The enclosed petition for Triethyl Citrate (TEC), Natural is being submitted by:

Michael Foods, Inc. d/b/a Abbotsford Farms
C/o Denise Ferriman, Regional Quality Manager – Core Eggs
430 Railroad Avenue
Gaylord, MN 55334
507-237-4289
Denise.ferriman@michaelfoods.com

Item A: Indicate on which section the petitioned substance will be included:

- **205.605** - Nonagricultural (nonorganic) substance allowed as ingredients in or on processed products labeled as “organic” or “made with organic (specified ingredients or food group(s)).

Item B

1. Triethyl Citrate (TEC), Natural (Organic Compliant)
   - Synonyms: Triethyl Ester; Ethyl Citrate; Citroflex 2; CITROFOL® AI
   - Triethyl citrate is an ester of citric acid. It is a colorless, odorless liquid used as a food additive to stabilize foams, especially as whipping aid for egg white.

2. Manufacturer information:
   - Jungbunzlauer Inc,
   - 7 Wells Ave.
   - Newton Centre, MA 02459
   - Phone: 617-614-0223
   - Fax: 617-964-2921
   - Contact: Gretchen Tolson, Technical Service Manager
   - E-Mail: gretchen.tolson@jungbunzlauer.com

3. Current application/ Intended Use
   - Current application is Flavor – Organic
   - Intended use is whipping enhancer for egg whites during processing – Organic

4. List of methods of application for which the substance will be used:
   - Whipping enhancer for organic, Hi Whip egg whites

5. Sources and detailed description of manufacturing procedures
   - This product was not produced from synthetic sources, and without the use of any synthetic solvents, synthetic carrier system or any artificial preservatives.
   - Manufacture procedures are attached (Production of CITROFOL®AI)

6. Summary of any previous reviews by state or private certification programs
   - The product listed above meets the Natural Flavor definition as described in FDA 21 CFR Part 101.22(a)(3), and was produced and handled without the use of GMOs, Irradiation or Sewage Sludge.
   - This product was not produced from synthetic sources, and without the use of any synthetic solvents, synthetic carrier systems, or any artificial preservatives.

7. Information regarding EPA, FDA and State regulatory authority registration
   - 184.1911 Triethyl Citrate
   - 182.1911 describes dried egg whites

8. Chemical Abstract Service (CAS) number
9. Physical properties and chemical mode of action
   - Molecular formula: C12 H2O O7
   - Molecular weight: 276.2830
   - Appearance: Clear colorless liquid
   - Purity (by G.C.): >99%
   - Specific Gravity @ 25C: 1.1350-1.1390
   - Refractive Index @ 20C: 1.4380-1.4460
   - Boiling Point/Boiling Point Range (C): 260
   - Flash Point (C) (Tag closed Cup): 151
   - Density: 1.14 g/ml at 25C
   - Vapor Pressure: 1mm @107C
   - Solubility in Water (%): Slightly Soluble
   - Solubility in Alcohol (%): Soluble
   - Triethyl Citrate does not appear on the List of Chemicals Known to Cause Cancer Or Reproductive Toxicity, under section 25249.8 of the CALIFORNIA SAFE WATER AND TOXIC ENFORCEMENT ACT OF 1986 (Chapter 6.6 added by Proposition 65 1986 General Election).
   - Stability & Reactivity: No known materials to avoid; no known hazardous decomposition products
   - Toxicological Information: None established, not listed as a carcinogen by IARC, ACGIH, NTP or OSHA.
   - Ecological Information: No data available
   - Disposal Considerations: Nonhazardous; not registered by DOT.
   - Grade – Halal, Kosher, NI.
   - Allergen: No known allergen

10. Safety information about the substance including a Material Safety Data Sheet and a substance report from the National Institute of Environmental Health Studies.
   - Material Safety Data Sheet is attached
   - National Institute of Environmental Health Studies substance report is not available.
   - ECOCERT Approval

11. Research information for the substance
   - FDA 21CFR 182.1911 in dried egg whites
   - Contrasting studies that do not support the use of TEC are not available.

12. Petition justification statement
   - Michael Foods, Inc. is requesting that Triethyl Citrate be approved for organic use ingredient in the function of enhancing the whipping factor in pasteurized egg whites – Hi Whip.
   - Triethyl Citrate is a natural, organic compliant ingredient flavor and is also used by the egg industry as a pasteurized egg white whipping enhancer in baking, i.e. angel food cakes.
   - The substance is essential for organic productions:
     - Michael Foods, Inc. Research and Development Department has done extensive research to find an organic substitute to serve the same purpose and has found that there is no alternative substance.
     - Comparative research was completed with and without the use of Triethyl Citrate, and the research demonstrates that in order to meet customer egg white whipping requirements the substance is necessary.
   - The substance is compatible with organic production practice:
     - The product was produced and handled without the use of GMO, Irradiation or Sewage Sludge. GMO position attached. The product was not produced from synthetic sources, and without the use of any synthetic solvents, synthetic carrier systems or any artificial preservatives.
     - Triethyl Citrate, having been designed as containing no artificial flavor, does not - to the best of our knowledge and belief and the manufacturer’s knowledge and belief – contain any artificial flavor and has not had any artificial flavor added.

13. CBI STATEMENT
   - This petition does not contain any confidential business information.
14. ATTACHMENTS

- Production on CITROFOL® Al (triethyl citrate)
- Product Label(s) for Triethyl citrate or products containing Triethyl citrate (Information on Standard Packaging CITROFOL® AL)
- MSDS for Triethyl citrate
- GMO Position
- Natural Status CITROFOL® Al
- ECOCERT Approval
Dear customers

Jungbunzlauer CITROFOL® AI (Triethyl Citrate; TEC) is manufactured by the natural derived raw materials citric acid and ethanol, both based on the process of fermentation. Therefore CITROFOL® AI can be considered as based 100 % on natural raw materials.

Citric acid and ethanol are fermented, using the naturally derived raw materials glucose syrup from maize as well as molasses and sugar from sugar beet or sugar cane.

The strains used for the manufacturing of the raw materials are not genetically modified according to the directive 90/219/EC and as amended in directive 2001/18/EC.

CITROFOL® AI itself is produced by esterification with additional purification and distillation steps and is finally obtained in its highly pure form.

There is no particular law that defines the requirements for "natural" food ingredients or products. As esterification is a chemical reaction and certain chemicals are used during the purification step of the ester, we do not approve the "natural" status of CITROFOL® AI.

We leave it up to our customers, if they indicate their end product as natural.

With best regards,
Technical Service Manager
Production of CITROFOL® Al
(Triethyl Citrate)

CITROFOL® Al is the Jungbunzlauer trade name of triethyl citrate which is chemically, according the IUPAC nomenclature, a 1,2,3-propane tricarboxylic acid, 2-hydroxy, triethyl ester.

**Esterification process**
CITROFOL® Al is produced by acidic esterification. As starting material citric acid and ethanol, both based on fermentation of carbohydrates raw materials, are dissolved in a reaction vessel. After the reaction the ethanol and water are removed by evaporation and is undergoing a rectification process to further usage in the process. Purification follows by neutralization and washing processes. In an intermediate step material it stored. This material can be additionally used for a second esterification by acetylation process (CITROFOL® Al). After the purification by distillation the triethyl citrate is filled in a storage tank. During the processing, the citrate ester passes through several filters and, before final filling into containers or trucks, passing a final safety filter of 25 µm.

**Process flow chart**
The following flowchart covers the single steps of our CITROFOL® Al:

- **Citric Acid anhydrous** + **Ethanol** → **Esterification (chemical reaction)**
  - **Rectification ethanol**
  - **Evaporation (removal ethanol/water)** → **Purification (neutralisation)**
  - **Intermediate* (storage tank)** → **Purification (destillation)** → **Storage Tank (triethyl citrate)**
  - **Filtration** → **Packing (e.g. IBC/ drums)** → **CITROFOL® Al**

*Raw material for acetylation

CITROFOL® Al is supplied in canisters with a net content of 25 kg, iron drums of 225 kg, ecobulk containers (IBC) of 1.000 kg and truckloads. In a cool, dry place and in original closed containers CITROFOL® Al can be stored for at least 3 years. A retest is recommended after the above mentioned time.

The given information reflects the current status. Jungbunzlauer will not automatically inform about updated information or minor changes. All sales of the described products are subject to our general conditions of sale.

### 4. FIRST AID MEASURES

**General advice**
No hazards which require special first aid measures. If feel unwell, seek medical advice.

| Inhalation | Move to fresh air. If symptoms persist, call a physician. |
| Skin contact | Wash off with soap and plenty of water. If skin irritation persists, call a physician. |
| Eye contact | Flush eyes with water as a precaution. If eye irritation persists, consult a specialist. |
| Ingestion | Drink water as a precaution. Consult a physician if necessary |
| Protection of first-aiders | No hazards which require special first aid measures. |

### 10. STABILITY AND REACTIVITY

- **Stability**: Stable at normal conditions
- **Conditions to avoid**: none under normal use. Hydrolyses in presence of aqueous solution of alkali salts
- **Materials to avoid**: Incompatible with strong bases and oxidizing agents.
- **Hazardous decomposition products**: No decomposition if stored normally. Thermal decomposition can lead to release of irritating gases and vapors.

### 11. TOXICOLOGICAL INFORMATION

- **Acute toxicity**: LD50/p.o./rat >32 g/kg bw(1)
  - LD50/i.p./mouse = 1.75 g/kg bw(2)
- **Local effects**: No skin irritation and no eye irritation (rabbit) (3)
- **Chronic toxicity**: Did not show carcinogenic effects in animal experiments.
  - NOEL (no-observed-effect-level) =100 mg/kg bw (3)
- **Reproductive toxicity**: Did not show mutagenic effects in animal experiments (3)
  - Not mutagenic in AMES Test (4)
- **Human experience**: Health injuries are not known or expected under normal use.
  - Patch test on human volunteers did not demonstrate sensitization properties. (5)
12. ECOLOGICAL INFORMATION

Mobility
No information available

Persistence and degradability
Readily biodegradable, according to OECD test.

Ecotoxicity
This product has no known eco-toxicological effects.
EC50/72h/algae = G 1
LC50/96h/golden orfe = 450 mg/l
EC10/18h/bacteria => 100,000 mg/L

13. DISPOSAL CONSIDERATIONS

Waste from residues/unused products
Can be landfilled or incinerated when in compliance with local, state and federal laws and regulations (contact local or state environmental agency for specific rules).

Contaminated packaging recycling
Empty containers should be transported/delivered for local or waste disposal

14. TRANSPORT INFORMATION

Not a Hazardous Material for DOT shipping.

15. REGULATORY INFORMATION

is generally regarded as safe (GRAS) by USA FDA. 21 CFR 182.1911
The ingredient is listed on the TSCA Inventory List.
European Food Additive, E 1505
CERCLA (Comprehensive Response Compensation, and Liability Act): Not hazardous
SARA Title III (Superfund Amendments and Reauthorization Bill): Not Considered Hazardous
USP-NG listed; Ph.Eur. Listed, FEMA (3083), JECFA Flavoring agent 629
Foreign Inventory Status: Canadian DSL (Domestic Substance List)

16. OTHER INFORMATION

HMIS* Rating
Health = 1
Fire = 1
Reactivity = 0

The information given is designed only as a guidance for safe handling, use, processing, storage, transportation, disposal, and release and is not to be considered a warranty or quality specification. The information relates only to the specific material designated and may not be valid for such material used in combination with any other materials or in any process, unless specified in the text.
ECOCERT Approval
Jungbunzlauer “From nature to ingredients®” approved for personal care

With the mission "From nature to ingredients®" the company commits itself to the security of man and the environment. Jungbunzlauer is a responsible and sustainable leader in naturally derived biodegradable ingredients. The ECOCERT approval of Jungbunzlauer products is important for all our customers seeking ingredients to formulate natural personal care products.

With the attached approval Jungbunzlauer products have been classified as 100% natural origin and can be used in the formulation of personal care products certified according to the ECOCERT Natural and Organic Cosmetic Standard.

The approval was granted for the following products and production plants:

**JUNGBUNZLAUER AUSTRIA AG (Austria)**
- Citric Acid Anhydrous
- CITROCOAT®N
- Trisodium Citrate Anhydrous
- Xanthan Gum FFPC
- Xanthan Gum FFCS-PC
- Xanthan Gum FFCS-PC
- Xanthan Gum FEDCS-PC
- Citric Acid Monohydrate
- LIQUINAT® (Citric Acid Solution)
- Trisodium Citrate Dihydrate
- Xanthan Gum FNPC
- Xanthan Gum FNCS-PC
- Xanthan Gum FNCS-PC
- Zinc Citrate

**JUNGBUNZLAUER LADENBURG GMBH (Germany)**
- Calcium Lactate Gluconate
- CITROFOL® AI (Triethyl Citrate)
- Monosodium Citrate
- Citric Acid DC
- LIQUINAT® (Citric Acid Solution)
- Tripotassium Citrate

**JUNGBUNZLAUER S.A. (France)**
- ERYLITE®
- L(+)-Lactic Acid 50%
- L(+)-Lactic Acid 80%
- L(+)-Lactic Acid 88%
- L(+)-Lactic Acid 90%
- Glucono-delta-Lactone
- Potassium-L(+)-Lactate 60%
- Sodium-L(+)-Lactate 50%
- Sodium-L(+)-Lactate 60%
- Sodium Gluconate

Please find enclosed the ECOCERT approval showing the INCI names and the most common functions in their use in personal care applications.

Jungbunzlauer
Technical Service
Information on Standard Packaging
CITROFOL® AI

Standard Canister:
Construction: HDPE (blue coloured)
Filling weight: 25 kg
Canister weight: ca. 1.4 kg
Dimension: 358 mm x 293 mm x 418 mm
Volume: 30 litres
Closure: lock closure

Example canister as used for all CITROFOL® products

Standard Drums:
Construction: mild steel drum
Filling weight: 225 kg
Drum weight: ca. 18 kg
Dimension: 571.5 mm x 585 mm x 882 mm
Volume: 216.5 litres
Drums diameter: 585 mm
Drums heights: 882 mm
Closures: a) ¾ “ b) 2”
Sealant: EPDM

Example steel drums as used for all CITROFOL® products

Standard Bulk Container (IBC):
Construction: HDPE with UV protection
Filling weight: 1000 kg
IBC weight: ca. 60 kg
Dimension: 120 x 100 cm
Filling opening: 150 mm
Steelcase: Galvanised steel tubes (18x18 mm)

Example IBC as used for all CITROFOL® products

are manufactured by fermentation or are based on fermentation derived products.
Micro-organisms - Production Strains
Jungbunzlauer does not use genetically modified production strains* for the manufacture of above mentioned food additives.

Fermentation Raw Materials
Jungbunzlauer works together solely with raw material suppliers who can exclude the processing of genetically modified organisms (GMO).
Jungbunzlauer purchases raw materials (e.g. glucose syrup) upon a NON-GMO agreement, if they are derived from crops for which genetically modified varieties exist (e.g. Bt maize).
For the glucose syrup production at the Jungbunzlauer plant in Pernhofen we purchase maize from farmers upon non-GMO agreement.

Regulation on Genetically Modified Food and Feed

Regulation on GMO Traceability

In view of the rapid advancement of modern biotechnology and the changing framework of laws and regulations of the European Community and its member states a statement on the usage of genetically modified organisms can only reflect the past and present situation. As soon as new European and National regulations on this matter will be published we commit ourselves to apply these immediately.

In Summary
1) Jungbunzlauer does not use genetically modified microorganisms for the fermentation step of above-mentioned food additives.
2) Above-mentioned Jungbunzlauer food additives are no genetically modified organisms as such and they do not contain genetically modified organisms.
3) There are no labelling requirements for above-mentioned Jungbunzlauer food additives according to Regulations (EC) No 1829/2003 and 1830/2003.
