

Appendix F

Analyses of IDFA Proposal to Adjust the Protein Price Formula to Reflect the Lower Value and Reduced Volume of Butterfat Recoverable as Whey Cream

Using Current USDA Baseline and Current Version of Econometric Model

August 2007

On July 11, 2007, at the reconvened hearing concerning Class III and IV pricing formulas, Dairy Programs was asked to provide economic analyses of a proposal by International Dairy Foods Association (IDFA) to adjust the protein price formula to reflect the lower value and reduced volume of butterfat recoverable as whey cream. This appendix provides analyses of the proposal using *USDA Agricultural Baseline Projections to 2016*, published in February 2007. Baseline projections have been adjusted to reflect make allowances as stated in the December 2006 Interim Final Rule. The most current version of the Dairy Programs National Econometric Model is used, as described in *National Econometric Baseline Documentation (Model Calibrated to USDA Baseline Projections to 2016)*, published in April 2007.

The International Dairy Foods Association (IDFA) previously proposed changing the Federal order protein price formula to account for the fat recovered in whey cream as well as the value associated with whey cream. However, a specific formula was not proposed before the hearing. During the reconvened hearing on Class III and Class IV pricing factors in July 2007, Sue Taylor of Leprino Foods Company (Leprino) presented a proposed protein price formula as a supplement to the IDFA proposal. This appendix includes two scenarios for analyzing this proposal. As with Appendix E, the impacts as stated in these analyses are in comparison to the USDA Agricultural Baseline Projections to 2016 (with adjustments to reflect make allowances stated in the December 2006 Interim Final Rule). The most current version of the National Econometric Model, as described in the April 2007 documentation, is used to analyze the scenarios. A summary of the impacts can be found in Table F-1. Detailed impacts of changes to major variables are listed in tables F-2 through F-13.

Scenario O incorporates the protein formula introduced in testimony. The formula was presented as follows:

$$1.383 \times (\text{NASS cheese price} - \$0.1682) + [1.572 \times (\text{NASS cheese price} - \$0.1682) - (0.922 \times \text{Fat Component Price}) - \$0.016] \times 1.17$$

The proposed formula increases the butterfat recovery factor from 0.900 to 0.922. The lower value of whey cream, as asserted by Leprino, is represented by the subtraction of \$0.016 per pound in the bracketed term.

As a result of these changes, the protein price falls below baseline by an average of \$0.0610 per pound over the ten-year projection period, bringing down the Class III price at 3.5 percent butterfat by an average \$0.12 per cwt over the same period. The all-milk price falls \$0.08 per cwt below baseline in the first year, but the gap narrows to \$0.03 below baseline by 2016, averaging a decline of \$0.04 per cwt below the baseline over the projection period. U.S. marketings fall, averaging 173 million pounds below baseline, due to lower cow numbers and yield per cow. The decline in marketings is a result of higher dairy product prices. The cheddar cheese, butter, nonfat dry milk, and whey prices increase by \$0.0081, \$0.0131, \$0.0053, and \$0.0016 per pound respectively over the ten-year projection period. Since Class III acts as the Class I mover over the projection period, the Class I price at 3.5 percent butterfat falls by \$0.12 per cwt. As a result, there is an average decrease in the retail fluid milk price of \$0.0082 per gallon over the projection period, and U.S. Class I marketings increase an average 34 million pounds. Producer revenue decreases by an average \$109 million below baseline levels.

Scenario P combines the formula changes from Scenario O with the proposed elimination of the 3-cent addition to the barrel price for cheese. This change in the cheese price calculation was previously analyzed with Scenarios I and I2, and is estimated in the same way for Scenario O, by subtracting \$0.0169 from the cheese price used in the protein price formula (See Preliminary Economic Analyses from February 2007 and Appendix E for details of previously related analyses).

The impacts of Scenario P are in the same direction as those of Scenario O, but of greater magnitude. The protein price falls an average \$0.1084 per pound over the projection period, while all other component prices increase, illustrating the inverse relationship between the protein price and the butterfat price. The all-milk price falls an average \$0.08 per cwt below baseline levels. U.S marketings for manufacturing classes decline, and dairy product prices rise. Cheddar cheese, butter, nonfat dry milk, and whey prices increase on average by \$0.0141, \$0.0228, \$0.0094, and \$0.0028 per pound respectively over the 10-year projection period. Class III remains the mover for Class I in all years except for 2008 and 2010. With an average decrease of \$0.20 per cwt in the Class I price at 3.5 percent butterfat over the projection period, the retail fluid milk price falls by \$0.0139 per gallon, and U.S. Class I use increases by an average 57 million pounds per year. Declines in cow numbers and milk per cow cause total marketings to fall an average 305 million pounds over the projection period, bringing down producer revenue by an average \$190 million below baseline levels.

	mil. pounds	O	0	-1	-1	0	0	0	0	0	0	0	0
	mil. pounds	P	0	-1	-1	0	0	0	0	0	0	0	0
MPSP Outlays ²	mil. \$	O	0	0	0	0	0	0	0	0	0	0	0
	mil. \$	P	0	-1	-1	0	0	0	0	0	0	0	0
Total Govt. Outlays	mil. \$	O	22	0	0	0	0	0	0	0	0	0	2
	mil. \$	P	44	-1	-1	0	0	0	0	0	0	0	4

¹ Net government removals equals support price purchases plus Dairy Export Incentive Program (DEIP) removals minus unrestricted sales.

² MPSP outlays are not projected in the model. The change is computed by multiplying NDM net removal quantities by the NDM support price of \$0.80. No attempt is made to estimate changes in storage, handling, transportation, processing, and packaging.
