Shipments of Grain by Rail in Ohio

Marvin E. Prater Daniel O'Neil, Jr. Adam Sparger

This summary of grain shipments by rail in Ohio is drawn from *State Grain Rail Statistical Summary*,¹ a report that describes the grain and oilseed shipped by rail in the United States from 2006 to 2010. The full report collects information on rail shipments from each State and to each State and examines some of the factors that influence the amount of grain grown and used. It examines rail shipments, rail receipts, grain and oilseed production, animal and poultry production, grain and oilseed exports, and grain and oilseed rail rates per ton-mile to explain the variations between States in shipments of these commodities.

Ohio ranks eighth among the grain and oilseed producing States, with a 2006–2010 average yearly production of 770.3 million bushels (mbu).

From 2006 to 2010, corn made up 65 percent of Ohio crops, soybeans 26 percent, and wheat 8 percent.

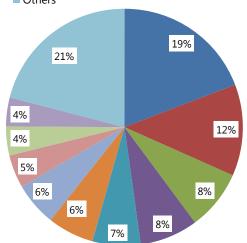

Nationally, Ohio is ranked 18th in animal and poultry production, averaging 10.8 million Grain Consuming Animal Units (GCAU)² from 2006 to 2010.

For each year from 2006 to 2010, an average of 1.2 million metric tons of grain and oilseeds were inspected for export from Ohio.

During the crop marketing years 2007–2010, railroad originations of grain and oilseeds had an average market share of 38.8 percent, a drop from the 44.8 percent average market share in the period 2001–2004.

During the period 2006–2010, Ohio shipped 28.7 million tons of corn by rail, up 0.3 percent from 28.6 million tons from 1996 to 2000. (fig. 1)

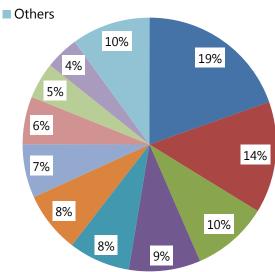

Ohio received a total of 734,000 tons of corn by rail during the 2006–2010 marketing years, down 55 percent from 1.6 million tons during the 1996–2000 marketing years. (fig. 2)

From 2006–2010, Ohio shipped 10.6 million tons of soybeans by rail, up 32.7 percent from 8 million tons shipped in the period 1996–2000. (fig. 3)

Ohio received a total of 1.5 million tons of soybeans by rail during the 2006–2010 marketing years, down 35.6 percent from 2.3 million tons during the 1996–2000 marketing years. (fig. 4)

In the years 2006–2010, 3.6 million tons of wheat were shipped by rail from Ohio, a 16.4-percent increase from 3.1 million tons from 1996 to 2000. (fig. 5)

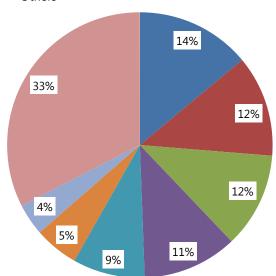

Ohio received a total of 2.3 million tons of wheat by rail during the 2006–2010 marketing years, down 49.5 percent from 4.5 million tons during the 1996–2000 marketing years. (fig. 6)

Fourteen percent of the grain car shipments originating in Ohio from 2006 to 2010 were 1–5 cars in size, 19 percent were 6–49 cars, 54 percent were 50–74 cars, and the remaining 13 percent of shipments were 75 cars or greater. (fig. 7)

Average tariff rail rates for shipments originating in Ohio were 3.6 cents per tonmile from 2006 to 2010. Rates ranged from 2.83 cents per ton-mile in 2000 to 6.57 cents in 1995. Rates increased 7 percent from 2005 to 2010. (fig. 8)

Data and Methodology

Data from the Surface Transportation Board's Confidential Waybill Samples over the period 1996-2010 were analyzed to measure grain and oilseed shipments by rail. The data were aggregated and sorted by a number of characteristics, the major categories being shipment origin, destination, and type of grain or oilseed. This information was then organized by both origin and destination State. The data were also sorted by shipment size for each State, showing the relative frequencies of grain and oilseed shipments of different sizes. Data having less than 30 observations are excluded, as are States having data for only 1 or 2 years of the 5-year period. Despite these precautions, States with relatively low volumes are more subject to year-to-year variation than are States with higher volumes because of the number of available observations used to calculate totals. This is a result of the sampling techniques used in the Waybill Samples. Thus, higher volumes are less likely to suffer from sampling limitations and be more representative of actual rail movements for any given year than are lower volumes.

GCAUs were calculated for each State using information on animal populations and the corresponding levels of feed necessary to maintain the populations. These calculations included meat and poultry for consumption and production purposes. Cows, sheep, turkeys, hogs, and chickens were included.

The export inspection numbers in this report were taken from USDA Grain Inspection, Packers and Stockyards Administration grain and oilseed export inspections at U.S. ports exporting grain and oilseeds in bulk. Grain and oilseed production levels by State were also calculated.

USDA is an equal opportunity provider and employer.
