she -- as they were still trying to get
hurricane disaster benefits, which I'm not sure how
the use of methyl bromide, you know, keeps a hurricane
from affecting you, but it -- this talks about their
-- their application for assistance is denied because
fumigation is a requirement for aquaculture practices.
There is no authority to implement provisions
differently than contained in the regulation.
The idea that -- that organic producers
can't take advantage of other USDA program disasters
because of the bias still held to organic is troubling and remains so.

And then, I need to comment about organic fish. The National Organic Program Director came to Florida in a public setting, spoke about if you can produce a fish in -- you know, under this program by feeding all organic feed, then by God you can sell it and you can put a USDA logo on it.

Companies took the U.S. National Organic Program Director at his word, invested several hundred thousands of dollars into, you know, designing a production system, implementing a production system, carrying it out, certifying it, have been feeding at great cost -- I mean, if there's any livestock producers in here that know the difference between sourcing conventional feed and sourcing certified organic feed, and feeding livestock, the cost is considerable.

And they've been doing that. They have been feeding 100 percent certified organic feed to shrimp. And, yes, they put the USDA logo on it. We have, as their certifier, asked and requested, and I
thought they had removed it and taken it off, but, you
know, we also, on behalf of our certified entities,
petitioned the USDA quite some time ago to engage in
expedited rulemaking -- I believe is the phrase that I
used -- in relation to aquaculture.

And, you know, these producers are trying
to hang on by a thread, competing against shrimp that
isn't fed organic feed, but yet carries organic shrimp
on it. I would think that my colleagues from
Consumers Union and the Center for Food Safety would
be more concerned about shrimp that's not fed organic
feed than shrimp that is fed 100 percent organic feed.

And I understand the consumer -- the
consumer confusion, and that's why we asked for and
requested expedited rulemaking.

I have five more minutes, I thought,
Goldie.

CHAIRPERSON RIDDLE: No.

MS. CAUGHLAN: You have used up nine.

MR. MESH: Oh.

(Laughter.)

Damn. All right. Well, then, I would
like to clarify the private label issue. This is the same -- not the same jar, but the same product that I used for Keith in Atlanta at the accreditation training to try to illustrate the idea of private labeling with the concern.

This is coffee, obviously, that's grown in various countries, a blend of coffees. You know, packed in Germany in probably a certified facility, packed for a distributor in New Jersey. The point that certifiers have or the concern that certifiers have, if the distributor -- if the private label isn't certified, nobody has access to know how many -- how many --

CHAIRPERSON RIDDLE: Finish your thought.

MR. MESH: -- jars of coffee there are, and how many plants throughout the world are actually producing this jar with these labels. You know, if -- if you go to one facility, you can audit how much coffee came in and how many jars went out. You don't know if there's more jars, more factories in other countries producing the same jar.

This jar is in every store there is.
There is a lot of organic instant, you know, coffee that, believe me, people are paying a premium price for being sold. And so that's the concern, at least from my point of view, of certifiers not having access to those records. You know, who has those records, who has access to them, and can we vouch for the integrity of the product.

CHAIRPERSON RIDDLE: Thanks, Marty.

MR. MESH: Questions on shrimp or other produce?

MS. KOENIG: My question is -- well, no, my statement -- and it -- you know, it has to do with Michael Sligh's comment, and you also said it, and I think that there's confusion. And maybe I'm confused as to the way we propose this organic seed under three -- you know, in terms of land races and -- and, you know, developing countries and subsistence farmers trying to get into organic --

MR. MESH: Or Florida farmers.

MS. KOENIG: Well, but if you look at -- it's A, B, and C, or the research. Okay? So, in other words, you know, if they can justify non-organic
seed based on the attributes -- you know, it's a land
race, it's adapted to the specific geographical
region, our policy I don't think is different than
what has been sort of the commercial availability
clause.

But, you know, or, if you're going to say
"research," you know, if you're going to use the
research and say, "Well, no, the research doesn't
prove it," if you're just going to use that, it says
that if you do research to prove it, then you have to
do, you know, evaluative research. And maybe -- and
that's how I understand "or." It's not "and, and,
and."

So I don't know, we can maybe try to get a
clarification of that.

CHAIRPERSON RIDDLE: Thanks for that, Rose. Thanks, Marty.

Okay. Julia Sabin, and then Aaron Zeis. Julia?

MS. SABIN: My name is Julia Sabin, General Manager of Smucker Quality Beverages. Good morning, National Organic Standards Board, National
Organic Program, and interested members of the organic community.

SQB procures organic ingredients, manufactures and markets a number of organic products under our brands of R.W. Knudsen, After the Fall, and Natural Brew, as well as our all-organic brand of Santa Cruz Organic.

SQB has submitted a list of materials to the National Organic Program and the National Organic Standards Board that we believe are essential for the continued use in our handling operation, and those of the farmers and ingredient suppliers.

We encourage the NOSB and the Secretary of Agriculture to keep those materials on the national list. We thank you for the timely posting of sunset review comments and encourage the NOP to continue to post all comments and Board recommendations for transparency.

Any documents that the Board utilizes as information to assist them in materials review should also be timely placed on the NOP website for the public to view.
In closing, we encourage the NOSB and NOP to work in conjunction with the organic industry on reclassifying materials and clarifying definitions. It is critical that recommendations made by this Board take public comment into consideration, are consistent with OFPA and with past board recommendations.

As always, we continue to fully support the NOP and the NOSB and thank you for all your tremendous work and dedication.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Julia.

Aaron Zeis? And then next up is Emily Brown Rosen. And before you start, Aaron, I just want to know if Mark Cox or Christine Cox are here, or Mark Retzloff. Okay. So Aaron, and then Emily.

MR. ZEIS: My name is Aaron Zeis.

CHAIRPERSON RIDDLE: Zeis, I'm sorry.

MR. ZEIS: That's quite all right. Z-E-I-S. And I am a farmer of three acres of mixed produce and I serve as Administrative Director for Indiana Certified Organic.

Good morning, members of the Board and NOP
and guests. I would like to thank you for the opportunity to share my views with you.

Today I'm here representing my opinions as an organic farmer and consumer. I have just a couple of items I would like to briefly address. The first is with regards to the USDA NOP certification of personal care products. I do believe there is a huge demand for personal care items that consumers can trust to be free of chemicals and synthetic ingredients.

I do understand that the authority with regards to personal care items is the FDA. However, many of -- many consumers are requesting more regulation and oversight on these items than the FDA is already providing. I do not have the perfect solution. However, I am aware of the cooperation and collaboration with other governmental agencies in the NOP, such as the EPA, with regard to pesticide reviews to NOP standards and the FSIS reviews of organic meat labels, TTB reviews of organic alcohol labels, and even the FDA with regard to livestock supplements.

I would hope there could be some point of
FDA review or cooperation with NOP to ensure the concerned public is not exposed to harmful chemicals such as thalades, aluminum compounds, or sodium laurel sulfate.

My second item is in reference to the guidance on the commercial availability of organic seed. I would like to thank the Board for addressing this item, as I believe it to be a major problem in the organic industry and a loophole that some farmers may choose to fudge.

I understand there is a large quantity of organic seed that is not being purchased due to this very problem.

I would like to approach the topic first from the vantage point of an organic farmer who grows over 75 varieties of produce, which is really not all that uncommon among diversified produce growers. The concepts of research and replications for all varieties is a completely impossible task. Jim and I spend many hours each year searching for organic seed and documenting my attempt when the particular variety of tomato or lettuce suited by my climate is not
commercially available.

There are thousands of tomato varieties, and many of the same varieties with different names by different seed companies. So hopefully you can see some of the confusion that may arise.

As a certifier, to document the nomenclature of all seed which is reported to be commercially unavailable and cross-reference this to which is available and report this annually, monthly, or daily to the NOP is something beyond comprehension.

Crop failures, weather difficulties, and other factors may leave a farmer without many choices late in the season. How can we really distinguish this with those who are trying to find the cheaper route?

This is a task which can be -- which -- this is a task which would place an overwhelming burden on the certifier, with an increase of labor requirements for all certifiers across the board, therefore likely affecting certification costs and paperwork for farmers.

I believe the commercially-available

NEAL R. GROSS

loophole is a problem and needs attention, and I appreciate the work that the Board has put into this recommendation. However, I believe it has not been addressed from the viewpoint of farmers and certifiers.

I am aware of the organic seed list available through ATTRA and other certification agencies, and maybe there could be a list created in which all seed companies may post varieties available on perhaps the NOP website.

I once again realize that I may not have the perfect solution, but I believe the proposed recommendation to be unreasonable.

I would like to thank the NOP and the NOSB -- well, I'd like to thank the NOSB for passing the pasture recommendation yesterday, and I would like to thank you all for all of your hard work.

Thank you.

CHAIRPERSON RIDDLE: Thanks, Aaron.

Okay. Emily Brown Rosen is the last commenter signed up.

MS. ROSEN: Thanks. Emily Brown Rosen,
Organic Research Associates. I just will be very brief and -- I don't want to drag this out, but looking forward on the sunset process, I just had a couple of points to make here, since that's your next big job here.

I support -- I'm glad you gave that review of items that you think are obviously in need of review. I think those were all good choices. I'd just like to point out a couple more.

The NOSB originally reviewed and recommended a two-year sunset on a couple of specific items back in 1995. So considering that it's 10 years later, I think it's probably a good idea now.

One of them was chlorine, and chlorine I know you worked on, you know, trying to change the annotation two years ago. We still haven't got that annotation anywhere achieved, and it is a very widely misinterpreted substance on the list. I believe it's being used at all different rates with all different justification. It's kind of hard for -- you know, it's just not consistent.

And I would like to point your attention
to a comment that has been already posted by Bob Sanderson from Jonathan Sprouts that's on the processing list. He wrote a very good comment about the use of chlorine in sprout treatment, which is a real concern. You know, he claims that it's being allowed at 20,000 parts per million, which is an FDA guideline for sprout safety at this point in organic production, and that the residues can be up to 16,000 parts per million, which is -- this is not an organic product.

You know, I don't think if consumers knew there was that much chlorine residue in the product they would think it was organic. So we need to look at that. I mean, he -- and he has an alternate method for doing it that involves a lot of testing and good HACCP management. So it's something that should be addressed.

The other item that was a two-year sunset was in crops -- streptomycin and tetracycline as antibiotics for use in bacterial disease control. I think there are alternatives out there. They might not be totally satisfactory, but it's time to revisit
that and let people come to the floor to say, you know, we do or we don't need that.

But I think it's -- it was questionable at the time, and with the concern about antibiotics in general being applied in the environment I think that would be a good one.

The other thing I wanted to say was that I was very impressed with your new TAP reviewers from Virginia who did the sucrose octanoate ester and the chitosan reviews. I think they're a good resource, and that when you -- they seem to be particularly well informed as far as regulatory status and FDA status of different items, because that's not always easy to figure out. I know from having to dig it up in the past.

So as we go forward, one other item, then, would be nutrient vitamins and minerals in food processing. Depending on how the Harvey thing shakes out, there is going to be a need to determine which nutrients are really required by law, you know, if they're going to be -- continue to be allowed in organic food. And I think that could be a helpful
Looking through that and making sure that we get a real good clarification, it's not all of them, it's -- you know, there's certain ones, and it's, you know, lots of different conflicting regulations there. So just a heads up.

Thanks very much, and you did a great job this time. There was a lot of hard work, so good luck.

CHAIRPERSON RIDDLE: Thanks, Emily.

And we will take a 15-minute break, and then come back with the committee chair work plan reports. And before you do that, as you give it thought over break, one of the first items that each committee chair needs to do is finalize recommendations from this meeting, feed them back into me to submit to the program. So keep that in mind.

All right. Fifteen-minute break. Be back at, let's say, 25 after. That's even a little longer than 15.

(Whereupon, the proceedings in the foregoing matter went off the record at
10:10 a.m., and went back on the record at 10:30 a.m.)

CHAIRPERSON RIDDLE: Please take your seats, and we'll resume business with the committee chair reports on future work plan items. And as we have done in the past couple meetings now, you know, we can have a very brief and focused discussion of those if other members of the Board have any questions to clarify or if NOP has any input on those proposals, and also if you would kind of prioritize and a little timeline so that we can project what's coming up when.

So -- I'm sorry, can't think of everything. So, who would like to go first? Kevin, are you prepared for Handling Committee?

VICE CHAIRPERSON O'RELL: The Handling Committee work plan -- the first item, high priority is the -- will be taking the issue on the ag/non-ag that was deferred after a very spirited debate. At this meeting we'll be requesting an expedited TAP review, full TAP review, for yeast, so we can get some information on the manufacturing process, both conventional and organic, at least in Europe. We'll
be looking at the public comment, and we'll be proposing a new recommendation.

Sunset material review process -- of course, we'll be reviewing the public comments and moving forward on those materials that we marked as a priority -- colors, flavors, and yeast -- as well as looking at other materials on that list to see if any ones are highlighted as being needed to move up on the priority list.

Pet Food Task Force -- we'll continue to be an observer/participant in the Pet Food Task Force as it moves forward towards its recommendation to the Board. And then we'll be reviewing any petitioned substance -- substances as -- as required. We'll also be working on the determination of a commercial availability criteria in cooperation with the Policy Development Committee.

That's what we have on our plan currently.

CHAIRPERSON RIDDLE: Okay. Any questions from Board members, comments? George?

MR. SIEMON: Generally commercially available for which parts, the ingredients, the 605 --
I mean --

VICE CHAIRPERSON O'ReLL: Six. Yes, 606.

MR. SIEMON: 606, I'm sorry. That section.

CHAIRPERSON RIDDLE: Substances that are petitioned to place on 606, both the criteria and procedures for those reviews, right?

VICE CHAIRPERSON O'ReLL: Yes.

CHAIRPERSON RIDDLE: Okay. Any other comments? All right. Thanks, Kevin.

Dave, are you ready?

MR. CARTER: Yes. The Police Committee, we really have six things on our plate right now. First of all, as Kevin mentioned, we'll be working with the Handling Committee on the determination of the commercial availability under 205.606.

Secondly, is to obtain the public comments and then to develop the final recommendation on the temporary variances for research document.

Third is the continuing saga, the never-ending saga of Board policy manual revisions, as that goes on.
Fourth is the completion of the -- what we're affectionately calling the Board Member 101 document, which is essentially the orientation and overview for the new Board members that Bea and Rigo have been working on.

Fifth, the new item that got assigned to us this morning was the review of potential separation of mineral source supplements from ag source supplements, and going through some of those materials and seeing how we might move forward.

And then, six is just an analysis of the issues relating to the remediation of the court order based upon the document that NOP provided us is how we might feed back then on NOSB and the collaboration and in working forward to address those issues.

And then, the final thing we have on the work plan is the Policy Committee is in charge of planning the graduation party for the class of 2006.

(Laughter.)

Which class has gotten through without any drop-outs or any flunk-outs. We've gone through intact, so --
CHAIRPERSON RIDDLE: Was that the highest priority?

(Laughter.)

Any questions, comments, members of the Board first? And I do have -- I would just like to have a little bit more discussion about this input on the court ruling. When Barbara spoke with us on Monday, the Board was invited to provide our ideas and input, and that needs to happen in a timely manner to have any, you know, value to the program is my understanding.

And so I have spoken with Bea about this, and Bea has offered to serve as kind of a clearinghouse to help consolidate ideas from Board members.

And then, so I ask that all Board members submit your ideas on all or any part of the court ruling and how the rule can be changed to come into compliance, and then Bea and I will work together to construct a letter to the Secretary essentially, as this will not be, you know, a Board recommendation that waits for the next meeting, but rather a letter
from the Chair on behalf of the Board.

So once Bea and I have a draft, then it will be circulated for your sign-on, your concurrence with that. So that's the plan.

Bea, do you have --

MS. JAMES: Well, are we looking for a particular date to try to have all the information? Because it will take a while to make that into a --

CHAIRPERSON RIDDLE: Right.

MS. JAMES: -- a presentable letter.

CHAIRPERSON RIDDLE: Yes. And we didn't talk about that. You know, if members have -- what is reasonable? I mean, a month is reasonable, but two weeks is ideal.

Andrea?

MS. CAROE: I'm a little bit unclear on what we are doing. I mean, I saw our role with this court order remediation to be one of in collaboration assisting the program with implementing necessary changes. I didn't see our role as determining what the remediation changes are, so I -- I'm not quite sure what this clearinghouse is. This is the first
I've heard of it.

And what kind of letter we're sending to the Secretary, I'm very concerned about -- about this action. It doesn't seem appropriate to me for this Board.

CHAIRPERSON RIDDLE: We were invited to provide our ideas.

MS. CAROE: To the Secretary or to the program?

CHAIRPERSON RIDDLE: Well, I use those interchangeably. The Secretary is the program, or the program -- I mean, to the program but, I mean, it's -- yes, it's to the program.

MS. CAROE: To the program. That's -- I think that's more --

CHAIRPERSON RIDDLE: Right. I mean, we exist to provide advice to the Secretary under statute, but it is the program in reality.

MS. CAROE: Well, it --

CHAIRPERSON RIDDLE: At any rate, we were invited to provide our ideas up front, and then once the proposed -- and then, there will be a time period
where we're not engaged, where the rule-writing is occurring --

MS. CAROE: Right.

CHAIRPERSON RIDDLE: -- and then, once the proposed rule comes out, then we would provide advice, or I may not be on the Board by that time, who knows, but, you know, the Board would provide a response as a commenter to the proposed rule. But we were invited to provide input, ideas, and to be considered.

MS. CAROE: Okay. Well, this seems like duplicative of what Dave has just presented on the Policy Committee as doing, and that's opening that dialogue.

MR. CARTER: I think this is in -- in accordance with the Policy Committee. I mean, just a member of the Policy Committee, Bea is going to serve as the primary person on the Policy Committee to coordinate that material. We will continue to run that through the Policy Committee.

CHAIRPERSON RIDDLE: Right, yes. That was just --

MS. KOENIG: I guess I just had a question
on the process. So we'll all -- will the -- will they be discussed -- like the different ideas, is it just a long list of some of our potential solutions, or are they actually going to be judged and weighed by the entire Board, and then -- which is very different. I mean, I don't mind -- instead of individually going in with our ideas, if we want to compile all our ideas and saying this was not voted on, these are just our ideas, that's very different than -- because I don't think we have the time and really the process to do that in a recommendation.

CHAIRPERSON RIDDLE: Right. I agree. And that would be a collection of ideas.

MS. KOENIG: Okay.

CHAIRPERSON RIDDLE: And I think that could be the most valuable to the program. There may be some things, you know, that we come up with that have no value. There may be some new ideas that --

MS. JAMES: I think the input is to help the NOP. I mean, it's ideas and feedback and thoughts and that -- that revolve around this particular issue that we will present to them to help them make sure
that they've looked at all different kinds of possibilities.

CHAIRPERSON RIDDLE: And as much as we can, you know, pros and cons, potential impacts as well, and that's what Barbara was saying.

MS. JAMES: It's not necessarily taking a position on anything.

CHAIRPERSON RIDDLE: Right.

MS. KOENIG: What I would just suggest is that, then, if somebody -- you know, of course, if people don't have time, they can just come up with an idea. If somebody wants to go in individually and give the pros and cons, I just don't want to see some analysis of individual ideas. I don't think that's our role.

You know, if you personally want to do an analysis, that's fine. But what I'm saying is I don't want the committee to take all of our ideas and then do some microanalysis and say --

CHAIRPERSON RIDDLE: No. I think we're all --

MS. KOENIG: That's fine.
CHAIRPERSON RIDDLE: -- on the same page.

MS. KOENIG: Okay.

CHAIRPERSON RIDDLE: If you submit an idea, and you look at it from both sides, pros and cons, great.

MS. KOENIG: Okay.

CHAIRPERSON RIDDLE: We'll see what we get. But as far as your timeline, what should we say? Would you like to suggest something?

MS. JAMES: I think if -- I think if the committee has a month to do that, and to get that back to me, and then I'll try to construct it and send that to you. And I don't think that we should submit anything without the whole Board getting a chance to look at it also.

CHAIRPERSON RIDDLE: Yes, definitely. So a month being for members to submit something to you?

MS. JAMES: Yes. Yes.

CHAIRPERSON RIDDLE: Okay. And then, we'll try and turn it around in a week's time hopefully, but whatever -- you know, within two weeks.

Let's set ourselves two weeks --
MS. JAMES: Within two weeks.

CHAIRPERSON RIDDLE: -- after that, and then it will be circulated to the Board, and at that time I'll set a deadline for you to respond, and once we have something out to you. It'll probably be about a week at that stage. So it's going to keep getting narrower.

Okay. Thanks. I'm glad we had that discussion.

All right. Nancy, are you ready for Crops?

MS. OSTIGUY: We are going to be revising the compost and compost tea recommendations based upon the input that we've been getting, write Q&As for compost and compost tea to accompany that recommendation, then sunset review with the materials that we are going to need to be looking at, and then the three that have come up in -- during the meeting for streptomycin and tetracycline.

Contaminants in fertilizer, so try to delineate the issue so that we can begin to get to a point where we may have a recommendation.
CHAIRPERSON RIDDLE: I'm sorry. Could you repeat that?

MS. OSTIGUY: Contaminants in fertilizers.

Then, because we have continued to get comments on the commercial availability of organic seeds, to look at those to assess what the impact is going to be on -- you know, to look at that and assess the impacts based upon the input that we have received.

There may be things that we didn't recognize is what I'm -- I'm not saying we're necessarily going to revisit it, but to make sure that we have taken into account public comment and see if what we view -- what we view that impact might be, if it's something that we might need to address or not.

CHAIRPERSON RIDDLE: Okay. So even though the Board adopted it -- I just want to be clear -- are you suggesting we hold that at committee before submitting it to the program, or --

MS. OSTIGUY: No. I'm not even saying that there's necessarily anything to change.

CHAIRPERSON RIDDLE: Yes.

MS. OSTIGUY: But I don't think we should
ignore the public comment that has come in.

CHAIRPERSON RIDDLE: No, no.

MS. OSTIGUY: That is -- really, it's to
look at that public comment to see whether or not
those items are potentially going to be problematic.

CHAIRPERSON RIDDLE: Okay. And is that
something that can happen along with a recommendation
when we submit it to the program?

MS. OSTIGUY: Sure. Sure.

CHAIRPERSON RIDDLE: So that they have a
little analysis of those comments and how it relates.

Okay. Thanks. Anything else?

MS. OSTIGUY: The goal is not to hold back
that.

CHAIRPERSON RIDDLE: Okay.

MS. OSTIGUY: No, that's -- let's see.

Obviously, all the decision sheets need to be done at
some point or another. It's on our agenda. I don't
believe it will be done by the next meeting, or the
materials -- soy protein isolate and ammonia
bicarbonate -- no, we did finish synthetic, didn't we?

No.
CHAIRPERSON RIDDLE: The synthetic/non-synthetic, yes.

MS. OSTIGUY: Okay.

CHAIRPERSON RIDDLE: The recommendation, and then you have --

MS. OSTIGUY: Now we can do -- yes, so we'll be looking at the two materials -- soy protein isolate and ammonia bicarbonate -- to bring those up to -- for Board recommendation. Well, we have the recommendation.

And then, last but not least, hydroponics, the guidance document.

CHAIRPERSON RIDDLE: No. No, it's continued on the work plan. There was some early drafting, and it has never been --

MS. OSTIGUY: It has never gotten anywhere.

CHAIRPERSON RIDDLE: -- never moved forward. Any comments, questions, for Nancy?

Okay. Andrea, are you ready?

MS. CAROE: Yes.

CHAIRPERSON RIDDLE: Okay.
MS. CAROE: We will submit the retailer Q&A. That passed without changes, so it's just going to put in the Board vote on that.

We will also submit the NOP -- the response to the NOP response to the ANSI report document, with the changes that were noted during the meeting. We'll further work on the peer review panel recommendation, again implementing or including as much of the public comment as seems warranted. And also, working in collaboration a little bit further with the program to make sure that that document is sound and has some -- some legs to move with.

And then, the last thing is kind of an open-ended thing, and I ask for some flexibility in the committee. Since we were told at this meeting that as those ANSI response items are being generated, they will be run through this committee, I want to keep the plate somewhere clear so that we can respond to those quickly.

So I've kind of got an open item that I can't really detail at this time, but that's it for this committee.
CHAIRPERSON RIDDLE: Okay. Sounds good. Any questions, comments?

All right. Livestock? Michael, you are prepared to take over as Chair and give the report here, correct?

MR. LACY: I am totally unprepared to take over as Chair.

CHAIRPERSON RIDDLE: But you are prepared to give the report.

MR. LACY: Maybe.

(Laughter.)

George and I are transitioning the Chair responsibilities, and I do want to thank George on behalf of the Livestock Committee for the dedicated leadership he has provided to the Livestock Committee. We really do appreciate it, George.

I have only half-jokingly told him that George Pierce will have to come to work for me for the next --

PARTICIPANT: Jim Pierce.

MR. LACY: -- Jim Pierce, excuse me, will have to come to work for me for the next year, and
George has agreed to that.

(Laughter.)

We obviously have some work to continue to do on the pasture requirement, and we will work expeditiously with NOP to develop the clear rationale for the proposed rule change and guidance. In defense of NOP, the Livestock Committee, and I think the NOSB Board, we do appreciate the NOP being cautious on this.

We do understand that we need to get this right, and we appreciate their help in making sure that we do get it right.

We will continue to work with Nancy on development of standards for organic honey. On the materials side, we have work to do on the ivermectin and moxidectin issues, and we'll look at any other materials that need to be examined in regard to the sunset.

We'll continue to work with NOP on the impact of the court ruling and how that impacts livestock. We'll continue to monitor the avian influenza situation and how that might impact the
organic poultry sector.

We would like to -- we feel like we've got to be proactive on this serious issue. Nancy and I will work on a statement of how the organic poultry -- or how organic poultry production should respond to this animal and human health threat.

Aquaculture issue remains on our plate. We'll monitor and assist the working groups, as appropriate. And as I mentioned, George and I are trying to work together to make sure nothing drops through the crack during the transition. But please let me know if there is anything that you think the Livestock Committee needs to address.

CHAIRPERSON RIDDLE: No, pet food is under Handling. But there is the aquaculture task -- or the aquatic species task force. Yes, you mentioned that. And Kevin did mention pet food, right?

VICE CHAIRPERSON O'RELL: Right, yes.

CHAIRPERSON RIDDLE: We've got them all covered.

Yes, Andrea?

MS. CAROE: Just a question for you,
Michael. I mean, I believe, George, you've been on
the task force, listening in on the task force.

MR. SIEMON: Unfortunately, I missed the
first two calls, but I'm going to try to be on the
third one.

MS. CAROE: Okay. Well, I have been on
it, but is that something that's going to transition
over to Michael as well? Or are you going to --

MR. SIEMON: We hadn't talked about that.
I had hoped to keep doing that, but we haven't talked
about that, so --

MS. CAROE: Okay.

MR. SIEMON: But since I missed the first
two calls, I'm off to a rough start here, I must
admit.

MS. OSTIGUY: I'm on that -- are you
talking about the --

MS. CAROE: I know you're on it as well,
but I -- I thought George was, and I didn't know if
that was -- okay.

CHAIRPERSON RIDDLE: So, yes, we
definitely have -- still have someone from Livestock
Okay. Is there any committee I missed?

MS. KOENIG: Me.

CHAIRPERSON RIDDLE: I'm so sorry.

Materials.

(Laughter.)

I don't know how that could happen.

MS. KOENIG: Well, actually, you know, other than sunset, you know, I'm happy to say that there's not that much going on. Yes, that is good.

No, but the big thing is in the short term, and it sounds like the committees are aware of it, that there are some materials that have come up during this meeting that we need to consider if we want to request a TAP on.

And with that, although you guys have provided a request for a TAP, what I need specifically is if you really mean a full TAP, or do you have specific questions, because as Arthur tries to deal with the contractor -- and we've got a lot of materials -- if there's only things that you have like a specific question on, maybe like the -- these anti
-- you know, antibiotics, and you specifically want them to go in depth on whether they're not -- you know, some of that information on the ivermectin or those kinds of things, because we do have some that have sufficient information.

So that's up to the committees, just provide either the -- saying you want a full TAP, or we don't need a full TAP, we need specifically these areas. So that's -- or, for example, if there's alternatives, and you want them to concentrate on alternatives, let us know.

And then, when it comes to the national sunset process, I want to get hard copies of all of the comments from Arthur. He's going to mail them to me, and then he will mail them to each of the department chairs. And I hope to help, you know, get on your tails and send e-mails and find out -- kind of record-keep to make sure things are on task.

So it's not that I'm going to be a pest, but I am going to be a pest.

CHAIRPERSON RIDDLE: Good.

MS. KOENIG: So, you know, and that's all
I see myself as being an annoyance in the next few months.

(Laughter.)

If I'm not enough of an annoyance, I'll call my committee members, and they can start being an annoyance to other people, too. Other than that, we do -- we have sent two important documents to the NOP, hopefully for concurrence.

So I'll just be in contact with them if they have any questions or just to try to get an idea of where their -- you know, if we're getting concurrence on our procedures as far as the synthetic/non-synthetic and the legal aspects of that reorganization of the national list.

CHAIRPERSON RIDDLE: And, Rose, I think it was yesterday you mentioned a form for committees to use.

MS. KOENIG: Yes. Well, I'll send what we have, the process that we have outlined. And it wasn't a -- it was kind of a generalized form. So I'll take a look at that, and I'll send it to the committees. If they feel that that's not useable --
as far as -- if we have technical reviews -- if we're basing them on actual TAPs, other than comments, you certainly can fill out our TAP process, our materials process, you know, using those sheets.

CHAIRPERSON RIDDLE: The evaluation forms that --

MS. KOENIG: On the evaluation forms for --

CHAIRPERSON RIDDLE: For each substance. You know, we need to just be clear what you need from us.

MS. KOENIG: The way -- could I just say the way I'm understanding it is on things that either the public has determined that it needs to be reviewed fully, you know, things that have been pinpointed by public comment, or things that we have, we will request a TAP -- a formal technical paper on that. and I would like you to fill out the same forms as if you're looking at a new material.

For those substances that the committee looks at, where you haven't -- where you have only received positive comment, I would like you to review
-- Arthur says there's archives now on the website of every -- all of the materials and information they have on the materials. It's maybe not complete, so each committee should go in and review the technical information that's available.

And certainly fill out the forms that we requested -- the descriptive information that we presented at the last meeting. And I guess we're going to have to determine on -- you know, it would be a lot of -- a lot of work we have to do, forms on every single material. But Arthur --

CHAIRPERSON RIDDLE: Arthur?

MR. NEAL: It will be very difficult for you to take -- we've placed the TAPs that were done in '95 through, what, '97 on the website, and it would be very difficult for you to fill out the evaluation forms with that information.

That's one of the reasons why sunset was set up with public comment in play -- to express the continued need for the substance. There's not much question concerning the use of the substance. Then, obviously, there's not a great concern about it.
Now, for those that people have expressed a concern for, to take it off, we don't want it anymore, those may be the ones that you -- you have time to really evaluate in depth, because for you to fill out evaluation forms for over 160 plus materials would take you from now until next year.

MS. KOENIG: So that was why the -- the forms that we set up for the review process were based on kind of a descriptive evaluation, and a description of the comments that come in, to justify those that would be simple.

CHAIRPERSON RIDDLE: Can I ask you, Rose, to work with Arthur just to make sure you've got a tool that's useable to committees and meets their needs before it's distributed?

MS. KOENIG: Okay. Well, we approved it, so we'll go over and look at it.

CHAIRPERSON RIDDLE: I understand we approved kind of the content of it, but if it could be in something really useable for committees to make it painless, but yet it's thorough.

CHAIRPERSON RIDDLE: Okay.
MR. NEAL: One of the things that I want to comment on, I'd like for the committee chairs to submit those substances for Rose to send to us for additional clarification, that you really work with her to pinpoint the questions that you want addressed by contractors, because we're going to try to go to them this week or mid next week with those requests, because we don't want to waste time. Time is valuable now.

And they are already aware that they are going to be receiving them, but we need to give them clear instructions on what we want them to do with those substances. Particularly, we've got flavors and you've got --

MS. KOENIG: Colors.

MR. NEAL: -- and what we want them to look at, do we want them to look at manufacturing process, availability, because some things they may not be able to address. So we need to be kind of clear on what we -- what we want from them.

VICE CHAIRPERSON O'RELL: We're going to want a pretty full review on those items, because we
haven't had any TAPs in the past. So, but we can --
we can put together a list of some ideas and direction
for that.

MR. NEAL: Please do, because
manufacturing process is going to be important.

CHAIRPERSON RIDDLE: Okay. Any other
questions, comments?

MS. KOENIG: The only other comment is
when the chairpersons get your comments, if the first
-- your first committee meeting when you compile kind
of the information, if you could -- if there are
things where you're getting "we need a review, we need
a review, we need a review," those quickly again -- I
mean, because this first set of requests are those
that we've requested based on our own knowledge. The
second set of requests for any kind of technical
review is going to come from public comment.

But, again, as Arthur says, we need to get
that as soon as possible. Once you guys determine
that, then you can set up other committee meetings to
go through the ones where you -- where you have not
received any negative "pull off the list" comments.
CHAIRPERSON RIDDLE: Yes. Gerry?

MR. DAVIS: The materials that Arthur was referring to that we need to get our comments to him next week, obviously those aren't -- that's the ones we've already pre-identified that he's referring to.

MS. KOENIG: Those, plus we may have additional ones that, like Nancy mentioned, and generated from public comment today or during this meeting --

MR. DAVIS: But not what has come in.

MS. KOENIG: Yes.

MR. DAVIS: We don't get that in time to fulfill --

MS. KOENIG: Well, that's what I'm saying. That's what -- that's the next set. And as soon as the chairpersons get hard copies -- and I'll try the best I can to kind of go through them and help you guys along, but that's the next immediate group that we need to know about.

VICE CHAIRPERSON O'RELL: Or when you start looking at them on the website to see if there are any, because I don't --
MS. KOENIG: Chairs will get hard copies of all --

VICE CHAIRPERSON O’RELL: What’s the time table for us getting hard copies?

MS. KOENIG: Like this week is --

MR. NEAL: We’ll try to mail those out to you, if not the end of this week, the beginning of next week, because I’ve been here, so I’m sure that there are more comments that’s been coming in.

VICE CHAIRPERSON O’RELL: Okay. good.

CHAIRPERSON RIDDLE: Okay. Everyone clear on that? All right. Thanks, Rose.

As Board Chair, I have a few things to report as far as work plan type items as well. And that is coming out of this meeting, I do need to submit the final recommendations from this meeting.

So before I can do that, I need the committee chairs to funnel those in to me, and then I need to review those and then complete that cover sheet that has now been created and sign off on that.

So I do need your timely cooperation, assistance, to get that done.
And then, I would like to, as I did after the last meeting, write a brief report of the meeting in a letter to the Secretary that just itemizes what we -- what we accomplished at this meeting and then also summarizes some of our future work plan items, just to keep it -- the attention there, that we are fulfilling our mandate under OFPA. So just to let you know that.

And then, there's one other item that we haven't discussed, and that is the role of the Board in the review of applicants for the Executive Director position. And Barbara and I I think really need to talk and come up with a plan for how we will be engaged in that.

You know, the last we know, the job description has gone to the Personnel Division, but it hasn't come back out yet. So we haven't seen the final job description, but we do need to have a plan and kind of form a subcommittee, kind of a personnel subcommittee I think, to be directly engaged in that process.

So I'll just need to work with Barbara and
come up with that, and then report on that at the next Executive Committee meeting.

So those were my three items that I wanted to mention. Any questions for me? Gerry?

MR. DAVIS: The subcommittee you mentioned, would you envision that be some outgoing Board members and some new?

CHAIRPERSON RIDDLE: Yes, definitely. But not the full executive -- I would imagine three people probably. You don't want to get it too big. So I guess, once again, if you're interested in that, please let me know to begin with.

Yes, Nancy. I don't mean right now, but --

MS. OSTIGUY: My proximity to D.C. makes that a possibility, that I could help out on that.

CHAIRPERSON RIDDLE: Okay. Thanks.

Okay. Now, the next item on our agenda is to talk about our next meeting date. And let's -- where that stands, does someone from the program have some information for us?

MR. NEAL: That rests with Barbara. But
the potential dates I think you all know is that week before Thanksgiving, the 14th through the 17th. Those are the dates. Barbara, I think she said on Monday, would let you know whether or not it's going to happen.

CHAIRPERSON RIDDLE: Right. Yes, she said by the end of the week, and I didn't know if she meant by the week ending on Wednesday or Friday.

MR. NEAL: I don't --

CHAIRPERSON RIDDLE: I was hoping that we would have something by the end of this meeting.

MR. NEAL: I don't have the information.

MS. CAUGHLAN: Barbara left?

MR. NEAL: She's not in the room. She's still in the hotel.

MS. JAMES: She had originally said the 14th/15th or 21st/22nd.

MR. NEAL: It's just the week of the 14th.

MS. CAUGHLAN: So it's maybe better.

PARTICIPANT: It's worse for me.

VICE CHAIRPERSON O'RELL: I won't be there.
PARTICIPANT: I'm going to be out of the country.

MR. SIEMON: Which days?

CHAIRPERSON RIDDLE: The 21st -- or 20th/21st sounds bad for Kevin and Dave right away. And I really -- we aren't going to decide this. I really don't want to engage much time.

MR. SIEMON: I'm sorry. But we have put away three days, haven't we?

CHAIRPERSON RIDDLE: Yes. In pencil on your calendar, the 14th through 17th, with the primary focus being the sunset review, and then election of officers. Those are two things that really have to happen, unless you want me to be Chair for life.

PARTICIPANT: Sure.

MR. NEAL: And we just -- and what she has conveyed, that there would be a two-day meeting, no more than a two-day meeting. So, but those are the range --

CHAIRPERSON RIDDLE: Yes, the range. Thanks. Yes, so it could be the 15th through 17th or 14th -- or 14th and 15th, 15th -- yes, it could be --
two days within that range. All right.

Okay. I guess that's all we can decide on
that. And I do have some closing remarks. I see the
agenda has me down for a half hour.

(Laughter.)

I will be brief, but I do have some
substantive remarks. I'd appreciate your continued
patience and attention.

Well, first, I would just like to thank
the USDA in general for the opportunity to serve, to
provide advice and to serve. But in specific, I'd
like to thank the staff, you know, for the work it
takes to organize the meeting. And regardless of
where the meeting is held, it's never perfect for
everyone, and you're always going to receive some
criticism.

But I want you to also receive appropriate
thanks and acknowledgement for the work, not just in
the logistics of the hotel, but all the copies, all
the posting, all the assistance and the engagement, so
that we can function as a Board.

And I also, as I said earlier in response
to one of the commenters, am very encouraged by what I see is a manifestation of collaboration occurring. And in particular, the precedent of the line-by-line responses to the past meetings' recommendations I think that is very healthy, and for us to know where you stand on our recommendations.

And we do provide advice. We love it when that advice is taken. But there are times when it does need further work, and we appreciate having things sent back to us. And there might come a time when our advice is rejected, but we like to know if that's the case, too. But hopefully, if we're working together, we won't reach that point in the future, or the Board won't reach that in the future.

And I think this climate of engagement and collaboration is really critical for the rule changes that we face, in response to the court ruling but also some of these other significant issues on the table.

I do remain baffled and concerned by some of the positions that were taken yesterday in the discussion on the synthetics and substances not appearing on the list being allowed for use, the whole
A plus B plus C equals Q. I do question the legal basis for that interpretation in OFPA, especially in light of the court ruling. So I do have ongoing concerns about that equation.

I'd like to acknowledge some of my own shortcomings here in this meeting -- not looking to the left often enough. I rarely --

(Laughter.)

But I also, more importantly than that, is I did err in not asking for any interests on topics before they came up for discussion. And this isn't just a materials issue, but other topics as well. And I have reviewed the actions that we've taken at this meeting, and from what I know of Board members' interests, I find no interests that deserve recusal in any of the actions that we have taken at this meeting.

If you have any to correct, you know, please do so. But that's my analysis of the actions taken at this meeting.

I'd like to thank all of you, and there are still quite a few of you out there, who have come to this meeting. The room was packed to start the
public comment on Monday. People said holding an NOSB meeting in D.C. in the middle of August, who would come?

Well, people did, and that just shows me, once again, what an engaged community it is, and the importance of your continued involvement and input. It's just so valuable to us, and I think you see that in the comments and questions after each of you have submitted your comments. They are taken very seriously, and empower and inform us to do a good job.

I am pleased by the progress of the two task forces that we have going on right now. I think they are making serious deliberations and considering different angles on both the aquaculture and pet food issues, and I think we'll have some valuable reports coming out of that process.

I really am pleased with the new members, how engaged you all have been. It's like you've been here, you know, longer than just one meeting now. So you definitely have lost any shyness and are fully engaged. So I appreciate that and really also want to thank all the veteran members for your continued
leadership and vision, commitment to this process. It's a tremendous amount of work.

Oh, I did have a comment about the whole notion of any life form being seen as agricultural. I -- that certainly is not consistent with the history of organic regulations, in this country or internationally. And I look at, where do you draw the line? And organic is about drawing the line when it comes to regulations.

You know, three years is no magical number, but we draw a line in the sand to qualify for transition of land. We do need to draw lines on this definition eventually, one way or another, and there may be some winners and losers, some people who disagree with that final outcome. But I look, you know, at earthworms, can we raise organic earthworms. Well, what about nematodes? What about amoebas? I mean, what about viruses?

And are prions life forms or not? I mean, we do need a line, and it can't just be all life forms qualify. And maybe we need to look in the, you know, Oxford or Webster Dictionary at agriculture, or look
at the Latin roots, and not just taxonomy, to help clarify this situation.

I encourage the Board as we move forward, as much as we can, to prioritize and keep a narrow focus. I think whenever we do we accomplish things well. When we get too scattered, it confuses the public and isn't helpful for the program.

I just have tremendous respect and awe for this process, and just the engagement of this Board and the members of the public, and it's just an honor to be a part of it.

So I would entertain a motion to adjourn.

VICE CHAIRPERSON O'RELL: So moved.

MS. OSTIGUY: Second.

CHAIRPERSON RIDDLE: Kevin moved to adjourn. Nancy seconds. All in favor, say aye.

(Chorus of ayes.)

Those opposed?

(No response.)

Thank you very much.

(Whereupon, at 11:14 a.m., the proceedings in the foregoing matter were adjourned.)
UNITED STATES DEPARTMENT OF AGRICULTURE
NATIONAL ORGANIC STANDARDS BOARD
MEETING
WEDNESDAY
NOVEMBER 16, 2005

The Board met in the Captain's Room in the Channel Inn Hotel, 650 Water Street, S.W., Washington, D.C., at 9:00 a.m., James Riddle, Chairman, presiding.

PRESENT
JAMES RIDDLE Chairman

Adjournment ........................................... 286
CHAIRMAN RIDDLE: Okay. I'd like to call the meeting to order. I guess I don't have to get too close to these mikes, especially in this room. And we still have one Board member not at the table, but George is here. He got in late last night, was just eating breakfast. So he will be joining us shortly.

I would like to thank you all for being here again. And good to see a full crowd, as usual. Continues to be interest in this program.

And I'd like to begin just with introductions of the Board members. And if you'd just tell a little bit about yourself and maybe something we don't know, something interesting anyway besides just name and rank and serial number and what sector you represent.

So, Goldie, would you like to start, please.

MEMBER CAUGHLAN: No.

CHAIRMAN RIDDLE: You don't have to. Just try to things interesting.
MEMBER CAUGHLAN: I guess I'm looking forward to putting a lot more time. My name is Goldie Caughlin. I'm from Seattle. I work with PCC Natural Markets, but I do not represent the retail sector. We are a food cooperative. But I'm one of the three positions that is available in some of the Boards for consumer rep. And I've done a lot of consumer work for the last 30 years in the state of Washington.

And I look forward to going back. I'm now going to be working with the Food Producers Board as well as in the state of Washington we have a joint small farm -- there's a small farm program as Washington State University and also a small farm direct marketing program with the Washington State Department of Ag. And we have formed a couple of years ago and it has solidified a joint board. And I'll be very pleased to work in regard to that board.

So I guess I'm still going to be a bored board -- no, anything but bored. I think that what's happening in our state I'm very pleased about some of the directions in terms of the organic -- the bioag, bio intensive and organic ag program which is going
straight ahead in Washington state. And we're all
working on that.

CHAIRMAN RIDDLE: Thanks.

Hugh?

MEMBER KARREMAN: My name is Hubert
Karreman. I'm a dairy veterinarian in Pennsylvania. I
sit here at this seat representing the environmental
and resource conservation contingent. My background
was in resource economics and soil science, but for
the last 10 or 15 years, 15 years, I've been working
with dairy cows in the organic sector.

And most everybody that knows me knows
where I stand on things. I'm very transparent as far
as what I say and have my opinions, of course.

One of my main things that I hope to do in
the future is educate other veterinarians across the
country, livestock veterinarians about the organic
sector. And that's kind of my focus from this time on.

CHAIRMAN RIDDLE: Thanks.

MEMBER JAMES: My name is Bea James. And
I'm from Minneapolis, Minnesota, Director of National
and Organic and HPC for a 20 store chain, upscale
mainstream grocery chain. And I represent the retailer position here on the NOSB.

Everybody's giving industry news on their one unique thing. I'll just say my one unique thing is that I may dress in a tie, but I got two kids at home, one of them's name is Harvest and the other one's name is Forest. And so I do live the lifestyle.

CHAIRMAN RIDDLE: Rigo?

MEMBER DELGADO: Harvest and Forest.

Well, I also have an interesting name, it's quite an icebreaker when you try to start a conversation. It's Rigoberto Delgado, but the user friendly version is Rigo.

I am a producer on the west side of Texas. Been producing cotton for a number of years and now I'm going into production of chickens. And I've been quite successful producing eggs. So that's the latest result from my experiment.

I'm an ageconomist by training and I have a master's in business administration. And, yes, I've done a lot of work in the corporate life but underneath in the bottom I am an organic friendly
person and I am very interested in working with other
groups of farmers there where we have our farm in west
Texas. We're starting to work with other smaller
producers in trying to get up a coop going. So,
that's the latest news in the front.

And in terms of interesting items, I did
start playing vegetarian until my children decided to
stop that. I think my wife agree with them, I'm
afraid.

MEMBER CARTER: Dave Carter, part of the
graduating class of 2006. Actually serve as the
consumer rep. What I do is half time I'm Director of
the of the National Bison Association, half time i'm
founder, one of the founders of a pet food company
called Pet Promise and half time do itinerate
consulting.

MEMBER CAUGHLAN: That's time and a half,
isn't it?

MEMBER CARTER: And so the unique thing I
guess about me is I happen to be married to the most
patient woman in the world, who is actually sitting in
the back of the room, my wife Sue today. Who a few
years ago I left one job because I was traveling too much and now I'm traveling about 70 percent of the time.

I guess the other unique thing is that we have some bison heifers down in Taos, New Mexico which we would like to expand and eventually get started.

MEMBER DAVIS: Hi. My name is Gerald Davis. I'm on the Board as a grower representative. I have worked in organic agriculture in vegetable farming and tree fruit production for 13 years.

And I'm kind of excited about the growth in the industry and what I see going on. I work at this time for a large organic vegetable farm called Cal-Organic as an ergonomist and a pest control advisor.

And I guess a new thing that would be nice to mention would be that the farm I work for is now owned by a larger conventional carrot farm that just this year the organic portion of it took back 1200 acres of land from them because we have too much demand for organic carrots and vegetables. And it used to be the other way, and I'm glad to see that.
MEMBER OSTIGUY: My name is Nancy Ostiguy. I work in the Entomology department in Penn State.

I don't know if there's really anything unique to say, probably most of you have noticed that I have played around with my hands up here. I quilt, and so there will be pieces of quilts being done while I'm here.

The other thing I do is I do research on honey bees. And we're having a lot of fun right now, run sort of in the scientific sense of looking at the viruses that impact honey bees. And we think we may have found a virus that actually increases or can impact the level of aggression in honey bees. So my next thing is to try and find out whether or not that virus is more prevalent in the Africanized bees. And if so, we may have a way to deal with Africanized bees so that they can be gentler.

CHAIRMAN RIDDLE: That's unique information.

I'm Jim Riddle, organic inspector and educator and certifier rep from Winnona, Minnesota.

And I'm really honored that my wife, Joyce
Ford, is here today. And Joyce has been tremendous support, help, inspiration and at times moderating influence on me and other times she actually incites me, and I have to moderate, believe it or not.

But some of you know that Joyce and I live off the grid. We are not hooked to the electric grid, produce all of our own power, solar and wind. And my latest involvement as a volunteer in life is in my home county, Winnona County, Minnesota has formed an economic development authority and two of the projects we're pursuing is putting up a big two megawatt community owned wind generator, and then also building local food systems. So I'm looking forward to some local focus here in the coming years as well as continuing national and other activities.

MEMBER O'RELL: My name is Kevin O'Rell. And this is my fourth year on the Board representing the handlers, processors in the industry. And I've been involved in organic for the last ten years and product development consulting and regulatory. I work for a company that produces organic soy and organic dairy products.
I guess in my personal life my daughter just turned 14 last week and my son turns 13 next week. So he wants a guitar. So, Rigo, I think I'll send him over your way for guitar lessons. But I think my life's about to change drastically at home.

MEMBER KOENIG: Hi. My name is Rose Koenig. I'm a producer in Gainsville, Florida. And my husband isn't here because I am a true producer in the sense it's a one-woman and a couple of interns show. Although Barbara always writes to me and says do you really -- yes. When I come in from the field I always have time to kind of write off some interesting things because it gives me a lot of time to think. So I spend my time doing manual labor and letting my mind wandering a lot of the time.

This is my last meeting, I think, officially unless we hear something different, forever and forever. So I've been thinking about that. And it's been an interesting thing.

I have also two children, one turning 8 and one turning 10. And when I think about that the 8 year old was turning 3 when I just started the Board,
it's pretty amazing to think. You know, sometimes you look back and you think it's difficult now, but how did I take off back then and leave my husband on the farm and the two kids. Anyway, that's the information.

MEMBER SIEMON: I'm George Siemon. I'm here as a farmer rep. And I work with Organic Valley, so I don't have much of a personal life anymore. I guess at this age you live through your children, and so the only thing I can say that's unique is my son's been down at Cleveland, Mississippi feeding people for 70 days, about 1500 people a day. I'm going to get to go down there next week and be there for Thanksgiving. And then the Saturday after that, the local community are going to have a thanks for giving celebration on Saturday. So I've really been living through that experience a little bit to see that Organic Valley has been sending a lot of food. So it's been a very exciting to be part of.

MEMBER CAUGHLAN: How old is that son?

MEMBER SIEMON: Twenty-five. Old.

CHAIRMAN RIDDLE: Spoken like a true dad.
MEMBER CAROE: Hi. I'm Andrea Caroe. And I'm environmental rep. And I work for a company called Protected Harvest. I'm the Certification Director. We certify farms to bio IPM practices. They're not organic. We're trying to raise the bar of conventional growers.

Let's see, interesting facts about me. I think everybody knows me. I've been around the industry for a while. I met Jim many moons ago in Marquerita Hot Springs as I was training to become an organic --

MEMBER SIEMON: That was the inspector training.

MEMBER CAROE: I have two children as well. I have a 13 year old son and a 16 year old daughter. And those of you that haven't reached kids of age 16, I could tell you some stories after a couple of drinks. But life has changed for us with the driver's license.

Anyway, I don't have any other interesting facts.

MEMBER WEISMAN: My name is Julie Weisman
from Tenafly, New Jersey. This is getting towards the end of my first year on the Board. I hold one of the handler positions on the Board.

My family's business is a food ingredient business. When I joined it ten years ago I brought organic into it. One of our big products is organic vanilla and other organic flavors. Most of our business up until now has been on the conventional side, and I am proud to say that there were two days last month where organic shipped than conventional.

And I have two daughters 13 and 6. So, yes, life has changed. I heard Kevin and I was like, oh yes, I know where that is.

An interesting thing about me is that I actually, my master's degree is in social work. I was a psychiatric social worker before I was in the food business.

CHAIRMAN RIDDLE: That will help you.

MEMBER CAUGHLAN: It'll help a lot.

CHAIRMAN RIDDLE: Thanks, Julie.

MEMBER LACY: I'm Mike Lacy from Athens, Georgia. I work at the University of Georgia in the
poultry science department. I'm the science rep on the Board.

Had big news in my family from a children perspective. I have one daughter that was married on the 1st of October.

MEMBER CAUGHLAN: Ah, congratulations.

MEMBER LACY: And I survived. I have not recovered.

CHAIRMAN RIDDLE: All right. Thanks. Thanks to all of you for being good sports, too.

Announcements, are there any Board members that have any announcements to share at this time? Dave?

MEMBER CARTER: Just to let you know, I will be leaving at about 11:15. I have a meeting up at USDA at 11:30. So I'll be excusing myself for as quick as I can to come back.

CHAIRMAN RIDDLE: All right. Thank you.

MEMBER CAUGHLAN: Will it involve a buffalo? Will it involve a bison?

MEMBER CARTER: It will involve bison, but not a live bison this time.
CHAIRMAN RIDDLE: Not a live bison on the mall this time. Okay.

Any other announcements?

Yes. I would like to let everyone know that there will be two public comment sessions. One today focused primarily on the Sunset Review and the Committee's recommendation. And then tomorrow afternoon on pasture. And if you haven't signed up, there are separate sign-up books in the back of the room. So you still can sign up.

And if you haven't just signed in for attending the meeting here, please do so during a break or at your convenience.

It says here on the agenda Chair's Report and some comments. I guess I would like to make a few comments before we get under way.

And one thing is just on a personal note, it's been truly an honor to serve on the NOSB, and especially an honor to serve with all of you. I think that we have always operated with respect for one another, even when there have been disagreements that we have the ability to have open discussions. And I
really appreciate all of the knowledge that all of you bring to the table. So it's been an honor to serve with all of you.

   And looking back, I don't know of another class, you know, of five appointees that have all stuck it out all five years. There may have been. Otherwise, usually somebody resigns for one reason or another. So it's been extra special to be a part of this group.

   And, you know, we have faced various challenges during the five years that we all have served. But this past year has been especially challenging, not for the Board and our function and our functioning back and forth with USDA. I think that that actually is better than it's been during the previous times. That continues to improve, and that's very encouraging. But outside of the Board has certainly been a difficult and challenging year. You know, first with the lawsuit and then the clarifications to that lawsuit, and then draft rule changes looking at minimizing disruption from the lawsuit. And those could only go so far; not far
enough for a lot of the sector's needs so that amendments going through but not with full support or not going unified to Congress. And that certainly has left us in a very challenging position.

The one thing, you know, I think we just have a lot of healing to do as a community and, hopefully, people will commit to that. I mean the law has been changed. We do have to learn a lot yet what the ramifications of those law changes are, but there will need to be new rules written to implement those changes. And I trust that the Board will be involved, that the public will be involved. There will be proposed rules. There will be opportunities to comment and be engaged. And, you know we have an opportunity to refocus now and make sure that those rule changes really protect organic integrity and incorporate the ongoing role of the Board in that.

But one common theme that's been encouraging despite all of the rhetoric flying back and forth, one common theme in both industry and public interest group positions has been to protect and preserve the authority of this Board and to defend
the recommendations of this Board that have gone through the process we followed. And so I think we need to, and this Board needs to continue to live up to that responsibility.

And I look back during the five years. You know, the rule was implemented, but that was on track to be implemented when we were appointed. You know, it was already out and so we just happened to be on the Board at that time. But we have done a lot of work ourselves. And among those accomplishments I think having a Board policy manual in place certainly guides the work of this Board on into the future, and it a foundation document as well as the principles of organic production and handling, having those down. And the compatibility criteria that we worked hard on, took a lot of public comments, as well as the new synthetic and nonsynthetic draft. I think those are some foundation pieces that we've put in place in our time on the Board, as well as really solidify the materials review process, the evaluation documents, the statement of work for the contracts. I think those are very solid pieces. Have been developed in
cooperation with the program. And we've reviewed our share of materials. Recommended some for approval and others rejected.

But we also have put draft recommendations for standards, apple culture, mushrooms, greenhouses, have very good chlorine task force report. And some of those things still need to be implemented, but they should not be discarded or forgotten by this Board or by the program.

And we've got Sunset well underway. But a lot of the difficult work is yet to do. In a way, we've picked the low hanging fruit, so to speak, for this meeting, the noncontroversial materials. But the challenge is going to be in the coming year dealing with the materials that are being deferred at this time.

I'll just close by saying that one thing that I have seen as a responsibility as a Board member, and I think the Board has taken this up, is the Board needs to be an independent voice. Yes, we work hand-in-hand with the program but we also need to bring a perspective from the community, from the
public to USDA to have a balance there. And so I just encourage the Board on into the future to always maintain an independent voice as needed and to stand up for the principles. Work together as a group and work together with the program, but don't be afraid to take a stand as needed.

So with that, I'll move on the Secretary's Report and Goldie is up. Just by way of introduction, in our books for this meeting we do not have the minutes meeting summary from the August meeting yet. I imagine there have been a few other things going on at the program and it's been a short time between meetings. So I would just like the transcript from this meeting to reflect that we have not yet addressed or considered the minutes from the August 2005 meeting. Those will need to be reviewed and adopted at the next meeting.

Goldie?

MEMBER CAUGHLAN: Well, I think the only thing I would add is that I apologize, but I have not transcribed the executive minutes from September. Sorry. That will be getting done before I caught up
in the Sunset.

By the way, I just have to come back in here and talk about my kids and my grandkids.

I have been spending more time with my grandchildren, certainly, because in the time that I've been on this Board I've added two more to the crew. I now I have six incredible grandkids from 3 months to 10 years. They're pretty much under foot a great deal of the time, and that's wonderful. That's the way I like it, too. So, thank you.

CHAIRMAN RIDDLE: Okay.

MEMBER CAUGHLAN: I'm the Secretary, and that's the report.

CHAIRMAN RIDDLE: And you're sticking to it.

MEMBER CAUGHLAN: And I'm sticking to it.

CHAIRMAN RIDDLE: But we do have minutes from Executive Committee call from October 14th. I think Dave and Bea worked together to capture those minutes. And I guess I would like to ask if the Executive Committee members to consider approval of those minutes, since they're in the book at this time.
Julie?

MEMBER WEISMAN: I just wondered if the minutes could be amended to reflect the fact that I was also on that call?

CHAIRMAN RIDDLE: Okay. And so we'll need to revise those and resubmit an electronic copy.

Any other changes to those draft minutes? Hearing none, is there a motion to approve, and this would be a vote by the Executive Committee members?

MEMBER CAROE: I'll motion to approve.

CHAIRMAN RIDDLE: Andrea move to approve.

MEMBER OSTIGUY: Second.

CHAIRMAN RIDDLE: Nancy seconds.

Further discussion? Hearing none, all in favor say aye.

EXECUTIVE COMMITTEE MEMBERS: Aye.

CHAIRMAN RIDDLE: Those opposed? All right. Thanks. We have those approved. So we still need to come back at the next Executive meeting, hopefully, and consider the minutes from September Exec meeting. Okay.

Next up we have the NOP report. And I'm
not sure who is going to go first. Barbara. And once
again, if you'll introduce yourself for the record,
please?

DEPUTY ADMINISTRATOR ROBINSON: Barbara
Robinson, Deputy Administrator for Transportation and
Marketing Programs for the Ag Marketing Service.

And welcome, everybody.

As part of the update but before we get
started, I have just a couple of housekeeping things,
well one housekeeping announcement and one rather sad
announcement.

First of all, the reason you don't see
Katherine here, her niece was killed in an automobile
accident last Friday, and this is a niece who is very
near and dear to her and her family. And Katherine
just couldn't be here. I don't really even want to go
into the details, but she had to go and take care of
arrangements for the family. So she just couldn't be
with us here today and sends her regrets.

Just as a matter of housekeeping if you
hear a lot of planes and a lot of noise, because we
are on the river, the next couple of days NORAD is
conducting exercises to mimic the post-9/11. So don't get nervous if you hear and see a lot of planes when you go outside. They're just trying to protect us, I guess, or something. So just thought I'd like you know that for people who are out-of-towners. Those of us who are here sort of get used to that stuff.

Now, I'm going to turn this back to Jim very briefly and then he's going to come right back to me, but Jim has an announcement to make because the first on the matter of update that I want to discuss deals with dairy pasture. Jim and I, and I've had several conversations with several of you on the Board but Jim is the Chair, and so in deference to the Chair and what the Department has agreed to do, it asked Jim to go ahead and make the announcement. So, Jim?

CHAIRMAN RIDDLE: Yes. Okay. Thanks, Barbara.

You know, we are having a public comment period tomorrow on the pasture issue and the program posted a request for comments for tomorrow's public input session. But the Livestock Committee will be considering a new draft that I have compiled that
really pulls together all previous existing NOSB recommendations on pasture, and they date back to 2000, and then 2001 and then we've had some earlier this year. And so there will be a Livestock Committee meeting after we recess today to consider that new draft. And then that will be presented tomorrow morning during Committee Chair reports on ongoing work plan items. But we will not be moving for a final vote by the Board because even though this doesn't contain new concepts, the draft itself has not been posted for a round of public comments. And that's something that I'm always committed to is a public comment because very soon I'll be on the other side of this microphone. But I just believe that that is also part of our responsibility.

But there is a new draft and it was circulated fairly widely so a number of people and all Board members have seen that. And there's a copy of that draft in addition to your meeting book.

So that's kind of where the Board action. And in discussions back and forth with Barbara my understanding is the program is committing to move
forward with an advanced notice of proposed rulemaking, or ANPR. Hopefully to be out by the end of January, but that's just a target. But it will be based on the existing recommendations of the Board and drawing from this draft, which really compiles all of those as well as the public comments that we've received and will receive tomorrow.

It's anticipated that there will be a 60 day public comment period on that ANPR. And during that time the program and the Board hope to organize a symposium or listening session somewhere in either upstate New York or Pennsylvania, or in dairy country to hear from dairy nutritionists, dairy producers, veterinarians on the importance of pasture for ruminant animals and directly in response to what is in that ANPR.

So I think we are making progress. It certainly has to be a thoughtful process to change the rules. But I see that progress is being made or there is a commitment to move forward based on existing recommendations.

DEPUTY ADMINISTRATOR ROBINSON: Right.
Thanks.

CHAIRMAN RIDDLE: Yes.

DEPUTY ADMINISTRATOR ROBINSON: I want to get through all these rapidly because this is your Sunset meeting.

We have completed the interviews for the Executive Director position and we'll be getting back to you. We asked all of the questions that you submitted to us. And we want to put all the answers together on some kind of a spreadsheet so we can get back to you with those and give you our feedback, and then get your reaction to the candidates. And we want to get that done as soon as possible.

I'm not going to be here all next week. I haven't had a day off, literally not one day off, since the hurricanes hit. So I'm taking a day off next week. In fact, I'm taking all of them off.

CHAIRMAN RIDDLE: Can you leave your cell phone number?

DEPUTY DIRECTOR ROBINSON: No. No. But we'll get something to you, hopefully, next week. I don't know how fast we can get that spreadsheet put
together, Mark. I can tell you personally who I would recommend, and I think you'd be pleased with that. But, at any rate.

On the NOSB nominees, the package is across the street with the Secretary. And just for information because I hear this all the time, we get letters from folks, I thought I would just like to tell you -- where are my notes? What kind of, what we do. We received over 50 nominations from people. We went out with 11,000 solicitations. We sent postcards and solicitations to every certifying agent. Here we go. Every single certifying agent in the United States, every organic producer and handler, all of the 1862 land grant colleges, all the historically black land grant institution in Tuskegee University, the entire National Directory of Farmers Market and Direct Marketing Associations, NRCS, California Federation of Certified Farmers Markets, the North America Farmers Direct Marketing Association, Farmers Market Online, National Association of Farmers Markets, Southland Farmers Market Association, Pacific Coast Farmers Market Association, Washington State Farmers Market

We solicited USDA's Farm Services Agency outreach programs, which consist of African-American, Asian Pacific Islanders, Hispanic Americans, American Agro Women Affiliates, Women Watch Group, Women in Agriculture, Women's Agricultural Network, Women's Food and Agricultural Network, Rural Womens Network and Women's Food and Agricultural Network.

So it's not like we just, you know, posted in the Federal Register. I want you to know that we really do try to get out there and canvas everywhere. And we did get over 50 nominations.

And I think we got a good selection of candidates. And when we forward the package across the street to the Secretary, we don't leave anything out. Everything we get goes to him. Absolutely everything. Everything that everybody sends in along with every single of recommendation. He gets it all, every bit of it. We don't hold anything back. So the package that went to the Secretary was about two
feet think.

Because we had a resignation, a vacancy, he has to select all three consumer representatives, the certifying agent representative and two producer representatives. So we'll hopeful that he'll make that selection soon so that we can seat the new Board members quickly as they need to be seated.

MEMBER CAUGHLAN: Barbara, excuse me?

DEPUTY DIRECTOR ROBINSON: Yes.

MEMBER CAUGHLAN: In the past -- it's Goldie.

DEPUTY DIRECTOR ROBINSON: Oh, there you are. Okay.

MEMBER CAUGHLAN: Right. Respectfully I would say that in the past two or three rounds we have been taken into consultation on a short list for responses from two regarding appointments. Is that not to be the case this time?

DEPUTY DIRECTOR ROBINSON: That's always the Secretary's prerogative, Goldie.

MEMBER CAUGHLAN: Right.

DEPUTY DIRECTOR ROBINSON: I don't have
any say over it.

MEMBER CAUGHLAN: I see.

DEPUTY DIRECTOR ROBINSON: And so every Administration or every Secretary chooses whether or not to do that. And this Secretary has not elected to. And the previous Secretary did not elect to. So I just, you know, I can't say to them now you really need to do this. Call it what you will, I just don't quite have the nerve to go to the Secretary and say you really out to post all these. So that's just simply their prerogative to do.

MEMBER CAUGHLAN: No indication that that's going to happen then? Thank you.

DEPUTY DIRECTOR ROBINSON: No.

Let's see, oh, obviously since we last met I have hard Mark Bradley as the Associate Deputy Administrator.

(Applause).

DEPUTY DIRECTOR ROBINSON: Mark has already discovered a phrase that I decided I hate. He continues to insist that this job is fun. And if he says it one more time, I'll smack him.
MEMBER OSTIGUY: Barbara?

DEPUTY DIRECTOR ROBINSON: But as long as he thinks it's fun, that's good.

MEMBER OSTIGUY: Barbara?

DEPUTY DIRECTOR ROBINSON: What?

MEMBER OSTIGUY: It's better than the alternative.

DEPUTY DIRECTOR ROBINSON: This is true. This is true. But Mark does bring a wealth of experience, as many of you know, to this job. And I'm very, very pleased for him to have assumed this position and look forward to working with him. He's got a lot of good ideas. I think he's going to do a lot of the things that this Board has wanted for a very long time. And has already put in place a lot of the procedures that you have asked for. And so I think you'll be happier as a Board and we certainly will be happy, too.

In fact, after I'm done I'm going to turn this over to Mark.

Now just very quickly, and I do mean quickly because we're in a state of flux about this,
we had a long discussion in August about sort of where we were on the lawsuit. Now Congress has come along and they've passed H.R. 2744, the appropriations for the fiscal year 2006, which has been signed in the last week by the President. And that appropriations bill did contain the rider which changed the Organic Foods Production Act.

Now, what does that mean? We are still looking at that. But the bottom line is we still do have some rulemaking to do to comply with the court order that we were bound by as a result of the Harvey lawsuit. For example, Congress did not do anything with the 8020 feed provision and the court still said that that was illegal. So we are in contact with the U.S. Attorney in Maine and he still our legal counsel through the Department of Justice. And so we are bound to reply to the court by June 2006. We can't just say oh well Congress passed a law so I guess we can just ignore the court. We can't do that. We still have to in effect closeout our dealings with the District Court of Maine and our U.S. Attorney will advise us how best to do that.
My guess is, and again like I told you in August I'm not a lawyer, my guess is that a lawyer will say we'll have to comply with whatever Congress didn't touch and that where Congress monkeyed somewhat with what the court did, we may have to go back to the court and petition for some sort of relief or something and reconcile where there is a conflict between what the court told us to do and then what Congress came along and kind of undid or contradicted in some fashion.

The bottom line to all of that is for USDA we have rulemaking to do regardless. The question is in what time frame will we have to complete this rulemaking. Obviously, since Congress may have overridden what the court has done, we won't have to do rulemaking by 2006. The bottom line for industry is it's back to business as usual for industry with respect to the National List. That has been restored to the current state for the 38 materials, or depending on how you count, I mean I've seen 36, 27 and 38 materials counted on that list. But the National List is the National List. And everybody had
until June 2007 anyway before life changed.

So if anybody came to me and said what should I do, I would say go on about your business and wait for the Department. The Department needs to issue a statement. We have not done that yet because we are waiting for good legal counsel to tell us how we have to proceed and what our determinate deadlines are. And as soon as we get that we will be, I'm sure, required by the Secretary and by legal counsel to issue a statement publicly. Something that goes on our website and something that is cleared and either issued by the Secretary himself or his office, but we will have to issue a statement publicly. And my advise to my superiors will be the sooner we issue something, the better.

So we are in the process right now of preparing the factual talking points. Putting something together that ready for clearance. So as soon as our legal counsel tells us here's what you're going to have to do, we've got all of the guts of it ready to go and all we need to do is insert the deadlines.
The one thing that Jim made a point at the beginning in his remarks and the one thing that I think we can definitely agree on from the Department's point of view, you know whatever our statement contains, I can tell you this: It will be a statement for the facts, here's what Congress did, here's how Congress may have changed the law and how it may be different from what the court did. We'll leave the political pundits of who did what to whom and misconceptions out there to other people. That's not our job. However, the one thing that we will reiterate, as Jim said, is the role of this Board. And the role of this Board was not changed either by the court or by Congress. The Secretary has no authority to put a synthetic on the National List. And that is one thing I want to clear up right here and now.

I've heard this. I've heard this I don't know how many times in different times. Congress did not give the Secretary any authority to put a synthetic on the National List anywhere. Not anywhere. So I've never heard a Board member say that, by the way. I'm certainly not saying that. But
I've heard it in the press. I've heard people say it. That's not true. That is absolutely not the case.

And by the way, another statement that I heard Jim make that I fully agree with, any rulemaking that will be done will be done collaboratively with the Board and with the public. We don't do rulemaking without going through a public notice and comment process. That is illegal. And I, for one, personally as long as I'm the Deputy Administrator, ain't going there. So we're going to have an open above board transparent discuss it, very collaborative process. Not just with you on the Board but with the public. It's not worth anything else. So, that's what we're going to do.

It's just a matter of getting our ducks in a row, finding the time line and getting there. But your role has not changed.

Now I'm going to go to Mark and he can update.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: BoY.

Thank you, Barbara. And thank you for this job. It's fun.
CHAIRMAN RIDDLE: Your name for the record, please?

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: My name is Mark Bradley. I'm the Associate Deputy Administrator?

DEPUTY DIRECTOR ROBINSON: Yes.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Got a little title creep going on in D.C. I used to be the Program Manager, but I think they've changed all that and this title is much more vague and less descriptive, but it sounds important. But really all I still do is manage the staff and try to keep work going through the NOP. Trying to make sure that everything gets done that needs to get done, and try to set up some kind of a management strategy that will have to be my own. Each of my predecessors, Keith one of them, Rich Matthews has had their own style about how they dealt with people and programs and progress through the NOP. And I'm looking forward to putting my own little spin on that.

And, as Barbara said, there are some things that the Board has been pushing for that I will
be pressing for myself. You may know, I come from a long line of quality system audits and background especially with the ISO 65 program. So I’ll be looking to inject a lot of that management strategy into how the NOP is handled, how we get some kind of a cycle of continuous improvement, transparency in processes, accountability, record keeping. Those are the kind of things when you're trying to implement a new rule, as you know we've been trying to do for the last few years, sometimes in the process of just getting everyone accredited and getting things settled down and implemented, we have a little bit more of a luxury now having gone through the work that this Board, especially the graduating class of 2006, has done. It's settled a lot of the issues that we can start getting down to some work as far as quality systems management and establishing a routine that people know what to expect. Board meetings at regular times, you know, addressing regular issues. Planned well advance. I think this is the rose colored glasses that Barbara was telling you I was looking through, but I'm looking forward to doing all that.
And thanks for -- I hope I can live up to her expectations of me.

The first thing before I get into the report, Barbara mentioned that we just had a nice round of interviews with candidates for the Executive Director's position. It was a lot of fun and it was fun -- oh, I didn't say that, did I? I love this job. That's the other one. The other one you may hear on occasion is all I ever really wanted to do is sell vegetables by the side of the road. Somebody I'm going to be able to do that, too.

MEMBER KOENIG: I'll hire you if you resign.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Thank you, Rosie.

But the questions that the Board put together on very, very short notice; thoughtful, they were interesting. I think the people that were interviewed enjoyed answering them. They gave a lot of detailed insight. They were the primary questions that we used. There were six questions. We kept very copious notes. And I think the product is something
that you're going to be interested in, perhaps, perpetuating.

That level of involvement was a good level for the Board, too. It could have got cumbersome if, you know, you had wanted to seat a panel and had to be sworn to secrecy and drug the process out. But that allowed us to maintain some privacy for the candidates. There were some folks there that, you know, when you apply for a job and you interview you take a little bit of a chance that those that don't get selected have to go back and work for whoever they were working for. So they were able to maintain some privacy. But I think you will be pleased with the product that you'll have a chance to look at and comment on, and we'll consider that.

I know that you're familiar with the folks that normally sit at the table up here. Bob Pooler and Keith Jones, Arthur Neal, Merideth Wilson up here. There are a few folks that are new on the staff.

J.D. Melvin in the back. If you could stand up, J.D.? Any certifiers that are calling in, don't call me anymore, call J.D. You're welcome to
call me anytime, but J.D. will be handling a lot of the traffic that comes through. He and Mary Lou Lusby will be contacts for the accreditation staff. Those are functions that I held in a former life, and hopefully can move on. J.D. is very highly qualified. He has about 20 years in government service working with commodities certification type programs. And he will be a good person to groom into that position, and he is functioning in there now. Has really picked up the ball.

Mary Lou Lusby handles the record keeping, the movement of documents. Is very meticulous. Has set up tracking systems where we can do a very good job keeping track of who is sending in updates and the materials that have to come through the program on a regular basis.

We have a new writer editor, I didn't know if you wanted to introduce him. Mike Smith.

DEPUTY DIRECTOR ROBINSON: Mike Smith is here.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: He's the newest person on the staff up here. And he doesn't
work for me, he works for Barbara. But we're looking forward to having him putting some policy on our documents and really I know he's going to be a big asset for Barbara in their shop.

Jim has asked specifically for an update on the state cost share programs. I don't know if that usually happens at this meeting, but I was glad to provide that. Bob Pooler, who is our state person, and he put together some talking points.

There are two programs for the cost share program. The AMA program, the Agriculture Marketing Assistant program was targeting 15 states and it's part of the Federal Crop Insurance Act. And there were 15 states that were historically had not participated as much with the Federal Crop Insurance program. So there was a million dollars obligated annually to support this program.

Thirteen of the 15 states routinely participate. The other two states, Delaware and Rhode Island participation, lack of producer participation is reason that they're not participating in it, although they could. The funds for that, since 2001,
they've had an average $373 provided to 1150 producers who have participated in the program. A total average dispersement of $430,000.

Now the other program, the national program is geared toward, it's a one time allocation. And all the funds for that have been finally distributed or obligated, rather. In March of 2005 the final $2.1 million had been obligated on that. As of that date the funds that had been used by 6100 producers for an average benefit provided $475.41.

Is that the level of information you needed on that, Jim? Does that help. Much detail?

CHAIRMAN RIDDLE: Yes. And then the other part is remaining funds in the national -- I understand you said they've been obligated.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Yes.

CHAIRMAN RIDDLE: Do you have a handle on what's still in the account as a total?

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: The funds have been obligated. We haven't, I don't think, heard back as far as those were actually used and dispersed. And the figures that we have are as of
March 2005.

CHAIRMAN RIDDLE: Okay. And then if a state has used all of their funds, is there a possibility to request a reallocation of some remaining funds that may not have been used by other states?

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: I don't know if that --

MR. POOLER: That can only occur if states don't utilize their funds.

This is Bob Pooler. We're getting reports back about how states are utilizing the funds. If states are showing or exhibiting the fact that they're not using funds, we will request funds back from that state so another state that is in need of funds can use it. But we're not at that level yet. We're now getting reports as to what their activity is. So I imagine sometime early in the spring we may know more information.

CHAIRMAN RIDDLE: Okay.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: All right?
CHAIRMAN RIDDLE: Yes. Thanks. Got that.

MR. NEAL: Now for those of you who can focus your attentions to the west --

CHAIRMAN RIDDLE: And you are?

MR. NEAL: Arthur Neal. We'll begin to see the sunset on the NOP report.

I just want to update you on materials. With respect to Sunset requests or requests for technical evaluations, we have received the reports for flavors, spices and oxytocin. You will be receiving them as soon as get back to the office, probably tomorrow. After the meeting I'll email these out to all of you. So by the time you get home, you'll have them to review.

The requests for newspaper aquatic plant extracts, humic acid and fish emulsions, we had received. They needed some more work. So additional work will be done on those. Once we receive them, you'll get them back. They weren't in shape to send forward to you.

CHAIRMAN RIDDLE: Just a question on that to be clear. Does the Board need to do more work in
clarifying that or --

MR. NEAL: You will have an opportunity to do that.

CHAIRMAN RIDDLE: Yes.

MR. NEAL: But it didn't meet our standard of even sending it forward to you.

CHAIRMAN RIDDLE: Okay. Okay.

MEMBER KOENIG: Okay. So are we doing that same process then with these? You give us a week to evaluate to see if they're technically okay.

MR. NEAL: Right.

MEMBER KOENIG: We give you the okay.

MR. NEAL: You got 21 days.

MEMBER KOENIG: Okay.

MR. NEAL: Twenty-one days to see what extra questions you have. If it meets the standard. If you want to see something in addition, you can make another request and we send it back out. But before we got to that point for the four that we sent back, we didn't think that they were even ready for you to make that type of decision.

CHAIRMAN RIDDLE: Okay.
MR. NEAL: Okay.

CHAIRMAN RIDDLE: All right. Thank you.

MR. NEAL: We have sent forward a request for chlorine materials for crops processing and livestock.

We have sent forward a request for -- no, we have not sent forward a request. There were two more substances, streptomycin.

DEPUTY DIRECTOR ROBINSON: Yes. And tetracycline.

MR. NEAL: And tetracycline. They have been sent forward. But they got so much on their plate, we may end up transferring that request to another contractor.

There's been a lot of talk about NOP as behind in petitions. We are. We do have a backlog of petitions, but it's not as great as many people believe. The only reason why we haven't moved a lot of petitions for it is because we've got the contractors working on Sunset technical evaluations. So it's hard for them to do all of them at the exact same time.
So, just an update. We have a petition for sulfuric acid as a pH adjuster in the processing of manure. That petition has been moved forward for technical evaluation, so we hope to receive a report by the technical contracts by mid to late January, although with the reports for Sunset.

Propionic acid has been petitioned for use as a feed preservative. We're sending that forward.

Gellan gum has been petitioned for use in processing. We're sending that forward.

Lime mud was one that was petitioned back in the fall. We have the report on that and we have sent that report out to Committee members last year. We'll send it back out again because I know there's a lot that's transpired since then. And we'll still need to hear feedback whether or not if the report meets the standard.

We've received a petition for sodium laurel sulfate for use in crop production. The Committee and I had talked last year about this particular substance. And the Committee said it's already approved for use on the list as herbicidal
soap, but there's a restriction on it. This petition wants the restriction to be modified. So we're going to move that forward.

In the recent months we have received three petitions for 606 items, spices, lecithin and pectin. These are all on hold until we can work out criteria for how to evaluate the additional removal of an item on 606.

We've also received a petition of sea salt onto the National List and pelargonic acid.

MEMBER CAUGHLAN: What.

MR. NEAL: Bob may have to help me on this one. I think it's P-E-L-A-R-G-O-N-I-C. Is that right, Bob? Yes. Short chain fatty acids.

And that's a short update on where we are with respect to materials. Okay.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: Where is the status of the -- because one of the reasons like with the soy protein isolate that you didn't mention that's been on hold has been -- and even for most of these, the synthetic/nonsynthetic document, what's the status of
that?

MR. NEAL: Good question.

MEMBER KOENIG: Because it's going to be tying us up on any of these technical reviews until we can really do the job we want to do and make sure we're consistent.

MR. NEAL: Good question. The document is still under review. The nonsynthetic/synthetic document is still under review by the Department by the program. We hope to have a response by early spring on that document. So you'll have it well enough in time to review those materials for recommendation. That's the goal.

It's not a simple thing in reviewing the document. What we're finding is that some of the terms that were even used don't even match up to other federal regulations, like substance. The definition of substance that's in that document doesn't include food. FDA has a definition of substance that it includes food. So there's some things that we have to work out. Because whatever we do, it has to be universal that we can apply it across the board.
CHAIRMAN RIDDLE: Hugh?

MEMBER KARREMAN: Question what my question will be, Arthur?

MR. NEAL: Yes, sir.

MEMBER KARREMAN: About the livestock materials, any updates on that?

MR. NEAL: Thanks for reminding me, Hugh?

MEMBER KARREMAN: Have they come from FDA and all that?

MR. NEAL: Yes. I've left off the dockets altogether.

Comment period closed for the crops and processing docket on yesterday. There have been comments posted to the website.

The livestock docket, unfortunately, has come back to NOP once again for additional work. We thought that it was wrapped up. We just got it back. And so we'll start working on it at the close of the meeting to get back into Agency review to get through the lawyers.

Yes, sir?

MEMBER KARREMAN: Could you let us know
what's wrong at this point that they're looking for?

MR. NEAL: They've got questions concerning -- you have the applications of FDAs, AMDUCA, which is the Animal Medicinal --

MEMBER KARREMAN: Drug Use Clarification Act.

MR. NEAL: Right. And one of the issues is that there are a number of substances that were recommended by the Board that had no approved livestock use but were only approved for use in humans. And so, yes, they were --

MEMBER KARREMAN: They're technically approved for, let's say, equine or non-lactating dairy cows but they are approved for livestock?

MR. NEAL: Right. But at the same time there's a restriction on FDA on some of those materials. It says for use in non-food animals.

MEMBER KARREMAN: That's correct, but that's where the AMDUCA would kick in.

MR. NEAL: Right.

MEMBER KARREMAN: Right.

MR. NEAL: But what our lawyers want us to
do is to get clarification that there is no approved animal drug that could complete the same task that the one that you all have recommended. And AMDUCA requires that.

MEMBER KARREMAN: I realize there's a algorithm for that. And if you need any help, I'm happy to help you with that.

MR. NEAL: Well, we'll be in contact because this is something that we just got back. And these are the hoops that we got to jump through to make sure that everybody understands that what we'll doing is legal. Because if the average consumer says well this thing isn't approved by FDA for use in animals, in food producing animals, but they're recommending it when it's only approved in use for humans?

MEMBER KARREMAN: Some of them are approved for, let's say, ruminant livestock less than 20 months of age.

MR. NEAL: Yes.

MEMBER KARREMAN: I realize what you're saying, but it's not really a human verse animal
thing. I think it's more the annotation on the label of the medicine itself. I think there's a little more leeway than perhaps --

MR. NEAL: There may be from a veterinarians perspective. But when you go to FDA regulations and how they have approved the drug, especially like this new substance -- how do you pronounce it? That's not an FDA animal approved drug.

That's --

MEMBER KARREMAN: Okay.

MR. NEAL: But we don't want to get into a discussion during this period.

CHAIRMAN RIDDLE: There will be a discussion back and forth.

MR. NEAL: Correct. Unfortunately.

CHAIRMAN RIDDLE: But not today.

MR. NEAL: Right.

MEMBER KARREMAN: It's been a while.

MR. NEAL: Yes, I know.

CHAIRMAN RIDDLE: I'm glad you brought it up.

MR. NEAL: Methionine has been added back
onto the National List.

CHAIRMAN RIDDLE: That's final rule.

MR. NEAL: As a final rule.

CHAIRMAN RIDDLE: For three more years, right?

MR. NEAL: Yes, ma'am?

MEMBER KOENIG: The other document, I don't know if you've considered it or you're reviewing it, but reorganization of the list by the OFPA categories. I don't know if you've done any analysis on that. And then, I mean, we can hold off this question for Sunset, you know, in terms of your answer but I'll ask during that little Sunset review section after lunch. But I'll let you think about it now. Is the question we had whether or not things that might not be approved for Sunset if we have a technical report, can we go ahead and -- if we needed a change in annotation, I'm talking about materials where the question is maybe in an inappropriate annotation, we had asked that at a Executive Committee call whether
if we have the technical report, if we could go ahead and leave it until 2007, not approve it for Sunset. But then relist it with a different annotation.

MR. NEAL: Let's talk later, because I'm not clear on the question.

MEMBER KOENIG: Okay. Okay. And then the OFPA category, too.

MR. NEAL: Right. OFPA categories is also under review by the lawyers as well. It's the language issue. What's considered a production aid, can that production aid category be extended to mean anything. And one of the things that you have to take into consideration is if production aid -- if the category production aids is a catch-all category, that means that synthetic fertilizer now could probably be on the National List with no problem. So, there's some questions that you got to think about legally, and we need guidance on it. We can't answer it, say, what does this production aid category mean. Does it wipe out all of the other prohibitions in OFPA? And I can't give you that answer. So it's under review. And we hope to have a response for you by the spring.
For those things that you recommended at the last meeting, we really hope to have responses by the spring meeting. And we'll be on consultation with you prior to the meeting, well enough in advance so that no one will be caught off guard.

MEMBER KOENIG: Because a lot of those documents we're finishing up and we're going officially off the Board, how do you expect to handle the wrapping up of those documents? I know we won't vote on it because we wouldn't be members. But we would be consulted?

I guess my great fear is that, you know, you get five new people on and these documents that have been in the pipe for a while, just losing that consistency.

MR. NEAL: Well, this is my vision. The new members probably won't be appointed -- they probably will be appointed before the next meeting, hopefully. However, in the interim you're still going to have to work on the documents prior to the meeting. You may not vote at the meeting, but you'll have great input before the meeting. And because of the
complexity of many of the issues being dealt with in the documents, we look for many of you to still be engaged in the discussions. And there's nothing wrong with that. You just may not have the vote. That's it.

CHAIRMAN RIDDLE: Okay. Thanks.

Any other questions?

MR. NEAL: Oh, Mark's got one more update.

CHAIRMAN RIDDLE: Okay. Well, thanks, Arthur.

Mark?

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Just one other thing that I wanted to add in, Jim. As part of the new management cycle I was alluding to, we're setting up a regular training period during January and February. And we're going to try to scatter these out around the country. I don't know what kind of international training we're going to get to do this year. But for the U.S. we've got training locations being set up for California, Colorado, Wisconsin in the northeast somewhere.

The two events that we're firm on right now in conjunction with the EcoFarm Conference at
Asilomar, we're going to be training on January 25th. And that is the day before the kick-off happens in the evening on that event. So we're having some training out there. And that's firm.

And also in Wisconsin on February 23rd in LaCrosse at the Upper Midwest Organic Farming Conference.

Those two events are firm and then we're working on the events possibly one in Denver in cooperation with Colorado Department of Agriculture and also in the northeast somewhere.

MEMBER JAMES: Mark, could you elaborate a little bit on exactly what the content of the training is going to be focused on?

CHAIRMAN RIDDLE: And these are accredited certifying agent trainings.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Yes, for accredited certifiers.

Every year as part of our quality management system we do an analysis of all the nonconformances that we've identified for certifiers through the course of the year. The audit review and
compliance staff conducts their audits worldwide now. And we analyze what they're finding to identify a need for training. It's part of the regular ISO system.

So what we've identified this year, we have identified key processes that need to have attention paid to them. First is going to be the certification process in general, the sequence of events and make sure everyone's clear on how the regulations read and what the standard for applying that is.

We're seeing a need for materials evaluation to make sure that when they have authority to address a material issues or when they needed to refer something to the Board. We don't want to overload the Board with questions, but they do need to know where they need to draw the line and defer to the Board for review.

The compliance process, the definition. There needs to be some clarification as far as nonconformances, whether or not they call them nonconformances. The regs refer them to -- compliance, rather. Monitor noncompliance. If they are issuing
certifications just based on conditions and not calling them a noncompliance. We want to make sure that there's a clear understanding as to what has to be reported to AMS compliance so that they can open the sequence of events that happens from notice of noncompliance, proposed suspension to revocation and revocation with the appeals process in there.

It's important that we receive initial reports on the noncompliances so that they can create the entire picture to make sure that the process is served. So that certified operations aren't just dismissed or decertified or revoked or suspended without having the process that's due to them.

Label evaluations will be touched on briefly.

And then we're getting ready for the first round of reaccreditation. Those announcements will start going out in April of 2006 to give them a year's notice. So we're going to tell them how that process is going to work. It's going to be just pretty much a repeat of what they did last year, or the last time when they first implemented it. But we're looking for
a little bit more information about certifier qualifications. The regs are not specific about what it takes, what the critical mass for an accredited certifier is, so we want them to tell us in terms of qualifications, experience, education, training; paint us a complete picture so that the Accreditation Committee can look at this and make sure that people are fully qualified and that they define those qualifications. They're not just saying we're qualified because we say we're qualified.

And we'll be working with the Board on those issues. That's one of the things that I would like to get in front of the Board for discussion, comments, maybe a recommendation. I don't know if it would cause any reg work, but something we can look at.

Bea?

MEMBER JAMES: One more question. Will the locations, dates, times, content of the training be posted on the website?

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: They will.
MEMBER JAMES: Okay.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY: Bob is working on the training syllabus right now. We're working on that together.

The dates have just been firmed up within the last week. We knew that we wanted to work with these events, but Asilomar and the Upper Midwest Conference were pretty much established. The trainings that we're looking at in Colorado and the northeast are things that we're having to design and try to key them in with other events. So as other events are identified that we can kind of catch people that are gathering up anyway, we'll tag them in with those. But, yes, we will post them on the website.

Thanks.

CHAIRMAN RIDDLE: All right. Thanks. And, Mark, I just wanted to remind you that the Board has adopted a compliance guidance document which was quite detailed. And hopefully, that will be helpful. And if it was off base, I'd certainly like the Board to be informed of that.

ASSOC. DEPUTY ADMINISTRATOR BRADLEY:
Absolutely.

CHAIRMAN RIDDLE: Okay. Well, thanks, Barbara, Arthur, Mark for your comprehensive report.

We're scheduled now to begin public comments, but we also by the clock would have a break coming up very soon. So I think why don't I give the names of the first two people to comment once we come back from break, and read the rules now for commenting. And then we will try to take a break.

So first the rules and the names to hold your interest.

In our Board policy manual we have an established policy for public comments. And those are:

All persons wishing to comment must sign-up in advance, and that has happened.

And you'll be called on in the order to speak. If you're not present when your name is called, I'll make a note of that, come back at the end of the list and I'll give you one more chance. If you're not present then, well then you've forfeited your opportunity.
You'll be given five minutes to comment.

And you're asked to give your name and affiliation when you begin your comments.

You may carry a proxy so long as that has been submitted in advance. And if you do have a proxy, please mention that at the beginning of your comments because you can be given an additional five minutes for a total of no more than 10.

And all persons providing comment will refrain from any personal attacks or remarks that otherwise impugn on the character of any individual or company.

So with that, when we come back from a 15 minute break at 10:45, Joe Smiley will be first and Cayce Warf on deck.

MEMBER CAUGHLAN: How many do we have?

CHAIRMAN RIDDLE: There's 20 people signed up for comment on --

MEMBER CAUGHLAN: We were to have started this earlier, so I was wondering.

CHAIRMAN RIDDLE: Right. We're running a little late, but I think it's been time well spent.
And we will get all the Sunset comments in before we then move on to the Committee reports and actions. So 10:45. Please be prompt.

(Whereupon, at 10:29 a.m. a recess until 10:45 a.m.)

CHAIRMAN RIDDLE: And today's public comment session, we're asking commenters to primarily focus on the Sunset Review. And there have recommendations from each of the three committees posted for about the last three weeks. And the most helpful comments will be comments that focus on those recommendations, especially if there are substances recommended for deferral at this time that you feel should not be deferred or there's no adequate grounds, or if there are substances that have been recommended for renewal that you feel the Committee has erred and they should be deferred for further study. But this is really not a time to debate the substances that are commended for deferral. Those we'll be taking a very close look at in the coming year, in the coming months and year.

So, at any rate, if you can focus your
comments on the Sunset recommendations, those would be extremely helpful to the Board at this time.

And first up we have Joe Smiley. You're heading the wrong direction, Joe.

And Goldie is not in the room. Goldie is the timekeeper typically. Is she prepared. Do you know how to work that? Yes, you can test that. Okay.

Bea? Well Goldie knows.

Two quick things before you start, Joe. As I was saying, Goldie is the timekeeper and you'll have five minutes. And she will hold up a sign giving you a one minute warning. But if you don't see the sign, that's really not her problem. The time will keep ticking.

And there may be a problem, however, that some people emailed to Katherine Benham in the last day and half, and she was out of the office. So if you requested to make comments in the last day and a half by email, your name is not probably on this list. So if you've just did it here at the last minute, make sure and check and we'll get you in if that's your situation.
Okay. With that, Joe Smiley.

MR. SMILEY: Right. Well, thank you very much. Joe Smiley, Quality Assurance International. Not Neal Young doing the well tour.

But I'd like to thank the NOSB for all their work. I'd like to especially thank the graduating class of 2006 for all of their great work. I mean, we've got a lot of work to do. We've seen it and I think that NOSB is in a good position to do that work. And I think that everything that's been said over the last couple of years about the growing cooperation between NOP and NOSB is well founded, and we look forward to that.

When Mark was in here, I was going to congratulate him on his new job. He said that job description was more vague and less description, and we all know that's not how Mark works. So looking forward to working with Mark and getting precise about a lot of the terms that we use. Especially these days because a lot of the issues that we're now going to be faced with are going to really require precision and accuracy, consistency and clarity.
I also appreciate Jim's and Barbara's comments on the recent congressional action. I think once the blogs, the Senates the media dies down and we get the facts the table, I think that we're all going to be able to work together and move forward to do what we're here to do, which is to keep the integrity in organics and to convert U.S. agriculture to methodologies. Those are both noble aims and I think both can be accomplished. I don't think there's a dichotomy between them.

I'd like to get to the point and endorse the NOSB recommendations. It's obviously a good start, as Jim said. Using a favorite industry expression, "You've picked the low hanging fruit," which is good; the low hanging fruit has to be picked. And so that's solid. We support it.

I especially support the deferral of lecithin. I think it's one of those perfect examples of how this rule really evolves and works that lecithin shouldn't be on the list that we are seeing moving in to start to provide organic materials. And I think we see that across the board.
I know as a certifier we are not supposed
to -- Mark's not here for my little plug. But we're
not supposed to advocate one way or the other, which
we don't. We're there to enforce. And let me tell
you, our job is tough without clarity and consistency.

We as certifiers have to make decisions all the time
on what's allowed and what's not allowed, commercial
availability and the Sunset. And your work really
helps us do our work. And we look forward to a lot
more clarity and consistency in the rule.

As you know, we've got a lot of issues
coming up. Sunsetting is just the beginning. The 606
issues, all the materials issues are going to be

In working with new companies that are new
to our organic that apply for certification and bring
to us their IPPs, their individual product profiles,
all of their list of materials it really is getting
complicated. It's really getting difficult to make
decisions. And, again, we're not an accredited
certification agency making decisions for multimillion
dollar, multinational companies with products that are
extremely complicated. And so for us we need the support of the NOSB and the NOP and really being clear so that we have consistency across the board in our examination and in our acceptance or denial of the materials.

And so I know that's the job of the NOSB. I appreciate what you've done to date.

Mark, you missed my comments. Too bad. But you love your job anyhow.

But we'll do what we can to make it work. And we appreciate your work. But I do want to stress, and I know you've heard it a million times, we can't just keep on waiting and waiting and waiting for some of these things. We've got to get answers. And quite frankly, as a company, we don't really mind what the answer is as long as we get an answer and we are allowed to enforce it.

So again, God speed. And hopefully we'll start to get clarity and consistency quicker and quicker as we go along.

Thanks.

CHAIRMAN RIDDLE: Okay, Joe.
Kevin, question of Joe?

MEMBER O'RELL: Well, actually, it's just a point of clarification as opposed to a question. Joe, because you brought up the lecithin issue on the deferral. And I just wanted to make sure that the public was clear on that.

When the Committee had gone into the discussion on 205.606 item that's really where we had our broad based discussion regarding lecithin. And had agreed at that time then to defer lecithin for some additional background information. Then the point was raised that on 205.605(b) on the synthetics lecithin unbleached, we had passed that or put a recommendation to pass lecithin bleach on 205.605(b).

But after the discussion on 606 we went back and the Committee put together a motion and second recommendation for which we were going to defer lecithin bleach on 206.605(b).

Now that's what's published in our handbook here today. It may not have gotten published; I didn't check to see if it got on the website on time for everybody to see that. But I wanted to make that...
point very clear that the recommendation for deferral both on 606 and the beach lecithin on 605(b)

MR. SMILEY: Well, that make sense. That makes sense.

CHAIRMAN RIDDLE: Thanks, Kevin.

Okay. Cayce Warf and then Mark Kastal.

MR. WARF: Good morning. My name is Cayce, two syllables.

CHAIRMAN RIDDLE: I'm sorry.

MR. WARF: Thank you. Cayce Warf, Director of R&D for Alcide and EcoLab. And I support the approval for the NOSP Handling Committee's recommendation on the Sunset Review List 205.605(a) and (b).

Furthermore, I would like to take this opportunity to comment and seek clarify relative to past and future materials relative to this Sunset Review process. Specifically, the category of antimicrobial rinses.

If you look at the NOP you don't find antimicrobial rinses listed there. It should be. These rinses include acidified sodium chlorite, which
I will call ASC for brevity, and peracetic acid solutions, which I will call POAA.

As a preface to my comments and the request I want to place before the Committee, I want to offer a couple of background comments.

First, I think very strongly that ruling on the acceptance or nonacceptance of materials in organic processing should be guided by environmental soundness, not synthetic versus nonsynthetic. Because there are organics that are not very environmentally sound, but are approved. Conversely, there are synthetics that are really environmentally sound but not acceptable to many in the organic community.

Second, I offer this quote for the Board's consideration. "The NOP is a marketing program that offers consumers an alternative choice and is based on sustainable practices. It is neither a food safety nor health program and by law cannot supersede any regulation promulgated by FDA, EPA, FSIS or APHIS or any other regulatory agencies charged with overseeing safety in food and/or in agriculture or the environment." That is a quote from Barbara Robinson in
a letter stamped January 4, 2003, which a copy is attached to my comments here.

I want to focus on two of the best food antimicrobial products that are commercially used right now; peracetic acid and also ASC. Both compounds are strong, broad spectrum, oxidative antimicrobials. Microbes cannot develop resistance to either of these compounds. And the reaction products of both are benign.

For peracetic acid, for example, the reaction products are acetic acid, which is vinegar and water.

Now let me take a few minutes about ASC, acidified sodium chlorite. It breaks down into citric acid and water in common table salt, all of which occur in the agri-eco system.

ASC solutions do not chlorinate organics as does chlorine or bleach. Acidified sodium chlorite solutions are mixed of sodium chlorite, which is a salt and citric acid. Citric acid, as you know, is a principal component of lemon juice. Sodium chlorite is used in drinking water, is
a precursor for making cornoxide, which by way is the NOP.

Recently one certifying agency has declined to certify a processor if that processor uses ASC to control salmonella incidents on organic poultry carcasses. We need consistency from all USDA accredited certifiers on this particular issue here.

I will say that ASC is not an ingredient. And in my comments I've given you chapter and verse on that. It is a food contact substance, and therefore should be outside the purview of the NOP.

Again, in the letter that attached that is the opinion that was voiced by Dr. Robinson in 2003.

Thank you. Any questions?

CHAIRMAN RIDDLE: Jim?

MEMBER KARREMAN: So you're saying it's food safe to issue using this goal to enhance food safety?

MR. WARF: Yes, it will.

MEMBER KARREMAN: And isn't APHIS in charge of that, or Food Safety Inspection Service?

FSIS or APHIS?
MR. WARF: Oh, yes. ASC, for example, has been used to treat 9 billion pounds of chicken in the United States. That's a third of all the chicken in the United States has been treated or is being treated with sodium chlorite as for a salmonella reduction intervention.

CHAIRMAN RIDDLE: I just would like to point out that peracetic acid has been petitioned and recommended --

MR. WARF: Yes.

CHAIRMAN RIDDLE: -- for addition to the National List. Have you petitioned for consideration of ASC?

MR. WARF: Three years ago we put a petition in and then we got a letter from Dr. Robinson that in our mind took it out of a need to put on the list because it was a food contact substance. And, again, that letter is attached to this. And that is outside the purview of the NOP because the residues are of no consequence, and therefore it's not an agreement into the final product.

CHAIRMAN RIDDLE: Yes, I understand that.
I don't know if you understand, though, that the whole food contact substance issue is certainly controversial. And the way to have clarity on use of the substance is to petition. There are numerous other processing aids, similar substances that have been petitioned and reviewed by the Board. And gets gives clarity in a public process and whether it's appropriate for use in organic. So I encourage you to resubmit that petition.

MR. WARF: All right. And I would encourage the Board also to look at calling this as a food contact substance that does not need the List, but I understand that it would be good for the public to have it on a list, one way or the other.

Thank you.

CHAIRMAN RIDDLE: Thank you.

Mark Kastel and then Emily Brown Rosen.

MR. ROSEN: Good morning, all. My name is Mark Kastel, I'm the Senior Foreign Policy Analyst with the Cornucopia Institute.

And dispel any nasty rumors that have been going around, this life threatening injury to this ear...
was not caused by a hit man in Chicago contracted with a large agribusiness firm. One of my buddy's hockey sticks last Friday night went in the wrong place.

At any rate, we'd first like to take this opportunity to welcome the Associate Deputy Administrator to his new position. Mark, you've treated me and other staff members at the Cornucopia Institute with courtesy and respect, and we really appreciate that. We look forward to working with you. Much luck in your new position.

And all these comments will be brief concerning materials. I want to thank the Board. This is not easy work. It's dense and there are probably more fun things to do with your volunteer time. But you've done a wonderful job I think reviewing all these materials. The only ones we're going to comment on the record concerning our livestock materials because of our areas of expertise.

First of all, we support the recommendations of the Board. Further, we wanted to comment on the therapeutic hormone treatment using oxytocin and the parasiticide Ivermectin. We think
it's very appropriate to defer those. We will be submitting survey results, which we're just completely, where we've interviewed the practices et.al. organic dairy marketers in the United States on a number of issues, one of them being therapeutic hormone use. And there's a very large percentage of those respondents indicating that they do not allow their producers to use oxytocin. So I think a record will show that it's not universally believed that it's necessary.

We're not on the record making that statement today. We want to review these surveys and we will submit them.

I want to take just a couple of minutes to talk, not about pasture policy, but about the process that this Board is going to engage in the next day with your Livestock Committee meeting. I want to emphasize that we really want you to take the most aggressive action that you feel which is within your purview this meeting. I want to make sure that you're aware of the fact that somewhere between 30,000 and 40,000 written comments were submitted to the
Secretary's office within the last few weeks asking:

(1) That this Board be allowed to address
as an action item the pasture document that you're
going to be reviewing, and that;

(2) Asking the Secretary to open up the
nomination process for this body for public comment.

There's a lot at stake here in the future.

We want to make sure that the appointees are the most
qualified. There's no one who has a better handle on
that then the folks around this table and the folks in
this room, and the people they represent. And we'd
certainly like the Secretary to have the benefit of
that.

Just in a perspective, those 30,000 to
40,000, there were 50 comments to HHS concerning avian
flu after they posted a Federal Register notice. There
were 2268 comments to the FDA after they posted a
Federal Register notice concerning the morning after
pill or plan B.

Thank you, Goldie.

So this is an overwhelming response from
consumers. There's been five years of public input.
The material you're going to be reviewing has all been vetted by this Board and voted on by this Board.

You'll notice there isn't a lot of farmers here today, and I only know of a couple who be here to testify tomorrow. So how long will we continue down this road when this started, as Jim said, there was one CAFO producing organic milk that it caused this concern. There are eight either operating or intransitional plans right now. And this spiraling out of control and we really ask you to step up and be as aggressive and timely in your response as possible.

And I thank you for this opportunity.

CHAIRMAN RIDDLel: Thanks, Mark.

Hugh and then Dave.

MEMBER KARREMAN: A question on your survey you're doing for the oxytocin. Did you say you're surveying the marketing processes or are you surveying the actual farmers that find the --

MR. KASTEL: Yes. Thank you, Hugh.

We are just completing a survey, a ten month study of the management practices at every branded organic dairy product in the United States and
some private labels who have chosen to participate, though the percentage of that participation is pretty low.

Our principal interest was what practices in terms of pasture their producers are utilizing, but we also interviewed them concerning replacement cattle practices. And one of the questions how they monitor their farmers if they do place restrictive prescriptions than the NOP implements. And one of the questions was concerning therapeutic hormone use as a variable in a group of about a dozen questions.

In some cases these marketers said well we just defer to NOP regulations. We don't do anything more than that. If they say, they're certified, we don't look any further. There are some that have field people and do extensive interviews and checking on their own so that if they make labeling claims; for instance if they make a claim no hormones on their label, someone else might make no milk producing hormones on their label. Then they could not violating the label integrity use oxytocin. So we want to make sure those labels are truthful and of
value to the consumers.

And we will be rating on all these issues. In addition to our narrative report we will be issuing a rating of every dairy brand in the United States to empower consumers and wholesale buyers to make good purchasing decisions based on the management practices on the farm.

CHAIRMAN RIDDLE: David and then Nancy.

I'd like to remind us we need to keep moving.

MEMBER CARTER: Just a real quick question. Did you include anything on this survey in terms of parasiticides?

MR. KASTEL: No, we didn't. Sorry, Dave.

CHAIRMAN RIDDLE: Nancy?

MEMBER OSTIGUY: And when you publish this, will you publish the questions specifically that you asked?

MR. KASTEL: Yes, absolutely. Yes. Yes.

CHAIRMAN RIDDLE: Thank you. Thank you, Mark.

MEMBER CAUGHLAN: And when is that due?
MR. KASTEL: About two months ago. If I wasn't here, maybe it would be out. But we really, really hope that within the next 30 days it will be published.

MEMBER CAUGHLAN: Thank you.

MR. KASTEL: Thank you.

CHAIRMAN RIDDLE: Okay. Emily Brown Rosen and then Tom Harding.

MS. BROWN ROSEN: Hi. Good morning. My name is Emily Brown Rosen. I'm a consultant. My company is called Organic Research Associates. And I'm also working for Pennsylvania Certified Organic as their materials manager twice a month product review for organic farmers.

I'd like to thank you for the careful review of the comments that were all filed on the Sunset docket. There was a lot of comments filed, and it looks like that NOSB carefully look at all of them, which I'm sure wasn't easy. But I do have a couple of comments on some of them.

One was about chlorine, and I understand from the discussion earlier that there are already --
because from reading your docket from the Handling and Livestock Committee that chlorine was mentioned there. But it sounds like you are doing a TAP review on chlorine anyway for those. Okay. So I spend a lot of time. The main part of my comment was that it needed to be done for all three. So that wasn't clear. So I will skip over that.

I do have references in here on some of the uses in livestock and handling production that should be taken into consideration. But the main problem is it's been very inconsistently applied, the chlorine annotation across the board. Certifiers are going by all different policies. So some people are allowing any amount of chlorine to be in contact with food, if the waste water is only four parts per million, some are requiring any amount used followed by a rinse in contact with the food, some have set more in between standards. So we need to figure out what is appropriate for organic and get something workable and enforceable that can be uniform.

In the crops paper you talked about deferring hydrogen peroxide because it might not be
essential. And new information in putting its use in the environment and residue, at least as a sanitizer.

Hydrogen peroxide is formed from hydrogen and oxygen breaks it down and those are the two end products. So I don't think residue is an issue. And this is discussed in the TAP review on peracetic acid. You might want to check into that, the references there may be useful in your question answering as far as uses.

I would say it's also used in greenhouse production of the sanitizer. It's recognized by FDA for pathogen reduction in sprouts that are infiltrated into the water in a sprout growing situation.

And it may also be used in organic potato production to stop sprouting.

So there are definitely uses and I have some references on that. And I don't know if you really need to defer it or not, but you can look at that.

Then the question of off the categories for hydrated lime and hydrogen peroxide. I want to say that originally the NOSB recommendation was that
Bordeaux mixes (copper sulfate and hydrated lime) would be allowed as a fungicide. And that was back in 1995. When the rule got published, the Bordeaux mix is not on the list but copper sulfate and hydrates lime are separate.

Copper is an off the category. Lime may be sometimes without copper. We have lime sulfur. Sulfur isn't off the category. But in general lime is a mineral, so minerals are off the category. So I would think between being used a fungicide in combination and being mineral that it would meet the general category.

Hydrogen peroxide, I just want to remind you of your own recommendation that you adopted in August of '05 about product aids. And I know Arthur addressed this, but I think you agreed on defining aid that should also include active substances using pest control disease, weed insect and nematodes. And you stated clearly it was the intent to include other pest control options in this category because of the specific listings of sticky barriers, tree wraps and seals, insect traps, roll covers, etcetera. So I
think that's a very good basis for your definition, and I hope you can operate on that basis of that definition. Because we have a number of substitutes for pest control potassium -- well, I guess potassium bicarbonate is a mineral, but there's a number of very benign materials that are much better than copper for disease control. So, I think you've got an option there.

I forgot to say I have a proxy from Leslie Zook. Can we add that on? I don't expect to go over too much.

MEMBER CAUGHLAN: I'll add it one when you're through.

MS. BROWN ROSEN: Okay.

Okay. On the handling substances, again, I appreciate that you're doing the TAP review. Inspector Warf has mentioned this is an issue on, especially on poultry rinsing.

I checked on the website. There were two petitions filed in 2002 and it's just never been done. It needs to be done and so we can clear up the confusion on that issue.
In the livestock uses, chlorine is also very commonly used as a sanitizer, clean in place dairy lines. It is required at certain levels on egg washing for processing eggs that are broken for processing. So we need to look at it in context of other rules, other regulations.

And it's also implanting in a lot of TTSPPs. So it's in more places than you think.

Okay. So I just wanted to make one little comment about the docket. Coming from the docket that were due yesterday on the proposed docket. And I'm sure there were a lot of -- or I hope there were a lot of comments posted. But, you know, there's a lot of confusion over the synthetics because they were all listed only with made with organic annotations and now, obviously, that's going to be changed. Although we're not sure exactly how. But two points there.

Especially there's two materials that are on the list which I'm not in support of at least in their present form, is tetrasodium pyrophosphate and sodium acid pyrophosphate.

When I went to review the background
information on TAP, SAPP, there was no TAP review posted, there was no evaluation posted. In the minutes you can find records of the discussion of the supplemental TAP review but it's never been available publicly. So I think that should be deferred from the final rule until all this information can be public and we can make public comments on it.

I think in light of a lot of the discussion about synthetics and processing, this might be a good candidate for maybe an organic classification, and I'd like to see all of the background information before that goes final. And the same thing with TTSP. The petition and the review criteria and I couldn't find the TAP review, and I looked. So it's not all there. It's not well documented. And I think it needs more considering all the public concern about adding more synthetics at this point, these two are not well documented and we need to be really firm on this before they get out and for what category.

So, any questions?

CHAIRMAN RIDDLE: Thanks, Emily.
Tom Harding representing no proxy. And then John Wood on deck.

Tom?

MR. HARDING: Good morning, everyone. And I do want to add my special thank you for all of you new coming Board members, the old ones leaving. I'm sure you feel a little older now.

And I certainly want to thank the NOP and the staff for their good work as well.

I think we've had a lot of criticisms and I think we've come a long way, and I was pretty impressed with this morning. I think it's really important that we continue to work together. This is our rule, not anyone else's. And that we need to work hard at it.

But I really want to thank those who are leaving the Board. You've done an enormous amount of work.

I do want to follow up on one thing. I think synthetic and nonsynthetic issues have to be resolved as quickly as possible and not later. It's an issue that I think will effect everything you're
reviewing now on the Sunset issues, and also
everything that you're going to be reviewing in the
future. So it's a really important issue.

Also the agriculture versus the
nonagriculture issues.

Anyway, I'm here this morning. Tom
Harding. I represent Agrisystems International. We
work with a number of producers and coops and value
added producers in this country and around the world.

And we've done that for nearly 30 years.

I want to talk first of all about the
issues of your recommendations. I think it's really
important that we move forward your recommendation,
both on the Handling from the Livestock and the Crops
Committee. And I think you've done a fairly good job
of looking at those things that are problematic on
those lists, and that includes all of the materials
list.

I do think that we need to be clear about
a couple of things, and that's where I want to get
into my comment next. And that is the issue of food
contact substances.
When the proposed rule came out recently, we speak of TMD 0401 or TM 0401, whichever it may be, specifically about peracetic acid. I mean that material, with a number of other materials, was petitioned on the basis with use for organic products. And the language came out for use with made with. And I understand why that took place. I think it's very important and I want to encourage you to move it back where it belongs. That's one issue. And that's for the handling side in 205.605(b).

The other issue is peracetic acid relative to livestock. I presume now from what I heard earlier, that that's going to come out in a separate proposed rule, and we'll be hearing about that soon. But I would encourage you, because it's a valuable material, it's a very benign material. It's really important that we look at under 205.603(a).

The big issue for me, though, and those minor definitions that we have in there, they're pretty clear, they were your recommendations and I supported them basically, and we do. And we have a number of letters that's already been filed on behalf
of these materials and Crops, Livestock and Handling.

Now you remember that peracetic acid is already in two different places in crops. You've already approved it, it's already been made, it's already on the list.

I think it's really important we take materials like this and move them forward in a very productive way. But for me, anyway, it's clear that we move them back where they belong. That we recommend that they be for the use of organic and not made with organic.

The other thing that's really important, and that was the issue that was alluded to earlier, both by Dr. Warf and Emily, and that's the issue of include contact substances in general. I think it's really important that we pay fundamental attention to getting that clarity extremely clear. And I'm going to read the issue from the standpoint that it's really important to us. I work with a lot of different certifiers. And even though it's under the same rule, sometimes it's not the same results. And it's not their fault, it's our fault. We haven't clarified this issue for them. So I want to make it very clear. This is not dumping on the certifier, because they
have enough work to do as it is.

I also want to remind that for livestock, anyway, the European Union and the UK have already approved these materials. So it's really important that we understand.

This is important to us from the standpoint of those of us who support trade that we have these kinds of materials in the trade system.

The other thing is I want to speak specifically about the issue of food conduct. Finally, and it is absolutely essential to the organic industry, and especially to the USDA credited certifiers that the NOP in conjunction with the established review, evaluation and recommendations process of the NOSB provide a clear, legally enforceable interpretation and an administrative policy that eliminates the confusion and inconsistent interpretation of the use of food contact substances in or on products labeled 100 percent organic, organic and made with organic.

We look forward to your positive and timely action on this. And I thank you for that.
And I want to just say this: It's not about whether we should or should not petition, Jim. You made a very important point. We don't know whether we should petition or not. And I think it's really important that if we have good materials, that we move them forward. If not, we vote to send them back and we put them to asleep. But we do need clear guidance. I would say all certifiers would echo that.

And I want to thank you again for your hard work, all of you. And welcome aboard, Mark.

CHAIRMAN RIDDLE: Thanks, Tom.

And I do want just point out that on the issue of the annotation being added in the Federal Register notice of proposed rule for peracetic acid and those other substances, on behalf of the Board and with Andrea's input, we did submit comments to the program earlier this week consistent with that same message; the things we recommended for organic use, that that's the annotation that should appear.

MR. HARDING: Well, you're always ahead of us, and I thank you very much for that. Any other questions. Okay. Thank you very much.
CHAIRMAN RIDDLE:  Thanks, Tom.

Okay. John Wood and then Tom Hutcheson.

MR. WOOD:  Thank you. I appreciate the opportunity to provide my comments to you this morning. My name is John Wood. I'm Director of Product Registration and Compliance for EcoLab Incorporated. We're based in St. Paul, Minnesota.

EcoLab is a leading manufacturer of industrial and institutional sanitizing cleaning and laundry products. In that portfolio EcoLab markets antimicrobially interventions which are secondary direct food additives that are cleared through 21 CFR 173 to reduce food borne illness, pathogen contamination on the surfaces of fruits and vegetables, poultry, red meat and seafood.

As I said, these additives are classified as secondary directs and they meet FDA's classification as processing aid based on the Agency's definition at 21 CFR 10.100(a)(3).

In the letter or the copy of my comments you will see that I have provided the clearances for peroxy acids for the treatment of red meat and
poultry, the use of acidified sodium chloride
solutions for the treatment of red meat, poultry,
fruits and vegetables and seafood and peracetic acid
solution as an intervention for our fruits and
vegetables.

EcoLab supports the NOSB and the NOP to
approve the NOSB Handling Committee recommendations
Sunset Review List 205.605(a) and (b).

Furthermore, I would like to address this
morning some of the other presenters have already
touched on this, the confusion that seems to be out
there as to secondary direct additives in 21 CFR by
some certifiers may think that those do not meet FDA's
definition of a food contact substance. As you know,
NOP defines still present those ingredients regulated
by the FDA as food additives permitted for direct
application to food for human consumption under 21 CFR
173, except that substances that FDA has classed as
food contact substances.

In 1997 through FDAMA, which amended the
federal Food Drug and Cosmetic Act, FDA provided a
notification process for food contact substances. And
a food contact substance as any substance is defined as any substance that's intended for use as a component of materials used in manufacturing, packaging, transporting or holding of food if such use is not intended to have a technical effect in the food.

This notification was intended to replace the lengthy food additive petition process. And this notification process was preserved for those additives where the agency could make a safety determination in 120 days or less. So FDA has a website, FSIS has a website now and you find on that website a list of approved food contact notifications. But the food contact notification process was not really fully implemented until the year 2000. So consequently, and as you know, we have materials, there are materials in 21 CFR 173 that meet the definition of a food contact substance. And this has led to some confusion that if a material is not on that list, then it's not a food contact substance.

I've provided to you as documentation some of the letters regarding peroxy acids and acidified
sodium chloride solutions, letters from USDA or FSIS stating that these are processing aids that do not have an ongoing intended technical effect and therefore, processor incidental adding labeling is not required.

So in closing, I think it's critical from what I've seen, and I've been dealing with this on a limited data. I just drawn into it recently. That there is confusion out there as to what is a food contact substance. And your help in putting forth a legal clarification to that I think would be extremely helpful to both the manufactures, the certifiers and everyone.

Thank you. Any questions?

CHAIRMAN RIDDLE: Thank you, Mr. Wood.

I do have one comment. That food contact substance list, I believe, is over 540 items now at this point and it continues to grow pretty rapidly. And the statement you quoted from the NOP website just to make it clear that in the Harvey case, the USDA in their filing said that that was a draft for discussion purposes.
MR. WOOD: Okay.

CHAIRMAN RIDDLE: So as the previous speaker pointed out, this is a big issue. The law has been changed. The program working with the Board and the public really does have to sort this out. So just a further background.

MR. WOOD: Okay. Thank you.

CHAIRMAN RIDDLE: Thanks.

Okay. We have Tom Hutcheson then Jim Pierce.

MR. HUTCHESON: Hi. Tom Hutcheson with the Organic Trade Association.

CHAIRMAN RIDDLE: Speak up, Tom.

MR. HUTCHESON: Sorry. I'm recovering from the Greenfield Bird flu.

I would like to add OTA's great thanks to the retiring Board members. Goldie and Dave, whose not here and Jim, Rose, George; all of you have been real work horses. And echoing what Jim said earlier, got an incredible amount done since the final rule was published. This is -- you've probably seen the span of the most change that any NOSB will be see and the
contributions you've made have laid the foundation for pretty much all future work that the Board is going to do, the Board manual in particular is an extremely useful document for everyone.

Also wishing to welcome Mark Bradley into the job he loves so well. And we love having you there, Mark. It's just -- I know especially the certifiers and people working in quality verification systems will appreciate your expertise in that area.

I'd also like to endorse the recommendations in general. Obviously, a great deal of work went into them. A lot of thought, careful thought into what needed more review.

The one thing that I would suggest is that when you do defer on material, the more information about why it was deferred, the better people will be able to give comments and speed the process along so that your statement of work to the TAP reviewers can include all of the necessary parameters so that it doesn't get further hung up. I realize there was some of which TAP reviews just weren't done, which is a very general reason. But if there were specific
reasons that came up as to why it was deferred, it
would be helpful to have all of those. And some of
them were. But the more information in that part of
it, the better for future reference. So I guess
people in general won't be around for the next Sunset
Review, but you can only hope so, right?

You'll be making comments and you'll want
the NOSB to include as much information as possible.

Pretty much just a heads up on a looming
issue, 606. Everyone has managed to avoid a number of
potential train wrecks over the last two years. I
think we need to think about 606 not as major a train
wreck as some of the past ones have threatened, but it
is a new idea for a lot of people. Of course, the
proposed rule said naturals are allowed unless they're
prohibited and the preamble to the final rule said
pretty much the same thing in those words.

Now we have a new situation. The process
has, reading now, "Until now it's been the
responsibility of certifiers and OTA expects that any
new rule will mandate that manufacturers demonstrate
not only that they're certifiers, but also to USDA
through the NOSB that a product is not commercially available in an organic form. OTA notes that this strengthens rather than weakens the existing rule."

That's supposed to be the good news.

The bad news is that OTA anticipates that upward of 1500 ingredients could be petitioned unless some degree of categorization of ingredients is allowed, in which case perhaps 50 to 100 would be petitioned, which is an order of magnitude pretty much.

The longer list includes various steam distilled essential oils, Co₂ extracts, alcoholic extracted botanticals and derivatives of all three as well as spices. OTA would like to support the broadest categories possible that will be legally acceptable as identifying ingredients in order to mean something close to the range of organic product options, and therefore demand for raw agricultural product that the trade currently has.

Just that and a quick note that any work on smoothing a reclassification of any items from 605(b) to 605(a) if there are now natural alternatives
available would be helpful particularly recommendations specifically in support of the simultaneous petition to remove and approve, and any issues that may arise from that.

CHAIRMAN RIDDLE: Thanks, Tom.

George?

MEMBER SIEMON: Just so I understand your blocking together, there would be approval of them as a group?

MR. HUTCHESON: No.

MEMBER SIEMON: There's 1500 individual ingredients and if you break them down to 50 or 100 groups. I didn't understand.

MR. HUTCHESON: No, no. It's 50 or 100 items if you included, say, flavors that were made by a particular process that the only difference is the natural flavor rather than that you would say natural flavors using this process that include this particular one item in each of these things that's different. That is, if something -- if one flavor was the same as another flavor except for one was raspberry and one was blueberry, then you could say
raspberry and blueberry and whatever that were made by this process. And that might help lessen that sort of thing. Because a lot of these are, if not standard formulations, at least similar. And I don't know the technical details of that, but it's one way to start thinking about some of what's actually out there.

We have a task force going on it. These are some of the issues we've begun to identify. This is just a heads up that this may be bigger than anybody expected, that's all.

CHAIRMAN RIDDLE: Yes. Thanks for that. And once again, we have to keep moving. But Andrea?

MEMBER CAROE: Well, I just wanted to ask you a quick question about categories of things between 606 like spices. My concern, and I'm talking of other members of the Board, is that by doing that spices that could become available won't. There's not going to be incentive to get those products on the market because they're lumped into a broader category. So if you put spices on the list because organic saffron is not available or organic cumin and maybe a couple of other things, but organic pepper is widely
available, now it's on the list and processors won't have to purchase the maybe more expensive organic black pepper instead of conventional.

The worry is by listing these things that we'll lose the incentive for producers to start making these organic products, these minor ingredients available. And has your task force worked on that at all and thought about that issue?

MR. HUTCHESON: Well, the common understanding before materials had to be listed individually on 606 was that when they become commercially available, the manufacturers had to use them. And I think that's a separate question of how commercial availability is treated. And, again, the Board's work on this is great, let's hope it moves forward expeditiously.

So the situation really isn't any worse than it was to begin with when all naturals were allowed unless there was an organic alternative available. Obviously, keeping a list of what certifiers are letting be used as not available in an organic form would be useful. So that you know a
posting, as I know NOSB is considering, for 30 days to have anyone say wait a minute you shouldn't accept that because it is commercially available or here's what is commercially available, are they really asking for something different from that.

So it's certainly not any worse than it was. And the degree of categorization is what we're asking some consideration of. And, of course, you're free to exempt anything from that within those that if you think, oh you know, forget it. Pepper is never going to be not available as organic, let's exempt that from this category, that's another route you could go as well.

CHAIRMAN RIDDLE: Thanks. Thanks, Tom, and I do just want to give a reminder that we won't be acting on commercial availability at this meeting. It's good information, but we will be acting on the Sunset recommendations. So as I ask commenters to focus on those as much as possible.

Thanks, Tom.

MR. HUTCHESON: Just a heads up.

CHAIRMAN RIDDLE: Yes. That's no problem.
Always appreciate it.

Jim Pierce. I know Marty Mesh is not here.

He was next. Franz Wielemaker.

MR. PIERCE: Good morning, Mr. Chairman.

NOSB, NOP staff, ladies and gentlemen of this rather snub gallery, I'm Jim Pierce self-appointed certifications czar at Organic Valley Cooperative.

Since I missed addressing you all last August, I thought it's appropriate to refresh you with the company disclaimer. The cooperative that I work for includes over 700 organic family farms in 17 states. The cooperative produces refrigerated dairy products, eggs, juice, produce and meats, every bit of which is certified organic.

Among the goals of the cooperative is to provide certified organic products, support family farms, promote humane treatment of farm animals, sustainable agricultural production and environmental protection.

Mark, I love this job.

The role of the NOSB as the USDA appointed Advisory Committee has been debated since its
inception. But beyond reproach is the premise that the NOSB deals with materials and the NOSB works in compliment with the NOP. As simple as that rolls off the tongue, it's a task that has been more complex than string theory.

Ladies and gentlemen, pat yourselves on the back. This is good work well done. You are the Board that first plowed through the quagmire of the Sunset clause, and you're about to greet the new dawn not only in tact, but as wiser seasoned veterans having blazed trail for further Board members to follow.

Good job particularly of shifting through a multitude of comments, many of which missed the mark considerable.

Good job remaining focused, not dealing with annotations, recategorizations and other temptations to meddle beyond your purview.

Good job working with the NOP on presentation and format. Good job NOP for assisting. Your guidance in accurately setting the course is obvious and appreciated.
Now, as I mentioned, I missed the August meeting so I've only addressed you five freshmen, soon to be sophomore members once. But veteran members know they don't get off without some criticism, always constructive and well meaning, of course. So pay attention and this won't hurt too bad, as mom used to say.

The only actual criticism I have is that a score card summary of all of this would be very helpful. Go back to the list and say which ones are going to be recategorized, which ones are going to be deferred. There's a lot of paper and I think we're going to find ourselves shuffling back and forth through a lot of paper this afternoon.

Other than that I have more questions than criticism, actually, since you really seem to be on the right track. And I hope the answers will become obvious as this meeting proceeds. Among what I hope to be enlightened on, how much of the precious time and resources available to materials review will be used? Hopefully, there will still be room for new petitions, not to mention the development of
commercial availability criteria and subsequent reviews.

What exactly are you expecting when you refer to "further technical information?" Hopefully, it will be specific, clear and cheap, an abstract concept in Washington, D.C., I realize.

Will you be leaving too much work for the next Board? God knows their plat will be full. And I guess I just hope to come away from this meeting with the assurance that farmers and processors will not find themselves in limbo during the review of these previously approved materials, which now find themselves on the bubble. This is quite a list, after all. The list of deferred livestock materials grew from two to four. The processing list also grew from two to four. And the crop list grew to 15 -- 15, seven of which were added not based on comments. I'm certainly going to do my very best to keep my eyes from glazing over while you educate me on this.

I gather from the recommendations that some of these materials were not technically listed correctly, in which case they say onward organic
soldiers. By all means, list them all and then fix them all.

Now Jim Riddle yesterday gave me a caveat that I said I could use, so I thought I'd better use it. Address annotations for technical corrections only, not for expanding or restricting use. Is that close? Thank you.

In closing, let me close by coaching you to be conscious of the lessons learned from the Harvey lawsuit. Be careful that your decisions that you make don't cut the hands off of well meaning organic farmers and producers. Minimize the disruption at the same time as you rachet up the old organic bar. Remember that as Sunset trailblazers you are repairing past oversights and setting precedents for future Board members. Do it right, do it just and do it so you can be proud of what you've done.

Thank you.

CHAIRMAN RIDDLE: Thanks, Jim.

We have Franz and Brian Baker.

MR. WIELEMAKER: Well, it's very hard to follow this very versed speaker. I'll make it brief.
I'm a new kid on the block in these kinds of meetings. I represent the Dole Fresh Food Company in Central America and South America. My name is Franz Wielemaker. And I'm charge of the organic program with that company. And I work with a lot of organic banana and pineapple growers in Central and South America over the last ten years.

What I would like to address is the use of ethylene in 605(b)(10). Ethylene allowed for post-harvesting ripening of tropical fruit and the degreening of citrus. And later on I'll talk about 601(k) where ethylene is mentioned for regulation of pineapple flowering.

As it is in the review committee, ethylene was deferred because further technical information had to be obtained or needs to be obtained. This is rather worrisome for a lot of the organic banana growers in Central and South America because it will give a lot of insecurity of what is going to happen in the near future. So I would like to see why or I wanted to find out why this was deferred. Because if it's about a technical information that is missing, it
might have been in some kind of comment that was made to NOP. And I went through the whole list of all the comments that were made. I only found one addressing ethylene. And in that comment they say that ethylene increases yields and decreases labor.

In the TAP review, for which exists, it is also said by reviewer three that ethylene would increase yield synthetically increase yield. I've seen in my 27 years of experience in banana research, I fail to see why or how ethylene applied post-harvest can increase yield. So I need a clarification for this.

And also how can it reduce labor if by all means are now able to produce an organic banana crop?

So if we can deferral changed and get ethylene for banana ripening approved this week, then I would also like to mention that I think for pineapple flowering in 601(k), I would like to add the flowering of pineapple in that section. Because just as with citrus, we do need to degreen pineapples for the market.

There exists TAP reviews for both of these
comments for both uses of ethylene, like mentioned. These are rather recent. They're quite complete. And the EPA here rules that an environmental phase studies for ethylene are not required. That's a statement by the EPA.

And also ethylene is exempt from tolerance requirements because ethylene poses no dietary risk.

So it's beyond my comprehension at this stage why ethylene should be deferred.

I thank you all for your attention. And you're all doing a great job, and I hope I brought my point across. I would like to hear some comments.

CHAIRMAN RIDDLE: Thanks, Franz.

Kevin?

MEMBER O'RELL: Yes. And we'll go into a little more detail in the presentation of the Handling Committee report. But just to kind of set the framework of under the gun under pressure to get as much on the plate as we could, as we said the low hanging fruit, which I realize you're using it for fruit but I apologize. That wasn't one of the low hanging fruit.
We chose to defer it because when we read the initial TAP review on ethylene, there were some questions there that we felt needed further review. And given the time constraints, we wanted to get through with those materials that seemed not to have a contentious position. So it's under review, we'll certainly have questions for it. And we'll make those questions known to the public as we go through the process.

MR. WIELEMAKER: The thing is by deferring it you're creating a lot of uncertainty under the growers in Central and South America. So I would say if you need clarifications on the TAP review, we can do that in the meantime. But the only negative comment that I can find in any of the two TAP reviews is by one reviewer. His comments never get reviewed. That's the end of the TAP review. So --

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: I just want to make you aware of the kind of philosophy, I guess, that we took and I proposed. We had a lot of comments. We had a lot of materials that we had to review in a very short
period of time between the closing of the comments and when we would have to post it on the web for prior to review.

Deferral, you know I know it's not a comforting feeling for things that people depend on. But what people are assuming, and I think it's a wrong assumption, is basically we could be -- it's further technical information, some of which has already been recanted by the Board, and as Art has stated, we have some of that information back from the contractors.

You'll be involved in the process. Anything that gets deferred will be voted upon probably at the next meeting. And some of it may not even be that much technical information. Maybe the Committee was not at the point to make a decision. So provide that information in your comment I think is really helpful. And I understand there's uncertainty. But don't --

MR. WIELEMAKER: Do you know any of the technical issues that were at stake or that are missing.

MEMBER KOENIG: Well, we'll discuss it and
just listen to the comments. You certainly, just like this -- from Livestock, you know after you hear the Committee's discussion as we go through those things and you still have maybe a comment or so that you want to provide to the Board, I don't think there's anything that's stopping people from coming tomorrow on issues.

CHAIRMAN RIDDLE: Only me.

MEMBER KOENIG: Yes. And, hopefully, if we have time periods, certainly we want the Livestock issue to be discussed tomorrow. But certainly if there opportunity, you can always submit comments in writing.

MR. WIELEMAKER: Okay. And then another issue was the addition of degreening for pineapples in 601.

CHAIRMAN RIDDLE: And it does say tropical fruits already.

MR. WIELEMAKER: Yes. But it's in 605, which is after harvest. And in pineapples it's done--

CHAIRMAN RIDDLE: In the field?

MR. WIELEMAKER: In the field.
CHAIRMAN RIDDLE: Yes. Yes, and I don't know if you caught earlier the discussion about not adding or restricting uses in the Sunset process and changing annotations. So really the most appropriate action there would be for you to file a petition to add that as an additional approved use on that particular topic.

MR. WIELEMAKER: Which I did.

CHAIRMAN RIDDLE: The other I think the Board is certainly hearing the need, even if we do defer it for timely action, so that it's clear what its regulatory status is. But it clearly is on the list as approved through October 2007. No changes there at all. That's the Sunset.

Thanks.

Brian Baker then Harriet Behar.

MR. BAKER: Thank you, Mr. Chair. Thank you members of the National Organic Standards Board, the National Organic Program.

I very much appreciate all the work that you've been doing, and in particular applaud the class of 2006. But above all I want to recognize one member.
I'd like to respect and honor Rose Koenig for all the hard work she's done on the Materials Committee.

(Applause).

MR. BAKER: Just a tremendous amount and body of work that she's left. And I hope that future NOSBs can build upon that and the synthetic/nonsynthetic work that she to clarify and to define those, not to mention her work on the Sunset and to bring reason and organization to how the National List is presented.

I'm Brian Baker, Organic Materials Review Institute, Research Director.

MEMBER KOENIG: I thought you might have been my husband or my brothers.

MR. BAKER: Well, they're lucky men, I assure you.

The Organic Materials Institute sees Sunset as an integral part of the materials review process, just as integral as the petitioning, the TAP review, the NOSB recommendations, the public comment. We have to reevaluate these materials. Time does not stand still. We have to go back to the original TAP
reviews. Having been a reviewer in those early days, I can tell you from personal experience there were things I did not know then that I know now. There were references that were not covered. There were TAP reviews that were not even done. And new information comes through every day. A lot's happened in the past week or two, not to mention what's happened over the past ten years. Science continues to make new discoveries, there's no technology.

We have seem materials that were classified as synthetic become available from organic agricultural sources. This blurs the distinction in categories between 605 and 606, to use the regulatory jargon. So the purpose of the Sunset was to not put so much of a burden on those who have taken the time to develop the new technologies, to source the organic alternatives, but to give some avenue for these things to enter into the discussion without requiring a repetition to remove.

So having said that, we also want there to be a minimum amount of disruption and a good process for those who have an economic stake on what's now on
the list to have their voice heard and to take into account what's happening there. There needs to be a time line to remove those substances. There needs to be adequate notice for those who formulate with substances that are being removed to reformulate, or address it some other way.

We're doing our share. We've emailed all of our listed suppliers, we emailed all of our subscribing certifiers. There was a lot of confusion with that email about -- and we don't want to be sending mixed messages. So we have to refer people to the Department and to tell them to come to these meetings. Obviously, there are people who hear the word deferral and they think the word denial. They're not the same. We're not advocating the removal of any substance. We're not advocating the retention of any substance. But we do want to see some consistency in how they're addressed.

And in particular I would like to mention one category of materials that appears in both the Livestock and Processing section, nutrient vitamins and minerals. These were not properly reviewed by the
technical advisory panel. They were given a two year period for reconsideration in 1995. And there remains confusion in both cases. I sent comments about that. And in order for expediency, I ask you to read those or ask questions if you have any at this time, rather than repeat what I wrote.

And briefly on commercial availability, it is a Sunset issue, but also a broader issue.

Thank you.

CHAIRMAN RIDDLE: Brian, I just want to be clear that on the nutrient and vitamin listings, you are encouraging the Board to defer those at this time?

MR. BAKER: That is correct.

CHAIRMAN RIDDLE: Okay. Thanks.

MR. BAKER: Thank you.

CHAIRMAN RIDDLE: We'll have one more. It's noon right now. We still have it looks like 11 people signed up to comment, which would be another hour of comments after lunch. But you're on now. And then first after lunch is David Cox, then Zea Sonnabend.

So, Harriett?
MS. BEHAR: My name is Harriett Behar. And I live in Wisconsin. I'm a full time organic inspector, educator and enthusiastic organic consumer. My husband and I operate a certified green house, grow organic vegetables and herbs, as well as having an organic processing operation where we dry vegetables and herbs.

I want to thank the NOSB, both the outgoing members and the continuing members of this Board for their diligence and persistence in some cases in maintaining a transparent process in their review of materials allowed in organic production. I appreciate both the opportunity to comment and bring my unique perspective and experience to this process, as well as hearing the opinions and expertise of others.

There are many stakeholders in the organic community. And through open discussion and common sense compromise, the NOSB has been able to maintain organic integrity by using the OFPA criteria when making decisions. Even though at times the end of the discussion may never seem in sight, either based in
insufficient information or lack of agreement among the stakeholders, I encourage this Board to continue with the sometimes argues process.

In review of the Sunset documents put forth by the various NOSB Committees, I agree with these recommendations overall. I would like to see the Handling Committee review the annotation currently in place for chlorine to be further clarified to allow more than four parts per million of this synthetic to be present when the solution is in contact with the organic products. The current annotation is not clear, and in my organic experience this is inconsistently regulated.

My main comment here is also concerning annotations. While I understand that these statements in the National List are in place to limit these materials to a specific use, I see misunderstanding by both farmers and processors of the annotations when out there in the field. I have seen lidocaine and procaine be used in cattle without the complete withhold time of seven days for dairy and 90 days for slaughter. I have also seen a lot of confusion
concerning the annotation present on sodium nitrate with some fertilizer companies selling this product bundled into a fertilizer blend as an approved material. Both the farmer and the certification agency have difficulty in determining how much of the nitrogen in the fertilizer blend is obtained from this restricted product.

While I do not have a specific recommendation -- sorry Bea -- to change these annotations, I caution this Board to be very careful when crafting annotations to prevent confusion and abuse.

There's a variety of materials that were deferred by the various committees. And I welcome the opportunity to comment on these materials such as oxytocin, potassium chloride, streptomycin and tetracycline when these go through the transparent process of TAP reviews and NOSB debate.

Lastly, due to the recent changes by Congress of the OFPA, I would request the most recent docket put out by the NOP with the synthetic materials in the handling category listed only in the made with
organic category be rewritten and reopened for public comment based on the OFPA changes.

In light of this change to the OFPA, I strongly urge the NOP to work even more closely with the NOSB and public when writing the rules concerning synthetics used in and on organic products, as well as the decision making process when determining noncommercial availability. The NOSB was put in place to bring a variety opinions and expertise to the table when making these important decisions. An organic label has strong integrity and consumer trust based on the transparent and inclusive NOSB process. I urge the NOSB and the public to be vigilant in the production of our organic label as we move forward with the rulemaking based on this OFPA change.

Organic production is not a black and white process. There are many gray areas that need to be discussed in the light of day with a decision making process that recognizes organic production as a holistic system and not a linear one using the experience, wisdom and common sense of all stakeholders. Organic consumers, farms and processors
deserve no less.

And with the methionine, just one other comment. Two meetings ago I suggested that the NOP or the NOSB put some money towards a task force to actually try to find the alternative to methionine. We now have three more years. I'd rather not just see the product keep moving forward. I would like to see an actual process to try to find the alternative.

Thank you.

CHAIRMAN RIDDLE: Thank you, Harriett.

Gerald?

MEMBER DAVIS: Harriett, in reference to a comment you made about sodium nitrate, there really is a simple way to, as a certifier, when it is included in a blend of blended fertilizer to document that and keep track of it in the certification, audit trail and so trail. And if you're willing to speak with me after, a break or something, I could share with you.

MS. BEHAR: Yes. As an inspector I know that I'm just saying this. It's difficult. The farmers are using it, it's being presented as an approved substance without then the farmer truly understanding
that they have to have this 20 percent of the nitrogen needs of the plant to be proved. And when it's hidden in the fertilizer, it just makes a lot of back and forth with the certifier. There's just a lot of extra paperwork and confusion out there.

MEMBER DAVIS: Well, we can talk about it afterwards.

MS. BEHAR: Yes, I know people can track it. But I'm saying practically it's not being done as easily as it could be.

CHAIRMAN RIDDLE: Hugh?

MEMBER KARREMAN: Harriett, just a question on the lidocaine. So what are you saying that the annotation needs to be more published? Or what are you seeing out there, first of all, because I'm out there in the trenches, but you're in Wisconsin. And what do you think --

MS. BEHAR: Well, I'm in the hills and you're in the trenches.

MEMBER KARREMAN: And what do you think it should be? I mean, you know, to make it clear.

MS. BEHAR: Like I said, I think that
there's a problem that a lot of times the annotations are not taken -- people just see the material. And for some reason they don't read the rest of that sentence. I just see a lot of that being a problem. So even though I bring up the annotation when I'm doing the inspection, I think we have to be careful about annotations because they just don't seem to be taken seriously as the product.

I see veterinarians being told that lidocaine and procaine are allowed, end of sentence. And so they come and they give that to the animal and the farmer doesn't say, oh oh, wait a minute, oh I got to pay attention to the rest. They just see it as an approved material.

CHAIRMAN RIDDLE: All right. Thanks. And we'll break for lunch. Try to be back at 1:00 is what the agenda says we'll start. So please be here. We'll continue public comment at that time.

(Whereupon, the meeting was adjourned at 12:07 p.m., to reconvene this same day at 1:24 p.m.)
A-F-T-E-R-N-O-O-N  S-E-S-S-I-O-N

1:24 P.M.

CHAIRMAN RIDDLE: Let's reconvene. We have most of the Board here. We still have people waiting to comment.

Mark Castel, you just dropped some papers.

David Cox or is it Gary, did you want to defer for now and come back later?

MR. COX: That's fine if I can get back on the agenda.

CHAIRMAN RIDDLE: You'll still be on the list, but if you prefer to pass for now and that way Lynn has a plane to catch, and he had kind of fallen off the email list, so move Lynn Clarkson up next and then we'll fit you back in. Thanks. But then Zea will be next after Lynn.

MR. CLARKSON: Good afternoon. My name is Lynn Clarkson. I'm managing director of Clarkson Soy Products. We make, we process 100 percent soy lecithin. I thought it might be helpful to you to have a processor on the public record, providing you some information about availability, functionality,
those issues and expose to any questions you might have.

In your packets you will have a one and a half page presentation on availability. You've got a one pager that's more or less scientific data on the definition of what lecithin is. You have a production spec sheet on what we're offering. And you have one page of commercial propaganda or what, what we're using. You can read better than I can speak, so I will distill that page and a half.

We have been making organic lecithin for about four years. The first two years, we were writing the learning curve and falling off and then climbing back on if we learned more on how to do it. There's some trade secrets involved. We've been making world-class lecithin since January of 2004.

That lecithin is currently used in baby food in Korea, baby food in the United States, chocolate, cookies, power bars, tofu and some beverages. It is a test of functionality that we have passed and done well.

Further tests of functionality, we will be
happy to cooperate with any tests required by any one
and we've tried to find a lecithin guru, a retired
gentleman who writes the book on lecithin or if he
doesn't write it, he is the editor of the book on
lecithin. We would like for him to propose whatever
he thinks is reasonable and submit ourselves to that.

You need to know that lecithin is not a
mono product. One of the best conventional providers
of lecithin has 165 standardized versions. There is
no way that we can commercially make available right
now with the size of the organic market, 165
standardized versions, so we have selected roughly
deep or four that have the most usage and those are
available.

I want you to know that we are quite
capable of making an organic bleached lecithin. We
are capable of making a granulated lecithin. But at
this time, we don't see enough demand to put that out
commercially.

Commercial availability, we have met all
offers or all requests for supply. We have surplus
capacity. We have in place a plan within six months
to double the supply and continue to increase it beyond that if there's enough demand in the marketplace. We simply don't know what's there right now.

I will tell you about one processor, one certifier that has a policy that we like. The certifier has decided we have carried the burden of persuasion meaning that we have met their standards for commercial availability and functionality that has transferred the burden to a user. If there's a user certifying a product that carries the lecithin under that seal, under that certifier, they have to show that the organic lecithin would not work for them.

We have no interest in pushing people to use something that doesn't work for them. It is a client relationship. We wish happy clients. So we like that procedure. We think that meets all of our needs.

Having said that, before I run away, I want to change hats and tell you that. I have a personal comment to make as one of the directors of the Organic Trade Association. I'm not speaking for
the trade association. I'm not speaking for the other directors. The Harvey and the legislative action that was taken has come up before you. I know that many of you have been keenly involved in it.

What I saw in the Harvey case as a director, with responsibility for guarding and encouraging the trade in organic materials, organic foods, was in my mind a serious threat to the foundation of the industry.

The options of dealing with that were extremely limited and had some time lines. As a handler and a processor, I am typically working 18 to 24 months in the future. Other processors making food products are working sometimes 24 to 36 months in the future. I felt it was absolutely critical to address that challenge to the process sector. As I said, we were limited on our options to do so.

I supported the political legislative strategy. I wanted it to do the least disruption possible. I wanted to address the loss of the minor synthetic ingredients that had been vetted through conversations or a significant period of time.
I have absolutely no disrespect and lots of respect for the challenges to the OTA during this procedure. I am happy with the result. I think you will see that the OTA is once again open for communication. I think it wishes to embrace the community and develop consensus on how we proceed and the protocols we use in the future to change things.

Thank you very much.

CHAIRMAN RIDDLE: Kevin?

MEMBER O'RELL: Lynn, you had mentioned that some of the convention suppliers of lecithin have 165 different varieties of lecithin in the marketplace. And you concentrated on three or four versions.

Do you see any major product categories or applications that would fall through the cracks and not be able to use your product because of the road that you took to have three or four? I realize 165 is a lot of products. But is there the danger of somebody with a legitimate concern about functionality for their product, you not being able to respond?

MR. CLARKSON: I would have to say I step
right into my area of ignorance. There may be some needs there that I'm not aware of. I cannot say that we can meet everybody's needs. I can say we can meet most of their needs out in the marketplace and we would be happy to submit ourselves to testing for anybody.

MEMBER O'RELL: In terms of form, you had indicated you have a granule form that is available now or could be available?

MR. CLARKSON: We have the ability to make it. We have the ability to provide it and we haven't seen enough demand to justify creating the supply line.

MEMBER O'RELL: So if somebody was using a dry version, but not powdered and not driving the demand feasible for your production, you wouldn't be able to meet that form?

MR. CLARKSON: We would welcome a discussion with anyone and based on their needs we could possibly do it. It would depend on the supply, how often they needed it replenished, issues like that.
MEMBER O'ReLL: Thank you.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: It has been a while. I actually started when the paneling committee was looking at the substance. I did a little bit of research. One of the reasons why we're calling for TAP is that it seemed like it was much more complicated than what first seemed a relatively simple substance.

It seems to me from the information that I gleaned from websites is that -- I don't know, but there's a little thing that was sitting on my shoulder that was telling me those 165 types perhaps are not all natural, that there could be other substances are added to change the properties of that and that's what I was concerned with because right now the way it's listed, only the bleached form is considered synthetic.

So I was hoping with the technical information that we will obtain from our contractor to actually get a better understanding, but can you glean any information of these 165 forms, are they all just
-- after the extraction of it, if there were things that were added to the formulation that would change the chemisitry of the lecithin is perhaps is not a nonsynthetic.

I think we may be opening up a larger --

MR. CLARKSON: Yes, you may be and you will probably test the limits of my knowledge about that. I think you will find in some powdered versions there may be some real issues. We have learned how to make a powdered version that meets all the organic standards. What kind of demand is there, I don't know because supply and demand have to have some sort of correlation here and that's a balancing act for us, but technically we can do that even in the powdered version. But I'm not cognizant of all the formulations and there are a myriad of formulations out there.

MEMBER SIEMON: Being specific about this lecithin bleach, what is your position on what we should do with that, the bleached lecithin? Is to defer it now and that's in your opinion of that? How does the supply and demand pushing for it apply? I
want the demand to pool the price through the marketplace and you seem to be agreeable to do that.

MR. CLARKSON: If we had demand there, the supply would be right behind it. We are capable of it today. There may be formulations that we can't meet. I'm quite pleased, leaving you with certifiers to come to us and say is it available and then work with us the way I mentioned without naming names of the certifier has been.

I think we could meet that market tomorrow, George, but I don't know the size, so I don't know whether it would fit.

MEMBER SIEMON: But the certifier methodology has really not been working, has it, because some certifiers have not been?

MR. CLARKSON: It hasn't been working, but one of the salutary issues coming from the Harvey is it's sensitized people to a lot of things. It's working much better.

(Laughter.)

MEMBER O'RELL: Lynn, just so you understand because I know you flinched a couple of
times about certifiers being able to follow anything.

If there were criteria given to certifiers to follow for items that were on 606, how would you feel about lecithin still remaining on 606 and having criteria come out for certifiers to follow to see if it meets going through the test of functionality? Because I think if I hear you right you're saying that if it comes off 606, there may be some specific applications that you might not be able to cover.

Mr. Clarkson: That's correct. And I don't have a right answer for this. I think I could live with either of the answers you proposed. I would like to see a general acknowledgement that is generally available, but I can tell you there are going to be some instances in which conventional may be the only thing that works.

Chairman Riddle: I just add that even when it's on 606, well, when it's on 606 that's when the certifier does that commercial availability on a case-by-case basis for every operator they certify. So that still applies.

Thanks. Go ahead.
MR. CLARKSON: I just want to underline that any testing that anybody wants done, we are quite happy to participate in.

CHAIRMAN RIDDLE: Okay, we have Zea Sonnabend, then David Cox.

MS. SONNABEND: Hi. I'm Zea Sonnabend, representing California Certified Organic Farmers, Inc., also known sometimes as the Materials Girl, because I think I can safely say I've been around since the beginning of any materials review process for organic. And I worked for the USDA as a contractor, the original TAP contractor from 1994 to 1996 in preparing the original materials for the National List. Was at all the NOSB meetings at that time, so it's sort of dear to my interest to comment on the sunset review, five years later.

I think the NOSB has really done a great body of work and I definitely want to thank the outgoing Members as many other people have because you've come a really long way in the ability to do the materials work that is so necessary to this Board and it's such a relief to me to not have to do it all
myself all the time and really keep close eyes on you for what you're doing every second.

I agree with most of the comments concerning the sunset and the renewals and deferrals, but I have a few points I want to bring out and I also want to say, in particular, that I really like the proposal to restructure the National List from August.

I proposed something almost exactly the same myself in response to the first rule for restructuring it by categories.

A few other particular comments: hydrogen peroxide as Emily brought up, there are two things on there that are mistakes from the very first way the National List was set up. Hydrogen peroxide is not really a disease control, but it was put on as disease control because of the way the EPA lists the label for the products for it. It's really a crop production aid. Now it is used as a sanitizer. That's a separate use, but it's a crop production aid, very similar to a carrier because it's used with sprayed-on materials to help the plants absorb them better, an oxygenator material.
So this is also similar to the way lignin sulfinates are used. With micronutrients, the hydrogen peroxide can be used with micronutrients with kelp, with other things to help the plants take them up better, so I would put it as crop production aid.

Also, hydrated lime was a mistake in the original. Emily pointed out why, but it was reviewed as part of Bordeaux mix. The annotation that was approved by the NOSB and should have been in the list was for use only with copper sulphate as part of Bordeaux mix. That did not happen and there's been no way to comment on that until now because they couldn't change the National List the way it was.

So I do recommend that you figure out a way to put it back on as copper and fix the old mistake so that it's part of Bordeaux mix.

You may wish to additionally review its uses as an insecticide because it can be used for that.

Okay, I was a little curious about the call for re-review for lignin sulfinates in antibiotics. I would like to emphasize to you that
lignin sulfinate has many, many different uses and although it will just say chelating agent, that covers like a really large range of different types of things it can be used for.

Also, it's primarily a carrier in these things, but I really strongly in your review, to look at all the possible uses because we see this product all the time and it could actually be listed as a sulphur compound since sulphur is a key part of it, if you do restructure the list.

Antibiotics, I had a question concerning the statement in your document, the use of antibiotics and organic production for therapeutic purposes, not growth enhancements needs to be clarified. I have a very large file at home on antibiotics and on lignin sulfinates and I'm happy to offer them. I have copies of the original TAP reviews, many of which are lost from the USDA office. I'm happy to offer them.

And then we want to make sure, as growers, and I think I can safely say this for all growers. Growers want no interruption in their ability to use things and plenty of notice that something is going to
change status. So I'm sure you all know this, but I just can't -- it needs to be repeated time and time again. Transparent review, then plenty of notice for change.

And lastly, I have to throw in one thing about the organic seed document. We liked the whole thing up until the very last statement that certifiers have to maintain and annually submit to NOP an up-to-date list of specific nonorganic crop varieties permitted for each agency. We keep this in growers' files. We don't transcribe it into the computer. This is hours and hours and hours of work that you're asking certifiers to do extra for what purpose?

That's all, except spirulina, if anyone wants to ask me.

MEMBER OSTIGUY: What about spirulina?

(Laughter.)

MS. SONNABEND: Thank you. I didn't understand the point in the document concerning, it said we want to renew sodium nitrate for spirulina, but for use only until October 21, 2005. It's not clear that -- because renew, it's not going to be
finished by October 21, 2005, so I think you need to add a sentence "if this is expiring" if that's your plan.

And I'm passing out some documents from CCF Grower and his affiliated companies for you to all look at.

MEMBER KOENIG: I'll have a look at it, but I think there is a label for -- I think it's oxidated. It wasn't a different brand name, but I think that's a hydrogen peroxide.

MS. SONNABEND: No, it is. And the EPA requires a pesticide label.

MEMBER KOENIG: Right.

MS. SONNABEND: But that's not, in effect, how it's used.

CHAIRMAN RIDDLE: Okay, thanks. David Cox.

MR. COX: Thank you, Mr. Chairman. For the record, David G. Cox. I'm a lawyer with the firm of Lane, Alton and Horst in Columbus, Ohio, speaking today on behalf of the Cornucopia Institute.

In a former life, I was a Senior Assistant
Attorney General for the Ohio Attorney General's Office. I prosecuted polluters for 14 years under the Clean Water Act, RCRA, CERCLA, hazardous waste violations. I did civil, criminal and administrative enforcement. So I know a little bit about how government works and how the administrative regulations are promulgated, how those rules should be enforced and implemented by USDA.

And in another former life I was actually a certified organic farmer for a couple of years, raising vegetables, selling them at farmer's markets, grocery stores, restaurants and actually operated a small SCA as well. So I know a little bit about the National Organic Program. I'm familiar with the regulations and the NFPA.

There's been a lot of talk today about certifiers facing confusion over how to certify somebody. There's been talk about consistency with the rules and the regs. Conspicuously absent, however, is any reference to enforcement of the program.

I apologize to the Board right now. I
have to take my comments out of order. I believe I have permission from USDA to discuss the pasture rule because I'm not going to be here tomorrow for the meeting. But I believe I've cleared this with Mr. Neal.

With respect to the pasture rule, it's my understanding that there have been some complaints filed with USDA pertaining to a particular dairy operation out in the West that isn't complying with the -- certainly the spirit or necessarily the letter of the organic regulations as it pertains to pasture. The cows are being confined. They don't have any meaningful access to pasture. They don't freely graze actually. The calves are in hutches out there. Some of the feeder calves come from a facility that's not even certified organic. There's synthetics in the grain. It's my understanding that these complaints lodged with USDA were basically closed without any investigation being done.

So the concern I have is that USDA needs to actually institute and implement an enforcement program at the national level in order to make sure
that this little green label that we have on all these, for instance, milk containers, actually means something.

With respect to complaints that are lodged with USDA, USDA has an obligation to actually investigate the complaint. They need to determine if there's a violation of law being conducted, if there will be a violation of the law, that will be occurring, or if past violations have occurred.

If that's the case, USDA needs to take appropriate enforcement action, issue administrative findings and orders, issue warning letters to the entity, actually issue cease and desist orders, notify the public of these entities, noncompliance with the laws, and engage in a process, not only with the Board, but also members of the public, with respect to the transparency of the results of the investigation. Public records need to be made available and USDA actually needs to cooperate with the Board in adopting the recommendations by the Board.

Again, my whole purpose today is to speak of some complaints that have been filed and USDA's
action or inaction does have some consequences. Some of these actions or inactions on the part of USDA can actually be challenged either through the Administrative Procedure Act or certain other USDA statutes that apply.

There's been a lot of work by the organic industry over the last now 15 years. It was a success to even have Congress enact the NFPA in 1990. That was -- to me, that's like on a par with Congress enacting the Clean Air Act, Clean Water Act, RCRA and all these environmental laws.

Now we've got some organic laws that are in place and I think it's important to actually honor the spirit and intent, not only of the statute, but also the regulations that have been adopted so that the little green label that's out there, that consumers have placed their trust in, actually means something and it's not a fictitious label.

Thank you.

CHAIRMAN RIDDLE: Thank you. We have Carol King, then Steven Clark. I'm sorry, I didn't give Carol a warning. Oh, you aren't signed up for
today. We won't make you speak then.

(Laughter.)

I'll check the list, I think it's in the back of the room. Check the list, make sure you're on for tomorrow.

Steven Clark, Diane Goodman is offering comments on behalf of and Gaye Timmons, but Gaye isn't here.

MS. KING: That was the letter I passed out.

CHAIRMAN RIDDLE: But it wasn't a proxy, you could have kept going on.

(Laughter.)

Then David Hilts will be next after Diane and Steven.

MS. GOODMAN: On behalf of myself and I'm Diane Goodman for the record. I'm a consultant to the organic industry and I want to express my deep appreciation and gratitude to every one of you through the last few months and especially to those of you who are leaving, to Goldie and Dave and Jim and Rose and George for the years that you have spent in this
process because I have been with you the whole time and know how much it's taken. So it's really with deep appreciation for your work.

On behalf of Steven Clark, Steven is PHD Director of Research and Industrial Development for Florida Crystals Food Corporation and this is now Steven speaking.

Good afternoon and thank you for the opportunity to make this comment. Florida Crystals recognizes the huge commitment of time and effort the Board has made to make the process of the sunset review efficient, comprehensive and accurate and we appreciate your work.

We agree with the Committee recommendations for determination of review for substances currently on the National List, is posted for comment, and urge you to vote your support, vote to support your Committee recommendations.

We continue to rely on substances in National List Sections 205.605(a) and (b), particularly enzymes, ascorbic acid, calcium hydroxide and calcium dioxide for the production of organic
sugar and rice and trust that your vote will guarantee those substances will remain viable after the sunset of the list.

We would also like to urge you to make your continued work with National Organic Program to clarify the definitions of synthetic and nonsynthetic, a priority in the work plans. We strongly recommend that together the Board and the NOP staff seek both scientific expertise and legal interpretation of OFPA for the most objective, compelling and valid definition that is scientifically substantiated.

I offer you, meaning Steven, offers you his expertise and knowledge about this subject and invite you to call on him to assist you in any way that he can.

We also support the Board in its upcoming role, advising NOP as rulemaking is developed to follow recently legislative action to create an expedited petition process for substances not available commercially, excuse me, not commercially available organically.

As a related note, we have many customers
who use products that will now need to be included in 17 CFR 205.606, based on the *Federal Register* notice of July 1st which limits those nonorganic agricultural substances to the five currently listed. We suggest the Board work collaboratively with your trade association which has a task force already in place, working on questions, considerations and criteria as well as members of the industry to best help certifiers determine commercial availability and help producers and handlers comply with new regulatory interpretation and rulemaking.

Florida Crystals would also like to take this opportunity to recognize Jim, Dave, George, Goldie and Rose for their years of dedication and service to the Board, to the organic industry and we wish you all well in your future endeavors. Thank you for your time and consideration of our cause.

Questions?

MEMBER DAVIS: Thanks, Diane. David Hilts and then we'll have Tom Harding speaking on behalf of Dennis Stiffler.

David?
MR. HILTS: Good afternoon, everybody. Thanks again, I want to thank the NOP and the NOSB for their continued hard work in this area and also providing the opportunity for public comment into the decisions for organic agriculture.

My name is Dave Hilts. I'm a research scientist, a biochemist with Acadian Seaplants which one of the world's largest manufacturers of aquatic plant extracts. We're located in Nova Scotia, Canada, the east coast of Canada. And I'm here today just to provide some public comment on the on-going sunset review, specifically, the decision on the Materials Review Committee to defer recommendation of the renewal of aquatic plant extracts as they are currently outlined in 205.601(j) on the National List, until technical information is obtained.

Acadian Seaplants has supplied aquatic plant extracts to organic growers for the past 15 years and we hope to continue to supply aquatic plant extracts beyond 2007 as the benefits of using our products in agriculture have been well documented over the last 40 years, both from our products and aquatic
plant extracts that are produced by a variety of companies around the world.

Our products, just for some background, are produced from freshly harvested marine algae and we do use an alkaline extraction process, that is we add a small amount of potassium hydroxide during the extraction to help rupture the cell walls of the algae and thus allowing the beneficial compounds like plant growth hormones, organic acids, carbohydrates, micronutrients, etcetera, to be released into the liquid phase. We then remove cellular debris and are left with a 100 percent, water soluble marine plant extract.

There have been some comments or some questions from some in the organic community that manufacturers of aquatic plant extracts like Acadian Seaplants could potentially add excess alkali to our products to fortify it with potassium. And I can't speak for the entire industry, but certainly in our company's situation that is not the case.

We use only a minimum amount required to produce a quality extract and our recipe that we use
for the extraction process was developed in conjunction with the National Research Council of Canada and is very sensitive to the actual amount of alkali that we do add. If we add excess or minimum -- excess or too little alkali, it leads to major manufacturing problems for us. It leads to major stability problems with the product. So that's something we certainly don't have advocate and we can't do.

There's also been some question that we may have petitioned the National Organic Program for the use of phosphoric acid as a pH adjuster as simply a way to fortify our products and synthetic phosphorous. And again, that's not the case. Our product is a complex, organic mixture when it's done, as I mentioned earlier, and it is susceptible to microbial spoilage with bacteria and molds which will then degrade the product.

And prior to the final rule being implemented in 2002, we used a synthetic preservative which was found in the U.S. EPA's Inerts List which is a list for inert, but once the final rule came into
effect, we were no longer permitted to do that. And rather than petition the NOP for the use of that synthetic preservative, we looked at the current regulations that were in effect for other products in our group and simply asked that the same annotation that was extended to another biological mixture in the category, namely the liquid fish products, be allowed to us as well, that is, using pH adjustment to stabilize the product.

We tried using citric acid which is one of the organic acids that was listed under the annotation and in our product, we simply cannot achieve the pH required to stabilize the product which is down below 4, using citric acid. That left only phosphoric and sulfuric and phosphoric was the choice that we pushed for, simply because it's triprotic acid which means you use the minimum of that.

One other issue, even if -- the use of potassium hydroxide and phosphoric acid in aquatic plant extracts, it just doesn't lead to agronomically significant quantities of these macronutrients in the final products. Given our application guidelines and
the NPK analysis for aquatic plant extracts, much less than 1 percent of the required nutrient requirements for our crop in any given year could be used, or could be supplied by applying our product.

And there's no way, both from an economic fact and from the fact that the residual salt that comes out the aquatic plant in our product, there's no way you could over-apply a product. A producer could not use our product at a thousand times the application guideline and try to reap these things.

If the current annotation is not renewed, that would leave only hydrolyzed extracts under the definition that's currently in there and the NOSB under my understanding has interpreted this to mean only reactions with water, and therefore you'd only have a water-algal suspension that would be available out there for producers' use. And we have a pretty good market penetration and I'm not aware of any simple mixtures of just algae and water that are out there and primarily I would suspect we would come back to still being the fact that there are no -- there's no way to stabilize that product.
So just in closing, we request the National Organics Standard Board and the NOP to continue to work together to find a path by which aquatic plant extracts containing minor levels of synthetic processing aids remain a viable source for growers in organic markets and certainly if Acadian Seaplants can provide any information, technical information, we'd be more than happy to do so.

CHAIRMAN RIDDLE: Thanks, Dave. George?

MEMBER SIEMON: The one percent was of what mineral?

MR. HILTS: Sodium.

MEMBER SIEMON: The one percent --

MR. HILTS: It would be the potassium phosphorous that we would be adding and if you look at the actual analysis of our product and look at the proper requirement for those things, the application outline, it would be one percent.

Thank you all for your time.

CHAIRMAN RIDDLE: Okay, we have Tom Harding speaking on behalf of Dennis Stiffler. And then Kim Dietz. I don't think Kim -- is she -- hi,
Kim. Sorry, didn't see you back there.

Okay, Tom, again.

MR. HARDING: Thanks, Jim. Good afternoon. I'm Tom Harding speaking on behalf of Dr. Dennis Stiffler.

And Dennis is the Executive Vice President of Food Safety for Coleman Natural Foods and NBC Natural Foods.

It's along the same subjects that we've talked about, but first of all I wanted to mention that Coleman is in support of the work of the NOSB and the recommendations that have come forward with regards to materials, by and large, and certainly in principle. And certainly encourages that measure to go forward under the sunset review process.

As a brief matter of introduction, we all know that Coleman has been around, one of the pioneers in this business. And I'll just give you some background real quickly.

Coleman Natural Foods represents a collection of premiere entrepreneurial founding companies, natural in scope, specializing in the
raising, the growing of natural and organic protein products, all of them in the organic category that are certified under the NOP.

Livestock systems include fully integrated production systems, poultry to pre-approved ranch and farm source verification; pork, lamb, bison and affidavit documentation support.

The majority of the harvesting and processing of the poultry, fresh prepared foods and controlled company owned are handled in controlled company owned facilities.

Outsource harvesting and processing is conducted for pork, lamb, bison, and fully-cooked prepared foods.

The marketing brands, just to mention a few, the Coleman Purely Natural, the Rocky Mountain Range, Rose, the Organic Chicken and then we can go on with red meat division. Again, Coleman Natural B3R. The Poultry Division, Pataluma Poultry Processors, certified entity as well, and the Prepared Foods Division.

The purpose of this testimony and public
comment is to address the use of oxidated antimicrobial decontamination interventions to control pathogens in red meat, poultry and prepared foods and to ensure consumers of the most food safe products possible.

The prospective: the general consumer associates organic food products with health, wellness and quality and of course, food safety. Producers and the processors of organic products are vigilant in their efforts to produce crops and raise animals and process products to deliver quality and food safe products to ensure consumers of the safest product possible using processing aids and food contact substances that do not change the very nature of the product that result in residues, and are compliant with the core values of organic production: enhancement of the environment, reducing the amount of chemicals and sustainable practices and methods. And that does not fundamentally change the definition of the organic food or for that matter, the finished product.

The potential pathogens are there and
consumers know that and they expect us to rid the
product of pathogens.

These pathogens are ubiquitous in the
environment. They are found in the fruits, the
vegetables, the water, the meat and meat products and
in fact, almost everything we eat.

The research data -- I'm not going to go
into it because it's endless and fairly well
substantiated and I just want to say that Coleman is a
valuable resource. I hope that you will turn to them
as we start to consider these other issues and I'm
going to get right into the recommendations and the
summary.

Oxidative antimicrobial decontamination
products that are consistent with FDA's definition of
secondary direct food contact additives, 21 CFR
173.325, and considered either a food contact
substance of a processing aid, 21 CFR 101.100(a) and
(3) thus not subject to labeling, should be readily
available to organic food processors.

I want to insert something here because
I've already heard it and I want to be very clear. No
one and Jim raised that point and we appreciated it, no one is asking for the whole list to be approved. We're talking about the very specific, targeted expectations of materials. We're first of all not that crazy and secondly, it's an impossible task. So I want to be very clear about that.

It's really important that we look at it in the broader sense. There are only a momentary technical effect on the treatment, but not lasting functional effect and there is a low probability of any significant residue on the finished product.

NOP regulations suggest that all non-organic substances including processing aids are to be included in the National List, 7 CFR 205.105(c).

USDA has stated that these substances do not need to undergo the normal review and submission of material by manufacturers, other than ingredients, additives need to under January 2003 letter and we cite Dr. Robinson again.

Inconsistencies do exist in the interpretation in the approval of processing agents through contacts, substances among certain third party
certifying agents. And that point there is that there is an inconsistency and it does not follow the certifier and we need to correct that problem because of the lack of clarity on this issue.

Summary: consumers should come first and be protected, not exposed or do an interpretation of a technical matter that is not clear that affects food safety, ultimately accepting and rejecting an organic product will come from consumers. Oxidated antimicrobials that do not resolve in product technical effect and greatly enhance the food safety of the organic products should be allowed and used. And the matter needs to be clarified and I thank you very much.

MEMBER KOENIG: A technical question, and you might be able to clarify it. It's a question of ignorance, I think.

So there is a distinction between that and a preservative. So you're saying preservatives have an attainable effect. These have a -- there's a --

MR. HARDING: Momentary.

MEMBER KOENIG: There's a momentary --
CHAIRMAN RIDDLE: Does it extend the shelf life?

MR. HARDING: It doesn't extend shelf life. What it does it extends food safety and I won't get into the shelf life discussion because I'm not the person to answer that question. It's a point.

MEMBER KOENIG: It's it a fine distinction? It is a defined distinction that we can access somehow? I look at those and say preservative -- preservatives have the same -- microbial -- but what you're saying is first, it's rinsed, it kills, but it doesn't stay in a functional effect in the product.

MR. HARDING: And we would be challenged to find that on the surface, after treated and properly handled. And we're talking about water and vinegar, technical speaking, and most of these materials are sodium chloride.

MEMBER KOENIG: And just a clarification, ozone is on our list. What is it used for? Is it similar?

MR. HARDING: Thank you for that question.
No, we're not talking about ozone.

MEMBER KOENIG: As far as I know, ozone is sort of that same function and I mean it's there. I'm not sure who petitioned, when it was petitioned. Maybe we can ask Zea. Zea may be able to help us with that.

MS. SONNABEND: Ozone is used more as an alternative to chlorine for use in water-based systems like hydro -- like in your hot tub. It's not used for cleaning equipment or like that.

MR. HARDING: And we are speaking specifically of periacetic acid and acidified sodium chloride.

CHAIRMAN RIDDLE: Thanks, Jim. Thank you, Rose.

Kim Dietz is the last commenter who signed up.

MS. DIETZ: Kim Dietz. I just want to go on the record. These are my personal comments and don't reflect the Smucker Company.

I wasn't going to say anything, but I do want to say thank you to this entire Board and all the
outgoing Members. I've had the privilege of working with you guys for the four years previous to this and I know that your hearts and souls and dedication are certainly to the organic industry and I appreciate that. So for all of you, those are my kind words.

I support the Federal Register docket to move materials to the organic label, the handling materials that were recommended. This Board recommended them to go into the organic label. I also support that.

I support the Handling Committee sunset recommendations. Good job, you guys. I was scared to death that this day would never come and it has, so you've done a great job with that.

I also support the deferral on flavors. I believe that I was part of the Handling Committee when we originally chose flavors and colors to be deferred. We know it's a contentious area. It's going to be. Let's just get down to it.

I have a couple of comments on that. I suggest that when we do look at flavors, let's go back and look at the minutes from the 1995 recommendations,
pour through those minutes -- I looked through those minutes last week. I think there's a lot of information in there that we need to consider. And, to me, I think the biggest issue that we need to look at is commercial availability on organic flavors and natural flavors. There's a lot of people that have converted to organic. There's a lot of people that haven't. And I think that, as the Board's role, you should look at commercial availability and somehow try to put that in the mix of the decision.

I do not support any annotation changes during the sunset review. I'm not sure, I thought I heard you say that, Rose. I just wanted to make sure that -- There's a process for that. It's called the petition process. You can add or remove a material or you can recommend a change in annotations and I believe that that's the way that process should work.

And, other than that, that's it.

So, good job. I look forward to five new Board Members. And I hope that all of you stay in the industry and continue your good work because we certainly need you.
CHAIRMAN RIDDLE: Thanks Kim. We will be having six new board members. I see Andrea, and then Kevin. Andrea?

MEMBER CAROE: Kim, really quickly. You were talking about commercial availability as it relates to flavors. Could you elaborate on that a little bit? I'm not quite sure what you were --

MS. DIETZ: Well, for example, I believe in 1995, when flavors were put on the National List, there were no organic flavors. The company that I work for was actually the first company to commission a flavor house and you see that in the Smucker comments. We commissioned a flavor house. Since then, there's a lot of organic flavors out there. I don't believe that companies, one, are using them the way they should. That's my personal belief. And, two, that they're not available to match -- the organic flavors are not available in the same form and function as natural flavors. So, we're not there all the way yet. We're partially there. We're probably fifty, sixty, seventy percent there. But we're not all the way there.
MEMBER CAROE: Just picking your brain, though --

MS. DIETZ: Yes.

MEMBER CAROE: -- as the expert on materials here --

(Laughter).

MEMBER CAROE: I'm not an expert. Now, as we look at, I mean, flavors is one of those broad categories and we have some that are widely-available organic and others that are not. So, logistically, I'm trying to figure out -- I mean, we're in a sunset process here, so it's accept or reject. So, what are you thinking. Are you --

MS. DIETZ: I think you need to, I mean, you need to seek industry input. I think you need to find out what people are using. Why they're not using organic. They're supposed to be, I would think that if they're available, companies should be using them, although they don't have to because they're on the National List. So, that's an issue.

I don't know what the recommendation -- logistically, you know, I believe they need to stay
on, because you don't have organics in all functions and forms yet. I hope there's a day that they can come off. We're just not quite there with technology.

MEMBER O'RELL: Thanks for your comments, Kim. And my comment was kind of along the lines of what Andrea said. It really relates to the commercial availability and I think we all share your concerns. But, knowing that the sunset process is not the process that we deal with commercial availability of these items. We have to make the determination as you know, whether they stay on the list or off the list. But, certainly, we share your concerns on --

MS. DIETZ: Right, but, you know, I mean ideally somebody should petition to change the annotation and add something in there that you must use organic flavors when available. And I don't know how to go about that. We've never tackled that beast yet, when they're both -- when some are available and some aren't --

MEMBER O'RELL: Right

MS. DIETZ: Flavors are one of those --

CHAIRMAN RIDDLE: Yes. I have a question,
and then, Rose -- yes, I see you. I do, but not when I talk.

(Laughter.)

CHAIRMAN RIDDLE: The question I have is, are there natural flavors that would be non-agricultural, or are they agricultural and therefore more appropriate to be moved to 606. Because that would drive that --

MS. DIETZ: Yes.

CHAIRMAN RIDDLE: -- development.

MS. DIETZ: Yes. I mean I think that's what you're looking for in the TAP. That's the technical information that we're seeking. In my mind, they're twofold. First, commercial availability and really, are they, could they be moved to 606? And that's, as we review these, this material, or these materials, that's some of the questions that we're going to have to answer.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: Again, some of the things that can be deferred -- it's not necessarily event the technical issue. You know, one of the problems is
that -- and this is what popped up with lecithin --
there's no way you can have one group that's not
agriculture, the other form is agricultural. It goes
back to that definition of non-ag and ag. So, flavors
are agricultural, they don't belong on 205.605 period.
So that, you know, we had some things that are, I
don't know why categorically, they were placed on the
list, but if there's something that's agriculture, it
can't be --

MS. DIETZ: Right, and I don't know if
this Board can move things. Again, it's the petition
process. We should have repetitioned or done
something with flavors before this point, before you
have to add or remove --

MEMBER KOENIG: Well --

MS. DIETZ: -- or maybe that's something
that's going to come up --

MEMBER KOENIG: -- hopefully, Arthur will
be here to discuss. We may not be able to come to the
conclusion on these, and we don't necessarily have to.
Things that have been deferred, we're not even voting
on.
But we need to get that discussion started so that you know during the next meeting what our process is going to be.

MS. DIETZ: And I know, I think this will be the hottest issue and the sunset is in 2007 and you have a whole industry relying on flavors right now, so that's why I'm encouraging you to act as fast as you can, start seeking the input that you need on commercial availability and whether they're natural or it should be on 605 or 606. And then make those recommendations fast.

As fast as possible. We don't want 2007 to roll around.

CHAIRMAN RIDDLE: Thank all of the commenters today. It's been some very valuable information. Thanks for taking for your time and coming before the Board.

Okay, we're going to go then to Rose, right, with an overview of the sunset review process. Kind of where we got to where we are today.

MEMBER KOENIG: And for the sake of time I'm just going to verbally go through it and then I
guess if any Board Members has specific questions, you all have been through this, so you all have been through the process.

CHAIRMAN RIDDLE: And there is not a handout in our book.

MEMBER KOENIG: The first thing I would like to do is thank all the commenters who came out because if we did not have material to work with, we would have been in trouble.

We had some comments. Those we had to deal with the best we could, but there were many thoughtful comments, very specific to the best of people's ability. They gave us some information that we could really think about and I will tell you that the Committees did read each and every comment. I read all the comments as well as the chairs of the Committees and the Committees Members, for those groups.

Some individual members may be relying on the recommendations of committees, but it has -- those comments have been viewed by multiple members, especially when they were voting on the recommendation
at the committee level.

   Basically, we proposed a working document for sunset -- I can't remember if Kim or I was chair at that time. That's how long it seems like it's been that we've been talking about those procedures.

   The NOP had a Federal Register notice that went out that explained this process and what was required based on comments and what really sunset was intended to mean in terms or what our jobs and obligations were as a Board.

   And it was correctly stated that we are -- as a sunset procedure, we're either voting things to continue as they exist on the list of they discontinue. That is what sunset is. There's no changing. That's part of that process in terms of annotation.

   But I would like to discuss and we'll talk about this after I've gone through this brief overview are the other options that we can do outside of the sunset process, but clearly sunset and what you're going to see here is either we're accepting the materials and their present annotation or we're
rejecting them and that means in 2007, they would not be renewed, but things are status quo until that time. Do not get delisted after this meeting. It's until the end of 2007.

So based upon that proposed working documents, I guess to the naive notions of our committee, we have thought that there would be this great database that was going to be organized and things would be categorized and there would be a lot of forward work that could be accomplished. But unfortunately there was one due date for all the comments and then we have this meeting scheduled a few months down the road, but we have to have our comments out to the public a month prior to the meeting. So we essentially had about 8 weeks or 10 weeks go to through all those comments.

So the approach we took as many folks have noticed is kind of doing the easiest groups first. Easiest in the sense that there were just positive that we need this. There was no indication from any of the commenters that it was no longer needed or there was any kind of inconsistencies with the OFPA
criteria.

And those, the great body of the recommendations that we're making today that we'll be reviewing are those, in fact, those materials. I asked Arthur earlier, there's about 167 materials that were put forth in the Federal Register notice that have come forth during this process.

A number of them, however, are in multiple different use categories so it's not 167 different substances, but if you base them on categorical use, that's how it's reflected.

So you'll see, you know, chlorine materials on livestock and crops and handling, although you know, in terms of maybe a deferral or review, you only have to kind of do one technical review for those multiple uses.

But -- so we have quite a large slate of materials that we're going to go through and hopefully it won't look like we're just kind of rubber stamping these materials. What we did is after we received all those comments, Arthur gave a hired copy and mailed them to myself as chair of the Materials Committee and
each of the chairs of the Committee received hard
copies so that would facilitate their work in terms of
organizing their Committees.

    And then additionally, every Committee
Member had access to the web so that they could review
the comments from all the individual commenters and
the public, also could review those, as you prepared
for the meeting.

    Our first initial Committee meetings kind
of set of the procedures. We asked the NOP, there was
good collaborative relationship trying to determine
how to proceed, what information does the NOP need
from the Committees in terms of eventually writing a
Federal Register notice for these materials.

    And basically, based on that feedback and
the back and forth between the various Committees, we
came up with a format that was used with the livestock
and crops committees specifically because of the use
categories and all of those lists. So we decided to
kind of break the lists apart and have separate
recommendations for each category and you'll see as we
go through the process that's how we're going to
handle materials.

And then the Handling Committee just kind of had a slight -- same kind of format, just a slight variation of that because it's just one kind of master list.

So the one thing that I'd like to also state is that as the Committees and most Committees had two to three different conference calls on materials, where the discussed the materials and actually took votes, there was a great effort to make sure that people did not have conflicts of interest and it was asked of Committee members to state if there was any conflict of interest and then the Committee voted to determine whether they felt that this person should or should not vote. And we'll be following that procedure today. I want Committee members to disclose if they do have any kind of conflict of interest, either the company has provided a public comment, let the rest of the Board determine whether that individual should vote or not vote on those materials.

And I think that's basically my comments,
CHAIRMAN RIDDLE: Thanks, Rose. Thanks for reading through all those comments and then screening the drafts from all the Committees and continuing to give comments. Rose?

MEMBER KOENIG: That was the sunset procedure. The question that I have for NOP and they can think on and we can think on as far as these deferred materials, as I stated, that some things were pulled because of inconsistency with often the sense that there isn't truly a category, especially in crops that specifically is outlined for particular materials. That might have kind of caused the deferral. Certainly comments provided by the public triggered deferrals and you can see some of the reasoning in the documents, why there were deferrals.

As I stated, we know that sunset is not the opportunity to change annotations, but many of the substances that have been deferred have issues that could involve annotations or could involve that it's not just on the list where it should be. In other words, it's going to change.
So the question that I would like to pose and again, it's not going to impact the materials now, but one idea is that we would vote yea or nay in terms of the continuance, but if there are materials that we have received technical evaluations on because we're getting technical -- we're using our TAP contractors similarly to the way we use them somebody petitions something.

If we can, in a separate process, as we evaluate these substances and relist them, so that when say we vote on them in March, if that's when a meeting is, they would be going through a separate Federal Register notice as a new listing, a proper listing, a corrected listing and we would at the same time, as we submit our sunset document, those would be ones that would not be furthered after 207.

So what we're hoping could happen would be that it would be a simultaneous adding and actually kind of taking off of the list something, but through two separate processes.

CHAIRMAN RIDDLE: I don't know if that -- if everyone understood or followed that, but my
understanding, I'll just try and paraphrase it and then take comments, would be that if we find through the additional review that a deferred material, something that would be deferred today, we wouldn't be making any of these decisions now, if they could be deferred today, but then the review occurs and it's found that the annotation really is inappropriate.

We can't correct the annotation in the sunset process, so instead, that listing would expire. It would truly sunset. But because we got a new review, a new TAP, we have the information to make a recommendation that there be essentially a new listing be added to replace the one that expires. So there's continuity there. Producers aren't left in the lurch, but that's a plan and I think Arthur is still checking to see if that is really a workable approach to this.

Andrea, then Julie.

MEMBER CAROE: I would propose a different procedure and I would propose that we do the yea or nay vote on these materials and if they are material that may need an annotation change, that we vote to keep it on and allow the petition process to happen
afterwards to change that.

However, we've posted these as if -- after this recommendation tomorrow happens, we'll have posted what materials are deferred. We can accept petitions and as these are sent to TAP reviewers, let them know that there is a petition for these to be added in some other form. The TAP reviewer could do double work at that time.

But I still think we need a yea or nay vote on it and if it is something that we feel may need a change, I would propose that we vote to allow it to stay on the list and deal with the changes afterwards so that inaction on the second step of that would keep it on the list and keep it in the hands of growers because if it does -- if we try to do the switch over and something happens with that second step, it's off the list and I think that's dangerous. I'd rather keep it on and work the change afterwards.

CHAIRMAN RIDDLE: We aren't going to decide this today.

MEMBER KOENIG: And I agree, if we can't get guarantees that that it couldn't happen
simultaneous.

CHAIRMAN RIDDLE: So I think that's another good idea to consider, another structure.

Julie?

MEMBER WEISMAN: I have a procedural question in regard to this and I ask for your patience because I'm still in my learning curve.

Who is initiating that petition? Everything that I've been exposed to up until now, petitions have been initiated by folks out there. And that's the question that I was posing to Arthur.

MEMBER KOENIG: The NOSB certainly has the authority to have the national list, okay? Now in normal cases, things that are brought forth are sort of the mechanism of a petition is out there so that the public can say hey, we need this. And essentially, we take that petition and do a technical review. Our vote is based on that technical review. It's -- we don't necessarily -- the reviewer may glean information from the petition, but basically we look at the TAP and sometimes we do look at the petition to augment that information.
And that's the question I had procedurally myself to Arthur. Essentially, it's not that we're pulling something out. We're going to have technical information, we would fill out the same sheets and have to go through the same procedure and look at the same criteria. It's just -- it's true, it would be a process where the call is initiating from the Board, rather than -- so that's -- so those are some of the issues that have to be discussed.

Can I state one more comment? The only thing that disturbs me with the concept and I know for facilitating things and I'm willing -- I'm certainly a compromiser, but you're going to have to convince me. I think in the spirit of the sunset procedure, if we knowingly are aware of a problem, and we just sort of ignore it by saying okay, well, let's automatically renew it even though we know some things, then what the heck is sunset all about if we're going to just rubber stamp practically everything? That's just -- I just put that out there.

MEMBER CAROE: Just a response to that.

If we know there's a problem with material, we don't
renew it, period. We don't renew a material if there's a problem with it.

If the annotation isn't exactly the way we want it or the community wants it -- there's a petition process for that, Rose. I mean we need to be very receptive to that and pay attention to those petitions as they come in, like any other petition. I mean there may be materials that aren't up for sunset would be the same thing.

CHAIRMAN RIDDLE: Arthur and then Bea.

MR. NEAL: I'll be quick. We agreed upon early in the process no change in annotations. And with this particular process, what we have we've got substances that have been on the list for five years and people had five years to petition. Now we get to sunset and we want to do it through the Board which complicates everything because we've got other people in the audience that want to have annotations modified as well.

So you've got the question is will the Board entertain those requests too? So either we keep it on or we take it off. That's what sunset is about.
The continued use of a prohibition or allow a
substance.

CHAIRMAN RIDDLE: Bea and then Goldie.

MEMBER JAMES: I just was going to make
comment about adding in another process at this stage
in the game, especially with the consideration that
we're going through a big transition here on the Board
and that to leave behind a new process it's just -- I
just feel like we need to make the votes today on the
items and then if we have a new process that we want
to implement, that we need to formulate that before we
just go ahead and say okay, we're going to do this on
these items. Because I don't feel comfortable knowing
that you're not going to be here next time and there's
this new process that we're trying to implement.

MEMBER KOENIG: And again, it's not --
what we're discussing here is not -- the sunset
procedure is the sunset procedure. I'm not saying
that we're changing that. I think we're all on the
same table. Nothing can change annotation-wise.
We're either keeping what we have or removing
something that -- you know.
What I'm saying is that it's not on the materials that I think that we're dealing with today, so we're trying to be proactive of what's coming up. I'm saying that there may be things that the Board just cannot live with in terms of -- then they take it off. But I'm saying if we have the technical information in hand, we have TAP reports. We just spent X amount of dollars from our contractor, if we have the technical information and we want to reconsider it, can we at that time reconsider it, not for sunset, but as adding something to the list.

CHAIRMAN RIDDLE: Arthur or Barbara?

MS. ROBINSON: I strongly recommend that you keep the sunset process as clean as possible. The more you complicate this thing, the worse it's going to get. I mean Bea is making a good point, but that point is valid whether Members are going on and off the Board regardless. But you know, the more things that you say well, maybe this is an opportune time to reconsider this or that is just going to make this thing grow exponentially and get more and more complicated and you will -- trust me on this.
have tried to say well, while we're at it why don't we
do this, it opens doors and --

(Laughter.)

You wouldn't believe what starts falling
through the doors. In fact, you know what happens
when we do that.

The petition process is an on-going
process that exists all the time. It is open to
anybody all the time. And as we've had this
discussion for I don't know how many years,
annotations have been a problem all the time.

So in one respect, we could all say well,
maybe this is the time to learn now that careful
annotations are probably better. This is a good time
to take advantage of hindsight and say let's be
careful how we annotate in the future. But if you
feel that strongly that something is so badly
annotated or the information that you're now getting
from a review says we don't like this material, I
really -- take it off, you know?

If an annotation alone can correct the way
it's being used, why do you feel that badly about it?
Keep sunset simple. It is a complicated enough process as it is. Annotation should not be the trap door by which you either put a material on this list or take it off. The petition process is for that.

CHAIRMAN RIDDLE: Thanks, Barbara. And I anticipate that once some of these deferred materials come back from Committees with recommendations to remove which may happen on some, if it's still necessary, the Board is going to hear about it and that could stimulate a petition.

We got a lot of interest just by recommending to defer some things at this meeting, just for further study and there's nothing that will gather interest like recommending to remove something. I guarantee that.

Before we -- yes, I'm sorry, Goldie. I think I have you on the list.

MEMBER CAUGHLIN: I guess what troubles me is that a lot of things would not have been approved had they not been annotated as we annotated them, number one. And there is no separating of the annotation from the appropriateness of that product.
They are inextricably tied together. So it is a separate issue, no matter how safe that product is, we saw fit at the time we put it on there, or another Board did, that it was annotated because we didn't feel comfortable giving it a blanket type of thing.

And I think what we heard here today about the lidocaine and some of the other things is a good reminder that maybe users and certifiers also have to have a wake-up call. They jolly well are responsible for the reading of the proper use of those products with annotation. If it means that we have to come up with clarity in how they are listed on labels or whatever, the annotation is tied to it. It is not something that is just ho hum. And I think that's very appropriate that this is the time for that wake up call. Like you say, it isn't just things that we're looking at right at this moment.

When we first started five years ago, there was a great deal of discouragement to the Board, do not annotate, do not annotate, do not annotate. Well, it became too damn difficult. The fact of the matter was it was ridiculous. We had to in good
faith, in good workmanship frequently find that those products were something that we felt appropriate to approve, but they had to be annotated as specifically as they were. So we did cross a threshold somewhere along the line where it became more common to annotate. And I don't think that is wrong. I just think that we have to find a way to deal with it once it's there.

MEMBER KOENIG: I don't think the annotations, it's not that all the annotations don't work. The annotations that we're having the most difficulty with are annotations that limit formulations, that in the annotation, in and of itself, specifies -- either it's aquatic plant extracts is a good example -- it's listed wrong. If it's a certain pH adjuster or an extraction buffer, then that buffer should be listed.

So the problem is do you want us to perpetuate a bad listing or do you want us -- that's what I'm saying, how do we fix -- you know if you're going to say you'll work to fix it some other way and for us to proceed and don't worry about fixing things
with this process, that's fine, but we need to know that we're not kind of rubber stamping a bad listing.

MR. NEAL: Barbara said what I was about to say. We fix it outside of sunset through petition.

MEMBER WEISMAN: If that is true, then I just want to have some clarification. Does that mean that we're just doing sunset. Sunset is sunset and that there will be no consideration of petitions until after October 21, 2007.

MEMBER CAUGHLIN: It doesn't mean that at all.

MS. ROBINSON: Someone could be before this Board today, except it's not on your agenda. Someone could have brought a petition before this Board today.

MR. NEAL: There will be petitions considered at the next spring meeting in addition to sunset.

CHAIRMAN RIDDLE: George?

MEMBER SIEMON: So of course, I can say a lot, but I'm trying to play within the game rules and obviously somewhere we established a policy that we
were not going to do annotations just to go back in
time. That was our own internal policy we adapted?

CHAIRMAN RIDDLE: No, the Federal
Register, as I recall, did not say that. It was more
that the Board and the Program agreed that annotations
were not to be changed and really, the intent was not
to add or restrict use through the sunset process by
changing its annotation.

The technical correction of an annotation
that's just plain wrong should be a separate issue,
but it may not be.

MEMBER SIEMON: So what Rose is saying in
part is dealing with our work load. Where we got
this, it's all fresh in our mind, so I understand
totally where she's going from the work load. So what
if somebody petitions on a deferred item between now
and the next meeting to deal with these kind of
issues, where would it go? Would we deal with it at
that time, since we're in the work load mode? Or
would we not?

CHAIRMAN RIDDLE: I think that would
trigger the process.
MEMBER SIEMON: So therefore the message is if there's any annotation issues on the deferred ones, now is a good time for someone to petition, is that right?

Then we would be dealing with annotations through that process. You asked what process could happen? There it is. We need someone in the public to petition on those items because I agree about the work load. We're going to have the TAPs in our hands. We're going to refreshed on these issues. Then is the time to do it.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: We are in agreement. I concur with that idea. See, I look at some of these issues, it's a programmatic issue. If something is, for whatever reason, is not consistent with OFPA, and it's on there, or if something is an agriculture product that's listed under a title that says nonagricultural, that's a programmatic problem. I don't see why anyone in the public and no one's best interest or self-interest if something is listed wrong. It's your job, not our job.
MR. NEAL: Imagine NOP making an ad hoc decision on yeast.

(Laughter.)

That's not a programmatic decision.

(Laughter.)

Some say it's listed wrong.

MEMBER CAUGHLIN: It's suicide.

MEMBER KOENIG: That's a good point. So you aren't going to do anything, okay.

(Laughter.)

Good thing I'm getting off the Board. I guess I can start the petition.

(Laughter.)

CHAIRMAN RIDDLE: Okay. Now before we start the first presentation and first on the agenda will be Livestock Committee. I have a few things I would just like to get clear. One is Rose already mentioned that if any of you have a unique interest in a substance that's coming up before us, I'm going to leave the burden on you to bring that up and reveal it. I'm not going to repeat it every single time that something comes up.
So we'll rely on you to bring it up at that time hopefully. So that's one thing.

The other is the whole concept of dealing with something while it's fresh in our minds is something that I've tried to do as Chair and that is vote on a topic when it's being discussed, when we've reached conclusion of debate. And right now the agenda says voting tomorrow which would mean revisiting everything tomorrow. I'd rather we, if we reach conclusion on a specific Committee recommendation or a section of a Committee recommendation, I'd like to go to a vote, unless there's a reason that the Committee needs to meet and change and we need to bring it back up again tomorrow.

So that's how I would propose, unless we discuss on Executive Committee call in October and agree that that would be the best way to proceed. So does anyone have objection or concern with that plan?

MEMBER KARREMAN: So you're saying we're actually voting today on these things?

CHAIRMAN RIDDLE: Right, each of the ones that are ready to a vote, unless they're being changed
by a Committee, I would like to be able to vote as we go along instead of having to revisit everything again tomorrow, despite how much fun that could be.

(Laughter.)

MEMBER KARREMAN: That's fine. I mean it's just not on the agenda that way.

CHAIRMAN RIDDLE: I understand that.

MEMBER KARREMAN: You might want to check with NOP. I don't know.

CHAIRMAN RIDDLE: Well --

MEMBER KARREMAN: Fine. I don't care.

MS. ROBINSON: You set an agenda and notify the public. So how are you going to vote? People may be coming specifically to hear votes at certain times. I know it's more convenient to do it the way you want to do it, but people have signed up to come tomorrow and to hear votes on certain things. I would feel a little more comfortable if you kind of stick to it the way it's already set up.

CHAIRMAN RIDDLE: Okay, I am hearing objections. Overruled. No, I'm overruled. Not you. That's fine. It's just sometimes I like common
sense.

MS. ROBINSON: In the future, just for the record, I would prefer you do that.

CHAIRMAN RIDDLE: That is what we have in the year I have been Chair. This kind of fell through the cracks in how the agenda got structured. Anything else? That's how we'll do it. We'll only talk today and we'll vote tomorrow and hopefully we won't forget about what we talked about between now and then.

MEMBER O'RELL: I think it would certainly be helpful if we take this to the point of discussion at least for those recommendations that we can, if we can get to total agreement and kind of just leave it there and say okay, we're here ready to vote, but because the way the agenda is published, we will vote tomorrow so that we don't have to go through a total repeat.

CHAIRMAN RIDDLE: Yes. So we will be identifying, if there are any outstanding issues or changes to the drafts today.

Okay, thanks for that.

(Laughter.)
So Mike, are you ready to begin the Livestock Committee presentation?

MEMBER LACY: Jim, I do want to first of all thank the entire Livestock Committee for their hard work on the recommendations. In particular, I want to thank Nancy for putting together the drafts; Rose, for her help and advice to the Committee getting their recommendations together; and also to Arthur, for his able assistance. We couldn't have done any of this without a lot of people's help.

On the very first one, I'm just going to read the Committee recommendation. Ours are pretty straight forward, but we would be, the Committee would be glad to answer any questions or give any rationale that we can give, but in the interest of time, I'll just stick with the recommendations and then we'll answer any questions that you have.

Just as a clarification edit, I think right above where it says Committee recommendation we've got four lines there that are sort of -- some input from Rose and we need to delete that.

We had deleted what she was questioning.
That no longer is in there and we just need to delete her aside.

So to begin with, the Livestock Committee recommends the renewal of the following substance in use category: alcohol, that would be ethanol, isopropanol, then aspirin, biologics, chlorhexadine, chlorine materials, electrolytes, glucose, glycerin, hydrogen peroxide, iodine, magnesium sulfate and phosphoric acid.

The Livestock Committee recommends deferring the vote on oxytocin and parasiticides. And the vote on that was 5 yes, 0 no, 0 abstained.

CHAIRMAN RIDDLE: Nancy?

MEMBER OSTIGUY: I don't remember at this point all of this, the discussion, but to be consistent with the recommendations of the other two Committees, I would like to see chlorine materials moved to deferred and that way we'll look at chlorine materials as a group for all purposes, rather than splitting it off as we have it now.

CHAIRMAN RIDDLE: And that was consistent with my understanding from earlier today that the
reports are in and it applies to all three categories. So if the Committee would consider that before bringing it back up for a vote tomorrow. Any other comments on -- Julie?

MEMBER WEISMAN: I had a question about ethanol being on the list. Is there a reason why organic alcohol can't be used for this purpose?

MEMBER LACY: I don't know. Can anybody help me out with that?

MEMBER KARREMAN: I think in veterinary procedures, if I use ethanol, I think other veterinarians out there in practice may not really have any need to get organic alcohol except for maybe one farm. So I would take that into consideration if it's for veterinary use, but maybe from farmers' point of view, I don't know. I won't answer for that.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: If it's listed, it's considered synthetic.

If it's not for food use, organic is not a requirement. I mean once a substance is on there, except in the area of handling and commercial
availability, there's -- I don't know if that answers.

MEMBER CAROE: My question with the alcohol, is it perhaps being used as a solvent with some other listed material for application purposes? I don't know. It's a pretty universal solvent, alcohol. I don't know if something is dissolved in it for using topically or is that happening? Because that mixing may happen at a pharmaceutical or something.

MEMBER KARREMAN: Yes, absolutely. There's -- first of all, you have the alcohol prep pad, so if you want to give an injection to an animal, it's always wise to use an alcohol prep pad or you know, douse them with a bottle of alcohol. That would not be organically available, easily, for practitioners, let's say. But also, there's botanical tinctures that definitely have alcohol base, but there's more and more that do have organic alcohol in them for sure. And I source them and some other veterinarians do as well. But I don't think you can split that out here.

MEMBER KOENIG: Are you questioning
whether it's synthetic or not?

MEMBER KARREMAN: Commercial availability.

MEMBER KOENIG: Even if it wasn't -- on the handling side, even -- the issue wouldn't be synthetic. The issue is organic and nonorganic. But I understand the -- you know, it's a different. There are pharmaceutical issues and it's not a food, it's not an ingredient. It's not a food.

MEMBER WEISMAN: What you're saying is valid. The organic is not valid. We don't even need to go there on this, because if it's on the list, that means that it's considered synthetic, okay?

MEMBER KOENIG: My only question is is there a reason why organic alcohol can't be used --

MEMBER WEISMAN: Forget the organic because it's either synthetic -- so you're saying there's ethanol out there that you believe is not --

MEMBER KOENIG: There's organic alcohol that's highly commercially available which I know it was not when this list was created. So I mean I think that's a legitimate sunset.

MEMBER KARREMAN: I don't see that
commercially available, organic alcohol. I don't see sourcing my veterinary supplies.

MEMBER KOENIG: Let me go back to that. Get rid of the organic, okay? On the livestock material, this list is either -- these materials are synthetic. That's why they're there. If you know that there's an alcohol that's produced that you can use in veterinary medicine that is not considered a synthetic based on our -- we have a somewhat working document on this definition synthetic, then we shouldn't list ethanol.

The reason why it's there says that any form of ethanol can be used because we're acknowledging that there's not a natural form out there, so I think your question is valid. Your organic, that doesn't matter a hill of beans, okay? It's whether it's natural, nonsynthetic or synthetic.

CHAIRMAN RIDDLE: Arthur and then Nancy.

MR. NEAL: Just to kind of clarify what Rose is saying, the organic commercial availability issue only relates to food processing. So the only thing that really matters here -- are there
alternatives? That's something that should be considered before placing it on the list.

MEMBER KOENIG: Can I call up Zea perhaps or someone in the audience who might have historically been there when this was reviewed? Or Emily?

CHAIRMAN RIDDLE: Emily is raising her hand.

MEMBER KOENIG: Brian?

MR. BAKER: Brian Baker. Organic Materials Review Institute and Technical Advisory Panel reviewer in the 1995-1996 and I don't think I was representative to certify a representative on the NOSB at the meeting where it was discussed, but I was certainly present at that meeting.

What Rose said is much the basis for the recommendation to add it to the National List. Ethanol can come from the fermentation of sugars, but it can also be synthesized by the reaction of ethylene. And there was a recognition that pharmaceutical grade ethanol is at times from synthetic sources and that in any event, just to be on the safe side so that certifiers' hands weren't tied
and they didn't have to go through an additional process of reviewing the ethanol being used for the applications described by Hugh as a matter of expediency, ethanol was put on the National List as a convenience.

CHAIRMAN RIDDLE: Thanks, Brian. Nancy?

MEMBER OSTIGUY: I would also then like to move ethanol to the deferred list and we can explore this issue.

MEMBER KOENIG: If we are discussing it, I'm not in favor of that. I think that provided the explanation, because I just don't think it's a practical thing to spend our resources on because the veterinary-grade stuff is just probably not going to be the same. It still goes back to the FDA, stuff you can use on animals is a stricter code than we can use ourselves.

(Laughter.)

CHAIRMAN RIDDLE: Okay. Bea? Dave?

MEMBER CARTER: I also oppose deferring because I think there's a difference between synthetic and nonsynthetic and organic and this whole
discussion. Unless you want to make the case that using an alcohol prep on beef cattle is a food contact surface.

(Laughter.)

MEMBER CAROE: Could you go over the two materials that were put on the list to defer and what -- I didn't see any comments on those materials, but maybe I missed them. Were those items that were identified by the Committee as needing more information or were they -- did you receive comments?

MEMBER LACY: We received comments. There were comments on those two.

CHAIRMAN RIDDLE: There is discussion of it in the Committee Summary.

MEMBER OSTIGUY: Several commentators stated that chlorhexadrine, chlorine materials, oxytocin, ivermectin and hydrogen peroxide should be removed from the list.

MEMBER JAMES: I have a question, Nancy. You mentioned that you wanted to move the chlorine materials to deferral to match up with what some of the other Committees are proposing and 205.605 has it
as a renewal and 205.601 has it as a deferral and I just -- I'm a little confused as to exactly what and why we are moving chlorine materials to a deferral in two areas and not in the other and I'm also wondering why we would defer chlorine materials, in general, as a disinfectant for equipment and surfaces.

MEMBER OSTIGUY: I was going to recommend that we move for deferral the chlorine materials under 205.605(b) anyway. And the reasoning is based upon some of the comments from reviewers having to do with chlorine reactivity, etcetera. And doesn't mean that it wouldn't be renewed. It's just a matter of looking at more recent data because it happened. There's studies that are out that we've not considered previously.

MEMBER JAMES: Right, and I heard one of the lobbyists talk about how we're not consistent with our solutions, but I just have a little bit of concern about that.

MEMBER OSTIGUY: It is not that I am necessarily predisposed that they're going to come off the list. I just feel that we should evaluate the
current data.

MEMBER KARREMAN: I am a little hesitant with deferring chlorine, actually, because it's such a vitally basic major compound for hygiene in the milk cows by state regulations and what not, cleaning dairy equipment and I don't think there's any alternatives, maybe there are some coming out, but I think it has to be kept in mind.

MEMBER LACY: Pardon me, the way I understand it, Jim has just suggested that we consider that which we will do at our meeting this afternoon and the Livestock Committee will decide whether to defer or not.

MEMBER CAROE: It would just make sense if we defer this material for any of the list, all that means is that we've requested more information on it. It doesn't make any sense to vote on it if we know we have more information coming in on it. We can approve it now or we can approve it later, if it's a good material. But if we've got more information coming in, why not just wait?

MEMBER JAMES: Is there a TAP review being
MEMBER CAROE: Yes.

MEMBER LACY: That has already been commissioned.

CHAIRMAN RIDDLE: Anything else on this section?

MEMBER LACY: On 603(a)?

MEMBER OSTIGUY: I have a comment that I want to make. We need to keep in mind that the goal is is that everything that we are renewing or saying will go off the list, that's all going to happen at the same time. So we're not going to end up in a situation where we won't have gotten around the chlorine and it ends up going off the list because we just haven't got there yet. That's not in the projections.

MEMBER LACY: Okay, let's go on to 603(b) and again, I don't think I prefaced it last time, but these recommendations are made based on comments received. The Livestock Committee recommends the renewal of the following substances in this use category: copper sulfate, iodine, lidocaine, mineral
oil, and procaine.

We recommend deferring the vote on hydrated lime. And again the Committee vote was 5 yes, 0 no, 0 abstained.

Any questions?

(Pause.)

Then we will proceed to 603(c). Recommendations made based on comments received.

Livestock Committee did not have -- there were no substances in the category of recommending for renewal. We did recommend deferring the vote on milk replacers and again the vote on that was 5, yes; 0, no; 0, abstained.

MR. NEAL: Two comments. One, just an update on lime hydrate. We have asked for a TAP on that. So we'll probably need to be in touch with you about what information you're looking for and with milk replacers, one of the questions is probably going to be is that a synthetic or is the issue a nonorganic milk replacer, because it may be listed wrong and that's something we have to think about.

MEMBER SIEMON: I was going to ask did the
Committee define what technical information they wanted to know for milk replacers? It's kind of the same question.

CHAIRMAN RIDDLE: And this was one that the Committee had already red flagged and I don't know if we had come up with a list of questions yet. But it's certainly something the Committee did do.

MEMBER SIEMON: I think we wanted to know how to define emergency as well. That was part of this. I just didn't know if there had been some more technical --

MEMBER LACY: It seems like it was a question of whether there were organic substances available.

Any other questions on 603(c)? Then proceeding on to 603(d), recommendations made that are based on comments received, the Livestock Committee recommends a renewal of the following substances in this use category: trace minerals and vitamins.

There were no other recommendations and again the vote on that was 5 yes, 0 no, 0 abstained.

MEMBER KOENIG: I just wanted to ask the
Committee to consider the comment that came about on the fact that both of those materials were added, again, historical data without a review and it was sort of they would just be placed on temporarily to get them on there. I don't know if we considered that.

MEMBER LACY: I don't think any of us were aware of that.

MEMBER SIEMON: Didn't we clarify this in 2000? This wasn't just in 1995.

MEMBER LACY: That's what I was thinking.

MEMBER SIEMON: It was the first meeting you were at.

MEMBER LACY: Yes.

MEMBER SIEMON: This talks about it being '95, but it was in 2000 that we endorsed this to this degree.

CHAIRMAN RIDDLE: Since 2000, yes, in recent history.

MEMBER KOENIG: That was one there was a TAP on it?

MEMBER SIEMON: There was no TAP in 2000.
MEMBER KOENIG: Could you approach and get it on the record?

MEMBER SIEMON: I didn't say there was a TAP. I'm just saying it wasn't something we did in 1995. It was something we did consciously in 2000, knowing there was a TAP, as compared to what was said in 1995.

CHAIRMAN RIDDLE: Brian?

MR. BAKER: Right and OMRI's comment there's been no TAP review. There remains confusion about the standard of identity and it's not clear what's being discussed here. It's not clear what limitations, what restrictions apply, particularly with other regulatory language and in other contexts and OMRI respectfully requests that a TAP review be conducted on these substances.

MEMBER SIEMON: On every one of these, for example, your list here, all these is what you're saying?

MR. BAKER: First decide whether the categories are appropriate and whether a case-by-case review is involved. Some of these are available from
organic sources. Some of these are available from nonsynthetic sources. Some of these are from genetically modified sources. It is very difficulty to distinguish between all of these different sources. Some of them are on the Food and Drug Administration's 21 CFR list. Some of them are approved the Association of American Feed Control officials and are not on 21 CFR.

So there is confusion there as to what FDA approval means. Of course, we recognize that the NOSB made its recommendation in 2000 and we are using that recommendation as guidance, but I can assure you that not everyone is clear or consistent on what that guidance means or how it is being implemented.

CHAIRMAN RIDDLE: Do you still have something to add, Arthur?

MR. NEAL: It is kind of directed at Brian's request and concern. It sounds like Brian's concern is more of a clarification that he seeks which could be restricting or it could be expansive which is not necessarily part of sunset, but a part of reviewing those materials for further changes.
We're very aware of the issue that you're discussing, some people want to know about and I think you're probably talking about proteinated chelates which the Board has already addressed in a recent meeting that proteinated chelates are already approved for use through this listing. But if you want to go further and you want to open that back up again, I don't think the sunset is the place to do it.

CHAIRMAN RIDDLE: George?

MEMBER SIEMON: Just the way we left it was we approved them, but then we identified the ones with concerns and then we TAP reviewed them, so we kind of went at it the opposite way, acknowledging that some of these need to go off. So we need petitions on these to take them off, rather than go through the whole list. That's just the way we did it, right or wrong. And that's why we looked at proteinated chelates and the other ones. We identified the ones and we did TAPs on them, just to get a listing.

CHAIRMAN RIDDLE: And then I have Kim and Zea to offer some further background.
MS. DIETZ: A point of confusion, now that I'm out here.

The sunset process, we agreed on a process. The Committees were charged with recommending materials that should be deferred, based on contentious areas, whether there were not, a public notice went out. You were supposed to receive comments and based on those comments, recommend to --

CHAIRMAN RIDDLE: For the record, who are you?

MS. DIETZ: Kim Dietz. Recommend to continue to allow or remove. And what I'm seeing now is that you're actually up here deferring materials that didn't go through that public process and I'm questioning the process because what's going to happen is if you defer materials now, how is the public going to know you deferred and have an opportunity to give public comment on them?

So it's just a little bit confusing. I don't really know if there's a problem with that, but you've made a recommendation to allow the chlorine issue just because the other Committees deferring, you
want to defer handling and the others, I'm not sure that's consistent if you've got no negative comments from the public on those materials.

Out here, it seems a little jumbled.

MEMBER KARREMAN: In livestock, there was one person and said synthetics should be off the list for each and every product that we have to address that.

MS. DIETZ: But people had 30 days to comment on the recommendation and you heard no comments until today's public comment about taking something off or deferring it, so just make sure however you continue that you give people the opportunity to say what they want to say on it.

MEMBER OSTIGUY: There were comments to defer chlorine that came in for all uses.

CHAIRMAN RIDDLE: And the Board, ourselves, have made a recommendation on this. And I have Zea and then Rose.

MS. SONNABEND: Zea Sonnabend, former TAP contractor. We did in 1995 or 1994, start reviewing some of the livestock minerals, particularly. Like I
can remember setting our reviews for cobalt or manganese or some of these individual things. But what we found and what you have from Brian is although it came in to us to review as cobalt, when you start looking into where it comes from, it's cobalt acetate, cobalt carbonate, cobalt sulfate, and like 12 different forms of just cobalt. And so if cobalt is just one of the many vitamins and minerals that you're talking about, that's where the NOSB got into a quandary and went well, how do we know whether cobalt carbonate is better than carbonate manganate, you know, like that. And so that's when it was decided to group them all together which led to the 2000 decision.

But there are some old -- I have some documents about several of the minerals back at home, however you decide to re-review them.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: Yes, I would just like to address both Kim and -- as far as the chlorine stands, we have new information. I think it's a conservative approach because we've already paid money to get the
second for information, look at it before we make a
decision and then have to go back. So again, deferral
is not denying. It's basically saying hold off, we're
getting new information, why rush into decision. We're
looking at the same material in three years.

As far as comments, at all times we look
at comments from the public. We would like it to be
the form of a Federal Register, but we were even told
by Barbara, it's not that we don't consider comments
after that time, it just certainly improves the
process if we can get them as we're going through it
procedurally.

So I think that accepting public comment
regarding materials, whether it's new information or
not, it's our responsibility to consider that
information and that's what we're doing. We're not
obligated to necessarily follow the comments, but we
certainly want to consider that information. And
that's all I'm saying is that in terms of the
minerals, we've heard some discussion. We certainly
can discuss it more, but this may be one that
Commitees would like to discuss a little bit more

before we finally vote on them tomorrow.

CHAIRMAN RIDDLE: Bea?

MEMBER JAMES: I was just going to say I think part of the confusion that came about earlier when we were listening to one of the lobbyists talk about a material that he was concerned about because it was deferred and I think in the public's eye deferral is kind of a red flag. And I don't think we've ever really documented anywhere, I just checked in the Foreign Policy Manual. We haven't really documented what deferral means. And what is going to happen to that material when it is in deferral. We probably need to do that so that going forward, there's not going to be this confusion around deferred products still can be used. It just depends on how -- what happens once you get more information.

CHAIRMAN RIDDLE: Yeah, and I'd like to respond because nothing happens to the material. It's still on the list. It's just giving the Board time to perform due diligence, thoughtful process, gather the information we need to have a solid recommendation.

MEMBER JAMES: Sure and I understand that
now. But I don't know that a lot of people who have been making comment fully understand what deferral means, because it seems like they're still trying to defend and rightfully so, you want to give information and feedback and defend your item, but I just think that we need to make sure that we are clear about what we mean about deferral going forward. So maybe that's something we need to, at some point, look at in the Board Policy Manual.

MEMBER KOENIG: I just want to say that I think the sunset policy is clear. It should be clear to people to understand that. And I think within our documents when people voted, we didn't say these are being deferred, but it's in that Committee summary that some of it will say additional, technical information. And if people don't understand it, that means a deferral, those are the ones that get voted for deferral. So it's in the documentation. And then whether people can't understand, that's a whole other issue, but I don't think it has to be a --

MEMBER CAROE: I just have a question and maybe Kim, you can answer this. When chlorine was put
on the list or maybe Brian or Emily, when chlorine was put on the three lists that it's on, was it one petition that put it in those three places or was it separate petitions?

The reason I ask that is it makes perfect sense, what you say Kim about getting public comment, but if we're saying that we need more information on this material on one list, then it would be inconsistent for us not to say we need it in the other lists. So I see both sides of it and I don't know which the Board wants to go with, but it seems to me this was one petition and it was put on all three lists. And if it was one petition put on all three lists, I think it should be looked at for all three together as well in the sunset.

MS. SONNABEND: Zea Sonnabend. It was. As it came into the process from the different Committees, it was three requests to have a TAP review for all three Committees for chlorine, but only one TAP review was done because the issues are substantially similar. And it was discussed all at one time and voted on all at one time.
CHAIRMAN RIDDLE: Mike?

MEMBER LACY: We will go on to 603(e). Recommendations made that are based upon comments received. The Livestock Committee recommends the renewal of the following substances in this use category: EPA list for inerts of minimal concern. And there were no other recommendations deferring or not renewing. The Committee vote was 5 yes, 0 no, 0 abstain.

CHAIRMAN RIDDLE: 604 and then I think it's time for a break.

MEMBER LACY: 205.604, Committee recommendation based on comments received, the Livestock Committee recommend prohibiting the use, continue prohibiting the use of strychnine. No other recommendations in this category. The vote was 5 yes, 0 no, 0 abstain.

CHAIRMAN RIDDLE: Okay, any other comments, questions? Hearing none, thanks, Mike, for the presentation and discussion and let's --

MEMBER CAUGHLIN: Where did we leave the issue of the minerals and the vitamins? Is it going
to be discussed in meeting or just left?

MEMBER LACY: The Livestock Committee I'm sure will discuss it again. As it stands now, I think we are going to stand with our recommendation of leaving it on the list.

CHAIRMAN RIDDLE: As a Committee member I'd like to review the comments we have received again and at least consider those seriously here this afternoon.

Okay, well, let's take a 15-minute break, so to 3:35.

(Off the record.)

CHAIRMAN RIDDLE: If people could take your seats, please, I'd like to resume business.

(Pause.)

CHAIRMAN RIDDLE: Okay, next up is the Handling Committee and so Kevin, would you please present your Committee's draft recommendation.

MEMBER DELGADO: Mr. Chairman, may I ask a question?

CHAIRMAN RIDDLE: Yes.

MEMBER DELGADO: I want to make sure that
I understand the whole situation. So if a material is deferred, does that mean we can sit on it for eternity or does the clock keep ticking on? What's the answer?

CHAIRMAN RIDDLE: The clock continues to tick for its sunset which will be October 21, 2007, so the pressure is still on the Board to deal with the substance and I would anticipate that six months is about the max that a substance -- a decision would need to be made by that time in order to go through the federal notice, the rulemaking process after the Board's recommendation.

So about six months from now or a year out from October of 2007, so by October of '06, all action should be done on these deferred materials.

MEMBER DELGADO: Thank you.

MEMBER O'ReLL: 205.605(a) first recommendation coming from the Handling Committee for nonsynthetics allowed. The Committee summary is brief. There were certainly many comments that were made as broad categories for keeping all materials on 205.605(a). In addition, each of the substances that were listed on 205(a) received many specific comments
recommending their continued allowance and organic handling.

One substance, yeast, had several comments supporting the continued use of this material, however, there were a few comments objecting to its continued use.

There were also comments that were submitted, just to address those that were supporting the continued use of agar agar and tartaric acid. Both of these materials were inappropriately listed in the ANPR sunset review in the Federal Register, but because these materials were not on the December 21, 2000 list, they're not to be considered as a part of this sunset review. So --

CHAIRMAN RIDDLE: If I could just add to that, if people don't -- they were added to the National List later, so they're on a different sunset track, but not relevant at this time.

MEMBER O'RELL: Correct. The Committee's recommendation was for the renewal of the following substances in this use category as they are published in the final rule. Do I need to read through all of
those? Yes.

CHAIRMAN RIDDLE: Since we are going to vote, you might as well.

MEMBER O'RELL: I saw he set that precedent, but he had shorter lists.

I won't read the annotations. The annotations are the ones as listed in the final rule.

Acids, bentonite, calcium carbonate, calcium chloride, carrageenan, daily cultures, diatomaceous earth, enzymes, kaolin, magnesium sulfate, nitrogen, oxygen, perlite, potassium chloride, potassium iodide, sodium bicarbonate, sodium carbonate, waxes, nonsynthetic, and yeast.

There were several comments about yeast. The comments that came in for yeast in terms of against it continuing on the list of 205.605(a) really were indicating that it should be moved to another list or that it was no longer agriculture, that it should go to 606, but as we've heard before, our role in the material, sunset material review process is not to make assessments and evaluations of the list, if it should be classified in another section of that list,
nor can we make determinations on agriculture or non-agriculture. That's still an issue is in the process of being determined and it's not part of sunset review. Therefore, the Handling Committee recommended the continued use of this material.

The Handling Committee voted to defer the following materials until either additional technical information could be attained or additional further reviews were done of historical information, particularly for flavors.

The two materials we're talking about deferring were for colors and flavors and there has been, as Arthur said earlier, a TAP review that has come back now on the flavors section that we'll be addressing.

Go ahead, Arthur.

MR. NEAL: Just to let you know, a preview of that -- of those reviews is real general information, just about what those categories are, what they contain. So when you all have an opportunity to review them, we'll be interested in seeing how you feel that they fit your needs.
MEMBER O'RELL: And on flavors, it was also pointed out in a comment that in 1995, there was significant discussion in the 1995 NOSB meeting around flavors and we want to be able to review that historical perspective as well.

There were no substances in this category that at this time we are recommending for not renewing and the vote for this recommendation was 4 yes, 0 no, no abstentions, one absent.

Any questions or discussion?

MEMBER SIEMON: Just a couple of questions. First on the flavors. Is the TAP review going to look at -- there's annotation about they can't use synthetic, but are they going to look at the whole issue that are there nonsynthetic ones, basically? It's not just these things, acetic salts, solvents, there might be other things that are used in there that make them synthetic.

Has that also been addressed?

MEMBER O'RELL: This is flavors for nonsynthetic sources only.

MEMBER SIEMON: But I'm asking are they
addressing that they are truly nonsynthetic?

MR. NEAL: If memory serves me correct --

MEMBER SIEMON: That's the issue. That was '74 and now we're doing a TAP review.

MR. NEAL: This looks at flavors, in general. There are nonsynthetic flavors. There are synthetic flavors. There are hundreds and hundreds of flavors out there and what this report does is give more information about the category of flavors.

What the Board has to wrestle with is how does it want to renew flavors on the National List because we know that there are organic flavors out there and by flavors being listed on 205.605(a), that could cause some confusion. We've got an ag versus non-ag issue of synthetic versus non-synthetic issue.

MEMBER SIEMON: Right.

MR. NEAL: So there are a lot of things. But this report only gets at general information about flavors and some technical information about their listings and categorizations.

MEMBER O'RELL: But again, in the process of getting that technical information and looking at
it, as I understand it, it's our charge to look at the
category use and the annotation that exists today and
make a decision going forward as to whether the
material continues or comes off the list, because I
agree with you, Arthur, we know that there are some
organic flavors which those come specifically from an
agricultural source. But there are also natural
flavors that do not come from agricultural sources,
but nonsynthetic sources.

MR. NEAL: Correct, and like I said, once
you receive the report that will have to be wrestled
with because it didn't get into commercial
availability or a lot of alternatives, how many
flavors are produced that are natural? How many
flavors are produced that are synthetic? It doesn't
get into that type of detail.

So the continued listing of it, like I
said, is going to have to be wrestled with.

MEMBER SIEMON: Then I just wanted to ask
about yeast. Here's the place where we could have
changed the annotation, be based on an organic
substrate or something like that and one way we could
have dealt with that. So here's a place where somebody could petition to change annotation to be organic substrate or whatever because we deal specifically with a substrate here. So that would be one of the --

MEMBER O'RELL: Somebody could absolutely petition for using organic substrates only in the fermentation. That could be one annotation or somebody could petition to have it removed from 605(a) and be considered for 606 as an agricultural product.

CHAIRMAN RIDDLE: Andrea?

MEMBER CAROE: That is the key. The comments that we received on yeast were really not related to the annotation or an inappropriate annotation, but the whole question of the ag versus non-ag that we've been wrestling with. So it's a separate issue that we are dealing with. It's not part of the sunset process.

MEMBER SIEMON: I just -- I did look through the four inches of comments, but in your summary here, was there people who spoke specifically against some of these that you're recommending to
renew?

I don't see any comments besides for yeast that would have said --

MEMBER O'RELL: No, there were --

MEMBER SIEMON: Against these. Was there any sense of that?

MEMBER O'RELL: From the analysis that we did in looking at all of the comments, we found no other comments. The only comments that were against items were yeast.

MEMBER SIEMON: Okay, that's what I asked, thank you.

MEMBER O'RELL: And even the ones that we're deferring, even the flavors and the colors received considerable amount of support and letters for their continued use, but no opposition for any other items.

MEMBER SIEMON: Thank you.

CHAIRMAN RIDDLE: Okay, moving on, Kevin.

MEMBER O'RELL: 205.605(b) synthetics allowed, again, in the Committee summary there were many comments just across the board for all of the
materials in 205.605(a) and (b). In addition, many of the substances on 205.605(b) continue -- had comments recommending their continued allowance in organic handling.

Many commenters supported the continued use of lecithin bleached, however one commenter did object to that based on the fact that there is an organic version of lecithin and as we heard today, even for an organic version of lecithin bleached.

We felt at the time, that there was not enough evidence supplied with that comment to support removal of lecithin bleached from the list, based on questions of functionality, form and quality. But we did feel that it was something that the Committee needed more time to investigate and to review and as such, the Committee recommended deferring this substance until additional information could be obtained.

Again, ethylene, there was in the same scenario there were many comments that supported the continued use of ethylene, however, there was one commenter who objected to its continued -- to the
continued use of ethylene.

And the Handling Committee wanted to conduct a further review of historical documents and there was a TAP that was done on ethylene, but the Committee received it pretty late in the game and as Rose had indicated, we were trying to get our public, our recommendations published for the public 30 days prior to the meeting, so at that point in time, in order to move the recommendation through, we agreed to defer ethylene.

There was also potassium tartrate made from tartaric acid. There were a number of people who supported the continued use of that, but as one commenter had indicated, that it was really a duplication in the list that potassium tartrate was the same as potassium tartrate made from tartaric acid. And it was redundant, so we are recommending to not renew potassium tartrate made from tartaric acid.

Then again, there were numerous comments in terms of change of classification of items, and/or annotation. These included glycerin, xanthan gum, tocopherols. Again, the classified information
reviewed these comments and felt that they are not part of the sunset review process and moved forward to continue them on the list.

The Committee recommendations, the Handling Committee recommendations for the renewal of the following substance in this use category as they are published in the final rule and I'm not going to read the annotations. Alginates, ammonium bicarbonate, ammonium carbonate, ascorbic acid, calcium citrate, calcium hydroxide, calcium phosphates, carbon dioxide. Now we did list chlorine materials in this. We can discuss this when I get done with the list in terms of what was brought out before with one TAP review that covered several use categories. We may want to consider deferring that item.

Ferrous sulfate, glycerides, glycerin, hydrogen peroxide, magnesium carbonate, magnesium chloride, magnesium stearate, nutrient vitamins and minerals, ozone, pectin, low-methoxy, phosphoric acid, potassium acid cartrate, potassium carbonate, potassium citrate, potassium hydroxide, potassium
iodide, potassium phosphates, silicon dioxide, sodium citrate, sodium hydroxide, sodium phosphate, sulfur dioxide, tartaric acid, tocopherals and xanthan gum.

For deferral, the Committee recommended deferring ethylene and lecithin bleached. The lecithin bleached discussion came up after review on the 606 list. When we got into further information about potential commercial availability of organic lecithin and also an organic lecithin bleached, we went back and revised our original recommendation to take lecithin bleached from the renewal list and put it on the deferred list.

And then the Handling Committee had recommended for not reviewing potassium tartrate made from tartaric acid because it is redundant.

And that vote was -- the original vote was 5 to 0, with no abstentions. Then we had a motion brought to the table to relook at the lecithin situation. That vote was 4 yes, 0 no, 1 absent.

Discussion? Questions?

MEMBER DAVIS: Ascorbic acid. Is that a misspelling on that list?
MEMBER O'RELL: That is a typo. So many eyes see this.

MEMBER SIEMON: You had said something came out about chlorine just now? I didn't hear what -- would you repeat what you just said about chlorine? There was some issues raised. I thought I heard you say that.

MEMBER O'RELL: I was just stating that the earlier, previous discussions surrounding chlorine and the fact that we have a TAP review coming in to cover the whole subject area of chlorine across crops, livestock and handling, that it -- we would need to discuss among the Committee, but it might be the Committee's recommendation to defer chlorine in light of that upcoming TAP.

MEMBER SIEMON: And will that happen by tomorrow then?

MEMBER O'RELL: We are meeting tomorrow morning. We have a joint meeting tomorrow morning with the Policy Development Committee. I think this discussion would probably take two minutes and to come to agreement.
MEMBER SIEMON: The other one is a food contact definition and food contact where it's not -- you have very clear -- about food contact services there, but I don't know if it's true or not, but I've heard that chlorine is used in rinsing vegetables. That would fall under this bigger category as far as I understand and I know it gets to the heart of the food contact thing, but I would look at this and say that it wouldn't be allowed for that purpose, the way this is read here.

CHAIRMAN RIDDLE: I would agree. This annotation doesn't allow that use, but the annotation in the crops list is for post-harvest.

MEMBER SIEMON: Is that where it would be?

CHAIRMAN RIDDLE: It could apply.

MEMBER SIEMON: Post-harvest? Would it be under crop though?

CHAIRMAN RIDDLE: I believe how that's being allowed.

MEMBER SIEMON: Then with the ethylene, is there any chance, I know you all have reviewed the TAP. Any chance that you're ready to move that into
the recommended for renewal?

MEMBER JAMES: I have a comment.

MEMBER O'RELL: Let me just answer the question. Is the comment related to ethylene?

MEMBER JAMES: I don't want to make that decision until we're done with our discussion.

MEMBER O'RELL: I guess what I would say is, George, we deferred it for a reason. We deferred it so we would have the time to be able to have proper discussion and due diligence on this issue. And to review the prior TAP to see if we may even want to request additional or updated TAP. So my feeling is no, it's going to be deferred.

MEMBER SIEMON: All right.

MEMBER JAMES: I reviewed all of the handling comments that were submitted and I don't remember seeing anything in there about chlorine materials. Now Nancy says that they were referred in every section and --

MEMBER O'RELL: If somebody made a blanket one and maybe somebody has that reference because I have the same list, Bea. I've gone through and I
haven't seen anybody --

MEMBER CAROE: We do have a blanket.

MEMBER O'RELL: There's a blanket one.

MEMBER CAROE: And I can pull it out, but I mean that means we could be deferring every single - -

MEMBER KOENIG: There was one and again, that would be an interpretation whether you would consider sprouts a handling issue or a farm, post-harvest. But specifically, there was a long comment that was presented on the use of chlorine and sprouts, post-harvest.

MEMBER CAROE: It might have been in the category of crops then.

MEMBER KOENIG: Again, some of the comments just by the nature, there were three groups and then there was a group that overlapped where it was pertinent to that and hopefully people looked in that group also because there was some that was -- multipurpose, yes.

MEMBER OSTIGUY: And my memory is that it was in the multipurpose group.
MEMBER JAMES: Well, I just think that we also need to take into consideration and I don't have everything memorized well enough to be able to go in here and say okay, under such and such, but I know it's in here somewhere that when you're dealing with food safety, that there are allowances for certain things and I think that this is one of those ingredients and I understand that we have a problem with the dilution of the dilution not being regulated closely enough, but I just -- I have concerns about just making this blanket deferral across all categories, without there being --

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: The deferral is not at all in my view a prelude to nonrenewal.

MEMBER JAMES: I understand that.

MEMBER OSTIGUY: And one of the comments that was made was that there are alternative products for disinfection and my personal reaction is that we need to consider that. If there are disinfectant processes that don't require chlorine, it is incumbent upon us to look at those. And if they're not
effective, okay, then that's a decision to say that chlorine still is just fine.

MEMBER JAMES: Okay, and I understand that. I just want to make sure that when we decide to do a blanket deferral the way we've done here that that -- I don't really understand that process and it concerns me a little bit because I don't necessarily agree that deferral in one category means that it should be deferred across all. So that's my concern.

MEMBER KOENIG: Again, it is a conservative approach. We've paid X amount of dollars to do a TAP, okay?

By all means, if somebody wants to make a motion tomorrow and without looking at that TAP or considering that information, by God, do it, you know? I may not vote for it, but go ahead and do it, but all I'm suggesting is that there's nothing wrong with looking, if you got the information, let's look at it and that's all we're saying.

MEMBER JAMES: Absolutely and I just would like to also just for the record say that if there are other ingredients out there that are more friendly
towards organic production, that are similar in sterilizing as chlorine, that we would also look at the possible misuse of those dilutions and what that would result in.

CHAIRMAN RIDDLE: Kevin, then Nancy.

MEMBER O’RELL: Actually, Rose has covered what I said. I just think it’s part of our due diligence because we know it's there. As far as alternatives being for chlorine, that's fine, really true, that's great. But as far as like disinfection for milkhouse-type hygiene for public health, you know, I hope we're not kind of basing an up or down vote on chlorine based on one study of an alternative. There better be a bunch.

CHAIRMAN RIDDLE: Is Nancy still in line here?

MEMBER OSTIGUY: First, my recommendation to pull this to deferral was not a blanket across all. It was based upon the individual categories and the uses within those categories.

There are alternatives to chlorine for disinfection. It depends on particular situations,
whether or not they meet the criteria in whatever situation you're after. And that's what has to be considered.

MEMBER KOENIG: I was just going to say just to remind people and it's probably more to educate the new Board Members because you haven't seen many of the TAPs that have come back and the contractors that we are using, they're basically in this case would be doing a full TAP where they are going to particularly look at alternatives and if you look at that, Hugh, you don't feel that there's sufficient studies or they haven't done a complete job, you have that 21 days to kind of ask specific questions.

So you should pay particular attention to those things, same with your -- so all of this is good process and what I'm saying is just remember it when it comes to our -- to the point where you've got that 21 days to get the answers to your questions because that's the opportunity that will be presented to you. So take advantage of it.

CHAIRMAN RIDDLE: And for new Members on
the Board, I just point out that we did have a Chlorine Task Force report which provided a lot of background which also warranted or we recommended re-review in accepting that report and I'll send that around to everybody as well for further background.

Anything else on that?

MEMBER O'RELL: On 605(b)? Seeing none, we're going to go to 205.606 and July is going to take us through the lead on 606.

MEMBER WEISMAN: I will read the Committee's summary for non-organically produced agricultural products allowed as ingredients in or on processed products labeled as organic or made with organic in whatever specified ingredients or food groups. Many comments were received supporting the retention of all five substances on 205.606.

In addition, comments were received opposing the relisting of all the substances on 205.606. These comments did not include adequate information supporting the removal of substances from the list as specified in the Federal Register notice regarding the sunset of materials on the National
List. And so the Committee felt that it did not have data or evidence to support the position to remove any of the substances listed in 205.606.

Four of the five materials on the list received a substantial number of comments in favor of their continued need in organic handling. Several commenters cited that some substances were available in organic form such as soy lecithin and had concerns that there won't be a market for the organically-produced substance if the non-organically-produced substance remained on the list.

However, there were other commenters who noted that the organic form was either not sufficient in quantity, which may be we already have additional information or inadequate in form which I don't know that we've heard anything yet that removes that concern.

No comments at the time that we were evaluating the comments provided adequate data to support their position.

And I will say a little bit more. We gave a little more consideration. Soy lecithin received
conflicting comments regarding its availability in a sufficient form. There was a TAP review of soy lecithin in 1995 that we looked at. It didn't really provide adequate information to help the Committee to make a determination for removing or continuing. And in light of that, the Committee recommended that this substance be deferred until further information could be obtained. I think some of which we heard this morning.

Comments specifically opposing the continued use of corn starch, gums, water-extracted only and kelp were based on the commenters' assertion that these items are now commercially available in organic form. But the information, again, such as supply source, supply quantity, functionality, performance, test data and name and address of producers who have used this material under similar circumstances, similar conditions was not supplied by those commenters for the Board to be able to make a decision to discontinue the use of these materials under 606.

In addition to that, along the same lines,
there also were no comments received from manufacturers or supplies of those substances regarding their availability in appropriate form, quality or quantity. And again, because such information was not provided among the comments that we received, the Handling Committee recommends the continued use of these materials.

There were no comments specifically opposing the continued use of pectin high-methoxy.

Therefore, the Handling Committee recommends the renewal of the following substances in this use category and I won't read -- for consistency sake I won't read the annotations. Corn starch, gums, kelp, pectin. The Handling Committee recommends deferring the vote on the following materials and that would be lecithin unbleached and there were no materials in the category to discontinue being listed.

The Committee vote was 4 in favor, none opposed, one absent.

Any questions? Wow.

CHAIRMAN RIDDLE: You covered it, I guess.

Okay, so that concludes the Handling Committee's
presentation of draft recommendations. So we will move on to Crops and Nancy, will you be taking the lead here? Okay.

MEMBER OSTIGUY: Okay, starting with 205.601, synthetic substances allowed for use in organic crop production, category use A as algaecides, disinfectants and sanitizers including irrigation systems and cleaning systems. The Crops Committee recommends the renewal of the following substances: alcohol, ethanol, isopropanol, ozone gas, periacetic acid, soap-based algaecides and demossers. The Crops Committee recommends deferral on the vote of the following: chlorine materials and hydrogen peroxide.

Any comments?

MEMBER CARTER: I am easily confused, but I'm wondering now, first of all, the number of ozone, going through here, what's the significance of enumerating the labeling?

MEMBER OSTIGUY: It is the number on the current list, so the current National List.

CHAIRMAN RIDDLE: What happened to three?

MEMBER OSTIGUY: I forget, but that's
where I pulled it from.

CHAIRMAN RIDDLE: I'll check it out.

MEMBER OSTIGUY: Oh, well, the things that are -- I think something got put in there though.

CHAIRMAN RIDDLE: That wasn't on the original --

MEMBER OSTIGUY: Correct. So it's not one of the sunset items, if I remember correctly.

CHAIRMAN RIDDLE: George?

MEMBER SIEMON: I need to understand why hydrogen peroxide is being deferred?

MEMBER OSTIGUY: For the same reason that chlorine materials are being deferred. There were a couple of comments by the public concerning hydrogen peroxide being very reactive and whether or not it was appropriate to have it on the national list. And so purely for the reason of being able to fully consider public comments is the reason why it's been deferred, not because there's any expectation that it ultimately would not be removed.

MEMBER SIEMON: But what technical information are you going to ask then on hydrogen
peroxide?

MEMBER OSTIGUY: I couldn't tell you right now.

MEMBER SIEMON: It seems good with respect to the public, but if they don't have any kind of question or there's really any doubt in the Committee, I don't understand why we defer it.

CHAIRMAN RIDDLE: Rose, then Dave.

MEMBER KOENIG: I mean in case of hydrogen peroxide when we know specifically there may be this one comment, the Committee may be able -- we don't necessarily have to engage our TAP contractors. Nancy, myself may be able to simply answer that question. It's just we didn't have enough time to get this job done, plus answer those technical questions. And we just want to address it. It doesn't mean -- it just means we need to gather a little bit more information.

MEMBER OSTIGUY: In fact, I don't believe we need to send hydrogen peroxide out for a TAP. I don't think that that was ever part of the discussion within the Crops Committee. But we just did not have
time to document why -- what our position would be to recommend either a renewal or removal. We need that justification for the NOP and since we didn't have time to do that, it's on the deferred list.

MEMBER CARTER: Again, a point of confusion about this. This -- Zea was talking about hydrogen peroxide being in the wrong place on the list. Is this the area?

MEMBER OSTIGUY: No.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Again, this is just us doing the due diligence needed on these materials. We took the comments very seriously. If we felt that there was some merit to the comment, but didn't have the time to do the conversation, we just put it in deferral, especially in crops, because there are so many materials we have to file through. Middle hanging fruit was the suggestion.

CHAIRMAN RIDDLE: Moving on.

MEMBER OSTIGUY: Category use (b) as herbicides, weed barriers as applicable. The Crops Committee recommends the renewal of the following use
categories: herbicides, soap-based; mulches and we recommend the deferral of mulches -- I need to do the secondary parts of this.

The Crops Committee recommends the renewal of herbicide soap-based and mulches, plastic mulch and covers, number two on the list and then the deferral of mulches, newspaper or other recycled paper without glossy or colored inks.

And again, the reasoning for the deferral is similar. We have information on this. We did not have time to review it before things needed to be posted on the web.

CHAIRMAN RIDDLE: Carry on.

MEMBER OSTIGUY: Okay, as compost feed stock, the Crops Committee does not have -- recommends renewing the following substances in this use category. Actually, we are sort of contradictory here. As compost feed stock, newspaper or other recycled paper without glossy or colored inks. And we have no deferral items in this category.

CHAIRMAN RIDDLE: And there, I guess if there is going to be some further review of newspaper
and colored inks where they're used as mulches, why
not also defer as compost feed stock.

MEMBER OSTIGUY: Yes.

MEMBER CAUGHLIN: Were the comments that
were received just in --

MEMBER OSTIGUY: No. I believe I
corrected this, but the right version did not end up
going where it needed to go.

CHAIRMAN RIDDLE: So that is likely to
change before tomorrow.

MEMBER OSTIGUY: Before tomorrow, yes.

The Crops Committee will have to talk for a moment or
two.

CHAIRMAN RIDDLE: Andrea?

MEMBER CAROE: I am sorry, I need to go
back to the last recommendation because on the first
page of the last recommendation it says you're
deferring no materials, none in this category --

MEMBER OSTIGUY: You have to look at --

there's another subheader, recommendations based upon
comments received and then recommendations based not
on comments received.
MEMBER CAROE: Thank you.

MEMBER OSTIGUY: As animal repellents, the Crops Committee recommends the renewal of soaps, ammonia and there are no items that are being recommended for deferral or nonrenewal.

CHAIRMAN RIDDLE: Continue.

MEMBER OSTIGUY: As insecticides, including kerocides or mite control, the Crops Committee recommends the renewal of the following: ammonium carbonate, boric acid, elemental sulfur, lime sulfur, soaps insecticidal, sticky trap barriers. The Crops Committee is recommending deferral on oils horticultural.

CHAIRMAN RIDDLE: George?

MEMBER SIEMON: What happened to copper sulfate? Is that because it was not put --

CHAIRMAN RIDDLE: That was added later.

MEMBER OSTIGUY: As insect management, the Crops Committee recommends renewal of pheromones. There are no items recommended for deferral or nonrenewal in this category.

Moving on, as rodenticides, the Crops
Committee recommends the renewal of sulfur dioxide, Vitamin D3. There are no materials that are being recommended for deferral or nonrenewal. Going on, as slug or snail bait, the Crops Committee doesn't have any recommendations in this category because there aren't any. As plant disease control, the Crops Committee recommends the renewal of the following: copper fixed, copper sulfate, lime sulfur, periacetic acid, potassium bicarbonate, elemental sulfur, recommending the deferral of oils horticultural and no materials are being recommended for nonrenewal. We're also recommending based upon inconsistencies with OFPA, deferral of the following materials: hydrated lime, hydrogen peroxide, streptomycin and tetracycline.

CHAIRMAN RIDDLE: George?

MEMBER SIEMON: To the inconsistency is not fitting into the 10 categories or --

MEMBER KOENIG: Basically, the -- that was based on that document when I went through and again, we just have to do a little bit more evaluation of it.
That in disease control, the coppers were specifically listed under the OFPA categories, but there really isn't any other category, so if there's an agreement in terms of the interpretation of those categories, then we probably can find a place for hydrogen peroxide and hydrated lime.

Or as somebody suggested, the way it was — I guess with the Bordeaux mixture, just kind of confusion. So there are things that we've got to analyze on those two and then streptomycin and tetracycline, they're basically antibiotics because those are bacterial diseases.

MEMBER OSTIGUY: And while OFPA doesn't make a specific prohibition on antibiotics -- we don't have a category. And the Board did make a statement, so we need to remedy that.

MEMBER KOENIG: And there is no OFPA category for antibiotics.

MEMBER OSTIGUY: But it is plant disease control.

Tocsin is not an antibiotic. A tocsin is a product that is made by an organism. There is a
MEMBER KOENIG: The mode of action is different.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: I just question these inconsistencies, are they part of the scope of sunset? Are we looking at -- should these materials be listed or not? Not the categories, not -- I mean if it's inconsistent with OFPA because it's prohibited, I understand that. If we -- if OFPA specifically says you can't have antibiotics and there are antibiotics that for sure is an issue to be deferred and ultimately should be recommended and not to be renewed, but the inconsistencies of where they're listed, I just feel that that should be a separate action.

MEMBER KOENIG: Agreed. We just need to discuss it and we're acknowledging that's the issue. We're deferring it so that we can rectify the issue and bring it forth back. You know, but at the point where the Committee was, we were trying to facilitate the ones where there were no issues. Again, I think
we're going to be in consultation with the NOP on this and figure out what is the correct process. And you could be 100 percent right. The conclusion may be just go ahead with sunset and we'll deal with it in some other function. But we want to make sure that we know clearly where we want to go on those.

MEMBER OSTIGUY: The Committee will be looking at this before tomorrow.

CHAIRMAN RIDDLE: Are you asking for a Crops Committee meeting?

MEMBER OSTIGUY: We already said we were going to.

CHAIRMAN RIDDLE: Okay, well, then we need to set that before we recess for the day here.

MEMBER OSTIGUY: To continue on, assuming that we are finished with as plant disease control, as plant or soil amendment, the Crops Committee is recommending the renewal of elemental sulfur, magnesium sulfate, micronutrients and vitamins B1, C and E. We're deferring until later lignin sulfinate and there are no materials not -- there are no materials recommended for nonrenewal.
We also have recommendations that were not based upon comments received and we're recommending a deferral of aquatic plant extracts, humic acid and liquid fish products.

CHAIRMAN RIDDLE: Could you or Rose explain a little bit more why the Committee recommended deferral of those three just again? Not to go into great detail, but just to refresh. Rose?

MEMBER KOENIG: Well, basically on the lignin sulfinate, one commenter said that it shouldn't be on the National List because nonsynthetic alternatives exist for the substance which were aeration, bubblers or other gentle agitation.

Additionally, the commenter stated that if the material is allowed, no residue should be allowed on the product. And then we, in general, wanted to review these extraction -- these materials, humic acid, liquid fish products and aquatic plant extracts, just in terms of -- as one of the commenters stated coming up that the annotations on them seem to have a lot of confusion to the industry and if you look into
the historical notes on them, at one time on aquatic plant extracts, other than hydrolyzed was the acknowledgement that there were natural forms of that.

We want to make sure that as a commenter did provide some information that he wasn't aware of any manufacturers of natural products that were being marketed, but we need to make sure that number one, if there is a natural alternative out there, that the information is still current on that, in general, and that is true of a lot of those three issues. They all have to do with extractions and we thought it would be wise to kind of get an overview.

MEMBER CAUGHLIN: This does indicate that these were based not on comments received, but you're saying that not directly from a comment, but because of a -- these were ones that remember, initially, the Committees have the option to kind of earmark those substances that they felt were --

MEMBER KOENIG: I understand that you were referring to comments.

MEMBER CAUGHLIN: Well, the lignin sulfate, I read that one because that was generated,
but the comments that I was speaking of was the public comment that Mr. Hilts --

MEMBER KOENIG: Right, I was thinking about that.

CHAIRMAN RIDDLE: Okay.

MEMBER OSTIGUY: As plant growth regulator, the Crops Committee recommends the renewal of ethylene gas for the regulation of pineapple flowering and there are no deferrals or nonrenewals recommended.

CHAIRMAN RIDDLE: Andrea?

MEMBER CAROE: Ethylene gas is one of the materials that is going to be looked at, is it appropriate to defer it here as well?

It will be looked at for handling.

MEMBER OSTIGUY: I can go either way.

MEMBER CAROE: I don't know. I don't know if it's appropriate for us to do that or not, but we are going to be looking further material.

MEMBER KOENIG: What I would suggest is it sounded like that was one that you guys were going to discuss in Committee and that you had already gathered
some information on, so maybe you guys can just --
when you do that brief overview, we can make that
determination.

It sounds like they may have sufficient
information to make a determination and not have to do
that review. Certainly, if you all decide to do a
TAP, we may want to reconsider that. So it's
something to put a little mark by and we'll determine
that probably tomorrow.

MEMBER O'RELL: We're not going to have an
answer from the Handling Committee tomorrow on that.
We are going to review that information, but not here.
I don't think we have the time so there won't be an
answer from the Handling Committee on ethylene
tomorrow. We would still -- except to defer it for
the additional review, yes.

MEMBER JAMES: Even if the TAP review on
ethylene comes back and it would impact reviewing it
in this category, we could still do that even though
it's not deferred here, correct? If we decide not to
defer it?

MEMBER CAUGHLIN: If we renew it, it's
renewed.

CHAIRMAN RIDDLE: The Board can reconsider a vote.

MEMBER JAMES: Isn't it cleaner to simply --

MEMBER OSTIGUY: The Committee will look at this also to see whether or not we will change the recommendation for tomorrow morning.

MEMBER CAROE: If we are recommending to put it on the list, it's on the list. I don't think we should plan on going back and changing our vote.

CHAIRMAN RIDDLE: You should never plan on that.

MEMBER CAROE: That's kind of what I was getting at is that we could go back and do that. I think that's not an option we should even consider.

CHAIRMAN RIDDLE: Okay.

MEMBER OSTIGUY: Floating agents in post-harvest handling. There are two items in this category, both are being recommended for deferral, lignin sulfinate and sodium silicate.

One commenter stated that sodium silicate
is unnecessary, that they've never encountered a tree producer who has ever used it or requested to use it. And then lignin sulfate was that there were alternatives. So we wanted to investigate both of those.

If there are no more comments on that, going on to category M, synthetic or inert ingredients as classified by the Environmental Protection Agency for use with nonsynthetic substances or synthetic substances listed in this section and used as an active pesticide ingredient and in accordance with any limitations on the use of such substance. The Committee recommends materials in EPA List 4, inerts of minimal concern.

There are no deferrals or recommendations for nonrenewal.

CHAIRMAN RIDDLE: Hugh, did you have a comment?

MEMBER KARREMAN: No.

CHAIRMAN RIDDLE: Okay.

MEMBER OSTIGUY: In that case we finally finished with 205.601. 205.602, nonsynthetic
substances prohibited for use in organic crop production. The Committee recommends the renewed listing of the following substances: ash from manure burning, arsenic, lead salts, sodium fluoraluminates, strychnine, sodium nitrate, and tobacco dust. There are no materials recommended for nonrenewal and one is recommended for deferral, potassium chloride.

CHAIRMAN RIDDLE: And we did receive comment, a question this morning about the status of sodium nitrate for spirulina and when the Committee voted it was before October 21st, but now and we did, the Committee did discuss the status for spirulina and it's our understanding that after that date, it is no longer on the list. It is prohibited.

MEMBER OSTIGUY: And that is what the Committee intended, is that the sunset of October 21, 2005 is status quo.

Arthur?

MR. NEAL: This is a general comment for all Committees. There are a number of substances that have been deferred. We just ask that if there's technical information that you're seeking, the
technical contractors to review, will you make sure you let us know because at the next meeting, it's the last meeting we're going to be able to take recommendations for sunset.

CHAIRMAN RIDDLE: Rose?

MEMBER KOENIG: I was speaking at the break with Kim and Julie, we were speaking and we were thinking it may behoove the Board to as we're putting those questions out to our technical contractors to somehow post it on the website so that the public is aware of the kinds of questions that we're asking so that they might be able to provide some additional technical information.

So I just ask you to kind of give us feedback in which would be the most appropriate and best process to do that, but I do think that it does make a lot of sense to give the public the opportunity on all these deferred comments, to provide us with additional technical information, both for the technical contractors as they're evaluating materials and for the Board, in addition to certainly public comment once the reports are out and our
recommendations are made.

MR. NEAL: I think that that's a great idea. I think that you'll have to be very clear with your questions. I think that going out to the public for responses is more cost-effective than going to the contractors because some of these things may not even need full TAPs. But that's a decision you'll have to make as Committees.

MEMBER KOENIG: What I'm thinking is that we will, some of them may be just for public comment, but what I was envisioning is even some of these single questions, now if we have to pay $4,000 to get a single question answered, I'll do the search on the internet, okay? And if that's the choice and I'll charge only $2,000.

(Laughter.)

Until January, you've got my time for free. No, but that's fine. Give us the economics of that because I certainly don't want to be putting resources out to answer questions that we could probably figure out on our own. So if have to pay the full price, we certainly can research that.
MR. NEAL: It may not be for the full price, but depending on how specific you are with your questions, if it's a broad question, they've got to do hours of research and they don't know exactly which way to go, it can add up. That's what I'm saying. It depends.

CHAIRMAN RIDDLE: Andrea?

MEMBER CAROE: I guess with these deferred materials and hearing the ones that were deferred by Committee, not by comment, a lot of them are based on some ambiguous annotations or some confusion about were they appropriate? I don't know what you want the TAP reviewers to tell you. What information are you looking for and who is the best to provide that if you think an annotation may be misunderstood.

The deferral to me was an opportunity to get more technical information, but --

MEMBER KOENIG: It's clear on the ones that we've put out there as Committees that we wanted full TAPs.

MEMBER CAROE: So you want a full TAP on aquatic plant extracts?
MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: George, then Julie.

MEMBER SIEMON: A couple points. Arthur, if we wanted to go to the bigger community, does that mean we'd somehow post the questions we have before the next meeting and say give input on these, we'd get input from the community?

MR. NEAL: Right, if you want additional information, one of the things I can't be clear enough on is you've got to be specific in what you want. The last couple of requests that we've put forward have been just give me a technical evaluation.

And with colors and flavors, it was tough, because you can't prescribe a manufacturing process because you don't have a petition. And because there are so many, the only thing you can do is be general. So like I said, I don't know how effective the reviewer is going to be for you, so if you're going to ask for additional information, you've got to be specific because you still may not get what you want.

MEMBER SIEMON: I'm concerned about how we engage the community out there because we'd have to
post it before they make the next recommendation for the next meeting, so there would have to be some mid-posting that these are the questions we want to have answered. Please send your --

MR. NEAL: Right. A couple of weeks after this meeting, you'll have to go out with the posting to have something before January or by January.

MEMBER SIEMON: Then I had a question about potassium chloride. I see that a commenter spoke against it and now you are all deferring it which means it might be allowed.

MEMBER KOENIG: No, what it's saying is that they're requesting -- the annotation allows you to use it with that specific use and what they're saying is it shouldn't be allowed in any form. Again, that's a change of annotation.

MEMBER SIEMON: It's a change of annotation.

CHAIRMAN RIDDLE: It would be to remove it from the list. It's a prohibited natural.

MEMBER KOENIG: So removing it as a prohibited natural allows it.
MEMBER SIEMON: No.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: If it's a natural.

MEMBER SIEMON: No, then it's flat prohibited.

CHAIRMAN RIDDLE: A natural. The listing is a bit redundant because the natural, it's a reverse --

MEMBER CAROE: If you're removing it, you're allowing it.

MEMBER SIEMON: So what was the Committee's intent by putting this defer in?

MEMBER KOENIG: Actually, in this case, in this case I think that this is a contradiction to our policy on the annotations because the annotation specifically, unlike all the other lists, and all the other substances, this annotation actually narrows -- do you understand what the problem is with this one?

MEMBER CAROE: It's the same thing. Keep it on the list and then afterwards, fix the annotation. It's a simple process.

MEMBER KOENIG: Okay, I guess you're
right.

CHAIRMAN RIDDLE: Julie, did you have anything?

MEMBER WEISMAN: Actually, I think it was addressed. Just a little bit of work to be done.

CHAIRMAN RIDDLE: Again, for the record, I want to correct something I said about the spirulina. I said after that date, it's prohibited for use in spirulina and that would not be accurate for spirulina. It would be still the same limitation as any other crop of 20 percent of nitrogen. I just wanted to correct that for the record.

Okay, that concludes the Crops Committee's report and we --

MEMBER SIEMON: Can we set up for our Committee meetings?

CHAIRMAN RIDDLE: Yes. So Livestock Committee and it sounds like Crops also and then Handling, you think you can handle that when you meet in the morning, it's already scheduled at 8 a.m. in the lobby is where we'll meet and then we'll go from there. Handling and Policy Committees, 8 a.m. in the
morning.

MEMBER OSTIGUY: I'd like the Crops to meet right now if we could.

MEMBER KOENIG: Fine with me.

MEMBER OSTIGUY: We're not going to have time in the morning.

CHAIRMAN RIDDLE: I know. The Livestock is planning on right now. So could we say Crops in a half hour and that's right now enough?

MEMBER KOENIG: 5:15 is fine.

CHAIRMAN RIDDLE: That keeps the pressure on Livestock to get everything done in a half hour.

So is that all right? Livestock, we'll just meet here, right away, and then Crops in a half hour.

Thanks. All right, we'll recess for the day we reconvene at 9 a.m. tomorrow as a full Board.

(Whereupon, at 4:43 p.m., the meeting was adjourned, to reconvene tomorrow, November 17, 2005 at 9 a.m.)
UNITED STATES DEPARTMENT OF AGRICULTURE

NATIONAL ORGANIC STANDARDS BOARD

MEETING

THURSDAY
NOVEMBER 17, 2005

The Board met in the Captain's Room in the Channel Inn Hotel, 650 Water Street, S.W., Washington, D.C., at 9:00 a.m., James Riddle, Chairman, presiding.

9:15 a.m.

CHAIRMAN RIDDLE: If people could take your seats. I'd like to call the meeting back to order. Okay.

Good morning. Looking at the agenda today, I was given 15 minutes to call the meeting to order. So, I wait until the very end.

So, now, we're right on schedule to begin with committee reports on pending work plan items and I'm aware of four items to come up during this time. One from the Livestock Committee, one report from Policy and Handling Committee and then reports from Aquaculture Task Force and Pet Food Task Force which are under the Handling Committee. The Pet Food is under Handling and the Aquaculture under Livestock Committee.

So, who's prepared to go first. We -- I haven't lined that out.

Dave, would you like to just give us a brief report on --
MEMBER CARTER: Yes, the -- the Policy Committee -- the Policy Committee and the Handling Committee have been working to develop a draft for commercial availability criteria. We met by conference call a couple of weeks ago.

Bea James agreed to take the -- the lead in compiling some of the historic information and developing an initial draft document with a -- with some input from some of the folks outside the Board helping to compile some of this information and we sat down this morning to review that with a joint meeting of -- of both committees, Policy and Handling, and went through the draft at least the best we could in a noisy restaurant and what we're -- where we're at then is -- now is that the committees are going to revise the draft that is on the -- that we began to work through with the goal of having something available for posting by the end of the year for public comment.

So.

CHAIRMAN RIDDLE: Okay. And this is really establishing the criteria for making these
determinations which aren't currently in the rule or the law as well as the procedures and also what the certifiers and operators need to do. Once something is on the list, then they still have to prove due diligence. So, it'll include all of that. Correct?

MEMBER CARTER: Exactly what I would have said.

CHAIRMAN RIDDLE: All right. And is there a timeline for having a draft posted?

MEMBER CARTER: Well, what we said was before the end of the year to have it posted.

CHAIRMAN RIDDLE: Okay.

MEMBER CARTER: We're going to have our follow-up meeting probably the first week in December and -- and --

MEMBER O'RELL: Right.

MEMBER CARTER: -- work this through. So, Kevin.

MEMBER O'RELL: Right. No, that's -- that's our plan.

CHAIRMAN RIDDLE: Okay. So -- so, by the
end of December to get a committee draft in to NOP for posting for public comment.

MEMBER O'RELL: Right. I think we're far enough along.

MEMBER CARTER: Now, we -- and it's a little bit disjointed because Bea did a great job of drafting up a document that had recommendation number one and recommendation number two and we didn't talk about either of those this morning or at least half of the committee meeting didn't talk about that. They were talking about a separate process. So, we're trying to pull it all together right now.

CHAIRMAN RIDDLE: Okay. Thanks. Michael, the Livestock Committee has done some further work on the pasture recommendation. Would you like to update us?

MEMBER LACY: And do you want us to also update you on our discussions last night about the chlorine sunset?

CHAIRMAN RIDDLE: No, when we come to those --
MEMBER LACY: Okay. We'll cover that later?

CHAIRMAN RIDDLE: Yes.

MEMBER LACY: Thank you.

CHAIRMAN RIDDLE: Um-hum.

MEMBER LACY: The Livestock Committee did meet last night and Jim has brought another draft dairy pasture recommendation to the committee. It was approved by the Livestock Committee last night.

Jim, do you want me to read this? Do you want to just cover the differences from our previous draft?

MEMBER SIEMON: We handed it out. So, let's just cover the differences.

CHAIRMAN RIDDLE: Yes, and -- and all the Board Members have a copy of the page that was changed which is the recommendation page and there are some extra copies on the back table if you're in the audience.

MEMBER LACY: I wasn't aware of that. Thank you.
CHAIRMAN RIDDLE: Yes. Sure. Yes. And all of the NOP have a copy in front of them as well.

MEMBER LACY: Thank you. I -- I appreciate that.

Then just very, very briefly. Since people do have access to it, can read it, the -- the changes are ruminants shall graze for at least 120 days per year except during the following stages of life: birthing, dairy animals up to six months of age or beef animals during a final finishing stage not to exceed 120 days.

Then there are a couple of strikeouts lower on where we've changed stage of production to stage of life and again, animal stage of production to stage of life and then a final addition number seven at the bottom. Prevent dairy animals from grazing pasture during lactation except as allowed under 205.239(b).

MEMBER SIEMON: So, this is more or less the same draft that we sent forward two meetings ago as a group and the only addition is that we've now put
in the specific 120 days in the rule instead it was
before in the guidance. So, now, it would be both in
the guidance and in the rule because there's been the
question of specificity the whole time here and so,
the public comment now has been about answering these
questions that were -- you know, that's what we're
getting and -- and so, it was just felt that the 120
days needed to be added to the rule.

Otherwise, everything is what we've
already as a Board voted on as far as --

MEMBER LACY: Yes, it's just been --
MEMBER SIEMON: Reformatted is all at the
most.

MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Yes, the other change in
formatting is previously the recommendation we adopted
had the language about preventing grazing during
lactation as a note. It really didn't have a place in
-- where it fit in the rule and under the livestock
feed section of the rule, currently, there's a list
prohibited, you know, materials and practices and so,
this draft puts that language in the list of prohibited livestock feed practices.

MEMBER SIEMON: And our concern was if we're going to go into this rule-making process that we ought to put our best proposal forward now and we've worked on this a long time and we've heard that we need something more specific than vague. So, putting 120 days there kind of takes care of a lot of the questions that have been brought up about what are you talking about or what's the time or pasture's already defined the rule.

CHAIRMAN RIDDLE: Okay. Kevin.

MEMBER O'RELL: Yes, Michael, can I ask a question. I see there was one no vote. What was the minority opinion?

MEMBER LACY: The minority opinion was a concern about process.

MEMBER SIEMON: Also, the vote also didn't it go down to whether we were going to do the stand-alone rule proposal or the stand-alone rule proposal with the attached ten pages? I thought the ten pages
attaching that was really a part of it, too. Maybe not. Wasn't it?

CHAIRMAN RIDDLE: Well, I think Mike had some concerns about some of the rationale or explanation, but we didn't make those changes as well.

So, it's my understanding that was another one of your concerns, but as presented this morning on the single sheet, these were the changes that were discussed and adopted and then voted on by the committee. The rest of the document wasn't changed. It does provide some of the regulatory objective, the rationale for why this is needed and then it does have all previous recommendations compiled into one document and then a list of scientific studies concerning pasture.

So -- so, it's really the entire package that was adopted by the committee, but the only sheet that was -- I passed out was where the changes were made.

Rose, I think you were --

MEMBER KOENIG: I had a question on the --
you know, I -- I'm not a -- a dairy producer. So, I'm not -- I may be a little naive again on these areas, but I looked at the information provided by the public I guess, I don't know, the pictures on that lawsuit and I didn't know that we had gotten in the mail and I didn't know if the issue was with those little looked like igloo plastic houses. I mean there was a photo of that and I didn't know if that was part of the issue.

I see the access to outdoor shade, shelter, exercise areas, fresh air and direct. So, did you guys discuss that aspect of the regulation. Was -- was there a concern by producers about the access to the outdoors? I couldn't glean that from the -- the complaint that we received in the mail.

CHAIRMAN RIDDLE: Well, Hugh, would you like to --

MEMBER KARREMAN: Well, just as -- as far as those, they're called hutches. Is that why you're -- you wanted to know about them in relation to
dairying.

MEMBER KOENIG: Well, I just wanted to know if that -- was that something that would be permitted in this? I mean I didn't understand.

MEMBER KARREMAN: Those calves -- that's very standard practice across the industry organic and conventional. Having calves in hutches. As a matter of fact, it's probably the preferred method to raise calves that are young, before they're weaned to prevent pneumonia. The ones you saw in the picture obviously were a massive amount of them, but a lot of my farmers with 40 cows will have three to five of those hutches outside the main barn for the health of the calves.

So, and those calves are -- before six months of age, they're usually kept in those hutches for health purposes up to about two to three months old at most.

MEMBER KOENIG: So, there's no -- we have not heard from the public any issues regarding necessarily the access to outdoors for ruminants. I
know it's been an issue for poultry that folks have stated, but that's just a question.

MEMBER SIEMON: That -- that -- that would be under the temporary confinement part and not under this pasture. So, they're really two different subjects, but the six months allows that kind of activity to go on recognizing there's a lot of different ways to raise calves.

MEMBER KOENIG: Okay.

MEMBER SIEMON: By the way, those calves mostly do have access to outdoors. They have a fence around the outside and so, they're -- they are able to go outside and in. So, mostly, that's an accepted humane process.

CHAIRMAN RIDDLE: And -- and I would like to, you know, respond to the concerns about process. Because I -- I am the one who introduced this revised recommendation to the committee and in doing so, it -- it stimulated the conversation that -- with Barbara in particular, but NOP and in this instance, it was the Board or a Board Member taking the initiative to, you
know, put something on the table. But, it has stimulated what I consider a very collaborative situation at this point and I haven't received feedback that -- that this -- I mean well, in fact, the feedback I have received is that this draft helps move that along.

So, even though, you know, I took initiative, it wasn't collaborative. In the outset, it's led to collaboration of where we're at today. That's -- that's -- and it's a shame Barbara is not here because I think as I described yesterday moving forward with this ANPR, this is a piece that helps move that forward. It's not something that obstructs or detracts from that process.

MEMBER SIEMON: But, do I understand with ANPR that we're -- kind of this is the end of our involvement.

CHAIRMAN RIDDLE: No.

MEMBER SIEMON: It's not going into the NOP rule-making public process and -- and our -- this is our last -- last recommendation.
CHAIRMAN RIDDLE: Well, no, I would never say that.

MEMBER SIEMON: Well, I know you wouldn't.

CHAIRMAN RIDDLE: But, it probably is mine. It's probably yours and mine. But, the Board -- now, the Board will continue to be engaged and if this gets posted for comment either as a Livestock Committee draft which it already has been adopted now at that status or as a Board draft, either way it's going -- the -- you know, the public will have a chance to give comment back to the Board. So, the Board will continue to have this on the agenda as a work plan item.

But, the Board also will be engaged, it's my understanding, in responding to that ANPR. So, we'll have to see what language the program puts on the table now and the Board, as always, will have a chance to comment on the ANPR or our proposed rule as well.

So, no, unfortunately, the Board's not done with this.
MEMBER O'RELL: Jim --

CHAIRMAN RIDDLE: Kevin, go ahead.

MEMBER O'RELL: Jim, this is a recommendation from the Livestock Committee for posting for public comment?

CHAIRMAN RIDDLE: Right. At this stage, yes.

MEMBER O'RELL: I want to be clear.

CHAIRMAN RIDDLE: Um-hum. Hugh.

MEMBER KARREMAN: Yes, I think as part of the process, you know, the public input has to be taken in and, you know, we've had public input. That's in our meeting agenda book. You know, specifically answering or trying to answer what the NOP has listed as those questions that was put out back, I don't know, a month or two ago and then so, you know, really I -- I -- I don't know how all the process goes, but I -- I do think this should go out for public comment, this draft, as a Board draft. Okay. Not a final recommendation, but as a draft to get public comment from outside and then have it work
into the ANPR process.

So, you know, I -- I would like to move that this recommendation becomes a Board draft that we send out for public comment.

MEMBER CARTER: I'll second that.

CHAIRMAN RIDDLE: Okay. Is there discussion on that? It's been moved and seconded that this recommendation from the Livestock Committee be posted as a Board draft. Either way, it's a draft.

MEMBER KARREMAN: It's a draft.

MEMBER SIEMON: I just want to clarify again. This is the same intent in wording as the previous Board draft except for where we've added 120 days. So, just so, we narrow it right down to moving the 120 -- duplicating the 120, the guidance into the rule now is the truly only intent difference to what we voted on two meetings ago.

CHAIRMAN RIDDLE: Well, right, but the Board did adopt that 120 days in the guidance statement.

MEMBER SIEMON: In the guidance.
CHAIRMAN RIDDLE: Yes.

MEMBER SIEMON: But, I'm saying --

CHAIRMAN RIDDLE: But, the change is to propose it as a rule change.

MEMBER SIEMON: We've already -- this is --

CHAIRMAN RIDDLE: Yes.

MEMBER SIEMON: It's -- there is formatting issues, but our job is intent and clear messaging. This is the clear message the draft board said except for the 120 days. I just want to make sure everybody understands what we're voting on.

CHAIRMAN RIDDLE: Yes.

MEMBER SIEMON: Is -- is only this one change.

MEMBER KARREMAN: And reason for the 120 days is that it's black and white. It's calendar days. It's good across the country. It's objective. It's enforceable.

CHAIRMAN RIDDLE: Yes. Un-hum. Rose.

MEMBER KOENIG: Again, I just -- we've
seen these documents. I just have a question. Is it a -- it's just something you guys might have done the analysis. When you say ruminants shall graze for at least 120 days, does that mean that legally that it's a full day? Like you can't just put a dairy animal out there for an hour and bring him back into the barn. I don't know.

MEMBER KARREMAN: I -- I -- right. This is just a draft. I think it's a starting point and we need to clarify that kind of thing in the ANPR process and hopefully, there is a meeting to discuss pasture for a whole day or two and get all that kind of input to make sure that, you know, 50 cows out of a thousand aren't the only ones going out grazing and that's being called grazing. We -- you're right. We have to make sure that we have -- it's a start. It's a draft. I don't know how else to put it right now.

MEMBER SIEMON: It defines the universe and then we -- I meant he bigger world. Now, we have to get down. Rules shouldn't go to that specificity.

MEMBER KARREMAN: Right.
MEMBER SIEMON: This -- this is -- it's unfortunate we got to keep diving down and now, we're down to how many hours per cow. I mean that's -- sooner or later, we're going to get to implementing a standard.

CHAIRMAN RIDDLE: But, Rose makes a very good points.

MEMBER KOENIG: I don't know. I mean I --

CHAIRMAN RIDDLE: I mean that's an excellent point.

MEMBER KOENIG: -- I mean I'm not a dairy person, but --

MEMBER SIEMON: All right. How long is a day?

CHAIRMAN RIDDLE: Right.

MEMBER SIEMON: Some days sort of longer that others.

MEMBER KOENIG: I -- I mean you -- as long as 120 day, I mean you said at least.

MEMBER SIEMON: Like when you're here.

CHAIRMAN RIDDLE: Yes. Dave.
MEMBER CARTER: Yes, I mean and I agree. I -- you know, we need to be conscious about how --

CHAIRMAN RIDDLE: Absolutely.

MEMBER CARTER: -- you know, down to the level and obviously, you write the rules for the folks that are always trying to break them as -- as opposed to those that have the intent of upholding them, but, you know, there's a certain point that a lot of this gets down to management. I mean how much management time are you going to spend running cows out for an hour and bringing them back in. You know, I mean there's just -- some of those things are guiding. So, you know, I think that 120 days is a good starting point. I gives a good intent of what we're after and, you know, if somebody wants to spend all that time and labor and everything to run cows in -- in and out of barns, I guess then we can address it at -- you know, as we go forward.

MEMBER KARREMAN: We will address that. It's -- this is a starting point. It's a very valid point, Rose. It's -- I think it's better than say...
just that cows have access to pasture. That's really weak.

MEMBER LACY: Jim, I -- I know you didn't mean this and I just want to come to the defense of the members of the Livestock Committee. We had been taking initiative on the pasture issue. We had expressed at our last, you know, SB meeting in our plan of work and in executive committee calls that we were working with NOP on addressing the regulatory concerns that they had. So, I just want to go on record that the Livestock Committee members were taking the initiative on this issue.

CHAIRMAN RIDDLE: Yes, and I stand corrected. When I mean initiative, I just mean a draft back on the table. Not -- not that it was being ignored by any means. There was ongoing discussions.

Any other comments?

Seeing none, we'll move to a vote and the motion is to adopt the Livestock Committee's pasture recommendation as a Board draft for posting for public comment and if it's all right with you, Goldie, we'll
start with you.

MEMBER CAUGHLAN: Gratefully, yes.

CHAIRMAN RIDDLE: Grateful. Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: I'm sorry. I didn't look up. Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Still yes.

CHAIRMAN RIDDLE: But, still it's only one vote. Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'RELL: Yes.

CHAIRMAN RIDDLE: Rose.
MEMBER KOENIG: I'm going to abstain.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.

MEMBER LACY: No.

CHAIRMAN RIDDLE: And Chair votes yes.

So, we have 12 yes, one no, one abstention. So, I think I have the current revised draft on my computer and I will submit that to the program for posting for public comment and -- and then that can feed into the whole preparation for ANPR.

Okay. Thanks.

Next, we go to -- go fishing. Have the Aquaculture Task Force Report and the Chair of that George Lockwood has submitted written and I think all of you have a copy of that in front of you.
So, Keith's going to present that on behalf of the Aquaculture Task Force. Keith.

MR. JONES: Thank you, Jim. Well, I don't know if this is on. Is this on? Is this on? All right. There it is.

Thank you, Jim.

The Aquaculture report was distributed to you earlier this morning. Each of you should have a copy of that report respectfully submitted to the Board by George Lockwood. I'm not going to read that report to you. I'm simply going to comment on how pleased I am with the progress of both the -- the Pet Food Task Force and the Aquaculture Working Group.

Emily Brown Rosen will bring you the update on the Pet Food Task Force here in a few minutes.

The Aquaculture Task Force or Aquaculture Working Group has gone through eight sections of regulatory language and they're -- they've really done a marvelous job in hammering out some very difficult issues. They are now working with the feed issue. As
many of you have known, this is a very thorny issue, a very difficult issue. But, there's really been a lot of goodwill on all of the part of the members and they've -- they're really coming to what I think are some fairly innovative solutions to -- to the -- to the problems that's confronted us with -- with regard to organic feed for aquaculture products.

George anticipates as he said in his report that he hopes to have a full recommendation to the Board within 60 days. I think that is going to be dependent on how well this -- this discussion on the feed gets wrapped up over the next couple of weeks, but all in all, it's been a pleasure in working with both the Aquaculture Group and the -- and the Pet Food folks. They're really doing a Board an enormous service. There's a tremendous amount of expertise on both of these -- both of these groups and I think you'll be well pleased when the -- when the recommendations finally come to you.

Thank you.

CHAIRMAN RIDDLE: Thanks, Keith. Goldie.
Then Dave.

MEMBER CAUGHLAN: Well, I guess you would answer or Keith would answer. Are you, Jim, going to continue on this if it extends past our tenure? Are you going to continue on the task force if it extends past Board tenure?

CHAIRMAN RIDDLE: Well, that's a good question. You know, certainly we'll continue --

MEMBER CAUGHLAN: For continuity, I would hope so.

CHAIRMAN RIDDLE: -- yes, through the end of January as Board Liaison. Unless there's any objection, I would continue to make myself available after that as a -- you know, to sit in on conference calls.

MR. JONES: I guess what I would see, Goldie, is that Jim would -- would certainly be seen as a resource. As a courtesy to the new Board members, we would want them to become involved as quick as -- as quick as possible, you know. So, I think that's the way we'd see if happening.
CHAIRMAN RIDDLE: So, I would be welcome on conference calls.

MEMBER CAUGHLAN: I guess I would see that with two -- I would see that with the two continuing Board members that is might be better policy to have the continuity if you were willing for you to continue. It's just an observation that I think I'd like to see that continuity in any event.

CHAIRMAN RIDDLE: Well, thanks. Yes, and I'm willing to do that and -- and I've made probably about half of the conference calls and I do monitor that conversations back and forth on the e-mail and -- and -- but, I'm not a voting member anyway of the working group.

MEMBER CAUGHLAN: Yes, I understand.

CHAIRMAN RIDDLE: But, I'm certainly willing to continue with that relationship.

Dave and then Kevin.

MEMBER CARTER: Yes, I'm just -- I'm trying to remember now. There's the Aquaculture and then the Wild Fish. So, what's the status of the
MEMBER CAUGHLAN: What's the status of that? Right.

MR. JONES: Well, that's a great question.

MEMBER CAUGHLAN: Hope you have a great answer.

MR. JONES: We -- we have struggled with -- with Wild Harvest for years and I think as I've shared with you at the last Board meeting, we went out for -- for request for participation in -- in the Wild Harvest Working Group.

We got responses back for that, Dave, but they really weren't diverse enough in terms of where they were coming down on the issue to allow what we felt would be a really full and -- and open debate.

What you need to understand is that this discussion is going on around the world. I had a long discussion with an individual from the UK who's -- who's involved in -- in certification services in -- in the UK. Europeans are wrestling with whether or not Wild Harvest is an appropriate methodology to
attached an organic label to.

I think it's our desire to continue to look at the issue. It's our desire to assemble a -- a working group, but we want to make sure that the representation on that working group is such that there can be a really good discussion on the issue. That it's not just either one side or the other. Yes, let's do it or no, let's don't do it and that's what was -- that's what really happen with the pool of people that we had. It was really going to be kind of a predetermined outcome just because of -- of who the people were signed up.

CHAIRMAN RIDDLE: And I appreciate the -- the update and the -- the attention to that process.

And I have a follow up question. Do you anticipate then another call for nominees at some point in the future or --

MR. JONES: Well, that decision hasn't been made yet. Obviously, NOP has -- has an enormous amount of work on its -- on its plate right now and I think what we want to do is get Pet Food pinned down,
get Aquaculture pinned down. Then let us get -- get some time under our belts here to look at the -- at the Wild Harvest.

My sense, Jim, in -- in talking to some of the colleagues around the world is that there may be some sort of coming together of the minds globally in terms of the whole appropriateness of Wild Harvest and so, there may be some opportunities to have a -- a larger dialogue worldwide on this issue before we do anything here in the -- in the states.

We continue to get a lot of interest in the product. We continue to get calls from people saying, you know, what's -- what's the status and -- and that kind of thing. So, if you -- if you get those calls, at least now you're -- you're informed so.

CHAIRMAN RIDDLE: Okay. Thanks. That's helpful. Anything else on this? Seeing none, Emily Brown Rosen who's Secretary of the Pet Food Task Force will present a report.

MS. ROSEN: Hi, I'm Emily Brown Rosen,
Secretary of the Pet Food Task Force.

Just briefly report what we've doing since August. I think we've had two more meetings, phone meetings and we're having another one tomorrow. We've -- we've come quite well along. We -- you know, we have more work to do. I think we're getting there. We have -- at this point, there's two main areas that they're working on and one is what adjustments to NOP rules do we need to facilitate pet food certification and that second area is labeling. How to handle labeling under the organic rules and also to mesh that or overlay it with the state regulations that already exist for pet food labeling.

So, we have a draft on rule changes and that's -- that we need to get that through. I think my focus will be to try and get that done first on the NOP rule area and then because the discussion about interacting with states and how that all settles out going to take longer and then we can -- you know, we can go further with the AFCO people.

But, our group is pretty diverse. We have
quite a few pet food -- organic pet food manufacturers at the table and then we have several officials from AFCO and from the conventional pet food world there also.

So, there's been a bit of getting to understand each others world view and positions and how these two things interact. So, the labeling thing is really tricky and the Chair Nancy Cook has called, you know, really urging a face-to-face meeting because -- so we can just sit there and go through it and -- and it's kind of hard to do that on an hour phone call and figure out how the interaction's going to be.

I mean the ideal thing would be our NOP rules and the state pet food labeling rules will both apply to the manufacturers and what we need to do is figure out where if any -- if there's any conflict and how we need to resolve that. But, so far, there doesn't seem to be a whole lot of conflict. We're -- we're -- it looks like we're -- we're pretty close. So -- so, that's where we're at.

Yes, so, there's -- there is general
consensus though I'd have to say about -- initially, we had to talk about where we're headed with the rules and the -- and the general consensus is, you know, organic pet food can't be a weakening of the standard. It has to be, you know, a strong representation to consumers the same as organic food and what we're basically looking at is like the livestock-type rules for pet food but with labeling as per handling. So, you can have your 95, 70 and 100 percent categories.

So -- so, that's where we're headed.

Any questions about that? Okay.

CHAIRMAN RIDDLE: All right. Yes, and on behalf of the Board, I -- I want to just follow up on what Keith was saying for both of these that were Aquaculture Working Group and Pet Food Task Force. I -- I really appreciate the work that they've done to date. There's been a robust exchange of ideas and very in-depth discussions both in person, on conference calls and back and forth by e-mail. So, I -- I think this -- it's a good process. It's -- it is taking some time, but I think there are going to be
some very thoughtful recommendations coming out of both of these. So, I just wanted to while I'm still behind the mike get to be able to thank the task forces for their work on this so far.

Okay. Are there any other committees that have pending work plan items that haven't been addressed. Later in the afternoon, we'll go back to kind of the presentation of what's next for the committees, but is there anything else at this time that needs to come up? Okay.

Dave.

MEMBER CARTER: You know, I just wanted to say I -- is -- is -- on behalf of the Policy Development Committee, I really appreciate the -- the process that we went through in -- in working with the program and in drafting up the questions to be used as a part of the evaluation process for the executive director and I know we were on a short time hook and -- and the like, but the -- the way that the process worked I thought was -- was very constructive and -- and we're looking forward to seeing the ultimate
outcome of that.

CHAIRMAN RIDDLE: Yes, and maybe now would be a good time to just talk about our plan. I talked about it with Barbara and with Mark since we recessed yesterday and I think Mark mentioned he's putting all of the answers to those questions into a database so we can see each of those and -- and it's going to be anonymous. You know, each of the applicants will be given a number. We won't know their identity.

The -- the plan that I would propose is -- is this. Because we really -- we want to respond timely again as in a little over a week to have a recommendation back in and so, Mark is proposing to get that database out to the Board -- all the Board members by Monday. Correct? Yes, of next week.

And, you know, we've talked about forming a committee, but I definitely want all Board members to be able to have input if you want to. To have the opportunity to provide your scores.

So, I don't know that really a committee is needed if by the end of next week, that would be
close of Friday, if all of your scores come to me. I will commit over the weekend then to compile those into one score sheet and essentially ask you to rank. I think there's seven applicants. To rank your preference from one to seven on each of them and then I'll simply do the math and come up with a composite score and then submit back to the program the following Monday.

Does that sound like a plan?

MEMBER CARTER: Yes, and -- and we had talked this morning with Mark about the format of that and -- and what I like. Because he was going to -- he said he could either list each one, you know, with their answers down or he could put it on a sheet so you had the questioning all the way across which I think the spreadsheet is the preferable method for me to -- to evaluate. So, I think that will be very helpful for us.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: So -- so, we're looking at responses to these questions which could be like a
paragraph or so. Right? I mean.

CHAIRMAN RIDDLE: Yes, a paragraph.

MEMBER CARTER: So, six times 742.

CHAIRMAN RIDDLE: Yes.

MEMBER CAROE: Very good.

CHAIRMAN RIDDLE: But, you won't have to score each question. Please do not score each response to each question because we can't come up with a composite person. We'd like the answer to number two on question number six. No.

MEMBER CARTER: Can you hire number two to do this --

CHAIRMAN RIDDLE: So, have --

MEMBER CARTER: -- and number four to do -- yes.

CHAIRMAN RIDDLE: Yes. Right. No, so, after you reviewed them all, we need candidates scored per candidate and then I'll simply do the math and turn it back around.

MEMBER CAROE: And -- and --

CHAIRMAN RIDDLE: Yes.
MEMBER CAROE: -- just a suggestion. Instead of ranking them one to seven --

CHAIRMAN RIDDLE: Yes.

MEMBER CAROE: -- we should maybe give them a number between like one and a hundred. Otherwise, you're going to end up with ties I think. I really -- when you do the math, it's going to average out and you're going to get some close. You might want to, you know, broaden the numbers a little bit so it doesn't happen. Just a suggestion.

CHAIRMAN RIDDLE: Yes. Yes.

MEMBER CAROE: It'll make it too complicated.

CHAIRMAN RIDDLE: Yes.

MEMBER CAROE: I don't think it will make it more complicated. I just think it'll make the number a little bit --

CHAIRMAN RIDDLE: Well. Pardon.

MEMBER JAMES: If there -- if there is a tie, then that just means there's two really good
candidates.

CHAIRMAN RIDDLE: Right.

MEMBER CAROE: And then we should consider it separately.

CHAIRMAN RIDDLE: Yes, and that's fine with him. I -- I -- I would keep it as simple as we can and there's going to be -- once we divide by the 14 members of the Board or however many number submit commits, contribute to the process is what I'll divide by and so, they'll all appear as fractions. Then there's a possibility of a tie, but yes, that's not a problem.

I got Kevin. Then Rose.

MEMBER O'RELL: Just, you know, if we -- I guess your expectation is we just rank these from top to bottom.

CHAIRMAN RIDDLE: Yes.

MEMBER O'RELL: No comments in terms of maybe the top one or two as to what -- because if it comes down to a tie with those top one or two, maybe some comments could be linked to that individual if he
had a strong -- for what strengths or whatever you believe. I -- I think -- for maybe the top two or three you give some comments. Not for all of the bottom ones.

CHAIRMAN RIDDLE: If you want. If you want. Yes, let's leave that open. Yes, Mark.

MR. BRADLEY: Actually, I -- I would encourage you if you want to -- to put brief comments in there that -- that reflect your priorities and the things that you see that are valuable in one candidate over another. Anything that you want to throw in there that -- that would help us with our evaluation is fine.

CHAIRMAN RIDDLE: Okay.

MR. BRADLEY: That's okay.

CHAIRMAN RIDDLE: Yes, and I'll -- I'll transfer those comments, but I'll also turn around the raw reviews from all the Board members just for your official record, but I'm willing to do that work of compiling it into one Board recommendation.
I got Rose. Then Julie.

MEMBER KOENIG: I -- I guess, you know, this process has been kind of interesting, you know, but the -- so, the assumption though on the Board as far as the NOP is we're passing that on. This is information, you know, that they're going to use in part to make their decision. We're not going to come back and say by the way, did you ever pick the -- you know, they could end up picking number six. Okay. So, we're not ever going to ask again. This is just our input. So, I just wanted to make that clear because I can see how it could be divisive if -- if we started asking questions like but was X our third candidate or was he our fourth choice. You know, what I mean? So, there's an assumption that -- they're -- this -- they're honoring our information and they're using it in their decision-making process, but it's not -- it may not be the deal breaker.

CHAIRMAN RIDDLE: No, it's -- it's our recommendation. It's not binding.

MEMBER CARTER: Rose, I think we've been
very clear on that.

MEMBER KOENIG: Okay.

MEMBER CARTER: I mean it's always been
that this is part of the evaluation process. This is
not the universe of the evaluation process. So, I
think that's been very clear from the outset.

MEMBER KOENIG: All right.

CHAIRMAN RIDDLE: All right. Julie.

MEMBER WEISMAN: Only kind of a -- a
housekeeping issue. Did I hear you say that you were
going to do this by the end of next week? By the end
of the week? Because it's --

CHAIRMAN RIDDLE: No.

MEMBER WEISMAN: -- it's a three-day week.

CHAIRMAN RIDDLE: I understand that
Thanksgiving's in there and I have other commitments
myself, but --

MEMBER WEISMAN: Four-day week.

CHAIRMAN RIDDLE: Yes, we got the turkey
which actually is -- will be passed on to the next
Board chair.

MEMBER WEISMAN: Okay. That's all.

MEMBER CARTER: This is a good family activity during half-time of a football game on Thursday. Okay.

CHAIRMAN RIDDLE: No, I want them back from all of you by Friday, by the end of Friday after Thanksgiving. So, yes, you may take some time during your holiday or get it done before, but then I'll take some time Saturday and Sunday to score them and get them in Monday or I'll take the time on Monday. But, it'll be -- by the end of Monday, they'll have the recommendation.

Bea.

MEMBER JAMES: I know this is also -- it's not mandatory that every member actually contribute and fill the survey out. However, I think it's important that at least half of the Board does give feedback.

So, if only three people submit feedback, I think that we need to somehow solicit more -- more
contributions to be able to have a better broader, you
know, what we -- what we got to the NOP. Because I
don't think that -- it's got to be at least half of
the people or else it's not the consensus. It's not
anywhere near the consensus of the Board.

MEMBER CAUGHLAN: Well, I think it has to
be self-initiated fortunately or unfortunately.

MEMBER JAMES: That's right and I know --
and I realize that, but I'm just saying that I -- I --
I -- I hope that we can agree that at least half of
the Board needs to contribute.

CHAIRMAN RIDDLE: That's I think a good
reminder and pressure's on. Yes.

MEMBER JAMES: Otherwise George could be
making the decision for all of us. I meant that in a
positive way.

CHAIRMAN RIDDLE: Okay. So, we have a
plan. All right. Good. Anything else from any other
committee at this time? I'm glad you brought that
back up, Dave. Yes, Hugh.

MEMBER KARREMAN: I just wanted to -- on
-- for Livestock, I hope that maybe next meeting, it's not pasture, don't worry, I mean that we address the avian influenza topic again next -- next meeting because we really need to. We've talked about it before, but hopefully, we can have that on the agenda somehow or another.

CHAIRMAN RIDDLE: Yes, and -- and I do encourage the committee chairs to be thinking about your work plan items because that'll come back up about 1:45 is what it's scheduled on the agenda. But, sometime this afternoon, we'll have that kind of laundry list of work-plan items.

Okay. Hearing and seeing nothing more, it says 10:15 to vote -- to start the vote on those national lists. I don't know if they'll be any planes landing between -- in the next 15 minutes, people wanting to come to see the votes, but we could -- we could take the break now and that way we stick to the agenda of 10:15. So, let's see. We'll start with the Livestock Committee again. So, be prepared in 15 minutes to move to voting on those items.
All right. So, let's take a -- a short break.

(Whereupon, at 10:00 a.m. off the record until 10:22 a.m.)

CHAIRMAN RIDDLE: Let's take our seats and as I said, the first group of Sunset recommendations that will come to a vote will be from the Livestock Committee, but before we do that, I would like to propose a plan for expedited voting and what I would propose is that after each subsection has been presented and moved that -- that the -- the chair will make a motion and get a second to put it on the floor and then if there's any discussion, we'll have the discussion and then when we vote, I would call first for a voice vote. If it's unanimous, then that's obvious. I will also ask if there are any recusals or abstentions even if it is unanimous and well, also on the issue of recusals, I'd appreciate after that motion has been made if you do need to recuse yourself, you mention it at that time before there's any discussion and we know that going into a vote.
But, once we vote, first I would call for voice vote. If it's unanimous, then that's done. We move on. If there is any division even if it's only one voice in the wilderness that I might hear, then we will go to a roll call vote, but if it's unanimous, I hate to take the time just to go through a roll call.

So, does anyone have any concerns? Of course, it's legal. We have to have a -- a two-third, I'm sorry, a two-thirds vote in favor. If it's unanimous, that clearly exceeds, but yes, there's nothing saying there has to be a roll call vote on every item either on --

MEMBER JAMES: Are you going to do a showing of hands? Is that what you wanted to do or just --

CHAIRMAN RIDDLE: Well, I was just going to do voice votes. All in favor say aye.

MEMBER SIEMON: Hear a no.

CHAIRMAN RIDDLE: If I hear a no, then -- then -- then we'll do a roll call. So, and I don't -- in anyway, if anyone feels that they would -- well, I
guess either way you're being put on the spot how you vote. So, that you have to own your vote either way.

Yes, Kevin.

MEMBER O'RELL: Jim, just a question about -- you mentioned recusal, but --

CHAIRMAN RIDDLE: Yes.

MEMBER O'RELL: -- there may be people who according to our Board policy manual that you don't necessarily feel you can -- your recusal, but in transparency to declare that --

CHAIRMAN RIDDLE: Yes, if you have any interest to declare.

MEMBER O'RELL: Interest. Yes.

CHAIRMAN RIDDLE: Thank you.

MEMBER O'RELL: Okay.

CHAIRMAN RIDDLE: And then -- and we'll decide whether it warrants recusal or not. Yes. All right. Rose.

MEMBER KOENIG: You know, I know you're trying to save time, but I -- I -- I mean it sounds kind of probably stupid, but, you know, every vote
we're taking, we -- we do a name call. I think just for record keeping and making sure that there's no misunderstanding in terms of votes, if we do it by section, you're talking about, you know, ten votes. I just think just in terms of process, it probably makes sense to -- to record that way.

CHAIRMAN RIDDLE: That's fine. One objection and we'll go with a roll call every time. That's fine. I'm not going to spend more time discussing how to save time.

All right. So, now, we're going to do a roll call after each one. So, Mike and tell us where you're at in the book please.

MEMBER SIEMON: And that's for each letter, we're going to do a vote?

PARTICIPANT: Can you do a voice vote for each item?

CHAIRMAN RIDDLE: No, Rose would like us and that's fine. To do a -- we're going to do a roll call vote. That was -- but, by -- by section as presented yesterday.
MEMBER LACY: In my book, we're under the purple tab 6 and under the orange tab 205.603 and 604.

CHAIRMAN RIDDLE: Okay.

MEMBER LACY: This is list 205.603(a).
The Livestock Committee based on comments received recommends the renewal of the following substances in this use category, alcohol, aspirin, biologics, chlorhexidine.

The next one chlorine materials, the Livestock Committee is going to move that to the deferred list. So, you can strike that from -- from that. The Livestock Committee has not changed its mind that it thinks that that should be continued at this time, but since had gone out to get TAP review on or get more information on that, we will deferred it until that additional information comes in. So, strike chlorine materials.

Electrolytes, glucose, glycerin, hydrogen peroxide, iodine, magnesium sulfate, phosphoric acid.

The committee recommends deferring the vote on the following materials until further
technical information is obtains: oxytocin, parasitacides and chlorine materials.

MEMBER OSTIGUY: Second.

MEMBER SIEMON: But -- but, now we add chlorine to that list of two.

CHAIRMAN RIDDLE: Yes.

MEMBER SIEMON: I didn't hear that.

CHAIRMAN RIDDLE: He mentioned it above, but yes, it -- it would be transferred down to the lower list. So, that's the motion that's been made and seconded. Made by Mike. Seconded by Nancy.

Discussion. All right.

MEMBER LACY: Jim, just -- just to be sure we're clear on it. The Livestock Committee recommends not renewing the following substances and we have none in that category.

CHAIRMAN RIDDLE: Okay. Thanks. And also on the draft, you did delete that paragraph on page one and the explanation that was a technical error.

MEMBER LACY: Correct. We did. Yes. We did that yesterday. Right.
CHAIRMAN RIDDLE: Yes. Uh-huh. Okay.

Just to be clear.

Was that your point, Andrea?

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Yes.

MEMBER CAROE: I just wanted to make sure.

CHAIRMAN RIDDLE: Okay. Any interest to declare in particular, specific. Okay. Seeing none.

I need discussion on this motion. Okay. Seeing none. We'll go to a roll call vote and this is on the 603(a) recommendation. Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.
MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'RELL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.

MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Chair yes. So, we have

-- Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: I'm sorry.

MEMBER CAUGHLAN: I wouldn't let you get

away with that.

CHAIRMAN RIDDLE: And the Chair votes yes.

We have 14 yes, zero no, zero abstentions, et cetera.
Okay. Mike.

MEMBER LACY: Jim, we -- we have recommendations made that are not based upon comments received, none in this category. Do you want to vote on that?

CHAIRMAN RIDDLE: No.

MEMBER LACY: I -- I agree. I just -- just want to make sure it's okay with Rose.

MEMBER KOENIG: Yes.

MEMBER LACY: Synthetic substance allowed for use in -- this is 205.603(b). It's topical treatment and recommendations made based on comments received. The Livestock Committee recommends renewal of copper sulfate, iodine, lidocaine, mineral oil and procaine. We recommend deferring the vote on hydrated lime and we did not have anything that we did not recommend renewal on this time.

CHAIRMAN RIDDLE: And the same thing.

MEMBER OSTIGUY: Second.

CHAIRMAN RIDDLE: Second and there was also that paragraph on the following page.
MEMBER LACY: Right.

CHAIRMAN RIDDLE: Yes.

MEMBER LACY: Recommendation -- we had no recommendations not based on public comment.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'ReLL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.
CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.

MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Chair votes yes.

Fourteen yes. Zero no.

MEMBER LACY: 205.603(c), Livestock Committee recommends based on comments received. We had no substances in the renewal category. We recommend deferring the vote on milk replacers. We had not items that we did not recommend for renewal and again, no recommendations made based on not receiving comments.
MEMBER OSTIGUY: Second.

MEMBER LACY: Thank you, Nancy.

CHAIRMAN RIDDLE: Okay. Moved by Mike. Seconded by Nancy. The 603(c) recommendation, any interest to declare? Any discussion? And -- and on this, the committee did talk about and identifying some questions for either public comment or the contractors. So, we did do a little work identifying that. All right.

So, we start with Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'ReLL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.
CHAIRMAN RIDDLE:  George.

MEMBER SIEMON:  Yes.

CHAIRMAN RIDDLE:  Andrea.

MEMBER CAROE:  Yes.

CHAIRMAN RIDDLE:  Julie.

MEMBER WEISMAN:  Yes.

CHAIRMAN RIDDLE:  Mike.

MEMBER LACY:  Yes.

CHAIRMAN RIDDLE:  Goldie.

MEMBER CAUGHLAN:  Yes.

CHAIRMAN RIDDLE:  Hugh.

MEMBER KARREMAN:  Yes.

CHAIRMAN RIDDLE:  Bea.

MEMBER JAMES:  Yes.

CHAIRMAN RIDDLE:  Chair yes. Fourteen yes. Zero no.

MEMBER SIEMON:  We're on a roll.

CHAIRMAN RIDDLE:  Okay. Mike.

MEMBER LACY:  205.603(d), feed additives.

The Livestock Committee recommends the renewal of the following substances: trace minerals, vitamins. We
had no -- no substances to defer. None to not recommend and no recommendations based on not receiving comments.

MEMBER OSTIGUY: Second.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'RELL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.
CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.

MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: I mean Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Chair votes yes.

MEMBER LACY: 205.603(e), Livestock Committee recommends on comments received renewal of EPA list for inerts. We had no deferrals, no substances not to -- that we're recommending not for renewals and no recommendations made not based on
comments received.

    MEMBER OSTIGUY: Second.

    CHAIRMAN RIDDLE: Moved by Mike. Seconded by Nancy. The recommendation on 603(e). Any interest to declare about inert? Any inert interest to declare? Seeing none. Any inert discussion? Seeing none. We'll start with Gerald.

    MEMBER DAVIS: Yes.

    CHAIRMAN RIDDLE: Nancy.

    MEMBER OSTIGUY: Yes.

    CHAIRMAN RIDDLE: Kevin.

    MEMBER O'RELL: Yes.

    CHAIRMAN RIDDLE: Rose.

    MEMBER KOENIG: Yes.

    CHAIRMAN RIDDLE: George.

    MEMBER SIEMON: Yes.

    CHAIRMAN RIDDLE: Andrea.

    MEMBER CAROE: Yes.

    CHAIRMAN RIDDLE: Julie.

    MEMBER WEISMAN: Yes.

    CHAIRMAN RIDDLE: Mike.
MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Chair yes. Fourteen yes. Zero no.

MEMBER LACY: Okay. This is 205.604 and just so I won't get tongue-tied again as I did yesterday, these are non-synthetic substances provided for use in organic livestock production. The committee recommends the renewal of the following substance in this use category which means that this substance would continue to be prohibited: strychnine. The Livestock Committee has no substances
to defer, none to recommend for -- for non-renewal in this category and no recommendations made not based on comments received.

MEMBER OSTIGUY: Second.

Nancy.

MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O’RELL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.
MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Abstain.

CHAIRMAN RIDDLE: Now, that threw me.

Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Chair vote yes. So, we have 13 yes. Zero no. One abstention.

MEMBER SIEMON: And throughout these, we all know there's this typo in here about the number. Right. That's noted about the numbers here.

CHAIRMAN RIDDLE: I'm sorry. Could you point --
MEMBER SIEMON: On all these out -- like this one say 601(e).

CHAIRMAN RIDDLE: Oh.

MEMBER SIEMON: They all have not corresponded with the top I. So, I -- I'm -- just a technical thing.

CHAIRMAN RIDDLE: Okay.

MEMBER SIEMON: All the way through, they've been mislabeled.

MEMBER LACY: That will be corrected in the final version.

CHAIRMAN RIDDLE: Thanks, George, because I hadn't caught that.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: So, yes, I'd ask the committee to correct that for the final versions that are submitted to the program.

Okay. Right here and -- and again here. Right. You just need to double check and make sure they match up to that particular --
MEMBER SIEMON: The -- the top one's right.

CHAIRMAN RIDDLE: Yes. It's just the wonders of copy and paste. Yes. Right. So, just double check that. Okay. That's it for the Livestock material Sunset reviews for this round. Thanks, Mike. Thanks, Nancy. For all your work in preparing this and -- and the rest of the committee.

Okay. We go to Handling.

MEMBER O'RELL: Handling 205.605(a) for non-synthetics allowed, I move that the Board would accept the Handling Committee recommendation for the following substances to continue use as published in the final rule. Do I need to read all these?

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: I guess so.

MEMBER O'RELL: I guess so. Acids, bentonite, calcium carbonate, calcium chloride, carageenan, daily cultures, diatomaceous earth, enzymes, kaolin, magnesium sulfate, nitrogen, oxygen, perlite, potassium chloride, potassium iodide, sodium
bicarbonate, sodium carbonate, waxes, non-synthetic yeast.

The Handling Committee also recommends deferring vote on the following materials: colors and flavors.

The Handling Committee recommends no substances for non-renewal.

Is there a second?

CHAIRMAN RIDDLE: Is there a second?

MEMBER SIEMON: I'll second.

CHAIRMAN RIDDLE: George seconds. Moved by Kevin. Seconded by George. The committee's recommendation on 605(a). Are there any interests to declare?

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Goldie. I mean Julie.

MEMBER WEISMAN: Okay. I -- my company's involved in making favors non-synthetic and as well as organic flavors. So, I just -- both. So, I don't -- I need some advice from the Board as to whether you feel I should recuse myself.
MEMBER CAUGHLAN: I see no need for you to recuse.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Since we're not really voting on them other than a deferral, I would say it would be fine, but you should disclose that next time when we're actually taking a note and --

MEMBER WEISMAN: Right.

MEMBER KOENIG: -- and the committee may change. Um-hum.

MEMBER WEISMAN: Thank you.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'RELL: Just -- are we done with them?

CHAIRMAN RIDDLE: No. I -- yes, I'll -- I'll -- so, does anyone -- it's suggested that especially since the vote today is on deferral that that is -- there doesn't rise to the need to recuse, but to just please bring it back up again for the final vote on its renewal. Okay. Now.

MEMBER O'RELL: In -- in terms of interest
to declare, I work for a company that utilizes a number of these materials and -- and products.

CHAIRMAN RIDDLE: Okay. Does anyone have a -- is there a unique interest here?

MEMBER SIEMON: I could say the same thing.

CHAIRMAN RIDDLE: Okay. Would you?

MEMBER SIEMON: But, using them is not the same having in my opinion, but I'm in the same position.

CHAIRMAN RIDDLE: Okay. All right. Does anyone feel that represents a unique interest that rises to the need for recusal? Rose.

MEMBER KOENIG: I just wanted it clear. None of your companies manufacture any of them. You're just utilizing them. So, you're not gaining any economic benefits.

MEMBER O'RELL: Correct. Correct.

CHAIRMAN RIDDLE: Okay. Thank you.

MEMBER O'RELL: And that will be the same for 605(b) and 606.
CHAIRMAN RIDDLE: Right. We'll get to that unfortunately when we --

MEMBER O'RELL: Well, I'd like to get -- can't we just cover it in one blanket exemption.

CHAIRMAN RIDDLE: I think so. I mean on -- on this particular issue, yes. I think that. I appreciate you bringing that up and I assume that's the same for George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Okay.

MEMBER KARREMAN: I -- I don't have any interest in it, but Kevin mis-spoke on one of those going down the list. He said non-synthetic yeast and it's listed as yeast and then the annotation.

CHAIRMAN RIDDLE: I was -- I thought he was saying waxes and then said non-synthetic and yeast and then kind of -- I didn't know where the non-synthetic --

MEMBER KARREMAN: We're not -- we're not talking annotations at all. So --
CHAIRMAN RIDDLE: No. No. No, for clarity.

MEMBER O'RELL: It's -- yes, wax is non-synthetic. Wax is non-synthetic. Yes.

MEMBER KARREMAN: Yeast. Oh, that's the actual.

CHAIRMAN RIDDLE: It's a description of --

MEMBER O'RELL: It's a description of -- it's the annotation that is listed under 605(a).

CHAIRMAN RIDDLE: All right. No further discussion. We'll vote on recommendation on 605(a) and we start with Kevin.

MEMBER O'RELL: Yes.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.
CHAIRMAN RIDDLE: Mike.

MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Goldie.

MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.

MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.

MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.

MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.

MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.

MEMBER OSTIGUY: Yes.

MEMBER O'RELL: 605(b), before I make the motion, I just wanted to point out a couple of changes
that the committee has discussed and because we haven't completed a draft for everybody to see so that you can follow what's been changed, under committee recommendations, chlorine materials, it was felt by the committee in order to be consistent with other committee recommendations and the fact that a TAP review on chlorine is coming, that we would agree to move that to a deferred material.

We also had a meeting this morning and discussed and reviewed ethylene. We looked at the comment that was made -- the one comment that was made for not renewing ethylene.

CHAIRMAN RIDDLE: Not deferring.

MEMBER O'RELL: Not deferring. Thank you.

Not deferring ethylene and realized that that comment and information is not new information and it was the same going back into the TAP which is a recent and it's a well-done TAP from 1999. That issue was addressed in the TAP and covered at that time and the Board voted to pass this material. So, we are changing our recommendation and moving ethylene from
the deferred to renewal status.

    So, with that, I will read through the
motion.

CHAIRMAN RIDDLE: Excuse, Kevin. And the
committee voted on that?

MEMBER O'ReLL: And the committee voted on
that.

CHAIRMAN RIDDLE: And what was the result
of the vote?

MEMBER O'ReLL: It was four to nothing,
one absent.

CHAIRMAN RIDDLE: Okay. Thanks.

MEMBER CAROE: He also had a typo.

CHAIRMAN RIDDLE: Oh, yes, the ascorbic
acid.

MEMBER O'ReLL: Ascorbic acid typo and
that -- thank you, Andrea. And all that will be
corrected in the final version that gets submitted.

CHAIRMAN RIDDLE: Okay.

MEMBER O'ReLL: So, with -- with that
discussion, I would move that the Board accept the
Handling Committee's recommendation for --

MEMBER SIEMON: I would second. Go ahead.

Sorry.

MEMBER O'RELL: I like that process, George, but --

MEMBER SIEMON: Right.

MEMBER O'RELL: -- a blanket. For the renewal of the following substances in this use category which is 205, 605(b) as published in the final rule: alginates, ammonium bicarbonate, ammonium carbonate, ascorbic acid corrected, calcium citrate, calcium hydroxide, calcium phosphates, carbon dioxide, ferrous sulfate, ethylene, glycerides, glycerin, hydrogen peroxide, magnesium carbonate, magnesium chloride, magnesium stearate, nutrients, vitamin and minerals, ozone, pectin, phosphoric acid, potassium acid tartrate, potassium carbonate, potassium citrate, potassium hydroxide, potassium iodide, potassium phosphate, silicon dioxide, sodium citrate, sodium hydroxide, sodium phosphates, sulfur dioxide, tartaric acid, tocopherols, xanthan gum.
Further, the Handling Committee would recommend deferring the vote on the following materials: chlorine materials and lecithin bleach and the Handling Committee would recommend not renewing the following substance: potassium tartrate made from tartaric acid.

CHAIRMAN RIDDLE: Okay. Is there a second?

MEMBER CAROE: Second.

CHAIRMAN RIDDLE: Andrea.

MEMBER CAROE: Second.

CHAIRMAN RIDDLE: Andrea second. All right. Okay. And it's moved and seconded. Are there any interest to declare other than ones already stated by George and Kevin.

MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Bea.

MEMBER JAMES: Our facility has ethylene ripening rooms. So, don't know if that's a -- you know, would require recusing or not.
CHAIRMAN RIDDLE: Are you the only the facility that has them?

MEMBER JAMES: In --

CHAIRMAN RIDDLE: That you know of.

MEMBER JAMES: No.

CHAIRMAN RIDDLE: That's a trick question.

So, you're not in a unique position. Are there any members that feel that is grounds for any refusal? Appreciate you bringing that up.

Anyone else? Good. Any discussion?

Seeing none. Oh, yes, sorry, Gerry.

MEMBER DAVIS: On the items such as magnesium carbonate, magnesium stearate where it has that disclaimer next to it on the made with organic versus organic, does that still exist? Is what we're voting on? As it --

CHAIRMAN RIDDLE: Right. That's part of the annotation.

MEMBER O'RELL: Part of the current annotation.

MEMBER DAVIS: At the moment, that's the
way it still is?

MEMBER O'RELL: That's -- that is the annotation in the listing.

CHAIRMAN RIDDLE: Right. Rigo.

MEMBER DELGADO: I have a question. What was the information that you found at the TAP that made you decide to renew ethylene? I was wondering.

MEMBER O'RELL: The -- the comment that came from the objector to renewal of ethylene pointed out that it was not consistent with organic agriculture and that going back into TAP was discussed and addressed and the Board vote at that time felt that it was consistent and we are trying to be consistent with the upcoming crops vote who also had the same objection for their material for ethylene for use in pineapple flowering.

MEMBER DELGADO: Okay. Thank you.

CHAIRMAN RIDDLE: Okay. Any other discussion? Andrea.

MEMBER CAROE: Just a point of information. You know, this Board should respect the
previous decisions of other Boards and that -- since there's no information, it's a matter of we're not going to overrule what a previous Board decision was concerning ethylene.

MEMBER KOENIG: I -- I -- that's not 100 percent accurate. What's accurate is and was in fact there's -- there's no new information -- that -- that statement was not one of the types of information that was -- that would change a decision.

There -- in the Federal Register notice, you had to show either alternatives or you had to show availability of organic forms, you know, in terms of handling.

Like I said to -- to -- to Kevin, I mean I'm not going to sit here and argue. I think, you know, that's a philosophical issue. That issue is dealt with in the first Board and they made that decision and I agree that was something that we don't go back on although we acknowledge that -- that everybody has a right to own philosophy.

The Sunset in particular, the changes that could
be made in Sunset had to do with those specified in
the Federal Register notice and, you know, we should
be consistent. The ones that we're pulling, the
information we're gathering is inconsistence either
with OFPA or alternative we're going to explore that
may now be available that weren't available. Organic
forms that are now available that weren't available.

MEMBER CAROE: Agreed, but that would be
new information. There's no new information. We're
introducing absolutely no new information --

MEMBER KOENIG: Right.

MEMBER CAROE: -- that wasn't looked at by
that Board that originally put this on the list.

MEMBER KOENIG: Right.

MEMBER CAROE: So, their decision stands.

MEMBER KOENIG: Right. Yes, I agree. I
just -- I didn't want -- I'm saying, but even if
they're -- no matter how many people said that, we
can't consider that information as an argument because
it wasn't one that was considered in that Federal
Register notice.
MEMBER O'RELL: I think the point is there was nothing new brought out by the comment that hadn't been previously addressed by the past Board's decision.

MEMBER DELGADO: And I would expect that if there's new --

CHAIRMAN RIDDLE: Speak up.

MEMBER DELGADO: I would expect that if there's new information to prove that a substance should be eliminated from that list, we will be using that information to get rid of that.

MEMBER KOENIG: Yes.

CHAIRMAN RIDDLE: Yes.

MEMBER O'RELL: If there was new information, we most likely would have deferred to study that new information to see if it's relevant.

MEMBER DELGADO: Thank you.

CHAIRMAN RIDDLE: Okay. Discussion? See if that's the end. Okay. We will vote and we have Rose.

MEMBER KOENIG: Yes.
CHAIRMAN RIDDLE: George.
MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: Andrea.
MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.
MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.
MEMBER LACY: Yes.

CHAIRMAN RIDDLE: Goldie.
MEMBER CAUGHLAN: Yes.

CHAIRMAN RIDDLE: Hugh.
MEMBER KARREMAN: Yes.

CHAIRMAN RIDDLE: Bea.
MEMBER JAMES: Yes.

CHAIRMAN RIDDLE: Rigo.
MEMBER DELGADO: Yes.

CHAIRMAN RIDDLE: Dave.
MEMBER CARTER: Yes.

CHAIRMAN RIDDLE: Gerald.
MEMBER DAVIS: Yes.

CHAIRMAN RIDDLE: Nancy.
MEMBER OSTIGUY: Yes.

CHAIRMAN RIDDLE: Kevin.

MEMBER O'RELL: Yes.

CHAIRMAN RIDDLE: Chair vote yes and so we have 14 yes. Zero no.

MEMBER O'RELL: Moving on to 606. Julie led our discussion yesterday. I -- I would move that the Board would accept the Handling Committee recommendation that recommends for the renewal of the following substances in this use category: cornstarch, gums, kelp and pectin.

Further, the Handling Committee recommends deferring the vote on lecithin unbleached and further, there are no substances in this category that are not being renewed with this vote.

MEMBER OSTIGUY: Second.

CHAIRMAN RIDDLE: Okay. Moved and seconded the committee recommendation on 606. Any interest to declare beyond those George and Kevin have already stated? They use some of these things.

Julie.
MEMBER WEISMAN: I -- I'm in the same category as -- as Kevin and George.

CHAIRMAN RIDDLE: Okay. But, you're not a manufacturer of these items?

MEMBER WEISMAN: No. No, I use them.

CHAIRMAN RIDDLE: Okay. Your company uses them. All right.

Any discussion of the recommendation?

MEMBER SIEMON: Yes.

CHAIRMAN RIDDLE: George.

MEMBER SIEMON: Kind of going back to the previous discussions. You know, this whole overall process we're relying on the public to give us new input. So, like is there, you know, available cornstarch. You know, I read the front page that there was no information about supply. So, we're -- we're really relying on the public to inform us as much as -- versus our own -- it goes back to our previous -- versus our own research and, you know, support by NOP. We're -- we're really relying on the
community to tell us what's up. What do you think?

Because --

CHAIRMAN RIDDLE: Yes.

MEMBER SIEMON: -- you know, I mean I don't know if there's organic cornstarch or not at this time.

CHAIRMAN RIDDLE: Okay. And yes, I have a comment. Then Nancy and then Kevin.

And I just want to remind everyone that this whole process, the next step once we finish our recommendations will be proposed rule. So, there still will be an opportunity for the public to comment to the program or to the department not to the Board again, but yes, the burden is on the public to comment if they have information.

Nancy.

MEMBER OSTIGUY: The way that I have viewed this is that we start with the Board's information. That's how we selected some items that we wanted to look at in greater detail was based upon Board knowledge, but in case we don't know something,
we didn't want to restrict it to that and that's when it went out to the public and relying then on public knowledge.

So, it was to make sure that we were the most inclusive that we could be.

CHAIRMAN RIDDLE: Kevin, any --

MEMBER O'RELL: Right.

CHAIRMAN RIDDLE: You want add.

MEMBER O'RELL: Well, I guess -- and -- and specifically in these terms on some of these materials, we didn't hear from any manufacturers or suppliers of these ingredients coming -- yes.

MEMBER SIEMON: So, there's kind of self-interested.

MEMBER OSTIGUY: Right.

MEMBER SIEMON: People should have served if there was available.

MEMBER O'RELL: Absolutely.

CHAIRMAN RIDDLE: Rose.

MEMBER KOENIG: That's not to say that there were statements stating that. There were some
gums that were commercially available. The difference between the lecithin and the comments on gums and I think cornstarch also was that manufacturer actually said yes, I can produce it. I have it in ample quantity and quality. Were the others were just -- just general information. We know it's being -- we know it's out there, but without a manufacturer saying I have the quantity, we just couldn't really go there on those other products.

CHAIRMAN RIDDLE: Okay. Anymore discussion? Seeing none. We'll start with the vote and this is on 606 recommendation from the committee.

George.

MEMBER SIEMON: Oh, boy. I'm going to abstain.

CHAIRMAN RIDDLE: Abstain. Andrea.

MEMBER CAROE: Yes.

CHAIRMAN RIDDLE: Julie.

MEMBER WEISMAN: Yes.

CHAIRMAN RIDDLE: Mike.

MEMBER LACY: Yes.
CHAIRMAN RIDDLE: Goldie.
MEMBER CAUGHLAN: Yes.
